INDEX TO THE SECOND VOLUME,

COMPRISING THE

SYSTEMATIC AND ENGLISH GENERIC NAMES, AND THE ENGLISH AND SYSTEMATIC SYNONYMES.

*** In this Index the systematic names used, and the English names in common use, are in Roman letters, the synonymes in *Italics*, the names of Classes, Sub-classes, and Orders in *large capitals*, and the names of Sub-orders and Tribes in *small capitals*.

Abatia, 722
Abrus, 342
Abrus, 315
Acacia, 401-423 476
Acacia, 386, 387 392 397 400, 401
Acacia, Common, 237
Acacia, False, 237, 238
Acacia, Bastard, 237, 238
Acæna, 592, 593
Acajou, 62
Achyronia, 131
Acia, 478
Acinodendron, 780
Acioa, 478
Aciotis, 765
Acisanthera, 717
Acmena, 857
Acoma, 55
Acosmium, 154
Acouroa, 126
Acropodium, 194
Actegeton, 12
Adambea, 721
Adamia, 527, 528
Adelobotrys, 750
Adenanthera, 399
Adenaria, 728
Adenilema, 522
Adenocarpus, 157, 158
Adenocarpus, 244
Adenocalyx, 429
Adesmia, 281-283
Adleria, 457
Ætia, 662
Æschynomene, 283-286.
Æschynomene, 237 338. 240 242. 278. 281-283. 289 292-294.
Afzelia, 451
Afzelia, 222
Agallochum, 60
Agallocha, 464
Agardhia, 672
Agathisanthes, 657
Agati, 241
Agati, 240
Ageria, 20
Agrimony, 563
Agrimonia, 563
Agrimonia, 564. 59[illegible]
ALANGIEÆ, 806
Alandina, 427
Alangium, 806
Alaternus, 30
Alchimilla, 590, 591
Alder Buckthorn, 32
Aldina, 379
Algaroba, 400, 401
Algaroba de Chili, 400
ALHAGEÆ, 310
Alhagi, 310
Alhenna or Henna, 722
Allomorpha, 778
Almond, Bitter, 482, 483
Almond, Sweet, 482, 483
Almonds, 482, 483
Almond, Dwarf, 482
Aloes-wood, 60 464
Aloexylon, 464
Altagana, 243
Alysicarpus, 310, 311
Alzatea, 11
Amaria, 164
Amelanchier, 604
Ameletia, 708
American Allspice, 652
Amerimnum, 378, 379
Amerimnum, 237 378-379
Amherstia, 437
Amicia, 279
Ammannia, 708 710
Ammannia, 703-708
Ammannioides, 703
Ammodendron, 467
Amonia, 564
Amoreuxia, 589
Amorpha, 234
Amosa, 387
Amphicarpæa, 343
Amphilochia, 669
Amphodus, 363
Amphinomia, 466
Amphymenium, 376
AMYGDALACEÆ, 481
Amygdalophora, 482
Amygdalus, 482
Amygdalus, 483 493
AMYRIDEÆ, 87
Amyris, 87-89
Amyris, 76-77 80 83 85 87
ANACARDIEÆ, 62
Anacardium, 62
Anacardium, 63
Anagyris, 112
Anagyris, 112
Anavinga, [illegible]. 53
Anchovy Pear, 872
Ancistrum, 592, 593
Andersonia, 662
Andira, 425
Angolam, 806
Angolamia, 806
Angophora, 822
Anil, 208
Anonymos, 134 280 721
Anoma, 429
Anoma, 427. 428
Antherylium, 722
Antherylium, 722
Anthonota, 457
Anthyllis, 165
Anthyllis, 147. 307-309
Aotus, 120
Apalatoa, 465
Apatitia, 800

OOTTERPARAH PUBLIC LIBRARY 1859

THE

GARDENER'S AND BOTANIST'S DICTIONARY.

Subclass II. CALYCIFLO'RÆ (from *calyx*, and *flos*, a flower). D. C. prod. 2. p. 1. Calyx gamosepalous (f. 1. *a.*); sepals more or less connected together, especially at their base (f. 1. *a.*). Torus more or less adnate to the inside of the calyx at the base (f. 4. B. *e. f.* and A. *d.*). Petals and stamens inserted in the calyx (vol. 1. f. 2. 2. *a. b.*) or in that part of the torus adnate to the calyx (f. 4. C. c. and B. *e.*), and therefore rising from the calyx. Petals usually free (vol. 1. f. 2. 2. *a.*). Ovary free or adnate to the calyx. The torus or disk in *Calyciflòræ* appears to be a dilatation of the peduncle converted into petals and stamens, it is large and adnate to the calyx, and usually bears the petals and stamens, sometimes it girds the stipe of the ovary as in *Passiflòræ* and the most of *Leguminòsæ*. The petals and stamens in the *Calyciflòræ* are, however, for the most part, inserted in the calyx. In the *Thalamiflòræ* the torus neither adheres to the calyx nor to the ovaries, which character distinguishes it from the *Calyciflòræ*.

Order LXIV. CELASTRI'NEÆ (plants agreeing with *Celástrus* in important characters). R. Br. gen. rem. p. 22. D. C. prod. 2. p. 2.—Rhamneæ, Spec. Juss.

Calyx of 4-5 obtuse sepals (f. 1. *a.*) connected at the base, imbricate in the bud (f. 2. *a.*). Petals alternating with the sepals (f. 2. *b.*), oblong, flat, rather fleshy, broadest at the base, fixed under the margin of the disk, imbricate in æstivation (f. 2. *a.*). Stamens (f. 2. *c.*) equal in number with the petals, and alternate with them, inserted in the margin, middle part, or superior part of the disk. Anthers 2-celled bursting inwards. Disk large (f. 2. *d.*) expanded, flat, closely girding the ovary, and covering the flat part of the calyx. Ovary free, immersed in the disk, and adnate to it, 2-4-celled; cells 1-seeded (f. 1. *c.*) Ova fixed to the inner angle of the cells by a short narrow podosperm, ascending. Raphe interior. Fruct or capsule never adherent, 2-4-valved, 2-4-celled, with a dissepiment in the middle of each valve, or a dry drupe containing a 2-celled nut; cells 1 or many-seeded. Seeds ascendent, rarely resupinate, suspended, arillate or exarillate. Endosperm fleshy. Embryo straight, with flat, thick cotyledons and a short inferior radicle. The order is composed of shrubs, having alternate or opposite, simple, rarely compound, rather coriaceous, entire, or toothed, feather-nerved, usually stipulate leaves, and axillary cymes of small whitish or greenish flowers. Several of the species are favourite ornaments of our shrubberies, as the *Staphylēa*, the *Celástrus*, and the *Euónymus*. The fruit of *Euónymus Europæ'us* is a brisk purgative, as is also the inner bark, and in strong doses powerfully emetic. A decoction of the twigs of *Maytēnus Boària* is used to bathe the swellings produced by the poisonous shade of the tree *Litri* or *Llithi*, *Rhus caústica*. This order is distinguished from *Rhámneæ* in the sepals being imbricate in æstivation, not valvate, and in the stamens being alternate with the petals as well as in the ovary being wholly superior and in the petals being flat. It differs from *Ilicíneæ* in the petals being free and in the stamens being perigynous, and from *Hippocrateáceæ*, to which it has been referred by R. Brown, in the stamens being free and perigynous, not as in that order hypogynous and monadelphous.

Synopsis of the genera.

Tribe I.

Staphylea'ceæ. *Seeds bony, truncate at the hilum, exarillate. Albumen wanting, or very sparing. Leaves compound, pinnate, or trifoliate.*

1 Staphyle'a. Calyx 5-parted (f. 1. *a.*), with coloured segments. Disk urceolate. Petals 5. Stamens 5. Styles 2-3, sometimes connected. Capsule bladdery, 2-3-celled, few-seeded (f. 1. *c.*).

2 Turpi'nia. Flowers polygamo-dioecious. Calyx 5-parted, with coloured margins. Petals 5, inserted in a 10-crenated disk. Styles 3, joined in one. Berry trigonal, 3-celled; cells 2-3-seeded.

Tribe II.

Euony'meæ. *Seeds arillate, not truncate at the hylum. Embryo straight, placed in the axis of a fleshy albumen. Leaves simple.*

3 Euo'nymus. Calyx 4-6-lobed (f. 2. *a.*), flat, with the base covered by the peltate disk. Petals 4-6 (f. 2. *b.*), spreading, inserted in the disk. Stamens 4-6, inserted in rather prominent glands. Style 1. Capsule 3-5-celled, 3-5-angled (f. 2. *f.*); cells 1-4-seeded, with a dissepiment in the middle of each valve.

4 Cela'strus. Calyx small, 5-lobed. Petals 5, unguiculate. Stamens 5. Ovary immersed in the disk. Style 1, crowned by 2-3 stigmas. Capsule 2-3-valved, usually with a complete or an incomplete dissepiment in the middle of each valve, and usually with a single seed in each cell.

5 Ca'tha. Calyx flat, 5-lobed. Petals 5, inserted under the margin of the disk. Stamens 5, inserted with the petals. Capsule 3-4-sided, 3-4-celled; cells 1-seeded. Style short, crowned by a 3-parted stigma.

6 Plectro'nia. Calyx obsoletely 5-toothed. Petals 5, sessile. Stamens 5, short. Style filiform, crowned by an ovate stigma. Berry oblong, 2-celled, 2-seeded.

7 Mayte'nus. Flowers polygamous. Calyx small, 5-cleft. Petals 5, spreading. Stamens 5. Disk fleshy. Stigma sessile, 2-3-lobed. Capsule 1-4-valved, with a dissepiment in the middle of each valve. Seeds few.

8 Alzate'a. Calyx 5-cleft, 5-angled, coloured. Stamens 5, hypogynous? Style 1. Capsule obcordate, 2-valved, 2-celled, with a dissepiment in the middle of each valve. Seeds numerous, girded by a membrane. Corolla none.

9 Crypterònia. Flowers monoecious. Calyx small, 5-toothed. Corolla none. Stamens 5. Style crowned by an obtuse stigma. Capsule 2-celled, 2-valved, many-seeded.

10 Polyca'rdia. Calyx 5-lobed. Petals 5. Stamens 5, short. Ovary depressed. Style very short, crowned by a lobed stigma. Capsule woody, 5-celled, 5-valved, or from abortion only 3-4-valved, with a dissepiment at the base of each valve. Seeds few, covered by a jagged aril.

11 Elæode'ndron. Calyx small, 4-5-lobed. Petals 4-5. Stamens 4-5. Disk fleshy. Style very short. Drupe dry, containing a 5-celled nucleus, rarely 2-celled from abortion. Seeds solitary or twin in the cells.

12 Actegeʹton. Flowers dioecious. Calyx 4-toothed. Petals 4. Stamens 4, connate at the base. Stigmas 2, sessile. Berry globose, 1-3-seeded.

13 Pteli'dium. Calyx urceolate, 4-lobed. Petals 4, inserted in the 4-lobed disk by the broad claws. Stamens 4. Ovary compressed. Style almost wanting. Fruit samaroid, much compressed, indehiscent, girded by a wing, 2-celled, 2-seeded.

14 Trallia'na. Calyx 5-parted. Petals 5, spreading. Disk erect, 10-crenate. Stamens 5. Style 1. Berry roundish, 2-celled, 2-seeded.

Tribe III.

Cassinie'æ. *Petals broadest at the base. Fruit indehiscent. Embryo straight in the axis of a fleshy albumen. Leaves simple.*

15 Cassi'ne. Calyx small, 5-parted. Petals 5, spreading. Stamens 5. Stigmas 3. Drupe dry, containing a 3-celled, 3-seeded nut. Seeds hanging from the top of the cells.

16 Harto'gia. Calyx 4-5-cleft. Petals 4-5, spreading. Stamens 4-5. Style thick, bifid; lobes bifid. Drupe dry, ovate, 2-celled, 2-seeded.

17 Curti'sia. Calyx 4-parted. Petals 4. Stamens 4. Style crowned by 4-5 stigmas. Drupe subglobose, succulent, containing a 4-5-celled, 4-5-seeded nut.

18 Nemopa'nthes. Flowers dioecious or polygamous from abortion. Calyx very small. Petals 5. Stamens 5. Stigmas 3-4, sessile. Berry subglobose, 3-4-celled, 3-4-seeded.

19 Ski'mmia. Calyx small, 4-parted. Petals 4, concave. Stamens 4, very short. Style 1. Berry ovate, umbilicate, obsoletely 4-furrowed, somewhat 4-valved, filled with farinaceous pulp. Seeds 4.

20 Le'pta. Calyx small, 4-parted. Petals 4, inflexed, triangular. Stamens 4, inserted at the angles of the disk. Style almost wanting. Stigma obtuse. Berry 4-lobed; lobes 1-seeded.

† *Genera allied to Celastrineæ, but differ materially in the valvate æstivation of the petals.*

21 Perrotte'tia. Calyx 5-lobed. Petals 5, valvate in æstivation, inserted under the disk. Stamens 5, inserted with the petals. Stigma sessile. Berry subglobose, containing 1-2 wrinkled nuts.

22 Dulóngia. Flowers hermaphrodite. Calyx 5-toothed, adnate to the ovary. Petals 5, valvate in æstivation, inserted round the base of the disk. Stamens 5, inserted with the petals. Stigmas 2, sessile. Fruit globose, baccate 2-celled; cells 2-3-seeded.

Tribe I.

STAPHYLEA'CEÆ (plants agreeing with *Staphylèa* in some characters). D. C. prod. 2. p. 2. Seeds bony, truncate at the hilum, without aril. Albumen wanting or sparing. Cotyledons fleshy. Leaves compound.

I. STAPHYLE'A (name abridged from *Staphylodéndron*, its name in ancient botany, derived from σταφυλη, *staphyle*, a bunch or cluster, and δενδρον, *dendron*, a tree; the flowers and fruit are disposed in clusters). Lin. gen. no. 374. Lam. ill. t. 210. D. C. prod. 2. p. 2.—Staphylodéndron, Tourn. inst. 386. —Bumálda, Thunb.

Lin. syst. *Pentándria, Di-Trigýnia.* Calyx 5-parted (f. 1. *a.*), covered by an urceolate disk at the base; lobes oblong, concave, coloured. Petals 5 (f. 1. *f.*). Stamens 5. Ovary 2-3-lobed. Styles 2-3, sometimes connected together. Capsule 2-3-celled; cells membranous (f. 1. *c.*), opening on the inside, few-seeded, sometimes connected together at the base, sometimes their whole length. Seeds globose.—Shrubs with impari-pinnate or trifoliate, opposite, rarely alternate leaves, bearing 2 stipulas at the base of the petioles (f. 1. *b.*), and at the base of the leaflets. Flowers white, disposed in racemose panicles.

* *Leaves trifoliate.*

1 S. trifòlia (Lin. spec. 386.) leaflets ovate, acuminate, regularly serrated, young ones downy beneath; styles smooth; capsules bladdery. ♄. H. Native of North America, from New York to Carolina, on rocks. Schmidt œstr. baum. 2. t. 81. A very common shrub in the gardens.

Three-leaved Bladder-nut. Fl. May, June. Clt. 1640. Sh. 6 to 8 feet.

2 S. Buma'lda (D. C. prod. 2. p. 2.) leaflets oblong, acu-

minate, rather scabrous; serratures awned, protruding from the recesses of the crenæ; styles villous; capsule with 2 beaks. ♄. G. Native of Japan, on the mountains. Bumálda trifòlia, Thunb. fl. jap. p. 8. Flowers white.

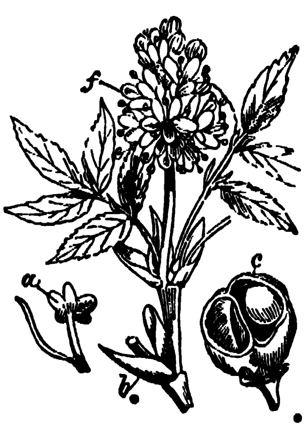
Bumalda's or Japan Bladder-nut. Fl. June, Aug. Clt. 1812. Shrub 6 feet.

* * *Leaves impari-pinnate.*

3 S. HETEROPHY′LLA (Ruiz et Pav. fl. per. 3. p. 29. t. 253. f. A.) petioles biglandular; leaflets 3-5 or 7, oblong-lanceolate, quite smooth, with callous serratures; flowers disposed in racemose panicles; capsules coriaceous, not bladdery. ♄. S. Native of Peru, in groves. Flowers white.

Variable-leaved Bladder-nut. Shrub 12 feet.

FIG. 1.



4 S. PINNA′TA (Lin. spec. 386.) petioles without glands; leaflets 5 to 7, oblong-lanceolate, quite smooth, serrated; flowers racemose; styles 2; capsules membranous, bladdery. ♄. H. Native of Europe, in hedges and thickets. In England, about Pontefract and other parts of Yorkshire; about Ashford, Kent. Smith, engl. bot. t. 1560. Staphylodéndron pinnàtum, Ray. syn. 468. Duh. arb. 2. t. 77. A smooth branching shrub with foliage resembling some kind of ash. Flowers white or of a pale greenish-yellow, bell-shaped, pendulous, inodorous. Haller says children eat the kernels, but according to Gerarde their first sweetness is succeeded by a nauseous taste, and an emetic effect. The nuts being hard and smooth, are strung for beads by the Roman Catholics in some countries. Singularity rather than beauty procures this plant a place in gardens.

Pinnate-leaved or Common Bladder-nut. Fl. June. Britain. Shrub 4 to 12 feet.

Cult. These shrubs possess very little beauty, but answer very well to mix with other shrubs for variety. They will grow in any common soil, and are easily increased by taking the suckers from the roots, by layers, or by cuttings put in the ground in September. The *S. heterophýlla* and *S. Bumálda* will require protection during frost.

II. TURPI′NIA (in honour of M. Turpin, a distinguished French botanical artist and naturalist, author of several articles in the Annales du Musée d'Histoire Naturelle). Vent. choix. 1803. p. 31. t. 31. but not of Humb. nor Pers. nor Rafin. D. C. prod. 2. p. 3. Dalrýmplea, Roxb. cor. 3. p. 276.

LIN. SYST. *Polygàmia, Dioècia,* or *Dioècia, Pentándria.* Flowers polygamous or dioecious. Calyx 5-parted, permanent, with coloured edges. Petals 5, inserted in the disk, alternating with the sepals. Stamens 5, inserted in a 10-crenate disk, alternating with the petals. Ovary trigonal. Styles 3 joined in one, or distinct. Berry trigonal, 3-celled; cells 2-3-seeded.—Trees with the habit of *Staphylèa,* with smooth, opposite, impari-pinnate leaves, and stalked, ovate, acuminated, serrated leaflets. Flowers white, disposed in panicles.

1 T. PANICULA′TA (Vent. choix. 1803. p. and t. 31.) upper branches of panicle alternate. ♄. S. Native of St. Domingo on the mountains, as well as of Mexico. Dalrýmplea Domingénsis, Spreng. syst. 1. p. 771. Flowers loosely panicled. Leaflets 7, 2 inches long, edged with glandular serratures. Fruit blue, 3-furrowed, very bluntly 3-lobed.

Panicle-flowered Turpinia. Tree 25 feet.

2 T. CORYMBÒSA; flowers panicled, corymbose; leaflets 5-7, oval, acuminate, bluntly sinuate-crenate, quite smooth; styles distinct. ♄. S. Native of Jamaica. Staphylèa corymbòsa, D. C. prod. 2. p. 3. Leaflets opposite.

Corymbose-flowered Turpinia. Tree 30 feet.

3 T. OCCIDENTA′LIS; flowers panicled; leaves doubly pinnate; leaflets ovate, acuminate, serrated, smooth; styles distinct. ♄. S. Native of Jamaica, on the mountains. Fruit about the size of a cherry. Leaflets alternate. Stipulas in pairs between the pinnæ. Staphylèa occidentàlis, Swartz, fl. ind. occ. 1. p. 566. exclusive of the synonyms. Flowers white.

Western Turpinia. Clt. 1824. Tree 30 feet.

4 T. POMI′FERA (D. C. prod. 2. p. 3.) branches of panicle all opposite; leaves ternate or pinnate, bluntly serrated. ♄. S. Native of the East Indies, in Silhet and probably in Nipaul. Its vernacular name in Silhet is *Junki-jam.* Dalrýmplea pomífera, Roxb. cor. 3. p. 276. t. 279. Panicle spreading. Leaflets 3-7, opposite, 5-6 inches long. Fruit yellow when ripe, roundish, 3-lobed, almost smooth, size of a large medlar, very fleshy. Flowers yellowish-white.

Pome-bearing Turpinia. Fl. May. Clt. 1820. Tree 20 feet.

Cult. These trees possess very little beauty, they are therefore hardly worth cultivating, unless in general collections. They will thrive well in a mixture of loam and peat, and cuttings will strike root in a pot of sand under a hand-glass, in heat.

TRIBE II.

EUONY′MEÆ (plants agreeing with *Euónymus* in important characters). D. C. prod. 1. p. 3. Seeds arillate, not truncate at the hylum. Embryo erect in the axis of a fleshy albumen. Cotyledons leafy.—Shrubs and trees with simple leaves.

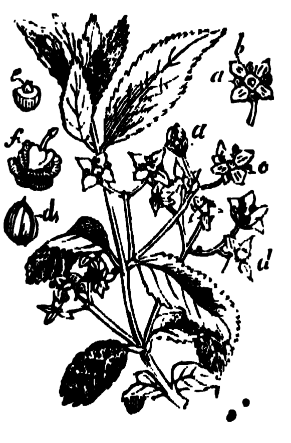
III. EUO′NYMUS (from ευς, *eus,* good, and *ονομα, onoma,* a name, well-named; by antiphrasis fetid). Tourn. inst. t. 388. Lin. gen. 271. D. C. prod. 2. p. 3. Roxb. fl. ind. 2. p. 402.

LIN. SYST. *Tetra-Hexándria, Monogýnia.* Calyx 4 (f. 2. *a.*) or 5-lobed, flat, covered by the peltate disk at the base. Petals 4 (f. 2. *b.*) -6, spreading, inserted in the disk. Stamens 4-6, inserted above the disk in rather prominent glands, alternating with the petals (f. 2. *c.*). Style 1. Capsule 3-5-celled, 3-5-angled, bearing a dissepiment in the middle of each valve. Seeds 1-4 in each cell, enwrapped in pulp or aril. Embryo green, straight, placed in the middle of a fleshy albumen.—Shrubs with tetragonal or terete branches, and ovate, usually opposite leaves, scarcely stipulaceous. Peduncles axillary. Shrubs, fetid in every part when bruised, and esteemed poisonous.

* *Petals oblong, oval, or ovate.*

European.

FIG.



1 E. EUROPÆ′US (Lin. spec. 286. var. *a,* exclusive of the synonym of Clus.) branches smooth; leaves ovate-lanceolate, finely serrated; peduncles usually 3-flowered; petals oblong, acute; lobes of capsule 5, blunt. ♄. H. Native of Europe in hedges and thickets. Plentiful in Britain. Smith, engl. bot. t. 362. Bull. herb. t. 135. E. vulgàris, Mill. dict. no. 1. Flowers small, greenish-white, fetid. Capsules of a fine rose-colour, 5-celled, 5-valved; cells 1-seeded. seeds orange-coloured. From its use for skewers it has the name of *Prickwood,* and is called by

Gerard *Prick-timber.* It is called also *Louse-berry*, *Dogwood*, and *Catteridge-tree.* In German it is named *Spindelbaum*; in Danish, *Beenved*; in Italian, *Fusaggéne*; in Spanish, *Bonetero*; *Bonete de Clerigo*; in Portuguese, *Barrete de Clerigo*; in Russian, *Mereskletiana kislianka*, *Swida*, *Sedlini Beresdren.* The wood is said to be used by musical instrument makers. For skewers and toothpicks the branches should be cut when the shrub is in blossom, for it is tough and not easily broken in that state; it is also used by watchmakers for cleaning watches: it was formerly used to make spindles, hence the English name of the genus. According to Linnaeus, kine, goats, and sheep eat the leaves, but horses refuse it. No animal, however, seems to browze upon it but the goat. The berries are said to be fatal to sheep; they are violently emetic and purgative; powdered and sprinkled upon the hair they destroy lice. The shrub seldom attains any great size when growing wild in the hedges, but when planted singly and properly trained it will have a strong woody stem, and rise more than twenty feet high, dividing into many branches, and when in fruit it has a fine appearance, the capsules being red and the seeds yellow. First flowers pentandrous, but the others are tetrandrous.

Var. β, leucocárpus (D. C. prod. 2. p. 4.) capsules white or pale, as well as the seeds.

European or Common Spindle-tree. Fl. May. Britain. Shrub 6 to 20 feet.

2 E. verrucòsus (Scop. carn. ed. 2. no. 268.) branches warted; leaves ovate, somewhat serrated; peduncles 3-flowered; petals ovate; capsule bluntly tetragonal. ♄. H. Native of Europe, particularly in Austria, Hungary, and Carniola. Jacq. fl. austr. t. 49. Duh. ed. nov. 3. t. 8. Schmidt. arb. t. 72. E. Europæ'us lepròsus, Lin. fil. suppl. 154. Petals covered with a pile consisting of very small teats. Capsules 3-4-celled, 3-4-valved; cells 1-seeded. Stigma bladder-like. Flowers small, greenish-white or greenish-yellow, tetrandrous and pentandrous.

Warted-branched Spindle-tree. Fl. May, June. Clt. 1763. Shrub 6 to 8 feet.

3 E. latifòlius (C. Bauh. pin. 428.) branches smooth; leaves broad-ovate, toothletted; peduncles trichotomous, many-flowered; petals oval, obtuse; lobes of capsule acutely angled, wing-formed. ♄. H. Native of Europe, in groves from Dauphiny to Tauria. Jacq. austr. t. 289. Sims, bot. mag. 2384. Jacq. hort. vind. 2. t. 120. Duh. arb. ed. nov. 3. t. 7. E. Europæ'us β, Lin. spec. 286. Flowers usually pentandrous, white at first, but becoming purplish as they fade. Capsules red?

Broad-leaved Spindle-tree. Fl. June, July. Clt. 1730. Shrub 10 to 20 feet.

4 E. na'nus (Bieb. fl. taur. suppl. p. 160.) branches smooth, somewhat herbaceous; leaves lanceolate, quite entire, nearly opposite; peduncles 1-3-flowered; flowers tetrandrous, 4-petalled. ♄. H. Native of the north of Caucasus. A little shrub, with the appearance of *Cneòrum tricóccum.* The fruit being unknown the genus is doubtful. Flowers whitish?

Dwarf Spindle-tree. Clt. 1825. Shrub 2 feet.

Asiatic.

5 E. Hamiltonia'nus (Wall. in fl. ind. 2. p. 403.) branches smooth, terete; leaves lanceolate, finely serrated; peduncles dichotomous, 6-flowered; flowers tetrandrous; petals 4, lanceolate, cordate; ovary 4-lobed, 4-celled, each cell containing 2 ova. ♄. H. Native of Nipaul. E. atropurpùrea, Wall. in fl. ind. 2. p. 402. Trunk erect; branchlets spreading. Petals with revolute edges, white. Anthers brown.

Hamilton's Spindle-tree. Fl. April, May. Clt. 1825. Sh. 5 to 20 feet.

6 E. gla'brus (Roxb. fl. ind. 2. p. 403.) arboreous; leaves oblong, smooth, with the anterior margin serrated; peduncles 2 or 3 times dichotomous, with a single flower in each fork; flowers pentandrous. ♄. F. Native of Chittagong, in the East Indies, where it flowers in May. Flowers greenish-white.

Smooth Spindle-tree. Tree 15 feet.

7 E. garcinifòlius (Roxb. in fl. ind. 2. p. 403.) branchlets smooth, terete; leaves lanceolate, entire; petals oblong, with incurved edges, much longer than the calyx; peduncles between the leaves, sometimes solitary, 3-flowered; flowers pentandrous. ♄. F. Native of Silhet, in the East Indies, where it is called *Mori*, and at Suemba in Upper Nipaul. E. lácerus, Hamilt. in D. Don, prod. fl. nep. p. 191? Flowers small, pale-yellow. Capsule oblong, size of a small field-bean, 1-celled, 2-valved, opening from the base, containing a solitary, oval seed, covered with a thin, succulent, veined, bright scarlet aril.

Garcinia-leaved Spindle-tree. Fl. May. Clt. 1820. Tree 12 feet.

8 E. tíngens (Wall. in fl. ind. vol. 2. p. 406.) branchlets obscurely tetragonal, smooth; leaves leathery, ovate-lanceolate, serrulated, wrinkled above; lobes of calyx permanent; peduncles 2 or 3 times dichotomous, short, flattened, disposed in numerous approximate pairs on the young shoots, with opposite, linear, fringed bracteas at each subdivision; petals veined, ovate, with short claws; capsule 5-cornered. ♄. F. Native of the East Indies, on the summit of Sheopore, as well as on the Sewalik mountains, and on those of Shreenugur. Its Newar name is *Kasoori.* Trunk as thick as a man's thigh, spotted with large, ochre-coloured tubercles; branchlets short, thick. Both the flower and leaf-buds consist of imbricated, lanceolate, fringed scales, and here and there interspersed among the peduncles. Flowers large, tetrandrous, or pentandrous, yellowish-green, marked with purplish veins. The yellow bark is employed by the Nipaulese for the purpose of marking the forehead with the idolatrous symbol, commonly called *Tika.* The wood is white and compact. Capsule about the size of a gooseberry, 4-5-cornered, 5-seeded.

Painting Spindle-tree. Fl. April, May. Tree 16 to 20 feet.

9 E. fimbria'tus (Wall. in fl. ind. 2. p. 408.) branches terete, smooth; leaves ovate, finely acuminated, fringed with long parallel toothed serratures; flowers tetrandrous, subumbellate, on long filiform peduncles; capsules with from 2-5 long, vertical tapering wings. ♄. F. Native of the East Indies, on the Sewalik mountains, as well as on those of Shreenugur. It is impossible to confound this with any other species, the leaves being distinctly doubly-serrated.

Fringed-leaved Spindle-tree. Tree.

10 E. gro'ssus (Wall. in fl. ind. 2. p. 408.) branches dotted; leaves subopposite, ovate, acute, bluntly and coarsely serrated on longish footstalks; peduncles twice dichotomous, with long, divaricating divisions, supported by a pair of lanceolate, acute bracteas; petals oblong. ♄. F. Native of Nipaul, on the northward of Sheopore, flowering in June. Leaves shining, rounded at the base, elegantly reticulated beneath.

Coarse-serrated Spindle-tree. Clt. 1824. Tree 12 feet.

11 E. I'ndicus (Heyne, herb. Wall. in fl. ind. 2. p. 409.) branches terete, smooth; leaves lanceolate or ovate-lanceolate, acuminated, quite entire; peduncles 1-3-flowered; petals oval, fringed; flowers pentandrous; capsule clavate, furnished with 5 short projecting wings. ♄. F. Native of the East Indies. Branchlets slender, slightly quadrangular. Leaves acute at the base.

Indian Spindle-tree. Shrub 8 feet.

12 E. dicho'tomus (Heyne, herb. Wall. in fl. ind. 2. p. 410.) branchlets slightly quadrangular; leaves linear-lanceolate, acuminate at both ends, perfectly entire; peduncles fascicled, filiform, one-third shorter than the leaves, 2 or 3 times dichotomous at the apex, bearing a number of small pentandrous

flowers; petals oval, fringed; capsules lengthened, clavate, 5-lobed, retuse. ♄. S. Native of the East Indies. Branches smooth, slender, opposite, or dichotomous.

Forked-branched Spindle-tree. Shrub.

13 E. MICRA'NTHUS (D. Don, prod. fl. nep. p. 191.) leaves elliptical, serrulated, smooth, acuminated, shining; peduncles trifid, many-flowered, one-half shorter than the leaves. ♄. F. Native of Nipaul. E. frígida, Wall.? Petals oval.

Small-flowered Spindle-tree. Clt. 1820. Shrub 8 feet.

14 E. LU'CIDUS (D. Don. prod. fl. nep. p. 191.) leaves lanceolate, acuminated, sharply serrated, shining, acute at the base; umbels lateral, opposite, pedunculate. ♄. F. Native of Nipaul. Petals ovate or oval?

Shining-leaved Spindle-tree. Clt. 1820. Shrub 6 feet.

* * *Petals orbicular.*

American.

15 E. ATROPURPU'REUS (Jacq. hort. vind. 2. t. 120.) branches smooth; leaves oblong-lanceolate, acuminate, serrated, stalked; peduncles many-flowered, compressed; petals orbicular; capsules angularly-furrowed, smooth. ♄. H. Native of North America, from New York to Carolina, on the banks of rivulets, Schmidt. arb. 73. E. Caroliniénsis, Marsh. arbr. amer. no. 1. and probably latifòlius, Marsh. arb. no. 2. Flowers quadrifid. tetrandrous, dark-purple. Fruit red.

Dark-purple-flowered Spindle-tree. Fl. June, July. Clt. 1756. Shrub 6 to 10 feet.

16 E. AMERICA'NUS (Lin. spec. 286.) branches smooth, quadrangular; leaves elliptic-lanceolate, acute, serrated, almost sessile; peduncles 1-3-flowered; flowers pentandrous; petals nearly orbicular; capsules warted and echinated. ♄. H. Native of North America from New England to Carolina, in hedges and shady woods, among rocks, and on the edges of swamps. Duham. arb. ed. nov. 3. t. 9.—Pluk. alm. t. 115. f. 5. Schmidt. arb. t. 75. Flowers yellow, tinged with red. Fruit scarlet, resembling those of *A'rbutus U'nedo* at first sight. They are a great ornament to this almost evergreen shrub. Its common name in America is *Burning-bush* on account of the colour of the fruit. E. sempervìrens, Marsh. arbr. amer. no. 3. E. alternifòlius, Mœnch.

American Burning-bush. Fl. June, July. Clt. 1686. Shrub 6 feet.

17 E. SARMENTÒSUS (Nutt. gen. amer. 1. p. 155.) branches smooth, tetragonal, sarmentose, usually rooting; leaves lanceolate, serrated, almost sessile; peduncles 1-3-flowered; flowers pentandrous; petals somewhat orbicular; capsules muricated. ♄. ◡. H. Native of North America, in Virginia and Carolina, in shady woods. E. scándens, Hort. Flowers yellow, tinged with red? Fruit scarlet?

Sarmentose Spindle-tree. Fl. June, July. Clt. 1824. Shrub straggling.

18 E. ANGUSTIFÒLIUS (Pursh. fl. amer. sept. 1. p. 168.) branches quadrangular, smooth; leaves elongated, linear-elliptical, somewhat falcate, nearly entire, almost sessile; peduncles for the most part 1-flowered; flowers pentandrous; capsules warted. ♄. H. Native of North America, in Georgia, in shady woods. Flowers yellow, tinged with red. Fruit scarlet. This species is nearly related to *E. Americànus*, and keeps its distinction from seed.

Narrow-leaved Spindle-tree. Fl. June, July. Clt. 1806. Shrub 6 feet.

19 E. OBOVA'TUS (Nutt. gen. amer. 1. p. 155.) stem prostrate, rooting; branches erect, bluntly quadrangular, with the bark inflated at the apex; leaves broad, obovate, obtuse, almost sessile, acutely-serrulated; peduncles 3-flowered; calyxes inflated. ♄. H. Native of Pennsylvania, in marshes between Franklin and Waterford. Fruit unknown. Anthers sessile.

Obovate-leaved Spindle-tree. Fl. June, July. Clt. 1820. Shrub creeping and straggling.

Asiatic species.

20 E. GRANDIFLÒRUS (Wall. in fl. ind. 2. p. 404.) branches terete, smooth; leaves obovate-oblong, obtuse, acutely-serrulate, with a tapering entire base; peduncles slender, flattened, nearly equalling the length of the leaves, 3-6-flowered; flowers tetrandrous; petals orbicular, flat with curled edges; capsule globular, pendulous, obscurely 4-cornered, with usually geminate, pendulous seeds. ♄. H. Native of the valley of Nipaul, in forests. Branches slightly 4-cornered. Flowers white, very large, inodorous, slightly nodding. Capsule nearly globular, about the size of a cherry, 4-celled, 4-valved. Seeds oval, black, half covered by a brilliant, red, minutely lobed, warted aril. This is a very ornamental shrub, both when in flower, and when loaded with its yellow pendulous capsules, each of which is furnished with as many as 6 black pendulous seeds.

Great-flowered Spindle-tree. Fl. April, May. Shrub 10 ft.

21 E. JAPO'NICUS (Thunb. jap. 100.) branchlets pendulous, slightly compressed; leaves oblong, sharply serrulated, acuminated; peduncles flattened, crowded and panicled on the recent shoots, 2 or 3 times dichotomous, bearing several flowers; petals orbicular, fringed, twice as long as the stamens; capsule with 4 horizontal spreading wings. ♄. G. Native of Nipaul, on Sheopore and Chundrugiri, as well as at Shreenugur and of Japan. Hell. in Ust. del. op. 1. p. 84. t. 4. Banks, icon. Kæmpf. t. 8. Flowers small, white, tetrandrous, rarely pentandrous. Outer branches hanging down in a very elegant manner.

Japan Spindle-tree. Fl. April, May. Clt. 1804. Tree 20 ft.

22 E. ECHINA'TUS (Wall. in fl. ind. 2. p. 410.) stems climbing, as well as rooting; leaves ovate-lanceolate, serrated; peduncles filiform, several times dichotomous, many-flowered, with one flower in each fork; petals orbicular, crenulate; capsules armed with numerous prickles. ♄. ◡. F. Native of the mountains of Nipaul, especially on Sheopore. Hook. bot. mag. 2767. Branches quadrangular at the apex, climbing over trees, and rooting by means of dense capillary fibres. Flowers small, pea-green, inodorous, tetrandrous. Capsules pendulous, globular, yellow, 4-celled, 4-seeded. Seeds black, almost covered with a scarlet fleshy aril. E. scandens, Graham.

Echinated-capsuled Spindle-tree. Fl. Ap. March. Clt. 1824. Shrub climbing.

23 E. VA'GANS (Wall. in. fl. ind. 2. p. 412.) climbing; branches quadrangular at the apex; leaves ovate-lanceolate, serrated; peduncles filiform, several times dichotomous, many-flowered, with a single flower in each bifurcation; petals orbicular, crenulate; capsules globular, naked, unarmed. ♄. ◡. F. Native of the mountainous forests of Nipaul, especially on Sheopore, and on Cheesapani. A most extensive, rambling, and climbing shrub, with stem, branches, and flowers exactly like those of *E. echinàtus*, but never throwing out roots from the branches and stems. Capsule 4-celled, 4-seeded. Seeds large, covered with a scarlet fleshy aril.

Rambling Spindle-tree. Shrub cl.

24 E. JAVA'NICUS (Blum. bijdr. 1146.) leaves opposite, oblong, bluntish, smooth, remotely serrulated above; pedicels 1-flowered, in fascicles, axillary, and terminal; flowers pentandrous; petals fringed. ♄. S. Native of Java, in woods.

Java Spindle-tree. Shrub 8 feet.

25 E. SIEBOLDIA'NUS (Blum. bijdr. 1147.) leaves opposite, oblong-lanceolate, sharply serrulated, smooth, puberulous on the middle nerve beneath; peduncles usually 5-flowered; flowers

tetrandrous; capsule acutely tetragonal. ♄. S. Native of Java. The shape of the petals is unknown.

Siebold's Spindle-tree. Shrub 10 feet.

26 E. subtriflòrus (Blum. bijdr. 1147.) spinose; leaves nearly opposite, oval-lanceolate, acuminated, sharply-serrulated, smooth; peduncles lateral, 3-flowered at the apex; flowers tetrandrous; capsule 4-lobed. ♄. G. Native of Japan.

Somewhat-three-flowered Spindle-tree. Shrub.

27 E. Thunbergia'nus (Blum. bijdr. 1147.) leaves nearly opposite, elliptic-oblong, tapering to both ends, sharply-serrulated, smooth; peduncles axillary, 3-flowered; flowers tetrandrous; capsule 4-lobed. ♄. G. Native of Japan. Celàstrus alàta, Thunb. fl. jap. 98. Form of petals unknown.

Thunberg's Spindle-tree. Shrub.

† *A doubtful species, which probably should be excluded from the genus.*

28 E. Chine'nsis (Lour. fl. coch. ed. Willd. 1. p. 194.) stem herbaceous, climbing, with tendrils; leaves cordate, toothletted, rough; peduncles lateral; petals 5, oblong-ovate; berry free, ovate, 10-angled, 1-celled, valveless; seeds many, covered with aril. ♃. ◡. G. Native of China, in the suburbs of Canton. Flowers white, pentandrous.

China Spindle-tree. Fl. May, June. Clt. 1820. Pl. cl.

Cult. The hardy kinds of this genus are well adapted for large shrubberies. They will thrive in any common soil, and are easily increased by seeds, which ripen in abundance; or ripened cuttings, planted in autumn, will readily strike root. Those said to be frame and greenhouse plants will no doubt turn out to be truly hardy.

IV. CELA'STRUS (from κηλας, *celas*, the latter season; the fruit remains on the tree all winter. The *Celàstros* of the Greeks is supposed to be *Euónymus*). Lin. gen. 270. Gært. fruct. 2. t. 95. D. C. prod. 2. p. 5.—Cátha, Forsk. descr. p. 63.—Euonymoìdes, Mœnch. meth. 70.

Lin. syst. *Pentándria, Monogýnia.* Calyx small, 5-lobed. Petals 5, unguiculate. Stamens 5. Ovary small, immersed in a 10-striped disk. Style 1. Stigmas 2-3. Capsule 2-3-valved, bearing a complete or incomplete dissepiment in the middle of each valve. Seed 1, or few, more or less involved in a large fleshy aril.—Shrubs with alternate leaves, and many-flowered axillary peduncles, sometimes approximating in terminal panicles. The carpology of many of the species being unknown, the species are arranged here in an artificial manner.

* *Leaves quite entire.*

African.

1 C. filifórmis (Thunb. fl. cap. 2. p. 115.) climbing, smooth; leaves lanceolate, opposite; branches filiform, flexuous; flowers axillary, few, almost sessile. ♄. ◡. G. Native of the Cape of Good Hope. Flowers white. Stigma capitate.

Filiform-branched Staff-tree. Shrub cl.

2 C. críspus (Thunb. fl. cap. 2. p. 115.) erect, much branched; leaves obovate, obtuse, wavy, smooth; branchlets pubescent; flowers axillary, umbellate, hairy. ♄. G. Native of the Cape of Good Hope. Flowers white.

Curled-leaved Staff-tree. Shrub 4 feet.

3 C. obtu'sus (Thunb. fl. cap. 2. p. 116.) erect, smooth; leaves obovate, very blunt, with revolute edges; panicles axillary. ♄. G. Native of the Cape of Good Hope. Panicle simple or dichotomous. Flowers white.

Obtuse-leaved Staff-tree. Shrub 6 feet.

4 C. lau'rinus (Thunb. fl. cap. 2. p. 116.) erect, smooth; leaves ovate-oblong, blunt, somewhat emarginate, with the edges a little revolute; panicles axillary. ♄. G. Native of the Cape of Good Hope. Style very short. Leaves 2 inches long. Flowers white.

Laurel-like Staff-tree. Fl. June, July. Clt. 1818. Shrub 2 ft.

5 C. oleoìdes (Lam. ill. no. 2596.) erect, smooth; leaves ovate-lanceolate, acute, stalked; petiole short, stem-clasping at the base; corymbs axillary, few-flowered, subterminal, some of them opposite the leaves, and others axillary. ♄. G. Native of the Cape of Good Hope. C. oleifòlia, Pers. ench. 1. p. 327. C. oleoìdes, Sieb. pl. ex sic. cap. no. 93. Flowers white.

Olive-like Staff-tree. Fl. May, June. Clt. 1824. Shrub 4 ft.

6 C. pteroca'rpus (D. C. prod. 2. p. 5.) erect, smooth; leaves ovate, somewhat emarginate; racemes short, axillary; capsules 3-valved, drawn out into 3 vertical toothed wings. ♄. G. Native of the Cape of Good Hope.—Burm. afr. t. 97. f. 1. This and the two following species will probably form a distinct genus, on account of their appendiculate fruit. Flowers white.

Wing-fruited Staff-tree. Fl. July. Clt. 1824. Shrub 4 ft.

7 C. rostra'tus (Thunb. fl. cap. 2. p. 117.) erect, smooth; leaves oblong-ovate, unequal, bluntly acuminated; panicles or corymbs dichotomous, axillary; capsules prickly, with unarmed scales. ♄. G. Native of the Cape of Good Hope. Flowers white.

Beaked-capsuled Staff-tree. Shrub 6 feet.

8 C. tricuspida'tus (Lam. ill. no. 2594.) erect, smooth; leaves oblong-ovate, obtuse, smooth, on short petioles; racemes axillary, simple, nearly the length of the leaves; fruit trigonal. ♄. G. Native of the Cape of Good Hope. Cassìne lævigàta, Lam. dict. 1. p. 652. O'lea Capénsis, Buchoz. dec. 6. t. 3. Flowers white.

Three-pointed-fruited Staff-tree. Fl. May, June. Clt. 1818. Shrub 6 feet.

9 C. lu'cidus (Lin. mant. 49.) erect, smooth; leaves oval or roundish, shining, marginated; pedicels axillary, crowded, very short; fruit 3-valved, naked. ♄. G. Native of the Cape of Good Hope. Lher. stirp. t. 25. Cassìne concàva, Lam. dict. 1. p. 633.—Pluk. alm. t. 280. f. 4. Flowers white.

Shining-leaved Staff-tree. Fl. April, Sept. Clt. 1722. Sh. 3 ft.

10 C. microphy'llus (Thunb. fl. cap. 2. p. 110.) erect, smooth; leaves ovate, blunt, approximate; panicle terminal, dichotomous. ♄. G. Native of the Cape of Good Hope. Flowers white.

Small-leaved Staff-tree. Shrub 2 feet.

11 C. diffu'sus; much branched, diffuse; leaves alternate, ovate, almost entire, obtuse, mucronate, glabrous; flowers axillary and terminal, sessile. ♄. S. Native of Guinea. Flowers yellowish-green.

Diffuse Staff-tree. Shrub 6 feet.

12 C. elli'pticus (Thunb. fl. cap. 2. p. 119.) erect, smooth; leaves elliptical, opposite; panicles simple, axillary. ♄. G. Native of the Cape of Good Hope, in woods. Flowers white.

Elliptical-leaved Staff-tree. Shrub 4 feet.

Asiatic.

13 C. tri'gynus (Roxb. fl. ind. 2. p. 391.) erect, smooth; leaves oblong, on short petioles; flowers in small, axillary, dichotomous, round heads; nectary of 5 scales; styles 3. ♄. S. Native of the Moluccas. Flowers white?

Three-styled Staff-tree. Shrub.

14 C. verticilla'tus (Roxb. fl. ind. 2. p. 291.) arboreous, smooth; leaves scattered, broad-lanceolate, wavy; panicle terminal, umbelliferous; capsule 1-celled, 2-valved, few-seeded. ♄. F. Native of Nipaul, where it is known by the name of *Tiblliti.* Trunk straight; the branches and branchlets have a strong tendency to be verticillate, as well as the leaves, which

are drooping. Stigma 2, rarely 3-lobed. Flowers white? Seeds covered with a soft scarlet aril.

Whorled-branched Staff-tree. Fl. April, July. Clt.? Tree 20 feet.

15 C. ROBU'STUS (Roxb. fl. ind. 2. p. 395.) erect, smooth; leaves lanceolate, entire, glossy; racemes axillary, length of leaves; capsules 1-celled, 2-valved. ♄. G. Native of Silhet, in the East Indies, where it is called *Sheelkoil.* It grows to be one of their largest timber trees. Racemes simple, solitary, or in pairs. Flowers numerous, small, greenish-yellow. Disk 5-lobed, girding the base of the ovary. Styles 2, terminated by capitate stigmas.

Robust Staff-tree. Fl. Aug. Tree 50 feet.

16 C. OPPOSÌTUS (Wall. in fl. ind. 2. p. 398.) erect, smooth, with opposite jointed branches, younger ones tetragonal; leaves opposite, lanceolate, blunt; peduncles axillary, 3-flowered. ♄. S. Probably a native of the peninsula of India. Flowers small, white? Style columnar, terminated by a bifid stigma.

Opposite-branched Staff-tree. Shrub 6 feet.

17 C. BIVA'LVIS (Jack, in mal. misc. 1. no. 2. p. 19.) erect, smooth; leaves lanceolate, acuminate; peduncles lateral, few-flowered; capsules ovate, 2-valved, 1-seeded; corolla wanting. ♄. S. Native of the Malay Islands. Peduncles dichotomous, 5-10-flowered. Style terminated by a truncate stigma. Seeds covered with a crimson aril, which is beautifully veined.

Two-valved-capsuled Staff-tree. Shrub.

American.

18 C. MACROCA'RPUS (Ruiz et Pav. fl. per. 3. t. 230. f. 16.) erect, smooth; leaves oblong-lanceolate, with an emarginate acumen; pedicels axillary, very short, aggregate; capsules ovate, 2-3-valved. ♄. S. Native of Peru, in woods. Haénkia multiflòra, Ruiz et Pav. fl. per. syst. p. 65. Seeds with a white pulpy aril. Flowers white. This is probably a species of *Pyrulària,* according to Nuttal.

Large-fruited Staff-tree. Shrub 6 feet.

19 C. DU'BIUS (Spreng. syst. 1. p. 774.) erect, smooth; leaves elliptical, obtuse; flowers axillary, somewhat fascicled; capsules 2-valved. ♄. S. Native of the Antilles. Senàica ellíptica, Lam.

Doubtful Staff-tree. Shrub 4 feet.

20 C. BULLA'TUS (Lin. spec. 285.) climbing, smooth; leaves ovate, acute, stalked, coriaceous; panicle terminal. ♄. ◡. G. Native of St. Domingo.—Pluk. alm. t. 28. f. 5. Capsules scarlet, elegantly wrinkled, 3-valved, each containing a hard oval seed, covered with a thin red aril. Flowers white, in loose terminal racemes. This species is said to be a native of Virginia, but notwithstanding the diligent researches of Mr. Pursh at the place of its supposed nativity, he has not been able to find it. He therefore strongly suspects that it is not a native of North America.

Wrinkled-capsuled Staff-tree. Fl. July. Clt. 1759. Shrub cl.

21 C. HA'ENKEI (Spreng. syst. app. p. 88.) branches flexuous; leaves stalked, oblong-lanceolate, wavy, quite entire; racemes axillary, much exceeding the leaves; flowers bracteate. ♄. S. Native of Peru. Háenkea flexuòsa, Ruiz et Pav. fl. per. 3. t. 231. Corolla monopetalous? pitcher-shaped, and the fruit a drupe. This is a very doubtful species of *Celástrus.*

Haenk's Staff-tree. Shrub.

22 C. OVA'TUS (Hill in hort. kew. 437. t. 16.) erect, smooth; leaves ovate, stalked, entire; flowers axillary, crowded. ♄. H. Native of the Bahama Islands.

Ovate-leaved Staff-tree. Shrub 4 feet.

* * *Leaves toothed, serrated or crenate.*

African.

23 C. ACUMINA'TUS (Thunb. fl. cap. 2. p. 119.) erect, smooth; leaves elliptical, acute, crenated; flowers axillary, usually twin. ♄. G. Native of the Cape of Good Hope. C. populifòlius, Lam. ill. no. 2698. according to Poir. suppl. 2. p. 144. Flowers white.

Acuminate-leaved Staff-tree. Shrub 6 feet.

24 C. PROCU'MBENS (Thunb. fl. cap. 2. p. 119.) decumbent, smooth; leaves ovate, toothed; flowers axillary, usually solitary; capsules 3-4-valved. ♄. G. Native of the Cape of Good Hope, in sandy places.

Procumbent Staff-tree. Shrub decumbent.

25 C. CYMATÒDES (Spreng. syst. 1. p. 775.) leaves obovate, wavedly-toothed, and reticulately veined, opposite; flowers axillary, sessile. ♄. G. Native of the Cape of Good Hope.

Waved-toothed-leaved Staff-tree. Shrub.

26 C. CE'RNUUS (Thunb. prod. p. 42.) leaves ovate, obtuse, serrated; peduncles axillary, 1-flowered, drooping. ♄. G. Native of the Cape of Good Hope. Flowers white?

Drooping-flowered Staff-tree. Fl. May, June. Clt. 1817. Shrub 6 feet.

27 C. UNDA'TUS (Thunb. fl. cap. 2. p. 126.) erect, smooth; leaves obovate, somewhat wedge-shaped, undulately-toothed; flowers axillary, sessile. ♄. G. Native of the Cape of Good Hope. Flowers white.

Waved-leaved Staff-tree. Fl. June, July. Clt. 1826. Sh. 6 ft.

28 C. TETRAGÒNUS (Thunb. prod. p. 42.) erect, smooth; leaves ovate, serrated, opposite; branches tetragonal; panicle terminal. ♄. G. Native of the Cape of Good Hope. Flowers white?

Tetragonal-branched Staff-tree. Clt. 1816. Shrub 4 feet.

29 C. ILI'CINUS (Burch. cat. afr. austr. no. 1663.) erect, smooth; leaves alternate, ovate, somewhat rhomboid, coarsely serrated, pale beneath; pedicels axillary, 1-flowered, jointed beneath the middle. ♄. G. Native of the Cape of Good Hope. Capsules 3-valved. Leaves like those of *Quércus ilex.* Flowers white.

Spanish-oak-leaved Staff-tree. Clt. 1817. Shrub 4 feet.

30 C. RHAMNOÌDES (Poir. suppl. 2. p. 145.) branches diffuse; leaves ovate or lanceolate, acute, sharply serrated, smooth; pedicels 1-flowered, axillary, crowded, unequal. ♄. G. Native of the Cape of Good Hope. Flowers white. It is not known whether this shrub is unarmed or spiny.

Rhamnus-like Staff-tree. Shrub 10 feet.

31 C. CASSINOÌDES (Lher. sert. p. 6. t. 10.) erect, smooth; leaves ovate, acute at both ends, serrated, permanent; pedicels 2-3 together, axillary, very short. ♄. G. Native of the Canary Islands. Flowers white.

Cassine-like Staff-tree. Fl. Aug. Sept. Clt. 1779. Shrub 4 ft.

32 C. LYCIOÌDES (Brouss. ex Willd. mss. in Schult. syst. 5. p. 427.) erect, smooth; leaves roundish-ovate, obtuse, crenate, coriaceous; pedicels axillary, very short. ♄. G. Native of the Canary Islands. Flowers white.

Lycium-like Staff-tree. Shrub 4 feet.

33 C. EDU'LIS (Vahl. symb. 1. p. 21.) erect, smooth; leaves opposite and alternate, elliptical, bluntly serrated; cymes axillary, dichotomous. ♄. G. Native of Yemen, in Arabia, where it is cultivated in gardens along with the coffee. The green leaves of this tree are eaten with avidity by the Arabs. They possess nearly the same qualities as opium. The tree is called *cat* or *kat* in Arabic; hence Càtha of Forsk. Flowers white. Capsule oblong-cylindrical, 3-celled, with one seed in each cell.

Eatable Staff-tree. Shrub 10 feet.

34 C. DE'COLOR (Gaillaud. voy. meroe. 2. t. 64. f. 6.) leaves oval-oblong, somewhat crenate, tapering to the base; peduncles axillary, 3-6-flowered; flowers subumbellate; capsules 2-valved. ♄. F. Native of Upper Egypt?

Ill-coloured Staff-tree. Shrub.

35 C. POPULIFÒLIUS (Lam. ill. no. 2698.) leaves ovate, acuminated, serrated; umbels almost sessile, few-flowered. ♄. G. Native of the Cape of Good Hope.

Poplar-leaved Staff-tree. Shrub 6 feet.

Asiatic.

36 C. PANICULA'TUS (Willd. spec. 1. p. 1125.) climbing; leaves roundish-oval, serrated, smoothish; panicle terminal; stamens inserted in a nectarial ring. ♄. ◡. S. Native of the East Indies, on the Circar mountains.—A large climbing shrub; the bark covered with grey scabrous specks. Flowers numerous, small, yellow. Style 1. Stigmas 3. Capsule round, size of a pea, 1-celled, 3-valved, containing from 3 to 6 seeds, surrounded by yellow aril.

Panicle-flowered Staff-tree. Fl. March, April. Shrub cl.

37 C. DEPE'NDENS (Wall. in fl. ind. 2. p. 389.) climbing, smooth; leaves oblong, acuminated, serrated; panicle terminal, composed of many simple, diverging, short racemes; stamens alternating, with an equal number of reniform nectarial glands. ♄. ◡. G. Native of Nipaul. C. multiflòra, Roxb. fl. ind. 2. p. 389. Flowers numerous, small, pale greenish-white. Capsule straw-coloured, roundish, somewhat 3-lobed, 3-valved, 3-celled, and usually with a single seed in each cell. Seeds covered with a thin, pulpy, scarlet aril. Style terminated by a stigma of 3 emarginate lobes.

Hanging-leaved Staff-tree. Fl. July. Shrub cl.

38 C. NU'TANS (Roxb. fl. ind. 2. p. 390.) climbing, smooth; leaves stalked, broad-ovate, bluntly serrated; panicle racemose, terminal, drooping; seeds invested by a complete aril. ♄. ◡. S. Native of Mysore. A large climbing and twining tree, with light-brown scabrous bark. Nectary a concave, 5-sided receptacle. Flowers small, greenish-white. Capsule round, size of a pea, 1-celled, 3-valved, containing 3-6 seeds each, invested by a thick, complete, fleshy, orange-coloured aril. Style scarcely any. Stigma with 3 spreading notched lobes.

Nodding-panicled Staff-tree. Clt. 1810. Shrub cl.

39 C. OBTUSIFÒLIUS (Roxb. fl. ind. 2. p. 393.) arboreous, smooth; leaves stalked, lanceolate, bluntly serrulated, very blunt and hard; peduncles axillary, many-flowered. ♄. S. Native of the Mauritius. C. trigynus, Lam. ill. 2. no. 2699. Style none. Stigma deeply 3-lobed. Capsules 3-valved, naked. Sonneràtia, Comm. C. pỳrius, Willem. herb. maur. p. 21. Young shoots glaucous, nodding at the points. Peduncles once or twice dichotomous. Flowers small, white. Calyx fringed. Stigma obscurely 3-lobed.

Blunt-leaved Staff-tree. Fl. May, June. Clt. 1824. Tree 20 feet.

40 C. MONOSPE'RMUS (Roxb. fl. ind. 2. p. 394.) climbing, smooth; leaves oblong, glossy, serrulated; panicles thin, linear, axillary, and terminal, longer than the leaves; capsules 3-valved, 1-seeded. ♄. ◡. G. Native of Silhet, in the East Indies, where it is called *Tiara*. Climbing and twining over trees to a considerable extent. Flowers numerous, small, pale greenish-yellow. Disk flat, repand, embracing the base of the ovary. Stigma trigonal. Capsule slightly triquetrous, oblong, smooth, the size of a field bean. Seed solitary, covered with an orange-coloured or scarlet aril.

One-seeded Staff-tree. Fl. April, May. Shrub cl.

41 C. WALLI'CHII; climbing, smooth; leaves ovate, coriaceous, acute, serrated, glossy, and shining; racemes axillary; capsules triquetrous, 3-valved, many-seeded. ♄. ◡. S. Native of Penang, in the East Indies. C. lùcida, Wall. in fl. ind. 2. p. 400. but not of Lin.

Wallich's Staff-tree. Shrub cl.

42 C. PAUCIFLÒRUS (Wall. in fl. ind. 2. p. 400.) erect, smooth; leaves lanceolate, acuminate, serrulated; peduncles axillary, 6-8-flowered; pistil villous; nectary 5-lobed; capsule triangularly globose, 3-valved. ♄. S. Native of Penang, in the East Indies, where it is called *Boonga Lawung*. Pittósporea serrulàta, Jacq. mss. Flowers yellowish-green, fascicled. Ovary downy. Stigma simple. Capsule 1-celled. Seeds attached along the middle of each valve to parietal prominent placentas, 6 in number, roundish, and angular.

Few-flowered Staff-tree. Shrub 6 feet.

43 C. STYLÒSUS (Wall. fl. ind. 2. p. 401.) climbing, smooth; leaves ovate-lanceolate, acuminated, acutely serrated; peduncles axillary, few-flowered, racemose; petals oblong; capsules globular, crowned by a long style. ♄. ◡. G. Native of Nipaul. Flowers greenish-white. Capsule yellow. Style crowned by a 3-lobed, 3-furrowed stigma.

Long-styled Staff-tree. Fl. May, July. Shrub cl.

44 C. ALNIFÒLIUS (D. Don, prod. fl. nep. p. 190.) leaves elliptical, acuminated, serrated, nerved, opaque on both surfaces, blunt at the base; peduncles axillary, usually solitary. ♄. G. Native of Nipaul, at Sirinagur. A smooth shrub.

Alder-leaved Staff-tree. Shrub.

45 C. MICROCA'RPUS (D. Don, prod. fl. nep. p. 191.) leaves ovate, crenated, pubescent on both surfaces, as well as the branchlets, acute at the base; peduncles axillary, usually solitary, 1-flowered. ♄. G. Native of Nipaul, at Sirinagur.

Small-fruited Staff-tree. Shrub.

46 C. HEYNEA'NUS (Roth. in Schult. syst. 5. p. 421.) erect, smooth; leaves elliptical, bluntly serrulated; cymes axillary, when in fruit divaricating. ♄. S. Native of the East Indies. C. serrulàtus, Roth. nov. spec. p. 155. Flowers whitish.

Heyne's Staff-tree. Shrub.

47 C. ALPE'STRIS (Blum. bijdr. 1145.) leaves ovate-oblong, acuminated, glandularly serrated, smooth; corymbs axillary, dichotomous. ♄. S. Native of Java, in the higher woods.

Alp Staff-tree. Shrub 7 feet.

48 C. REPA'NDUS (Blum. bijdr. p. 1145.) leaves ovate-oblong, long-acuminated, ratherrepand, smooth; panicle axillary, about equal in length to the leaves. ♄. S. Native of Java.

Repand Staff-tree. Shrub.

49 C. ROTHIA'NUS (Schult. syst. 5. p. 423.) leaves roundish-oval, acuminated, serrated, pubescent; panicle terminal, with corymbose branches. ♄. S. Native of the East Indies. C. paniculàtus, Roth. mss. but not of Willd. Flowers white.

Roth's Staff-tree. Shrub.

50 C. PUNCTA'TUS (Thunb. fl. jap. 97.) climbing, smooth; branches dotted; leaves oval, acuminated, serrated; flowers scattered on the branches. ♄. ◡. G. Native of Japan and China. Branches angular, rough from white dots. Flowers greenish. Seeds covered with a yellow wrinkled aril.

Spotted-branched Staff-tree. Clt. 1817. Shrub cl.

51 C. STRIA'TUS (Thunb. jap. 98.) erect, smooth; branches striped, and are as well as the leaves, opposite, ovate, acuminated, serrated; peduncles scattered, 1-flowered. ♄. G. Native of Japan. Capsule 1-4-celled, or from 1-4 aggregate carpels.

Striped-branched Staff-tree. Shrub.

52 C. CRENA'TUS (Forst. prod. no. 113.) leaves ovate, crenulate; cymes axillary. ♄. G. Native of Marquesas Islands in the Pacific ocean, as well as in the East Indies, according to Roth, which is probably the same.

Notch-leaved Staff-tree. Shrub.

53 C. DILATA'TUS (Thunb. in Lin. trans. 2. p. 332.) erect, smooth; leaves obovate, pointed, serrated at the apex; flowers aggregate, terminal. ♄. G. Native of Japan. Berries blue, aggregate.

Dilated-leaved Staff-tree. Shrub.

54 C. ARTICULA'TUS (Thunb. jap. 97.) erect, smooth; leaves

roundish, serrated, acuminate; peduncles axillary, somewhat trifid. ♄. G. Native of Japan. C. orbiculàris, Lam. ill. no. 2700. C. auriculàtus, Vitm. summ. 2. p. 31. Capsules 3-valved.

Jointed Staff-tree. Shrub.

55 C. ALA'TUS (Thunb. jap. 98.) erect, smooth; branches winged; leaves opposite, on very short petioles, acuminate, serrulated; peduncles 1-flowered, furnished with 2 glands above the middle. ♄. G. Native of Japan. Capsules 1-2-3-celled. This is probably a species of *Euónymus.*

Winged-branched Staff-tree. Shrub 7 feet.

American.

56 C. SCA'NDENS (Lin. spec. 285.) climbing, smooth; leaves oval, acuminated, serrated; racemes terminal. ♄. ◡. H. Native of North America, from Canada to Virginia, in hedges and woods among rocks. Duh. arb. 1. t. 95. Schkuhr. handb. 1. t. 47. Flowers pale yellow. Berries orange-scarlet, 3-cornered, 3-seeded. See H. B. et Kunth, nov. gen. amer. 7. p. 64. Flowers dioecious.

Climbing Staff-tree. Fl. May, June. Clt. 1736. Shrub cl.

57 C. MYRTIFÒLIUS (Lin. spec. 285.) erect, smooth; leaves ovate, serrulated; flowers racemose. ♄. S. Native of Jamaica.—Sloane, hist. 2. t. 193. f. 1. There is a species from Siberia very like this plant, and another said to be from Virginia; but these are truly obscure plants.

Myrtle-leaved Staff-tree. Clt. 1810. Tree 15 feet.

58 C. QUADRANGULA'RIS (Schrad. in Gœtt. anz. 1821. p. 716.) erect, smooth; younger branches quadrangular; leaves oblong-oval, spiny-toothed, shining; peduncles axillary, crowded. ♄. S. Native of Brazil. Ilex acutángula, Neuw. bras. ex Nees, in flora, 1821. p. 739. Flowers white.

Quadrangular-branched Staff-tree. Clt. 1820. Sh. 10 feet.

59 C. ILICIFÒLIUS (Schrad. l. c.) erect, smooth; leaves oblong, truncate, subsinuate, spiny, shining above, opaque beneath; peduncles axillary. ♄. S. Native of Brazil. I'lex truncàta, Neuw. bras. 2. ex Nees, in flora, 1821. p. 329 and 361.

Holly-leaved Staff-tree. Shrub.

60 C. RETU'SUS (Poir. suppl. 2. p. 146.) erect, smooth; leaves ovate and oval, acuminated, emarginate, or retuse at the apex, serrately-crenate. ♄. G. Native of the Andes of Peru. C. emarginàtus, Ruiz et Pav. fl. per. 3. p. 6. t. 229. f. *a.* but not of Willd. C. Peruviànus, Deitr. lex. 2. p. 111. This is probably a species of *Maytènus* according to Kunth.

Retuse-leaved Staff-tree. Clt. 1824. Tree 20 feet.

61 C. CONFE'RTUS (Ruiz et Pav. fl. per. 3. p. 6.) erect, smooth; branches in aggregate whorles; leaves crowded, oval, and roundish, serrulated; flowers crowded. ♄. S. Native of Peru in groves. Flowers white. Capsules with 2 or 3 spreading reflexed valves. Probably a species of *Maytènus.*

Crowded Staff-tree. Shrub.

62 C. MEXICA'NUS (Moc. et Sesse, fl. mex. icon. ined. D. C. prod. 2. p. 8.) erect, smooth; leaves ovate-oblong, acute, serrated; pedicels axillary, trifid, 3-flowered. ♄. G. Native of Mexico. Capsule 3-celled, 3-seeded.

Mexican Staff-tree. Clt. 1824. Shrub 6 feet.

63 C. MAGELLA'NICUS (D. C. prod. 2. p. 8.) leaves ovate-lanceolate, acute, bluntly serrated; flowers axillary, almost sessile; fruit compressed, 2-celled, 2-seeded. ♄. F. Native of the Straits of Magellan. Cassine Magellánica, Lam. ill. no. 2590.

Magellan Staff-tree. Shrub.

† *Doubtful species. Leaves ternate or pinnate. These will probably form a distinct genus in some other order.*

64 C. MAURITIA'NUS (Willem. herb. maur. 22.) leaves ternate, downy beneath; panicle terminal. ♄. S. Native of the Mauritius.

Mauritian Staff-tree. Shrub.

65 C. MICRA'NTHUS (Roxb. fl. ind. 2. p. 393.) climbing, somewhat armed; leaves unequally pinnate, with from 7-9 opposite, oblong, entire, smooth leaflets; panicles axillary, filiform, rusty; disk saucer-shaped, bearing the stamina on its margin; style wanting. ♄. S. Native of the Moluccas.

Small-flowered Staff-tree. Shrub.

Cult. The hardy kinds of *Staff-tree* will grow in any common soil; they are well fitted to be planted in small shrubberies. *C. scándens* is a plant well adapted to cover bowers or trellis-work. All are easily increased by laying the young shoots or by slips of the roots. The stove, greenhouse, and frame species will thrive well in a mixture of loam, peat, and sand; and ripened cuttings, planted in mould with a hand-glass placed over them, will root freely, those of the stove kinds in heat.

V. CA'THA (a name of Arabian origin). Forsk. descr. p. 63.

LIN. SYST. *Pentándria, Monogýnia.* Calyx small, flat, 5-lobed, regular. Petals 5, inserted under the margin of the disk, sessile, spreading. Stamens 5, inserted with the petals, equal. Disk large, orbicular, filling the bottom of the flower, emarginate at the origin of the stamens. Ovary half immersed in the disk, 3-celled; ovula 2, fixed to the central axis, collateral, ascending, in *C. pyracántha* 5-6, and without an axis. Style short, or nearly wanting, crowned by a 3-parted stigma. Capsules triquetrous, 3-furrowed, 3-celled, 3-valved. Albumen fleshy. Cotyledons leafy. Radicle pointing towards the hilum. Spiny trees and shrubs, with scattered, simple, leaves, sometimes in fascicles, with stipular ciliæ. Corymbs of flowers axillary, somewhat dichotomous. Flowers stalked in fascicles, white.

This genus being separated from *Celástrus*, we shall therefore retain the authorities for the species under that genus.

* *Leaves quite entire.*

1 C. LACÍSA (Thunb. fl. cap. p. 219.) prickles recurved; leaves orbicular, cut; peduncles axillary, very short, subumbellate. ♄. G. Native of the Cape of Good Hope.

Cut-leaved Staff-tree. Shrub 4 feet.

2 C. LINEA'RIS (Thunb. fl. cap. 219.) spines leafy; leaves linear; panicles axillary. ♄. G. Native of the Cape of Good Hope, in woods.

Linear-leaved Staff-tree. Fl. May, Ju. Clt. 1818. Sh. 4 ft.

3 C. INTEGRIFÒLIA (Thunb. fl. cap. 219.) spines leafy; leaves ovate, reflexed; pedicels axillary. ♄. G. Native of the Cape of Good Hope, in bushy places. Flowers white.

Entire-leaved Staff-tree. Shrub 3 to 4 feet.

4 C. IN'TEGER (Thunb. fl. cap. 123.) spiny, smooth; leaves ovate, emarginate; panicle axillary. ♄. G. Native of the Cape of Good Hope. According to Sprengel this is the same as *C. integrifòlius.*

Entire Staff-tree. Shrub 3 to 4 feet.

5 C. RÍGIDA (Thunb. fl. cap. 220.) spiny, smooth; branches somewhat secund; leaves obovate, quite entire, cut; flowers axillary, sessile. ♄. G. Native of the Cape of Good Hope. Flowers white.

Stiff Staff-tree. Clt. 1818. Fl. May, June. Shrub 4 feet.

6 C. EMARGINA'TA (Willd. spec. 1. p. 1128.) spines leafy; leaves obovate, entire, smooth; flowers numerous, axillary; capsules inflated; cells 2-seeded. ♄. S. Native of every part of the East Indies, very common. Stem nothing deserving the name, but innumerable branches bent in every direction. Umbellets many-flowered on very short peduncles, one or two

rising from the centre of the fascicles of leaves. Flowers small, whitish-yellow. Disk saucer-like, crenulate, surrounding the base of the ovary. Style half 3-parted. Stigmas emarginate. Capsule inflated, 3-sided, 3-celled, 3-valved, with 2 red seeds in each cell, resting on a white fleshy receptacle. It is called *Chennee-chintoo* in the Telinga language, and is very useful to make fences and for fuel.

Emarginate-leaved Staff-tree. Clt. 1820. Shrub 4 feet.

* * *Leaves toothed or serrated.*

Asiatic.

7 C. MONTA'NA (Roth. nov. spec. 154. Roxb. fl. ind. 2. p. 387.) spines bearing leaves and flowers; leaves obovate, serrulated, smooth; panicles axillary, small, dichotomous; capsules 3-sided, 3-celled, each cell containing 1 or 2 seeds. ♄. S. Native of the East Indies, on mountains. Flowers small, white. Disk as in *C. emarginàta.* Stigmas emarginate. Seeds small, nearly round, with a white aril embracing the lower part of the seed. The wood is hard and durable.

Mountain Staff-tree. Tree 20 feet.

8 C. WALLI'CHII; spines bearing leaves and even flowers; stem erect, stiff; branches round, flexuous; leaves very tough, obovate-cuneated, sharply-serrulated; corymbs small, scattered among the leaves. ♄. S. Native of the East Indies, at Travancore. C. rígida, Wall. fl. ind. 2. p. 396. C. buxifòlius, Roxb. Leaves at first in fascicles on the spines. Flowers small, white.

Wallich's Staff-tree. Shrub 8 feet.

9 C. RU'FA (Wall. fl. ind. 2. p. 397.) erect, smooth, sparingly armed with axillary short spines; leaves lanceolate, acuminate, serrulated, coriaceous; corymbs axillary, fascicled, on capillary, coloured peduncles; capsule obovate, triangular, 3-seeded. ♄. S. Native of the forests in the valley of Nipaul. A large very branchy tree. Young branches angular, of a more or less deep red colour, glaucous. Leaves with glandular serratures. Flowers small, white. Capsules small, obovate, 3-lobed, 3-celled, 3-seeded. Segments of calyx and petals crenulate.

Rufous Staff-tree. Fl. March, April. Tree 30 feet.

10 C. ZEYLA'NICA (Roth. mss. ex Schult. syst. 6. p. 427.) spines axillary, opposite, shorter than the petioles; leaves roundish-cuneated, somewhat emarginate at the apex, obsoletely crenated, shining; peduncles axillary, aggregate. ♄. S. Native of the East Indies. Flowers white.

Ceylon Staff-tree. Shrub.

African.

11 C. SENEGALE'NSIS (Lam. dict. 1. p. 661.) spines bearing leaves and flowers; branches terete; leaves obovate-oblong, smooth, somewhat glaucous, unequally toothed; cymes small, few-flowered. ♄. S. Native of Senegal and Gambia. C. phyllacánthus, Lher. sert. ang. 6. no. 28. Flowers whitish-green.

Var. β, glaucifòlius (D. C. prod. 2. p. 8.) leaves whitish-glaucous beneath, bluntish; cymes many-flowered, about the length of the leaves.

Senegal Staff-tree. Shrub 8 feet.

12 C. BUXIFÒLIA (Lin. spec. 285.) spines large, bearing both leaves and flowers; leaves lanceolate-obovate, obtuse, serrated, smooth, coriaceous; branches angular; corymbs axillary, pedunculate, longer than the leaves. ♄. G. Native of the Cape of Good Hope, in bushy places. Sims, bot. mag. 2114. Houtt. pfl. syst. 3. t. 21. f. 1. Flowers white. Capsules globular.

Box-leaved Staff-tree. Fl. May, June. Clt. 1752. Shrub 8 to 10 feet.

13 C. CYMÒSA (Sol. in bot. mag. t. 2070.) spines all naked; leaves obovate, obtuse, serrated, smooth, coriaceous; corymbs shorter than the leaves. ♄. G. Native of the Cape of Good Hope. Flowers whitish.

Cymose-flowered Staff-tree. Fl. July. Clt. 1816. Shrub 8 to 10 feet.

14 C. MULTIFLÒRA (Lam. dict. 1. p. 661.) lower spines very long, those on the branches small, rather leafy; leaves obovate, rhomboid, serrated, smooth; branches rather angular; cymes axillary, stalked. ♄. S. Native of Africa. C. Hispánicus, Hort. par. Flowers white.

Many-flowered Staff-tree. Fl. May, Ju. Clt. 1816. Sh. 6 ft.

15 C. PYRACA'NTHA (Lin. spec. 285.) spines naked; branches round; leaves obovate or elliptical, serrated or entire, shining; peduncles axillary, few-flowered, branched, divaricating. ♄. G. Native of the Cape of Good Hope. Sims, bot. mag. 1157. Mill. icon. t. 87. Flowers greenish-white. Capsule red, 3-celled, 3-seeded, but often fewer from abortion.

Fire-spined Staff-tree. Fl. May, Ju. Clt. 1742. Sh. 4 ft.

16 C. ROTUNDIFÒLIA (Thunb. fl. cap. 221.) spines spreading; leaves stalked, roundish, obsoletely toothed. ♄. G. Native of the Cape of Good Hope. Flowers unknown.

Round-leaved Staff-tree. Shrub 4 feet.

17 C. FLEXUÒSA (Thunb. fl. cap. 221.) spines filiform; branches flexuous; leaves smooth, ovate, wavedly-serrated; pedicels numerous, axillary, 1-flowered. ♄. G. Native of the Cape of Good Hope. Flowers whitish.

Flexuous-branched Staff-tree. Fl. May, June. Clt. 1820. Shrub 6 feet.

18 C. PARVIFLÒRA (Vahl. symb. 1. p. 31.) spines naked; leaves ovate, crenated, smooth; peduncles filiform, dichotomous, longer than the leaves. ♄. G. Native of Kurma, in Arabia. Càtha spinòsa, Forsk. descr. 64. Flowers small, white.

Small-flowered Staff-tree. Shrub.

19 C. ARTICULA'TA (Thunb. jap. Blum. bijdr. p. 1146.) spinose; leaves roundish, oval, acute at both ends, smooth; young branches rather spiny, sarmentose; peduncles axillary, trifid. ♄. G. Native of Japan.

Jointed Staff-tree. Shrub 6 feet.

Cult. The culture and propagation of the species of *Càtha* is the same as that for the stove and greenhouse species of *Celástrus*, p. 9.

VI. PLECTRO'NIA (from πλεκτρον, *plectron*, a thorn; shrub covered with thorns.) Lin. gen. no. 300. Schreb. gen. no. 389. Burm. prod. p. 6.

LIN. SYST. *Pentándria, Monogýnia.* Calyx obsoletely 5-toothed, clothed with sinuses or 5 villous scales, permanent. Petals 5, sessile, inserted in the throat of the calyx. Stamens 5, very short; anthers 2-celled, roundish, each covered by a calycine scale. Ovary small. Style filiform. Stigma ovate. Berry oblong, 2-celled, 2-seeded. Seeds oblong, compressed.—A tree of no beauty, with quadrangular branches, opposite, stalked, lanceolate-ovate, entire, long leaves, and branched corymbs of white flowers, which are shorter than the leaves.

1 P. VENTÒSA (Lin. mant. 52. syst. 242.). ♄. G. Native of the Cape of Good Hope. P. corymbòsa, Burm. prod. 6.—Burm. afr. 257. t. 94. Celástrus? Plectrònia, D. C. prod. 2. p. 9.

Wind Plectronia. Clt. 1816. Tree.

Cult. For culture and propagation see greenhouse species of *Celástrus*, p. 9.

VII. MAYTE'NUS (Maiten is the name of one of the species in Chili). Feuill. Domb. Molin. ? H. B. et Kunth, nov. gen. amer. 7. p. 64. D. C. prod. 2. p. 9.

LIN. SYST. *Polygàmia, Diœ'cia.* Flowers polygamous. Calyx 5-cleft, small, permanent. Petals 5, spreading, alternating with the sepals. Disk fleshy, surrounding the ovary. Stigma sessile, 2-3-lobed. Capsule 1-4-valved, with a dissepiment in the middle of each valve. Seeds few, arillate, in the bottom of the cells. Embryo flat, placed in a fleshy albumen.—Small trees, natives of Chili and Peru, with alternate, simple, coriaceous, toothed, permanent leaves, and axillary, small, greenish-white flowers. Capsules usually copper-coloured inside. This genus is allied to *Senàcia* from the structure of the fruit, but from the embryo is referable to *Celastrìneæ*. According to Molina, his *Maytènus* has a 1-leaved calyx, a monopetalous corolla, 2 stamens, and a 1-seeded capsule. It may be this genus badly described, or a distinct one.

1 M. OCTOGÒNUS (D. C. prod. 2. p. 9.) leaves elliptical, bluntly angular, nerveless, obtuse, glaucous. ♄. S. Native of Peru in groves. Celástrus octogònus, Lher. sert. angl. p. 7. Senàcia octogòna, Lam. ill. no. 2713. Zízyphus Peruviàna, Lam. dict. 3. p. 320. Capsule 2-valved, 1-seeded.

Eight-angled-stemmed Maytenus. Fl. Oct. Nov. Clt. 1786. Shrub 6 feet.

2 M.? ULIGINÒSUS (H. B. et Kunth, nov. gen. amer. 7. p. 65.) branches terete, scattered; leaves obovate-elliptical, rounded at both ends, obsoletely repand-toothed, rather coriaceous, smooth; flowers axillary, crowded; pedicels 1-flowered. ♄. G. Native of New Granada, in the province of Quito, near Guayaquil, in bogs. Celástrus orbiculàris, Willd. in Schult. syst. 5. p. 423. Capsule 3-valved, 3-celled, 3-seeded, ex. Bonpl.

Bog Maytenus. Shrub 5 feet.

3 M. CHILE'NSIS (D. C. prod. 2. p. 9.) leaves elliptic-oblong, tapering to the base, taper-pointed, with serrated edges. ♄. G. Native of Chili, at Coquimbo. Maiten. Feuill. obs. 3. p. 39. t. 27. Maytènus, Juss. gen. 449. Desrous, in Lam. dict. 4. p. 2. exclusive of the synonyme of Molina? Senàcia Maytènus, Lam. ill. no. 2712. Celástrus Maytènus, Willd. spec. 1. p. 1127. Capsules 2, rarely 3-valved.

Chili Maytenus. Tree 12 feet.

4 M. UNCINA'TUS; leaves lanceolate-linear, narrow, elongated, acuminated, serrated. ♄. G. Native of Chili. Celástrus uncinàtus, Ruiz et Pav. fl. per. 3. p. 7. t. 230. Flowers as in the former species crowded in the axillæ of the leaves, on short pedicels. M. Chilénsis, var. β, angustifòlius, D. C. prod. 2. p. 10.

Hooked Maytenus. Shrub 6 feet.

5 M. VERTICILLA'TUS (D. C. prod. 2. p. 10.) branches aggregate, whorled; leaves oblong-lanceolate, serrated; peduncles 1-3-flowered, much shorter than the leaves, rising along the branches either above or below the leaves in racemes. ♄. G. Native of Peru, in groves at Cuchero, Munna, &c. Leaves almost smooth, shining. Capsules 2-3-4-celled.

Whorled-branched Maytenus. Clt. 1823. Shrub 6 feet.

6 M. BOA'RIA (Mol. chili, 152.) leaves opposite or alternate, oblong, smooth, serrated; flowers scattered; seeds covered with red aril; corolla monopetalous; style 1; stamens 2; capsule 2-valved, 2-celled, 2-seeded. ♄. G. Native of Chili. A decoction of the twigs of this shrub is used to bathe the swellings produced by the poisonous shade of the Llithi, *Rhús caústica*. Its vernacular name is *Boaria*.

Boaria Maytenus. Clt. 1822. Shrub 10 feet.

Cult. See greenhouse species of *Celástrus* for culture and propagation, p. 9.

VIII. ALZATE'A (in honour of Joseph Anthony de Alzati y Ramirez, a Spanish naturalist). Ruiz et Pav. fl. per. prod. t. 7. D. C. prod. 2. p. 10.

LIN. SYST. *Pentándria, Monogýnia.* Calyx 5-cleft, 5-angled, permanent. Petals wanting. Stamens 5, hypogynous? Style 1. Capsules obcordate, 2-celled, 2-valved, with a dissepiment in the middle of each valve. Very like *Maytènus*, but the flowers are apetalous.

1 A. VERTICILLA'TA (Ruiz et Pav. fl. per. 3. p. 20. t. 241. f. *a*.). ♄. G. Native of Peru in groves near Messapata. Leaves obovate, emarginate. Flowers small, greenish-white, in corymbs.

Whorled Alzatea. Clt. 1824. Shrub 10 feet.

Cult. See greenhouse species of *Celástrus* for culture and propagation.

IX. CRYPTERO'NIA (from κρυπτος, *cryptos*, hidden, and πτερον, *pteron*, a wing; the seeds are terminated by a narrow wing). Blum. bijdr. 1145.

LIN. SYST. *Monœ'cia, Pentándria.* Flowers monoecious from abortion. Calyx inferior, small, 5-toothed. Corolla none. Stamens 5, short, alternating with the calyx. Ovary 2-celled, girded by a membranous margin. Style crowned by an obtuse stigma. Capsule subglobose, crowned by the permanent style, 2-celled, 2-valved, many-seeded. Dissepiments contrary to the valves. Seeds albuminose, terminated by a subalate wing. This genus comes near to *Alzatèa* —A tall tree, with opposite, oblong, quite entire leaves, and lateral panicles of small flowers.

1 C. PANICULA'TA (Blum. l. c.). ♄. S. Native of Java on the mountains.

Panicled-flowered Crypteronia. Tree 50 feet.

Cult. For culture and propagation see *Polycárdia.*

X. POLYCA'RDIA (from πολυ, *poly*, many, and καρδια, *kardia*, a heart; in allusion to the petioles being furnished with numerous heart-shaped wings). Juss. gen. 377. D. C. prod. 2. p. 10.

LIN. SYST. *Pentándria, Monogýnia.* Calyx 5-lobed, permanent. Petals 5. Stamens 5, short, alternating with the petals. Ovary depressed. Style 1, very short. Stigma lobed. Capsule woody, 5-celled, 5-valved (rarely 3-4-valved from abortion) with a membranous dissepiment at the base of each valve in the middle. Seeds few in the bottom of each cell, oblong, each surrounded by a calyciform jagged aril. Flowers sessile on the middle nerves of the leaves.

1 P. PHYLLANTHOÌDES (Lam. ill. 2. p. 100. t. 132.). ♄. S. Native of Madagascar. A smooth shrub, with alternate coriaceous leaves, tapering into the footstalk, some of which are oblong, entire; others deeply emarginate, bearing 1-5 flowers in the recess. Florínda, Nor. mss. Commersònia, Comm. mss. P. Madagascariénsis, Gmel. syst. p. 407. P. epiphýlla, Smith, in Rees' cycl. vol. 28.

Phyllanthus-like Polycardia. Shrub 6 feet.

Cult. Loam, peat, and sand is a good soil for this shrub, and ripened cuttings will strike root in a pot of sand under a hand-glass, in heat.

XI. ELÆODE'NDRON (from ελαια, *elaia*, an olive, and δενδρον, *dendron*, a tree; the fruit is like that of an olive, and the seeds are oily). Jacq. in act. helv. nov. 1. p. 36. but not of Retz. D. C. prod. 2. p. 10.—Rubéntia, Comm. in Juss. gen. 378.—Schrebèra, Retz. obs. 6. p. 25.

LIN. SYST. *Tetra-Pentándria, Monogýnia.* Calyx small, 4-5-lobed. Petals 4-5, spreading, broad at the base. Stamens 4-5, alternating with the petals. Disk fleshy, girding the ovary. Style very short. Drupe dry, containing a woody 5-celled (rarely 2-4-celled from abortion) nut. Seeds 2 in each cell, but sometimes solitary from abortion, erect, oblong. Albumen fleshy. Embryo central, straight, with leafy cotyledons and an inferior radicle.—Trees or shrubs with smooth, laurel-like, opposite leaves, and axillary panicles of flowers. Flowers small, greenish-white or yellowish-green.

1 E. ORIENTA'LE (Jacq. icon. t. 48.) leaves entire, or toothed,

obovate-oblong, or ovate, much longer than the petioles; flowers usually pentandrous. ♄. S. Native of the Mauritius and Madagascar, where it is called bois d'olive. Rubéntia olívina, Gmel syst. 108. E. I'ndicum, Gært. fruct. 1. t. 57. Lam. ill. t. 132. Nerves in the young leaves reddish. The nut is said to be hairy on the outside. Flowers yellowish-green.

Eastern Olive-wood. Clt. 1771. Tree 12 feet.

2 E. AUSTRA'LE (Vent. malm. t. 117.) leaves crenately-toothed, oblong-lanceolate, coriaceous, much longer than the petioles; flowers usually tetrandrous. ♄. G. Native of New Holland. Portenschlágia austrális, Tratt. arch. t. 250. Lamárckia dentàta, Hortul. Flowers small, greenish-yellow.

Southern Olive-wood. Fl. June, Aug. Clt. 1796. Sh. 4 ft.

3 E. INTEGRIFÒLIUM; leaves oblong-lanceolate, coriaceous, much longer than the petioles, quite entire, or with a few small glandular teeth; flowers numerous, usually tetrandrous; calyx reflexed. ♄. G. Native of New Holland. Portenschlàgia integrifòlia, Tratt. arch. t. 284. Flowers yellowish-green.

Entire-leaved Olive-wood. Fl. June, Aug. Clt.? Sh. 6 ft.

4 E. GLAU'CUM (Pers. ench. 1. p. 241.) leaves elliptical, serrated, hardly 3-times longer than the petioles; cymes loose, nearly the length of the leaves; flowers pentandrous. ♄. S. Native of Ceylon and Coromandel. Schrebèra álbens, Retz. obs. 6. p. 25. t. 3. Celástrus glaúcus, Vahl. symb. 2. p. 42. Mangífera glaúca, Rottb. nov. act. hafn. 2. t. 4. f. 1. Senàcia glaúca, Lam. ill. no. 2714. Leaves oblong. Panicles axillary, dichotomous. Flowers small, greenish-yellow. Drupe nearly round, size of a large cherry. This plant has been introduced from Ceylon, under the name of Ceylon-tea; its leaves are like those of that plant, but much longer; their taste slightly bitter and astringent.

Glaucous Olive-wood. Clt. 1824. Tree 14 feet.

5 E. XYLOCA'RPUM (D. C. prod. 2. p. 11.) leaves ovate, entire, or somewhat scolloped, glaucous, coriaceous, on very short petioles; corymbs dichotomous, one-half shorter than the leaves; flowers pentandrous. ♄. S. Native of the island of St. Thomas. Cassine xylocárpa, Vent. choix. t. 23. Cassine sphærocárpa, hort. par. Flowers greenish-yellow. Probably this and the following will form a separate genus.

Woody-fruited Olive-wood. Clt. 1816. Shrub 4 feet.

6 E. ROTUNDA'TUM (D. C. prod. 2. p. 11.) leaves ovate-roundish, obtuse, quite entire, or a little toothed, coriaceous, on short stalks, usually three in a whorl; cymes crowded, one-half shorter than the leaves; flowers pentandrous, dioecious. ♄. S. Native of St. Thomas, in salt marshes. Flowers greenish-yellow.

Rounded-leaved Olive-wood. Shrub.

† *Species hardly known.*

7 E.? CRÓCEUM (D.C. prod. 2. p. 11.) leaves elliptical, coriaceous, with awned, spiny serratures. ♄. G. Native of the Cape of Good Hope. Flowers copper-coloured?

Copper-coloured Olive-tree. Shrub.

8 E.? TOMENTÒSUM (Humb. ex Willd. mss. in Rœm. et Schult. syst. 3. p. 345.) leaves oblong-lanceolate, downy; flowers pentandrous. ♄. S. Native of South America. Flowers greenish-yellow.

Downy Olive-wood. Tree.

9 E.? TRINE'RVE (Hort. madr. ex Willd. l. c.) leaves ovate, cordate, 3-nerved, crenated; branches spiny. ♄. S. Native of?

Three-nerved-leaved Olive-wood. Tree?

Cult. See *Ptelídium* for culture and propagation.

XII. ACTEGE'TON (from ἀκτιν, *actin*, a ray, and γειτων, *geiton*, near to?). Blum. bijdr. p. 1143.

LIN. SYST. *Diœ'cia, Tetrándria.* Flowers dioecious from abortion. Calyx inferior, urceolate, 4-toothed. Petals 4. Stamens 4, joined together a little at the base, alternating with the petals. Anthers incumbent. Ovary 1-celled, 4-ovulate. Stigmas 2, sessile. Berry globose, 1-3-seeded. Seeds marked by a prominent hilum at the base, exalbuminous. Embryo straight. This genus comes near to *Schæffèria*, but differs in the structure of the fruit.—A sarmentose shrub with axillary, twin, spreading prickles. Leaves opposite, ovate, elliptic, cuspidate, quite entire, smooth. Flowers small, racemose, axillary, and terminal.

1 A. SARMENTÒSUM (Blum. bijdr. 1144.). ♄. ◡. S. Native of Java, where it is called *Papadjaran.*

Sarmentose Actegeton. Shrub straggling.

Cult. For culture and propagation, see next genus.

XIII. PTELI'DIUM (it has received this name from its similarity to *Ptèlea*). Pet. Th. gen. nov. 24. veg. afr. austr. 1. p. 11. and 29. t. 2. D. C. prod. 2. p. 11.—Seríngia, Spreng. syst. 1. p. 160. but not of Gay.

LIN. SYST. *Pentándria, Monogýnia.* Calyx urceolate, 4-lobed. Petals 4, inserted by the broad claws in the calyx. Disk 4-lobed. Stamens 4, alternating with the petals. Ovary compressed. Style almost wanting. Fruit samara-like, much compressed, indehiscent, surrounded by a wing, 2-celled, 2-seeded. Seeds erect. Embryo flat, green, in a fleshy albumen.—A shrub with opposite, ovate, quite entire leaves, and loose, axillary panicles of small flowers.

1 P. OVA'TUM (Poir. suppl. 4. p. 597. Lam. ill. t. 910.) ♄. H. Native of Cochin-china. Seríngia ovàta, Spreng. syst. 1. p. 441. Ptèlea ovàta, Lour. fl. coch. p. 82. Flowers greenish-white.

Ovate-leaved Ptelidium. Clt. 1818. Shrub 6 feet.

Cult. Loam, peat, and sand is a good mixture for this shrub, and ripened cuttings will strike root in sand under a hand-glass, in heat.

XIV. TRALLIA'NA (in honour of Alexander Trallian, a celebrated physician of the sixth century: his works were published at Paris, 1548.) Lour. fl. coch. p. 157. D. C. prod. 2. p. 11.

LIN. SYST. *Pentándria, Monogýnia.* Calyx permanent, 5-parted, with rounded lobes. Petals 5, spreading, reflexed. Disk erect, with 10 notches. Stamens 5, hypogynous? Ovary roundish. Style 1. Berry roundish, 2-celled, 2-seeded. Seeds angular inside, and rounded on the outside. Leaves cordate, acuminated, alternate. Peduncles lateral, dichotomous, bearing small greenish-white flowers.

1 T. SCA'NDENS (Lour. l. c.) ♄. ◡. G. Native of Cochin-china. Rhámnus scándens, Spreng. syst. 1. p. 768.

Climbing Tralliana. Shrub cl.

Cult. A climbing shrub of no beauty. It will grow in any common soil, and ripened cuttings will root in sand, under a hand-glass.

Tribe III.

CASSINIEÆ (plants agreeing with *Cassine* in important characters). Petals broadest at the base. Fruit indehiscent. Embryo straight, placed in the axis of a fleshy albumen.—Trees or shrubs, with simple leaves.

XV. CASSI'NE (a name of American origin). Lin. gen. 371. Lam. ill. t. 310. Gært. fruct. 2. p. 72. t. 92. D. C. prod. 2. p. 11.

LIN. SYST. *Pentándria, Monogýnia.* Calyx small, 5-parted. Petals 5, spreading, broadest at the base. Stamens 5, alternating with the petals. Ovary 1. Style wanting. Stigmas 3-5. Drupe almost dry, containing a thin 3-5-celled, 3-5-seeded nut. Seeds hanging from the top of the cells.—Cape and Asiatic shrubs, with tetragonal branches, opposite, smooth, coriaceous leaves, and axillary peduncles, bearing small flowers.

1 C. Mauroce'nia (Lin. spec. 385.) leaves sessile, obovate, quite entire, convex; pedicels many, very short. ♄. G. Native of Æthiopia. Maurocènia frangulària, Mill. dict. no. 1.—Dill. elth. t. 121. f. 147. Flowers at first greenish-yellow, but changing at length to white. Fruit dark-purple when ripe. The specific name is in honour of the Venetian senator Franc Morosini, who had a fine garden at Padua, a catalogue of which was published by Ant. Tita.

Morosini's Hottentot-cherry. Fl. July, Aug. Clt. 1690. Shrub 6 feet.

2 C. Cape'nsis (Lin. mant. 220.) leaves stalked, ovate, retuse, crenate, flat; panicles axillary, shorter than the leaves. ♄. G. Native of the Cape of Good Hope, in woods.—Burm. afr. t. 85.—Dill. elth. t. 238. Flowers small, white.

Cape Phillyrea. Fl. July, Aug. Clt. 1629. Shrub 6 feet.

3 C. exce'lsa (Wall. in fl. ind. 2. p. 376.) leaves alternate, oval, acuminate, quite entire, with an acute base, rather fleshy, shining above; umbels axillary and lateral, many-flowered, rounded; stigmas 5; berry 5-celled, 5-seeded. ♄. G. Native of Nipaul, in all the forests of the valley and the surrounding mountains. Flowers white? Berry about the size of a currant, pulpy, yellow. Notwithstanding the rotate corolla, and the increased number of stigmas and seeds, as well as the alternate leaves, Dr. Wallich had no hesitation in referring this tree to *Cassine*.

Tall Cassine. Fl. May, June. Clt. 1820. Tree 40 feet.

4 C. di'scolor (Wall. in fl. ind. 2. p. 278.) leaves ovate, acuminate, tapering much to the base, whitish beneath, quite entire, coriaceous; fascicles of flowers axillary, dichotomous; stigmas 4. ♄. G. Native of the East Indies, on the mountains bordering on Silhet. Flowers yellowish, monopetalous.

Two-coloured-leaved Cassine. Fl. Jan. Tree 20 feet.

5 C. Colpoòn (Thunb. fl. cap. 2. p. 227.) leaves stalked, ovate, crenate, but usually quite entire; panicle axillary, length of leaves. ♄. G. Native of the Cape of Good Hope. Euónymus Colpoòn, Lin. mant. 200.—Burm. afr. t. 86. Flowers white. (quadrifid?)

Colpoon-tree. Fl. July, Aug. Clt. 1791. Shrub 6 feet.

† *Doubtful species.*

6 C. Æthiópica (Thunb. fl. cap. 2. p. 227.) leaves stalked, oblong, deeply crenate; panicles axillary. ♄. G. Native of the Cape of Good Hope. Flowers white. This is probably a variety of *C. Capénsis.*

Æthiopian Cassine. Fl. July, Aug. Clt.? Shrub 5 feet.

7 C. ba'rbara (Lin. spec. 385.) leaves sessile, cordate-oblong, serrate-toothed; panicles axillary, shorter than the leaves. ♄. G. Native of the Cape of Good Hope. Thunb. fl. cap. 2. p. 226. Peduncles usually 3-flowered. Flowers small, white.

Barbarous Cassine. Fl. July, Aug. Clt. 1816. Shrub 6 ft.

8 C. oppositifòlia (Mill. dict. no. 3.) leaves stalked, ovate, acute; flowers axillary, scattered. ♄. G. Native of? Formerly cultivated in the gardens of England under the name of Hyson tea. Flowers greenish-white?

Opposite-leaved Cassine. Shrub.

Cult. Shrubs with large thick leaves, and small white flowers. They will grow freely in a mixture of loam and peat; and ripened cuttings will readily strike root, if planted in a pot of sand with a hand-glass placed over them.

XVI. HARTO'GIA (in honour of J. Hartog, a Dutch naturalist and traveller at the Cape of Good Hope). Thunb. nov. gen. 5. p. 35. with a figure, but not of Lin. D. C. prod. 2. p. 12.

Lin. syst. *Tetra-Pentándria.* Calyx 4-5-cleft. Petals 4-5, spreading. Stamens 4-5, alternating with the petals. Ovary 1. Style thick, bifid, with bifid lobes. Drupe dry, ovate, 2-celled, 2-seeded. Habit of *Myginda*, from which it is hardly distinct.

1 H. Cape'nsis (Lin. fil. suppl. 128.) ♄. G. Native of the Cape of Good Hope. Leaves opposite, oblong, crenated, smooth, hardly stalked. Pedicels few-flowered, axillary, drooping. Schrebèra schinoìdes, Thunb. prod. t. 2. Elæodéndron schinoìdes, Spreng. syst. 1. p. 780.

Cape Hartogia. Fl. June, July. Clt 1800. Shrub 10 feet.

Cult. See *Cassine* for culture and propagation.

XVII. CURTI'SIA (in honour of the late William Curtis, a celebrated English botanist, who commenced the Botanical Magazine) Ait. hort. kew. 1. p. 162. but not of Schreb. D. C. prod. 2. p. 12.—Doràtium, Sol. in Jaum. exp. 2. p. 267. Relhània and Junghània, Gmel. syst. 247. and 259.

Lin. syst. *Tetrándria, Monogýnia.* Calyx 4-parted. Petals 4, blunt, longer than the calyx. Stamens 4, alternating with the petals. Ovary and style 1. Stigmas 4-5. Drupe subglobose, succulent, containing a 4-5-celled, 4-5-seeded nucleus.—A fine tree, with opposite, broad, shining, toothed, smooth leaves, which are rusty beneath, and racemose panicles of small flowers. See Rich. dict. class. hist. nat. t. 5. p. 203.

1 C. fagi'nea (Ait. hort. kew. l. c. Lam. ill. t. 71.) ♄. G. Native of the Cape of Good Hope.—Burm. afr. t. 82. The Hottentots and Caffres make the shafts of their javelins or assagays from the wood of this tree. They always carry one or two of these with them on their journeys. They consist of an iron spear, hollowed out on each side, about six inches long, with or without an iron shaft, which is sometimes round and smooth, and sometimes grooved. It is fastened with thongs of leather to a slender, round stick, 5 feet long, tapering towards the end, and made of the wood of this tree. With these lances, which they throw with great dexterity to the distance of a hundred paces, the Hottentots and Caffres defend themselves, and kill buffaloes and other wild animals. The tree is called in Dutch *Assagay-hout*, *Wite-else*, and *Stink-hout.* In English *Hassagay*, or *Assagay-tree*, from its use among the natives at the Cape.

Beech-like Hassagay-tree. Clt. 1775. Tree 60 feet.

Cult. See *Cassine* for culture and propagation.

XVIII. NEMOPA'NTHES (from *νεμος, nemos*, a grove, and *ανθος, anthos*, a flower; habitat). Rafin. journ. phys. 1819. p. 96. and in Sillim. amer. journ. 1. p. 377. D. C. prod. 2. p. 17.—Ilicioìdes, Dum. Cours. ed. 1. vol. 4. p. 27.

Lin. syst. *Polygámia, Diœ'cia.* Flowers dioecious or polygamous from abortion. Calyx small, scarcely conspicuous. Petals 5, distinct, oblong-linear, deciduous. Stamens 5, alternating with the petals. Ovary hemispherical, covered with clammy juice. Style wanting. Stigmas 3-4, sessile, in the male flowers they are hardly manifest. Berry somewhat globose, 3-4-celled, 3-4-seeded.—A small deciduous shrub.

1 N. Canade'nsis (D. C. mem. soc. gen. 1. p. 44. pl. rar. hort. gen. t. 3.) ♄. H. Native of North America, from Canada to Carolina, on high mountains, near edges of ponds. I'lex Canadénsis, Michx. fl. bor. amer. 2. p. 299. t. 49. N. fasciculàris, Rafin. l. c. I'lex delicátula, Bart. fl. virg. p. 67.? Prinos lùcidus, Ait. hort. kew. 2. p. 478. Leaves ovate, quite entire, or serrated at the apex, smooth. Pedicels usually solitary, 1-flowered, very long. Flowers white. Berries large, beautiful crimson, very ornamental.

Canadian Nemopanthes. Fl. April, May. Clt. 1802. Shrub 3 feet.

Cult. See hardy species of *Prinos* for culture and propagation.

XIX. SKI'MMIA (from *mijama-skimmi*, the name of the plant in Japan). Thunb. fl. jap. 62. nov. gen. 57. D. C. prod. 2. p. 18.

Lin. syst. *Tetrándria, Monogýnia.* Calyx small, permanent, 4-parted. Petals 4, concave. Stamens 4, very short. Ovary free? Style 1. Berry ovate, umbilicate, obsoletely 4-furrowed, somewhat 4-valved, containing mealy pulp inside. Seeds 4, somewhat trigonal, oblong. Perhaps an *I'lex* or *Euónymus*, or probably allied to *Rhámnus.*

1 S. Japónica (Thunb. l. c.) ♄. G. Native of Japan. Leaves alternate, somewhat crowded in whorles, oblong, wavy, evergreen. Flowers panicled. Kæmpf t. 5. I'lex Skímmia, Spreng. syst. 1. p. 495.

Japan Skimmia. Tree 20 feet?

Cult. See *Cassine* for culture and propagation, p. 13.

XX. LE'PTA (from λιπτος, *leptos*, minute; flowers minute). Lour. fl. coch. p. 82. D. C. prod. 2. p. 18.

Lin. syst. *Tetrándria, Monogýnia.* Calyx small, 4-parted, spreading. Petals 4, somewhat triangular, furrowed, inflexed. Stamens 4, inserted in the angles of the receptacle; filaments awl-shaped. Ovary roundish. Style almost none. Stigma blunt. Berry 4-lobed; lobes 1-seeded.—A much branched shrub, with ternate, lanceolate, quite entire leaves, and axillary compound racemes of small white flowers. This is a species of *Skimmia* according to Juss., *I'lex* of Spreng., *Vitis* of Smith, and *Othèra* of Poir. but it is hardly known.

1 L. triphy'lla (Lour. l. c.) ♄. G. Native of Cochinchina, in woods. I'lex Lépta, Spreng. syst. 1. p. 496.

Three-leaved Lepta. Shrub 10 feet.

Cult. See *Cassine* for culture and propagation, p. 13.

† *Genera allied to Celastríneæ, but differ materially in the æstivation of the petals.*

XXI. PERROTTE'TIA (in honour of Perrottet, a botanical collector, who travelled in Guiana and Madagascar). H. B. et Kunth, nov. gen. amer. 7. p. 73.

Lin. syst. *Pentándria, Monogýnia.* Calyx 5-lobed, regular, permanent. Petals 5, inserted under the disk, sessile, ovate, acute, longer than the calyx, permanent, valvate in æstivation. Stamens 5, inserted with the petals, and alternating with them, free, permanent. Anthers roundish, kidney-shaped, 2-celled. Disk orbicular, filling the bottom of the flower. Ovary superior, half immersed in the disk, 2-celled, and with 2 ovula in each cell. Stigma sessile, obtuse. Berry subglobose, containing 1-2 wrinkled nuts.—An unarmed shrub, with alternate, simple, entire, dotless leaves, with twin petiolar stipulas. Panicles axillary, bracteate. Flowers very minute, sessile, in fascicles, dark-purple.

1 P. Quindiue'nsis (H. B. et Kunth, nov. gen. amer. 7. p. 75. t. 622.) ♄. S. Native of South America, on Mount Quindiu.

Quindiu Perrottetia. Shrub 5 to 6 feet.

Cult. Loam and sand is a good mixture for this shrub; and ripened cuttings will root in heat.

XXII. DULO'NGIA (in honour of Peter Louis Dulong, a learned physician, and member of the Academy of Sciences of Paris). H. B. et Kunth, nov. gen. amer. 7. p. 78.

Lin. syst. *Pentándria, Digýnia.* Calyx adnate to the ovary, with a free 5-toothed limb. Petals 5, inserted round the base of the disk, sessile, ovate, valvate in æstivation. Stamens 5, free, inserted with the petals. Anthers 2-celled, didymous. Ovary inferior, 2-celled, having 6 ova in one cell, and 3 in the other. Disk orbicular, rather convex. Stigmas 2, sessile, acutish. Fruit globose, baccate, pea-formed, crowned by the permanent calyx, petals and stamens half-2-celled; cells 2-3-seeded, tuberculated.—An unarmed shrub, with alternate, simple, exstipulate leaves. Peduncles rising from the middle nerve of the leaf, branched, many-flowered. Flowers stalked, minute, white.

1 D. acumina'ta (H. B. et Kunth, nov. gen. amer. 7. p. 78. t. 626.) ♄. S. Native of South America, near Popayan. Phyllonòma ruscifòlia, Willd. in Rœm. et Schult. syst. 6. p. 210.

Acuminated-leaved Dulongia. Shrub 6 feet.

Cult. See last genus for culture and propagation.

Order **LXV. BREXIA'CEÆ** (the order only contains the genus *Bréxia*). Lindl. introd. nat. syst. p. 112.

Calyx inferior, small, permanent, 5-parted, imbricate in æstivation. Petals hypogynous, also imbricate in æstivation. Stamens 5, hypogynous, alternating with the petals, arising from a narrow cup, which is toothed between each stamen; anthers oval, innate, 2-celled, bursting lengthwise. Style one, continuous, crowned by a simple stigma. Fruit drupaceous, 5-celled, many seeded. Seeds attached to the axis, without albumen. Embryo with ovate, obtuse cotyledons, and a cylindrical centripetal radicle.—Trees, with nearly simple stems. Leaves alternate, simple, without dots, and furnished with minute deciduous stipulas. Flowers green, in axillary umbels, surrounded by bracteas on the outside. This order differs from *Celastríneæ* in the hypogynous insertion of the stamens, and in the numerous seeds. It agrees with *Pittospòreæ* in the insertion and definite number of stamens, as well as in the fruit being many seeded; but it differs in many important characters.

I. BRE'XIA (from βρεξις, *brexis*, rain; the leaves afford protection against rain). Pet. Th. mad. 69.—Venàna, Lam. ill. 2. t. 99. no. 365. t. 131. dict. 8. p. 450.

Character the same as the order.

1 B. Madagascarie'nsis (Pet. Th. gen. mad. no. 69.) leaves obovate or oblong, entire, while young minutely gland-toothed. ♄. S. Native of Madagascar. Ker. bot. reg. 730.

Madagascar Brexia. Fl. June. Clt. 1812. Tree 20 feet.

2 B. spinòsa (Lindl. bot. reg. 872.) leaves lanceolate, long, spiny-toothed. ♄. S. Native of Madagascar.

Spiny Brexia. Fl. June. Clt. 1812. Tree 20 feet.

3 B. chrysophy'lla (Sweet. hort. brit. p. 492.) leaves lanceolate, yellowish, entire or slightly and sparingly toothed. ♄. S. Native of Madagascar.

Golden-leaved Brexia. Clt. 1820. Tree 20 feet.

Cult. Elegant trees, with fine foliage. They will grow freely in a mixture of turfy loam and peat; and cuttings with their leaves not shortened strike readily in sand under a hand-glass in heat, or a leaf torn off with a bud attached will grow.

Order **LXVI. ILICI'NEÆ** (plants agreeing with *I'lex* in important characters). Brogn. mem. Rhamneæ, p. 16.

Calyx of 4-5 sepals, imbricate in æstivation. Corolla submonopetalous (f. 3. *a.*), deeply divided, imbricate in æstivation, inserted under the ovary (f. 3. *d.*). Stamens alternating with the petals (f. 3. *b.*), rarely opposite them, and inserted in the corolla (f. 3. *b.*); filaments erect. Anthers 2-celled;

cells adnate to the sides of the filament. Disk wanting. Ovary fleshy, thick, subtruncate, 2-6-celled; cells small, 1-2-ovulate. Ova hanging from the tops of the cells, by a podosperm, which is cup-shaped at the top, and girding the ovum at the base. Raphe exterior. Stigma nearly sessile, lobed. Fruit baccate (f. 3. c.), containing 2-6 woody or fibrous nuts. Seed suspended, nearly sessile. Endosperm large, fleshy. Embryo small, situated near the hilum, 2-lobed, with a superior radicle.—This order is composed of shrubs or trees, having alternate or opposite, usually coriaceous, glabrous, entire or prickly-toothed, feather-nerved leaves. Flowers axillary, solitary, or in fascicles. Peduncles simple, but sometimes disposed in dichotomous cymes. The order differs from *Celastrìneæ* in the corolla being monopetalous, with the stamens inserted in it, and in the absence of the disk. It differs from *Rhámneæ* in these last particulars, as well as in the calyx being valvate in æstivation.—The famous Paraguay-tea is the leaves of a species of *I'lex*, and the *Prìnos verticillàtus* possesses such active and astringent bitter tonic and febrifugal qualities, that it is used in North America with success as a substitute for Peruvian bark.

Synopsis of the Genera.

1 MYGI'NDA. Calyx small, 4-cleft. Corolla deeply 4-cleft. Stamens 4, inserted in the base of the corolla. Style short, crowned by 4 stigmas. Drupe 1-celled, 1-seeded, probably from abortion.

2 LEPIONU'RUS. Flowers monoecious. Calyx small, entire. Corolla 4-parted. Stamens 4, opposite the segments of the corolla, and inserted in its throat. Drupe baccate, containing a 1-seeded nut. Stigmas 4, sessile.

3 I'LEX. Calyx 4-5-toothed. Corolla 4-5-cleft. Stamens 4-5, inserted in the tube of the corolla. Stigmas 4-5, almost sessile, sometimes distinct, sometimes connected. Drupe containing 4-5 1-seeded nuts.

4 PRI'NOS. Calyx 6-toothed. Corolla 6-cleft. Stamens 6, inserted in the tube of the corolla. Drupe containing 6 1-seeded nuts.

5 STROMBÒSIA. Calyx small, obsoletely-crenulated. Corolla 5-cleft, with a villous throat, with 5 stamens inserted in the bottom of it; these are opposite the divisions. Drupe baccate, 1-seeded from abortion. Style short, crowned by an obtuse stigma.

6 LEUCO'XYLON. Flowers polygamous. Calyx 4-parted. Corolla 4-parted. Stamens 12-14, adhering to the base of the corolla. Drupe containing 1-2 1-seeded nuts.

I. MYGI'NDA (in honour of Francis von Mygind, a German botanist). Jacq. amer. p. 24. D. C. prod. 2. p. 12.—Rhacòma, Lin. gen. no. 114.—Crossopétalum, P. Browne, jam. 145.

LIN. SYST. *Tetrándria, Monogýnia.* Calyx small, 4-cleft. Corolla deeply 4-cleft, sub-rotate. Stamens 4, alternating with the segments of the corolla, and shorter than them, and inserted in its throat. Ovary roundish. Style short or wanting. Stigmas 4, therefore sometimes at the top of the style, and sometimes sessile. Drupe ovate, 1-celled, 1-seeded, probably from abortion. Seed hanging from the top of the cell, albuminous.—Caribbean or South American shrubs, with tetragonal branches, opposite, subcoriaceous, laurel-like leaves, axillary pedicels, which are usually trifid or trichotomous, and small flowers, which are for the most part white.

* *Leaves downy beneath.*

1 M. MICROPHY'LLA (D. C. prod. 2. p. 12.) leaves obovate-oblong, blunt, quite entire, pubescent beneath, as well as the branchlets; fruit solitary, almost sessile, terminated by the filiform style. ♄. S. Native of St. Domingo, where the Spaniards call it *Mala-muger*. I'lex microphýlla, Spreng. in herb. Balb.

Small-leaved Myginda. Shrub.

2 M. ROTUNDA'TA (Lam. ill. no. 1546.) leaves ovate-roundish, crenate, pubescent beneath; peduncles nearly simple, few-flowered. ♄. S. Native of the Antilles.

Rounded-leaved Myginda. Shrub.

3 M. URAGÒGA (Jacq. amer. t. 16. pict. t. 22.) leaves ovate or cordate, almost sessile, acuminated, serrated, pubescent; corymbs twice trifid. ♄. S. Native of South America, near Carthagena, and in the island of St. Martin, near the sea. Each division of the corymb bearing 3 flowers. Flowers small, of a dark shining red. Fruit red, soft, the size of a pea. The Spaniards call it *Yerva de Maravedi*. At Carthagena the inhabitants use a decoction or infusion of the root as a powerful diuretic; the leaves have the same quality, but in a much smaller degree. Houtt. fl. syst. 3. p. 142. t. 19. Lam. ill. t. 76. Rhacòma crossopétalum, Lin. and crossopétalum, P. Browne, jam. t. 17. f. 1.

Diuretic Myginda. Fl. Aug. Sep. Clt. 1790. Shrub 3 to 6 ft.

* * *Leaves smooth on both surfaces.*

4 M. ILICIFÒLIA (Lam. dict. 4. p. 396.) leaves ovate-roundish, spiny-toothed, smooth, pale beneath; peduncles axillary, forked; fruit pointed by the permanent style. ♄. S. Native of St. Domingo. Flowers white.

Var. β, *acutifòlia* (D. C. prod. 2. p. 13.) leaves ovate, acuminated, spiny-toothed, smooth. ♄. S. Native of St. Domingo.

Holly-leaved Myginda. Shrub 4 feet.

5 M. MYRSINOÌDES (H. B. et Kunth. nov. gen. amer. 7. p. 68. t. 620.) leaves somewhat distich, elliptical, acute, rounded at the base, serrulated, smooth, on short stalks; peduncles 1-flowered, 2-3 times longer than the leaves; flowers pentandrous. ♄. S. Native of Peru, in hot places, near Contumasa. The ovary in this and the preceding species is 2-celled, each cell containing 3 seeds. It is therefore probable that these two species may form a distinct genus.

Myrsine-like Myginda. Shrub 2 feet.

6 M. MYRTIFÒLIA (Nutt. gen. 1. p. 109.) leaves oblong, blunt, serrated, smooth, with revolute edges; peduncles very short, usually solitary, 1-flowered; style short, club-shaped, 4-lobed at the apex. ♄. H. Native of North America, on the western coast. I'lex myrsinites, Pursh. fl. sept. amer. 1. p. 119. Flowers small, white. Drupe containing only one seed at maturity, dark-purple, about the size of a pea. Leaves permanent, serrate in front, and entire behind.

Myrtle-leaved Myginda. Fl. May, Aug. Clt. 1818. Sh. 4 ft.

7 M. PA'LLENS (Smith in Rees' cycl. no. 4.) leaves elliptical, very obtuse, crenate, smooth, almost sessile; peduncles bifurcate, with a flower in the fork; style 4-lobed at the apex. ♄. S. Native of Antigua. Flowers white? with waved petals. Leaves yellowish-green.

Pale-leaved Myginda. Shrub 4 feet.

8 M. RHACÒMA (Swartz. fl. ind. occ. p. 34[illegible].) leaves lanceolate-ovate, bluntish, crenated, on short stalks, smooth; peduncles dichotomous, cymosely-umbellate; style short, filiform, 4-lobed at the apex. ♄. S. Native of St. Domingo and Jamaica, in the sand by the sea-side, and many other parts of South America in a like situation. Rhacòma crossopétalum, Lin. spec.

169.—P. Browne, jam. t. 17. f. 1.—Jacq. icon. rar. t. 311. Flowers small, reddish. Drupe about the size of a red currant, containing one nut.

Rhacoma Myginda. Clt. 1798. Shrub 3 feet.

9 M. LATIFÒLIA (Swartz, fl. ind. occ. 1. p. 342.) leaves elliptical, crenate, smooth, on short footstalks, coriaceous; peduncles trifid, few flowered; stigmas 2-4, almost sessile. ♄. S. Native of the Caribbee islands. Flowers small, white Drupe ovate, about the size of pepper, drooping.

Broad-leaved Myginda. Fl. Ap. May. Clt. 1795. Sh. 3 ft.

10 M. INTEGRIFÒLIA (Lam. dict. 4. p. 396.) leaves elliptical, blunt, entire, smooth, coriaceous, on short stalks; peduncles dichotomous, few-flowered; flowers dioecious; stigmas 4, sessile. ♄. S. Native of Martinique and St. Domingo. It is probably a species of *I'lex*, according to Kunth, but with the true habit of *Rhacòma*. M. integrifòlia Guadalupénsis, Spreng. syst. 1. p. 496. Flowers white?

Entire-leaved Myginda. Clt. 1826. Shrub 3 feet.

11? M. BRASILIE'NSIS (Spreng. syst. 1. p. 496.) leaves oblong, tapering to both ends, coriaceous, quite entire, shining, reticulated; panicles axillary, shorter than the leaves. ♄. S. Native of Brazil. Flowers whitish?

Brazilian Myginda. Shrub 3 feet.

12? M. GONGÓNHA (D. C. prod. 2. p. 13.) leaves oblong, rounded at the base, with a short acumen at the apex, marginate, remotely serrated; racemes axillary, sparingly branched; flowers sessile; branches terete. ♄. S. Native of Brazil, in the provinces of St. Paul and Minas Geraes, where it is called *Gongonha*. Cassine Gongónha, Mart. in Isis. 1824. p. 589. An infusion or decoction of the roots is a powerful diuretic; the leaves and branches possess the same quality, but in a less degree.

Gongonha Myginda. Shrub 6 feet.

Cult. A mixture of loam and peat will answer the species of *Mygínda*, and ripened cuttings will root in sand, under a hand-glass; those of the stove species in heat.

II. LEPIONU'RUS (from λεπις, *lepis*, a scale, and *ουρα*, *oura*, a tail; in allusion to the pendulous bracteate spikes of flowers). Blum. bijdr. 1148.

LIN. SYST. *Monœ'cia, Tetrándria.* Flowers monoecious from abortion. Calyx inferior, small, coloured, entire. Corolla deeply 4-parted, with spreading segments. Stamens 4, opposite the segments of the corolla; filaments very short, inserted in the base of the corolla. Ovary girded by a short fleshy margin. Stigmas 4, acute, sessile. Drupe baccate, fleshy, containing a 1-seeded nut. Embryo albuminous, inverted.—A shrub, with alternate, oblong, entire, smooth leaves, and axillary, pendulous spikes of flowers, before expansion covered with imbricate bracteas, each bractea covering 3 flowers.

1 L. JAVA'NICUS. ♄. S. Native of Java.

Java Lepionurus. Shrub 6 feet.

Cult. For culture and propagation, see stove species of last genus.

III. I'LEX (this name is originally derived from *ac*, a point in Celtic; the leaves of several species are prickly). Lin. gen. no. 172. D. C. prod. 2. p. 13. Aquifòlium, Tourn. inst. t. 371. Gært. fruct. 2. t. 92.

LIN. SYST. *Tetrándria, Tetragýnia.* Calyx 4-5-toothed, permanent. Corolla 4-5-cleft, sub-rotate. Stamens 4-5, alternating with the segments of the corolla, and inserted in its tube. Ovary sessile, 4-celled; stigmas 4, almost sessile, sometimes distinct, sometimes connected in one. Berry containing 4-5 1-seeded nuts. Seeds inverted; albumen fleshy.—Evergreen shrubs or trees, with the leaves usually coriaceous. Peduncles many-flowered. Flowers small, usually white, hermaphrodite, rarely dioecious or polygamous from abortion.

† *Leaves spiny-toothed.*

1 AQUIFÒLIUM (Lin. spec. 181.) leaves ovate or oblong acute, shining, waved, spiny-toothed at the apex; peduncles axillary, short, many flowered; flowers subumbellate. ♄. H. Native of Europe, in shady places. It is to be found in many parts of Britain in woods and forests, but still it is a truly doubtful native. Smith, eng. bot. t. 496. Fl. dan. 508. Mill. fig. 46. Black. icon. t. 205. The holly rises even to 30 feet high, and sometimes more. The flowers dirty white, hermaphrodite, dioecious, or polygamous. Berries roundish, red, crowned by the calyx, each containing 3 or 4 seeds. The holly is called also in English *Hulver* and *Holme.* It is known by the name of *Hulver* in Norfolk. In German it has a great variety of appellations; *Stechpalme*, *Stecheiche*, *Stechbaum*, *Stechlaub*, *Hulse*, *Hulsenbaum*, *Hulsenstrauch*, *Hulst*, *Hulch*, *Holst*, *Hubze*, *Hullgenobz*, *Myrtendorn*, *Christdorn*, *Mausedorn*, *Zwieseldorn*, *Kleesebusch*, *Stechapsel*, *Stechwinde*, *Walddistel.* In Danish *Stikpalme*, *Marctorn*, *Chirstorn*, *Skoutisdel.* In Swedish *Jerneck*, *Christorn.* In French, *Le Houx*, *le grand Housson*, *l'Agron grand Pardon*, and *Bois Franc.* In Italian, *Agrifolio*, *Alloro spinoso.* In Spanish, *Acebo Agrifolio.* In Portuguese, *Azevinko*, *Agrifolio*, *Acrifolio*, *Aquifolio.* In Russian, *Wacfoscheld*, *Ostrokof*, *Padub.*—The holly makes an impenetrable fence, and bears cropping well, nor is its verdure, or the beauty of its scarlet berries, ever observed to suffer from the severest of our winters. It would be preferable to the hawthorn for hedges were it not for the slowness of its growth. A holly hedge should always be cropped in May. The wood is the whitest of all hard woods, and useful for various purposes. It is used in fineering, and is sometimes stained black to imitate ebony. It is much used with box, yew, white-thorn, &c. in the small trinkets, and other works carried on in and about Tunbridge, commonly called Tunbridge-ware. The bark also affords the substance called bird-lime, which is prepared by boiling it till the green part is capable of being separated from the white, then laying it in a cool cellar for a few days, afterwards pounding it till it becomes a tough paste, washing it repeatedly till it gets quite clear; then placing it in an earthen vessel to ferment or become fine, when it will be fit for use.

There are numerous varieties of this tree, which are highly ornamental in clumps, borders, and other parts of pleasure grounds, affording much variety when judiciously intermixed. The most remarkable of these are as follow: the *smooth green-leaved*, the *common green-leaved*, the *narrow-serrated green-leaved*, the *green-leaved yellow-berried*, the *box-leaved green*, and the *hedge-hog green*, the *prickly silver-striped-leaved hedge-hog*, the *gold-striped-leaved hedge-hog*, the *blotched-leaved hedge-hog*, *yellow* and *white*, the *smooth white-striped-leaved*, the *smooth yellow-white-striped-leaved*, the *smooth blotched-leaved*, the *smooth narrow-striped-leaved*, the *blotched-leaved yellow-berried*, the *cream-coloured-leaved*, the *copper-coloured-leaved*, the *white-leaved*, the *mottled-edged-leaved*, the *painted lady*, the *various-leaved*, the *thick-leaved holly*, &c.

Var. β, *echinàtum* (Mill. dict. no. 2.) leaves full of spines on the disk, as well as the edges. ♄. H. Said to be originally from North America. It does not change by culture.

The leaves in young plants are always spiny-toothed, but in the adult ones they are usually entire. The plant, native of Cochin-china, is said to bear black berries: it is therefore probable that this may turn out to be a distinct species.

Prickly-leaved or common Holly. Fl. May, June. Britain. Tree 30 feet.

2 I. RECU'RVA (Link, enum. 1. p. 247.) leaves oblong, acu-

minated, regularly spiny-serrated; spines of the young leaves recurved; peduncles short, many-flowered. ♄. H. Native of? Ilex Aquifòlium, var. γ serràtum, Desf. caf. 230. Flowers whitish. Berries red.

Recurved-spined Holly. Fl. May, June. Clt.? Tree.

3 I. BALEA'RICA (Desf. arb. 2. p. 262.) leaves ovate, acute, shining, flat, entire or spiny-toothed; umbels axillary, few-flowered, short. ♄. G. Native of Minorca and Madeira. I. Aquifòlium, var. δ, Lam. dict. 3. p. 145. I. Maderénsis, Willd. enum. suppl. 8. ex Link. Flowers white.

Minorca Holly. Fl. May, July. Clt. 1815. Tree 10 feet.

4 I. OPA'CA (Ait. hort. kew. 1. p. 177.) leaves ovate, flat, coriaceous, acute, sinuately-toothed, spiny, smooth, but not shining; flowers at the base of the annual shoots; calycine teeth acute. ♄. H. Native of North America, from Canada to Carolina, in sandy woods, particularly plentiful in the State of New Jersey. Tree sometimes 80 feet high, and 4 in diameter. Flowers white. Berries scarlet.

Opaque Holly. Fl. May, June. Clt. 1744. Tree 80 feet.

5 I. LAXIFLÒRA (Lam. dict. 3. p. 147.) leaves ovate, sinuately toothed, spiny, coriaceous, smooth; stipulas awl-shaped; peduncles many-flowered, loosely branched, scattered above the axillæ of the leaves on the young branches; calycine teeth acute. ♄. H. Native of Carolina, in shady sandy woods. Flowers white. Berries yellowish-red.

Loose-flowered Holly. Fl. May, June. Clt. 1811. Shrub 5 feet.

6? I. MADAGASCARIE'NSIS (Lam. dict. 3. p. 148.) leaves ovate, acute, spiny, smooth; pedicels axillary, 1-flowered; berries ovate, 2-seeded. ♄. S. Native of Madagascar.

Madagascar Holly. Tree 30 feet.

7 I. DIPYRE'NA (Wall. in fl. ind. 1. p. 473.) leaves elliptical-oblong, mucronate, on short stalks, even, hardly wavy, remotely spiny-serrated; flowers sessile, in axillary fascicles; berries 2-seeded. ♄. G. Native of Nipaul, where it is called *Caulah*; also on the confines of Chinese Tartary, where it is called *Kundar.* Branchlets angular. Flowers small, white. Berries dark-brown. The tree is called *Gumshing* in the Bhotea language.

Two-seeded Holly. Fl. April, May. Shrub 12 feet.

8? I. LONGIFÒLIA (Neuw. bras. 2. ex flora. 1821. p. 301.) leaves oblong, spiny, with 6 recesses on both sides, wavy, tridentate at the apex, cuneated at the base. ♄. S. Native of Brazil.

Long-leaved Holly. Tree.

* * *Leaves toothed, serrated, or crenate, but not spiny.*

9 I. PERA'DO (Ait. hort. kew. 1. p. 169.) leaves ovate, with an entire acumen, or having a very few teeth, shining; umbels short, axillary, few-flowered. ♄. G. Native of Madeira. I. Maderénsis, Lam. dict. 3. p. 146. Flowers white or reddish. Berries large, red.

Var. β, obtùsa (D. C. prod. 2. p. 14.) leaves blunt, emarginate. Duh. ed. nov. 1. t. 2.

Perado Holly. Fl. May, June. Clt. 1760. Tree.

10 I. CHINE'NSIS (Sims, bot. mag. t. 2043.) leaves oblong, tapering to both ends, with cartilaginous toothletted edges; teeth hardly pungent; petioles and midrib villous; corymbs lateral; peduncles dichotomous. ♄. G. Native of China. Leaves somewhat spotted above. Flowers white.

China Holly. Fl. July. Clt. 1814. Tree 20 feet.

11 I. HETEROPHY'LLA; leaves opposite, stalked, oval, acute at both ends, quite entire, or spiny-toothed; peduncles crowded, axillary, 1-flowered. ♄. G. Native of Japan. I. Aquifòlium var. heterophylla, Blum. bijdr. 1150.

Variable-leaved Holly. Tree 30 feet.

12 I. MACROPHY'LLA (Blum. bijdr. 1150.) leaves ovate or oval-oblong, obtuse, acute at the base, serrated, coriaceous, glabrous, shining above; racemes axillary, about equal in length to the petioles; branches smooth, striated. ♄. G. Native of Japan.

Large-leaved Holly. Tree.

13 I. TRIFLÒRA (Blum. bijdr. 1150.) leaves oval-lanceolate, acute at both ends, serrulated, veinless, puberulous on the middle nerve, and on the branches; fascicles of flowers axillary and lateral, usually 3-flowered. ♄. S. Native of Java.

Three-flowered Holly. Tree.

14 I. CASSINE (Ait. hort. kew. p. 170.) leaves ovate-lanceolate, sharply serrated, flat, smooth, as well as midrib petioles and branches; peduncles lateral, corymbosely-branched. ♄. H. Native of North America, from Lower Carolina to Florida, in swamps. Aquifòlium Carolinénse, Catesb. car. 1. t. 31. I. Caroliniàna, Mill. dict. no. 3. I. cassinoìdes, Link, enum. 1. p. 148. Flowers white. Berries red. The leaves of this species are used in the same way as those of *I. vomitòria.*

Cassine-like or Broad-leaved Dahoon Holly. Fl. Aug. Clt. 1700. Shrub 10 feet.

15 I. ANGUSTIFÒLIA (Willd. enum. 1. p. 172.) leaves linear-lanceolate, serrated at the apex, with the edges rather revolute, smooth, as well as the midrib petioles and branches; cymes lateral, stalked. ♄. H. Native of North America, from Virginia to Georgia, in deep swamps. I. myrtifòlia, Walt. carol. 241. I. rosmarinifòlia, Lam. ill. 1. p. 356. Flowers white. Berries red?

Narrow-leaved Holly. Fl. June. Clt. 1806. Shrub 8 feet.

16 I. VOMITÒRIA (Ait. hort. kew. 1. p. 278.) leaves oblong or elliptical, blunt at the apex, crenate-serrated, and are, as well as the branchlets smooth; umbels lateral, nearly sessile. ♄. H. Native of North America along the sea coast, from Carolina to Florida. I. Cassine vèra, Walt. fl. carol. 241. I. ligustrìna, Jacq. coll. 4. p. 105. icon. rar. t. 310. Wendl. hort. t. 31. Cassine Perágua, Mill. fig. t. 83. f. 2.—I. Cassèna, Michx. fl. 1. p. 229. I. religiòsa, Bart. fl. virg. 69. I. Floridàna, Lam. ill. no. 1731. Flowers white. Berries red. The leaves of this handsome shrub are used by the Indians to make their black drink, so much in use among them, not only as a medicine, but also as a drink of etiquette on their councils, when matters of consequence are to be transacted. At a certain time of the year the Indians come down in droves, from a distance of some hundred miles, to the coast, for the leaves of this tree, which is not known to grow at any considerable distance from the sea shore. They make a fire on the ground, and putting a great kettle of water on it, they throw in a large quantity of these leaves, and setting themselves round the fire, from a bowl that holds about a pint they begin drinking large draughts, which in a very short time occasion them to vomit easily and freely; thus they continue drinking and vomiting for the space of two or three days, until they have sufficiently cleansed themselves, and then every one taking a bundle of the branches to carry away with him, they all retire to their habitations.

Emetic Holly or South-sea Tea. Fl. June, July. Clt. 1700. Shrub 12 feet.

17 I. OVALIFÒLIA (Meyer. esseq. 91.) leaves oval, serrate-crenate, coriaceous, with revolute edges, smooth; flowers racemose, axillary, and terminal; pedicels corymbose. ♄. S. Native of South America, about Essequebo. The leaves are 3 times larger than those of *I. vomitòria.* Flowers white.

Oval-leaved Holly. Shrub 6 feet.

18 I. ELLÍPTICA (H. B. et Kunth, nov. gen. amer. 7. p. 70. but not of D. Don,) leaves elliptical, rounded at both ends, sharply serrulated towards the apex, coriaceous, quite smooth, shining above; peduncles 1-flowered, and are, as well as the

branches, hairy; flowers 4-5-petalled. ♄. G. Native of Peru; in hot places, about Contumasay. Flowers white.

Elliptic-leaved Holly. Shrub.

19 I. SCOPULÒRUM (H. B. et Kunth, nov. gen. amer. 7. p. 70.) leaves ovate, roundish, and obovate, rounded at the apex, obsoletely-crenate, coriaceous, smooth, shining above; peduncles 5-7-flowered, and are, as well as the branchlets, pubescent, clammy; flowers 4-5-petalled. ♄. G. Native of Quito, at Paramo de Alpachaca. Flowers white.

Rock Holly. Tree 20 feet.

20 I. RUPÌCOLA (H. B. et Kunth, l. c.) leaves ovate-roundish, elliptical, blunt, crenate-serrated, coriaceous, quite smooth, shining on both surfaces; peduncles usually 3-flowered, and are, as well as the branches, smooth; flowers 4-petalled. ♄. G. Native of the province of Quito, near Loxa, in Paramo de Saragura. Flowers white.

Rock-hill Holly. Tree.

21 I. SALICIFÒLIA (Jacq. coll. 5. p. 36. t. 2. f. 2.) leaves long-lanceolate, acuminated at both ends, coriaceous, smooth, toothletted from the middle; cymes axillary, longer than the petioles. ♄. S. Native of the Mauritius. Burglària lùcida, Wendl.? ex Steud. Flowers white. Leaves with red edges.

Willow-leaved Holly. Fl. June, July. Clt. 1818. Shrub 10 feet.

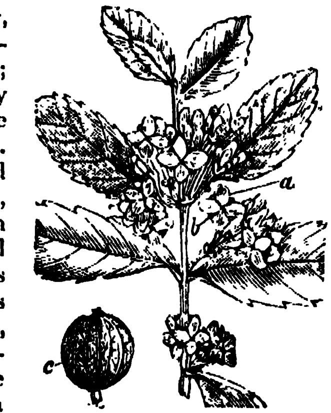
22 I. ODORA'TA (Hamilt. in D. Don, prod. fl. nep. p. 189.) leaves oval-oblong, bluntly acuminated, crenulate, stalked; umbels sessile, glomerate, equal in length to the petioles. ♄. H. Native of Nipaul, in the vicinity of Chitlong at the town of Lahuri. Flowers white, sweet-scented.

Sweet-scented Holly. Tree.

23 I. PALTÒRIA (Pers. ench. 1. p. 152.) leaves oval, crenate, coriaceous, smooth, crowded, hardly stalked; branches somewhat velvety; peduncles axillary, 1-3-flowered. ♄. G. Native of Peru and New Granada, on the highest mountains. Branches brownish-black. Stigma large, tetragonal. Corolla usually 4-petalled, white. Paltòria ovàlis, Ruiz et Pav. fl. per. 1. t. 84. f. 6. Ilex Paltòria, H. B. et Kunth, nov. gen. amer. 7. p. 69.

Paltor's Holly. Shrub 10 feet.

FIG. 3.



24 I. PARAGUE'NSIS (Lamb, pin. vol. 2. app. t. 2.) quite smooth; leaves obovate, oblong, bluntish, remotely serrated; peduncles axillary, many-parted; flowers 4-cleft, tetrandrous, rarely 5-cleft; stigma 4-lobed; drupe 8-furrowed, containing 4 nuts. ♄. S. Native of Paraguay, and in the Brazils, about Curitiba, where it is called *Mate*, and in French *Herbe du Paraguai*, and in Paraguay *Yerva mate*. Flowers white. Berries red. This plant is that which grows in Paraguay, where the Jesuits make a great revenue from the leaves. These leaves are used in Paraguay, La Plata, Chili, Peru, and Quito at all hours of the day, by putting a handful in a kind of tea-pot called *mate*, and from the spout of this the hot liquor is imbibed. Some mix sugar with it, and others add a few drops of lemon juice: and by pouring fresh boiling water, the infusion may be renewed. The Creoles are very fond of it, and never travel without a supply. They drink the infusion at every meal, and never eat until they have taken some of it. It must be drank directly, for if suffered to remain long the liquor would become as black as ink. The pipe to the mate, or tea-pot, called a bombilla, is perforated with holes at the top, to prevent swallowing the pulverized herb, which swims on the surface. The whole party is supplied by handing the mate and pipe from one to another, filling up the vessel with hot water as fast as it is drunk out. The repugnance of Europeans to drink after all sorts of people in a country where siphilitic diseases are so prevalent, has occasioned the introduction of small glass pipes, with which each person is sometimes provided. About 200,000 arrobas of the leaves, equal to 5 millions lbs., are annually obtained from Paraguay, 110,000 arrobas of which go to Chili, from which Lima and Quito are supplied; the rest is expended in the vice-royalty of Buenos Ayres. The leaves when green taste something like mallow leaves; they are roasted and dried, and almost pulverized before they are packed. There are three kinds of it in its prepared state, although produced by the same plant, which go under the names of *Caa-cuys*, *Caa-mini*, and *Caa-guazu*; the first is the buds of the leaves when hardly expanded; the second is the leaves stripped off the ribs before roasting, and the third is roasted without any preparation. The *Caa-cuys* does not keep, and is consequently all used in Paraguay. The aromatic bitterness which the herb possesses when prepared is partly dissipated by carriage. The principal harvest of the herb is made in the eastern part of Paraguay, and about the mountains of Maracaya, but it is also cultivated in the marshy valleys which intervene between the hills. The people boast of innumerable qualities which this herb possesses. It is certainly aperient and diuretic, but the other qualities attributed to it are rather doubtful. In the mine countries the use of this herb is more universal, from the opinion that prevails amongst the Spaniards, that the wines there are prejudicial to health. Like opium, it produces some singular effects; it gives sleep to the restless, and spirit to the torpid. Those who have once contracted the habit of taking it, do not find it an easy matter to leave it off, or even to use it in moderation, though when taken to excess it brings on similar disorders to those which are produced by the immoderate use of strong liquors.

The practice adopted for procuring the leaves is for the merchant to provide himself with a quantity of such goods as are best suited to the natives. After having obtained permission of the government, he goes to the quarter where the natives understand the work, and there he gives public notice of his design. The cutters collect, and having received advances in goods, he provides them with mules, and then conducts them to whatever yerval or grove promises the best harvest. Each morning the cutters disperse on foot, and cut as many branches as they can carry, and after scorching them over the fire, they bring them to the general deposit. A hurdle of long poles is there prepared in the shape of a cylindrical vault, which they call barbaqua; on this the branches are placed, and under a large fire is made, on which they dry the leaves. This done, they remove the fire, and on a hard and hot platform, after being swept clean, they throw the leaves, which they beat and separate. The leaves being separated are put into leather bags; they are now considered as fit for use, but not considered as seasoned until they are a few months old.

Mate or *Paraguay* Tea. Clt. 1823. Tree 15 feet.

25 I. GONGO'NHA (Mart. trav. engl. edit. 2. p. 100.) leaves elliptical, pungently-mucronate, spiny-toothed, rounded at the base, green and shining above; spikes usually twin, branched, densely-pubescent; flowers pentandrous; style distinct, entire. ♄. S. Native of Brazil, in the provinces of the Mines. The leaves of this plant afford a kind of tea, called in Brazil *Gongonha* or *Congonha*, and which is considered by some as identical with that from Paraguay. MM. Martius and St. Hilaire appear to be of this opinion. Dr. Martius found the plant in the province of Minas Geraes, but M. Auguste St. Hilaire met with his plant near Curitiba, in the province of St. Paul, and it

is therefore reasonable to suppose that his plant is identical with that from Paraguay. Since the export of tea from Paraguay has been prohibited by the present Dictator, Dr. Francia, the inhabitants of the other States, who were formerly supplied from Paraguay, are now obliged to use that from Brazil, which is found to be much inferior. Persons ignorant of the specific distinctions between the two trees have attributed the inferiority of the Brazil kind merely to the different mode of preparing the leaves.

Gongonha or Brazilian Mate or Tea. Tree.

26 I. MARTINIA'NA (Lamb. pin. append. t. 8.) leaves oval-oblong, crenated, coriaceous, shining, short-acuminated; racemes aggregate, compound, smoothish; flowers tetrandrous. ♄. S. Native of Guiana. Berry red, containing 4 nuts. Mr. Lambert thinks that the properties of this plant are the same as those of *I'lex Paraguénsis*, from the habit being similar.

Martin's Holly or Guiana Mâte. Tree 30 feet.

27 I. EMARGINA'TA (Thunb. jap. 78.) leaves obovate, emarginate, crenated, with revolute edges; flowers axillary, twin, stalked. ♄. G. Native of Japan, near Nagasaki. Flowers white.

Emarginate-leaved Holly. Shrub 10 feet.

28 I.? CUNEIFÒLIA (Lin. spec. 181.) leaves wedge-shaped, smooth, equally tricuspidate. ♄. H. Native of North America. Flowers and fruit unknown.

Var. β, Bonariénsis (D. C. prod. 2. p. 16.) leaves ovately wedge-shaped, smooth, tricuspidate, with the middle lobe twice as long as the lateral ones. ♄. G. Native of Buenos Ayres. Flowers axillary, solitary, almost sessile, surrounded by scales. Lam. dict. 3. p. 148.

Wedge-leaved Holly. Shrub 10 feet.

29 I. CRENA'TA (Thunb. jap. p. 78.) leaves ovate, crenate, blunt, with revolute edges; peduncles drooping, scattered on the branches, usually 3-flowered. ♄. G. Native of Japan. Flowers white.

Crenate-leaved Holly. Shrub.

30 I. SERRA'TA (Thunb. jap. 78.) leaves ovate, acute, ciliately serrated; pedicels axillary, solitary, 1-flowered, drooping. ♄. G. Native of Japan, in the island of Nipon. Flowers white.

Serrate-leaved Holly. Fl. June. Shrub.

31 I. LATIFÒLIA (Thunb. jap. 79.) leaves ovate, bluntish, serrated, shining above, with revolute edges; pedicels aggregate, longer than the petiole, and rising above the axillæ of the leaves. ♄. G. Native of Japan. Flowers white.

Broad-leaved Holly. Tree 20 feet.

32 I. MYRICOÌDES (H. B. et Kunth, nov. gen. amer. 7. p. 71.) leaves oblong, acute, cuneated at the base, somewhat cordate, serrulated, smooth, as well as the branches; peduncles 3-flowered, twice or thrice longer than the petioles; flowers 4-petalled. ♄. G. Native of New Granada, on the mountains between Meneses and Pasto. Flowers whitish.

Myrica-like Holly. Tree 6 feet.

33? I. HIPPOCRATEOÌDES (H. B. et Kunth, nov. gen. amer. 7. p. 71.) leaves oblong, somewhat acuminated, crenate-serrulated, veiny, coriaceous, rather shining, and are, as well as the branchlets, smooth; peduncles dichotomous, 3-7-flowered, 2 or 3 times longer than the petioles; flowers 4-petalled. ♄. S. Native of South America? Flowers white.

Hippocratea-like Holly. Shrub.

34? I. LAU'RINA (H. B. et Kunth, nov. gen. amer. 7. p. 71.) leaves lanceolate-oblong, acuminated, acute at the base, remotely serrulated, netted, coriaceous, and are, as well as the branches, smooth; peduncles 1-3-flowered, in crowded fascicles, length of petioles; flowers 4-petalled. ♄. S. Native of South America?

Laurel-like Holly. Tree.

* * * *Leaves quite entire or nearly so.*

35 I. CANARIE'NSIS (Poir. suppl. 3. p. 67.) leaves ovate-lanceolate, flat, somewhat acute, quite entire, shining; umbels axillary, few-flowered; peduncles longer than the petioles. ♄. H. Native of the Canary Islands. Flowers white, truly dioecious. Fruit black.

Canary-Island Holly. Fl. June, July. Clt. 1820. Tr. 20 ft.

36 I. DAHOÒN (Walt. fl. car. 241.) leaves lanceolate-elliptical, coriaceous, almost quite entire, with the edges a little revolute, and with the midrib, petioles, and branchlets villous; peduncles lateral and terminal, in panicled corymbs. ♄. H. Native of North America, from Carolina to Florida, in open swamps. I. Cassìne, Willd. hort. berl. 1. t. 31. Flowers white. Berries red. An elegant shrub.

Var. β, laurifòlia (Nutt. in Sillim. amer. journ. 5. 1822. p. 289.) leaves larger, elliptical, acutish, permanent; pedicels elongated, usually 3-flowered. ♄. H. Native of Eastern Florida. Very like *I. Dahoòn*.

Dahoon Holly. Fl. May, June. Clt. 1726. Shrub 8 feet.

37 I. LIGUSTRIFÒLIA; leaves obovate-lanceolate, quite entire, with the edges revolute, midrib, petioles, and branches smooth; cymes lateral. ♄. H. Native of North America, from Virginia to Georgia, in deep swamps. I. angustifòlia, Nutt. gen. amer. 1. p. 109. Flowers white. Berries red.

Privet-leaved Holly. Fl. June, July. Shrub 6 feet.

38 I. MYRTIFÒLIA (Lam. ill. no. 1732.) leaves ovate, acute at both ends, quite entire; flowers lateral, in fascicles, dioecious. ♄. S. Native of the Caribbee islands. Flowers white. This species has the habit of a *Sideróxylon*.

Myrtle-leaved Holly. Clt. 1806. Shrub 10 feet.

39 I. NIPAULE'NSIS (Spreng. syst. app. p. 48.) leaves elliptical, quite entire, acute at both ends; umbels globose, stalked, solitary, puberulous, shorter than the petioles. ♄. H. Native of Nipaul. I. ellíptica, D. Don, prod. fl. nep. p. 189. but not of Kunth. Flowers white.

Nipaul Holly. Shrub 8 feet.

40 I. CYMÒSA (Blum. bijdr. 1149.) leaves oblong, bluntly acuminated, quite entire, smooth; cymes dichotomous, axillary; berry 8-seeded. ♄. S. Native of Java. Flowers dioecious.

Cymose-flowered Holly. Tree 50 feet.

41 I. SPICA'TA (Blum. bijdr. 1149.) leaves oblong-lanceolate, quite entire, coriaceous, quite smooth, with revolute margins; spikes axillary and lateral; berry 6-8-seeded. ♄. S. Native of Java, in woods on the higher mountains.

Spike-flowered Holly. Tree 20 feet.

42 I. MACOUCÒUA (Pers. ench. 1. p. 152.) leaves oval or somewhat ovate, sometimes tapering to an obtuse emarginate point, coriaceous, smooth, quite entire; peduncles numerous, cymose, axillary. ♄. S. Native of Guiana and Cayenne, in woods, as well as of the islands of St. Domingo and Trinidad. Macoucòua Guianénsis, Aubl. guian. 1. t. 34. I'lex acuminàta, Willd. spec. 1. p. 711. Cassìne Maurocènia, Sieb. pl. exsic. trin. no. 81. Flowers white. Berries red, ovate, 2-celled. The tree is called *Macoucou* in Guiana.

Macoucoua Holly. Tree 40 feet.

43? I. OBCORDA'TA (Swartz, fl. ind. occ. 1. p. 338.) leaves obcordate, coriaceous, quite entire, shining, nerveless; stipulas small, prickly; peduncles 3-flowered, axillary, shorter than the petioles. ♄. S. Native of Jamaica, on the Blue Mountains. Flowers white. Style very short. Stigma blunt. Berries red, 1-celled.

Obcordate-leaved Holly. Shrub 6 feet.

44 I. ASIA'TICA (Lin. spec. 710.) leaves broad-lanceolate, obtuse, quite entire. ♄. G. Native of the East Indies.

Asiatic Holly. Shrub?

45 I. inte'gra (Thunb. fl. jap. p. 77.) leaves oblong, blunt, quite entire; umbels axillary, sessile; pedicels 1-flowered, usually 4 together. ♄. G. Native of Japan.

Entire-leaved Holly. Shrub 6 feet.

46 I. rotu'nda (Thunb. fl. jap. 77.) leaves broad, oval, acuminated, entire, smooth; peduncles umbelliferous, pubescent, longer than the petioles. ♄. G. Native of Japan. Branches knotted. Flowers pentandrous.

Round-leaved Holly. Shrub 8 feet.

47 I. bumelioìdes (H. B. et Kunth, nov. gen. amer. 7. p. 71.) branches smooth; leaves obovate, mucronate, decurrent at the base, almost quite entire, coriaceous, shining above; peduncles 3-4 together, 1-flowered. ♄. G. Native of Peru, in the province of Quito, near Loxa. Flowers unknown. Berries 4-5-seeded.

Bumelia-like Holly. Tree 16 feet.

Cult. All kinds of *Hollies* are much esteemed on account of their evergreen leaves. The hardy kinds are usually increased by budding or grafting on the common Holly, which is easily reared from seed, but they will also root freely by cuttings taken off at a joint in ripened wood, planted in sand in a shady situation, with a hand-glass placed over them. The greenhouse and stove kinds may be struck in the like manner, but those of the latter will require a little heat. The berries of all kinds of Holly should be gathered when they are ripe, mixed with sand, and turned over frequently till the October following, when they should be sown in beds covered over with mould three quarters of an inch thick, or the berries may remain on the trees till spring, when they may be sown. In general they do not vegetate till the second year.

IV. PRI'NOS (*πρινος*, *prinos*, is the Greek name of the Holly, which the present genus much resembles). Lin. gen. no. 461. D. C. prod. 2. p. 16.—Agèria, Adans. fam. 2. p. 166.

Lin. syst. *Hexándria*, *Monogýnia*, or *Polygàmia*, *Diœ'cia*. The character is the same as *Ilex*, but the flowers are 6-cleft, hexandrous, usually dioecious or polygamous from abortion, and the fruit contains 6 nuts.—Shrubs, with alternate, deciduous or permanent leaves, and axillary, usually 1-flowered pedicels.

§ 1. *Prinoìdes* (see genus for derivation). *D. C. prod. 2. p. 16. Flowers usually 4-5-cleft.*

1 P. deci'duus (D. C. prod. 2. p. 16.) leaves deciduous, elliptic-lanceolate, tapering into the petiole, serrated, with the middle nerve villous beneath; pedicels axillary, those bearing the male flowers aggregate, and those bearing the female ones solitary. ♄. H. Native of North America, from Virginia to Georgia, on rocky shady banks of rivers. Ilex prinoìdes, Ait. hort. kew. 2. p. 278. Ilex decídua, Walt. fl. car. 241. Flowers white. Berries crimson, large.

Var. β, æstivàlis (Lam. dict. 3. p. 147.) adult leaves smooth on both surfaces. ♄. H. Native of North America. Ilex æstivàlis, Lam. l. c. Flowers white.

Deciduous Winter-berry. Fl. June, July. Clt. 1736. Shrub 4 feet.

2 P. ambi'guus (Michx. fl. bor. amer. 2. p. 236. but not of Pursh.) leaves deciduous, oval or elliptical, mucronate, entire, quite smooth; pedicels bearing the male flowers, crowded at the bottom of the branchlets, those bearing the female ones solitary, upon long pedicels. ♄. H. Native of Carolina. Wats. dend. brit. t. 29. Cassìne Caroliniàna, Walt. fl. car. p. 242. The leaves, according to Nuttall, are entire, but in De Candolle's specimen they are serrated at the apex. Perhaps distinct plants. Flowers white. Berries red.

Ambiguous Winter-berry. Fl. June, Aug. Clt. 1812. Sh. 4 ft.

3 P. ni'tidus (Vahl. ecl. 2. p. 26.) leaves oblong-ovate, serrated, shining, membranous; pedicels axillary, 1-flowered; flowers tetrandrous. ♄. G. Native of Montserrat. The leaves are probably deciduous. Branches angular.

Shining-leaved Winter-berry Shrub.

4 P. dioi'cus (Vahl. ecl. 2. p. 25. t. 14.) leaves oblong-ovate, somewhat serrated, smooth, coriaceous; peduncles axillary, usually 1-flowered; flowers dioecious, tetrandrous. ♄. H. Native of the island of Montserrat. Flowers white. Berries red. Perhaps a species of *Ilex*.

Dioecious Winter-berry. Shrub.

§ 2. *Agèria (D. C. prod. 2. p. 17.) Flowers usually 6-cleft. Leaves deciduous.*

5 P. verticilla'tus (Lin. spec. 471.) leaves oval, deciduous, acuminated, serrated, pubescent beneath; fascicles of male flowers axillary, umbel-like; female ones aggregate, all 6-parted. ♄. H. Native of North America, from Canada to Virginia, in sandy wet woods, and on the borders of swamps. Duh. arb. 1. t. 23. Wats. dend. brit. t. 30. P. padifòlius, Willd. enum. 394. P. Gronòvii, Michx. fl. bor. amer. 2. p. 236. P. confértus, Mœnch. Flowers white. Berries red or crimson.

Whorled Winter-berry. Fl. June, Aug. Clt. 1736. Shrub 8 feet.

6 P. du'bius; leaves deciduous, oval, acuminated at both ends, mucronately-serrated, pubescent beneath; flowers 4-5-cleft; male ones crowded at the bottom of the branches, female ones solitary. ♄. H. Native of North America, in sandy woods, and on the borders of swamps, from New Jersey to Carolina. P. ambíguus, Pursh. fl. amer. sept. 1. p. 220. Flowers white. Berries red, larger than those of *P. verticillàtus*.

Doubtful Winter-berry. Fl. July, Aug. Clt. 1736. Tree 12 ft.

7 P. lævig'atus (Pursh. fl. sept. amer. 1. p. 220.) leaves deciduous, lanceolate, with adpressed serratures, acuminated, smooth on both surfaces, shining, hardly pubescent on the nerves beneath; flowers 6-cleft, male ones scattered; female ones axillary, solitary, almost sessile. ♄. H. Native of North America, on the Alleghany mountains, from New York to Virginia. Wats. dend. brit. t. 28. Flowers white. Berries large, dark-red.

Smooth-leaved Winter-berry. Fl. July. Clt. 1812. Sh. 8 ft.

8 P. lanceola'tus (Pursh, fl. sept. amer. 2. p. 17.) leaves deciduous, lanceolate, finely and remotely serrated, smooth on both surfaces; male flowers aggregate, triandrous; female ones usually twin, stalked, 6-cleft. ♄. H. Native of Georgia and Carolina, in the lower counties. Flowers white. Berries small, scarlet.

Lanceolate-leaved Winter-berry. Fl. June, July. Clt. 1811. Shrub 8 feet.

§ 3. *Wintèrlia* (probably from the name of some botanist). *Mœnch. meth. 74. D. C. prod. 2. p. 17. Flowers for the most part 6-cleft. Leaves permanent.*

9 P. gla'ber (Lin. spec. 471.) branches rather pubescent; leaves evergreen, cuneate-lanceolate, coriaceous, smooth, shining, a little toothed at the apex; pedicels axillary, usually solitary, for the most part 3-flowered. ♄. H. Native of North America, from Canada to Florida, in sandy shady woods. Flowers white. Berries black, called in Jersey *Ink-berries*. A low and handsome shrub.

Glabrous Winter-berry. Fl. July, Aug. Clt. 1759. Shrub 3 to 4 feet.

10 P. atoma'rius (Nutt. gen. amer. 1. p. 213.) leaves evergreen; cuneate-oval, acute, coriaceous, somewhat serrated at the apex, bearing black atoms or dots beneath; young branches a little clammy; pedicels lateral, 1-flowered. ♄. H. Native of Georgia, in woods on the banks of rivers. Flowers white. Berries dark.

Atom-bearing Winter-berry. Fl. July, Aug. Clt. 1820. Shrub 2 feet.

11 P. CORIA'CEUS (Pursh, fl. sept. amer. 1. p. 221.) leaves evergreen, cuneate-lanceolate, coriaceous, smooth, shining, quite entire; corymbs axillary, sessile, very short, many-flowered; flowers 6-cleft. ♄. H. Native of Georgia in sandy woods, near the banks of rivers. Wats. dendr. brit. t. 27. Flowers white. A handsome tall shrub, with the appearance of *I'lex Dahoòn*. There are two varieties of this shrub, the one with broader obovate-lanceolate leaves, the other with narrower lanceolate acute leaves.

Coriaceous-leaved Winter-berry. Fl. June, July. Clt. 1820. Shrub 10 feet.

12 P. MONTA'NUS (Swartz, fl. ind. occ. 1. p. 622.) leaves evergreen, ovate, serrated all around the edges, quite smooth and shining on both surfaces; peduncles axillary, 3-flowered. ♄. S. Native of Jamaica among bushes on the mountains. Flowers small, white. Berries roundish, black.

Mountain Winter-berry. Tree 30 feet.

13 P. SIDEROXYLOÌDES (Swartz, fl. ind. occ. 1. p. 624.) leaves roundish, obtuse, quite entire, somewhat coriaceous; pedicels 4-8, axillary, crowded, 1-flowered, longer than the petioles. ♄. S. Native of the Caribbee Islands. Flowers white. The wood is hard.

Iron-wood-like Winter-berry. Tree 20 feet.

Cult. The hardy kinds of *Prinos* are well adapted for small shrubberies; they will grow well in any light soil, but prefer peat, and are easily increased by laying down the shoots or by seeds. The stove species will grow in a mixture of loam and peat, and ripened cuttings will root in sand under a hand-glass, in a moderate heat. The seeds will not vegetate till the second year.

† *Genera allied to Ilicìneæ, but differ materially in some particulars from the rest of the order.*

V. STROMBO'SIA (στρομβος, *strombos*, a turban, a top; shape of fruit). Blum. bijdr. 1154.

LIN. SYST. *Pentándria, Monogýnia.* Calyx inferior, small, flat, obsoletely-crenulated. Petals 5, conniving, campanulate, villous in the throat. Stamens 5, short, opposite the petals and inserted in them. Anthers bursting inwards, didymous. Ovary immersed in the disk, 5-celled, cells 1-seeded; or 3-celled, cells 2-seeded. Style short, crowned by an obtuse stigma, which is obsoletely toothed. Fruit baccate, turbinate, substipitate, 1-seeded from abortion.—A tall tree, with alternate, oblong, acuminated, entire, smooth, shining leaves, and axillary fascicles of greenish flowers.

1 S. JAVA'NICA (Blum. bijdr. 1155.). ♄. S. Native of Java, in mountain woods.

Java Strombosia. Tree 50 feet.

Cult. See stove species of *Prìnos* for culture and propagation.

VI. LEUCO'XYLON (from λευκος, *leukos*, white, ξυλον, *xylon*, wood; wood white). Blum. bijdr. 1169.

LIN. SYST. *Polygàmia, Diœ'cia.* Flowers polygamous from abortion. Calyx inferior, 4-parted, with the segments obtuse and imbricate. Corolla subcampanulate, 4-parted. Male flowers with about 12-14 stamens, which are partly hypogynous and partly adnate to the base of the corolla, and inclosed in it. Anthers 2-celled. Female flowers with a 4-celled ovary, each cell containing many seeds. Style 2-parted, crowned by 2 emarginate stigmas. Drupe corticate, 1-celled, containing 1-2 1-seeded bony nuts. Embryo inverted in cartilaginous albumen. A tall tree with spreading branches, with the branchlets and leaves distich. Leaves small, alternate, approximate, elliptic-lanceolate, coriaceous, veinless, shining above but silky-pubescent beneath as well as the branchlets. Flowers axillary, male ones crowded, female ones solitary. According to Blume, the genus has the habit of *Terebinthàceæ*, but it is more nearly allied to *Ebenàceæ* and *Ternstræmiàceæ*, but we think it is still nearer to *Ilicíneæ*.

1 L. BUXIFÒLIUM (Blum. bijdr. 1169.). ♄. S. Native of Java, in mountain woods, where it is called *Kimerak*.

Box-leaved Leucoxylum. Fl. Feb. Tree 60 feet.

Cult. For culture and propagation see stove species of *Prìnos*.

VII. RHAPTO'STYLUM (ῥαπτος, *rhaptos*, sewed together; and στυλος, *stylos*, a style; styles joined together). H. B. et Kunth, nov. gen. amer. 7. p. 78.

LIN. SYST. *Decándria, Monogýnia.* Calyx 5-cleft, with ovate, equal segments. Petals 5, sessile, valvate in æstivation, acute, equal, longer than the calyx, hypogynous. Disk wanting. Stamens 10, hypogynous, shorter than the corolla. Filaments dilated at the base and subulate at the apex, adhering together and with the petals at the base, smooth, opposite the petals. Anthers 2-celled, bursting inwards. Ovary superior, large, conical, 3-celled; ova solitary, pendulous. Stigma sessile, 3-lobed.—An unarmed, smooth tree, with alternate, slender branches, and alternate, entire, membranous, exstipulate leaves. Flowers minute, white, in fascicles in the axils of the leaves.

1 R. ACUMINA'TUM (H. B. et Kunth 7. p. 79. t. 621.). ♄. S. Native of New Granada.

Acuminated-leaved Rhaptostylum. Shrub 6 feet.

Cult. For culture and propagation see stove species of last genus.

ORDER LXVII. RHA'MNEÆ (plants agreeing with *Rhámnus* in important characters). R. Br. gen. rem. p. 22. D. C. prod. 2. p. 19. Brogn. mem.—Rhámnorum, Gen. Juss.

Calyx monosepalous, 4-5-cleft (f. 4. B. *a.* D. *c.*), with the tube adhering to the base of the ovary (f. 6. C. *d.* B. *f.*); lobes valvate when in the bud. Petals 4-5 (f. 4. D. *a.* B. *c.*), cucullate (f. 7. A. *h.*) or convolute (f. 6. C. *c.*), rarely wanting, alternating with the lobes of the calyx, very often of the form of a scale, all inserted in the mouth of the calyx. Stamens 4-5, opposite the petals (f. 4. B. *c.*). Anthers 1- (f. 7. D. *c.*) 2-celled (f. 6. C. *b.*). Ovary free, or adhering to the calyx more or less, always immersed in the disk when there is any, 2-3 (f. 6. E. *g.*) rarely 4-celled, each cell containing 1 erect seed (f. 6. E. *g.*). Style 1-3. Stigmas 2-3 (f. 6. E. *c.*). Fruit fleshy (f. 5. F. *k.*) indehiscent or dry, tricoccous (f. 6. E. *g.*). Seeds erect. Albumen fleshy, rarely wanting. Embryo straight, slender, about equal in length to the seed, with large, flat cotyledons, and a short inferior radicle. —Trees or shrubs, with simple, alternate, rarely opposite leaves, usually furnished with stipulas. Flowers small, usually greenish-yellow. This order is nearly allied to *Celastrìneæ*, but differs in the sepals or lobes of the calyx being valvate in æstivation, not imbricate, and in the stamens being opposite the petals, not alternating with them, as well as in the ovary being more or less adnate to the calyx, not distinct from it. It also comes near to *Byttneriàceæ* in the æstivation of the calyx, but is distinguished from it by the insertion of the stamens. Throughout this order there is a remarkable agreement between the inner bark and the fruit, especially in several species of *Rhámnus*, in which they both are purgative and emetic, and in some degree astringent. Many species of *Zizyphus*, however, bear wholesome and agreeable fruit. The berries of the greater number yield yellow and green dyes, under the hands of the chemist, of much importance to manufacture. The bark of *Ceanóthus cœrúleus* is esteemed febrifugal in Mexico.

Synopsis of the Genera.

1 Paliu'rus. Calyx spreading, 5-cleft (f. 4. A. *a.*). Petals obovate, convolute (f. 4. A. *b.*). Stamens exserted (f. 4. A. *c.*). Anthers 2-celled (f. 4. A. *c.*). Disk flat (f. 4. A. *d.*) pentagonal. Styles 3. Fruit dry, indehiscent (f. 4. A. *g.*), containing a 3-celled nut (f. 4. A. *h.*), winged in the circumference (f. 4. A. *f.*).

2 Zi'zyphus. Calyx spreading (f. 4. B. *a.*), 5-cleft. Petals obovate, unguiculate (f. 4. B. *b.*), convolute. Stamens exserted (f. 4. B. *c.*). Anthers 2-celled (f. 4. B. *c.*). Disk flat (f. 4. B. *f.*), pentagonal. Styles 2-3 (f. 4. B. *g.*). Fruit fleshy, containing a 1-2-celled nut (f. 4. B. *h.*).

3 Sphæroca'rya. Calyx 5-parted. Petals minute, ovate, obtuse. Stamens short. Disk none. Style 1. Drupe fleshy, containing a 1-celled, 1-seeded nut.

4 Conda'lia. Calyx spreading, 5-cleft (f. 4. C. *a.*). Petals wanting. Anthers 2-celled (f. 4. C. *c.*). Disk flat, pentagonal (f. 4. C. *e.*). Style 1. Fruit drupaceous, containing a 1-celled nut (f. 4. C. *d.*).

5 Berche'mia. Calyx tubular, 5-cleft (f. 4. E. *a.*). Petals convolute (f. 4. E. *c.*). Stamens inclosed (f. 4. E. *d.*). Anthers 2-celled (f. 4. E. *c.*). Disk annular (f. 4. E. *f.*), nearly flat. Style simple. Fruit dry, 2-celled (f. 4. E. *g.*).

6 Ventila'go. Calyx spreading, 5-cleft (f. 4. D. *c.*). Petals obovate, convolute (f. 4. D. *a.*). Stamens exserted (f. 4. D. *b.*). Anthers 2-celled (f. 4. D. *b.*). Disk fleshy, flat. Style compressed, bidentate (f. 4. D. *j.*). Fruit indehiscent (f. 4. D. *h.*), woody, 1-celled, 1-seeded, winged at the apex (f. 4. D. *k.*).

7 Sagere'tia. Calyx urceolate, 5-cleft (f. 4. F. *a.*). Petals convolute or cucullate (f. 4. F. *c. b.*). Anthers 2-celled (f. 4. F. *f.*). Disk thick, cup-shaped. Ovary 3-celled (f. 4. F. *d.*). Style short, thick (f. 4. F. *g.*).

8 Rha'mnus. Calyx urceolate (f. 5. A. *b.* C. *b.*), 4-5-cleft (f. 5. A. *a.* C. *a.*). Petals emarginate (f. 5. C. *c.*), or wanting. Anthers 2-celled (f. 5. A. *d.*). Disk thin (f. 5. C. *c.*). Styles 3-4, connected (f. 5. A. *g.*), or free. Fruit baccate, containing 3-4, rarely 2, little nuts (f. 5. A. *j.* B. *f.*).

9 Scu'tia. Calyx urceolate, 5-cleft (f. 6. A. *g.*). Petals flattish, emarginate (f. 6. A. *e. f.*). Anthers 2-celled (f. 6. A. *b.*). Disk fleshy (f. 6. A. *e.*). Style short (f. 6. A. *k.*). Fruit containing 3 nuts (f. 6. A. *l.*).

10 Retaníla. Calyx urceolate, 5-cleft (f. 5. E. *b. e.*). Petals cucullate (f. 5. E. *c. d.*), sessile. Stamens inclosed (f. 5. E. *c.*). Anthers kidney-shaped, 1-celled. Disk covering the bottom of the calyx (f. 5. E. *g.*) Style simple (f. 5. E. *h.*). Fruit containing a 3-celled nut (f. 5. E. *i.*).

11 Colle'tia. Calyx campanulate (f. 5. F. *f.*). coloured. Petals wanting. Anthers 1-2-celled, kidney-shaped (f. 5. F. *i.*) or ovate. Disk cup-shaped (f. 5. F. *g.*). Style simple, elongated. Fruit dehiscent, containing 3 nuts (f. 5. F. *h. k.*).

12 Trevòa. Calyx turbinate, 5-cleft. Petals cucullate. Stamens inclosed. Anthers 1-celled, kidney-shaped. Disk almost wanting. Style long, hairy. Capsule membranous, 2-valved, 1-seeded.

13 Disca'ria. Calyx campanulate, 4-5-cleft, coloured. Petals 4-5. Stamens inclosed. Anthers 2-celled. Disk cup-shaped, fleshy. Style crowned by a 3-lobed stigma.

14 Hove'nia. Calyx rather spreading (f. 6. B. *a.*), 5-cleft. Petals obovate, unguiculate (f. 6. B. *e.*), convolute. Stamens inclosed (f. 6. B. *c.*). Anthers 2-celled. Disk fleshy (f. 6. B. *f.*), flat. Style trifid. Fruit of 3 free berries (f. 6. B. *l.*).

15 Colubrìna. Calyx spreading, 5-cleft (f. 6. D. *a.*). Petals obovate, convolute (f. 6. D. *b.*). Stamens exserted (f. 6. D. *c.*). Anthers 2-celled. Disk fleshy, flattish, pentagonal (f. 6. D. *g.*). Style trifid. Fruit dehiscent, containing 3 seeds (f. 6. D. *f.*).

16 Ceanòthus. Calyx a hemispherical tube, with a 5-cleft limb (f. 6. C. *d.*). Petals unguiculate, cucullate (f. 6. C. *c.*). Anthers 2-celled (f. 6. C. *b.*). Disk spongy, annular (f. 6. C. *e.*). Styles 3. Fruit containing 3-seeds (f. 6. D. *f.*).

17 Willeme'tia. Calyx urceolate, 5-cleft (f. 6. F. *d.*). Petals cucullate, sessile (f. 6. F. *b.*). Stamens inclosed. Anthers 2-celled. Disk very thin (f. 6. F. *c.*). Ovary 3-celled. Style simple.

18 Pomade'rris. Calyx rather spreading (f. 6. E. *a.*), 5-cleft. Petals flat, unguiculate, subcordate or wanting. Stamens exserted (f. 6. E. *b.*). Anthers 2-celled (f. 6. E. *c. e.*). Disk wanting. Style trifid (f. 6. E. *c. d.*). Fruit containing 3 seeds (f. 6. E. *f.*).

19 Crypta'ndra. Calyx coloured, campanulate 5-cleft (f. 5. D. *c. b. a.*). Petals small, cucullate, sessile (f. 5. D. *e.*). Stamens inclosed (f. 5. D. *c.*). Anthers 2-celled. Disk wanting. Style simple. Capsule containing 3 seeds.

20 Bartli'ngia. Calyx bibracteate, tubular, 5-cleft. Petals scale-formed. Stamens 10. Anthers 2-celled, opening laterally. Disk wanting. Style simple. Ovary compressed, 1-celled, 1-2-seeded.

21 Solena'ntha. Calyx 5-cleft. Petals 5, conniving into a tube. Anthers 2-celled, each inserted under a scale. Ovary 2-lobed.

22 Tetrapa'sma. Calyx 4-cleft. Petals 4, cucullate. Stamens 4, inclosed. Stigma 3-lobed. Ovary 3-celled.

23 Trichoce'phalus. Calyx with a short tube and long setaceous segments (f. 7. C. *b.*). Petals wanting or setaceous. Anthers kidney-shaped, 1-celled (f. 7. C. *e.*). Disk hardly any. Style simple, short. Fruct containing 3 seeds (f. 7. C. *c.*).

24 Phy'lica. Calyx with a cylindrical tube and a 5-cleft limb (f. 7. B. *b.*). Petals cucullate (f. 7. B. *d. c.*). Stamens inclosed (f. 7. B. *c.*). Anthers 1-2-celled. Disk hardly evident. (f. 7. B. *f.*). Style trifid (f. 7. B. *i.*). Fruct 3-seeded (f. 7. B. *h. k.*).

25 Soula'ngia. Calyx with an obconical tube and a cleft limb (f. 7. D. *d.*). Stamens inclosed (f. 7. D. *c.*). Anthers kidney-shaped, 1-celled (f. 7. D. *c.*). Disk epigynous (f. 7. D. *h.*), pentagonal, fleshy. Style simple. Fruit 3-seeded (f. 7. D. *k. i. j.*).

26 Goua'nia. Calyx with a rather spreading, 5-cleft limb

(f. 7. A. *a*.). Petals convolute (f. 7. A. *f*.) or cucullate (f. 7. A. *h*.). Stamens inclosed (f. 7. A. *h*.). Anthers 2-celled. Disk epigynous (f. 7. A. *d*.) pentagonal or stellate (f. 7. A. *c*.). Style trifid. Fruit 3-winged, 3-seeded (f. 7. A. *g*.).

27 Crumena'ria. Calyx campanulate, 5-cleft. Petals cucullate. Stamens inclosed. Anthers 2-celled. Style crowned by 3 stigmas. Capsule papyraceous, 3-seeded.

† *Genera allied to Rhámneæ, but they are not sufficiently known.*

28 Cou'pia. Calyx small, 5-toothed. Petals 5, oblong, appendiculate inside. Stamens 5. Stigmas 4-5, sessile. Berry pea-shaped, 4-5-celled, 4-5-seeded.

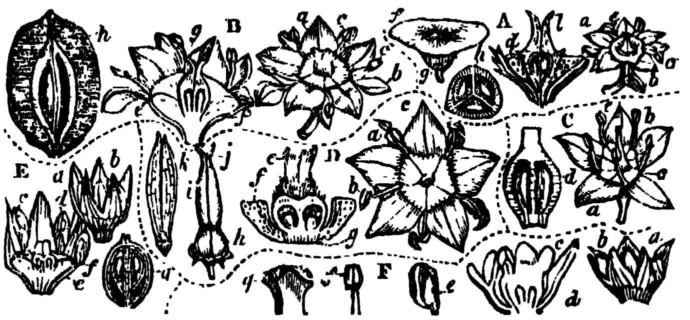
29 Carpode'tus. Calyx turbinate, 5-cleft. Petals 5, small. Stamens 5. Style filiform. Drupe dry, globose, 5-celled, 5-seeded.

30 Schæffe'ria. Flowers dioecious. Calyx 4-parted. Petals 4. Stamens 4. Style short or wanting. Stigmas 2. Berry dry, 2-celled; cells 1-seeded.

31 Olìnia. Calyx campanulate, 5-6-toothed. Petals 5, narrow. Stamens 5-6, concealed under so many scales. Style short. Fruct inferior, 5-angled, 5-seeded.

32 Daphniphy'llum. Flowers dioecious. Calyx small, crenulated. Corolla none. Stamens 6-10, connate at the base. Stigma bifid, sessile. Drupe containing a 1-seeded fibrous nut.

FIG. 4.



I. PALIU'RUS (Paliurus was the name of a town in Africa). Tourn. inst. t. 386. D. Don, prod. fl. nep. p. 189. D. C. prod. 1. p. 22. Brogn. mem. Rhamn. p. 46.

Lin. syst. *Pentándria, Trigýnia.* Calyx spreading, 5-cleft (f. 4. A. *a*.). Petals 5, obovate, convolute (f. 4. A. *b. c*.). Stamens 5, protruding (f. 4. A. *c*.). Anthers ovate, 2-celled. Disk flat (f. 4. A. *d*.), pentagonal. Ovary 3-celled (f. 4. A. *h*.), half immersed in the disk (f. 4. A. *d*.). Styles 3. Fruit dry, indehiscent (f. 4. A. *g*.), expanding into a membrane round the disk (f. 4. A. *f*.), containing a 3-celled nut f. 4. A. *h*). Seeds sessile.—Shrubs or trees with alternate simple leaves, with the habit of *Zízyphus*.

1 P. aculea'tus (Lam. ill. t. 210. fl. fr. ed. 3. no. 4081. Duh. ed. nov. 3. t. 17.) branchlets pubescent; leaves ovate, serrulated, quite smooth, 3-nerved, with 2 spines at their base, one erect the other hooked; umbellules axillary, few-flowered, crowded; wing of capsule crenated. ♄. H. Native of sterile places about the Mediterranean sea, on both shores, and on the western coast of Asia. P. petàsus, Dum. Cours. 6. p. 266. P. austràlis, Gært. fruct. 1. t. 43. f. 5. P. vulgàris, D. Don. prod. fl. nep. 189. Rhámnus Paliùrus, Lin. spec. 281. Zízyphus Paliùrus, Willd. spec. 1. p. 1103. Sims, bot. mag. 1893. Flowers greenish-yellow. From the singular appearance of the fruit, resembling a head with a broad-brimmed hat on, the French call the tree *Porte-chapeau.* This is by many persons supposed to be the plant from which the crown of thorns, which was put upon the head of our Saviour, was composed; the truth of which is supported by many travellers of credit, who affirm that this is one of the most common shrubs in the country of Judæa, and from the pliability of its branches, which may easily be wrought into any figure, it may afford a probability. Hasselquist is of opinion that it was rather the *Zízyphus spina-Chrísti.*

This is the common thorn of the hedges in Asia, and forms a fence of a most impassable kind. The seeds are sold in the herb-shops of Constantinople, and the native *hakims*, or doctors, prescribe them in many complaints, under the name of *Xallé*. They are also used as a dye.

Prickly Christ's-thorn. Fl. June, July. Clt. 1596. Sh. 8 ft.

2 P. virga'tus (D. Don, in bot. mag. t. 2535. fl. nep. 189.) branches smooth; leaves obliquely cordate or elliptical, 3-nerved, shining; wing of fruit entire. ♄. H. Native of Nipaul. Leaves serrulated, with 2 thorns at the base of each, the one straight, the other hooked. Flowers in axillary corymbs, greenish-yellow. A beautiful shrub.

Twiggy Christ's-thorn. Fl. July, Aug. Clt. 1819. Sh. 10 ft.

3 P.? Auble'tia (Schult. syst. 5. p. 343.) prickles scattered, straight, short; leaves ovate, crenulate, smooth; corymbs axillary, pubescent; berries orbicular, convex beneath, flat above. ♄. H. Native of China, about Canton. Aublètia ramosíssima, Lour. fl. coch. 283. P. ramosíssima, Poir. suppl. 4. p. 262. Flowers greenish-yellow. Stamens inclosed in the petals. Probably a species of *Zizyphus*.

Aublet's Christ's-thorn. Shrub 8 feet.

Cult. These handsome shrubs are well fitted for shrubberies; they will grow in any common soil, and may be either increased by layers, cuttings of the roots, or seeds.

II. ZI'ZYPHUS (Zizouf, in Arabic, is the name of the *Lotos*). Tourn. inst. t. 403. Gært. fruct. 1. p. 43. Lam. ill. t. 185. D. C. prod. 2. p. 19. Brogn. mem. Rhamn. p. 47.

Lin. syst. *Pentándria, Di-Trigýnia.* Calyx spreading, 5-cleft (f. 4. B. *a*.). Petals 5, obovate, unguiculate, convolute (f. 4. B. *b. c*.). Stamens 5, exserted (f. 4. B. *c*.). Anthers ovate, 2-celled (f. 4. B. *c*.). Disk flat, pentagonal (f. 4. B. *f*.), expanded, adhering to the tube of the calyx. Ovary 2-3-celled (f. 4. B. *e*.), immersed in the disk. Styles 2-3 (f. 4. B. *g*.). Fruit fleshy (f. 4. B. *h*.), containing a 1-2-celled nut (f. 4. B. *h*.). Seeds sessile, compressed, very smooth.—Shrubs with altèrnate, 3-nerved leaves, and spiny stipulas. Flowers axillary, cymose. Fruit mucilaginous, eatable, more or less grateful.

* *Leaves smooth on both surfaces.*

1 Z. vulga'ris (Lam. ill. 185. f. 1.) leaves ovate, retuse, toothletted, and are, as well as the branchlets, smooth; prickles wanting or twin, one of them recurved; drupe ovate, oblong. ♄. H. Native of Syria, from whence it has been introduced into Europe. Rhámnus Zízyphus, Lin. spec. 282. Pall. fl. ross. 2. t. 59. Z. sativa, Desf. arb. 2. p. 373. Duh. ed. nov. 3. t. 16. but not of Gært. Z. Jújuba, Mill. dict. no. 1. but not of Lam. Flowers greenish-yellow, 2 or 3 together. Fruit blood-red or saffron-coloured, having a sweet granular pulp. This tree is cultivated for its fruit in many parts of the south of Europe, where it is called *Jujube.* In Italy and Spain the fruit is served up at the table in deserts, during the winter-season, as a dry sweet-meat. It is sold in the markets in the towns of Italy and Spain. The tree is said to have been first introduced into Italy from Syria by Sextus Pampinius, in the time of Augustus Cæsar. The fruit is also sold in abundance in the markets of Constan-

tinople, under the name of *Hunnab-agaghi*, and which has for a long time been imported into the west of Europe under the name of *Jujube*. The Turks of Constantinople plant the tree before their coffee-houses with other trees, to enjoy the shade and fruit in their season.

Common Jujube. Fl. Aug. Sept. Clt. 1640. Tree 20 feet.

2 Z. Sine'nsis (Lam. dict. 3. p. 318.) leaves ovate-oblong, acutely serrated, smooth; branches pubescent; prickles twin, spreading, straightish; petals reflexed; drupe ovate. ♄. H. Native of China. Rhámnus Zizyphus, Lour. fl. coch. 158. Flowers greenish-white. Drupe eatable, brownish-yellow, ovate, fleshy, and are sold in the markets of Canton during the autumn.

Chinese Jujube. Clt. 1818. Shrub 4 to 5 feet.

3 Z. Lòtus (Lam. dict. 3. p. 316.) leaves ovate-oblong, obsoletely crenated, and are, as well as the branches, smooth; prickles twin, one of them recurved, the other straight, longer than the petiole; drupe roundish-ovate. ♄. F. Native of Persia, and the interior of Africa, Sicily, Spain, &c. Rhámnus Lòtus, Lin. spec. 281. Desf. act. par. 1788. t. 21. Park's trav. with a figure. Shaw's afr. no. 632. f. 632. This is the lotos of the Lotophagi. It grows wild in Africa, especially in the kingdom of Tunis, in a tract called *Jereed*, which was formerly the country of the Lotophagi. The Lotophagi, as the Greeks call them, possessed a considerable part of the sea-coast, between the two Syrtes, the island of Meninx (now Jérba) and the coast beyond it as far as the lake and river Tritonis to the Machlies. Scylax extends the name to the tribes between the two Syrtes. Ptolemy limits them to the neighbourhood of the river Cinyps, while Herodotus appears to confine them to the west of that river. Strabo places them in the neighbourhood of Jerba, although he calls the adjoining Syrtes that of the Lotophagi. Pliny assigns them, in addition to the island, the environs of the Syrtes also. But the allotment of this confined space to the eaters of lotos was owing to the want of a more extended knowledge of the countries that border on the desert, for it appears that the tribes who inhabit them eat universally of this fruit, in a greater or less degree, and most of them apparently as much as they can obtain of it. The Arabs know the plant by the name of *Seedra*. It has the habit of *Rhámnus*, and the flowers of the common *Jujube*. But the fruit is smaller, rounder, and sweeter, the size of sloes, containing large stones; they are borne on every part of the plant, like gooseberries; they have a purplish tinge. The farinaceous pulp is separated from the stone, and laid by for winter use; its flavour approaches nearly to that of figs or dates. A kind of wine is made from the fruit by expression, and diluted with water, but this will not keep more than a few days. The same liquor perhaps which is fabled to have produced such extraordinary effects on the companions of Ulysses.

> "The trees around them all their food produce,
> Lotos the name divine, nectareous juice,
> Thence called Lotophagi, which whoso tastes,
> Insatiate riots in their sweet repasts,
> Nor other home nor other care intends,
> But quits his house, his country, and his friends."
> *Homer's Odyssey.*

Dr. Shaw says that the fruit is common in the deserts, and other parts of Barbary, is still in great repute, and sold in the markets all over the southern districts of those kingdoms. Mr. Park says he discovered the lotos to abound in all the countries of Africa he traversed, flourishing most in a sandy soil, but in the greatest plenty in the kingdoms of Kaarta Ludamar, and in the northern parts of Bambara. The fruit small, farinaceous berries, of a yellow colour and delicious taste. The natives, he says, convert them into a sort of bread, by exposing them some days to the sun, and afterwards pounding them gently in a wooden mortar, until the farinaceous part is separated from the stone. This meal is then mixed with a little water, and formed into cakes, which, when dried in the sun, resemble in colour and flavour the sweetest gingerbread. The stones are afterwards put into a vessel of water, and shaken about so as to separate the farina which may still adhere to them, this communicates a sweet and agreeable taste to the water, and with the addition of a little pounded millet, forms a pleasant gruel called *fondi*, which is the common breakfast in many parts of Ludamar, during the months of February and March. The fruit is collected by spreading a cloth upon the ground, and beating the branches with a stick.

Mr. Browne, in his Travels in Africa, informs us that the Arabic name of the *lotos* is *Nebbek*, and that there are two sorts of it at Dár-foor, the largest of which is called *Nebbek-el-Arab*; the one a shrub the other a tree, both equally thorny. The latter bearing a smaller fruit than the former, of a darker colour and different flavour, which the natives eat both fresh and dry; for it dries on the tree and remains the greatest part of the winter months. In that state it is formed into a paste, of not unpleasant taste, and is a portable provision on journeys.

The *lotos* of the Lotophagi must not be confounded with the Egyptian *lotos*, which is *Nymphæ'a Lòtus*, nor with the *lotos* of Homer and Dioscorides, which is a species of *Trifòlium*, nor with the *lotos* of Hippocrates, which is *Céltis austràlis*, nor with the Italian *lotos* which is *Diopyrus lòtus*.

Lotos of the Lotophagi or Jujube Lotus. Clt. 1731. Shrub 2 to 4 feet.

4 Z. mucrona'ta (Willd. enum. 251.) leaves ovate, cordate, crenated, smooth; prickles twin, one recurved; drupe somewhat globose. ♄. G. Native of the Cape of Good Hope, along the banks of the river Cariep. Z. bubalina, Licht. ex Schult. syst. 5. p. 334. Flowers greenish-yellow. Fruit red, eatable.

Mucronate-leaved Jujube. Clt. 1810. Tree 20 feet.

5 Z. heteroge'nea (Poir. suppl. 3. p. 193.) leaves ovate, acuminated, serrulated, shining; prickles twin, one recurved; pedicels solitary, 1-flowered. ♄. H. Native of Persia. Rhámnus heterogèneus, Burm. fl. ind. p. 61.—Pluk. alm. t. 312. f. 4. Flowers yellowish. Fruit eatable, pleasant.

Heterogeneous Jujube. Shrub.

6 Z. spìna-Chrísti (Willd. spec. 1. p. 1105.) leaves ovate, toothed, smooth, or pubescent beneath; prickles twin, spreading, one of which is straightish, the other somewhat incurved; peduncles corymbose, villously downy; drupe ovate-globose. ♄. H. Native of the north of Africa, in Palestine, and Ethiopia, also in date plantations, near Tozer, and in Egypt. Rhámnus spìna-Chrísti, Lin. spec. 282. Desf. fl. atl. 1. p. 201. Rhámnus Nabèca, Forsk. ægyp. 204. but not of Lin. Z. Africàna, Mill. dict. no. 4. Z. Napèca, Lam. dict. 3. p. 320. Nabca, Alp. eg. 2. t. 4. p. 10. Œnòplia spinòsa, Bauh. pin. 477. Ger. emac. append. t. 1605. Branches whitish. Flowers yellowish-green. Fruit oblong, about the size of a sloe, with a pleasant taste, furnishing a very pleasant food to the inhabitants of Egypt and Arabia. Hasselquist thinks this is the tree which afforded the crown of thorns put on the head of Christ, as it is common in the East, and is very fit for the purpose, being furnished with many sharp spines well adapted to give pain. The crown might be made of the round pliant branches, and what seems to be the greatest proof is, that the leaves much resemble those of ivy. But notwithstanding what Hasselquist says, we are still of opinion that the *Paliùrus aculeàtus* is the true Christ's-thorn.

Var. β, inérmis (D. C. prod. 2. p. 20.) prickles wanting; leaves large, very blunt. ♄. H.—Clus. hist. 1. p. 27.

Christ's-thorn. Fl. Aug. Sept. Clt. 1759. Shrub 8 feet.

7 Z. parvifòlia (Del. voy. à Meroe a fleuve blanc, paris 1826,

part. bot.) prickles twin, one of which is longer than the other and recurved; leaves entire, on short petioles, ovate, acute. ♄ . H. Native of Egypt, on the banks of the White river.

Small-leaved Jujube. Shrub.

8 Z. Nape'ca (Willd. spec. 1. p. 1104.) climbing; leaves obliquely cordate, bluntish, serrate, downy beneath; prickles twin, exceedingly sharp, one recurved, the other straight; corymbs axillary, many-flowered; flowers digynous. ♄ . ◡ . S. Native of Ceylon and other parts of the East Indies. Rhámnus Napèca, Lin. spec. 282.—Pluk. phyt. t. 216. f. 2.—Rumph. amb. 2. t. 42. Flowers yellowish. Fruit size of a pea, smooth, shining, black, marked round the base with a circular scar. They are eaten by the natives. The taste is very acid and astringent. Rumphius says that three berries are a strong purgative. It is seldom eaten but with salt meat, or as a sauce to fish and other food. A decoction of the bark of the root is said to promote the healing of fresh wounds. The tree is to be found in Prince of Wales' Island. At Silhet it is very common. The name is derived from *nabq* or *nabka*, the Arabic name of one of the species.

Napeca Jujube. Clt. 1816. Shrub cl.

9 Z. Bacle'i (D. C. prod. 2. p. 20.) leaves broad-ovate, acuminated, crenulated, smooth, or somewhat downy on the nerves and petioles; prickles usually twin, one of them recurved; corymbs axillary, smooth; drupe ovate-globose. ♄ . S. Native of Senegal. Flowers greenish-yellow. This is probably the *Lotos* which Mr. Mungo Park saw at the Gambia. Fruit eatable.

Bacle's Jujube. Shrub 8 feet.

10 Z. incu'rva (Roxb. fl. ind. 2. p. 364.) leaves oval, smooth, serrulate, obtusely-acuminated, oblique at the base; prickles twin, one straight, the other recurved; peduncles axillary, few or many-flowered; flowers semidigynous; petioles and nerves of leaves somewhat pubescent. ♄ . H. Native of Upper Nipaul at Suemba. Z. paniculàta, Hamilt. mss. Flowers yellowish-green. Fruit small, round, dark-purple.

Incurved-spined Jujube. Fl. Aug. Sep. Clt. 1823. Tree 20 ft.

11 Z. Javane'nsis (Blum. bijdr. 1142.) climbing; prickles solitary, recurved; leaves 5-nerved, elliptic-oblong, bluntish, doubly serrulated, smooth; corymbs axillary, dichotomous, and are, as well as the petioles, pubescent. ♄ . S. Native of Java, where it is called *Aroy Kokuhoelang*.

Java Jujube. Shrub cl.

12 Z. Timorie'nsis (D. C. prod. 2. p. 20.) leaves ovate-oblong, acuminated, oblique at the base, smooth on both surfaces, crenately-serrulated, 3-nerved; branches unarmed; corymbs axillary, about the length of the petioles. ♄ . S. Native of the island of Timor. Stigmas 2. Fruit unknown.

Timor Jujube. Tree.

13 Z. trine'rvia (Roxb. fl. ind. 2. p. 351.) unarmed; leaves ovate-oblong, 3-nerved, bluntly serrated, glossy; flowers in axillary fascicles; stigma 2-cleft; drupe spherical. ♄ . S. Native of Mysore, in the East Indies. Flowers numerous, small, greenish-yellow. Drupes spherical, size of a cherry, polished, of a lively yellow colour, with a soft, gelatinous, sweet pulp. This is the same as *Z. soròria*, Rœm. et Schult. syst. 5. p. 337. and trinérvia var. glabràta, Roth. nov. spec. 5. p. 337.

Three-nerved-leaved Jujube. Clt. 1821. Tree 20 feet.

14 Z. panicula'ta (Roth. nov. spec. 161.) leaves oblong-oval, somewhat acuminated, serrulated, scabrous, hairy beneath at the nerves; prickles twin, recurved; branches rising as it were beneath the leaves; panicle terminal, elongated, dichotomous; nut 1-seeded. ♄ . S. Native of the East Indies.

Panicled-flowered Jujube. Tree.

15 Z. ni'tida (Roxb. fl. ind. 2. p. 358.) leaves obliquely ovate-oblong, 3-nerved, obtusely-serrated, smooth; prickles twin, one recurved, the other straight; drupes subcylindrical; flowers few, collected on a common peduncle. ♄ . G. Native of China. Flowers yellow, semidigynous. Drupe oblong, pendulous, and smooth, about an inch long; when ripe, pale-yellow; they are eaten, but to the taste they are rather insipid. Innumerable suckers usually rise from the root, which run to a great distance from the parent tree, and make it a troublesome plant in a garden.

Shining-leaved Jujube. Clt. 1822. Shrub 8 feet.

16 Z. elli'ptica (Roxb. fl. ind. 2. p. 359.) leaves elliptical-ovate, 3-nerved, pale beneath, smooth; prickles twin, the upper one rather incurved, the under one recurved; corymbs axillary, dichotomous; flowers usually trigynous. ♄ . S. Native of the East Indies, at Travancore. Flowers greenish-yellow. Young shoots slightly villous and flexuous.

Elliptical-leaved Jujube. Fl. May, June. Tree 20 feet.

17 Z. gla'bra (Roxb. fl. ind. 2. p. 364.) climbing, smooth; leaves ovate, cordate, long, obtuse, pointed, serrulated, smooth, strongly marked with 3 nerves; prickles solitary, recurved; drupes oval. ♄ . G. Native of Chittagong, in the East Indies. Fruit about the size of a gooseberry.

Smooth Jujube. Shrub cl.

18 Z. flexuòsa (Wall. in fl. ind. 2. p. 365.) a smooth shrub, with spiny flexuous branches, and unarmed straight branchlets; prickles twin, one very long and straight, the other recurved; leaves lanceolate, obtuse, crenate, smooth; flowers axillary, usually solitary; style deeply bifid. ♄ . H. Native of Nipaul, at Gosaingsthan. An elegant shrub, with mahogany-coloured prickles. Flowers solitary or few in a fascicle, yellowish, rather large.

Zigzag-branched Jujube. Clt. 1820. Shrub 8 feet.

19 Z. Caracu'tta (Hamilt. ex Wall. in fl. ind. 2. p. 361.) leaves round, serrulated, 3-nerved, adult ones smooth, but rather villous when young; prickles twin, the under one recurved; peduncles axillary, many-flowered, very short; style 3-cleft; drupe oval, with a 3-celled nut. ♄ . S. Native of the East Indies, in the southern parts of Mysore, where it is called *Karakutta* by the natives. Young branches villous. Flowers greenish-yellow. Fruit the size of a large cherry, depressed a little at both ends, smooth, dark-brown; fleshy part tough, firm, and yellowish.

Karakutta Jujube. Fl. April. Clt. 1823. Tree 16 feet.

* * *Leaves downy beneath.*

20 Z. reticula'ta (D. C. prod. 2. p. 20.) leaves oval, somewhat toothletted, netted with veins, and downy beneath; prickles twin, straight; stigma usually 3-toothed; drupe globose. ♄ . S. Native of South America. Paliùrus reticulàtus, Vahl. eclog. amer. 3. p. 6. t. 23. Flowers greenish-yellow. Fruit eatable.

Netted-leaved Jujube. Shrub.

21 Z. rugòsa (Lam. dict. 3. p. 319.) leaves broad-oval, wrinkled, serrulated, sometimes smooth, sometimes downy beneath; prickles usually twin, recurved; corymbs stalked, dichotomous, downy. ♄ . S. Native of the East Indies.—Pluk. alm. t. 29. f. 7. This species is said to come very near *Z. xylocárpa*.

Wrinkled-leaved Jujube. Shrub 6 feet.

22 Z. hórrida (Roth. nov. spec. 159.) leaves ovate, blunt, crenulate, pubescent beneath at the ribs; prickles twin or solitary, recurved; corymbs dichotomous, axillary, and lateral. ♄ . S. Native of the East Indies.

Horrid Jujube. Shrub.

23 Z. celtidifòlia (D. C. prod. 2. p. 20.) leaves ovate, oblique at the base, upper ones acuminated, almost entire, 3-nerved, lateral nerves bifid at the base, and are, as well as the petioles and branchlets, pubescent; prickles usually solitary, recurved, quite smooth; corymbs axillary. ♄ . S. Native of the island of Timor. This is very like *Z. Œnóplia*, and is perhaps the *Z. glabràta* of Heyne and Roth. nov. spec. 158?

Nettle-tree-leaved Jujube. Tree.

§ 2. *Leaves silky or downy beneath.*

24 Z. Œnóplia (Mill. dict. no. 3.) leaves unequally ovate-cordate, entire, acute, 3-nerved, covered with rusty down beneath; prickles solitary, recurved; branchlets pubescent; flowers crowded in the axils of the leaves. ♄. G. Native of various parts of India. Rhámnus Œnóplia, Lin. spec. 282.—Burm. zeyl. t. 61. Flowers minute, greenish-yellow. Fruit small, black, ovate-globose, juicy.

Vinous Jujube. Clt.? Shrub 6 feet.

25 Z. tomentòsa (Roxb. fl. ind. 2. p. 360.) leaves unequally ovate-cordate, 3-nerved, obtuse, minutely-serrulated, hairy above, and downy beneath; panicles lateral; prickles solitary, scarcely curved. ♄. G. Native of Chittagong, in the East Indies, where it is used for fences.

Downy Jujube. Shrub 8 feet.

26 Z. xylo'pyrus (Willd. spec. 2. p. 11.) leaves obliquely-cordate, 3-nerved, serrated, clothed with hoary down beneath, as well as the branchlets and petioles; prickles stipular when present, the one recurved, the other straight; corymbs axillary, many-flowered, downy. ♄. S. Native on the coast of Coromandel, common in every forest. Rhámnus xylópyrus, Retz. obs. 2. p. 11. Flowers greenish-yellow. Fruit the size of a large cherry, greenish, and downy, marked round the base with the remains of the nectary, containing a 3-celled, 3-valved, 3-seeded nut. Cattle eat the leaves, young shoots, and fruit. The kernels taste like filberts, and are eaten by the natives. The wood of the largest trees is much esteemed by them, being yellowish or orange-coloured, very hard, and durable, and at the same time not very heavy.

Pear-wood Jujube. Clt. 1824. Tree 20 feet?

27 Z. a'lbens (Roxb. fl. ind. 2. p. 356.) leaves obliquely-oval, serrulated, downy beneath; corymbs axillary, on long peduncles; corolla wanting; style 2-cleft; fruit drooping, smooth, white; prickles solitary, recurved. ♄. G. Native of China. Drupe the size of a small cherry. The pulp rather mealy and sweet.

White-fruited Jujube. Fl. year. Tree 20 feet.

28 Z. latifòlia (Roxb. fl. ind. 2. p. 355.) leaves oval, serrated, 3-nerved, downy beneath, unequal at the base; prickles solitary, short, thick, recurved; corymbs panicled, terminal; corolla wanting; drupe turbinate; nut 1-2-celled. ♄. S. Native of the East Indies, in the mountainous tracts of the Circars. Dr. Wallich found a tree so closely allied to this in Nipaul at Noakote and Silhet that he dare not separate them; he ascertained that Roth's *Z. obliqua* is this very species, and *Z. paniculàta* of the same individual to be hardly distinct. Drupe yellow, size of a small cherry, usually 1-celled and 1-seeded. Those of the Nipaul plant are eaten by the natives.

Broad-leaved Jujube. Shrub 12 feet.

29 Z. Ju'juba (Lam. dict. 3. p. 318.) leaves obliquely-ovate, serrated, downy below, as well as the young branches, hoary; prickles twin, the one recurved, the other straight; corymbs axillary, almost sessile. ♄. G. Native of India, and cultivated in China and Cochin-china. Rhámnus Jùjuba, Lin. spec. 282.—Rumph. amb. 2. t. 36.—Rheed. mal. 4. t. 41. Flowers greenish-yellow. Drupe globular, size of a large cherry, smooth, yellow when ripe, containing a 2-celled, 1-seeded nut. There is a variety of this, or a new species, in the East Indies, which produces an excellent fruit of a long form, about the size of a hen's egg, known by the name of *Narikellekool* in Bengal. The fruit of both varieties is eaten by all classes of persons. It is sweet and mealy. The bark of the tree is said to be used in the Moluccas in diarrhœa, and to fortify the stomach, which seems to confirm the astringent properties of the bark of most of the plants of this order.

Jujube-tree. Fl. April, May. Clt. 1759. Tree 16 feet.

30 Z. soròria (Schult. syst. 5. p. 337.) leaves roundish-ovate, obtuse, mucronate, serrulated, downy beneath; prickles wanting; corymbs axillary, divaricating, dichotomous; stigma simple. ♄. S. Native of the East Indies. Z. trinérvia, var. *α*, Roth, nov. spec. 5. p. 337. Allied to *Z. Jùjuba*. Fruit eatable.

Sister Jujube. Fl.? Clt. 1821. Tree 16 feet.

31 Z. microphy'lla (Roxb. fl. ind. 2. p. 362.) leaves roundish-ovate, 3-nerved, serrulated, woolly beneath; prickles twin, one straight, the other recurved; branchlets bifarious, flexuous; flowers fascicled; stigma 2-cleft. ♄. S. Native on the coast of Coromandel, as well as of Ceylon. Z. rotundifòlia, Lam. dict. 3. p. 319. Z. nummulàrius, Gmel. syst. 401?—Pluk. alm. 199. t. 197. f. 2.—Rhámnus nummulària, Burm. ind. 61. Flowers greenish-yellow.

Small-leaved Jujube. Shrub 4 feet.

32 Z. orthaca'ntha (D. C. prod. 2. p. 21.) leaves ovate, almost entire, obtuse, covered with short hoary down beneath, as well as branchlets and petioles; prickles twin, straight; corymbs axillary, downy. ♄. S. Native of Senegal. Flowers greenish-yellow. Drupe reddish, round, about the size of a filbert, and is eaten by the natives of Senegal, as well as made into a sort of drink by them, resembling that made from *Z. Lòtus*, which see, no. 3.

Straight-prickled Jujube. Tree 16 feet.

33 Z. orbicula'ris (Schult. syst. 5. p. 338.) leaves cordate, orbicular, or somewhat ovate, obtuse, mucronate, downy, equally and bluntly serrulated; prickles solitary, recurved; corymbs axillary, conglomerated, dichotomous; fruit downy, containing a 3-celled nut. ♄. S. Native of the East Indies. Z. rotundifòlia, Roth. nov. spec. 160. but not of Lam. Flowers greenish-yellow.

Orbicular-leaved Jujube. Tree?

34 Z. Poire'tti; leaves ovate-roundish, sharply serrulated, downy beneath, as well as the branches, petioles, and flowers; prickles twin, one recurved, the other straight; corymbs axillary; fruit subglobose, smooth. ♄. S. Native of St. Domingo. Z. tomentòsa, Poir. suppl. 3. p. 192. but not of Roxb.

Poirett's Jujube. Tree?

35 Z. rotunda'ta (D. C. prod. 2. p. 21.) leaves ovate, obtuse, rather oblique at the base, somewhat crenulated, clothed beneath with greyish-velvety down, as well as the petioles, branchlets, and flowers; prickles twin, the one recurved, the other straight; corymbs axillary; fruit ovate, blunt, smooth. ♄. S. Native of the Mauritius, in woods. Rhámnus Mauritiànus, Willem. herb. Maur. p. 20? Flowers yellowish.

Rounded-fruited Jujube. Tree 12 feet?

36 Z. Mauritia'na (Lam. dict. 3. p. 319.) leaves oval, roundish, obtuse, almost entire, clothed beneath with dense white or somewhat rusty down, as well as the petioles, branchlets, and flowers; prickles twin, one recurved, the other straight; corymbs axillary; fruit oblong, acuminated. ♄. S. Native of the Mauritius. Flowers yellowish. Resembling *Z. Jùjuba*.

Mauritian Jujube. Fl. May. Clt. 1820. Tree 16 feet?

37 Z. oxyca'rpa (D. C. prod. 2. p. 21.) leaves ovate, somewhat acute, tapering to the base, and oblique, sharply serrulated, hoary-velvety beneath, as well as the petioles and branchlets; prickles twin, the one recurved, the other straight; corymbs axillary; fruit oblong, acuminated. ♄. S. Native of the East Indies, and in the Indian Archipelago. (Labill.) This species resembles *Z. Œnóplia* in the leaves, but *Z. Mauritiàna* in the fruit.

Sharp-fruited Jujube. Shrub 12 feet?

38 Z. e'legans (Wall. in fl. ind. 2. p. 360.) erect, nearly unarmed, with filiform pubescent branches, and bifarious, lanceolate, serrulated, bluntly-acuminated leaves, which are smooth above, and pubescent beneath. ♄. S. Native of Singapore. The fruit and flowers of this elegant shrub are unknown.

Elegant Jujube. Shrub 6 feet?

39 Z. EXSE'RTA (D. C. prod. 2. p. 21.) leaves ovate, serrulated, downy beneath; prickles wanting; corymbs axillary; calyx with 10 glands on the inside; stamens twice or thrice longer than the petals. ♄. S. Native of the island of Luzon, near Manilla. Rhámnus trinérvis, Cav. icon. t. 505. f. 1. but not of Roth. Z. trinérvis, Poir. suppl. 3. p. 192. Stigmas 2, thickened. Berry ovate, 1-celled, 1-seeded.

Protruding-stamened Jujube. Shrub or Tree.

† *Species not sufficiently known.*

40 Z. ANGULA'TA (Lam. dict. 3. p. 320.) leaves roundish-oval, a little toothed, smooth on both surfaces; prickles twin, straight; branches tetragonal, with prominent angles. ♄. S. Native of? Flowers, as well as fruit, unknown.

Angular-stemmed Jujube. Shrub?

41 Z. HAVANE'NSIS (H. B. et Kunth, nov. gen. amer. 7. p. 57.) branches 5-angled, twisted, flexuous, smooth; spines stipular, straight; leaves roundish-ovate, unequal-sided, somewhat cordate, 3-nerved, obsoletely-crenulated, coriaceous, smooth; calyxes clothed with rusty down. ♄. S. Native of the island of Cuba, near Havannah. Anthers behind. The tree has the habit of *Z. angulàta*, and will probably with it form a distinct genus, or form a section of *Ceanòthus*.

Havannah Jujube. Tree 20 feet.

42 Z. AGRE'STIS (Schult. syst. 5. p. 341.) leaves oblong, quite entire, smooth; prickles twin, straight, short; flowers racemose, apetalous; drupe globose, containing a 3-celled nut. ♄. G. Native of Cochin-china. Rhámnus agréstis, Lour. fl. coch. 158. Stamens surrounded by hairs. Drupe globose, red, eatable.

Field Jujube. Shrub 8 feet.

43 Z. SOPORÍFERA (Schult. syst. 5. p. 340.) leaves lanceolate, nerveless, quite entire; prickles scattered, straight; flowers axillary, solitary; drupe roundish, 1-seeded. ♄. G. Native of the north of China. Rhámnus sopórifer, Lour. fl. coch. 158. According to Loureiro it comes very near to the figure in Rumph. amb. 2. t. 37. which has been considered *Z. Napèca* by Linnæus. Flowers reddish. Drupe small, red. The kernel of the nut, steeped a few days, is hypnotic and paregoric, causes gentle sleep, and mitigates pain.

Sleepy Jujube. Shrub.

44 Z. CAPE'NSIS (Poir. suppl. 3. p. 193.) leaves ovate-oblong, smooth; prickles twin, straight; flowers digynous; stem shrubby. ♄. G. Native of the Cape of Good Hope.

Cape Jujube. Shrub 4 feet.

Cult. The hardy kinds will grow in any common garden soil; they are well adapted for shrubberies, and are easily increased by ripened cuttings, planted in a good soil, with a hand-glass placed over them, or by slips of the roots, planted in the same manner. The greenhouse and stove species will grow well in a mixture of loam, peat, and sand, and ripened cuttings will root, planted in a pot of sand, with a hand-glass placed over them, but those of the stove species will require to be placed in heat.

III. SPHÆROCA'RYA (from σφαιρα, *sphaira*, a sphere, and καρυον, *caryon*, a nut; nuts round). Wall. fl. ind. 2. p. 371.

LIN. SYST. *Pentándria, Monogýnia.* Calyx 5-parted. Petals 5, alternating with the stamens, inserted in the calyx, and with 5 fringed scales between the stamens and opposite the calycine segments. Stamens 5, inserted in the calyx. Disk none. Drupe pear-shaped, containing a smooth round nut.—A large tree, with alternate, ovate, entire, smooth, exstipulate leaves, and axillary and terminal villous racemes of small greenish, inodorous flowers.

1 S. EDU'LIS (Wall. l. c.). ♄. G. Native of Nipaul in the forests, about the valley. The flesh of the fruit is pale-brown, and the inhabitants of Nipaul are very fond of it, which, however, to a European palate, holds out but little temptation.

Edible-fruited Sphærocarya. Tree 40 feet.

Cult. For culture and propagation see greenhouse species of *Zizyphus*.

IV. CONDA'LIA (in honour of Anthony Condal, M. D. companion of Lœfling in his voyages). Cav. icon. 6. p. 16. t. 525. D. C. prod. 2. p. 28. Brogn. mem. Rham. p. 48.

LIN. SYST. *Pentándria, Monogýnia.* Calyx spreading, 5-cleft (f. 4. C. *a.*), adhering to the ovary; segments deciduous, but with the base permanent. Petals wanting. Anthers bilocular (f. 4. C. *e.*). Stamens alternating with the sepals (f. 4. C. *e.*). Style 1. Disk flat, expanded (f. 4. C. *c.*), pentagonal. Ovary girded by the disk, free, 2-celled (f. 4. C. *d.*). Stigma small, entire. Fruit drupaceous, ovate, containing a 1-celled, 1-seeded nut (probably from abortion?). Seed ovate, destitute of a furrow.—Much branched, smooth shrubs, with spiny branchlets, alternate, almost sessile, obovate-oblong, entire leaves, and axillary flowers. This genus differs from *Zizyphus*, to which it is nearly allied, in being destitute of petals, as well as in the style and stigma being simple.

1 C. MICROPHY'LLA (Cav. l. c.) leaves alternate, almost sessile, obovate-oblong, mucronate. ♄. G. Native of Chili. Zízyphus myrtoìdes, Ort. dec. 9. p. 119. Branches spreading, spiny at the apex. Flowers on short pèdicels, greenish-yellow.

Small-leaved Condalia. Clt. 1824. Shrub 3 feet.

2? C.? PARADÓXA (Spreng. syst. 1. p. 825.) leaves opposite, connate, thick, decurrent, stiff, pungent; peduncles lateral, crowded. ♄. S. Native of Monte Video.

Paradoxical Condalia. Shrub 4 feet.

Cult. These shrubs will grow well in a mixture of loam, peat, and sand, and ripened cuttings will root freely, planted in a pot of sand, with a hand-glass placed over them.

V. BERCHE'MIA (Berchem, probably the name of some botanist). Neck. elem. 2. p. 122. D. C. prod. 2. p. 22. Brogn. mem. Rham. 49.—Œnóplia, Hedw. f. gen. 1. p. 151.—Œnóplia, Schult. syst. 5. p. 962.

LIN. SYST. *Pentándria, Monogýnia.* Calyx with a hemispherical tube, and 5 erect segments (f. 4. E. *a.*). Petals 5, convolute (f. 4. E. *c. d.*). Stamens inclosed within the petals (f. 4. E. *c.*). Anthers ovate, 2-celled. Disk annular (f. 4. E. *f.*), rather flat. Ovary half immersed in the disk, 2-celled (f. 4. E. *e.*). Style simple, short, bifid at apex. Fruit dry, indehiscent, 2-celled (f. 4. E. *g.*). Seeds adhering to the testa of the pericarp.—Erect or climbing shrubs, with alternate, many-nerved, entire leaves, and with the flowers subumbellate in the axillæ of the upper leaves, or disposed in terminal panicles.

* *Climbing shrubs.*

1 B. VOLU'BILIS (D. C. prod. 2. p. 22.) branches smooth, a little twining; leaves oval, mucronate, a little wavy; racemes axillary and terminal; drupe oblong, violaceous. ♄. ◡. H. Native of Carolina and Virginia. Rhámnus volùbilis, Lin. fil. suppl. 132. Jacq. icon. rar. t. 336. Zízyphus volùbilis, Willd. spec. 1. p. 1102. Œnóplia volùbilis, Schult. syst. 5. p. 332. Flowers greenish-yellow. Authors attribute to the roots antisyphilitic properties.

Twining Berchemia. Fl. June, July. Clt. 1714. Shrub cl.

2 B. FLORIBU'NDA (Brogn. in mem. rhamn. p. 50.) unarmed, smooth, with rambling branches; leaves ovate, acute, quite entire, retuse at the base, glaucous beneath; panicle large, terminal; flowers racemose; drupe somewhat cylindrical. ♄. S. Native of Nipaul, at Thankote and Sankoo, and on Chundrugiri.

Zízyphus floribúndus, Wall. fl. ind. 2. p. 368. Flowers small, white.

Bundle-flowered Berchemia. Fl. May, July. Shrub rambl.

3 B. FLAVE′SCENS (Brogn. in mem. rhamn. p. 50.) unarmed, smooth, climbing; leaves oblong-ovate, acute, glaucous, quite entire; racemes terminal, simple; flowers fascicled. ♄. ◡. G. Native of Nipaul, about Gosainsthan. *Zízyphus flavéscens*, Wall. fl. ind. 2. p. 367. Flowers white.

Yellowish Berchemia. Fl. July. Shrub cl.

4 B. CALOPHY′LLA; climbing; armed with solitary, short, recurved prickles; leaves ovate-oblong, smooth, glossy, 3-nerved, veinless, minutely crenulated; corymbs terminal, panicled. ♄. ◡. S. Native of Pulo-Pinang. *Zízyphus calophýlla*, Wall. fl. ind. 2. p. 367.

Beautiful-leaved Berchemia. Fl. Jan. Shrub cl.

* * *Stems erect.*

5 B. LINEA′TA (D. C. prod. 2. p. 23.) branches downy, unarmed; leaves ovate, repand, netted beneath; flowers hermaphrodite. ♄. G. Native of China. Rhámnus lineàtus. Lin. amœn. 4. p. 308.—Osb. it. 219. t. 7. Leaves of a beautiful yellowish-green colour beneath, with red veins. Flowers whitish.

Lined-leaved Berchemia. Fl. June, July. Clt. 1804. Sh. 8 ft.

6 B.? POIRETTIA′NA (D. C. prod. 2. p. 23.) branches pubescent; stipulas small, spiny; leaves ovate, netted; flowers solitary; fruit roundish. ♄. S. Native of the East Indies. Rhámnus lineàtus, Poir. dict. 4. p. 473.—Pluk. alm. 1. p. 122. f. 4.

Poirett's Berchemia. Shrub 6 feet.

7 B. LOUREIRIA′NA (D. C. prod. 2. p. 23.) branches smooth, procumbent, with scattered prickles; leaves ovate, somewhat crenated, flat; flowers 10-petalled, pentandrous; drupes oblong-ovate, scabrous, 2-celled. ♄. G. Native of Cochin-china, in hedges and among bushes. Rhámnus lineàtus, Lour. fl. coch. 159. but not of Lin. Flowers white, numerous on the peduncles. Drupe small, red. A decoction of the root is deobstruent and diuretic.

Loureiro's Berchemia. Shrub 8 feet, trailing.

N.B. *B. Burmanniàna*, D. C. prod. 2. p. 23., *Rhámnus*, &c. Burm. zeyl. p. 198. t. 88. belongs to *Euphorbiàceæ* not far from *Andráchne*.

Cult. *B. volùbilis* will grow in any common soil, and is well adapted for bowers or trellis-work. It may be increased by ripened cuttings, and slips of the root, planted under a hand-glass, or by laying down the young shoots. The other species will grow freely in a mixture of loam and peat, and ripened cuttings will strike root in a pot of sand, under a hand-glass.

VI. VENTILA′GO (from *ventilo*, to be exposed to wind, and *ago*, to drive away; in allusion to the fruit being winged, which causes them to be scattered away by the wind). Gært. fruct. 1. p. 223. t. 49. Brogn. mem. Rhamn. p. 50. D. C. prod. 1. p. 38.

LIN. SYST. *Pentándria, Monogýnia.* Calyx spreading, 5-cleft (f. 4. D. *c*.). Petals 5, obovate, convolute (f. 4. D. *a*.). Stamens exserted (f. 4. D. *b*.). Anthers ovate, 2-celled. Disk fleshy, flat. Ovary immersed in the disk, 2-celled. Style compressed, short, bidentate (f. 4. D. *j*.). Fruit indehiscent, woody (f. 4. D. *h*.), 1-celled, 1-seeded, with the upper part drawn out into a wing (f. 4. D. *k*.).—Large, climbing shrubs, with stiff smooth branches, alternate, short-stalked, coriaceous, smooth, serrulated leaves, which are oblique at the base, and with the flowers disposed in long axillary racemes, which are either solitary, twin, or in threes.

1 V. MADRASPATA′NA (Gært. l. c.) leaves bifarious, ovate-oblong, serrulated; racemes disposed in terminal panicles. ♄. ◡. S. Native of the East Indies, in forests and other uncultivated places, amongst the mountains, very common in the north of Bengal. Roxb. cor. 1. t. 76. Flowers numerous, small, greenish-white. This plant is generally dioecious. The smell of the flowers is very offensive, not unlike that of *Stercùlia fœ′tida*. While young the stem and flexuous branches are striped with white lines, which elegantly contrast with the smooth green bark, not unlike what is observed in *A′cer striàtum*. This is most probably the *Fùnis viminàlis* of Rumph. amb. 3. t. 2.

Var. β, *denticulàta* (Willd. in nov. act. berl. 3. p. 417.) leaves crenulated, pubescent beneath. ♄. ◡. S. Native of the East Indies near Samulcotta.

Var. γ, *bracteàta* (Heyne, mss.) floral leaves long, villous. ♄. ◡. S. Native of Silhet in the East Indies.

Madras Ventilago. Fl. June, July. Clt. 1822. Shrub cl.

2 V. CINERA′SCENS; leaves full of parallel veins, oval, acute, quite entire, smooth, cinereous beneath; racemes terminal; pedicels in fascicles. ♄. ◡. S. Native of Java. Rhámnus cineráscens? Blum. bijdr. 1141.

Cinereous Ventilago. Shrub cl.

3 V. OBLONGIFÒLIA (Blum. bijdr. 1144.) leaves oblong, acuminated, obliquely rounded at the base, serrated, tomentose in the axils of the veins beneath; racemes interrupted, leafy. ♄. ◡. S. Native of Java.

Oblong-leaved Ventilago. Shrub cl.

Cult. See *Berchèmia* for culture and propagation.

VII. SEGERE′TIA (named in honour of M. Segeret, member of the Royal Agricultural Society of Paris, a vegetable physiologist). Brogn. mem. Rhamn. p. 52.

LIN. SYST. *Pentándria, Monogýnia.* Calyx pitcher-shaped, 5-cleft (f. 4. F. *a*.). Petals 5, convolute or cucullate (f. 4. F. *c*.). Stamens bearing ovate, 2-celled anthers (f. 4. F. c.). Disk fleshy, cup-shaped, girding the ovary. Ovary almost immersed in the disk, 3-celled (f. 4. F. *d*.). Style short, thick (f. 4. F. *g*.). Fruit unknown. Stigmas 3, sessile, or 3-lobed.—Shrubs with slender branches, which are usually spinescent. Leaves nearly opposite, on short petioles, lanceolate, or oblong, serrated, feather-nerved. Flowers small, solitary, or glomerated, disposed in simple or branched, interrupted, stiff, spreading, axillary, or terminal spikes.

* *Spiny.*

1 S. THEE′SANS (Brogn. in mem. rhamn. p. 53.) branches divaricate, spiny at the apex; leaves ovate, smooth, serrulated; flowers somewhat panicled, glomerated, in terminal spikes. ♄. G. Native of China. Rhámnus theèsans, Lin. mant. 207. R. thèa, Osb. itin. 232. Flowers greenish? The poor in China make use of the leaves of this plant instead of the true tea, probably from its astringency and perfume. They call it *Tia*.

Var. β, *intègra;* leaves entire, mucronate. ♄. G. Dum. Cours. bot. cult. 6. p. 258.

Tea Segeretia. Fl. May, June. Clt.? Shrub 4 feet.

2 S. SPICA′TA (Brogn. in mem. rhamn. p. 53.) branches cylindrical, smooth, lateral ones spiny; leaves lanceolate, acuminated, serrulated, quite smooth, with 2 stipulas at the base of each; spikes simple, stiff, divaricate, axillary, and terminal. ♄. S. Native of Peru.

Spicate-flowered Segeretia. Shrub 4 feet.

3 S. BLU′MII; leaves veiny, nearly opposite, ovate-lanceolate, acuminated, rather cordate at the base, serrulated, shining above, young ones furfuraceous beneath; spikes axillary, filiform, hardly longer than the leaves, and terminal, panicled. ♄. S. Native of the East Indies and Java. Rhámnus filifórmis, Roth. nov. spec. 153.? Blum. bijdr. 1140.

Blume's branched Segeretia. Shrub 6 feet.

4 S. OPPOSITIFÒLIA (Brogn. mem. rhamn. p. 53.) branches round, climbing; leaves and branches truly opposite, and with short straight thorns, which grow out into branches; leaves ovate-lanceolate, serrulated, acuminated, somewhat retuse at the base; racemes axillary and terminal, short, villous, the whole forming a pretty large brachiate panicle; flowers fascicled. ♄. ◡. G. Native of Nipaul at Cokurna in the valley. Zízyphus oppositifòlia, Wall. fl. ind. 2. p. 370. Flowers greenish.

Opposite-leaved Segeretia. Fl. Aug. Sept. Shrub cl.

5 S. AFFI'NIS; leaves veiny, nearly opposite, ovate-oblong, long-acuminated, rounded at the base, serrulated, smooth; spikes panicled, axillary, and terminal, shorter than the leaves. ♄. S. Native of Java. Rhámnus affinis, Blum. bijdr. 1141.

Allied Segeretia. Shrub 8 feet.

6 S. HAMÒSA (Brogn. mem. rhamn. p. 53.) branches round, climbing, opposite; spines hooked; leaves oblong, acuminated, serrulated, villous at the origin of the nerves; flowers fascicled, disposed in short, panicled, villous, terminal racemes. ♄. ◡. G. Native of Nipaul, at Chundrugiri, where it climbs over trees and shrubs to a great extent. Zízyphus hamòsa, Wall. fl. ind. 2. p. 369. Thorns slightly curved. Flowers greenish.

Hooked-thorned Segeretia. Fl. Aug. Shrub cl.

7 S. TRI'GYNA; climbing; branches round; leaves ovate, acuminated, smooth, shining, serrulated, retuse at the base; flowers glomerate, disposed in spikes, forming a terminal panicle; petioles and branchlets pubescent; styles 3. ♄. ◡. G. Native of Nipaul, in mountain woods. Rhámnus trígynus and terminàlis, Hamilt. in D. Don, prod. fl. nep. p. 190. Shrub spinose.

Trigynous Segeretia. Fl. Aug. Sept. Shrub cl.

8 S. GUAYAQUILE'NSIS (Brogn. mem. rhamn. p. 53.) much branched; branches quadrangular; spines scattered, awl-shaped; leaves elliptical, mucronate, hoary beneath; flowers sessile, scattered on the spikes; stigmas 3. ♄. S. Native on the shore of the Pacific ocean, near Guayaquil. Rhámnus Guayaquilénsis, H. B. et Kunth, nov. gen. amer. 7. p. 54.

Guayaquil Segeretia. Shrub 6 feet.

9 S. SENTICÒSUS (Brogn. mem. rhamn. p. 53.) shrub very spiny, almost leafless; branches round; spines decussately-opposite, very long; leaves ovate, somewhat quintuple, nerved; flowers rising above the base of the spines in glomerated fascicles; stigma trifid. ♄. S. Native of Peru, in hot places, near Contumasay. Collètia spicàta, Willd. in Schult. syst. 5. p. 513. Rhámnus senticòsus, H. B. et Kunth, nov. gen. amer. 7. p. 54. Fruit globose, 1-3-seeded. Flowers green.

Thorny Segeretia. Shrub 6 feet.

10 S. DECUSSA'TA; branches angular, elongated; leaves ovate-oblong, acute, quite entire, somewhat coriaceous, quite smooth; spines axillary, decussate, spreading, stiff; flowers disposed on long spikes; spikes conjugate at the base of the spines, and are 3-times longer than them. ♄. S. Native of Peru. Rhámnus decussàta, herb. Pav. This is probably the same as the preceding species.

Decussate-spined Segeretia. Shrub 6 feet.

* * *Unarmed.*

11 S. E'LEGANS (Brogn. mem. rhamn. p. 53.) lower leaves truly opposite, ovate-oblong, acuminated, rounded at the base, serrulated, smooth, shining; panicles axillary and terminal, simple; flowers glomerate, spiked; stigmas 3, sessile. ♄. S. Native of South America, but in what place is unknown. This plant is probably spiny? Rhámnus élegans, Kunth.

Elegant Segeretia. Shrub.

12 S. SPLE'NDENS; climbing; leaves veiny, ovate, bluntly acuminated, somewhat cordate at the base, crenulated; cymes axillary, bifid, shorter than the petioles. ♄. ◡. S. Native of Java. Rhámnus spléndens, Blum. bijdr. 1140.

Splendid Segeretia. Shrub cl.

13 S. LANCEOLA'TA; arborescent; leaves lanceolate, serrulated, acute at both ends and pubescent beneath. ♄. H. Native of North America, in Tennessee, on the sides of hills. Rhámnus lanceolàtus, Pursh, fl. bor. amer. 1. p. 166. Berries black.

Lanceolate-leaved Segeretia. Tree 16 feet.

14 S. MICHA'UXII (Brogn. mem. rhamn. p. 53.) leaves oval, serrulated; flowers very minute, dioecious, disposed in spikes, sessile; style trifid; berry 3-seeded. ♄. H. Native of Carolina and Florida, on the sea coast. Rhámnus minutiflòrus, Michx. fl. bor. amer. 1. p. 154. Flowers white.

Michaux's Segeretia. Shrub 6 feet.

15 S. FILIFÓRMIS; leaves ovate-lanceolate, serrulated, shining, with the ribs beneath, as well as the petioles, pubescent; flowers hermaphrodite, disposed in filiform spikes, the whole forming a panicle. ♄. S. Native of the East Indies. Rhámnus filifórmis, Roth. nov. spec. 153.

Filiform-spiked Segeretia. Shrub.

16 S. PARVIFLÒRA; leaves somewhat coriaceous, shining, serrated, ovate, acuminated; flowers disposed in loose spikes, the whole forming a panicle. ♄. S. Native of the East Indies. Rhámnus parviflòrus, Klein. et Willd. in Schult. syst. 5. p. 294.

Small-flowered Segeretia. Shrub.

17 S.? CORYMBÒSA; leaves coriaceous, elliptical, a little serrated; flowers corymbose, on peduncles. ♄. S. Native of the East Indies. Rhámnus corymbòsus, Vahl.

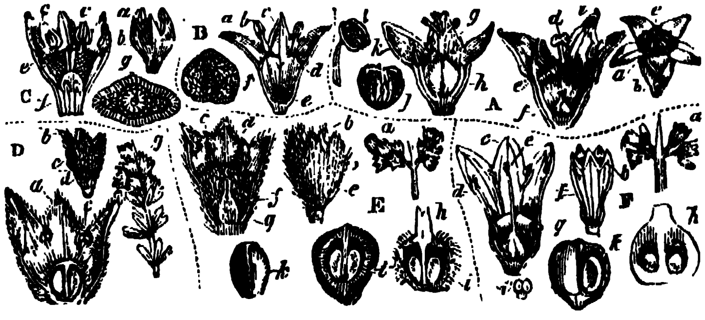
Corymbose-flowered Segeretia. Shrub.

18 S. LEPRÒSA; climbing, adult branches spiny; leaves veiny, nearly opposite, ovate, somewhat cordate, obtuse, serrated, smooth; young ones densely furfuraceous; pedicels 1-flowered, axillary, solitary. ♄. ◡. S. Native of Java. Rhámnus lepròsus, Blum. bijdr. 1139.

Leprous Segeretia. Shrub cl.

Cult. The hardy kinds of this genus are well fitted for shrubberies; they are increased by ripened cuttings or slips of the roots, planted under a hand-glass, but they are generally propagated by laying the branches. For the culture and propagation of the stove and greenhouse species see *Berchèmia*, p. 28.

FIG. 5.



VIII. RHA'MNUS (from the Celtic word *ram*, signifying a tuft of branches, which the Greeks have changed to ῥάμνος, and the Latins to *ramus*). Lam. dict. 4. p. 461. ill. t. 128. Gært. fruct. 2. p. 106. D. C. prod. 2. p. 23. Brogn. mem. rhamn. p. 53.

LIN. SYST. *Pentándria, Monogýnia.* Calyx urceolate, 4-5-cleft (f. 5. C. *b.* A. *a.*). Petals wanting or emarginate (f. 5. *C. c.*). Stamens bearing ovate 2-celled anthers (f. 5. A. *d.* B. *b.*). Disk thin, covering the tube of the calyx (f. 5. B. *d.* A. *e.* C. *e.*). Ovary free, 3-4-celled (f. 5. A. *h. f.*). Styles 3-4 (f. 5. A. *g.*), connected or free. Fruit baccate, containing 3-4-indehiscent nuts (f. 5. A. *j.* B. *f.*), rarely only 2 from abortion.—Small trees, or shrubs, with alternate, stipulate, short, stalked, entire or toothed, usually smooth leaves, which are permanent and coriaceous, or caducous, with feather nerves; in those with the permanent leaves the nerves are either vaguely branched, or in others approximating. Plants possessing strong purgative qualities.

Sect. I. Marcore'lla. Neck. elem. 2. p. 122. Rhámnus and Alatérnus of Tourn. Flowers usually dioecious, and 4-cleft. Seeds deeply furrowed with the raphe in the bottom of the furrow. Embryo curved. Leaves usually permanent, vaguely veined.

§ 1. *Alatérnus* (from *alternus*, alternate; leaves). *Tourn. inst. t.* 366. *Flowers racemose, 5-cleft* (f. 5. A. *a. e.*). *Evergreen shrubs.*

1 R. ALATE'RNUS (Lin. spec. 281.) leaves ovate-elliptical or lanceolate, coriaceous, quite smooth, serrated; flowers dioecious, disposed in short racemes. ♄. H. Native of the south of Europe and the north of Africa. Duh. ed. nov. 3. p. 42. t. 14. Alatérnus Phýlica, Mill. dict. no. 1. fig. t. 16. f. 1. Flowers green, without any corolla.

Var. α, Baleáricus (Hort. par.) leaves roundish; stipulas awl-shaped, and are, as well as the branchlets, somewhat spiny. Rh. rotundifòlius, Dum. Cours. 6. p. 260.

Var. β, Hispánicus (Hort. par.) leaves ovate, a little toothed.

Var. γ, vulgàris (D. C. prod. 2. p. 23.) leaves ovate, serrated.

Var. δ, angustifòlius (Mill. fig. t. 16. f. 2.) leaves almost linear-lanceolate. ♄. H. Rh. Clùsii, Willd. enum. 1. p. 250. —Clust. hist. 1. p. 50. Lob. icon. 2. t. 134.

There are several other varieties, as 1. The *Smooth* Alaternus. 2. The *Entire-leaved* Alaternus. 3. The *Spotted-leaved* Alaternus. 4. The *Gold-striped-leaved* Alaternus. 5. The *Silver striped-leaved* Alaternus.

The flowers of *Alatérnus* are said not to be perfectly dioecious. The fresh shoots and leaves will dye wool yellow. The honey breathing blossoms, says Evelyn, afford an early and marvellous relief to the bees, as they open in April. Clusius reports that the fishermen in Portugal dye their nets red with a decoction of the bark; and that dyers there use small pieces of the wood to strike a blackish-blue colour. The *Alatérnus* was much more in request formerly than at present, having been planted against walls in court-yards to cover them, as also to form evergreen hedges in gardens, for which purpose it is very improper, for the branches shoot too vigorously, and are easily broken, and displaced by the wind. It is still, however, used in towns for covering walls, but chiefly to make a variety in ornamental plantations.

Alaternus. Fl. April, June. Clt. 1629. Shrub 20 feet.

2 R. HY'BRIDUS (Lher. sert. t. 5.) leaves oblong, acuminated, serrated, smooth, shining, hardly permanent, rather coriaceous; flowers andrógynous. ♄. H. This plant has been raised in the gardens from *R. alatérnus* and *R. alpìnus*. R. Burgundiacus, Hort. par. R. sempervìrens, Hortulan. Flowers green.

Hybrid Alaternus. Fl. April, June. Clt. 1629. Shrub 12 ft.

3 R. GLANDULÒSUS (Ait. hort. kew. 1. p. 265.) leaves ovate, bluntly-serrated, smooth beneath, in the axillæ of the lower veins glandular; flowers hermaphrodite, racemose. ♄. G. Native of the Canary islands, in woods on the mountains. Vent. malm. t. 34. Flowers green.

Glandular-leaved Alaternus. Fl. Ju. Jul. Clt. 1785. Sh. 15 ft.

4 R. INTEGRIFÒLIUS (D. C. cat. hort. monsp. p. 136. exclusive of the country,) leaves elliptical-oblong, mucronate, quite entire; flowers hermaphrodite, racemose. ♄. G. Native of Teneriffe, on the highest peak. R. coriàceus, Nees hort. phys. p. 114. t. 22. Brouss. in Rœm. et Schult. syst. 5. p. 291. Young leaves flat, adult ones boat-shaped. Flowers green, apetalous.

Entire-leaved Alaternus. Clt. 1822. Shrub 2 feet

5 R. INCA'NUS (Roxb. fl. ind. 2. p. 350.) leaves ovate-lanceolate, entire, smooth above, hoary beneath; corymbs on small axillary branchlets; flowers hermaphrodite; style 3-cleft. ♄. S. Native of the Moluccas. Flowers very numerous, small, greenish-yellow. Calyx villous on the outside.

Hoary Buck-thorn. Shrub 10 feet.

§ 2. *Rhámnus* (see genus for derivation). *Flowers in fascicles, 5-cleft.*

6 R. LONGIFÒLIUS (Link. enum. 1. p. 228. Dum. Cours. bot. cult. 6. p. 260.) leaves oval-oblong, acute at both ends, serrated, smooth, shining, pilose in the axillæ of the veins beneath. ♄. H. Native of? R. Willdenoviànus, Rœm. et Schult. syst. 5. p. 295. Flowers green.

Long-leaved Buck-thorn. Fl.? Clt. 1822. Shrub 8 feet.

7 R. PRINOÌDES (Lher. sert. 6. t. 9.) leaves ovate-lanceolate, acuminated, serrated, shining; flowers on pedicels, axillary, usually twin, polygamous. ♄. G. Native of the Cape of Good Hope. Zizyphus lùcidus, Mœnch. suppl. 101. Drupe black. Stigmas 3. Flowers green or white.

Prinos-like Buck-thorn. Fl. Aug. Sept. Clt. 1778. Sh. 10 ft.

8 R. CELTIDIFÒLIUS (Thunb. fl. cap. 2. p. 72.) leaves ovate, serrated, smooth; flowers on pedicels, axillary, solitary, apetalous. ♄. G. Native of the Cape of Good Hope.—Burm. afr. t. 88. Flowers green.

Celtis-leaved Buck-thorn. Fl. April, June. Clt.? Shrub.

§ 3 *Flowers* 4-*cleft* (f. 5. B. *a. c.*), in fascicles.

* *Branchlets terminating in a thorn.*

9 R. CATHA'RTICUS (Lin. spec. 280.) erect; leaves ovate, toothed; flowers in fascicles, polygamo-dioecious, berries 4-seeded, rather globose. ♄. H. Native of Europe, in hedges and groves; plentiful in England. Smith, engl. bot. t. 1629. Woodv. med. bot. t. 114. Oed. fl. dan. t. 850. Duh. ed. nov. 3. t. 10. This is the white-thorn of the modern Greeks. It is a rigid bush; its branches terminating in strong thorns. There is a variety of it with 5-cleft flowers, and unarmed branches. The flowers yellowish-green, with very narrow petals, and a deep 4-cleft style. Berries globular, blueish-black when ripe, size of a pea. The juice of the unripe berries has the colour of saffron, and is used for staining maps or paper; these are sold under the name of French berries. The juice of the ripe berries mixed with alum is the sap-green of the painters; but if the berries be gathered late in the autumn the juice is purple. The bark affords a beautiful yellow dye. The inner bark or liber, as well as the berries, like that of elder, is said to be a strong cathartic, and to excite vomiting. The berries are nauseous, and violently purgative, occasioning thirst and dryness in the mouth and throat, accompanied usually with severe griping of the bowels, unless some diluting liquor be taken plentifully with them. The juice made into a syrup is the officinal preparation called Buck-thorn. About an ounce of this is a moderate dose, and it was formerly employed as a hydrogogue; but it is now falling into disuse, and is rarely prescribed except in conjunction with other medicines of this class. It is said even that the flesh of birds which feed upon these berries is purgative.

Var. β, Hydriénsis (Jacq. carn. 2. t. 2.) larger leaves tapering to the base. ♄. H. Native about Hydria.

Purging Buck-thorn. Fl. May. Britain. Shrub 12 feet.

10 R. VIRGA'TUS (Roxb. fl. ind. 2. p. 351.) erect; branchlets terminating in a spine; leaves nearly opposite, oblong, ventricose, serrated; flowers around the base of the young shoots, and axillary, tern; stigmas 2-3-cleft. ♄. H. Native of Nipaul, and the Nelligery mountains. R. cathárticus, Hamilt. mss.

Leaves usually alternate. Flowers very small, yellow. Calyx seldom 5-cleft. Berries 2-3-seeded. Branches twiggy, the lateral branchlets terminated in a thorn.

Twiggy Buck-thorn. Fl. Ju. Jul. Clt. 1820. Shrub 12 ft.

11 R. TINCTÒRIUS (Walds. et Kit. pl. rar. hung. 3. p. 255.) erect; leaves ovate, crenate-serrated; petioles villous; flowers crowded, dioecious; berries obcordate, 3-4-seeded. ♄. H. Native of Hungary, in hedges. R. cardiospérmus, Willd. herb. Flowers greenish-yellow. The berries are used for dying as well as the inner bark.

Dyers' Buck-thorn. Fl. May, June. Clt. 1820. Sh. 8 feet.

12 R. INFECTÒRIUS (Lin. mant. 49.) procumbent or diffuse; leaves ovate-lanceolate, serrulated, smoothish; flowers dioecious, bearing petals in both sexes. ♄. H. Native of the south of Europe, in rough places, and in the fissures of rocks.—Clus. hist. 1. p. 111. with a figure.—Ardu. mem. 78. t. 14. Flowers greenish-yellow, with two reflexed stigmas. The unripe berries are much used for dyeing, and are imported in great quantities into England under the name of *Grain d'Avignon* or *Avignon berries.* They are what give the yellow colour to Turkey leather or yellow Morocco.

Dyers' or Avignon-berry. Fl. June, July. Clt. 1683. Shrub procumbent.

13 R. SAXA'TILIS (Lin. spec. 1671.) procumbent or erectish; leaves ovate-lanceolate, serrulated, smoothish; flowers dioecious, female ones destitute of petals. ♄. H. Native of the south of Europe, among rocks, in Austria, Switzerland, Italy, and Greece. Jacq. austr. t. 53. R. longifòlius, Mill. dict. Flowers greenish-yellow. Berries black, containing 3 whitish seeds, each inclosed in a dry whitish membrane, separating into two parts with elastic force. The unripe berries of the species are also supposed to be Avignon berries. See R. infectòrius. Branches with a few long thorns.

Rock Buck-thorn. Fl. June, July. Clt. 1752. Shrub procumbent.

14 R. OLEOÌDES (Lin. spec. 279.) diffuse or somewhat erect; leaves oblong, obtuse, entire, coriaceous, smooth, with netted veins beneath. ♄. H. Native of Sicily, Mauritania, Spain, and Greece, in the fissures of rocks. Desf. atl. 1. p. 197. Flowers greenish-yellow. Berry juiceless, 2-celled, 2-seeded.

Olive-like Buck-thorn. Fl. Ju. July. Clt. 1752. Shrub 3 ft.

15 R. BUXIFÒLIUS (Poir. dict. 4. p. 463.) diffuse; leaves ovate, quite entire, mucronate, smooth, coriaceous, green on both surfaces. ♄. H. Native of Numidia. Flowers greenish-yellow. According to Desf. this is only a variety of the preceding. Perhaps this is R. buxifòlius, Brot. fl. lus. 1. p. 301.

Box-leaved Buck-thorn. Fl. June, July. Clt. 1820. Sh. 3 ft.

16 R. PUBE'SCENS (Poir. dict. 4. p. 464.) diffuse; leaves ovate, quite entire, coriaceous, pubescent. ♄. H. Native of the south of France, and of the Levant. R. oleoìdes, Lam. fl. fr. 2. p. 545. ed. 3. no. 4075. This is probably only a variety R. oleoìdes.

Pubescent Buck-thorn. Fl. Ju. July. Clt. 1817. Shrub 3 feet.

17 R. AMYGDALÌNUS (Desf. atl. 1. p. 198.) diffuse; leaves permanent, lanceolate, obtuse, almost entire, coriaceous, smooth, not netted beneath. ♄. H. Native of the north of Africa, and the islands of the Archipelago, in the fissures of rocks. Flowers greenish-yellow. The Avignon berries or yellow berries are also obtained from this shrub, as well as from *R. infectòrius, tinctòrius, saxátilis, oleoìdes, buxifòlius,* and *pubéscens.*

Almond-like Buck-thorn. Fl. June, July. Clt. Shrub 3 feet.

18 R. PERSICIFÒLIUS (Moris. stirp. sard. 4to. fasc. 2.) erect; branches spiny at the apex; leaves oblong-lanceolate, crenated, obtuse, reticulately-veined, and pilose beneath. ♄. H. Native of Sardinia.

Peach-leaved Buck-thorn. Shrub.

19 R. CRENULA'TUS (Ait. hort. kew. 1. p. 263.) erect; leaves oblong, somewhat serrated, permanent, smooth, netted with veins beneath. ♄. G. Native of Teneriffe, on the mountains. Flowers greenish-yellow.

Crenulate-leaved Buck-thorn. Fl. March. Clt. 1778. Sh. 6 ft.

20 R. PRUNIFÒLIUS (Smith, prod. fl. græc. 1. p. 157. Rees' cycl. no. 6.) plant depressed or procumbent; leaves obovate, obtuse, crenated, naked; flowers dioecious or polygamous. ♄. H. Native of Crete, on the highest mountains. The female flowers have usually the rudiments of stamens. Flowers greenish-yellow.

Plum-leaved Buck-thorn. Shrub depressed.

21 R. LYCIOÌDES (Lin. spec. 279.) erect; leaves linear, quite entire, obtuse, smooth; flowers hermaphrodite. ♄. H. Native of Spain, frequent on the limestone hills of Valentia. Cav. icon. 2. t. 182. Flowers greenish-yellow. Berries black, round, 2-3-seeded.

Var. β, Arragonénsis (Asso, syn. arr. p. 27.) leaves yellowish above.

Lycium-like Buck-thorn. Fl. Sept. Dec. Clt. 1752. Shrub 4 feet.

22 R. ERYTHRÓXYLON (Pall. fl. ross. 2. t. 62. itin. French edit. t. 90.) erect; leaves linear-lanceolate, quite entire or serrated, smooth; flowers hermaphrodite; berries oblong. ♄. H. Native of Siberia, on rocks. Berries about the size of a pea, 3-seeded. Flowers greenish. This shrub when cultivated becomes destitute of spines. The wood is orange or almost red.

Var. β, angustissimus (D. C. prod. 2. p. 25.) leaves linear, narrow, very finely serrulated. ♄. H. Native of Caucasus. R. lycioìdes, Pall. fl. ros. t. 63. This is perhaps a distinct species.

Red-wooded Buck-thorn. Fl. July, Aug. Clt. 1823. Sh. 6 ft.

* * *Branchlets not terminated by spines.*

23 R. RUPE'STRIS (Vill. dauph. 2. p. 531.) procumbent, branched; leaves ovate, quite entire, smooth; flowers dioecious. ♄. H. Native of Dauphiny, on rocks. R. pùmilus β, rupéstris, D. C. prod. 25. Flowers greenish-yellow. Stigma 3-cleft.

Rock Buck-thorn. Fl. June, July. Clt. 1752. Sh. proc.

24 R. VALENTI'NUS (Willd. spec. 1. p. 1096.) procumbent; leaves roundish, elliptical, minutely-crenate, and nearly sessile; flowers 4-cleft, hermaphrodite. ♄. H. Native of Spain, on the mountains of Mecca and Palomera, in the kingdom of Valentia. R. pùmilus, Cav. icon. 2. t. 181. Style deeply 3-parted. Drupe dry, 3-celled.

Valentia Buck-thorn. Fl. June, July. Clt. 1816. Sh. proc.

25 R. WULFE'NII (Spreng. syst. 1. p. 762.) erectish; leaves orbicular, with cartilaginous crenate margins, veiny, silky beneath at the nerves; stigma simple; flowers hermaphrodite. ♄. H. Native of Austria. R. pùmilus, Wulf. in Jacq. coll. 2. p. 141. t. 11. Flowers greenish-yellow.

Wulfen's Buck-thorn. Fl. June, July. Clt. 1752. Sh. 2 ft.

26 R. PUSI'LLUS (Ten. prod. 16.) procumbent; leaves obovate, acute, crenulated, and mucronate at the apex; flowers hermaphrodite; stigma 3-parted. ♄. H. Native of Naples.

Small Buck-thorn. Fl. Ju. July. Clt. 1823. Shrub proc.

27 R. SIBTHORPIA'NUS (Schult. syst. 6. p. 286.) diffuse; leaves obovately-rhomboid, almost entire, lined, villous; flowers dioecious, usually digynous. ♄. H. Native of Mount Parnassus. Allied to *R. alpinus* and *R. frángula.* R. pubéscens, Sibth. fl. græc. t. 239. Flowers green.

Sibthorp's Buck-thorn. Shrub diffuse.

28 R. DAHU'RICUS (Pall. fl. ross. 2. t. 61.) erect; leaves oblong-ovate, serrated, smooth, veiny; flowers dioecious, female ones with bifid stigmas. ♄. H. Native of Dahuria, on the banks of the river Argun. Flowers greenish-yellow. Berries

about the size of a pea, sometimes twin. Very like *R. cathárticus*, but without thorns. The wood is red, and is called sandal wood by the Russians.

Dahurian Buck-thorn. Fl. May, Ju. Clt. 1817. Shrub 5 feet.

29 R. ALNIFÒLIUS (Lher. sert. p. 5.) erect; leaves obovate or ovate, serrulated, obliquely-lined, with lateral nerves, acuminated or obtuse, smoothish beneath, except the nerves; flowers hermaphrodite or dioecious; pedicels 1-flowered, aggregate; calyxes acute; fruit turbinate. ♄. H. Native of North America.

Alder-leaved Buck-thorn. Fl. Ju. July. Clt. 1778. Sh. 8 feet.

30 R. FRANGULOÌDES (Michx. fl. bor. amer. 1. p. 153.) leaves oval, serrated, pubescent on the nerves beneath; flowers hermaphrodite; pedicels 1-flowered. ♄. H. Native of North America, from Canada to Carolina, on dry hills, near rivers. Flowers green. Berries black. Leaves small.

Frangula-like Buck-thorn. Fl. Ju. Jul. Clt. 1810. Sh. 8 feet.

31 R. PURSHIA'NUS (D. C. prod. 2. p. 25.) erect; leaves oval, toothletted, short-acuminated, with a small cordate recess at the base, pubescent on the nerves beneath; peduncles twice bifid; berries depressed, globose. ♄. H. Native of North America, on the banks of the Kooskoosky. R. alnifòlius, Pursh, fl. sept. amer. 1. p. 166. but not of Lher. Berries purple, very highly esteemed among the natives.

Pursh's Buck-thorn. Fl. May, June. Shrub 6 feet.

32 R. SERRULA'TUS (H. B. et Kunth, nov. sp. amer. 7. p. 51. t. 617.) shrubby; branches villously hairy; leaves oblong, acute at both ends, sharply serrated, smooth, clammy; peduncles axillary, solitary, single-fruited. ♄. G. Native of Mexico, in the plains near St. Augustin de las Guevas. Flowers greenish-yellow.

Serrulated-leaved Buck-thorn. Shrub 6 feet.

33 R. CALIFÓRNICUS (Eschscholtz, mem. acad. scienc. peterb. 10. p. 281.) unarmed; flowers hermaphrodite, monogynous, in fascicled umbels; berry 2-seeded; leaves oval, serrulated. ♄. H. Native of California.

Californian Buck-thorn. Shrub.

34 R. MICROPHY'LLUS (Willd. in Schult. syst. 5. p. 295.) shrubby, procumbent, much branched; branches twisted; branchlets hairy; leaves linear-lanceolate, obtuse, almost entire, smooth; peduncles solitary, axillary; flowers 5-cleft, hermaphrodite, monogynous. ♄. G. Native of Mexico. Flowers greenish-yellow. This shrub has the habit of *R. oleoìdes*, but with the flowers 5 or 6-cleft, and the style simple, and 2-lobed at the apex. H. B. et Kunth, nov. gen. amer. 7. p. 51. t. 616.

Small-leaved Buck-thorn. Clt. 1823. Shrub trailing.

35 R. ALPI'NUS (Lin. spec. 280.) erect, twisted; leaves oval-lanceolate, crenate-serrated, smooth, lined with many parallel nerves; flowers dioecious, female ones with 4-cleft stigmas. ♄. H. Native of the Alps of Switzerland, Dauphiny, Austria, and Carniola. Duh. ed. 2. vol. 3. t. 13. Hall. hist. no. 823. t. 40. Berries black. Flowers greenish.

Alpine Buck-thorn. Fl. May, June. Clt. 1752. Shrub 4 feet.

36 R. PU'MILUS (Lin. mant. 49.) plant procumbent, much branched; leaves ovate, serrated, smooth; flowers hermaphrodite. ♄. H. Native of Mount Baldo, and the Alps, and Carniola, in the fissures of rocks. Stigma 3-cleft. Flowers greenish-yellow, with the stamens white. R. rupéstris, Scop. carn. 1. t. 5.

Dwarf Buck-thorn. Fl. Ju. July. Clt. 1752. Sh. procumbent.

SECT. II. FRA'NGULA (from *frango*, to break). Tourn. inst. t. 383. D. C. prod. 2. p. 26. Brogn. mem. rhamn. p. 55. Flowers hermaphrodite, rarely dioecious, 5-cleft (f. 5. C. *a.*), sometimes 4-cleft (f. 5. C. *a.*). Seeds smooth, compressed, with the hylum white and exserted, and with the raphe lateral on the surface of the inner testa. Embryo flat. Leaves membranous, caducous, quite entire, lined with approximate parallel nerves.

37 R. CAROLINIA'NUS (Walt. car. p. 101.) erect; leaves oval-oblong, almost entire, smooth; umbels stalked; flowers hermaphrodite; berries globose. ♄. H. Native of North America, Virginia, and Carolina, in woods and swamps. Flowers greenish 4 cleft. Stigma 2-lobed. Berries black, 4-seeded.

Carolinian Buck-thorn. Fl. May, Ju. Clt. 1818. Sh. 6 feet.

38 R. FRA'NGULA (Lin. spec. 280.) leaves oval, quite entire, lined with 10 or 12 lateral nerves, and are, as well as the calyx, smooth; flowers hermaphrodite. ♄. H. Native of Europe, in woods and thickets. In England, but rare in Scotland. Flowers whitish, 5-cleft. Berries dark-purple, each containing 2 large seeds. Peduncles 1-flowered, aggregate. Smith, engl. bot. t. 250. Oed. fl. dan. t. 278. From a quarter to half an ounce of the inner bark or liber, boiled in water or beer, is violently purgative. In dropsies or constipation of the bowels in cattle it is a certain purgative. The berries gathered before they are ripe dye wool green and yellow, when ripe blue and green. The bark dyes yellow, and with preparations of iron black. The flowers are particularly grateful to bees. Goats devour the leaves voraciously, and sheep will eat them. Charcoal prepared from the wood is preferred by the makers of gunpowder. The berries are sometimes mixed by herb gatherers with those of the true Buck-thorn, *R. cathárticus*, or substituted for them, but the smaller number of seeds betrays the deception. Their qualities perhaps differ very little.

Breaking or Alder Buck-thorn, or Berry-bearing Alder. Fl. May. Britain. Shrub 3 to 10 feet.

39 R. LATIFÒLIUS (Lher. sert. 5. t. 8.) leaves elliptical, acuminated, quite entire, lined with 12 or 15 lateral nerves; younger leaves and calyxes villous; flowers hermaphrodite. ♄. G. Native of the Azores, on the mountains of St. Michael. Flowers greenish. Stigma slightly 3-cleft.

Broad-leaved Buck-thorn. Fl. July. Clt. 1778. Shrub 5 ft.

40 R. SANGUI'NEUS (Pers. ench. 1. p. 239.) leaves ovate or oblong, acuminated, quite entire, lined, and are, as well as the calyxes, smooth; flowers hermaphrodite, fascicled, axillary. ♄. H. Native of Galicia, on the banks of rivers. R. sanguíno, &c. Ort. dec. 87. Young branches red. Flowers greenish.

Bloody-branched Buck-thorn. Shrub 6 feet.

41 R. HUMBOLDTIA'NUS (Schult. syst. 5. p. 295. H. B. et Kunth, nov. gen. amer. 7. p. 52. t. 618.) branches and leaves smooth, alternate, and opposite, oblong-elliptical, obtuse, rounded at the base, quite entire, beneath as well as the calyxes beset with glandular dots; peduncles axillary, 3-6-flowered; flowers somewhat umbellate; stigmas 2-lobed. ♄. S. Native of South America, between Totonilco el Grande and Actopan, near the village of Magdalena. R. franguloides, Willd. herb. but not of Michx. Fruit 2-celled, cells 2-seeded. Flowers white. This species differs from all the others in the cells of the fruit being 2-seeded, and in the leaves being for the most part opposite.

Humboldt's Buck-thorn. Tree.

SECT. III.? ANTIRHA'MNUS (from *anti* and *rhámnus*). D. C. prod. 2. p. 20. Leaves opposite, bistipulate. Flowers axillary. Fruit 2-celled.—Unarmed species not sufficiently known. Natives of Mexico. They should perhaps be joined with *Ceanòthus* or separated into a distinct genus.

42 R. UMBELLA'TUS (Cav. icon. 6. p. 2. t. 504.) leaves ovate, acute, entire, lined with feather nerves, smoothish; peduncles axillary, bearing an umbel of 4 or 5 flowers. ♄. G. Native of Mexico. Segments of calyx each with 2 hollows inside. Flowers reddish.

Umbel-flowered Buck-thorn. Shrub 6 feet.

43 R. BINIFLÒRUS (Moç. et Sesse, fl. mex. icon. ined. D. C. prod. 2. p. 26.) leaves entire, oval, acute at both ends, lined with feather nerves; peduncles axillary, 2-flowered. ♄. G. Native of Mexico. This is perhaps sufficiently distinct from the preceding species.

Twin-flowered Buck-thorn. Shrub.

44 R. TERNIFLÒRUS (Moç. et Sesse, fl. mex. icon. ined. D. C. prod. 2. p. 26.) leaves somewhat acute, toothed, rusty beneath as well as the branchlets; pedicels 3, axillary, 1-flowered. ♄. G. Native of Mexico. Flowers greenish.

Tern-flowered Buck-thorn. Shrub.

† *Species doubtful to what genus they belong, perhaps many of them should be placed in the genus* SEGERE'TIA *and some in* SCU'TIA.

* *Unarmed. Leaves entire.*

45 R. TETRAGÒNUS (Lin. fil. suppl. 153.) leaves opposite, ovate, smooth, sessile; flowers terminal, somewhat panicled, incomplete; berries 1-celled, 1-seeded. ♄. G. Native of the Cape of Good Hope. Probably a species of *Scùtia* or *Ceanòthus.*

Tetragonal-branched Buck-thorn. Cult. 1816. Shrub 6 feet.

46 R. POLIFÒLIUS (Vahl. symb. 1. p. 768.) leaves alternate, lanceolate, downy-white beneath, as well as the branches; flowers axillary, almost sessile, usually solitary, hermaphrodite, and usually trigynous. ♄. G. Native of New Zealand. Probably a species of *Pomadérris.*

Poly-leaved Buck-thorn. Shrub.

47 R. ZIZYPHOÌDES (Spreng. syst. 1. p. 768.) leaves ovate-lanceolate, acute, hoary and downy beneath; flowers terminal, loosely panicled, hermaphrodite; capsules baccate, containing 3 nuts. ♄. G. Native of the Society Islands. Probably a species of *Segerètia.*

Zizyphus-like Buck-thorn. Shrub.

48 R. MYRTÌNUS (Burm. ind. p. 60.) leaves oblong-ovate, shining beneath. ♄. S. Native of Coromandel.

Myrtle-like Buck-thorn. Shrub.

49 R. BRASILIE'NSIS (Spreng. syst. 1. p. 768.) leaves oblong-lanceolate, tapering at both ends, coriaceous, shining above; peduncles axillary, 1-flowered, aggregate, rather hispid. ♄. S. Native of Brazil.

Brazilian Buck-thorn. Shrub.

50 R. RAMIFLÒRUS (Rich. act. soc. hist. nat. par. 107.) quite smooth; leaves lanceolate-oblong, shining; flowers minute, in scattered bunches along the branches. ♄. S. Native of Cayenne.

Branched-flowered Buck-thorn. Shrub.

* * *Unarmed. Leaves toothed or serrated.*

51 R.? CASSINOÌDES (Lam. in Poir. dict. 4. p. 474.) leaves ovate, coriaceous, glaucous, obsoletely toothed; branches angular; flowers axillary, almost sessile, 5-cleft. ♄. S. Native of St. Domingo. Probably a species of *Cassine.*

Cassine-like Buck-thorn. Shrub.

52 R. QUITE'NSIS (Humb. et Bonpl. in Schult. syst. 5. p. 295.) leaves obovate-oblong, obtuse, mucronate, serrated, quite entire at the base, coriaceous; peduncles solitary, axillary; branches angular. ♄. S. Native of Peru in the province of Quito.

Quito Buck-thorn. Shrub.

53 R. WI'HHOR (Luce in ind. hort. Dorp. 1824. p. 6.) compare with Luce topogr. von. den. ins. æsel. Riga. 1823.

Wihhor Buck-thorn. Shrub.

54 R. LANCEOLA'TUS (Pursh, fl. amer. sept. 1. p. 166.) arborescent, unarmed; leaves lanceolate, serrulated, acute at both ends, pubescent beneath. ♄. H. Native of Tenessee on the sides of hills. Berries black.

Lanceolate-leaved Buck-thorn. Clt. 1812. Shrub.

Cult. The hardy species are all proper for shrubberies, some are evergreen and some deciduous, these are usually increased by layers and seeds, which are produced in abundance. The stove and greenhouse kinds will grow in any light soil, and they are easily increased by cuttings, planted under a hand-glass.

IX. SCU'TIA (from *scutum*, a shield, form of disk). Comm. mss. Brogn. mem. rhamn. p. 55. Séntis, Comm. in herb. Ceanòthus, sect. 1. Scùtia, D. C. prod. 2. p. 29.

LIN. SYST. *Pentándria, Monogýnia.* Calyx pitcher-shaped, with an erect 5-cleft border (f. 6. A. *a.*). Petals nearly flat, emarginate (f. 6. A. *b.*). Stamens short; anthers ovate, 2-celled (f. 6. A. *b.*). Disk fleshy, covering the tube of the calyx (f. 6. A. *e.*), which closely girds the ovary, but not adnate to it. Ovary 2-3-celled (f. 6. A. *g.*). Style short, simple (f. 6. A. *k.*). Fruit tricoccous (f. 6. A. *l.*), girded at the base by the circumcised calyx (f. 6. A. *h.*).—Smooth shrubs with alternate leaves approximating by pairs, and nearly opposite, quite entire or hardly serrulated, coriaceous, feather-nerved, bistipulate; stipulas minute, deciduous. Spines wanting or arched, about equal in length to the petioles, rising from the axillæ of the lower leaves. Flowers axillary, disposed in few-flowered simple umbellets, scarcely longer than the petioles.

1 S. I'NDICA (Brogn. mem. rhamn. p. 56.) branchlets twiggy, armed with sub-opposite, recurved prickles; leaves nearly opposite, obovate, retuse, toothletted towards the apex. ♄. S. Native of the East Indies, in forests. Rhámnus circumcíssus, Lin. fil. suppl. 152. Ceanòthus circumcíssus, Gært. fruct. 2. p. 111. t. 106. Shrub dividing into many long straggling scandent branches. Umbellets solitary, axillary. Fruit containing 5 seeds when all come to maturity.

Var. β, pauciflòrus (D. C. prod. 2. p. 30.) pedicels 3-5. ♄. S. Native of the Mauritius. Ceanòthus, nov. spec. Sieb. pl. exsic. maur. no. 75.

Indian Scutia. Shrub straggling.

2 S. LU'CIDA; branches armed with short, opposite, and solitary, recurved prickles; leaves opposite, from round to oblong, emarginate, entire, polished and firm; peduncles from 2-4-flowered; berries globular, usually 2-seeded. ♄. S. Native of the Mauritius. Rhámnus lùcidus, Roxb. fl. ind. 2. p. 353. A small much branched tree, with far spreading and straggling, somewhat climbing branches.

Shining-leaved Scutia. Tree 20 feet.

3 S. COMMERSÒNII (Brogn. in mem. rhamn. p. 56.) branches spreading, stiff; leaves almost opposite, approximate, distich, elliptical, quite entire. ♄. S. Native of the Island of Bourbon, as well as on the eastern coast of Africa. Séntis, Comm. herb. Lýcium Africànum, Burm. herb. Rhámni cathártici foliis spinòsum, Herm. cat. pl. Afr. p. 16. Called *Bois-senti* in Bourbon

Commerson's Scutia. Shrub 10 feet.

4 S. CAPE'NSIS; leaves cordate or ovate, very blunt, entire, smooth; prickles solitary, recurved. ♄. G. Native of the Cape of Good Hope. Rhámnus Capénsis, Thunb. prod. 1. p. 44. fl. cap. 2. p. 73. Ceanòthus Capénsis, D. C. prod. 2. p. 30. Flowers whitish.

Cape Scutia. Fl. May, July. Clt. 1823. Shrub 4 feet.

5 S. FE'RREA (Brogn. mem. rhamn. p. 56.) leaves oblong-ovate, coriaceous, smooth, shining, quite entire; peduncles axillary, shorter than the petioles, somewhat umbellate; flowers apetalous; calyx spreading. ♄. S. Native of the Antilles. Rhámnus férreus, Vahl. symb. 3. p. 41. t. 58. Ceanòthus férreus, D. C. prod. 2. p. 30.

Iron Scutia. Shrub.

6 S. SARCOMPHA'LUS (Brogn. mem. rhamn. p. 56.) leaves ovate or oval, coriaceous, smooth, quite entire, blunt, or emar-

ginate: peduncles axillary, longer than the petioles, racemosely-corymbose. ♄. S. Native of Jamaica. Sarcomphàlus, P. Brown, Jam. 179. Rhámnus sarcomphàlus, Lin. amœn. 5. p. 395. Kunth, nov. gen. amer. 7. p. 57. in a note. Ceanòthus sarcomphàlus, D. C. prod. 2. p. 30. This differs from the other species in the petals being helmet-shaped, stamens turned outwards, and in the disk being thicker, as well as in the leaves being alternate, not approximating by pairs. This tree rises generally to a considerable height; the trunk is generally about 3 feet in diameter. The wood is hard, of a dark colour, and close grain; it is looked upon as one of the best timber woods in the island of Jamaica. The name is derived from σαρξ, σαρκος, *sarx, sarcos*, flesh, and ομφαλος, *omphalos*, a navel; resemblance in the ovary, surrounded by the disk.

Sarcomphalus Scutia. Tree 30 feet.

† *Species not sufficiently known.*

7 S. LÆVIGA'TA; leaves oblong, obtuse, quite entire, coriaceous, veinless, smooth; flowers axillary, 2-3 pedicellate, ♄. S. Native of Santa Cruz. Rhámnus lævigàtus, Vahl. symb. 3. p. 41. Ceanòthus lævigàtus, D. C. prod. 2. p. 30.

Var. β, Guadalùpæ (D. C. prod. 2. p. 30.) leaves oval, quite entire, coriaceous, with a middle nerve and a few lateral ones; flowers axillary, 3-5 pedicelled. ♄. S. Native of Guadaloupe.

Smooth Scutia. Clt. 1818. Shrub 10 feet.

8 S. SPHÆROSPE'RMA; leaves oblong, acuminated, serrated, smooth; peduncles axillary, subracemose, length of petiole; fruit pellucid, spherical; seeds trigonal. ♄. S. Native of Jamaica, among bushes. Rhámnus sphærospérmus, Swartz, fl. ind. occ. 1. p. 499. Ceanòthus? sphærocárpus, D. C. prod. 2. p. 30. Flowers yellowish-green. Berry the size of a small pepper-corn, either quite globular or obscurely 3-lobed, pellucid, pale-green, containing 1 or 3 seeds. Stigma in 2 deep, acute divisions.

Round-seeded Scutia. Clt. 1824. Shrub 10 feet.

9 S. PAUCIFLÒRA; leaves obovate-oblong, obtuse, smooth, entire, or a little toothed; racemes lateral, short, few-flowered. ♄. G. Native of Mexico. Ceanòthus pauciflòrus, Moc. et Sesse, fl. mex. icon. ined. D. C. prod. 2. p. 33. Flowers greenish-yellow!

Few-flowered Scutia. Shrub.

10 S.? PANICULA'TA; leaves roundish-oval, acuminated, serrated, pubescent; panicle terminal, with subcorymbose branches. ♄. S. Native of the East Indies. Celástrus Rothiànus, Schult. syst. 5. p. 423. Ceanòthus paniculàtus, Roth. nov. spec. 154. Flowers white.

Panicled Scutia. Shrub.

Cult. Inconspicuous shrubs not worth cultivating, except in general collections; they will grow in any light soil, and are easily increased by young cuttings, planted under a hand-glass, in a moderate heat.

X. RETANI'LLA (the name of *R. obcordàta* in Peru). Brogn. mem. rhamn. p. 57.—Molinæ'a, Comm. mss.—Collètia species, Vent. and D. C.

LIN. SYST. *Pentándria, Monogýnia.* Calyx pitcher-shaped, 5-cleft (f. 5. E. *e.*), internally fleshy. Petals 5, cucullate (f. 5. E. *d.*), sessile. Stamens inclosed; anthers kidney-shaped, 1-celled. Disk effuse, covering the whole inner surface of the calyx (f. 5. E. *f.*). Ovary free (f. 5. E. *g.*), 3-celled. Style simple, short. Stigma 3-toothed. Fruit adnate to the base of the calyx, indehiscent, containing a 3-celled woody nut (f. 5. E. *i.*). Seeds sessile (f. 5. E. *i.*).—Subshrubs with elongated, nearly simple naked branches, or with a few leaves at their base, these are opposite, quite entire, and small. Flowers small, villous on the outside (f. 5. E. *e.*), brownish, disposed in short, few-flowered, opposite spikes on the young branches (f. 5. E. *a.*).

1 R. OBCORDA'TA (Brogn. mem. rhamn. p. 58.) leaves obcordate, quite entire, 3-nerved; flowers sessile, spiked, rising from the axillæ of the scales. ♄. G. Native of Peru. Rhámnus Retanílla, Domb. herb. Collètia obcordàta, Vent. hort. cels. t. 92. Branches twiggy, flexile. Flowers white.

Obcordate-leaved Retanilla. Clt. 1822. Shrub 3 feet.

2 R. EPHE'DRA (Brogn. mem. rhamn. 58.) leaves almost wanting; flowers sessile, disposed in glomerated spikes on the naked branches. ♄. G. Native of Peru. Branches erect, spiny at the apex. Collètia Ephédra, Vent. choix. t. 16. Rhámnus Ephédra, Domb. herb. Flowers white.

Ephedra-like Retanilla. Clt. 1823. Shrub 2 feet.

Cult. These plants will thrive very well in a mixture of loam and peat; and cuttings of young wood will root freely, if planted in a pot of sand, placed under a hand-glass.

XI. COLLE'TIA (named by Commerson in honour of M. Collet, his friend and countryman; he wrote upon the plants of Brest). Kunth, nov. gen. amer. 7. p. 58. D. C. prod. 2. p. 28. Brogn. mem. rhamn. p. 58.

LIN. SYST. *Pentándria, Monogýnia.* Calyx campanulate, membranous, (f. 5. F. *f.*), coloured. Petals wanting, or very minute, linear. Stamens with ovate, 2-celled (f. 5. F. *i.*), or reniform, 1-celled anthers. Disk short, cup-shaped (f. 5. F. *g.*), adnate to the bottom of the calyx. Ovary free (f. 5. F. *h.*), 3-celled. Style simple, elongated (f. 5. F. *e.*). Stigma 3-lobed. Fruit girded at the base by the permanent tube of the calyx, tricoccous (f. 5. F. *k.*), dehiscent (f. 5. F. *k.*). Seeds sessile.—Much-branched shrubs, almost destitute of leaves, with divaricating, decussately opposite branches and spiny branchlets. Leaves, if present, very minute, quite entire, opposite. Flowers axillary, fascicled, or racemose, or when the leaves are absent they rise from beneath the base of the spines (f. 5. F. *a.*).

1 C. SERRATIFÒLIA (Vent. choix. t. 15.) leaves elliptical, sharply serrated; branches leafy; pedicels longer than the flowers; flowers usually solitary. ♄. G. Native of Peru. Rhámnus Spártium, Domb. herb. Flowers yellowish.

Saw-leaved Colletia. Fl. May, July. Clt. 1823. Sh. 3 ft.

2 C. CRUCIA'TA (Gill. et Hook, bot. misc. 1. p. 152. t. 43.) leaves very few, elliptic, quite entire; stem very prickly; spines decussate, compressed laterally, broad, ovate, acute, decurrent. ♄. G. Native of Rio de la Plata, on sandy hills near Maldonado.

Cross-spined Colletia. Clt. 1824. Shrub 4 to 5 feet.

3 C. SPINÒSA (Lam. ill. 2. p. 90. t. 129. Hook, bot. misc. 1. p. 153. t. 44. A.) leaves elliptic, quite entire; spines very strong, awl-shaped; fascicles of flowers scattered; calyx urceolate; filaments elongated, exserted. ♄. G. Native of Chili and Peru, also of Brazil. C. polyacántha, Willd.

Var. α, glàbra (Hook, l. c.) smooth. C. spinòsa, Lam. l. c. C. hórrida, Willd. spec. 1. p. 1113. C. spinosíssima, Gmel. syst.

Var. β, pubescénti-incàna (Hook, l. c.) plant clothed with hoary pubescence.

Spiny Colletia. Fl. May, July. Clt. 1823. Shrub 3 to 4 ft.

4 C. FE'ROX (Gill. et Hook. bot. misc. 1. p. 154.) spines strong, awl-shaped; fascicles of flowers scattered; calyx oblong-cylindrical; anthers nearly sessile. ♄. G. Native of Chili, about Mendoza.

Fierce Colletia. Fl. May, July. Clt. 1823. Shrub 2 to 4 ft.

5 C. ULI'CINA (Gill. et Hook, bot. misc. 1. p. 155.) spines slender, very numerous; fascicles of flowers crowded at the tops of the branches; calyx elongated, cylindrical, with the filaments inserted in the tube. ♄. G. Native of Chili.

Var. α, glàbra (Hook, l. c.) smooth.

Var. β, pubescénti-hirsùta (Hook, l. c.) plant hairy-pubescent.

Furze-like Colletia. Shrub 2 to 4 feet.

6 C. CHACA'YE; leaves somewhat obovate, serrated; flowers tern; branches very leafy. ♄. G. Native of Peru. Rhámnus Chacàye, Domb. herb. Flowers yellowish.

Chacaye Colletia. Shrub 2 feet.

7 C. TETRAGÒNA (Brogn. mem. rhamn. p. 59.) branches almost naked, leafless, smooth; branchlets distant, simple, spiny, stiff, spreading; racemes axillary, rising beneath the spines, usually 6-flowered; fruit opposite on the branchlets, sessile on the branches, racemose. ♄. G. Native of Peru. Domb. Flowers yellowish.

Tetragonal-branched Colletia. Shrub 3 feet.

† *Allied species.*

8 C. INFE'STA (Brogn. mem. rhamn. p. 59.) shrub much branched; branches almost opposite, cylindrical, ultimate ones spiny; spines simple, spreading, stiff, axillary; leaves opposite, oblong-linear, quite entire, smooth; almost nerveless; flowers axillary, solitary; peduncles slender, shorter than the leaves. ♄. S. Native of Mexico, in the plains near Gazave. Ceanòthus inféstus, H. B. et Kunth, nov. gen. amer. 7. p. 61. t. 614. D. C. prod. 2. p. 31. Rhámnus lineàris, Moc. et Sesse, in herb. Lamb. Calyx hemispherical, with a spreading limb. Petals cucullate. Anthers cordate; cells confluent at top. Disk thin, at the limit of the throat, incrusting the tube. Ovary semiadnate to the bottom of the tube of the calyx, 3-celled. Style simple, filiform, longer than the tube of the calyx. Stigma simple. Flowers white.

Troublesome Colletia. Cult. 1824. Shrub 3 feet.

9 C. MULTIFLÒRA (Moc. et Sesse, fl. mex. icon. ined. D. C. prod. 2. p. 29.) leaves entire, oblong; pedicels 1-flowered, 5-6, crowded together, length of flower; petals 5, cucullate. ♄. G. Native of Mexico. Disk extended even to the throat, and half adnate to the ovary. Branches spiny, bearing the flowers beneath the spines.

Many-flowered Colletia. Shrub 4 feet.

10 C.? DISPE'RMA (D. C. prod. 2. p. 29.) leaves entire, oblong; pedicels 1-flowered, 2 or 3 in a fascicle, length of flowers; flowers 5-petalled; berries oblong, 2-celled. ♄. G. Native of Mexico. Branches unarmed. Calyx very short in this and preceding species.

Two-seeded Colletia. Shrub 3 feet.

11 C.? VELUTÌNA (Spreng. syst. 1. p. 771.) leaves alternate, oblong, serrated, villous beneath; peduncles axillary, cymose, and downy, as well as the flowers. ♄. S. Native of Brazil.

Velvety Colletia. Shrub 2 feet.

Cult. See *Retanílla* for culture and propagation.

XII. TREVO'A (*Trevo*, the name of some Spanish botanist). Meyers, mss. Hook, bot. misc. 1. p. 158.

LIN. SYST. *Pentándria, Monogýnia.* Calyx turbinate, 5-cleft, permanent, with reflexed segments. Petals cucullate, erect, inclosing the stamens. Anthers 1-celled, bursting by a kidney-shaped chink. Disk almost wanting. Ovary superior, large, hairy, 3-celled, cells 1-seeded. Style awl-shaped, much exserted, and very hairy, crowned by an acute simple stigma. Capsule membranous, 2-valved, 1-seeded, (2 of the cells being abortive) crowned by the permanent style. Seed erect, elliptical, compressed, marked by a conspicuous longitudinal furrow. Albumen sparing, fleshy. Embryo erect, cylindrical, with an inferior radicle.—Spiny shrubs with awl-shaped short spines, cruciately disposed. Leaves in fours, marked with longitudinal nerves. Fascicles of flowers rising from tubercles in the axils of the leaves and at the base of the spines.

1 T. QUINQUENE'RVIS (Gill. et Hook, bot. misc. 1. p. 158. t. 45. B.) hairy-pubescent; leaves oblong-elliptic, entire, 5-nerved, hoary beneath. ♄. G. Native of Chili on the Andes.

Five-nerved-leaved Trevoa. Shrub 4 to 5 feet.

2 T. TRINE'RVIS (Gill. et Hook, bot. misc. 1. p. 159.) smooth; leaves elliptic, crenately-serrated, 3-nerved, green beneath. ♄. G. Native of Chili.

Three-nerved-leaved Trevoa. Clt. 1828. Shrub 4 to 6 feet.

Cult. For culture and propagation see *Retanílla*, p. 34.

XIII. DISCA'RIA (from δισκος, *diskos*, a disk; disk broad). Hook, bot. misc. 1. p. 156.

LIN. SYST. *Tetra-Pentándria, Monogýnia.* Calyx short, campanulate, 4-5-cleft, coloured. Petals 4-5, smaller than the stamens. Anthers 2-celled, bursting lengthwise. Disk girding the base of the germ, bowl-shaped, fleshy, with a narrow, elevated, nearly entire, free margin. Ovary half superior. Style short, crowned by a 3-lobed stigma.—Spiny shrubs.

1 D. AMERICA'NA (Hook, bot. misc. 1. p. 156. t. 44. D.) calyx for the most part 5-cleft, with reflexed segments. ♄. G. Native of Buenos Ayres.

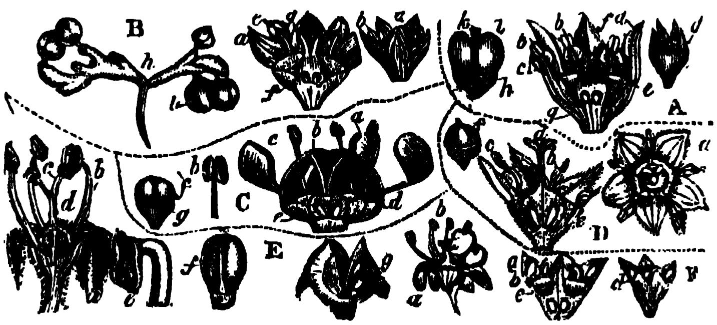
American Discaria. Shrub.

2 D. AUSTRA'LIS (Hook, l. c. p. 157. t. 45. A.) calyx 4-cleft, with erect segments. ♄. G. Native of New Holland at Cox's River to the south of Bathurst. Collètia pubéscens, Brogn. mem. rhamn. p. 59. Branches almost leafless, pubescent; branchlets simple, spiny. Leaves few, opposite, obovate, minute, quite entire, pubescent. Racemes short, many-flowered, rising from beneath the spines. Petals small, linear, convolute.

Southern Discaria. Shrub.

Cult. For culture and propagation see *Retanílla*, p. 34.

FIG. 6.



XIV. HOVE'NIA (in honour of David Hoven, a senator of Amsterdam, who contributed to the success of the travels of Thunberg by his good offices). Thunb. jap. 101. D. C. prod. 2. p. 40. Brogn. mem. rhamn. p. 60.

LIN. SYST. *Pentándria, Monogýnia.* Calyx somewhat spreading, 5-cleft (f. 6. B. *a.*). Petals 5, obovate, unguiculate (f. 6. B. *e.*), convolute. Stamens inclosed in the petals; anthers ovate, 2-celled. Disk fleshy, flat (f. 6. B. *f.*). Ovary 3-celled. Style trifid. Stigmas 3, round. Fruit free, tricoccous (f. 6. B. *l.*), seated on a thick fleshy peduncle (f. 6. B. *h.*).—Trees; with alternate, broad, cordate, serrated, 3-nerved leaves.

1 H. DU'LCIS (Thunb. jap. 101.) leaves cordate, ovate, acuminated, equal at the base, 3-nerved, smooth. ♄. G. Native of Japan, near Nagasaki, where it is called *Ken* and *Kenpokonas*. Kœmpf. amœn. ex. 2. p. 809. with a figure. Flowers small, white, in axillary and terminal dichotomous panicles. Peduncles

sub-cylindrical, reflexed, smooth, an inch long, thickening after flowering, containing a sweet red pulp, which is eaten by the Japanese, and has a taste somewhat like a pear.

Sweet Hovenia. Fl. July, Aug. Clt. 1812. Tree 12 feet.

2 H. INÆQUA'LIS (D. C. prod. 2. p. 40.) leaves cordate, acuminate, rather hairy beneath, unequal at the base, 3-nerved. ♄. G. Native of Nipaul, at Katumanda, where it is called *Munko-Khoshee*. H. acérba, Lindl. bot. reg. t. 501. H. dúlcis, D. Don, prod. 189. Wall. fl. ind. 2. p. 414. Flowers small, white, disposed in axillary, rarely in terminal, dichotomous, villous cymes. Capsule round, size of a pea, seated on an enlarged peduncle, which is soft, and contains a red sweet pulp. This does not come to maturity till after the capsules are ripe.

Unequal-leaved Hovenia. Fl. Ap. Jul. Clt. 1820. Tree 30 ft.

Cult. See *Retanílla* for culture and propagation, p. 34.

XV. COLUBRI'NA (from *coluber*, a snake, in allusion to the twisted stems). Rich. mss. Brogn. mem. rhamn. p. 61.—Rhámnus and Ceanòthus species of authors.

LIN. SYST. *Pentándria, Monogýnia*. Calyx spreading, 5-cleft (f. 6. D. *a*.). Petals 5, obovate, convolute (f. 6. D. *b*.). Stamens exserted (f. 6. D. *c*.); anthers ovate 2-celled. Disk fleshy, rather flat, pentagonal (f. 6. D. *g*.). Ovary immersed in and adnate to the disk (f. 6. D. *e*.), 3-celled. Style trifid (f. 6. D. *a*.). Stigmas 3. Fruit capsular, dehiscent, tricoccous, girded at the base by the circumcised calyx (f. 6. D. *f*.). Seeds furnished with a short stalk.—Shrubs, with alternate, quite entire or crenulated leaves, netted with distant feather nerves, smooth, but usually pubescent or rusty-villous. Flowers in axillary, short, crowded cymes, or in fascicles, with simple peduncles (f. 6. D.).

* *South American species.*

1 C. FERRUGI'NEA (Brogn. mem. rhamn. p. 62.) leaves ovate, a little acuminated, entire, covered with rusty villi beneath, as well as the branchlets and flowers; flowers axillary, cymose, aggregate. ♄. S. Native of South America, in most of the West India Islands. Rhámnus colubrìnus, Lin. syst. 195. Jacq. hort. vind. 3. t. 50. Ceanòthus colubrìnus, Lam. ill. no. 2684. Ceanòthus arboréscens, Mill.—Comm. hort. 1. t. 90. Flowers greenish. Seeds ovate, shining, black. This tree is called *Bois couleuvre* or *Snake-wood* in Martinique; hence the generic name.

Rusty Snake-wood. Fl. May, Nov. Clt. 1762. Tree 30 feet.

2 C. FERME'NTUM (Rich. ined. in Brogn. mem. rhamn. p. 62.) This species has not been described; it is therefore only known to Brogniart. It is a native of Guiana.

Fermented Snake-wood. Tree.

3 C. RECLINA'TA (Brogn. mem. rhamn. p. 62.) leaves elliptical, acute, quite entire, pubescent beneath, as well as the branches and flowers; branches flexible, pendulous; flowers axillary, aggregate, cymose. ♄. S. Native of the mountains of Jamaica, in bushy places, also in St. Domingo, where it is called *Palo-amargo*. Rhámnus ellípticus, Ait. hort. kew. 1. p. 265. Paliùrus inérmis, Hort. par. Zízyphus Domingénsis, Duham. ed. nov. 3. p. 55. ex Desf. Ceanòthus reclinàtus, Lher. sert. p. 6.—Browne, jam. t. 29. f. 2. Flowers greenish.

Reclined-branched Snake-wood. Fl. Aug. Clt. 1758. Sh. 6 ft.

4 C. GRANULÒSA (Brogn. mem. rhamn. p. 62.) leaves ovate-oblong, acuminated, somewhat serrated from the middle, smooth, shining, with the nerves at the base pubescent, as well as the petioles; peduncles axillary, short, dichotomous, umbellate. ♄. S. Native of Peru, in groves. Ceanòthus granulòsus, Ruiz et Pav. fl. per. 5. t. 228. f. *b*. Flowers white. Capsules roundish, turbinate, with prominent ribs.

Granular Snake-wood. Tree 24 feet.

5 C. TRIFLÒRA (Brogn. in mem. rhamn. p. 62.) leaves acute, crenulated, rusty beneath; peduncles axillary, 3-flowered, or pedicels 3 together, 1-flowered. ♄. G. Native of Mexico. Rhámnus triflòrus, Moc. et Sesse in herb. Lamb. Flowers greenish-white.

Three-flowered Snake-wood. Shrub.

6 C. CUBE'NSIS (Brogn. mem. rhamn. p. 62.) leaves elliptical, oblong, acutish, quite entire, greenish-velvety above, hoary and downy beneath, as well as the branchlets and flowers; peduncles axillary, corymbose, longer than the petioles. ♄. S. Native of Cuba, in bushy places, as well as of St. Domingo. Ceanòthus Cubénsis, Lam. Jacq. hort. vind. t. 49. Rhámnus Cubénsis, Lin. Flowers cream-coloured. Sepals fringed.

Cuba Snake-wood. Fl. ? Clt. 1820. Shrub 8 feet.

7 C. ALAMA'NI; leaves ovate, obtuse, serrulated, somewhat velvety and green above, hoary and downy beneath, as well as the branchlets and flowers; peduncles axillary, corymbose, length of petioles. ♄. S. Native of Mexico. Ceanòthus Alamàni, D. C. prod. 2. p. 31. Leaves both opposite and alternate in the same branch.

Alaman's Snake-wood. Shrub.

8 C.? MACROCA'RPUS; leaves ovate, somewhat cordate at the base, roundish, serrated, downy beneath, as well as the branchlets; flowers axillary, glomerate; fruit pendulous. ♄. S. Native of New Spain. Ceanòthus macrocárpus, Cav. icon. 3. t. 276. Flowers white.

Long-fruited Snake-wood. Clt. 1824. Shrub 6 feet.

9 C.? PUBE'SCENS; leaves ovate, acuminated, pubescent, acutely serrated; peduncles axillary, very short; dichotomous umbellate. ♄. S. Native of Peru, in groves. Ceanòthus pubéscens, Ruiz et Pav. fl. peru, 3. p. 6. t. 228. f. a. Flowers white. Fruit round, black.

Pubescent Snake-wood. Tree 18 feet.

10 C.? MOCINIA'NA; leaves oval, entire, 1-nerved, pubescent beneath, as well as the branchlets; peduncles lateral, dichotomous, few-flowered. ♄. G. Native of Mexico. Ceanòthus Mociniànus, D. C. prod. 2. p. 32. Ceanòthus macrocárpus, Moc. et Sesse, fl. mex. icon. ined. but not of Cav. Calyx spreading much after the time of flowering.

Mocino's Snake-wood. Clt. 1824. Shrub.

* * *Asiatic species.*

11 C. ASIA'TICA (Brogn. mem. rhamn. p. 62.) leaves ovate, acuminated, serrulated, glossy, 3-nerved at the base; peduncles axillary, branched, many-flowered, shorter than the leaves. ♄. S. Native of the East Indies, Ceylon, Mauritius, Nipaul, as well as on the western coast of equinoxial Africa. Ceanòthus Asiáticus, Lin. spec. 284. Cav. icon. t. 440. f. 1. Lam. ill. t. 129. Tubanthèra, Comm. mss.—Burm. zeyl. 111. t. 48. Rhámnus acuminàtus, Colebr. mss. Flowers small, yellowish-green, fragrant. Capsule round, obovate, about the size of a small gooseberry, 3-furrowed, 3-celled, 3-valved, 3-seeded. Seeds triangular, with a gibbous back.

Asiatic Snake-wood. Fl. July, Aug. Clt. 1691. Shrub 16 feet.

12 C. NIPAULE'NSIS; shrub erectish or rambling, with all the upper parts pubescent; leaves somewhat bifarious, oblong, acuminated, serrulated, smooth, and shining, with alternate nerves, the axillæ of which are hairy; racemes terminal, panicled, pubescent. ♄. G. Native of Nipaul. Ceanòthus Nipaulénsis, Wall. fl. ind. 2. p. 375. Branches scabrous, and have a tendency to ramble over trees. Flowers small, green, fascicled, disposed in terminal racemes on the naked branches, interspersed with a number of small, lanceolate, floral leaflets, the whole forming a branchy panicle. Petals very small, yellowish, cucullate, concealing the stamens. Ovary 3-lobed. Style trifid. Fruit about the size of a pea at first, succulent, afterwards dry, con-

taining 3 nuts. This will probably prove to be a species of *Willemétia.*

Nipaul Snake-wood. Fl. May, Ju. Clt. 1820. Sh. rambling.

13 C. ? TRI'QUETRA; leaves elliptical-ovate, finely acuminated, sharply serrulated, acute at the base, with parallel pubescent ribs, villous at their axillæ beneath; peduncles axillary, short, fascicled, 1-flowered; capsules acutely 3-cornered. ♄. G. Native of Nipaul, at Shreenugur. Ceanòthus tríquetrus, Wall. fl. ind. 2. p. 376. Leaves pubescent when young.

Triquetrous-capsuled Snake-wood. Shrub.

14 C.? PUBIFLÒRA; leaves elliptical-oblong, acute, serrated, smooth; flowers axillary, crowded, velvety, on short pedicels. ♄. S. Native of the island of Timor. Ceanòthus pubiflòrus, D. C. prod. 2. p. 30.

Downy-flowered Snake-wood. Shrub.

15 C. LESCHENAU'LTII; leaves ovate, long-acuminated, somewhat cordate at the base, crenulately-serrated, smooth above, hoary beneath from very minute down; cymes axillary, many-flowered, almost sessile, length of petioles. ♄. S. Native of Ceylon. Ceanòthus Leschenaúltii, D. C. prod. 2. p. 30. Branches minutely-pubescent at the top, as well as the calyxes.

Leschenault's Snake-wood. Shrub 10 feet.

* * * *African species.*

16 C. GUINEE'NSIS; leaves elliptical-oblong, acutish at both ends, quite entire, on short stalks; cymes corymbose, many-flowered, axillary, hoary-velvety. ♄. S. Native of Guinea. Ceanòthus? Guineénsis, D.C. prod. 2. p. 30. Rhámnus paniculàtus, Thonn.

Guinea Snake-wood. Shrub 6 feet.

17 C.? MYSTACI'NUS; leaves cordate, obtuse, quite entire, smooth above, but rather hairy beneath; branches ending in a tendril; flowers axillary, umbellate. ♄. ◡. G. Native of Abyssinia. Rhámnus mystacìnus, Ait. hort. kew. ed. 1. p. 266. Ceanòthus? mystacìnus, D. C. prod. 2. p. 31. Stem weak, climbing to a considerable extent by means of tendrils from the upper part of the branches. Flowers greenish-white. Ovary immersed in a snow-white glandular disk, filling the tube of the calyx. Stigma trifid.

Bearded Snake-wood. Fl. Nov. Clt. 1775. Shrub cl.

Cult. These plants are not worth cultivating except in general collections. A mixture of loam and peat will suit them well, and cuttings of young wood will root readily if planted in sand, and placed under a hand-glass; those of the stove species require heat.

XVI. CEANO'THUS (κεανωθος, *keanothus*, a name employed by Theophrastus to designate a spiny plant, derived from κεω, *keo*, to cleave; however the modern genus has nothing to do with the plant of Theophrastus). Brogn. mem. rhamn. p. 62.—Ceanòthus species, Lin. Juss. Lam. Ceanòthus, sect. 2. Eucea-nòthus, D. C. prod. 2. p. 31.

LIN. SYST. *Pentándria, Trigýnia.* Calyx with a sub-hemispherical tube, and 5 connivent segments (f. 6. C. *b.*). Petals 5, unguiculate, cucullate (f. 6. C. *c.*), deflexed. Stamens with ovate 2-celled anthers (f. 6. C. *b.*). Disk spongy, annular (f. 6. C. *d.*). Ovary spherical, girded by the disk (f. 6. C. *e.*), 3-celled. Styles 3, diverging, terminated by small papiliform stigmas. Fruit tricoccous (f. 6. C. *f.*), girded by the circumcised tube of the calyx (f. 6. C. *g.*). Seeds almost sessile (f. 6. C. *e.*).—Smooth or pubescent shrubs, natives of North America, with erect branches, alternate, serrated, 3-nerved leaves, and very slender, white, blue or yellow flowers, disposed in terminal panicles or in axillary racemes.

1 C. AZU'REUS (Desf. cat. 1815. p. 232.) leaves ovate-oblong, obtuse, acutely-serrated, smooth above, hoary and downy beneath; thyrse elongated, axillary, with a downy rachis; pedicels smooth. ♄. G. Native of Mexico, on the road to St. Angelo. Ker. bot. reg. t. 291. C. cærùleus, Lag. gen. et spec. 1816. p. 11. Lodd. bot. cab. t. 110 C. bícolor, Willd. in Schult. syst. 7. p. 65. ex fl. mex. icon. et descr. ined. Flowers pale-blue. The bark is febrifugal.

Azure-flowered Red-root. Fl. Ap. May. Clt. 1818. Sh. 10 ft.

2 C. TARDIFLÒRUS (Horn. hort. hafn. 230.) leaves cordate, ovate, serrated, downy beneath; thyrse elongated, axillary. ♄. H. Native of North America. Perhaps only a variety of the following. Flowers white.

Late-flowering Red-root. Fl. Sep. Nov. Clt. 1820. Sh. 6 ft.

3 C. AMERICA'NUS (Lin. spec. 284.) leaves ovate, acuminated, serrated, pubescent beneath; thyrse elongated, axillary, with a pubescent rachis. ♄. H. Native of North America, in dry woods, from Canada to Florida. Duham. arb. 1. t. 51. Mill. fig. t. 57. Sims, bot. mag. t. 1479. Flowers small, white. Fruit bluntly trigonal. In North America this shrub is commonly known by the name of *New Jersey tea*, or *Red-root*, having been actually used in the American war as a substitute for tea. The Canadians use the infusion of the root in gonorrhœa, and other authors attribute to it antisyphilitic properties. It will dye wool a fine strong nankin-cinnamon colour. A beautiful shrub when in flower.

American Red-root or New Jersey tea. Fl. June, July. Clt. 1713. Shrub 2 to 4 feet.

4 C. OVA'TUS (Desf. arb. 2. p. 381.) leaves ovate or oval, serrated, smooth on both surfaces, as well as the peduncles; thyrse short, axillary? ♄. H. Native of North America. Fruit somewhat globose, 6-ribbed. Flowers white. This plant is usually confounded in gardens with the preceding.

Ovate-leaved Red-root. Fl. Ju. July. Clt. 1818. Sh. 2 to 4 ft.

5 C. PERE'NNIS (Pursh. fl. amer. sept. 1. p. 167.) leaves oval, somewhat serrated, smooth; panicle thyrsoid, terminal, and axillary. ♃. H. Native of North America, on rocks near rivers, in Virginia and Carolina. C. herbàceus, Rafin. The stems scarcely ever remain over winter, but die down to the root. Flowers white or yellow.

Perennial Red-root. Fl. May, Ju. Clt. 1822. Pl. 2 feet.

6 C. THYRSIFLÒRUS (Eschscholtz, mem. acad. scienc. peters. 10. p. 281.) leaves oval, 3-nerved, serrulated, smooth; stem many-angled; panicle thyrsoid in the axillary branches. ♄. H. Native of New California.

Thyrse-flowered Ceanothus. Shrub.

7 C. INTERME'DIUS (Pursh, fl. sept. amer. 1. p. 167.) leaves oblong-oval, acute, mucronately-serrulated, triple-nerved, pubescent beneath; panicles axillary, on long peduncles, with loose corymbose pedicels. ♄. H. Native of North America, in the woods of Tennessee. Leaves not one-fourth the size of those of *C. Americànus.* Flowers white.

Intermediate Red-root. Fl. Ju. July. Clt. 1812. Sh. 2 to 4 ft.

8 C. SANGUI'NEUS (Pursh, fl. sept. amer. 1. p. 167.) leaves oblong-obovate, serrated, pubescent beneath; panicles axillary, thyrsoid, on very short peduncles; pedicels aggregate. ♄. H. Native of North America, near the Rocky Mountains, on the banks of the Missouri. Branches blood-red or purple. Panicles not longer than the leaves. Flowers white.

Bloody-branched Red-root. Fl. May, June. Clt. 1812. Shrub 2 to 3 feet.

9 C. MICROPHY'LLUS (Michx. fl. bor. amer. 1. p. 154.) leaves oblong, obtuse, entire, minute, sub-fascicled, smooth; branches straight, somewhat decumbent; corymbs stalked, loose, terminal. ♄. H. Native of North America, in sandy woods, from Carolina to Florida. C. hypericoìdes, Lher. mss. Leaves 3-4 lines long. Fruit almost globular. Flowers white.

Small-leaved Red-root. Fl. May, June. Clt. 1806. Sh. 2 ft.

10 C. serpyllifòlius (Nutt. gen. amer. 1. p. 154.) leaves small, elliptical-ovate, obtuse, serrulated; branches filiform, decumbent; panicles axillary, stalked, few-flowered; flowers conglomerated. ♄. H. Native of Florida, about St. Mary's. Flowers white.

Wild-thyme-leaved Red-root. Shrub decumbent.

11 C. buxifòlius (Willd. in Schult. syst. 7. p. 62. t. 615.) leaves ovate-elliptical, obtuse, glandularly-serrulated, 3-5-nerved, smooth; nerves covered with adpressed hairs on the under surface; branches round, smooth, with a few scattered spines; racemes solitary on the short branches. ♄. G. Native of Mexico, in woods, near Real del Monte. Flowers white.

Box-leaved Red-root. Shrub 6 to 8 feet.

Cult. Small neat shrubs, with large red roots; hence their English name. They will thrive well in any common garden soil, and are proper shrubs for the front of shrubberies. They are increased by layers or by seeds. The greenhouse species or those natives of Mexico only require to be protected from frosts during winter. Young cuttings of these will root if planted in a pot of sand, with a hand-glass placed over them.

XVII. WILLEME'TIA (in honour of *C. L. Willemet*, author of Herbarium Mauritianum). Brogn. mem. rhamn. p. 63.—Ceanòthus spec. Lin. and other authors.

Lin. syst. *Pentándria, Monogýnia.* Calyx urceolate (f. 6. F. *d.*), with the tube adnate to the ovary (f. 6. F. *e.*) at the base, but free at the top, with a 5-cleft limb (f. 6. F. *a.*). Petals 5, cucullate, sessile (f. 6. F. *b.*). Stamens inclosed in the petals; anthers ovate, 2-celled. Disk very thin, incrusting the tube of the calyx. Ovary half-inferior, 3-celled. Style simple, trigonal. Stigma 3-lobed. Fruit unknown.—A quite smooth shrub, with erect branches, alternate, oblong-lanceolate, serrated, feather-nerved leaves, and small white flowers, which are disposed in few-flowered, terminal or axillary panicles.

1 W. Africa'na (Brogn. l. c.) ♄. G. Native of the Cape of Good Hope. Ceanòthus Africànus, Lin. spec. 284.—Pluk. phyt. t. 126. f. 1.—Seb. thes. 1. t. 22. f. 6. Leaves shining. Branches purplish when ripe.

African Willemetia. Fl. July, Aug. Clt. 1712. Shrub 6 ft.

Cult. An elegant shrub. It will succeed well in an equal mixture of loam and peat, with a little sand, and young cuttings will root readily if planted in a pot of sand, with a hand-glass placed over them.

XVIII. POMADE'RRIS (from πωμα, *poma*, a lid, and δερρις, *derris*, a skin; in allusion to the peculiar membranous covering to the capsule). Labill. nov. holl. 1. p. 61. D. C. prod. 2. p. 33. Brogn. mem. rhamn. p. 64.—Pomatodérris, Schult. syst. 5. no. 985.—Pomatidérris, Kunth. nov. gen. amer. 7. p. 60.

Lin. syst. *Pentándria, Monogýnia.* Calyx with an adnate tube, and a 5-cleft (f. 6. E. *a.*), somewhat spreading limb. Petals 5, flat, unguiculate, somewhat cordate, or wanting. Stamens exserted (f. 6. E. *b.*); anthers ovate, 2-celled (f. 6. E. *b.*). Disk wanting. Ovary half adnate, 3-celled. Style trifid, rarely diverging (f. 6. E. *c.*). Fruit half inferior (f. 6. E. *g.*), tricoccous; coccula each with a broad perforation at the base on the inside. Seeds each furnished with a short stalk (f. 6. E. *g.*).—Erect, branched shrubs, more or less covered with starry down. Leaves entire or serrated, villous on both surfaces, or smooth on the upper surface, feather-nerved. Flowers disposed in axillary or terminal, corymbose, or in expanded corymb-like panicles, flowering from the base to the apex, for the most part yellow or cream-coloured.

* *Flowers 5-petalled, disposed in corymbose cymes.*

1 P. phyllirææoi'des (Sieb. pl. exs. nov. holl. no. 215.) cymes corymbose, crowded; calyxes and pedicels villous; leaves elliptical-oblong, quite entire, coriaceous, smooth above, clothed with hoary-velvety villi beneath. ♄. G. Native of New Holland. Leaves acutish. Flowers pale-yellow.

Phyllirœa-like Pomaderris. Fl. May, June. Clt. 1818. Shrub 2 to 6 feet.

2 P. lani'gera (Sims, bot. mag. t. 1823.) cymes somewhat panicled, woolly; leaves oblong-lanceolate, quite entire, coriaceous, velvety above, rusty and woolly beneath. ♄. G. Native of New Holland, on the eastern and southern coast. Ceanòthus laníger, Andr. bot. rep. t. 569. Pomadérris obscùra, Sieb. pl. exs. nov. holl. no. 216. Flowers pale-yellow.

Var. β; leaves smooth above. P. ferrugínea and P. viridirùfa, Sieb. pl. exsic. nov. holl. no. 214 and 209.

Wool-bearing Pomaderris. Fl. April, June. Clt. 1806. Sh. 3 to 6 feet.

3 P. elli'ptica (Labill. nov. holl. 1. p. 61. t. 86.) cymes somewhat umbellate, hoary and velvety; leaves elliptical, obtuse, smooth above, clothed with very short, white tomentum beneath. ♄. G. Native of New Holland at Cape Van Diemen. Sims, bot. mag. t. 1510. Flowers cream-coloured.

Elliptical-leaved Pomaderris. Fl. May, July. Clt. 1805. Shrub 6 feet.

4 P. di'scolor (Vent. malm. t. 58.) cymes somewhat umbellately-corymbose, many-flowered, hoary and velvety from very short, scarcely manifest hairs; leaves ovate-lanceolate, acuminated, smooth above, but clothed with short, white down beneath. ♄. G. Native of New Holland. P. acuminàta, Link. enum. 235. P. malifòlia and P. díscolor, Sieb. pl. exs. nov. holl. no. 208 and 213. Flowers whitish. An intermediate species between *P. elliptica* and *P. intérmedia*, but hardly distinct from the former.

Two-coloured-leaved Pomaderris. Fl. May, June. Clt. 1814. Shrub 8 feet.

5 P. interme'dia (Sieb. pl. exs. nov. holl. no. 210.) cymes corymbosely-panicled; calyxes and pedicels velvety-villous; leaves elliptical, acuminated at both ends, smooth above, but hoary and velvety beneath. ♄. G. Native of New Holland. Flowers pale-yellow.

Intermediate Pomaderris. Fl. May, June. Clt. 1825. Sh. 6 ft.

6 P. andromedæfòlia (Cuning. in Field's new south wales, p. 351.) leaves oval-lanceolate, smooth above, but clothed beneath with white down; corymbs terminal, crowded; flowers with petals? ♄. G. Native of New Holland, on rocky parts of the Blue Mountains. Flowers pale-yellow.

Andromeda-leaved Pomaderris. Fl. April, June. Shrub 4 ft.

7 P. ledifòlia (Cuning. l. c.) leaves oval or elliptical, smooth, silky-white beneath; corymbs few-flowered, terminal; stems twiggy. ♄. G. Native of New Holland, upon rocky hills at Cox's River. Flowers pale-yellow.

Ledum-leaved Pomaderris. Fl. May, Ju. Clt. 1824. Sh. 2 ft.

* * *Flowers 5-petalled, corymbose, or racemosely-panicled. Seeds each furnished with a smaller perforation at the base than the rest of the species. Petals scarcely unguiculate.*

8 P. globulòsa (G. Don, in Loud. hort. brit. 84.) leaves obovate, quite entire, downy beneath, as well as the flowers and branches; peduncles axillary, corymbose; capsules opening from the base to the top. ♄. G. Native of New Holland, on the eastern coast. Ceanòthus globulòsus, Labill. nov. holl. 1. p. 61. t. 85. Flowers pale-yellow.

Globular-fruited Pomaderris. Fl. April, June. Clt. 1808. Shrub 8 feet.

9 P. spathula'ta (G. Don, in Loud. hort. brit. p. 84.) leaves oblong-obovate, somewhat spatulate, obtuse, quite entire, downy beneath, as well as the branches and flowers; racemes

somewhat panicled; capsules opening from the base to the top. ♄. G. Native of New Holland, in Van Lewin's Land. Ceanòthus spatulàtus, Labill. nov. holl. 1. p. 60. t. 84. Flowers pale-yellow.

Spatulate-leaved Pomaderris. Fl. April, June. Clt. 1826. Shrub 6 feet.

10 P. Wendlandia'na (G. Don, in Loud. hort. brit. p. 84.) leaves oblong-lanceolate, acute, smooth above, clothed with rusty down beneath; panicles terminal and axillary. ♄. G. Native of New Holland? Ceanòthus Wendlandiànus, Schult. syst. 5. p. 299. Habit of *P. ellíptica.* Fruit unknown. Flowers yellowish.

Wendland's Pomaderris. Fl. April, Ju. Clt. 1810. Sh. 10 ft.

11 P.? capsula'ris (G. Don, in Loud. hort. brit. p. 84.) leaves ovate, cordate, acuminated, serrated; capsules 3-valved, dehiscent. ♄. G. Native of the island of Tait in the South Seas. Ceanòthus capsulàris, Forst. prod. 112. Flowers yellowish.

Capsular Pomaderris. Fl. April, June. Clt. 1820. Shrub 6 feet.

* * * *Flowers apetalous, panicled, or racemose.*

12 P. ape'tala (Labill. nov. holl. 1. p. 52. t. 87.) panicles racemose, many-flowered; leaves ovate-lanceolate, acuminated, irregularly serrated, smooth above, or scabrous from starry down, clothed with hoary starry down beneath, with rather prominent nerves. ♄. G. Native on the western coast of New Holland, at Cape Van Diemen. Flowers greenish-yellow.

Apetalous Pomaderris. Fl. May, Ju. Clt. 1803. Sh. 6 ft.

13 P. a'spera (Sieb. pl. exs. nov. holl. no. 211.) panicles racemose, elongated; leaves ovate-lanceolate, acuminated, irregularly serrated, and scabrous from starry down, clothed with downy, hoary, starry villi beneath. ♄. G. Native of New Holland. Flowers greenish-yellow. Very like *P. apètala* and hardly distinguishable.

Rough Pomaderris. Fl. May, Ju. Clt. 1825. Shrub 6 ft.

14 P. ligustrìna (Sieb. pl. exsic. nov. holl. no. 212.) panicles few-flowered; leaves ovate-lanceolate, smooth above, but soft, downy, and velvety beneath from simple rather silky hairs, with scarcely prominent nerves. ♄. G. Native of New Holland, on the eastern coast. Calyxes woolly. Flowers greenish-yellow.

Privet-like Pomaderris. Shrub 4 feet.

15 P. phylicifòlia (Lodd. bot. cab. t. 120. Link. enum. 1. p. 232.) panicles racemose, leafy; leaves linear, rather scabrous above, hoary and downy beneath, with the middle nerve rather prominent. ♄. G. Native of New Holland. Flowers greenish-white. Stigma 3-4-cleft. Tube of calyx pubescent, with white oval lobes.

Phylica-leaved Pomaderris. Fl. May, Ju. Clt. 1819. Sh. 2 ft.

Cult. Pomadérris is a beautiful early flowering genus of shrubs. For culture and propagation see *Willemètia*, p. 38.

XIX. CRYPTA'NDRA (from κρυπτος, *cryptos*, hidden, and ανηρ ανδρος, *aner andros*, a male; in allusion to the stamens being hidden by the petals). Smith, in Lin. trans. 4. p. 217. D. C. prod. 2. p. 38. Brogn. mem. rhamn. p. 65.

Lin. syst. *Pentándria, Monogýnia.* Calyx coloured, campanulate, 5-cleft (f. 5. D. *a. b.*). Petals small, cucullate, sessile (f. 5. D. *c.*). Stamens enclosed; anthers 2-celled. Disk wanting. Ovary half-adnate, 3-celled. Style simple. Stigma tridentate. Capsule half inferior, tricoccous, crowned by the permanent calyx. Seeds each furnished with a short fleshy stalk.—Small, heath-like, much-branched, erect shrubs, with fastigiate branches, or short spreading branches, rarely spiny. Leaves small, quite entire, smooth, scattered. Flowers aggregate at the tops of the branches or solitary, erect, or pendulous, calyculated at the base with 5 small imbricate scales (f. 5. D. *d.*).

1 C. pyramida'lis (Brogn. mem. l. c.) branchlets pubescent, erect, pyramidal; leaves obovate-oblong, quite entire, smooth; stipulas setaceous; flowers solitary, erect; fruit oblong, rather pendulous. ♄. G. Native of New Holland. Flowers white.

Pyramidal Cryptandra. Fl. May, July. Shrub 1½ foot.

2 C. ericifòlia (Smith, in Rees' cycl. Rudge, in Lin. trans. soc. 10. p. 294. t. 18.) stem somewhat silky at the apex; leaves linear, rather remote, acute, smooth; heads of flowers terminal; bracteas silky, toothed; style pilose. ♄. G. Native of New Holland, about Port Jackson. C. capitàta, Sieb. pl. exs. nov. holl. no. 66. Flowers white, silky on the outside. Leaves 2-3 lines long.

Heath-leaved Cryptandra. Fl. May, Jul. Clt. 1821. Sh. 2 ft.

3 C. ama'ra (Smith, in Rees' cycl. Rudge, in Lin. trans. 10. p. 295. t. 18. f. 2.) stem rather hoary at the apex; leaves dense, spatulate, obtuse; heads of flowers terminal; bracteas entire, and are as well as the style smooth. ♄. G. Native of New Holland, about Port Jackson. C. ericæfòlia, Sieb. pl. exs. nov. holl. no. 67. Flowers white.

Bitter Cryptandra. Fl. May, June. Clt. 1821. Shrub 2 ft.

4 C. spine'scens (Sieb. pl. exs. nov. holl. no. 68.) smooth; branches spiny; leaves oblong, obtuse, tapering a little to the base; flowers usually solitary; bracteas brown, scarious, a little toothed, short; calyx covered with pressed, hoary-pubescence on the outside. ♄. G. Native of New Holland. Flowers white. Habit of *Condàlia.*

Spiny Cryptandra. Fl. May, June. Clt. 1824. Sh. 1 to 2 ft.

Cult. See *Willemètia* for culture and propagation, p. 38.

XX. BARTLI'NGIA (in honour of C. Bartling, who, with Wendland, wrote an ingenious dissertation on *Diósma*). Brogn. in mem. rhamn. p. 66.

Lin. syst. *Pentándria, Monogýnia.* Calyx furnished with 2 bracteas at the base, with a subhemispherical tube, and a 5-cleft limb; segments twice as long as the tube, oblong, obtuse, villous inside, imbricate in the bud. Petals 5, roundish, small, scale-formed, flat, inserted in the base of the calyx (perigynous or hypogynous). Stamens 10, 5 opposite the petals, and 5 opposite the segments of the calyx, these last are longest; filaments filiform, short; anthers ovate-roundish, 2-celled; cells opening laterally by a longitudinal chink. Disk wanting. Ovary compressed, furrowed on one side, somewhat lanceolate, 1-celled, 1-seeded (or 2-seeded?); ovula fixed to the furrowed side. Style short, awl-shaped. Stigma small, simple. This genus should probably be removed to *Rosàceæ* after *Chrysobálanus.*

1 B. obova'ta (Brogn. l. c.). ♄. G. Native of New Holland. Cryptándra obovàta, Sieb. pl. exs. nov. holl. no. 129. Stem smooth; leaves alternate, stalked, obovate, thickish, smooth; heads few-flowered; bracteas entire. Calyx smooth. Flowers white.

Obovate-leaved Bartlingia. Fl. May, Ju. Clt. 1825. Sh. 2 ft.

Cult. See *Willemètia* for culture and propagation, p. 38.

XXI. SOLENA'NTHA (from σωλην, *solen*, a tube, and ανθος, *anthos*, a flower; in allusion to the petals converging into a tube).

Lin. syst. *Pentándria, Monogýnia.* Calyx permanent, 5-cleft. Petals 5, conniving into a tube, deciduous. Disk? Anthers 5, 2-celled, each inserted under a scale. Ovary 2-lobed. —A stiff-branched spiny shrub with oblong-lanceolate, somewhat serrated leaves, scattered, and in fascicles. Flowers axillary and lateral, white.

1 S. spinòsa. ♄. G. Native of New Holland, on rocky

hills, Cox's River. Cryptándra spinòsa, Cuning. in Field's new south wales, p. 352.

Spiny Solenantha. Fl. Ap. Ju. Clt. 1826. Shrub 1 to 2 feet.

Cult. See *Cryptándra* for culture and propagation.

XXII. TETRAPA'SMA (from τετρας, *tetras*, four, and σκεπασμα, *skepasma*, a veil or hood; in allusion to the four hooded petals veiling the stamens).

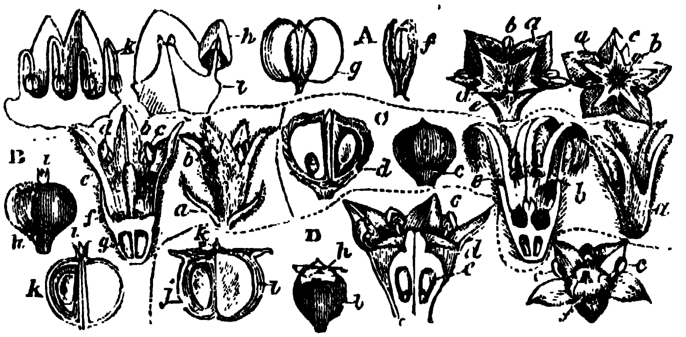
Lin. syst. *Tetrándria, Monogýnia.* Calyx 4-cleft. Petals 4, cucullate, inserted between the segments of the calyx. Anthers 4, inclosed within the petals. Stigma 3-lobed. Ovary 3-celled. —A rushy, shrubby plant, with brachiate strong thorns.

1 ju'ncea. ♄. G. Native of New Holland, at Cox's River, Bathurst, and on the banks of the Macquarie. Flowers probably white.

Rushy Tetrapasma. Shrub.

Cult. See *Willemètia* for culture and propagation, p. 38.

FIG. 7.



XXIII. TRICOCE'PHALUS (from θριξ τριχος, *thrix trichos*, hair, and κεφαλε, *kephale*, a head; in allusion to the hairy heads of flowers). Brogn. mem. rhamn. p. 67.—Phýlica, species of authors.

Lin. syst. *Pentándria, Monogýnia.* Calyx with a short urceolate tube (f. 7. E. *a*.), adnate to the ovary at the base, but free at the apex, having 5 long, bristle-like segments (f. 7. C. *b*.). Petals wanting or bristle-like. Stamens 5. Anthers kidney-shaped, 1-celled. Disk hardly distinct, covering the tube and segments of the calyx. Ovary inferior, 3-celled (f. 7. C. *d*.). Style simple, short. Stigma rather 3-lobed. Fruit half-inferior, tricoccous (f. 7. C. *c*.). Seed propped by a short fleshy stalk (f. 7. C. *d*.).—Small, heath-like shrubs, natives of the Cape of Good Hope, with fastigiate downy branches. Lower surface of leaves villous, upper surface smooth, with convolute edges, on short petioles, stipulate or exstipulate. Flowers capitate; heads elongated (in *T. spicàta*) or spherical, as in *T. stipulàris*, very downy.

1 T. stipula'ris (Brogn. l. c.) leaves alternate, lanceolate-linear, acutish, smooth above, hoary-velvety beneath, with revolute edges; stipulas awl-shaped; heads of flowers terminal, sessile. ♄. G. Native of the Cape of Good Hope, on sandy hills. Phýlica stipulàris, Lin. mant. 208. Wendl. coll. t. 32. Spreng. berl. mag. 8. p. 104. t. 8. f. 3. Young branches hoary-velvety. Bracteas short, naked, usually bifid. Flowers white.

Var. β; leaves broader, somewhat cordate at the base. Flowers white.

Stipular Tricocephalus. Fl. May, Sept. Clt. 1786. Sh. 3 ft.

2 T. spica'tus (Brogn. mem. rhamn. l. c.) leaves cordate, oblong, acuminated, erect, smooth above, hoary beneath; spikes ovate-cylindrical, downy. ♄. G. Native of the Cape of Good Hope. Phýlica spicàta, Lin. fil. suppl. 153. Lam. ill. t. 127. f. 3. P. pínea, Thunb. fl. cap.? Flowers white.

Spiked Tricocephalus. Fl. Nov. Dec. Clt. 1774. Sh. 2 ft.

3 T.? elli'ptica; leaves opposite, elliptical, or somewhat ovate, thick, hard, hoary-villous beneath, concave; stipulas ovate, concave; peduncles axillary; heads of flowers hoary and velvety. ♄. G. Native of St. Helena, on the tops of the mountains, where it is called *Wild-olive.* Phýlica ellíptica, Roxb. in Beats. app. 316. Flowers white.

Elliptical-leaved Tricocephalus. Shrub 4 feet.

4 T. ramosíssima; leaves alternate, lanceolate, acute, shining above, hoary villous beneath, with revolute edges; stipulas awl-shaped; flowers axillary, almost sessile. ♄. G. Native of St. Helena, on the middle mountains, where it is called *Wild-rosemary.* Phýlica rosmarinifòlia, Roxb. in Beats. app. 316. but not of Lam. P. ramosíssima, D. C. prod. 2. p. 34. Flowers white.

Much-branched Tricocephalus. Clt. 1810. Tree 12 feet.

Cult. These shrubs will grow well in sandy peat, and young cuttings will strike root freely in a pot of sand, with a hand-glass placed over them.

XXIV. PHY'LICA (from φυλλικος, *phyllicos*, leafy; in allusion to the curious evergreen foliage). Lin. gen. no. 266. Lam. ill. t. 127. Gært. fruct. 1. t. 24. D. C. prod. 2. p. 34. Brogn. mem. rhamn. p. 68.

Lin. syst. *Pentándria, Monogýnia.* Calyx with a subcylindrical tube, adnate to the ovary below, but free at the apex, 5-cleft (f. 7. B. *b*.). Petals 5, cucullate (f. 7. B. *c. d*.). Stamens inclosed (f. 7. B. *c*.). Anthers ovate or kidney-shaped, 2-celled or 1-celled. Disk hardly distinct (f. 7. B. *f*.), covering the tube and segments of the calyx. Ovary inferior (f. 7. B. *g*.), 3-celled. Style simple. Stigma 3-lobed or 3-toothed (f. 7. B. *i*.), in some entire. Fruit inferior (f. 7. B. *k*.), crowned by the whole of the small permanent calyx (f. 7. B. *i*.), tricoccous (f. 7. B. *h*.). Seeds propped by a short fleshy stalk (f. 7. B. *k*.). —Much branched, heath-like shrubs, with erect, fastigiate branches, scattered, linear, exstipulate leaves with revolute edges, having the lower surface villous, and the upper smooth or pubescent. Flowers capitate or spicately-capitate, girded by short, villous, or longer feathery-pilose bracteas (f. 7. B. *a*.).

Sect. I. Ericoìdes (plants with the habit of *Erìca*). Brogn. mem. rhamn. l. c. Segments of the calyx ovate, acute, erect, or spreading a little, rather woolly on the outside. Petals roundish, concave, arched, cucullate. Anthers kidney-shaped, with confluent cells, or 1-celled, 2-valved. Stigma usually 3-lobed or 3-toothed. Leaves shining above, short, needle-shaped. Flowers crowded, in dense spherical heads.

1 P. parviflòra (Lin. mant. 209.) leaves awl-shaped, acute, scabrous, somewhat pilose; branches panicled; heads of flowers small, downy. ♄. G. Native of the Cape of Good Hope, in sandy places. Petals white.

Small-flowered Phylica. Fl. April, Jul. Clt. 1790. Sh. 2 ft.

2 P. ericoìdes (Lin. spec. 283.) leaves linear-lanceolate, bluntish, spreading, smooth, downy beneath; branches somewhat umbellate; heads of flowers hemispherical. ♄. G. Native of the Cape of Good Hope, in sandy fields. Comm. hort. amster. 2. t. 1. Sims. bot. mag. t. 224. Spreng. in berl. mag. 8. p. 103. t. 8. f. 1. Flowers pure white.

Heath-like Phylica. Fl. April, Sept. Clt. 1731. Sh. 3 ft.

3 P. glabra'ta (Thunb. fl. cap. 2. p. 77.) leaves lanceolate, acute, spreading, somewhat scabrous above but downy beneath; branches smoothish; heads of flowers globose, woolly. ♄. G. Native of the Cape of Good Hope. Flowers white.

Smoothed Phylica. Fl. May, June. Clt. 1817. Shrub 3 ft.

4 P. aceròsa (Willd. enum. 252.) leaves linear, acute, downy-villous beneath; branches in whorls; heads downy, few-

flowered. ♄. G. Native of the Cape of Good Hope. Pluk. alm. t. 445. f. 1. ex Spreng. berl. mag. 8. p. 103. t. 8. f. 2. Hoffman's verz. 1824. p. 182. Flowers white.

Acerose-leaved Phylica. Fl. May, June. Clt. 1820. Sh. 3 ft.

5 P. **nítida** (Lam. ill. no. 2613.) leaves linear, acutish, spreading, smooth above, and shining, but downy beneath, floral ones as well as branches woolly; heads of flowers ovate, woolly. ♄. G. Native of the Cape of Good Hope. Flowers white.

Var. β, erióphora (Berg. cap. 52.) leaves rather hairy, lanceolate. ♄. G. Native of the Cape of Good Hope. This is probably identical with *P. nítida.*

Shining Phylica. Fl. Nov. Clt. 1774. Shrub 3 feet.

6 P. **secu'nda** (Thunb. fl. cap. p. 82.) leaves linear, mucronate, erectly spreading, smooth above, but downy beneath; heads of flowers hairy. ♄. G. Native of the Cape of Good Hope. Flowers white.

Secund Phylica. Fl. May, June. Clt. 1817. Shrub 3 feet.

7 P. **austra'lis** (Link. enum. 1. p. 230.) leaves lanceolate-linear, smooth above, but hoary-tomentose beneath; branches hairy; heads of flowers downy, small. ♄. G. Native of New Holland? Segments of calyx downy on the outside, ovate, very blunt. Flowers white. According to Sprengel this is the same as *P. parviflòra*, and therefore a native of the Cape of Good Hope.

Southern Phylica. Fl. April, June. Clt. 1818. Shrub 3 ft.

8 P. **pu'mila** (Wendl. in Willd. enum. 1. p. 252.) leaves linear-lanceolate, spreading, strigosely-villous, white beneath; flowers axillary, subcapitate; segments of calyx lanceolate, reflexed, spreading. ♄. G. Native of the Cape of Good Hope. Flowers white.

Dwarf Phylica. Fl. May, June. Clt. 1823. Shrub 1 foot.

9 P. **exce'lsa** (Wendl. coll. 3. p. 3. t. 4.) leaves lanceolate, villous, lower ones spreading, upper ones erect, somewhat imbricate; floral ones short, villous, erect; flowers spiked. ♄. G. Native of the Cape of Good Hope. Segments of calyx obtuse. Flowers yellowish-green.

Tall Phylica. Fl. May, July. Clt. 1823. Shrub 6 feet.

10 P. **callòsa** (Lin. fil. suppl. 153.) leaves cordate, oblong, acutish, coriaceous, hoary beneath, young ones pilose, adult ones smooth, floral ones hairy, spreading, longer than the heads of flowers. ♄. G. Native of the Cape of Good Hope. P. refléxa, Lam. ill. t. 127. f. 3. P. pínea, Thunb. fl. cap. Flowers yellowish-green.

Callous Phylica. Fl. Mar. April. Clt. 1774. Sh. 3 feet.

† *Species doubtful whether they belong to this section.*

11 P. **elonga'ta** (Willd. in Schult. syst. 5. p. 449.) leaves lanceolate, smooth; heads of flowers terminal, downy. ♄. G. Native of the Cape of Good Hope. Flowers white.

Elongated Phylica. Shrub 3 feet.

12 P. **squamòsa** (Willd. in Schult. syst. 5. p. 491.) leaves oblong, obtuse, close-pressed; heads of flowers terminal. ♄. G. Native of the Cape of Good Hope. Flowers white.

Scaly-leaved Phylica. Shrub 2 feet.

13 P. **ru'bra** (Willd. in Schult. syst. 5. p. 491.) leaves lanceolate, acute, downy beneath; heads of flowers terminal. ♄. G. Native of the Cape of Good Hope.

Red Phylica. Shrub 3 feet.

14 P. **microce'phala** (Willd. in Schult. syst. 5. p. 491.) leaves linear, spreading, with revolute edges; heads of flowers terminal. ♄. G. Native of the Cape of Good Hope.

Small-headed Phylica. Shrub 3 feet.

Sect. II. Strigòsa (from *strigosus*, strigose). Brogn. mem. rhamn. p. 69. Calyx with a long tube, and erect, acute, awl-shaped segments, which are hairy on the outside. Petals oblong, complicately-cucullate. Anthers oblong, 2-celled; cells parallel, opening lengthwise by distinct chinks. Stigma awl-shaped or clavated, entire. Leaves pubescent, hairy, strigose or villous, linear. Flowers spiked or capitate, usually involucrated, with very long, villous, or feathery bracteas.

15 P. **bícolor** (Lin. mant. 208.) leaves linear, acutish, and erectish, pubescent, downy beneath; branches rather villous; heads of flowers ovate, dense, woolly. ♄. G. Native of the Cape of Good Hope, in sandy places. P. strigòsa, Thunb. fl. cap. 2. p. 80. Adult leaves and branches naked. Flowers white.

Two-coloured Phylica. Fl. April, July. Clt. 1817. Sh. 3 ft.

16 P. **pi'nea** (Thunb. fl. cap. 2. p. 83.) leaves lanceolate, mucronate, smooth above, downy beneath, upper ones smallest; flowers in racemose spikes. ♄. G. Native of the Cape of Good Hope. Flowers white.

Pine-like Phylica. Fl. Nov. Dec. Clt. 1774. Shrub 3 ft.

17 P. **rosmarinifòlia** (Lam. ill. no. 2614.) leaves linear, erect, somewhat revolute, and imbricate, rather pilose above, hoary beneath; floral leaves somewhat ovate, shorter than the others; spikes of flowers ovate, dense. ♄. G. Native of the Cape of Good Hope. Lodd. bot. cab. t. 849. Flowers white.

Rosmary-leaved Phylica. Fl. April, Jul. Clt. 1815. Sh. 3 ft.

18 P. **villòsa** (Thunb. fl. cap. 2. p. 83.) leaves linear, spreading, lower ones smooth, rather scabrous, upper ones smaller; flowers in racemose spikes. ♄. G. Native of the Cape of Good Hope. Flowers white.

Villous Phylica. Fl. May, June. Clt. 1790. Shrub 3 feet.

19 P. **horizonta'lis** (Vent. malm. no. 57. obs. 3.) leaves linear, villous, hoary beneath; floral leaves longer than the others, and are as well as the branches spreading horizontally; heads of flowers small; flowers spreading. ♄. G. Native of the Cape of Good Hope. P. plumòsa, Spreng. berl. mag. 8. p. 105. f. 7. Lam. ill. t. 127. f. 4. but not of Lin.

Horizontal Phylica. Fl. May, June. Clt. 1820. Sh. 3 ft.

20 P. **plumòsa** (Lin. spec. 283.) leaves linear, awl-shaped, smooth above, hoary beneath, upper ones hairy; heads of flowers small, woolly. ♄. G. Native of the Cape of Good Hope. Lodd. bot. cab. 253.—Pluk. mant. 342. f. 3. Flowers white.

Feathery Phylica. Fl. Mar. June. Clt. 1759. Shrub 3 ft.

21 P. **squarròsa** (Vent. malm. no. 57. obs. 3.) leaves linear-lanceolate, spreading, villous and hoary beneath, lower ones rather smooth; floral ones longer than the rest, spreading; heads of flowers roundish; calycine segments erect, acute. ♄. G. Native of the Cape of Good Hope. Lodd. bot. cab. t. 36. Flowers white.

Squarrose Phylica. Fl. Aug. Nov. Clt. 1800. Shrub 2 ft.

22 P. **capita'ta** (Thunb. fl. cap. 2. p. 86.) leaves linear-lanceolate, somewhat villous, lower ones reflexed, smooth, coriaceous; floral ones very villous, spreading a little; heads of flowers roundish. ♄. G. Native of the Cape of Good Hope. Wendl. coll. 2. t. 50. Ker. bot. reg. t. 711. P. pubéscens, Ait. hort. kew. 1. p. 268.—Burm. afr. t. 44. f. 3. Heads of flowers the size of a chesnut. Flowers white.

Headed Phylica. Fl. May, Aug. Clt. 1800. Shrub 2 feet.

23 P. **Commelìni** (Spreng. berl. mag. 8. p. 104. t. 8. f. 6.) leaves linear-lanceolate, acute, spreading, villous, and hoary beneath; floral ones longer, also spreading; heads of flowers roundish. ♄. G. Native of the Cape of Good Hope. P. pubéscens, Willd. enum. 252. but not of Aiton. Segments of calyx erect, ovate, acute. Flowers white.

Commeline's Phylica. Fl. May, June. Clt. 1800. Sh. 3 ft.

24 P. **lanceola'ta** (Thunb. fl. cap. 2. p. 79.) leaves linear-lanceolate, erectly-spreading, smooth above, downy beneath; heads of flowers roundish, hairy, involucrated with bracteas.

♄. G. Native of the Cape of Good Hope, on hills. Flowers white.

Lanceolate-leaved Phylica. Fl. April, May. Clt. 1790. Sh. 3 ft.

25 P. VILLÒSA (Thunb. fl. cap. 2. p. 83.) leaves linear, spreading, lower ones smooth, rather rough, upper ones smaller; flowers in racemose spikes. ♄. G. Native of the Cape of Good Hope. Flowers white.

Villous Phylica. Fl. May, July. Clt. 1790. Shrub 2 feet.

26 P. CYLI'NDRICA (Wendl. coll. 1. t. 7.) leaves linear-lanceolate, strigosely-villous, white beneath, erect, but at length spreading, floral ones erect, imbricate, very villous; flowers in spikes. ♄. G. Native of the Cape of Good Hope. Spreng. berl. mag. 8. p. 104. t. 8. f. 5. P. pubéscens, Lam. ill. t. 127. f. 2. Flowers greenish-yellow.

Cylindrical-headed Phylica. Fl. April, Aug. Clt. ? Sh. 2 ft.

† *Species doubtful whether they belong to this section.*

27 P. IMBE'RBIS (Lin. mant. 209.) leaves linear, blunt, scabrous, downy beneath; heads of flowers pubescent. ♄. G. Native of the Cape of Good Hope.—Seb. mus. 2. t. 49. P. brunioìdes, Lam. ill. no. 2620. Flowers white.

Beardless Phylica. Shrub 2 feet.

28 P. PAPILLÒSA (Wendl. coll. 3. p. 5. t. 71.) leaves linear, acerose, erect, papillose, hairy, floral ones downy; flowers disposed in terminal spikes. ♄. G. Native of the Cape of Good Hope. Flowers white.

Papillose-leaved Phylica. Fl. May, Jul. Clt. 1820. Sh. 2 ft.

29 P. DIVARICA'TA (Vent. malm. no. 57. obs. 2.) leaves lanceolate, scattered, flat, somewhat villous above, but velvety and cloth-like beneath; branches slender, elongated, decumbent. ♄. G. Native of the Cape of Good Hope. Flowers white. Probably identical with the following.

Divaricated-branched Phylica. Shrub decumbent.

30 P. LEDIFÒLIA (Desf. cat. hort. par. 1804. p. 203.) leaves scattered, oblong, acuminated at both ends, flat, spreading, shining above, covered with hoary down beneath, as well as the branchlets. ♄. G. Native of the Cape of Good Hope. The spikes of flowers are terminal and involucrated with bracteas, according to Lher.

Ledum-leaved Phylica. Fl. May, Jul. Clt. 1820. Sh. 2 ft.

31 P. TRICHÓTOMA (Thunb. fl. cap. 2. p. 82.) leaves trigonal, obtuse, smooth; stem trichotomous, hairy; heads of flowers terminal, hairy, about the size of a pea. ♄. G. Native of the Cape of Good Hope, in fields, but rare.

Trichotomous-stemmed Phylica. Clt. 1818. Shrub 3 feet.

32 P. GLOBÒSA (Thunb. fl. cap. 2. p. 87.) leaves ovate, concave above, smooth, imbricate; heads of flowers terminal, globose, about the size of a pea. ♄. G. Native of the Cape of Good Hope.

Globose-headed Phylica. Shrub 2 feet.

33 P. ATRA'TA (Licht. in Schult. syst. 5. p. 490.) leaves cordate, linear-lanceolate, with revolute edges, smoothish, but downy beneath; heads terminal, villous, woolly. ♄. G. Native of the Cape of Good Hope, on mountains. Flowers white. Branchlets clothed with dark villi.

Dark-branched Phylica. Fl. May, July. Shrub 3 feet.

Cult. Handsome shrubs, requiring the same treatment and culture as that recommended for *Trichocéphalus*, p. 40.

XXV. SOULA'NGIA (in honour of Soulange Bodin, a nurseryman near Paris). Brogn. mem. rhamn. p. 70.—Phýlica, species of authors.

LIN. SYST. *Pentándria, Monogýnia.* Calyx with an obconical tube adnate to the ovary (f. 7. D. *f.*), 5-cleft. Petals 5, cucullate (f. 7. D. *c.*). Stamens inclosed in the petals (f. 7. D. *c.*); anthers kidney-shaped, 1-celled. Disk epigynous (f. 7. D. *d.*), pentagonal, fleshy. Ovary adnate to the tube of the calyx (f. 7. D. *e.*), and equal in length to it, 3-celled. Style simple, short, rather conical, rarely trifid at the apex, crowned by a 3-toothed stigma or by 3 stigmas. Fruit inferior (f. 7. D. *i.*), marked above by a large areola (f. 7. D. *h. k.*), tricoccous. Seeds propped by a short, thick, fleshy stalk (f. 7. D. *e. j.*).—Much branched shrubs, with alternate, exstipulate, quite entire, short stalked, ovate, cordate, or lanceolate, rarely linear leaves, which are usually smooth above and villous beneath. Flowers in the axillæ of the leaves or bracteas, solitary, spiked, or panicled, clothed with short down.

1 S. AXILLA'RIS (Brogn. mem. rhamn. p. 71.) leaves linear-lanceolate, spreading, with revolute edges, smooth above, hoary beneath; flowers in the axillæ of the upper leaves, on short pedicels, the whole constituting a leafy spike. ♄. G. Native of the Cape of Good Hope. Phýlica axillàris, Lam. ill. no. 2615. Spreng. berl. mag. 8. p. 104. t. 8. f. 4. P. rosmarinifòlia, Willd. enum. 253. but not of Lam. Flowers white.

Axillary-flowered Soulangia. Fl. May, June. Clt 1812. Shrub 3 feet.

2 S. OLEÆFÒLIA (Brogn. mem. rhamn. p. 71.) leaves ovate-oblong, mucronate, acute, coriaceous, flat, spreading, covered with hoary down beneath, but smooth above or pubescent; flowers in loose racemes at the tops of the branches, intermixed with bracteas. ♄. G. Native of the Cape of Good Hope. P. oleæfòlia, Vent. malm. no. 4. obs. 2. P. spicàta, Lodd. bot. cab. t. 323. P. oleoìdes, D. C. prod. 2. p. 36. Flowers white.

Olive-leaved Soulangia. Fl. May, July. Clt. 1800. Sh. 3 ft.

3 S. THYMIFÒLIA (Brogn. mem. rhamn. p. 71.) leaves lanceolate, acuminated, spreading, smooth above, but hoary beneath, with rather revolute edges; flowers sessile, disposed in heads at the tops of the branches. ♄. G. Native of the islands in the Antarctic sea. Phýlica thymifòlia, Vent. malm. t. 57. Flowers white.

Thyme-leaved Soulangia. Fl. May, Jul. Clt. 1820. Sh. 3 ft.

4 S. PANICULA'TA (Brogn. mem. rhamn. p. 71.) leaves ovate-lanceolate, acuminated, spreading, shining above, downy white beneath; flowers disposed in leafy, terminal, panicled racemes. ♄. G. Native of the Cape of Good Hope. Phýlica paniculàta, Willd. spec. 1. p. 1112. Phýlica myrtifòlia, Poir. dict. 5. p. 293. Flowers white.

Panicled-flowered Soulangia. Fl. May, July. Clt. 1817. Shrub 2 to 3 feet.

5 S. BUXIFÒLIA (Brogn. mem. rhamn. p. 36.) leaves ovate, coriaceous, spreading, smooth above, but covered with hoary down beneath; flowers in heads at the tops of the branches. ♄. G. Native of the Cape of Good Hope. Phýlica buxifòlia, Lin. spec. 283. Wendl. coll. 1. t. 26. Lodd. bot. cab. t. 848.—Burm. afr. 119. t. 44. f. 1. Flowers greenish.

Box-leaved Soulangia. Fl. May, Sept. Clt. 1759. Sh. 6 ft.

6 S. CORDA'TA (Brogn. mem. rhamn. p. 71.) leaves cordate, ovate, coriaceous, acute, mucronate, smooth above, but covered with hoary down beneath; heads of flowers small, axillary, stalked. ♄. G. Native of the Cape of Good Hope. Phýlica cordàta, Lin. spec. 283.—Comm. præl. p. 62. t. 12. Flowers white.

Cordate-leaved Soulangia. Fl. May, Ju. Clt. 1789. Sh. 6 ft.

7 S. PEDICELLA'TA; leaves linear-lanceolate, rather erect, pubescent above and hoary beneath with revolute edges, especially when dried; flowers on pedicels in the axillæ of the leaves, the whole forming a terminal leafy corymb. ♄. G. Native of the Cape of Good Hope. Phýlica pedicellàta, D. C. prod. 2. p. 36. Flowers white.

Pedicellate-flowered Soulangia. Shrub 4 feet.

8 S. RECLINA'TA; leaves lanceolate, reclinate, silky, white beneath, bearded at the apex; flowers stalked in the axillæ of

the upper leaves, the whole forming a kind of umbel. ♄. G. Native of the Cape of Good Hope. Phýlica reclinàta, Wendl. coll. 2. p. 49. t. 56. Flowers white.

Reclinate-leaved Soulangia. Fl. May, Jul. Clt. 1823. Sh. 3 ft.

9 S.? ARBÒREA; leaves ovate-lanceolate, crowded, veinless, downy beneath, bearded at the apex; heads of flowers axillary. ♄. G. Native of the island of Tristan d'Acunha. Phýlica arbòrea, Pet. Thouars. fl. trist. d'acun. p. 45. Carm. fl. in Lin. trans. p. 23. Trunk covered with a grey bark. Leaves half an inch long. Flowers white.

Tree Soulangia. Clt. 1817. Tree 12 feet.

10 S. ORIENTA'LIS; leaves ovate-lanceolate, smooth above but clothed with hoary down beneath; flowers in racemose panicles. ♄. G. Native of? Phýlica orientàlis, Lois. herb. amat. t. 283. Flowers white.

Eastern Soulangia. Fl. May, July. Clt. 1820. Shrub 4 ft.

11 S.? DIOI'CA; leaves cordate; flowers dioecious; scales of calyx hairy. ♄. G. Native of the Cape of Good Hope. Allied to *S. buxifòlia* and *cordàta.* Phýlica dioíca, Lin. mant. 342.

Dioecious Soulangia. Fl. Aug. Sept. Clt. 1817. Shrub 6 ft.

Cult. See *Trichocéphalus* for culture and propagation, p. 40.

XXVI. GOUA'NIA (in honour of Anthony Gouan, once Professor of Botany at Montpelier, author of Hortus Monspeliensis, &c.). Jacq. amer. 264. Lin. gen. no. 1167. Lam. ill. t. 845. D. C. prod. 2. p. 38. Brogn. mem. rhamn. p. 71.—Retinària, Gært. fruct. 2. p. 187. t. 120. f. 4.

LIN. SYST. *Pentándria, Monogýnia.* Calyx with an adhering tube and a somewhat spreading, 5-cleft limb (f. 7. A. *a.*). Petals convolute (f. 7. A. *h.*) or cucullate (f. 7. A. *f.*). Stamens enclosed (f. 7. A. *h.*). Anthers ovate, 2-celled (f. 7. A. *k.*). Disk epigynous (f. 7. A. *e.*), pentagonal or stellate (f. 7. A. *c.*). Ovary adnate to the tube of the calyx (f. 7. A. *c.*), 3-celled. Style trifid. Fruit inferior, trigonal, or 3-winged (f. 7. A. g.), tricoccous; coccula not joined, indehiscent, coriaceous. Seeds sessile.—Usually climbing shrubs, with the branchlets often naked from abortion and tendrilled. Leaves alternate, feather-nerved, lower nerves largest and arched, somewhat triple-nerved, toothed, rather pubescent, stipulate at the base. Flowers usually polygamous from abortion, disposed in glomerated spikes on the naked branchlets, rarely in the axillæ of the bractea-like leaves, as in *G. smilacìna.*

* *American species. Disk starry; flowers hermaphrodite.*

1 G. INTEGRIFÒLIA (Lam. dict. 3. p. 5.) leaves quite entire, oval, smoothish, membranous. ♄. ◡. S. Native of? Branchlets and petioles pubescent. Flowers greenish-white. There are two varieties of this plant, the one with acute, the other with obtuse leaves.

Entire-leaved Gouania. Clt. 1800. Shrub cl.

2 G. DOMINGE'NSIS (Lin. spec. ed. 2. p. 1663.) leaves ovate, acuminated, smoothish, serrated. ♄. ◡. S. Native of St. Domingo, Jamaica, and Guadaloupe. G. glàbra, Jacq. amer. t. 179. f. 40. Banistèria lupuloides, Lin. spec. ed. 1. p. 427.—Pluk. alm. t. 162. f. 3. and t. 201. f. 4. Fruit 3-winged. Flowers greenish-yellow?

St. Domingo Gouania. Clt. 1739. Shrub cl.

3 G. STRIA'TA (Rich. act. soc. hist. nat. 1. p. 113.) leaves ovate, smooth, nerved, crenate, emarginate; branches and rachis striated. ♄. ◡. S. Native of Guiana, in woods. G. Domingénsis, Aubl. guian. 2. p. 934. Flowers greenish-yellow.

Striated-stemmed Gouania. Shrub cl.

4 G. CANE'SCENS (Rich. ex Poir. suppl. 2. p. 820.) leaves oval-lanceolate, acute, hoary beneath; racemes axillary and terminal. ♄. ◡. S. Native of Guiana. Flowers greenish-yellow.

Hoary Gouania. Shrub cl.

5 G. PUBE'SCENS (Lam. ill. t. 845. f. 1. ex Poir. suppl. 2. p. 820.) leaves ovate, crenated, rather pubescent; racemes simple, terminal, disposed in a panicle, lower racemes axillary. ♄. S. Native of St. Domingo. Flowers greenish-yellow.

Var. β, *Martinicénsis* (Poir. l. c.) leaves almost smooth; branches tendrilled at the apex; racemes lateral. ♄. ◡. S. Native of Martinique. Probably a proper species.

Pubescent Gouania. Shrub erect.

6 G.? PANICULA'TA (Spreng. new. entd. 3. p. 49.) leaves ovate, coarsely toothed, smooth; racemes panicled, axillary, and terminal. ♄. S. Native of St. Domingo. This and the preceding species are erect and destitute of tendrils, therefore it is doubtful whether they belong to *Gouània* or not.

Panicled Gouania. Shrub erect.

7 G. CRENA'TA (Lam. dict. 3. p. 5.) leaves ovate, crenated, rather villous, on short petioles; tendrils terminal and axillary. ♄. ◡. S. Native of South America. Leaves 4 inches long and 2 broad. Flowers greenish-yellow.

Var. β, *cordifòlia* (D. C. prod. 2. p. 39.) leaves cordate at the base, coarsely dentate-crenated. ♄. ◡. S. Native of St. Domingo.

Crenate-leaved Gouania. Shrub cl.

8 G. TOMENTÒSA (Jacq. amer. 263.) leaves roundish-ovate, acuminated, bluntly serrated, downy beneath; racemes terminal and axillary; fruit 3-winged. ♄. ◡. S. Native of the Caribbee islands. Gært. fruct. 3. t. 183. f. 1. Fruit with rounded thin wings. Flowers greenish-yellow.

Downy Gouania. Clt. 1823. Shrub cl.

9 G. STIPULA'RIS (Moc. et Sesse, fl. mex. icon. ined. D. C. prod. 2. p. 39.) leaves ovate, smoothish, serrated, acuminated, somewhat cordate at the base; stipulas large, half-sagittate; fruit 3-winged. ♄. ◡. S. Native of Mexico. Stipulas truly distinct. Flowers greenish-yellow?

Large-stipuled Gouania. Shrub cl.

10 G. CYCLOCA'RPA (Smith in Rees' cycl. no. 3.) leaves elliptical-oblong, acute, obsoletely serrated; younger ones silky and rusty, adult ones naked; fruit with narrow orbicular wings. ♄. ◡. S. Native of the West Indies?

Circle-fruited Gouania. Shrub cl.

11 G. A'PTERA (D. C. prod. 2. p. 39.) leaves ovate, acutish, somewhat cordate at the base, coarsely serrate-toothed, and are as well as the branches covered with soft villi. ♄. ◡. S. Native of South America. Tendrils on the tops of the branchlets as well as along the peduncles.

Wingless-fruited Gouania. Shrub cl.

* * *Brasiliàna* (natives of Brazil). *Segments of calyx with membranous edges, plaited in the bud, forming 5 crests. Disk not stellate but pentagonal, not extended beyond the throat of the calyx. Flowers umbellate or racemose in the axillæ of the upper leaves, sometimes terminal.*

12 G. SMILACÌNA (Smith, in Rees' cycl. 16. no. 8.) leaves cordate, acute, minutely serrated, sometimes pilose; stipulas awl-shaped; peduncles umbellate, hardly the length of the leaves. ♄. ◡. S. Native of Brazil. Branches flexuous. Leaves small. Flowers yellowish.

Smilax-like Gouania. Shrub cl.

13 G. CORYLIFÒLIA (Raddi. mem. pl. bras. add. p. 16.) leaves roundish or somewhat ovate-cordate, with glandular toothlets, pubescent beneath; racemes axillary and terminal, very long. ♄. ◡. S. Native of Brazil, on Mount Cercovado, near Rio Janeiro. Capsules 3-winged, netted. Flowers yellowish?

Hazel-leaved Gouania. Shrub cl.

14 G. CORDIFÒLIA (Raddi. mem. pl. bras. l. c.) leaves cordate, ovate, serrulated, rather hairy; flowers axillary and terminal, capitate, hairy. ♄ . ◡. S. Native of Brazil; common about Rio Janeiro. Stipulas minute, almost linear. Flowers minute, yellow.

Heart-leaved Gouania. Clt. 1820. Shrub cl.

* * * *Asiaticæ* (natives of Asia). *Disk starry. Flowers polygamous.*

15 G. DENTICULA'TA (Smith, in Rees' cycl. 16. no. 4.) leaves ovate, entire, acuminated at the apex, with the acumen finely toothed, hairy beneath; racemes axillary; tendrils terminal. ♄ . ◡. S. Native of the East Indies, in the island of Honimao. Flowers yellowish.

Toothletted-leaved Gouania. Shrub cl.

16 G. MAURITIA'NA (Lam. dict. 3. p. 4.) leaves ovate, acuminated, somewhat cordate at the base, subserrated, covered with silky down on both surfaces; racemes axillary, shorter than the leaves; tendrils and branches clothed with rusty villi. ♄ . ◡. S. Native of the Mauritius. G. Domingénsis, var. Mauritiàna, Aubl. Wings of fruit rounded, thin, membranous. Flowers yellowish.

Mauritian Gouania. Clt. 1823. Shrub cl.

17 G. RETINA'RIA (D.C. prod. 2. p. 40.) leaves ovate, acutish, a little serrated, young ones rather pubescent, adult ones smooth; racemes terminal and axillary, much longer than the leaves; fruit winged, triquetrous. ♄ . ◡. S. Native of the Mauritius. Retinària scándens, Gært. fruct. 2. p. 187. t. 120. f. 4. Lam. ill. t. 845. f. 3. Flowers yellowish.

Resinous Gouania. Shrub cl.

18 G. TILIÆFÒLIA (Lam. dict. 3. p. 5.) leaves cordate, ovate, acuminated, smoothish, with glandular serratures; racemes axillary and terminal, pubescent; fruit rather ovate, wingless. ♄ . ◡. S. Native of the Island of Bourbon. G. Stadtmánni, Willem. herb. maur. 58. Flowers greenish-yellow.

Lime-tree-leaved Gouania. Fl. May, Jul. Clt. 1810. Sh. cl.

19 G. LEPTOSTA'CHYA (D. C. prod. 2. p. 40.) leaves ovate, acuminated, rather cordate, coarsely crenated, and are as well as the branchlets smooth; racemes axillary and terminal, very slender, elongated; flowers on very short pedicels, smoothish; fruit bluntly triquetrous, wingless. ♄ . ◡. S. Native of the East Indies, on mountains, in many places. G. tiliæfòlia, Roxb. cor. 1. p. 67. t. 98. exclusive of the synonyms. Flowers greenish-yellow.

Slender-spiked Gouania. Fl. May, July. Clt. 1810. Sh. cl.

20 G. MICROCA'RPA (D. C. prod. 2. p. 40) leaves elliptical, acute, almost entire, and are as well as the branchlets smooth, upper ones oblong; racemes terminal, elongated; fruit triquetrous, winged. ♄ . ◡. S. Native of the East Indies. G. tiliæfòlia, Rottl. in herb. Puer. This species has the fruit of *G. retinària*, but one half smaller. Leaves with oblique nerves.

Small-fruited Gouania. Shrub cl.

21 G. OBTUSIFÒLIA (Vent. mss. in herb. Brogn. mem. rhamn. p. 72.) shrub erect, rusty-villous; leaves elliptical or ovate, obtuse, crenated, villous beneath, somewhat pubescent above; flowers in long simple spikes, emitting from their base one simple tendril, disposed in interrupted bundles, each propped by a bristle-like bractea; fruit with three semicircular wings. ♄ . S. Native of Java. Flowers greenish-yellow.

Blunt-leaved Gouania. Shrub erect.

22 G. NIPAULE'NSIS (Wall in fl. ind. 2. p. 417.) leaves oval, finely acuminated, rounded, or acute at the base, seldom subcordate, villous and strongly ribbed beneath; stipulas membranous, lanceolate, falcate; racemes very long, villous, terminal, or from the upper axillæ of the leaves. ♄ . ◡. G. Native of Nipaul, on the high mountains of Sheopore, Chundrugiri, &c. Tendrils simple, terminal, or from the base of the racemes. Petioles furnished with a couple of evanescent glands at their base. Flowers greenish-yellow.

Nipaul Gouania. Fl. June, Oct. Shrub cl.

Cult. *Gouània* is a genus of insignificant shrubs, not worth cultivating, except in general collections. They will all grow freely in a mixture of loam and peat; and ripened cuttings will soon strike root if planted in a pot of sand plunged in heat, with a hand-glass placed over them.

XXVII. CRUMENA'RIA (from *crumèna*, a purse; in allusion to the thin, papery capsule). Mart. nov. gen. bras. 2. p. 68. t. 160. Brogn. mem. rhamn. p. 73.

LIN. SYST. *Pentándria, Monogýnia.* Calyx campanulate, 5-cleft, coloured above, with the tube connate to the ovary below. Petals hood-formed. Stamens with inclosed, 2-lobed anthers. Style 1. Stigmas 3. Capsule covered by the adnate calyx, papyraceous, tricoccous; coccula with winged margins, 1-seeded, fixed to the central, 3-parted, filiform receptacle.—A small, annual plant, with decumbent branches, alternate, stalked, cordate, quite entire leaves, furnished with twin stipulas at their base. Peduncles axillary, jointed, solitary, or twin. Flowers small, white.

1 C. DECU'MBENS (Mart. l. c. t. 160.). ⊙. S. Native of Brazil, in grassy places by the sides of woods. This genus does not differ from *Gouània*, unless in the calyx being campanulate, and in its tube being free at the apex, as well as in the disk being defective. However, it differs from every plant in the present order in the stems being annual.

Decumbent Crumenaria. Pl. decumbent.

Cult. This plant is not worth cultivating, unless in the gardens of the curious. The seeds should be sown in a pot of mould about the beginning of April, and placed in a hot bed, and when the plants are of sufficient size, some may be planted in separate pots, others may be planted in the open border, where they will probably ripen their seed.

† *Genera allied to Rhámneæ, but are not sufficiently known.*

XXVIII. COU'PIA (*Couepi* is the Guiana name of one of the species). Aubl. guian. 1. p. 296. D. C. prod. 2. p. 29.—Cùpia, Jaum. exp.—Glossopétalum, Schreb. gen. no. 526.

LIN. SYST. *Pentándria, Tetra-Pentagýnia.* Calyx small, 5-toothed, permanent, adhering to the base of the ovary. Petals 5, oblong, appendiculate inside. Stamens 5, very short. Ovary roundish, crowned by 4 or 5 sessile stigmas. Berry pea-shaped, 4-5-celled, 4-5-seeded.—Trees with alternate, feather-nerved, somewhat unequal stipulate leaves, axillary peduncles, bearing numerous, umbellate pedicels and small flowers. This genus should probably be placed in *Rutàceæ*.

1 G. GLA'BRA (Aubl. guian. 1. t. 116.) leaves quite smooth. ♄ . S. Native of Guiana, in the woods of Sinemari. Glossopétalum glàbrum, Willd. spec. 2. p. 1521. Flowers yellow. Berries black. The natives of Guiana make canoes of the trunk of this tree.

Smooth Coupia. Tree 60 feet.

2 G. TOMENTÒSA (Aubl. l. c.) leaves hairy on both surfaces. ♄ . S. Native of Guiana, in woods. Glossopétalum tomentòsum, Willd. spec. 2. p. 1521. The bark and leaves are bitter. The latter are used by the inhabitants of Guiana against inflammation of the eyes.

Downy Coupia. Tree 25 feet.

Cult. Loam, peat, and sand is a good mixture for this genus, and ripened cuttings will root if planted in sand under a hand-glass, in heat.

XXIX. CARPODE'TUS (from καρπος, *carpos*, a fruit, and δετος, *detos*, tied; there is a ring round the middle of the fruit resembling a tie). Forst. gen. t. 17. D. C. prod. 2. p. 29.

Lin. syst. *Pentándria, Monogýnia.* Calyx with a turbinate tube, adnate to the ovary, and a 5-cleft limb; lobes deciduous. Petals 5, small, inserted in the calyx. Stamens very short; anthers almost sessile. Style 1, filiform. Stigma depressed, capitate. Berry dry, globose, 5-celled, 5-seeded, girded by the tube of the calyx.

1 C. serra'tus (Forst. nov. gen. t. 17. Spreng. pug. 1. p. 20.) ♄. G. Native of New Zealand. Leaves oblong, with glandular serratures, puberulous above, pale, smooth, and netted beneath. Peduncles opposite the leaves. This plant is very little known.

Serrate-leaved Carpodetus. Shrub 12 feet.

Cult. See *Willemètia* for culture and propagation, p. 38.

XXX. SCHÆFFE'RIA (in honour of James Christian Schæffer, a German botanist, author of Botanica Expeditior in 1762). Jacq. amer. 259. D. C. prod. 2. p. 40.

Lin. syst. *Diœ'cia, Tetrándria.* Flowers dioecious from abortion. Calyx 4-parted, blunt, permanent under the fruit, perhaps altogether free. Petals 4, alternating with the sepals. Stamens 4, opposite the petals. Ovary 2-celled. Style short or wanting. Stigmas 2. Berry dry, 2-parted, rarely 1-celled, usually 2-celled; cells 1-seeded. Seeds erect. Albumen fleshy. Embryo central, straight, flat.—Shrubs, with alternate, entire leaves, and numerous small, axillary, stalked flowers.

1 S. frute'scens (Jacq. amer. 259.) style slender, 2-lobed at the apex; petals blunt; leaves elliptical, acuminated at both ends, and are, as well as the branches, smooth. ♄. S. Native of St. Domingo, Jamaica, Carthagena, and New Spain, in bushy places. S. complèta, Swartz, fl. ind. occ. 1. p. 327. t. 7. f. *a.* Flowers white. Berries the size of a small pea, of a yellowish-red colour.

Var. β, buxifòlia (D. C. prod. 2. p. 41.) leaves broad, ovate, mucronate. ♄. S. Native of Jamaica. Sloan. hist. 2. p. 209. f. 1.

Shrubby Schæfferia. Clt. 1793. Shrub 6 feet.

† *Doubtful species.*

2 S. panicula'ta (Spreng. neue. entd. 3. p. 49.) petals concave; flowers panicled; leaves spatulate, coriaceous, pubescent beneath, as well as the branches. ♄. S. Native of Brazil. Flowers whitish.

Panicled Schæfferia. Shrub.

3 S. viride'scens (Moc. et Sesse, fl. mex. icon. ined. D. C. prod. 2. p. 41.) style none; stigmas 2, thick, sessile; petals acute. ♄. S. Native of Mexico. Leaves almost like those of *S. frutéscens*, but more blunt. Fruit globose. Younger petals greenish on the outside, but of a dirty-white on the inside.

Greenish-flowered Schæfferia. Shrub 6 feet.

4 S. racemo'sa (Moc. et Sesse, fl. mex. icon. ined. D. C. prod. 2. p. 41.) style wanting; stigmas 3, thick, sessile; petals obtuse. ♄. S. Native of Mexico. Racemes lateral, many-flowered. Scales 4 between the stamens, or alternating with the petals. Fruit globose. This will probably form a distinct genus.

Racemose-flowered Schæfferia. Shrub.

Cult. This is a genus of insignificant shrubs; for the culture and propagation see *Goúpia*, p. 44.

XXXI. OLI'NIA (the name of a town in Spain). Thunb. in Rœm. arch. 2. p. 1. and p. 4. D. C. prod. 2. p. 41.

Lin. syst. *Penta-Hexándria, Monogýnia.* Calyx with a campanulate tube, and 5 or 6 blunt teeth. Petals 5, inserted in the calyx, alternating with the teeth, linear-lanceolate, permanent, furnished with rather concave scales on the inside at the base. Stamens 5 or 6, very short, inserted in the calyx; anthers concealed under the scales. Ovary free? Style very short. Stigma thickened, pentagonal. Fruit crowned by the calyx, 5-angled, 5-seeded.—A smooth, much branched shrub. Branches tetragonal. Leaves ovate, opposite. Flowers white, in axillary panicles.

1 O. cymòsa (Thunb. l. c. and fl. cap. 194.) ♄. G. Native of the Cape of Good Hope, on the western side of the Table Mountain. Sideróxylum cymòsum, Lin. fil. suppl. 1. p. 152. Flowers white, sweet-scented.

Cymose-flowered Olinia. Shrub 4 feet.

Cult. This shrub will grow in a mixture of loam and sandy peat, and ripened cuttings will root if planted in a pot of sand, with a hand-glass placed over them.

XXXII. DAPHNIPHY'LLUM (from δαφνε, *daphne*, the Greek name for the laurel, and φυλλον, *phyllon*, a leaf; in allusion to the leaves resembling the laurel). Blum. bijdr. 1152.

Lin. syst. *Diœ'cia, Hexa-Decándria.* Flowers dioecious. Calyx inferior, small, crenulated. Corolla none. Male flowers, with 6-10 short stamens, which are connate at the base. Anthers erect, tetragonal. Female flowers with a 2-celled ovary, with the cells containing 2 ovula, and a bifid sessile stigma. Drupe oval, baccate, crowned by the stigma containing a 1-seeded fibrous nut. Embryo minute, inverted in a fleshy albumen.—A tree, with scattered, oblong-lanceolate, entire, smooth, exstipulate leaves, which are glaucous beneath. Racemes axillary, simple.

1 D. glauce'scens (Blum. bijdr. 1153.) ♄. S. Native of Java, on the higher mountains of Salak and Gede.

Glaucescent-leaved Daphniphyllum. Tree.

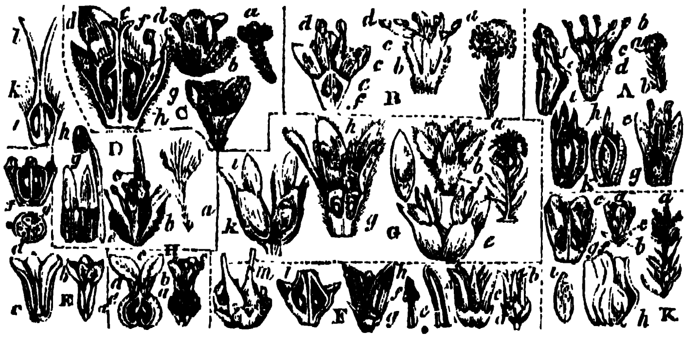
Cult. See *Coúpia* for culture and propagation, p. 44.

Order LXVIII. **BRUNIA'CEÆ** (plants agreeing with *Brùnia* in important characters). R. Br. in Lin. trans. 1818. D. C. prod. 2. p. 43. Brong. mem. brun. in ann. scienc. nat. par. august, 1826.

Calyx adhering to the ovary (f. 8. G. *g.* H. *a.*), rarely free (f. 8. C. *h.*), 5-cleft (f. 8. B. *b.* K. *c.*), or 5-toothed (f. 8. H. *b.*), imbricate in æstivation. Petals 5 (f. 8. G. *b.* C. *d.*) imbricate, inserted in the ovary, alternating with the segments of the calyx (f. 8. K. *c.* G. *b.*). Stamens 5 (f. 8. B. *d.*), alternating with the petals, epigynous; anthers fixed by the back, bursting inwards, 2-celled, opening lengthwise (f. 8. B. *d.*). Ovary half inferior (f. 8. F. *l.*), 1 (f. 8. A. *g.*) -3-celled (f. 8. E. *g.*); cells 1 (f. 8. C. *g.*) -2 (f. 8. E. *g.*) -seeded; ovula suspended from the central column of the ovary. Style simple or bifid (f. 8. D. *l.*). Stigma 1 or 2-3, small, papilliform. Fruit dry, bicoccous, or indehiscent, 1-seeded, inferior, or half inferior. Seeds with a small embryo, located in the apex of a fleshy albumen, with short cotyledons, and a long conical radicle.—Much branched, heath-like shrubs, with small, smooth, or hardly pilose leaves, which are usually callously-ustulate at the apex, stiff, quite entire, and are inserted in 5 rows, on the branches. Flowers small, capitate, or rarely panicled, spiked or terminal and solitary; heads of flowers naked or involucrated with larger leaves; flowers each furnished with 3 bracteas at their base, lower bractea larger than the rest, lateral ones opposite, smaller, or wanting. In

Lincònia, Thámnea, Audouínia, Tittmánnia, the flowers are involucrated by 4 or more bracteas.

FIG. 8.



Synopsis of the Genera.

1 **Berze'lia.** Calyx adhering to the ovary (f. 8. A. *g.*); segments unequal, gibbous (f. 8. A. *e.*). Ovary inferior, 1-celled (f. 8. K. *g.*), 1-seeded. Style simple. Fruit indehiscent.

2 **Bru'nia.** Calyx adhering to the half inferior ovary (f. 8. K. *g.*). Ovary 2-celled (f. 8. B. *e.* K. *g.*); cells 1-2-seeded. (f. 8. K. *g.* B. *f.*). Styles 2. Fruit indehiscent, 1-seeded from abortion.

3 **Staa'via.** Calyx adhering (f. 8. G. *g.*). Petals free (f. 8. G. *h. c.*). Ovary half inferior, 2-celled (f. 8. G. *k. g.*); cells 1-seeded. Style simple. Fruit 2-seeded (f. 8. G. *k. g.*).

4 **Raspa'lia.** Calyx free (f. 8. C. *h.*). Petals and stamens inserted in the free ovary (f. 8. C. *d. g.*). Ovary 2-celled (f. 8. C. *h.*); cells 1-seeded. Styles 2 (f. 8. C. *e.*).

5 **Bera'rdia.** Calyx adhering to the ovary (f. 8. D. *i.*). Petals cohering into a tube at the base. Ovary half inferior, 2-celled; cells 1-seeded. Styles 2. Fruit 2-seeded.

6 **Lincònia.** Calyx adhering to the ovary (f. 8. F. *l.*). Petals oblong, convolute (f. 8. F. *b. c.*). Stamens inclosed; cells of anthers diverging (f. 8. F. *f.*) below. Ovary half inferior, 2-celled; cells 2-seeded. Fruit 2-seeded (f. 8. F. *m.*).

7 **Audoui'nia.** Calyx adhering to the ovary (f. 8. E. *f.*), with large imbricate segments (f. 8. E. *a.*). Petals unguiculate. Ovary half inferior (f. 8. E. *f.*), 3-celled; cells 2-seeded (f. 8. E. *g.*). Style simple (f. 8. E. *b.*).

8 **Tittma'nnia.** Calyx with a spherical tube (f. 8. H. *a.*), adnate to the ovary, with erect scarious segments (f. 8. H. *b.*). Petals unguiculate (f. 8. H. *c.*). Ovary inferior, spherical (f. 8. H. *e.*), 2-celled; cells 2-seeded. Ovula fixed to the dissepiment, pendulous.

9 **Tha'mnea.** Calyx adhering to the ovary, with lanceolate segments. Ovary inferior, 1-celled, many-ovulate, covered by the fleshy disk. Ova hanging from the central column. Style simple.

I. BERZE'LIA (in honour of Berzelius, the celebrated chemist). Brogn. et Dum. mem. l. c. p. 14.—Brùnia, species of authors.

Lin. syst. *Pentándria, Monogýnia.* Calyx adhering to the ovary (f. 8. A. *g.*), with unequal gibbous segments (f. 8. A. *e. i.*). Ovary inferior, 1-celled, 1-seeded (f. 8. A. *g.*). Style simple, terminated by a small subconical stigma (f. 8. A. *c.*). Fruit indehiscent.—Small heath-like shrubs, with short, somewhat trigonal, imbricate or spreading leaves. Heads of flowers (f. 8. A. *a.*) naked, usually crowded at the tops of the branches, with three bracteas at the base of each flower.

1 B. **abrotanoìdes** (Brogn. et Dum. mem. p. 15.) leaves ovate, ustulate at the apex, smooth, spreading, on short petioles; heads of flowers the size of a filbert, terminal, crowded, subcorymbose; receptacle hairy; bracteas clavate, green, smooth, ustulate at the apex; petals spreading, spatulate. ♄. G. Native of the Cape of Good Hope.

Var. α; flowers 4-cleft, tetrandrous; petals large, spreading; stamens very long.

Var. β; flowers 5-cleft, pentandrous; petals smaller than those of the preceding, as well as the stamens shorter. Brùnia abrotanoìdes, Burm. afr. p. 266. t. 100. f. 1. Wendl. coll. t. 45. Lodd. bot. cab. t. 355. Flowers white.

Southernwood-like Berzelia. Fl. May, July. Clt. 1787. Shrub 1½ foot.

2 B. **interme'dia** (Schlecht. in Linnæa. 6. p. 188.) much branched, ultimate branches somewhat fastigiate, smoothish; leaves linear-trigonal, spreading or reflexed, callous at the tip, smoothish; heads of flowers size of a nut, forming a corymb on the lateral branches; bracteas lanceolate-spatulate, pilose, callous at the tip; calyx pilose; petals erectish, oblong, obtuse, tapering to the base. ♄. G. Native of the Cape of Good Hope.

Intermediate Berzelia. Shrub 2 to 4 feet.

3 B. **lanuginòsa** (Brogn. et Dum. mem. p. 16.) branches erect, fastigiate, young ones villous; leaves triquetrous, spreading, callose at the apex, rather pilose; heads of flowers about the size of a pea at the tops of the lateral branches, disposed in a fastigiate panicle; bracteas spatulate, smooth, callose at the apex; petals almost erect, oblong-lanceolate, blunt. ♄. G. Native of the Cape of Good Hope, and in Madagascar. Brùnia lanuginòsa, Lin. hort. cliff. p. 71. spec. 288. Wendl. coll. t. 11. Lodd. bot. cab. t. 572.—Pluk. phyt. t. 318. f. 4. Flowers white.

Woolly Berzelia. Fl. June, Aug. Clt. 1774. Shrub 1 to 2 ft.

4 B. **ru'bra** (Schlecht. l. c. p. 189.) branched; branches erect, younger ones rather villous; leaves linear-lanceolate, rather tetragonal towards the apex, with a strong middle nerve, recurvedly spreading or reflexed, callose at the tip, younger ones rather villous; heads of flowers size of a pea, terminal or axillary, solitary or aggregate; bracteas somewhat rhomboid-spatulate, pilose, callous at the tip; petals spreading, oblong, obtuse. ♄. G. Native of the Cape of Good Hope. Brùnia rùbra, Herb. Willd. ex Spreng. syst. 1. p. 782.

Red Berzelia. Shrub 2 to 4 feet.

5 B. **cordifo'lia** (Schlecht. in Linnæa. 6. p. 189.) branched; branches erect, younger ones pubescent; leaves subcordate-ovate, bluntish, somewhat marginate, flat, spreading or reflexed, smooth, callous at the tip; heads of flowers size of a nut, solitary on the tops of the lateral branches; bracteas subspatulate, pilose, callous at the apex; petals spreading, oblong-elliptic, tapering to the base, and 2-crested at the apex. ♄. G. Native of the Cape of Good Hope.

Heart-leaved Berzelia. Shrub 2 to 4 feet.

6 B. **squarro'sa** (Schlecht. in Linnæa. 6. p. 189.) leaves lanceolate, reflexed, acute, smooth, ustulate at the apex; heads of flowers terminal, hairy, smaller than a pea. ♄. G. Native of the Cape of Good Hope. Brùnia squarròsa, Thunb. fl. cap. 2. p. 92.

Squarrose Berzelia. Fl. July, Aug. Clt. 1820. Sh. 2 to 3 ft.

7 B.? **globo'sa**; leaves trigonal, incurved, acute, imbricate,

villous; heads of flowers terminal, smooth, about the size of a walnut, or larger. ♄. G. Native of the Cape of Good Hope. Brùnia globòsa, Thunb. fl. cap. 2. p. 90. Flowers white.

Globose-headed Berzelia. Fl. Ju. Aug. Clt. 1816. Sh. 1 to 2 ft.

Cult. See *Brùnia* for culture and propagation, p. 48.

II. BRU'NIA (in honour of Corneille de Bruin, better known under the name of Le Brun, a Dutch traveller; he travelled through Persia to India in 1701 to 1708, and in Asia Minor, Egypt, &c. from 1673 to 1674). Lin. gen. 274. (exclusive of Staàvia). Gært. fruct. 1. p. 152. t. 30. Thunb. fl. cap. 2. p. 89. —Brùnia and Barrèria, Adans. D. C. prod. 2. p. 43. Brogn. et Dum. mem. p. 16.

LIN. SYST. *Pentándria, Monogýnia.* Calyx adhering to the ovary (f. 8. K. *g.*). Ovary half inferior, 2-celled (f. 8. K. *g.* B. *e.*); cells 1-2-seeded. Styles 2, diverging (f. 8. B. *d.*) at the apex. Fruit indehiscent, 1-seeded from abortion (f. 8. K. *h.*). —Shrubs more or less branched, with the branches in whorls, erect or spreading. Leaves small, closely imbricate, and flowers capitate (f. 8. B. *a.*) in *B. alopecuroìdes*, *B. nodiflòra*, and *B. virgàta;* but in *B. racemòsa* and *B. pinifòlia*, the leaves are larger, fir or myrtle-like, spreading, and the flowers in panicles (f. 8. K. *a.*) Flowers furnished with 3 bracteas each, or sometimes deficient of the two lateral ones.

SECT. I. NODIFLO'RÆ (from *nodus*, a knot, and *flos*, a flower; flowers disposed in close heads or knots). Calyx hairy, with spatulate segments (f. 8. B. *b.*). Petals somewhat spatulate (f. 8. B. *c.*). Stamens exserted (f. 8. B. *d.*), unequal. Ovary 2-celled (f. 8. B. *e.*); cells 2-seeded. Fruit crowned by the permanent calyx, stamens, and petals.

1 B. NODIFLO'RA (Lin. spec. 288. mant. 343.) leaves lanceolate, awl-shaped, trigonal, acute, smooth, closely imbricate, not ustulate at the apex; heads of flowers globose, size of a cherry, on the top of the branches. ♄. G. Native of the Cape of Good Hope. Wendl. coll. t. 35.—Breyn. cent. 22. t. 10. Flowers white.

Knot-flowered Brunia. Fl. July, Aug. Clt. 1786. Sh. 1 to 2 ft.

2 B. PASSERINOÌDES (Schlecht. in Linnæa. 6. p. 190.) dichotomously branched; branches erect, slender; leaves minute, obovate-elliptical, densely-imbricated, and pressed to the stem, callous at the points, concave outside, puberulous at first, but at length becoming smooth and shining; heads minute, few-flowered, terminal, solitary. ♄. G. Native of the Cape of Good Hope.

Passerina-like Brunia. Shrub 2 to 3 feet.

SECT. II. ALOPECUROI'DEA (from *αλωπηξ*, *alopex*, a fox, and *ουρα*, *oura*, a tail; disposition of flowers like a fox tail). Calyx with scarious, smooth segments (f. 8. K. *c.*). Petals ovate (f. 8. K. *a.*), inclosing the stamens. Ovary 2-celled (f. 8. K. *g.*); cells 1 or 2-seeded. Fruit crowned by the calyx. Petals and stamens caducous.

3 B. RACEMO'SA (Brogn. et Dum. mem. p. 18.) leaves spreading, sessile, ovate, acuminated, somewhat cordate, 3-nerved, rather pilose; flowers panicled; panicle composed of dense, distant, rather leafy racemes. ♄. G. Native of the Cape of Good Hope. Phýlica racemòsa, Lin. mant. 209. D. C. prod. 2. p. 37. Béckia cordàta, Burm. prod. 12. Flowers white.

Racemose-flowered Brunia. Fl. May, Sept. Clt. 1790. Shrub 5 feet.

4 B. PINIFÒLIA (Brogn. et Dum. mem. p. 19.) leaves spreading a little, sessile, linear, blunt, 1-nerved, quite smooth, coriaceous, flat; panicle dense, composed of rather simple racemes; flowers scarious, approximate. ♄. G. Native of the Cape of Good Hope. Phýlica pinifòlia, Lin. fil. suppl. 153. Béckia Africàna, Burm. prod. 12. Flowers white.

Pine-leaved Brunia. Fl. May, Ju. Clt. 1789. Sh. 1 to 2 ft.

5 B. IMBRICA'TA; leaves imbricate, ovate, cordate, smooth or somewhat ciliated, flat; panicle composed of numerous racemes; branches hairy. ♄. G. Native of the Cape of Good Hope. Phýlica imbricàta, Thunb. fl. cap. 85. Flowers white.

Imbricate-leaved Brunia. Fl. Aug. Nov. Clt. 1801. Shrub 1 to 3 feet.

6 B. ALOPECUROÌDES (Thunb. fl. cap. 2. p. 93.) leaves awl-shaped, trigonal, acute, smooth, imbricate, incurved, ustulate at the apex; heads of flowers terminal, ovate-globose, dense naked, smaller than a pea; bracteas shorter than the flowers. ♄. G. Native of the Cape of Good Hope. Flowers white.

Fox-tail-like Brunia. Fl. Ju. Aug. Clt. 1816. Shrub 1½ foot.

7 B. VIRGA'TA (Brogn. et Dum. mem. p. 20.) branches slender in whorles; leaves closely-pressed to the stem, sessile, lanceolate-awl-shaped, acute, ustulate at the apex, channelled, quite smooth; heads of flowers terminal, about the size of a small pea, few-flowered. ♄. G. Native of the Cape of Good Hope, on the top of the mountain called Rode-sand. B. verticillàta, Thunb. fl. cap. 2. p. 92.? fil. suppl. 158.? Flowers white.

Twiggy Brunia. Shrub 1 to 2 feet.

8 B. LA'XA (Thunb. fl. cap. 2. p. 93.) leaves trigonal, blunt, closely-pressed to the stem, imbricate, smooth; branches loose, twiggy; heads of flowers spike-formed, smooth. ♄. G. Native of the Cape of Good Hope, in the interior of the country. Flowers white.

Loose-branched Brunia. Fl. June, Aug. Clt. 1805. Sh. 2 ft.

† *Species not sufficiently known, therefore doubtful to which of the Genera of Bruniàceæ they belong, but they are most probably referable to the first section of the present genus.*

9 B. LÆ'VIS (Thunb. fl. cap. 2. p. 89.) leaves linear, convex, incurved, blunt, imbricate; heads of flowers terminal, downy, about the size of a filbert. ♄. G. Native of the Cape of Good Hope. Flowers white.

Smooth Brunia. Fl. June, Aug. Clt. 1822. Shrub 2 feet.

10 B. DEU'STA (Thunb. fl. cap. 2. p. 90.) leaves trigonal, blunt, smooth, black at the apex, imbricately-spreading; heads of flowers terminal, smooth, about the size of a pea. ♄. G. Native of the Cape of Good Hope. Flowers white.

Burned-leaved Brunia. Fl. June, Aug. Clt. 1804. Sh. 2 ft.

11 B. COMÒSA (Thunb. fl. cap. 2. p. 91.) leaves trigonal, smooth, spreading, obtuse, ustulate at the apex; heads of flowers globose, terminal, and axillary, sessile, about the size of a pea. ♄. G. Native of the Cape of Good Hope. Flowers white.

Tufted Brunia. Fl. July, Aug. Clt. 1820. Shrub 1 to 3 ft.

12 B. CAPITE'LLA (Thunb. fl. cap. 2. p. 91.) leaves trigonal, smooth, spreading, ustulate at the apex; heads of flowers terminal and axillary, about the size of a pea. ♄. G. Native of the Cape of Good Hope. Flowers white.

Small-headed Brunia. Shrub 1 to 3 feet.

13 B. ARACHNOÍDEA (Wendl. coll. 2. p. 62.) leaves linear, thin, acuminated, somewhat trigonal, cobwebbed, fuscous at the apex, spreading, crowded; heads of flowers globose, small. ♄. G. Native of the Cape of Good Hope. Flowers white.

Cobwebbed Brunia. Fl. June, Aug. Clt. 1820. Sh. 1 to 3 ft.

14 B. ERICOÌDES (Wendl. coll. 2. p. 57.) leaves linear, short, acute, trigonal, pilose in the middle, brown and callose at the apex, spreading; heads of flowers globose, about the size of a cherry. ♄. G. Native of the Cape of Good Hope. Flowers white.

Heath-like Brunia. Fl. July, Aug. Clt. 1804. Sh. 1 to 3 ft.

15 B. MACROCE'PHALA (Willd. ex Spreng. syst. 1. p. 782.) leaves linear-lanceolate, crowded, hairy, erectly-spreading; heads of flowers terminal, solitary. ♄. G. Native of the Cape of Good Hope. Flowers white.

Long-headed Brunia. Fl. Ju. Aug. Clt. 1815. Sh. 1 to 3 ft.

16 B. SUPE'RBA (Donn, hort. cant. Willd. spec. 1. p. 1143.) leaves semicylindrical, spreading, incurved, pilose, ending in spacelate awns. ♄. G. Native of the Cape of Good Hope. B. speciòsa, Hortulan. Flowers unknown.

Superb Brunia. Fl. May, July. Clt. 1791. Shrub 1 to 3 ft.

† *Species only known by name, from catalogues, without any description. These are probably identical with some of those described above.*

1 *B. capitàta* (Desf.). 2 *B. élegans* (Dum. Cours). 3 *B. formòsa* (Dum. Cours).

Cult. Elegant heath-like shrubs, but with insignificant flowers. A mixture of peat and sand suits them best, and young cuttings, planted in sand with a bell-glass placed over them, will strike root.

III. STAA'VIA (in honour of Martin Staaff, a correspondent of Linnæus). Dahl. diss. Thunb. prod. 41. D. C. prod. 2. p. 45. Brogn. et Dum. mem. Brun. p. 22.– Levisànus, Schreb. gen. 377.– –Astrocòma, Neck. elem. no. 196.

LIN. SYST. *Pentándria, Monogýnia.* Calyx adhering to the bottom of the ovary (f. 8. G. *g.*) but free at the top, ending in 5 awl-shaped callose lobes (f. 8. G. *f.*). Petals free (f. 8. G. *c.*). Ovary half-inferior, 2-celled (f. 8. G. *k. g.*); cells 1-seeded. Style simple. Stigma 2-lobed. Fruit bicoccous (f. 8. G. *k.*).—Small shrubs, with linear, spreading leaves, which are callose at the apex. Flowers collected into terminal, disk-like heads (f. 8. G. *a.*), involucrated by numerous shining, whitish bracteas, which are either longer or shorter than the leaves. Receptacle of flowers villous or chaffy.

1 S. RADIA'TA (Thunb. fl. cap. 2. p. 96.) young branches and leaves pilose; leaves linear, acute, hardly keeled, spreading or deflexed, mucronate; heads of flowers corymbose; bracteas of involucre membranous, mucronate, arched, deflexed, white, a little longer than the flowers. ♄. G. Native of the Cape of Good Hope. Phýlica radiàta, Lin. spec. ed. 2. p. 283. Brùnia radiàta, Lin. mant. 209.—Pluk. mant. t. 454. f. 7.—Breyn. cent. t. 82. Flowers dusky.

Rayed-flowered Staavia. Fl. May, June. Clt. 1787. Shrub 1 to 2 feet.

2 S. GLUTINÒSA (Thunb. fl. cap. 2. p. 95.) branches and leaves quite smooth; leaves linear, trigonal, thickish, blunt, callose, ustulate, approximate, erect; heads of flowers usually solitary, terminal; bracteas of involucre erect or stiffly spreading, not arched, white, much longer than the flowers; flowers agglutinated with resinous juice. ♄. G. Native of the Cape of Good Hope, on the Table Mountain. Wendl. coll. 1. t. 22. Brùnia glutinòsa, Lin. mant. 210.—Pluck. mant. t. 431. f. 1. Flowers dusky.

Glutinous-flowered Staavia. Fl. April, May. Clt. 1793. Shrub 1 to 2 feet.

3 S. NU'DA (Brogn. et Dum. mem. p. 23.) branches fastigiate, and are as well as the leaves smooth; leaves oblong-linear, short, trigonal, erect, imbricate; heads of flowers solitary, terminal; involucre shorter, or equal in length to the leaves, and of the same colour. ♄. G. Native of the Cape of Good Hope Flowers dusky?

Naked Staavia. Shrub 1 to 2 feet.

4 S. CILIA'TA (Brogn. et Dum. mem. p. 24.) branches fastigiate, villous; leaves sessile, erect, imbricate, oblong-lanceolate, acute, smooth, keeled on the back, and ciliated with long hairs on the margins, and with callose points; heads of flowers discoid, woolly (bracteas and segments of the calyx very villous) involucre shorter than the flowers, imbricate, pilose, of the same colour as the leaves. ♄. G. Native of the Cape of Good Hope. Brùnia ciliàta? Lin. spec. 288.

Ciliated-leaved Staavia. Fl. May, Jul. Clt. 1812. Sh. 1 to 2 ft.

Cult. See *Brùnia* for culture and propagation.

IV. RASPA'LIA (in honour of M. Raspal, who has written on the structure of grasses and the formation of fecula). Brogn. et Dum. mem. brun. p. 21.

LIN. SYST. *Pentándria, Digýnia.* Calyx free, 5-cleft (f. 8. C. *c.*). Petals and stamens inserted in the free ovary (f. 8. C. *g.*). Ovary 2-celled (f. 8. C. *h.*).; cells 1-seeded. Styles 2 (f. 8. C. *e.*).—A subshrub, with twiggy, fastigiate branches, alternate, opposite, or whorled, short branchlets. Leaves small, rhomboid, keeled, closely pressed to the branchlets, quite smooth, spirally inserted. Heads of flowers solitary, twin, or tern (f. 8. C. *a.*), at the tops of the branches, downy, not involucrated. Flowers small, white, with a spreading limb and enclosed anthers.

1 R. MICROPHY'LLA (Brogn. et Dum. mem. p. 22. t. 37. f. 1.). ♄. G. Native of the Cape of Good Hope. Brùnia microphýlla? Thunb. fl. cap. 2. p. 94.

Small-leaved Raspalia. Clt. 1804. Shrub 1 to 2 feet.

Cult. For culture and propagation see *Brùnia.*

V. BERA'RDIA (in honour of M. Berard, a professor of chemistry at Montpelier). Brogn. et Dum. mem. brun. p. 24.– –Brùnia and Lincònia, species of authors.

LIN. SYST. *Pentándria, Digýnia.* Calyx adhering to the ovary at the base, but free at the apex, 5-cleft (f. 8. D. *b.*). Petals 5, cohering into a tube at the base. Stamens adhering to the petals more or less at the base. Ovary half inferior. Styles 2 (f. 8. D. *l.*). Fruit bicoccous (f. 8. D. *i.*).—Small shrubs, with erect, fastigiate, slender branches, awl-shaped, acute, close-pressed leaves, covering the stem on every side. Flowers capitate (f. 8. D. *a.*), involucrated, with awl-shaped bracteas, which are longer than the leaves, each flower is furnished or propped by 3 bracteas, the lower one is twice the length of the flower (f. 8. D. *c.*), the two lateral ones are about equal in length to the flower.

1 B. PALEA'CEA (Brogn. et Dum. mem. p. 25.) leaves awl-shaped, acute, short, closely pressed to the stem, quite smooth, ustulate; heads of flowers corymbose; lower bractea twice as long as the flower, awl-shaped, ustulate, hairy at the base; segments of calyx shorter than the petals, villous; anthers ovate. ♄. G. Native of the Cape of Good Hope. Brùnia paleàcea, Thunb. prod. p. 41. Lin. mant. 559. Wendl. coll. t. 21. Flowers white.

Chaffy Berardia. Fl. June, Aug. Clt. 1791. Sh. 1 to 2 ft.

2 B. AFFÌNIS (Brogn. et Dum. mem. p. 25.) leaves awl-shaped, acute, closely pressed to the branches, smooth, or a little fringed; lower bractea awl-shaped, smooth, longer than the flowers; segments of calyx longer than the petals, smooth; anthers linear-oblong. ♄. G. Native of the Cape of Good Hope. Lincònia capitàta, Banks. herb. Flowers white.

Allied Berardia. Shrub 1 to 2 feet.

3 B. FRAGARIOÌDES (Schlecht. in Linnæa. 6. p. 188.) leaves linear-filiform, triquetrous, smooth, closely pressed to the stem with the margins and ribs densely ciliated. ♄. G. Native of the Cape of Good Hope. Brùnia fragarioìdes, Willd. spec. 1. p. 1143.

Strawberry-like Brunia. Clt. 1794. Shrub 1 to 3 feet.

† *An allied species or a new genus.*

4 B. PHYLICOÌDES (Brogn. et Dum. mem. p. 25.) leaves ovate, obtuse, imbricate, convolute, in 5 rows, downy externally; heads

of flowers corymbose; bracteas downy, equal in length to the flowers; calyx and petals woolly on the outside. ♄. G. Native of the Cape of Good Hope. Brùnia phylicoìdes. Thunb. fl. cap. 2. p. 94. Flowers white. This species differs from the preceding two in the petals being concave and free to the base, inclosing the stamens, as well as in the form of the calyx. The habit of the plant is altogether quite distinct.

Phylica-like Berardia. Fl. Ju. Aug. Clt. 1805. Sh. 1 to 2 ft.

Cult. For culture and propagation see *Brùnia*. p. 48.

VI. LINCO'NIA (Lincon, evidently the name of some botanist). Lin. mant. p. 147. Swartz, in berl. mag. 1810. p. 85. D. C. prod. 2. p. 45. Brogn. et Dum. mem. p. 26.

Lin. syst. *Pentándria, Digýnia.* Calyx adhering to the ovary (f. 8. F. *g.*), with a 5-cleft limb; segments short, membranous (f. 8. F. *a.*), smooth. Petals oblong, convolute (f. 8. F. *a*), inclosing the stamens; cells of anthers diverging at the base (f. 8. F. *b. c.*). Ovary half inferior, 2-celled (f. 8. F. *l.*); cells 2-seeded. Styles 2 (f. 8. F. *m.*). Fruit bicoccous (f. 8. F. *m.*).—Heath-like shrubs, with numerous, erect, fastigiate branches. Leaves spirally inserted on all sides of the branches, spreading, or loosely imbricate, on very short stalks, coriaceous, quite smooth, or a little fringed on the margins, marked with a prominent nerve, ustulate at the apex. Flowers solitary, in the axillæ of the upper leaves, the whole forming a crowded leafy spike, each flower involucrated by 4 or 5 bracteas, which are about the length of the calyx.

1 L. ALOPECUROÍDEA (Lin. mant. 216.) leaves spreading a little, linear, acute, almost sessile, with one prominent stiff nerve; flowers a little longer than the leaves; bracteas membranous with pilose edges, longer than the calyx. ♄. G. Native of the Cape of Good Hope. Swartz, in berl. mag. 1810. p. 86. t. 4. Brogn. mem. l. c. t. 37. f. 3. Flowers flesh-coloured or white.

Fox-tail-like Linconia. Fl. May, Ju. Clt. 1816. Sh. 1 to 2 ft.

2 L. THYMIFÒLIA (Swartz. in berl. mag. 1811. p. 284. t. 7. f. 1.) leaves elliptical, keeled, tipped with black; bracteas naked. ♄. G. Native of the Cape of Good Hope, in the interior of the country. Diósma deústa, Thunb. phyt. blætt. p. 25. but omitted in his fl. cap. as well as the following species. Brùnia láxa, Thunb. fl. cap. 2. p. 93.? Flowers white.

Thyme-leaved Linconia. Fl. May, Ju. Clt. 1825. Sh. 2 ft.

3 L. CUSPIDA'TA (Swartz. in berl. mag. 1811. p. 284. t. 7. f. 1.) leaves spreading a little, oblong, obtuse, ustulate at the apex, keeled; flowers equal in length to the leaves; bracteas equal in length to the calyx, with fringed, pilose edges. ♄. G. Native of the Cape of Good Hope. Diósma cuspidàta, Thunb. phyt. blætt. p. 24. Flowers white.

Cuspidate-leaved Linconia. Clt. 1825. Shrub 1 to 2 feet.

4 L.? PERUVIA'NA (Lam. dict. 3. p. 527.) leaves in whorles, linear, sessile, hairy, connate at their base. ♄. G. Native of Peru. Fruit unknown. This is probably a species of *Margyricárpus.* It is certainly a very doubtful species of *Lincònia*, being a native of Peru, and the leaves are said to be connate at the base; it is more likely they are many-parted.

Peruvian Linconia. Shrub.

Cult. See *Brùnia* for culture and propagation. p. 48.

VII. AUDOUI'NIA (in honour of V. Audouin, a profound entymologist). Brogn. et Dum. p. 28.

Lin. syst. *Pentándria, Monogýnia.* Calyx adhering to the ovary (f. 8. E. *f.*), 5-cleft; segments large, imbricate (f. 8. E. *a.*). Petals with a long, 2-keeled claw, and a spreading, roundish limb (f. 8. E. *b. d.*). Ovary half-inferior (f. 8. E. *f.*), 3-celled (f. 8. E. *g.*); cells 2-seeded. Style simple, terminated by 3 small, papilliform stigmas.—A shrub with erect branches. Leaves spirally inserted, imbricate, a little keeled. Flowers purple, crowded into oblong, spike-like, terminal heads.

1 A. CAPITA'TA (Brogn. et Dum. mem. p. 28. t. 38. f. 1.). ♄. G. Native of the Cape of Good Hope. Diósma capitàta, Thunb. prod. 43. Lin. mant. 210. D. C. prod. 1. p. 717.

Capitate-flowered Audouinia. Fl. May, Ju. Clt. 1790. Shrub 1 to 2 feet.

Cult. See *Brùnia* for culture and propagation. p. 48.

VIII. TITTMA'NNIA (in honour of J. A. Tittmann, who has wrote on the structure and evolution of the embryo of plants). Brogn. et Dum. mem. p. 29. t. 38. f. 2.

Lin. syst. *Pentándria, Monogýnia.* Calyx with a spherical tube (f. 8. H. *a.*), wrinkled and glandular on the outside, adnate to the ovary, 5-cleft, with scarious, erect segments (f. 8. H. *b.*). Petals with the claws 2-keeled on the inside, and with ovate-roundish spreading lamina (f. 8. H. *c.*). Ovary inferior, spherical, 2-celled (f. 8. H. *e.*), with a membranous dissepiment, free at the edges; cells 2-seeded. Ovula pendulous, fixed to the dissepiment. Style simple, conical, crowned by a bidentate stigma.—A small shrub with subumbellate, fastigiate branches. Leaves linear, subcylindrical, wrinkled, incurved, erect, imbricate, callose at the apex. Flowers axillary, approximate towards the tops of the branches, bent to one side, and calyculated at the base by short scarious scales.

1 T. LATERIFLÒRA (Brogn. et Dum. mem. p. 30.). ♄. G. Native of the Cape of Good Hope.

Side-flowered Tittmannia. Shrub 1 to 2 feet.

Cult. See *Brùnia* for culture and propagation. p. 48.

IX. THA'MNEA (from *θαμνος, thamnos*, a shrub). Sol. mss. Brogn. et Dum. mem. p. 30. t. 38. f. 3.

Lin. syst. *Pentándria, Monogýnia.* Calyx adhering to the ovary at the base, but free at the apex, divided into 5 lanceolate, smooth, scarious, imbricate segments. Petals with 2-keeled claws, and an ovate, spreading limb. Ovary inferior, covered by a fleshy disk, 1-celled, many-seeded. Ovula hanging from the apex of the column. Style simple. Stigma entire.—A small shrub with filiform, erect, fastigiate branches: Leaves very small, somewhat rhomboidal, short, blunt, keeled, closely pressed, spirally inserted; upper ones a little longer than the rest, forming an involucre to the flower. Flowers solitary, terminal, white.

1 T. UNIFLÒRA (Sol. mss. Brogn. et Dum. mem. p. 31.). ♄. G. Native of the Cape of Good Hope.

One-flowered Thamnea. Shrub 1 to 2 feet.

Cult. The whole of the plants belonging to this natural order are worth cultivating for their neatness. All the genera require the same treatment. A mixture of peat and sand suits them best, but they will require but a moderate supply of water. Young cuttings planted in a pot of sand, will strike root freely, with a hand-glass placed over them.

Order LXIX. SAMY'DEÆ (plants agreeing with *Samýda* in important characters). Gært. fil. carp. 3. p. 238. and 242. Vent. mem. inst. 1807. p. 2. p. 142. Kunth, nov. gen. amer. 5. p. 360. D. C. prod. 2. p. 47.

Calyx permanent, of 3-7, but usually of 5 sepals (f. 9. *a.*), connected together more or less at the base into a tube (f. 9. *a.*). Lobes imbricate in æstivation, rarely valvate, usually petal-like and coloured on the inside. Petals wanting, unless that the coloured inside of the calyx should be considered the lamina of the petals adhering to it. Stamens adnate to the tube of the calyx (f. 9. *a.*), double, triple, or quadruple the number of the sepals; filaments monadelphous at the base and flat, but awl-shaped at the apex, sometimes they are all antheriferous, sometimes the alternate ones are sterile and shorter than the fertile ones, villous or fringed, the alternate ones bearing ovate, 2-celled, erect anthers inserted by their base. Style filiform. Stigma capitate or lobed. Capsule coriaceous, 1-celled, 3-5-valved, many-seeded (f. 9. *d.*); valves incompletely dehiscent, usually somewhat pulpy, and coloured inside. Seeds ovate, baccate, umbilicate, fixed to the papillose or pulpy part of the valves. Albumen fleshy. Embryo inverted, minute, with ovate, leafy, plaited cotyledons, and a blunt radicle, contrary to the external umbilicus.—Shrubs or little trees, natives of the warmer regions of the world. Leaves alternate, stipulate, usually somewhat distich, simple, quite entire or toothed, feather-nerved, permanent, usually full of pellucid dots, which are either round or oblong. Peduncles axillary, sometimes solitary, 1 or many-flowered. Sometimes aggregate, 1-flowered. This order agrees with *Bixíneæ* and *Flacourtiànceæ* in the structure of the fruit, but the situation of the stamens brings it between *Rhámneæ* and *Rosàceæ, Chrysobalàneæ* or *Chailletiàceæ*.

Synopsis of the Genera.

1 Samy'da. Stamens 10-12, all antheriferous (f. 9. *a.*). Stigma globose.

2 Casea'ria. Stamens 12-30, monadelphous at the base, alternate ones antheriferous, sterile ones awl-shaped or spatulate.

3 Chætocra'ter. Calyx 5-parted. Stamens 20, monadelphous at the base, forming a cup-shaped tube, the 10 antheriferous ones shorter than the rest, the 10 sterile ones are bristle-like and hairy. Stigmas 3.

I. SAMY'DA (σαμυδα, the Greek name of the birch, resemblance). Lin. gen. 543. Lam. ill. t. 355. D. C. prod. 2. p. 47.—Guidònia, Plum. gen. t. 24.

Lin. syst. *Decándria, Monogýnia.* Stamens 10-12, all bearing anthers. Stigma globose.

Sect. I. Eusamy'da (from εὐ, *eu*, good, and σαμυδα; genuine species). D. C. prod. 2. p. 47. Calyx tubular at the base, cleft to the middle. Stamens 10 or 12. Flowers large.

* *Flowers decandrous.*

1 S. glabra'ta (Swartz. fl. ind. occ. 2. p. 760.) peduncles axillary, solitary, 1-flowered; leaves ovate-lanceolate, obtuse, quite entire, shining. ♄. S. Native of Jamaica, on the mountains. Flowers white.

Smooth-leaved Samyda. Fl. May, Aug. Clt. 1800. Sh. 12 ft.

2 S. villòsa (Swartz. fl. ind. occ. 2. p. 758.) peduncles solitary, axillary, 1-flowered; leaves oblong, acute, a little serrated, oblique at the base, silky, villous beneath. ♄. S. Native of Jamaica on the mountains. Flowers white, downy. Pulp of seeds scarlet.

Villous-leaved Samyda. Fl. June, Aug. Clt. 1820. Sh. 6 ft.

3 S. spinulòsa (Vent. choix. t. 43.) pedicels 2-3 together, axillary; leaves oval-oblong, acuminated, serrulated, coriaceous, quite smooth, but pubescent on the nerves beneath. ♄. S. Native of the islands of St. Thomas and Porto-Rico. Flowers one half smaller than those of the preceding species, white.

Spiny Samyda. Shrub 6 feet.

4 S. macroca'rpa (Moc. et Sesse, fl. mex. icon. ined. D. C. prod. 2. p. 48.) pedicels 2-3 together, very short, axillary; leaves ovate, acute, serrated, rather downy beneath. ♄. S. Native of Mexico. Flowers greenish-white. Capsules large, blood-red inside.

Long-fruited Samyda. Shrub 6 feet.

5 S. velutìna (D. C. prod. 2. p. 48.) flowers 5-cleft; pedicels numerous, axillary, very short; leaves obovate-oblong, mucronate, acutely serrated, clothed on both surfaces with velvety villi. ♄. S. Native of St. Domingo. Flowers probably white.

Velvety Samyda. Shrub 6 feet.

6 S. affìnis (Spreng. syst. 2. p. 354.) pedicels 1-flowered, numerous, axillary; leaves oblong, tapering at both ends, almost entire, opaque, smooth. ♄. S. Native of St. Domingo. Flowers white?

Allied Samyda. Shrub.

7 S. grandiflòra (Spreng. syst. 2. p. 354.) pedicels 1-flowered, aggregate, axillary; leaves oblong, tapering to both ends, almost sessile, opaque above, but shining beneath. ♄. S. Native of Brazil. Flowers probably white.

Great-flowered Samyda. Shrub 8 feet.

8 S. decu'rrens (Spreng. syst. 2. p. 354.) cymes axillary, stalked, few-flowered; leaves oblong, tapering to both ends, running down the petioles at the base, crenulate, quite smooth, opaque. ♄. S. Native of Brazil.

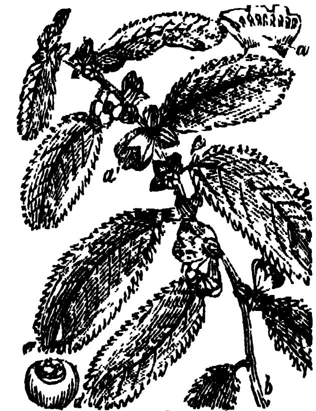
Decurrent-leaved Samyda. Clt. 1820. Shrub 4 feet.

* * *Flowers dodecandrous.*

9 S. serrula'ta (Lin. spec. 758.) peduncles solitary, axillary, 1-flowered; leaves ovate-oblong, acute, with stiff serratures, rather puberulous above, but downy beneath, and netted with nerves. ♄. S. Native of the Caribbee Islands. Plum. ed Burm. t. 146. f. 2. Jacq. coll. 2. p. 328. t. 17. f. 1. Flowers white.

Serrulate-leaved Samyda. Fl. June, Jul. Clt. 1723. Sh. 4 ft.

FIG. 9.



10 S. ròsea (Sims. bot. mag. t. 550.) flowers 5-cleft; pedicels 1-flowered, numerous, axillary, very short; leaves oblong, blunt, finely serrated, clothed with soft pubescence on both surfaces. ♄. S. Native of St. Domingo. S. serrulàta, Andr. bot. rep. t. 202. S. pubéscens, Lin. spec. 557. exclusive of the synonyms. Flowers large, rose-coloured. (f. 9.)

Rose-coloured-flowered Samyda. Fl. June, Jul. Clt. 1793. Sh. 4 ft.

11 S. ru'bra (Moc. et Sesse, fl. mex. icon. ined. D. C. prod. 2. p. 48.) pedicels numerous, axillary, very short; leaves obovate, blunt, serrate-toothed, pubescent beneath. ♄. S. Native of Mexico. Flowers red, 6-cleft. This species is probably sufficiently distinct from the preceding.

Red-flowered Samyda. Shrub 6 feet.

12 S. tinifòlia (Vent. ex Spreng. syst. 2. p. 354.) pedicels axillary, 1-flowered, longer than the petioles; leaves obovate, smooth, quite entire. ♄. S. Native of the East Indies.

Tinus-leaved Samyda. Shrub.

* * * *Flowers polygamous, male ones decandrous.*

13 S.? Sello'i (Spreng. syst. 2. p. 354.) flowers polygamous, decandrous; pedicels aggregate, axillary; leaves ovate-oblong, serrulated, unequal at the base, shining above and smooth

beneath. ♄. S. Native of Brazil. Bigelòvia Brasiliénsis, Spreng. neue entd. Flowers white.
Sello's Samyda. Shrub 6 feet?

Sect. II. Guidònia (named by Plumier in honour of Guido Crescentius Fagon, physician to Louis XIV., to whom Linnæus dedicated another genus *Fagònia*, see vol. 1. p. 770). D. C. prod. 2. p. 48. Samydæ dùbiæ, Kunth. Calyx almost divided to the base. Stamens 8, rarely 10. Flowers small. Intermediate between *Samỳda* and *Caseària*.

* *Flowers octandrous.*

14 S. multiflòra (Cav. icon. 1. p. 48. t. 67.) flowers 4-parted; pedicels axillary, aggregate; leaves oblong, tapering to both ends, toothed, downy beneath. ♄. S. Native of St. Domingo. Flowers whitish.
Many-flowered Samyda. Shrub 4 feet.

15 S.? macrophy'lla (Willd. spec. 2. p. 625.) flowers 5-cleft? revolute; corymbs terminal; leaves ovate, acute, smooth, obscurely crenated, villous in the axillæ of the veins beneath. ♄. S. Native of the East Indies. Flowers greenish. Anthers brown.
Long-leaved Samyda. Clt. 1820. Shrub 6 feet.

* * *Flowers decandrous and octandrous.*

16 S. ni'tida (Lin. spec. 557.) flowers octandrous and decandrous, 5-parted; pedicels axillary, crowded, 1-flowered; leaves cordate, smooth, somewhat serrated. ♄. S. Native of Jamaica, in the low lands. Lam. ill. t. 355. f. 2.—P. Browne, jam. 217. t. 23. f. 3. Flowers white and red. There are small teeth between the stamens, therefore it comes near to *Caseària*. P. Browne calls this shrub the *Larger Cloven-berry-bush.*
Shining-leaved Samyda. Clt. 1793. Shrub 6 feet.

17 S. spine'scens (Swartz, fl. ind. occ. 2. p. 762.) flowers decandrous and octandrous, 5-parted, almost sessile, nearly terminal; leaves lanceolate-ovate, bluntly crenated, smooth; branches spreading, spinescent. ♄. S. Native of St. Domingo, where it flowers in December and January. Flowers pale, in short, dense, downy clusters or spikes.
Spinescent Samyda. Shrub 12 feet.

18 S. pube'scens (Hamilt. prod. fl. ind. occ. p. 37.) leaves ovate-oblong, tapering to both ends, remotely-serrated above, quite entire at the base, tomentosely-pubescent; flowers subalternate, axillary. ♄. S. Native of St. Domingo.
Pubescent Samyda. Shrub.
Cult. See end of order for culture and propagation.

II. CASEA'RIA (in honour of J. Casearius, who assisted Rheede in the Hortus Malabaricus). Jacq. amer. 132. Lin. gen. no. 514. D. C. prod. 2. p. 48.—Anavínga, Lam. dict. 1. p. 147. ill. t. 355.—Iroucàna and Pitúmba, Aubl. guian.—Athenæ'a and Caseària, Schreb.—Melistaùrum, Forst. gen.—Caseària and Anavínga, Gært. fil.—Lindlèya, Kunth, malv. p. 10. but not of H. B. et Kunth, nov. gen. amer.

Lin. syst. *Hexa-Dodecándria*, *Monogýnia*. Stamens 12-30, monadelphous at the base, alternate ones bearing anthers, sterile ones awl-shaped or spatulate, usually villous or fringed. This genus ought probably to be divided into several genera, but the number of parts is not sufficient.

§ 1. *Hexanthèræ* (from ἑξ, *hex*, six, and *ανθηρα*, *anthera*, an anther). *D. C. prod. 2. p.* 48. *Fertile stamens* 6. *Sterile ones* 6. *Leaves coarsely spiny-toothed.*

1 C. ilicifòlia (Vent. choix. t. 44.) flowers 5-cleft; leaves ovate, with spiny angles, coriaceous, downy beneath. ♄. S. Native of St. Domingo.
Holly-leaved Casearia. Shrub.

2 C. comocladifòlia (Vent. l. c. in a note) flowers 5-cleft; leaves roundish, with spiny angles, quite smooth. ♄. S. Native of St. Domingo.
Comocladia-leaved Casearia. Shrub.

§ 2. *Octanthèra* (*οκτω*, *octo*, eight, and *ανθηρα*, *anthera*, an anther). *D. C. prod. 2. p.* 49. *Fertile stamens* 8. *Sterile ones* 8. *Leaves quite entire, or a little serrated.*

3 C. coria'cea (Vent. choix. t. 45.) flowers 7-8-anthered, 5-cleft; pedicels numerous, axillary, 1-flowered; leaves obovate, quite entire, coriaceous, smooth. ♄. S. Native of Batavia. Flowers small.
Coriaceous-leaved Casearia. Shrub.

4 C. glomera'ta (Roxb. hort. beng. 33.?) flowers 5-cleft; pedicels very numerous, in fascicles, 1-flowered, very short; leaves oval-oblong, acuminated, smooth, a little serrated. ♄. S. Native of Bengal. Flowers small. There is a specimen of this plant in the Lambertian Herbarium, named *C. Anavinga.*
Glomerated-flowered Casearia. Shrub.

5 C. ova'ta (Willd. spec. 2. p. 629.) flowers 6-8-anthered? 4-cleft; pedicels 1-flowered, axillary, usually solitary; leaves ovate, acuminated, a little serrated. ♄. S. Native of the East Indies. C. Anavínga, Pers. ench. 1. p. 485. Anavínga, Rheed. mal. 4. t. 49. Anavínga ovàta, Lam. dict. 1. p. 148.
Ovate-leaved Casearia. Shrub.

6 C. ramiflòra (Vahl. symb. 2. p. 50.) flowers 8-anthered, 5-cleft; pedicels 1-flowered, rising in fascicles along the branches beneath the leaves; leaves elliptical, acute, serrated, smooth on both surfaces. ♄. S. Native of the West Indies and the shores of Guiana. Iroucàna Guianénsis, Aubl. guian. 1. p. 329. t. 127. Athenæ'a, Schreb. gen. no. 661. Flowers white. Capsules green with a tinge of violet. Seed covered with a scarlet, pulpy, viscid membrane. The bark, leaves, and fruit have a sharp aromatic taste. The last is called *Caffe Diable* or *Devil's coffee*, by the creoles.
Branch-flowered Casearia. Clt. 1824. Shrub 4 feet.

7 C. nítida (Jacq. amer. 132. act. helv. 8. p. 58. with a figure) flowers 8-anthered, 5-parted; cymes stalked, axillary; leaves ovate, crenated, smooth, shining above. ♄. S. Native of Carthagena, among bushes. Samỳda crenàta, Poir. dict. 6. p. 490. Flowers whitish. Pulp of fruit scarlet or purple.
Shining-leaved Casearia. Shrub 12 feet.

8 C. corymbòsa (H. B. et Kunth, nov. gen. amer. 5. p. 366.) flowers 8-anthered, bluntly 5-cleft; corymbs axillary, solitary, stalked, many-flowered, one-half shorter than the leaves; leaves oblong, acuminated, acutish at the base, sharply toothed, smooth, full of pellucid dots. ♄. S. Native of South America, on the banks of the river Magdalena, near Mompox and Honda. Calyx white inside.
Corymbose-flowered Casearia. Shrub 10 feet.

9 C. hírta (Swartz. fl. ind. occ. 2. p. 756.) flowers 8-anthered, 4-parted; pedicels crowded, 1-flowered; leaves ovate, serrated, hairy beneath. ♄. S. Native of Jamaica, in the low lands. Samỳda tomentòsa, Swartz. prod. 98. Flowers white inside but green outside. Filaments yellow.
Hairy-leaved Casearia. Shrub 7 feet.

10 C. spinòsa (Willd. spec. 2. p. 626.) flowers 8-anthered, 5-parted; pedicels 1-flowered, crowded, axillary; leaves ovate, serrated, smooth; branches spiny. ♄. S. Native of St. Domingo and the island of Cuba, where it is called *Jia*. Samỳda spinòsa, Lin. spec. 557. C. aculeàta, Jacq. amer. 133. The spines are strong and straight, they are only abortive indurated branches, as in *Cérasus spinòsa*. Flowers white. Fruit greenish-purple.
Spiny Casearia. Shrub 7 feet.

11 C. Mariquite'nsis (H. B. et Kunth, nov. gen. amer. 5. p. 364.) leaves elliptic-oblong, acuminated, acute at the base, denticulated, smooth, full of pellucid dots; fruit solitary or twin, covered with fine tomentum. ♄. S. Native of New Granada, near Mariquita. Flowers unknown.

Mariquito Casearia. Shrub 10 feet.

12 C. argu'ta (H. B. et Kunth, nov. gen. amer. 5. p. 363.) branches finely tomentose; leaves elliptic-oblong, acuminated, rounded at the base, sharply serrated, smooth above, and pubescent on the nerves beneath, full of pellucid dots; fruit crowded, pubescent at the apex. ♄. S. Native of Mexico, near La Venta del Exido. Flowers unknown.

Sharp-notched Casearia. Tree 20 feet.

13 C. multiflòra (Spreng. syst. 2. p. 355.) flowers 8-anthered, 5-parted? panicles axillary, divaricate; leaves ovate-lanceolate, acute, quite entire, smooth; branches spinescent. ♄. S. Native of the East Indies. Flowers greenish-white. Sterile stamens cucullate. Fruit baccate, sub-4-celled.

Many-flowered Casearia. Shrub 8 feet.

§ 3. *Decanthèra* (from δεκα, *deka*, ten, and *ανθηρα*, *anthera*, an anther). *D. C. prod. 2. p. 49. Fertile stamens* 10, *with a sterile one between each. Leaves quite entire or serrated.*

14 C. parviflòra (Willd. spec. 2. p. 627.) flowers 10-anthered, 5-parted, small; pedicels 1-flowered, crowded, axillary; leaves oblong, acuminated, crenulate, smooth on both surfaces, shining, evidently full of pellucid dots. ♄. S. Native of the West Indies, in bushy places. Samỳda parviflòra, Lin. spec. 557.—Sloan. hist. 2. t. 211. f. 2. Flowers whitish. Pulp of fruit yellow.

Small-flowered Casearia. Clt. 1818. Shrub 6 feet.

15 C. sylve'stris (Swartz. fl. ind. occ. 2. p. 725.) flowers 10-anthered, 5-parted, small; pedicels 1-flowered, axillary, crowded; leaves ovate-oblong, long, and bluntly acuminated, quite entire, and smooth on both surfaces, shining, and evidently full of pellucid dots. ♄. S. Native of the West Indies, among bushes on the mountains. Flowers whitish. Fruit small, red.

Var. β? platyphýlla (D. C. prod. 2. p. 49.) leaves oval, with a short taper-point. ♄. S. Native of Perto-Rico and St. Thomas. C. integrifòlia, Vahl. ined.

Wild Casearia. Clt. 1823. Shrub 7 feet.

16 C. inæquila'tera (St. Hil. fl. bras. 2. p. 237.) branches smooth; leaves oblong or elliptic-oblong, very unequal-sided, narrowed at both ends, acuminated, serrate-toothed, full of pellucid dots, smoothish, shining; flowers smooth, umbellate; umbels nearly sessile; fertile stamens 10, exceeding the calyx; style trifid. ♄. S. Native of Brazil, in the province of Rio Janeiro.

Unequal-sided-leaved Casearia. Shrub 4 to 5 feet.

17 C. micra'ntha; branches puberulous at the apex; leaves oblong-lanceolate, narrowed at both ends, acuminated, serrulated, full of pellucid dots, smoothish, umbellate; umbels sessile; fertile stamens 10, equal with the calyx; style trifid. ♄. S. Native of Brazil, in the province of Minas Geraes, where it is called *Pioya*. C. parviflòra, St. Hil. fl. bras. 2. p. 237. Calyx white inside.

Small-flowered Casearia. Shrub 10 feet.

18 C. grandiflòra (St. Hil. fl. bras. 2. p. 232. t. 126.) branches covered with yellowish tomentum; leaves oblong-lanceolate, acute, sharply serrated, dotless, smoothish above, but clothed with yellowish tomentum beneath; flowers clothed with yellowish tomentum, glomerate, sessile; fertile stamens 10, one-half shorter than the corolla; style undivided. ♄. S. Native of Brazil, in the province of Minas Geraes.

Great-flowered Casearia. Shrub 4 to 5 feet.

19 C. sessiliflo'ra (St. Hil. fl. bras. 2. p. 234.) branches smooth below and puberulous above; leaves elliptic, short-acuminated, obsoletely serrulated, full of pellucid dots, smooth; flowers pubescent, glomerate, sessile; fertile stamens 10, 3-times shorter than the calyx; style undivided. ♄. S. Native of Brazil, in the province of Rio Janeiro. Calyx greenish-white.

Sessile-flowered Casearia. Shrub 5 to 6 feet.

20 C. ulmifo'lia (Vahl. in Vent. choix. no. 47. in a note. St. Hil. fl. bras. 2. p. 233.) flowers 10-anthered, 5-parted, umbellate; umbels on short stalks; style undivided; leaves oval-oblong, taper-pointed, acutely serrulated, puberulous, full of pellucid dots; branches smooth. ♄. S. Native of Porto-Rico and Brazil. Stamens smooth. Sterile filaments fringed, spatulate. Flowers whitish, a little larger than those of the two preceding species. In the province of Minas Geraes, in Brazil, the inhabitants employ this plant in domestic medicine. They boil the leaves, and apply them to wounds and to the bites of the most poisonous serpents.

Elm-leaved Casearia. Shrub 4 to 6 feet.

21 C. serrula'ta (Swartz. fl. ind. occ. 2. p. 754.) flowers 10-anthered, 5-parted, small, a little fringed; pedicels axillary, crowded, 1-flowered; leaves ovate-lanceolate, blunt, serrulated; branches flexuous. ♄. S. Native of the West Indies, in the island of Nevis. Samỳda Neviàna, Poir. dict. 6. p. 493. Flowers whitish.

Serrulate-leaved Casearia. Clt. 1818. Shrub 4 feet.

22 C. parvifo'lia (Willd. spec. 2. p. 628.) flowers 10-anthered, 5-parted, spreading-reflexed; pedicels crowded, lateral, 1-flowered; leaves ovate, acuminated, crenate-serrated, smooth. ♄. S. Native of Martinique, Guadaloupe, and Porto-Rico. C. decándra, Jacq. amer. t. 85. C. punctàta, Spreng. new. entd. 2. p. 154. Flowers whitish. Ovary conical, taper-pointed, hairy. Pulp of fruit yellow.

Small-leaved Casearia. Clt. 1827. Shrub 6 feet.

23 C. acumina'ta (D. C. prod. 2. p. 50.) flowers 10-anthered, 5-parted, small, quite smooth: pedicels axillary, crowded, 1-flowered; leaves ovate-lanceolate, taper-pointed, crenate-serrated, smooth, without dots. ♄. S. Native of French Guiana. Sterile filaments short, scarcely hairy. Flowers whitish.

Acuminate-leaved Casearia. Shrub 6 feet.

24 C. macrophy'lla (Vahl. ecl. 2. p. 32.) flowers 10-anthered, 5-parted, rather velvety; pedicels crowded, axillary, 1-flowered; leaves elliptical, taper-pointed, a little crenated, smooth on both surfaces. ♄. S. Native of Cayenne. Pitúmba Guianénsis, Aubl. guian. 2. app. 29. t. 385. C. Pitúmba, Poir. dict. 6. p. 492. Fertile and sterile stamens villous. Leaves 6-8 inches long. Flowers 2-3 lines long, whitish? Fruit about the size of a walnut.

Long-leaved Casearia. Shrub 8 feet.

25 C. pauciflo'ra (St. Hil. fl. bras. 2. p. 235.) branches smooth at the bottom, but pubescently tomentose at the apex; leaves oblong-lanceolate, long-acuminated, nearly entire, dotless, puberulous; flowers pubescently-tomentose, umbellate; umbels sessile; fertile stamens 10, 3-times shorter than the calyx; style undivided. ♄. S. Native of Brazil, in the province of Minas Geraes. Flowers white inside.

Few-flowered Casearia. Shrub 4 to 5 feet.

26 C. oblongifo'lia (St. Hil. fl. bras. 2. p. 234.) branches smooth; leaves oblong, acute, nearly entire, full of pellucid dots, smooth; flowers puberulous, umbellate; umbels sessile; fertile stamens 10, 3-times shorter than the calyx: style undivided. ♄. S. Native of Brazil, in the province of Rio Janeiro.

Oblong-leaved Casearia. Shrub 4 to 5 feet.

27 C. li'ngua (St. Hil. fl. bras. 2. p. 236.) branches puberulous; leaves oblong-lanceolate, roundish at the base, acumin-

ated, serrulated, full of pellucid dots, smoothish; flowers pubescent, umbellate; umbels sessile; fertile stamens 10, 3-times shorter than the calyx; style trifid. ♄. S. Native of Brazil, in the province of Minas Geraes, where it is called *Lingua de Fia*, and of the province of Goyaz, where it is called *Cha de frade*. A decoction of the leaves of this plant is used in the interior of Brazil in inflammatory diseases and malignant fevers.

Lingua Casearia. Shrub 4 to 6 feet.

28 C. Commersonia'na (St. Hil. fl. bras. 2. p. 235.) branches smooth; leaves oblong-elliptic, narrowed at the base and apex, bluntly acuminated, obsoletely crenate-serrated, smoothish, dotless; flowers pubescently-tomentose, umbellate; umbels sessile; fertile stamens 10, nearly equal in length to the calyx; style trifid. ♄. S. Native of Brazil near Rio Janeiro. Calyx white inside.

Commerson's Casearia. Shrub 4 to 6 feet.

29 C. stipula'ris (Vent. choix. t. 46.) flowers 10-anthered, 5-parted, somewhat canescent; style undivided; pedicels disposed in a stalked, axillary umbel; leaves oblong-lanceolate, taper-pointed, smooth, and shining above, but clothed with hoary tomentum beneath, sharply serrated, full of pellucid dots; branches clothed with white tomentum. ♄. S. Native of Guiana, Porto-Rico, St. Domingo, and Brazil. Samyda arbòrea, Rich. act. soc. hist. nat. par. 1792. C. incàna, Bert. ined. Stipulas linear, very long, deciduous. Flowers whitish.

Stipular Casearia. Shrub 4 to 8 feet.

30 C. zizyphoìdes (H. B. et Kunth. nov. gen. amer. 5. p. 362.) flowers 10-anthered, 5-cleft; leav [illegible]-oblong, taper-pointed, rounded at the base, crenate-ser[illegible], smooth; pedicels axillary, crowded in an umbel. ♄. S. Native of South America, between Cumana and Caraccas, near the city of New Barcelona. Calyx white inside.

Zizyphus-like Casearia. Shrub 6 to 8 feet.

31 C. celtidifòlia (H. B. et Kunth, nov. gen. et spec. amer. 5. p. 362.) flowers 10-anthered, 5-cleft; leaves oblong, taper-pointed, acute at the base, smooth, dentately-crenulate, teeth mucronate, middle nerve puberulous beneath; umbels axillary, many-flowered, on short stalks. ♄. S. Native of South America, on the banks of the river Orinoco, near Angustura and Charichana. Calyx white inside.

Celtis-leaved Casearia. Tree 20 feet.

32 C. prunifo'lia (H. B. et Kunth, nov. gen. amer. l. c.) flowers 10-anthered, 5-parted; pedicels in glomerate, axillary fascicles; leaves oblong, taper-pointed, acute at the base, obsoletely toothletted, smooth, membranous, without dots. ♄. S. Native of South America, in the province of Bracamora. Calyx white inside.

Plum-leaved Casearia. Tree 20 feet.

33 C. mòllis (H. B. et Kunth, nov. gen. amer. 5. p. 362. t. 480.) flowers 10-anthered, 5-parted; pedicels crowded in axillary umbels; leaves elliptical-oblong, taper-pointed, rounded at the base, toothed, smoothish above, but covered beneath with rusty down. ♄. S. Native of Caraccas, in shady valleys, near Araguen. Flowers whitish.

Soft Casearia. Shrub.

34 C. rufescens (St. Hil. fl. bras. 2. p. 231.) branches clothed with rufescent tomentum; leaves elliptical, short, acuminated, serrulated, smooth above, but clothed with rufescent tomentum beneath, full of pellucid dots; flowers puberulous, umbellate; umbels sessile; fertile stamens 10, one-half shorter than the calyx; style undivided. ♄. S. Native of Brazil, in the province of Minas Geraes, in that part called Minas Novas.

Rufescent Casearia. Shrub 4 to 6 feet.

35 C. hirsu'ta (Swartz. fl. ind. occ. 2. p. 755.) flowers 10-anthered, 5-parted, pubescently-villous; pedicels crowded, lateral, 1-flowered; leaves ovate, taper-pointed, serrate-toothed, hairy above and villous beneath. ♄. S. Native of Jamaica and St. Domingo, on the mountains. Flowers whitish. Fruit trigonal.

Var. β, glabràta (D. C. prod. 2. p. 50.) leaves smooth on the upper surface, but smooth on both surfaces in the adult leaves. ♄. S. Native of Porto-Rico.

Hairy-leaved Casearia. Clt. 1825. Shrub 6 feet.

36 C. fra'gilis (Vent. choix. no. 47. in a note,) flowers 10-anthered, 5-parted, smooth; pedicels axillary, few, 1-flowered; leaves ovate-lanceolate, thickish, smooth, quite entire. ♄. S. Native of the East Indies, and the Mauritius. Clàsta fràgilis, Comm. ind. Flowers whitish inside.

Brittle Casearia. Shrub 6 feet.

37 C. Guinee'nsis; flowers 5-cleft, 10-anthered; leaves ovate-lanceolate, acuminated, serrated, 3-nerved at the base, very villous, as well as the branches; peduncles many-flowered, crowded, axillary. ♄. S. Native of Guinea. Flowers small, green.

Guinea Casearia. Shrub 4 to 6 feet.

38 C. grewiæfòlia (Vent. choix. no. 48. in a note,) flowers 10-anthered; pedicels axillary, 1-flowered; leaves cordate-oblong, serrulated, downy beneath. ♄. S. Native of Java.

Grewia-leaved Casearia. Shrub.

39 C. elli'ptica (Willd. spec. 2. p. 628.) flowers 10-anthered, 5-parted; pedicels axillary, crowded, 1-flowered; leaves elliptic-lanceolate, a little serrated, bluntish, young ones pubescent beneath. ♄. S. Native of the East Indies. Anavínga lanceolàta, Lam. dict. 1. p. 146. ill. t. 355. f. 1. Flowers whitish.

Elliptical-leaved Casearia. Shrub 6 feet.

40 C. obli'qua (Spreng. syst. 2. p. 355.) flowers 10-anthered, 5-cleft, subsessile, axillary, solitary, very small; leaves oblong-lanceolate, triple-nerved, acuminated, unequal-sided, serrulated, smooth on both surfaces, shining above, and full of pellucid dots. ♄. S. Native of Brazil. Flowers whitish.

Oblique-leaved Casearia. Shrub.

41 C. Melista'urum (D. C. prod. 2. p. 51.) flowers 10-anthered, polygamous, 5-parted; lobes concave, obtuse, spreading; sterile stamens awl-shaped, pilose at the apex; style very short. ♄. G. Native of New Caledonia. Melistàurum dístichum, Forst. gen. t. 72. Samỳda polyándra, Willd. spec. 2. p. 626. The name is derived from μελι, honey, and σαυρος, a stake; the nectary bearing some resemblance to a fence of that kind.

Melistaurum Casearia. Shrub 6 feet.

42 C. Samy'da (D. C. prod. 2. p. 51.) flowers 10-anthered; sterile filaments fringed; style very short; calyxes 5-parted; capsule 3-furrowed. ♄. S. Native of Porto Rico. Anavínga Samỳda, Gært. fil. 3. p. 240. t. 224. This is probably identical with one of the Decantherous species described above.

Samyda-like Casearia. Shrub 6 feet.

§ 4. *Dodecanthèra* (from δωδεκα, *dodeca*, twelve, and ανθηρα, *anthera*, an anther). *D. C. prod.* 2. *p.* 51. *Fertile stamens* 12-15, *with an equal number of sterile ones.*

43 C. tinifòlia (Vent. choix. t. 47.) flowers 12-anthered, sterile filaments awl-shaped; calyx 5-parted, spreading; pedicels solitary, axillary, 1-flowered; leaves obovate, smooth, quite entire, evidently full of pellucid dots. ♄. S. Native of Java. Flowers the size of those of *Samỳda serrulàta*, white.

Tinus-leaved Casearia. Shrub.

44 C. adama'ntum (St. Hil. fl. bras. 2. p. 230. t. 125.) branches smooth above, but covered with rusty tomentum below; leaves obovate, short-acuminated, serrulated, full of pellucid dots; flowers umbellate; umbels sessile; fertile stamens 12, a little shorter than the calyx; style undivided. ♄. S. Native of Brazil, in the province of Minas Geraes, in that part called Distrito dos Diamantes.

Adamant Casearia. Shrub 5 feet.

45 C. Javite'nsis (H. B. et Kunth. nov. gen. amer. 5. p. 366. t. 479.) flowers 15-anthered; sterile filaments hairy; style trifid; calyx 5-parted, reflexed; pedicels axillary, umbellately-crowded, 1-flowered; leaves elliptical-oblong, acuminated, remotely-toothed, smooth, shining, without dots. ♄. S. Native of Cayenne and New Guiana. Lindlèya glàbra, Kunth. Flowers greenish-yellow. Perhaps a species of *Chætocràter*.

Javita Casearia. Tree 20 feet.

† *Species not sufficiently known.*

46 C. viridiflòra (D.C. prod. 2. p. 51.) leaves ovate-elliptical, smooth, somewhat coriaceous, rather crenulated; flowers almost sessile, fascicled, axillary. ♄. S. Native of the East Indies. Samỳda viridiflòra, Poir. dict. 6. p. 493. Flowers greenish.

Green-flowered Casearia. Clt. 1820. Shrub 6 feet.

47 C. denta'ta (Moc. et Sesse, fl. mex. icon. ined. D. C. prod. 2. p. 51.) flowers decandrous, 5-parted; pedicels axillary, very short, 1-flowered, 3 or 4 together; leaves oval, bluntish, toothed, with the petioles and nerves pubescent. ♄. S. Native of Mexico. This is probably identical with *C. hirsùta.*

Toothed-leaved Casearia. Shrub 6 feet.

48 C. du'bia (Moc. et Sesse, fl. mex. icon. ined. D. C. prod. 2. p. 51.) flowers decandrous, 5-parted; peduncles axillary, in corymbose racemes, the length of the leaves; leaves ovate-lanceolate, serrated, acute, smooth. ♄. S. Native of Mexico.

Doubtful Casearia. Shrub.

† † *Species only known by name, without any description being given.*

49 C. Vare'ca (Roxb. hort. beng. p. 33.) ♄. S. Native of Silhet, in the East Indies. Its Bengal name is *Tittachcera.*

Vareca Casearia. Shrub.

50 C. gla'bra (Roxb. l. c.) ♄. S. Native of the Moluccas.

Smooth Casearia. Shrub.

51 C. tomentòsa (Roxb. l. c.) ♄. S. Native of the East Indies, among the Circars, where it is called *Garugoodoo.*

Downy Casearia. Shrub 6 feet.

52 C. esculé'nta (Roxb. l. c.) ♄. S. Native of the East Indies, among the Circars, where it is called *Kundajungira.*

Esculent Casearia. Shrub 6 feet.

Cult. See end of order for culture and propagation.

III. CHÆTOCRA'TER (from χαιτη, *chaite*, a head of hair, and κρατηρ, *crater*, a cup; in allusion to the stamens being joined at the base into a cup-shaped tube). Ruiz et Pav. prod. fl. per. 61. t. 36. syst. p. 106. D. C. prod. 2. p. 52.—Cratèria, Pers. ench. 1. p. 485.

Lin. syst. *Monadélphia, Decándria.* Calyx 5-parted. Stamens 20, joined at the base into a cup-shaped tube, 10 of which bear anthers, and are shorter than the rest, the 10 sterile ones are bristle-formed and hairy. Stigmas 3.

1 C. fascicula'tum (Ruiz et Pav. fl. per. syst. 107.) leaves oblong, serrated, acuminated; flowers in fascicles. ♄. S. Native of Peru, in the groves of Chinchao. Cratèria fasciculàta, Pers. ench. 1. p. 485. Bark rather bitter, furnishing a cream colour.

Fascicled-flowered Chætocrater. Tree 24 feet.

2 C. capita'tum (Ruiz et Pav. fl. per. syst. 108.) leaves oblong, serrated, taper-pointed, full of dots; flowers capitate. ♄. S. Native of Peru, in the groves of Cuchero. Cratèria capitata, Pers. ench. 1. p. 485.

Headed-flowered Chætocrater. Tree 18 feet.

Cult. All the genera of this order will thrive in a mixture of loam and peat, with a little sand; and cuttings will strike root readily if planted in a pot of sand, plunged in a moderate heat, with a hand-glass placed over them. The plants of the first section of *Samỳda* are the most worthy of cultivation.

Order LXX. HOMALI'NEÆ

(plants agreeing with *Homàlium* in important characters). R. Brown. cong. p. 19. D. C. prod. 2. p. 53.

Flowers hermaphrodite. Tube of calyx short, obconical, usually, or perhaps always, adhering to the ovary; limb parted into pairs of lobes, from the number of 10 (f. 12. *a.*) to 30, outer lobes calyciform, larger than the inner ones (f. 12. *a.*), somewhat valvate in æstivation between themselves, alternate or inner ones smaller (f. 12. *a.*), petaloid, disposed in a similar mode to the outer ones in æstivation, all spreading when in flower. Petals wanting, but with sessile glands at the base (rarely in the middle) of the inner lobes of the calyx, and perhaps on the outer ones also. Stamens rising from the apex of the tube of the calyx between the glands, opposite the outer lobes of the calyx, sometimes equal in number with the lobes of the calyx, but usually 3 or 7 times that number disposed in fascicles, therefore multiple the number of the calycine lobes. Anthers 2-celled, didymous, opening by a double chink. Ovary conical, 1-celled, containing numerous ovula, usually adhering to the calyx at the base, but in part free. Styles 3-5, simple, filiform or awl-shaped. Pericarp capsular, or somewhat baccate, 1-celled. Placentas parietal, the same number as the styles, many-seeded. Seeds small, ovate, or angular. Embryo inclosed in a fleshy albumen.—Shrubs or trees, natives of the warmer regions of the world. Leaves alternate, stalked, simple, feather-nerved, toothed or quite entire. Stipulas deciduous, or probably for the most part wanting. Flowers spicate, racemose or panicled. This order agrees with *Rosàceæ* in the insertion of the stamens, but in the structure of the fruit it comes near to *Bixíneæ* and *Flacourtiàneæ*. From the absence of the petals, and the insertion of the stamens, as well as in the structure of the fruit, it comes nearest to *Samy'deæ*. Probably *Maunèia* should be referred to this order.

Synopsis of the Genera.

1 Homa'lium. Tube of calyx obconical, with a 12 (f. 12. *a.*) -14-parted limb disposed in a double series, inner lobes narrowest. Stamens in fascicles, placed in front of the outer lobes of the calyx, each fascicle containing 3-6 stamens. Styles 3, filiform.

2 Napimòga. The character the same as in *Homàlium*, but destitute of glands at the base of the inner lobes of the calyx.

3 Aza'ra. Calyx 4-5-parted. Stamens numerous, inserted in the bottom of the calyx. Styles 3, joined.

4 Pine'da. Calyx 8-10-parted, in a double series. Stamens indefinite in fascicles. Style simple. Stigma trigonal, sulcate. Berry 1-celled. Placentas 4, fleshy, adhering lengthwise to the parietes, many-seeded.

5 **Blackwe'llia.** Tube of calyx short; limb 10-30-parted, inner lobes smallest. Stamens inserted in the calyx, at the base of the glandless lobes. Ovary conical above. Styles 3-5. Capsule 1-celled, many-seeded. Seeds fixed to the parietes.

6 **Illígera.** Calyx 10-parted, in 2 series; inner segments petaloid. Stamens 5, inserted in the base of the calyx, and alternating with 5 glands. Style crowned by a peltate emarginate stigma. Ovary inferior, 1-celled, 1-ovulate.

7 **Rhinanthe'ra.** Calyx 10-parted; segments disposed in a double series. Stamens 5, inserted in the base of the calyx, alternating with 5 glands. Style crowned by a peltate emarginate stigma.

8 **Astra'nthus.** Tube of calyx short, limb 14-cleft, the 7 alternate lobes shortest. Stamens 7: anthers 3-celled. Ovary free. Styles 4. Fruit 1-seeded.

9 **Ny'sa.** Calyx turbinate, 10-12-cleft, in a double series. Stamens 5-6, opposite the inner lobes of the calyx. Ovary half adhering to the calyx. Styles 2-3. Fruit unknown.

10 **Myrianthe'ia.** Calyx campanulate, 10-cleft, the 5 inner lobes unguiculate and petaloid. Stamens inserted in the calyx, in 5 4-5 anthered fascicles. Ovary conical at the apex, inclosing 4 ovula. Styles 4. Fruit 1-seeded from abortion.

† *Genera allied to Homalineæ.*

11 **Asterope'ia.** Calyx large, 5-cleft; lobes oblong, expanded. Petals 5, deciduous, inserted in the calyx. Stamens 10, alternate ones shortest, adnate to the tube of the calyx. Ovary trigonal, 3-celled. Style short, 3-cleft. Stigmas capitate. Seeds fixed by their centre.

12 **Nei'llia.** Calyx campanulate, 5-cleft (f. 10. *b.*). Petals 5 (f. 10. *d.*), roundish, sessile, inserted in the throat of the calyx. Stamens numerous, inserted with the petals in a double series (f. 10. *e.*). Style one, obtuse. Capsule 1-celled, many-seeded. Seeds numerous, fixed to a single parietal placenta.

13 **Aristote'lia.** Calyx campanulate, 5-cleft. Petals 5, inserted in the bottom of the calyx. Stamens 15-18, in fascicles. Anthers bursting by 2 pores at the apex. Ovary free. Styles 3, connected at the base. Berry globose, 3-celled; cells 1-2-seeded. Seeds angular. Albumen fleshy. Embryo flat.

I. HOMA'LIUM (from ὁμαλος, *homalos*, equal, regular; the stamens are 21, and regularly divided into 3-stamened fascicles). Jacq. amer. 170. D. C. prod. 2. p. 53.—Acòma, Adans. fam. 2. p. 510.—Racóubea, Aubl. guian. 1. p. 590.

Lin. syst. *Polyadélphia, Polyándria.* Calyx somewhat conical, adhering to the ovary; limb disposed in a double series, 10 (f. 12. *a.*) -14-parted, inner lobes narrowest (f. 12. *a.*). Glands 6-7, placed at the base of the inner lobes of the calyx. Stamens placed in front of the outer lobes between the glands, in fascicles (f. 12. *a.*), containing 3 (f. 12. *a.*) or 6 stamens each. Ovary conical above. Styles 3, filiform.—Small trees, with oval-oblong, acuminated, serrated leaves, and with the flowers disposed in spicate racemes.

1 H. racemòsum (Jacq. amer. 170. t. 183. f. 72.) leaves membranous, serrated; racemes axillary and terminal; flowers pedicelled; fascicles triandrous. ♄. S. Native of Jamaica, Martinique, Guadaloupe, and other parts of South America. Lam. ill. t. 483. f. 2. There is a variety of this tree with 4 styles. Leaves ovate, bluntly-acuminated, with coarse deep serratures. Racemes length of leaves, perhaps always axillary. Flowers yellow? Jacq. amer. pict. t. 261. f. 43. A lofty tree, with habit and leaves of elm.

Racemose-flowered Homalium. Fl. May, July. Clt. 1816. Tree 60 ft.

2 H. Racou'bea (Swartz. fl. ind. occ. 991.) leaves coriaceous, toothed; racemes terminal; flowers almost sessile; fascicles of stamens triandrous. ♄. S. Native of Guiana. Racoúbea Guianénsis, Aubl. guian. 1. p. 590. t. 236. H. spicàtum, Lam. dict. 1. p. 62. ill. 483. f. 1. Racemes much longer than the leaves; flowers sessile, yellowish. *Racoúbea* is derived from its Guiana name.

Racoubea Homalium. Shrub 8 feet.

3 H. angustifòlium (Smith in Rees' cycl. no. 3.) leaves elliptical-lanceolate, almost entire; racemes axillary; flowers almost sessile; inner lobes of calyx obovate. ♄. S. Native of Sierra Leone. Flowers yellowish?

Narrow-leaved Homalium. Tree.

4 H. sena'rium (Moc. et Sesse, fl. mex. icon. ined. D. C. prod. 2. p. 54.) leaves ovate, coarsely-toothed; racemes axillary and terminal; flowers on pedicels; fascicles of stamens hexandrous. ♄. S. Native of Mexico.

Six-stamened Homalium. Shrub.

Cult. See end of order for culture and propagation.

II. NAPIMO'GA (its Guiana name). Aubl. guian. 1. p. 592. t. 237. D. C. prod. 2. p. 54.

Lin. syst. *Polyadélphia, Polyándria.* Character the same as *Homàlium*, but destitute of the glands at the inner lobes of the calyx.—A tree, with elliptical-oblong, serrated leaves, and axillary and terminal spikes of small greenish flowers. Stamens 18.

1 N. Guiane'nsis (Aubl. guian. l. c.) ♄. S. Native of Guiana, in woods. Homàlium Napimòga, Spreng. syst. app. p. 210.

Guiana Napimoga. Tree 20 feet.

Cult. See end of order for culture and propagation.

III. AZA'RA (in honour of Joseph Nicholas Azara, a Spanish promoter of botany). Ruiz et Pav. fl. per. et chil. prod. 1. p. 76. t. 36. syst. p. 1. p. 137. D. Don, in edinb. new. phil. journ. for Jan. 1831.

Lin. syst. *Polyándria, Monogýnia.* Perianthium 4-5-parted. Petals wanting. Stamens indefinite, inserted in the base of the calyx. Anthers round, 2-celled, bursting outwards. Styles 3, joined, crowned by 3 minute stigmas. Berry globose, 1-celled, few-seeded from abortion, opening by a fissure at the base of the styles. Placentas 3, parietal, alternating with the stigmas, with lateral branches. Seeds covered with spongy aril when mature, albuminous, having 2 covers; umbilicus basilar, perforated. Embryo straight, with reniform leafy cotyledons, and a terete radicle.—Leafy trees, with alternate, simple, stalked, stipulate leaves, which are bitter to the taste. Flowers disposed in corymbs or spikes, fragrant.

N. B. This genus has been inserted in *Bixíneæ*, p. 297. vol. 1. of this work, but since that part of the work has been printed the genus has been discovered to belong to *Homalíneæ.* We have therefore given a fresh character both of the genus and species.

Sect. I. Aza'ra (see genus for derivation). Perianthium 5-7-parted, spreading, with the segments somewhat imbricate in æstivation. Stamens indefinite, many sterile.

1 A. denta'ta (Ruiz et Pav. fl. per. et chil. syst. 1. p. 138. fl. per. 5. t. 465. f. a.) leaves ovate, serrated, scabrous, tomen-

tose beneath; corymbs sessile, few-flowered; stipulas leafy, unequal, one of which is large, and the other small. ♄. G. Native of Chili, in groves about Conception, where it is called *Corcolen*.

Toothed-leaved Azara. Fl. June, Sept. Shrub 12 feet.

2 A. serra'ta (Ruiz et Pav. fl. per. et chil. syst. 1. p. 137. gen. t. 36. fl. per. 5. t. 465. f. *b*.) leaves oblong, serrated, smooth; corymbs stalked, many-flowered. ♄. G. Native with the first. Stipulas leafy, one much longer than the other.

Serrate-leaved Azara. Shrub 12 feet.

Sect. II. Alme'ja (a word of no meaning). D. Don, in edinb. new phil. journ. Jan. 1831. Perianth with a connivent 4-cleft limb, furnished with scales on the inside, valvate in æstivation. Stamens definite, all fertile, disposed in fascicles opposite the lobes of the perianth.

3 A. integrifòlia (Ruiz et Pav. syst. fl. per. et chil. 1. p. 138. fl. per. 5. t. 466. f. *a*.) leaves obovate or oblong, entire, smooth; stipulas equal, permanent; flowers spiked. ♄. G. Native with the others, where it is also called *Corcolen*.

Entire-leaved Azara. Fl. June, Aug. Shrub 12 feet.

† *A doubtful species.*

1 A. celastri'na (D. Don, in edinb. new. phil. journ. for Jan. 1831.) leaves roundish-oval, subserrulated, smooth; stipulas small, equal; flowers axillary, in fascicled panicles. ♄. G. Native of Chili.

Celastrus-like Azara. Shrub 10 feet.

Cult. See end of order for culture and propagation.

IV. PINE'DA (in honour of Anthony Pinedo, a Spanish naturalist, who went round the world with Malespine; he died on the voyage in 1762). Ruiz et Pav. fl. per. prod. 76. t. 14. syst. 1. p. 133. D. C. prod. 2. p. 54.

Lin. syst. *Polyándria, Tetragýnia.* Perianth 8-10-parted, permanent with the segments, disposed in a double order, imbricate in æstivation, outer ones largest. Petals wanting. Throat of perianth furnished with an elevated densely pilose ring. Stamens very numerous, disposed in a multiple order, inserted in the throat of the perianth; filaments capillary, smooth; anthers roundish, 2-celled, bursting outwards lengthwise. Styles 3-4-5, joined in one, crowned by as many pruinose stigmas. Capsule or berry free, crustaceous, valveless, opening by a fissure under the styles. Placentas 4, rarely 3 or 5, narrow, parietal, with lateral branches, alternating with the stigmas. Seeds few at maturity from abortion, pedicellate, roundish-obovate, depressed at the apex, arillate, having a double covering with a little hole at the base perforated even to the embryo. Albumen fleshy, white. Embryo straight, with kidney-shaped, flat cotyledons, and a terete, thick, obtuse radicle.—An erect, branched shrub, with scattered, stalked, elliptic-oblong, or obovate, emarginate, tomentose leaves, rather serrated at the apex. Stipulas 2, small, awl-shaped. Flowers numerous, terminal, corymbose. Peduncles filiform, 1-flowered, tomentose. Perianth tomentose. Stamens yellow.

1 P. inca'na (Ruiz et Pav. fl. per. l. c.) ♄. S. Native of Peru, among stones, where it is called *Lloqui*. Leaves oblong-obovate and lanceolate, serrated at the top. Homàlium incànum, Pers. ench. 2. p. 82. A twiggy shrub.

Hoary Pineda. Shrub 12 feet.

Cult. See end of order for culture and propagation.

V. BLACKWE'LLIA (in honour of Elizabeth Blackwell, an English artist; she published in 1735 a collection of drawings, entitled Curious Herbal). Comm. mss. Juss. gen. p. 343. Lam. ill. t. 412. but not of Gært. D. C. prod. 2. p. 54.

Lin. syst. *Dodecándria, Pentagýnia.* Calyx with a short tube, adhering to the ovary more or less; limb 10-30-parted, with the lobes in pairs, the inner ones smallest, outer ones larger, bearing glands at their base, but rarely in the middle. Stamens rising from the tube of the calyx, alternating with the glands, and therefore opposite the petals. Ovary conical above. Styles 3-5. Capsule 1-celled, many-seeded. Seeds fixed to the parietes.—Small trees, with ovate-toothed leaves and simple or panicled racemes of flowers, which are probably all whitish.

* *Racemes panicled.*

1 B. integrifòlia (Lam. dict. 1. p. 428. ill. t. 412. f. 2.) leaves ovate, blunt, smooth, for the most part quite entire; panicles terminal. ♄. S. Native of the Mauritius. Flowers dodecandrous.

Entire-leaved Blackwellia. Clt. 1823. Tree.

2 B. panicula'ta (Lam. dict. 1. p. 428.) leaves ovate-roundish, toothed, smooth; panicles terminal; flowers decandrous. ♄. S. Native of the island of Bourbon, where it is called *Bois a écorce blanche* from its white bark. Vermóntea decándra, Comm. ined. ex Steud. nom. p. 111. Flowers white.

Panicled-flowered Blackwellia. Clt. 1820. Tree.

3 B. glau'ca (Vent. choix. t. 55.) leaves ovate-oblong, obtuse, a little toothed, smooth, glaucous; racemes axillary, panicled; flowers with 7-8 anthers, and 5 styles. ♄. S. Native of the Mauritius. Flowers white.

Glaucous Blackwellia. Clt. 1824. Shrub.

4 B. Nipaule'nsis (D. C. prod. 2. p. 54.) leaves oval, acuminated, serrate-toothed, smooth; racemes axillary, panicled; flowers 6-7-anthered. ♄. G. Native of Nipaul. Branches terete, grey marked with lenticular, linear-oblong, white glands. Stipulas deciduous. Leaves 3 inches long, and an inch and a half broad. Racemes branched, many-flowered, a little shorter than the leaves. Flowers small, white.

Nipaul Blackwellia. Shrub.

5 B. cerasifòlia (Vent. choix. t. 56.) leaves elliptical, acuminated, toothed, smooth, shining; racemes axillary, panicled; flowers pentandrous; glands in the middle of the lobes of the calyx; ovary free. ♄. S. Native of Madagascar. Leaves like those of the common laurel. Flowers white.

Cherry-leaved Blackwellia. Tree.

* * *Racemes simple, spike-formed.*

6 B. axilla'ris (Lam. dict. 1. p. 428. ill. t. 412. f. 1.) leaves ovate, a little crenated, smooth; spikes axillary, long, simple, nodding. ♄. S. Native of Madagascar. Flowers white.

Axillary-racemed Blackwellia. Clt. 1824. Tree.

7 B. tomentòsa (Vent. choix. t. 57.) leaves cuneiformly-obovate, toothed, downy beneath; spikes axillary and terminal, erect, very long, and simple; flowers 5-6-anthered. ♄. S. Native of Java. Flowers white.

Downy-leaved Blackwellia. Tree.

8 B. spira'lis (Wall. in asiat. resear. vol. 13.) leaves obovate, with glandular teeth, rather pubescent beneath; spikes axillary, very long, nodding; flowers usually pentandrous. ♄. S. Native of Pegu, in the East Indies. Leaves almost sessile, cuneated at the base, 6-8 inches long, 2-3 broad, with distant blunt serratures. Spikes longer than the leaves, slender, simple, perhaps nodding when fresh, but they are erect in the specimen. Flowers white.

Var. β, *glabérrima* (D. C. prod. 2. p. 55.) leaves smaller, and more coarsely crenate-serrated, smooth, coriaceous; spikes almost 3 times longer than the leaves. ♄. S. Perhaps another species.

Spiral Blackwellia. Clt. 1820. Tree 20 feet.

9 B. PADIFLÒRA (Lindl. bot. reg. 1308.) leaves oval, denticulated, smooth; flowers hexandrous and tetragynous; racemes erect, shorter than the leaves. ♄. G. Native of China. Calyx 6-cleft. Petals 6, white. Perianth 12-parted, the inner segments ciliated, resembling very much an elaborately finished shuttlecock. The shrub will grow very well in the open border in summer.

Bird-cherry-flowered Blackwellia. Fl. Aug. Clt. 1824. Sh. 6 ft.

Cult. See end of order for culture and propagation.

VI. ILLI'GERA (in honour of C. W. Illiger, a naturalist). Blum. bijdr. 1155.

LIN. SYST. *Pentándria, Monogýnia.* Calyx superior, 10-parted; segments disposed in 2 series, inner series petaloid. Stamens 5, inserted in the base of the calyx, and alternating with 5 glands. Filaments naked at the base or biauriculate. Anthers erect, bursting valvately at the sides by 2 cells, as in *Laurìneæ.* Ovary inferior, 1-ovulate. Style crowned by a peltate emarginate stigma. Fruit unknown.—Sarmentose shrubs, with alternate, ternate, entire leaves, and axillary panicles of flowers.

1 I. APPENDICULA'TA (Blum. bijdr. 1153.) leaflets oval-oblong, bluntish, veiny, smooth; panicle tomentose; stamens biauriculate at the base. ♄. S. Native of Java, on the high mountains called Burangrany.

Appendiculate-stamened Illigera. Shrub straggling.

2 I. PU'LCHRA (Blum. bijdr. 1154.) leaflets oval-oblong, acuminated, veined transversely, and are, as well as the panicles, smooth; stamens without appendages. ♄. S. Native of Java.

Fair Illigera. Shrub straggling.

Cult. See end of order for culture and propagation.

VII. RHINANTHE'RA (from ριν, *rhin*, a snout, and ανθηρα, *anthera*, an anther; in allusion to the anthers being beaked). Blum. bijdr. 1121.

LIN. SYST. *Icosándria, Monogýnia.* Calyx 8-parted, permanent, with the segments disposed in 2 series, inner series largest and biglandular at the base. Corolla wanting. Stamens numerous, unequal; anthers beaked, 2-celled. Style 1, short, crowned by an obtuse 3-4-gonal stigma. Berry globose, beaked by the permanent style, 3-4-celled; cells 2-4-seeded. Embryo perhaps exalbuminous.—A branched spiny shrub, with alternate, ovate-oblong, serrulated, coriaceous, smooth leaves, which are biglandular at the base. Racemes axillary and terminal, short, tomentose. Flowers small, sweet-scented.

1 R. ODORATI'SSIMA (Blum. bijdr. l. c.) ♄. S. Native of Batavia, in boggy places.

Sweet-scented Rhinanthera. Shrub 6 feet.

Cult. A mixture of peat and sand will probably suit this plant; and ripened cuttings will perhaps root in sand under a hand-glass, in heat.

VIII. ASTRA'NTHUS (from αστρον, *astron*, a star, and ανθος, *anthos*, a flower; lobes radiating in a stellate manner). Lour. fl. cochin. D. C. prod. 2. p. 55. Sims, bot. mag. 2659.

LIN. SYST. *Heptándria, Tetragýnia.* Calyx with a short tube, with the limb cleft into 14 parts, the 7 alternate ones shortest. Stamens 7-10; anthers 3-celled. Ovary free. Styles 4-5. Fruit 1-seeded (Lour.). This genus is considered to be the same as *Blackwéllia.*

1 A. COCHINCHINE'NSIS (Lour. l. c.) ♄. G. Native of Cochin-china. Ker, bot. reg. 894. A tree, with ovate, serrated, lanuginous leaves. Spikes long, simple, axillary. Flowers white disposed in long, simple, axillary spikes.

Cochin-china Astranthus. Fl. Ju. July. Clt. 1823. Tree 15 ft.

Cult. See end of order for culture and propagation.

IX. NI'SA (meaning unknown). Pet. Th. gen. mad. no. 81. D. C. prod. 2. p. 55.

LIN. SYST. *Penta-Hexándria, Di-Trigýnia.* Calyx turbinate, 10-12-cleft, in a double series; the inner ones are called petals by Pet. Th.; these are erect. Glands alternating with the inner lobes of the calyx. Stamens 5-6, opposite the inner lobes, alternating with the glands. Ovary half adhering to the calycine tube. Styles 2-3. Fruit unknown.—Shrubs, with sinuate-toothed leaves.

1 N. NUDIFLÒRA (D. C. prod. 2. p. 55.) flowers in naked spikes. ♄. S. Native of Madagascar.

Naked-flowered Nisa. Shrub.

2 N. INVOLUCRA'TA (D. C. prod. 2. p. 55.) flowers enveloped in a large, compressed, coloured involucre. ♄. S. Native of Madagascar.

Involucrated-flowered Nisa. Shrub.

Cult. See end of order for culture and propagation.

X. MYRIANTHE'IA (from μυριος, *myrios*, a myriad, and ανθος, *anthos*, a flower; flowers numerous). Pet. Th. gen. mad. no. 71. D. C. prod. 2. p. 55.

LIN. SYST. *Polyadélphia, Polyándria.* Calyx campanulate, 10-cleft, outer lobes oblong, connivent, calyciform, inner lobes shorter, unguiculate, petal-like. Stamens inserted in the calyx, polyadelphous, fascicles 5, containing from 4 to 5 slender filaments. Scales 5, alternating with the fascicles of the stamens. Ovary half adhering to the calyx, conical at the apex, including 4 ovula. Styles 4. Fruit 1-seeded from abortion.—Small elegant trees or shrubs, natives of Madagascar, with alternate, short, stalked, thick leaves. Flowers numerous, white, in axillary racemes. The character of this genus is taken from Pet. Th. l. c., but the species still remain unpublished.

Cult. See end of order for culture and propagation.

† *Genera allied to Homalineæ.*

XI. ASTEROPE'IA (from αστρον, *astron*, a star; in allusion to the lobes of the calyx being disposed in a stellate manner). Pet. Th. gen. afr. aust. p. 51. t. 15. gen. mad. no. 73. D. C. prod. 2. p. 55.

LIN. SYST. *Decándria, Monogýnia.* Calyx large, permanent, 5-cleft; lobes oblong, expanded. Petals 5, deciduous, inserted in the calyx, and alternating with its lobes. Stamens 10, the 5 alternate ones shortest, adnate to the urceolus of the calyx. Ovary trigonal, 3-celled. Style short, trifid. Stigmas capitate. Seeds fixed by their centre.—A middle-sized tree, with alternate, short-stalked, quite entire leaves, and numerous purplish flowers, which are disposed in divaricating panicles.—This genus is said to be allied to *Blackwéllia* by the author Petit Thouars.

1 A. MULTIFLÒRA (Pet. Th. l. c.) ♄. S. Native of Madagascar, near Foul Point.

Many-flowered Asteropeia. Tree 20 feet.

Cult. See end of order for culture and propagation.

XII. NEI'LLIA (named by Mr D. Don, in honour of his friend Patrick Neill, of Edinburgh, F.R.S.E. and F.L.S., secretary of the Wernerian and Caledonian Horticultural societies of Edinburgh). D. Don, prod. fl. nep. p. 228.

LIN. SYST. *Icosándria, Monogýnia.* Calyx campanulate (f. 10. *b.*), free, 5-cleft. Petals 5, roundish (f. 10. *d.*), sessile, inserted in the throat of the calyx. Stamens numerous, disposed in a double series (f. 10. *e.*), inserted with the petals; filaments smooth; anthers roundish, 2-celled (f. 10. *h.*), bursting lengthwise outwardly. Style terete, smooth, crowned by an obtuse stigma (f. 10. *g.*). Capsule follicular, 1-celled, opening on the inner side, many-seeded, crowned by the permanent style, free within the calyx. Seeds spherical, shining, fixed to a single parietal placenta in a double series, having a double covering. Albumen fleshy. Embryo straight, with oval flat cotyledons, and a thick obtuse radicle. Plumule inconspicuous.—Shrubs, with the habit of *Spiræ'a*, with stipulate, simple, alternate, doubly-serrated, stalked leaves. Stipulas deciduous, membranous or leafy, acute. Flowers disposed in racemes, white, terminal or lateral.

1 N. thyrsiflòra (D. Don, prod. fl. nep. 228.) leaves cordate, ovate, and 3-lobed, doubly-serrated; stipulas leafy, serrated; racemes spicate, disposed in a terminal thyrse; bracteoles toothed; calyx silky. ♄. H. Native of Nipaul. A much branched shrub, with the branches canescent, and with the leaves villous on the nerves beneath.

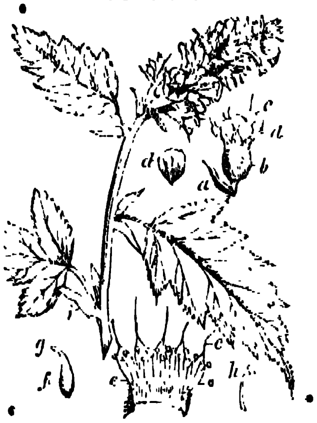
Thyrse-flowered Neillia. Shrub 6 feet.

2 N. rubiflòra (D. Don, prod. fl. nep. 229.) leaves cordate, 3-lobed, acuminated, doubly-serrated; stipulas entire, membranous; racemes terminal, solitary, many-flowered; bracteoles bluntish, entire; calyx tomentose; petals roundish. ♄. H. Native of Nipaul. Flowers twice the size of those of *N. thyrsiflòra*, and the calyx is furnished with pedicellate glands inside (f. 10.).

Bramble-flowered Neillia. Shrub 6 feet.

Cult. See end of order for culture and propagation.

FIG. 10.



XIII. ARISTOTE'LIA (named after Aristotle, the celebrated philosopher). Lher. stirp. p. 31. t. 16. D. C. prod. 2. p. 56. but not of Adans. nor Lour.

Lin. syst. *Polyadélphia, Polyándria.* Calyx campanulate, profoundly 5-cleft. Petals 5, inserted in the base of the calyx, and alternating with its lobes. Stamens 15-18, especially 3 or 4 in each bundle, placed in front of the lobes of the calyx. Anthers opening by 2 pores at the apex. Ovary free. Styles 3, somewhat connected at the base. Berry globose, 3-celled, each cell containing 1-2-ovula. Seeds angular, with fleshy albumen, and a flat embryo.—A shrub, with diffuse branches. Leaves nearly opposite, stalked, oblong, acute, smooth, shining, dentate, permanent. Stipulas deciduous. Racemes axillary. Flowers small, greenish. Some of the stamens are sterile. From the disposition of the stamens this genus agrees with *Homálium*, but from the dehiscence of the anthers it comes nearer to *Elæocárpeæ*.

1 A. Ma'cqui (Lher. l. c.) ♄. H. Native of Chili, where it is called *Macqui*. Lam. ill. t. 399. Wats. dend. brit. t. 44. A. glandulòsa, Ruiz et Pav. fl. per. syst. p. 126. Poir. suppl. 587. The berries are about the size of a pea, very dark purple, at length becoming black; they are acid and eatable. The inhabitants of Chili make a wine from them, which they give in malignant fevers. Dombey used this remedy with success in Chili against the plague in 1782.

Macqui Aristotelia. Fl. April, May. Clt. 1733. Sh. 6 ft.

Cult. The plants of this order are scarcely worth cultivating for ornament, as the flowers of all are extremely insignificant. The stove and greenhouse species will grow freely in a mixture of loam, sand, and peat; and cuttings nearly ripe will strike root if planted in a pot of sand, with a hand-glass placed over them; those of the former should be placed in a moderate heat. The *Aristotèlia Mácqui* and the species of *Neíllia* being hardy, and furnished with beautiful leaves, are worth cultivating in shrubberies, but they will require to be sheltered during winter by a mat, as the shoots are apt to be killed to the ground by frost. Any common garden soil will suit them, and ripened cuttings will root freely, planted under a hand-glass, and they may also be increased by layers.

Order LXXI. CHAILLETIA'CEÆ (plants agreeing with *Chaillètia* in important characters). D. C. prod. 2. p. 57. Chaillèteæ, R. Brown, cong. p. 23.

Calyx (perigone) permanent, 5-cleft (f. 11. *a. d.*) coloured inside, with the lobes imbricate in æstivation. Petals (or petal-like scales, or abortive stamens) rising from the bottom of the calyx and alternating with its lobes, situated almost in the same circle with the stamens (f. 11. *b.*), small, usually bifid (f. 11. *b.*), sometimes connected at the base with the stamens (f. 11. *d.*). Glands opposite, numerous. Stamens exserted from the calyx, and placed opposite its lobes (f. 11. *d.*), and therefore alternating with the petals; anthers roundish, 2-celled. Ovary free, hairy (f. 11. *h.*), 2-3-celled, each cell containing 2 ovula. Styles 2 (f. 11. *g.*), -3, short, free, or connected together. Stigmas somewhat capitate (f. 11. *g.*). Drupe (f. 11. *k. i.*), with a dry, coriaceous rind, containing a 2-3-celled nut, but usually 1-2-celled from abortion. Seeds solitary in each cell, hanging from the apex (f. 11. *i.*), destitute of albumen. Embryo thick, with a short superior radicle and fleshy cotyledons.—Shrubs with alternate, bistipulate, short, stalked, oval, acute, feather-nerved, entire leaves. Flowers axillary, white, usually with the peduncles adhering to the petioles. This order is furnished as if it were with a calyx and corolla.

Synopsis of the Genera.

1 Chaille'tia. Calyx 5-lobed (f. 11. *a.*). Petals 5, bifid (f. 11. *b.*). Stamens 5. Ovary 2-3-celled (f. 11. *f.*). Styles 2 (f. 11. *g.*) -3, free, or joined. Drupe dry, containing a 2-3-celled nut (f. 11. *i. k.*).

2 Leuco'sia. Calyx 5-cleft. Petals 5. Stamens 5. Ovary 3-seeded. Style 1. Drupe dry, containing a bony nut.

3 Tapu'ra. Calyx 5-parted; segments fringed. Petals 3, connate and connected with the filaments; they are divided. Stamens 3. Style 1, trifid.

I. CHAILLE'TIA (in honour of M. Chaillet, a Swiss botanist). D. C. ann. mus. 17. p. 153. with a figure, prod. 2. p. 57.—Patrìsia, Rohr. ined.—Mestòtes, Soland. mss. ined.

Lin. syst. *Pentándria, Mono-Trigýnia.* Calyx 5-lobed (f. 11. *a.*). Petals 5, bifid, or emarginate (f. 11. *b.*). Stamens 5. Ovary 2-3-celled, 2-3-styled (f. 11. *f.*). Styles free (f. 11. *g.*), or connected together. Shrubs with axillary cymes or racemes of flowers.

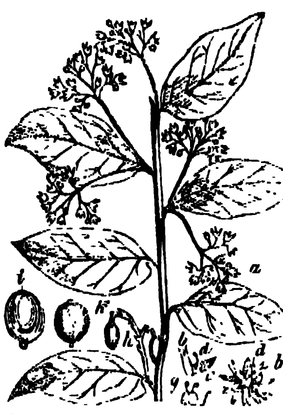
Sect. I. Mesto'tes (from μεστος, *mestos*, full). D. C. prod. 2. p. 57. Styles distinct.

1 C. peduncula'ta (D. C. l. c.) leaves ovate, obtuse, and un-

equal at the base; peduncles dichotomous, corymbose, adnate at the base to the petiole; petals bifid; styles free. ♄. S. Native of Cayenne. Flowers white (f. 11.).

Stalked-flowered Chailletia. Sh.

FIG. 11.



Sect. II. Dichape'talum (from διχα, *dicha*, double, and πεταλον, *petalon*, a petal; in allusion to the petals being emarginate). D. C. prod. 2. p. 57. Styles connected together.

2 C. Timorie'nsis (D. C. prod. 2. p. 57.) leaves oval, acuminated at both ends; peduncles dichotomously corymbose, not adhering to the petiole; petals obtuse, emarginate; styles connected together. ♄. S. Native of the island of Timor. Leaves smooth on both surfaces. Calyx and peduncles white from villi. Flowers white.

Timor Chailletia. Shrub 6 feet.

3 C. dichape'talum (R. Brown, cong. p. 24.) branches climbing, almost leafless; flowers in bundles in the axillæ of the leaves; petals bifid; styles joined. ♄. ◡. S. Native of Madagascar. Dichapétalum Madagascariénse, Pet. Th. gen. mad. no. 78. D. Thouarsiànum, Rœm. et Schult. syst. 5. p. 324. C. fasciculàta, Spreng. syst. 1. p. 931. Scales 5, at the base of the ovaries. Flowers white.

Double-petalled Chailletia. Shrub.

4 C. toxica'ria (G. Don, in edinb. phil. journ. 1824. oct. p. 348.) leaves oblong-lanceolate, acuminated, smooth, coriaceous, with wavy entire margins, on short stalks; racemes panicled, axillary, and terminal, pubescent; drupe ovate, pubescent. ♄. S. Native of the mountains of Sierra Leone, where it is called *rat-bane* by the colonists, the kernel of the fruit being used for poisoning rats. Flowers small, white. Fruit dry, the size of a plum.

Var. β, *comprêssa* (G. Don, l. c.) fruit roundish-compressed.

Poisonous Chailletia. Fl. year. Clt. 1823. Shrub 4 feet.

5 C. ere'cta (G. Don, l. c.) branches elongated, erect; leaves oblong-lanceolate, obtuse, emarginate, entire, smooth, coriaceous, stiff; flowers axillary; drupe ovate, roundish, pubescent, dry. ♄. S. Native of Sierra Leone, on the mountains. Fruit rather larger than those of the preceding species.

Erect Chailletia. Fl. Feb. Shrub 8 feet.

Cult. See end of order for culture and propagation.

II. LEUCO'SIA (from λευκος, *leucos*, white). Pet. Th. gen. mad. no. 79. D. C. prod. 2. p. 58.—Chaillètia, spec. R. Br.

Lin. syst. *Pentándria, Monogýnia.* Calyx 5-cleft. Petals 5. Stamens 5. Ovary adhering to the calyx, 3-seeded. Style 1. Fruit trigonal, containing a wrinkled bony nut.

1 L. Thouarsia'na (Rœm. et Schult. syst. 5. p. 324.). ♄. S. Native of Madagascar. A small weak shrub with few-nerved scabrous leaves, which are white from down beneath. Chaillètia Leucòsia, Spreng. syst. 1. p. 931.

Petit Thouars's Leucosia. Shrub 6 feet.

Cult. See end of the order for culture and propagation.

III. TAPU'RA (Tapura is the name of the tree in Guiana). Aubl. guian. 1. p. 126. t. 48. Rich. dict. p. 34. D. C. prod. 1. p. 58.—Róhria, Schreb. no. 63.

Lin. syst. *Triándria, Monogýnia.* Calyx 5-parted, with unequal, fringed lobes. Petals 3, connected with the filaments at the base, emulating a monopetalous corolla; the two longest are 2-parted, the third is short and 3-parted. Stamens 3. Style 1, trifid at apex. Fruit unknown.

1 T. Guiane'nsis (Aubl. guian. l. c.). ♄. S. Native of Guiana, in woods on the Serpent Mountain. Róhria petioliflòra, Willd. spec. 1. p. 186. Chaillètia sessiliflòra, D. C. ann. mus. 17. p. 153. t. 1. f. 2. Flowers yellow. The creoles call it *Bois de Golleti.*

Guiana Tapura. Shrub 8 feet.

Cult. The plants of this order are not worth cultivating but in the gardens of the curious, as neither their leaves nor flowers possess any beauty. They will grow in a mixture of loam and peat, and young cuttings will probably strike root in a pot of sand, under a hand-glass, in heat.

Order LXXII. AQUILARI'NEÆ (plants agreeing with *Aquilària* in important characters). R. Brown, congo. p. 25. D. C. prod. 2. p. 59.

Calyx or perigone, turbinate, coriaceous, 5-lobed (f. 12. *c.*); segments ovate, acute, spreading, permanent (f. 12. *h.*). Urceolus adhering to the bottom of the perigone, 5-parted, with bifid lobes (f. 12. *b. d.*). Stamens 10 (f. 12. *b.*), with short filaments protruding between the lobes of the urceolus, bearing long versatile anthers (f. 12. *c.*). Ovary free (f. 12. *c.*), stipitate ovate, crowned by a short simple stigma. Capsule pear-shaped (f. 12. *g.*), 2-valved, 2-celled (f. 12. *f.*), with a dissepiment in the middle of each valve (f. 12. *f.*). Seeds solitary in the cells from abortion, arillate or tailed.—Trees, with alternate, feather-nerved, quite entire leaves. This order is not sufficiently known. It differs from *Samýdeæ* in the seeds being fixed to a dissepiment, not to the parietes; from *Chailletiàceæ* in the seeds being erect, not inverted, as well as in the stamens being twice the number of the lobes of the perigone; from *Thymèleæ* in the fruit being 2-valved, 2-celled, 2-seeded. The genera are badly defined, and the species are scarcely known.

Synopsis of the Genera.

1 Aquila'ria. Perigone 5-cleft (f. 12. *c. h.*). Urceolus 10-lobed (f. 12. *d.*). Stamens 10 (f. 12. *b.*). Anthers versatile (f. 12. *c.*). Style none. Seeds covered by a spongy substance.

2 Ophispe'rmum. Perigone 6-parted. Urceolus 10-lobed. Stamens 10. Anthers adnate. Seed furnished on the side by a long scolloped wing.

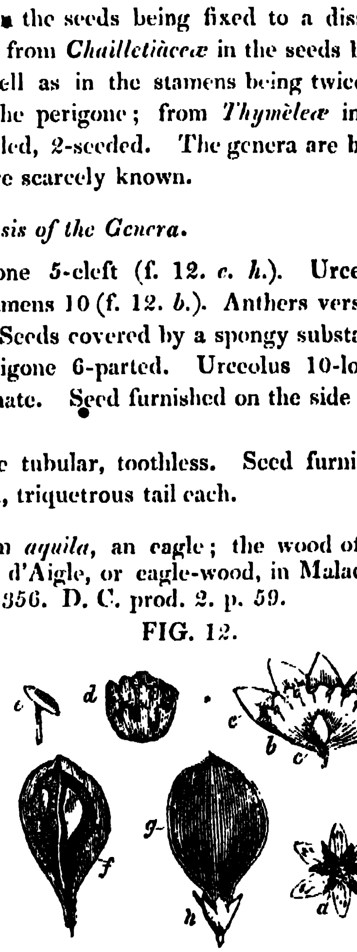
3 Gyrino'ps. Perigone tubular, toothless. Seed furnished with a spongy, awl-shaped, triquetrous tail each.

I. AQUILA'RIA (from *aquila*, an eagle; the wood of *A. Malaccénsis* is called Bois d'Aigle, or eagle-wood, in Malacca). Lam. dict. 1. p. 49. ill. t. 356. D. C. prod. 2. p. 59.

Lin. syst. *Decándria, Monogýnia.* Perigone 5-cleft (f. 12. *c.h.*). Urceolus 5-lobed; lobes bifid (f. 12. *d*). Stamens 10. Anthers versatile (f. 12. *c.*), fixed by the middle. Style none. Seeds covered by a spongy body.

1 A. Malacce'nsis (Lam. l. c.) leaves ovate, abruptly-acuminated. ♄.

FIG. 12.



S. Native of Malacca. A. ovata, Cav. diss. 7. p. 377. t. 224. Bois d'Aigle, Sonnerat. The wood is whitish-yellow. Branches rather villous. Petioles short, hairy. Stipulas wanting. Leaves quite smooth. For the history of this tree see Lam. dict. 1. p. 49.

Malacca Eagle-wood. Clt. 1823. Tree.

2 A. **Agallócha** (Roxb. hort. beng. p. 33.) ♄. S. Native of the East Indies, where it is called *Ugoor* or *Ugooroo* by the natives, and by Europeans *Lignum-aloes* or *Aloe-wood*, but the *Aloéxylon Loureìrii* is a very distinct plant from this and the following. The wood has a fine scent, and is called Agallochum. This shrub is supposed to be the *Calambac* or *Agallochum* of the ancients.

Agallochum or Aloe-wood. Tree.

3 A. **secunda'ria** (D. C. prod. 2. p. 59.) ♄. S. Native of the Moluccas. Agallóchum secundàrium, Rumph. amb. 2. t. 10. This species, according to Lamarck, differs from the preceding in the leaves being gradually acuminated, not abruptly so. The wood of this tree has been long used as a perfume, and was formerly an article of the Materia Medica, under the names of Agallochum, Lignum Aloes or Aloe-wood. This wood in its natural state is white and inodorous. That which possesses the peculiar aroma, for which it is valued, is supposed to be the consequence of a diseased process in the tree, causing the oleaginous particles to stagnate and concrete into resin in the inner part of the trunk and branches, by which the natural appearance of the wood is altered, so as to be of a darker colour, and of a fragrant smell. At length the tree dies, and when split the resinous part is taken out. The perfumes which this wood affords are highly esteemed by the oriental nations. This perfume is said to be useful in vertigo and palsy, given in the form of powder; it is recommended to restrain vomitings and alvine fluxes. But it seems to contain little else than that camphoraceous matter common to many other vegetable substances. From its bitter taste it has the name of aloes. The above description may apply to all the species, or perhaps to *Aloéxylon Agallóchum*. See *Leguminòsæ*.

Secondary Aloe-wood. Tree.

Cult. See end of order for culture and propagation.

II. **OPHISPE'RMUM** (from οφις, *ophis*, a snake, and σπερμα, *sperma*, a seed; in allusion to the twisted form of the seed). Lour. fl. coch. 281. D. C. prod. 2. p. 59.

Lin. syst. *Decándria, Monogýnia.* Perigone 6-parted. Urceolus 10-lobed, tomentose, placed in the orb at the base of the calyx. Stamens 10; anthers standing. Style longer than the stamens, bifid at the apex. Capsules compressed, opening at the apex. Seeds solitary, ovate, acuminate, furnished laterally by a long, somewhat terete, scolloped wing. This is a species of *Aquilària* according to Mr. R. Brown.

1 O. **Sine'nse** (Lour. l. c.) leaves lanceolate, wavy. ♄. G. Native of China. Aquilària Ophispérmum, Poir. dict. scienc. nat. 18. p. 161. A. Chinénsis, Spreng. syst. 2. p. 356. Calyx and stamens remaining with the capsule. Perigone sometimes 5-parted.

China Snake-seed. Tree 60 feet.

Cult. See end of order for culture and propagation.

III. **GYRINO'PS** (from γυρος, *gyros*, a circle, in allusion to the tail of the seed). Gært. fruct. 2. p. 276. t. 140. D. C. prod. 2. p. 60.

Lin. syst. ? Perigone tubular, short, toothless. Genitals unknown. Seeds furnished with a spongy, corky, triquetrous, awl-shaped tail, descending towards the bottom of the capsule.

1 G. **Wa'lla** (Gært. l. c.) ♄. S. Native of Ceylon, where it is called *Walla*. No part but the fruit of this tree is known.

Walla Gyronops. Tree.

Cult. The plants of this order are not worth cultivating unless in botanical gardens; the species will all grow in a mixture of loam and peat, and cuttings will strike root in sand under a hand-glass placed in heat.

Order LXXIII. TEREBINTHA'CEÆ. Juss. gen. 368. D. C. prod. 2. p. 61. in part. Anacardiàceæ, Lindl. introd. nat. syst. 127.

Flowers usually unisexual, rarely hermaphrodite. Calyx small and permanent, with 5, or occasionally 3-4 or 7 divisions. Petals equal in number to the divisions of the calyx, perigynous, sometimes wanting, imbricate in æstivation. Stamens equal in number to the segments of the calyx, perigynous, or twice that number, or even more, equal or alternately shorter, some of them sterile; filaments distinct, or in genera having no calycine disk, cohering at the base. Disk fleshy, annùlar, or cup-shaped, hypogynous, occasionally wanting. Ovary simple, very rarely 5-6, of which 4 or 5 are abortive, superior, rarely inferior, 1-celled. Styles 1-3, sometimes 4, and sometimes wanting, with an equal number of stigmas. Ovum solitary, attached by a cord to the bottom of the cell. Fruit indehiscent. Seeds exalbuminous. Embryo either with a superior or inferior radicle, but always directed towards the hilum, sometimes suddenly curved back, with leafy or fleshy cotyledons.—Trees or shrubs, full of resinous, gummy, caustic, highly poisonous, or even milky juice. Leaves alternate, simple, ternate, or pinnate, destitute of pellucid dots. Flowers terminal or axillary. All the orders broken off from *Terebinthàceæ*, are very nearly related to each other, and whatever affinity is borne by one of them will be participated in by all the others, in a greater or less degree. They are distinguished from *Rhámneæ* in their resinous juice, imbricate calyx, and stamens not opposite the petals; from *Celastrìneæ* by several of the same characters and the want of albumen; from *Rosàceæ* and *Leguminòsæ* by their dotted leaves, very minute stipulas, if any, resinous juice, solitary ovum, or by some one or other of these characters. Some of the trees contained in this order are celebrated for yielding a clammy juice, which is at first white and afterwards becomes black, and is used for varnishing in India.

The varnish from Silhet is chiefly procured from *Semecárpus*, one kind from *Anacárdium*. All these varnishes are dangerous, they inflame the skin and produce painful swellings. A valuable black lac or varnish is obtained from *Stagmària vernicíflua* (edin. phil. journ. 6. p. 400.). A black varnish, well known in India, is manufactured from the nuts of *Semecárpus* and the berries of *Holigárnia longifòlia*, and from the trunk of *Melanorrhœ'a*. The leaves of some species of *Schìnus* are so filled with resinous fluid, that the least degree of unusual repletion of the tissue, causes it to be discharged; thus some of them fill the air with their fragrance after rain, and *S. mólle* and some others expel their resin with much violence when immersed in water, so as to have the appearance of spontaneous motion, in consequence of recoil. *Schìnus arroeìra* is said by St. Hilaire to cause swellings on those who sleep under its shade. The fresh juicy bark of the *Arrueira* shrub, *S. mólle*, is used in Brazil for rubbing newly made ropes, which it covers with a very durable bright dark brown colour. The juice of the same plant is applied by the Indians in diseases of the eyes (Prince Maximil. trav. 270.). The fruit of *Semecárpus Anacárdium* and *Anacárdium occidentàle* is said to exercise a singular effect on the brain (Verey. bull. pharm. 1814. p. 271.). The bark of *Rhus glàbrum* is considered febrifugal, and is also employed as a mordant for red colours. Several species of *Comoclàdia* stain the skin black. The *Cashew* and the *Pistachia* are valuable for their nuts, which are well-known articles in the markets of Europe. The *Mango* is equally famous for its fruit within the tropics. Mastich is the produce of *Pistàcia lentiscus* and Venetian turpentine that of *Pistàcia terebínthus*. The bark of *Rhús coriària* is a powerful means of tanning the skins of animals, and several of the species of the same genus produce excellent varnishes.

Synopsis of the Genera.

Tribe I.

Anacardie'æ *or* Cassuvie'æ. *Petals and stamens inserted in the calycine disk or in the calyx. Ovary* 1, 1-*celled*, 1-*ovulate. Seed sustained by a funicle, which is inflexed at the apex and rising from the bottom of the cell, exalbuminose. Cotyledons thick, replicate above the radicle.*

1 Anaca'rdium. Flowers polygamo-dioecious. Calyx 5-parted. Petals 5, linear. Stamens 10, unequal, some sterile. Style and stigma one. Nut kidney-shaped, seated on a pear-shaped fruit. Leaves simple.

2 Rhinoca'rpus. Flowers polygamo-dioecious. Calyx 5-cleft. Petals 5, oblong. Stamens 10, 4 or 5 of which are only fertile. Style lateral. Nut oblique, compressed, seated on a thick pedicel. Leaves simple.

3 Semeca'rpus. Flowers polygamo-dioecious. Calyx 5-cleft. Petals 5, oblong. Ovary 1, sessile, 1-celled. Stamens 5, all fertile. Styles 3. Nut compressed, heart-shaped, seated on a thick depressed torus. Leaves simple.

4 Holiga'rna. Male and hermaphrodite flowers on divisions of the same tree. Calyx 5-toothed. Petals 5, villous. Stamens 5. Ovary 1-celled, 1-seeded. Nut olive-formed, somewhat compressed. Leaves simple.

5 Mangi'fera. Flowers polygamous. Calyx 5-parted. Petals 5. Stamens 5, 4 of which are usually without anthers. Style 1. Drupe baccate, rather compressed (f. 13. *b.*), containing a fibry woody nut (f. 13. c.). Leaves simple.

6 Buchana'nia. Flowers hermaphrodite. Calyx 5-cleft, rarely 3-4-cleft. Petals 5, inserted under the disk. Stamens 10. Disk 10-crenate. Ovaries 5 or concrete, 4 of which are barren, the styles are therefore 5, and the ovary 1. Drupe rather fleshy, 1-seeded. Leaves simple.

7 Conioge'ton. Flowers hermaphrodite. Calyx 5-parted. Petals 5. Stamens 10, equal. Ovaries 4-5, 1-styled, girded by a denticulated urceolus. Stigmas obtuse. Drupe solitary, containing a 1-seeded lenticular nut. Leaves simple.

8 Pista'cia. Flowers dioecious, apetalous, disposed in amentaceous racemes, each scale with 1 flower. Calyx 3-4-cleft. Ovary 1-3-celled. Stigmas 3, thickish. Drupe rather dry, containing a bony, 1-celled, 1-seeded nut. Leaves pinnate.

9 Astro'nium. Flowers dioecious. Calyx of 5 coloured sepals. Petals 5. Glands 5 in the disk. Stamens 5. Ovary 1. Styles 3, reflexed. Pericarp membranous, 1-seeded. Leaves impari-pinnate.

10 Melanorrhœ'a. Flowers hermaphrodite. Sepals 5, caducous, cohering valvately. Petals 5, rarely 6, imbricate in æstivation. Stamens numerous, inserted in the torus. Style 1. Fruit indehiscent, depressedly kidney-shaped, stalked. Leaves simple.

11 Comocla'dia. Flowers hermaphrodite or monoecious. Calyx 3-4-parted. Petals 3-4, long. Stamens 3-4, short. Ovary 1. Style none. Stigma 1. Drupe 1-celled, 1-seeded. Leaves impari-pinnate.

12 Cyrtoca'rpa. Flowers polygamous. Calyx 5-parted. Petals 5, sessile, imbricate in æstivation. Stamens 10. Disk large, 10-crenate. Style crowned by a 10-cleft stigma. Drupe obovate, having 5 tubercles above the middle, containing a hard nut. Leaves impari-pinnate.

13 Spathe'lia. Flowers dioecious or polygamous. Calyx 5-parted. Petals 5, hypogynous. Stamens 5, with tricuspidate filaments. Stigmas 3. Drupe 3-celled, trigonal, 3-winged, sometimes 2-celled and 2-winged. Cells 1-seeded. Leaves impari-pinnate. Perhaps belonging to *Sapindàceæ*.

14 Picra'mnia. Flowers dioecious. Calyx 3-5-parted. Petals 3-5. Stamens 3-5. Stigmas 2, sessile. Drupe containing a 2-celled, 2-seeded nut. Leaves impari-pinnate.

15 Bischófia. Flowers dioecious. Calyx 5-parted. Petals none. Stamens 5, connate. Ovary 3-celled; cells 2-ovulate. Stigmas 3, sessile. Fruit containing 3 1-seeded nuts. Leaves trifoliate.

16 Sa'bia. Flowers hermaphrodite. Calyx 5-cleft. Petals 5. Styles 2, contiguous, crowned by an obtuse stigma. Stamens 5, inserted in a 5-lobed disk. Drupe 2-lobed; lobes 1-seeded.

Tribe II.

Sumachi'neæ. *Petals and stamens inserted in the calycine disk or in the calyx. Ovary* 1, 1-*celled*, 1-*ovulate. Seed pendulous, suspended from a funicle, which rises from the base, exalbuminous. Cotyledons leafy, with the radicle inflexed above them.*

17 Rhu's. Calyx small, 5-parted. Petals 5. Stamens 5, all fertile, both in the male flowers and the hermaphrodite ones. Ovary 1, 1-celled, 1-seeded. Styles 3, short, or stigmas 3, sessile. Drupe nearly dry, 1-celled, containing a 1-celled, 1-2-3-seeded bony nut. Leaves variously compound, rarely simple.

18 Mau'ria. Flowers hermaphrodite. Calyx 4-5-lobed, urceolate. Petals 4-5. Stamens 8-10, inserted under the annular disk. Ovary 1, sessile, 1-celled, 1-seeded. Style very short, crowned by a 3-4-angled stigma. Fruit compressed, rather fleshy. Leaves impari-pinnate.

19 Stagma'ria. Flowers hermaphrodite. Calyx tubular, irregularly ruptured. Petals 5, inserted in the stipe of the ovary.

Stamens 5. Ovaries 1-3, 1-styled, only one of which comes to perfection. Berry 1-seeded.

20 Duva'ua. Flowers monoecious or dioecious. Calyx 4-cleft. Petals 4, concave. Stamens 8, inserted under the disk, unequal. Disk urceolate, 8-toothed. Ovary sessile. Styles 3-4, very short, crowned by capitate stigmas. Drupe globose, containing a coriaceous 1-seeded nut. Leaves simple.

21 Schìnus. Flowers dioecious. Calyx 5-parted. Petals 5. Stamens 10, with the filaments sterile in the male flowers. Ovary sessile. Stigmas 3-4, sessile, collected in a dot. Drupe with a thin fleshy epicarp, and a 1-seeded bony nut. Leaves impari-pinnate.

† *Genera allied to Terebinthàceæ, tribe Sumachìneæ, but are not sufficiently known.*

* *Petals 4-5. Stamens usually 3-5.*

22 Trice'ros. Calyx 5-parted. Petals 5. Stamens 5. Styles 3, simple. Berry coriaceous, 3-horned, 3-celled, containing 2-3-seeds. Leaves impari-pinnate.

23 Trattinìckia. Male and hermaphrodite flowers mixed. Calyx and corolla campanulate, and 3-toothed. Stamens 5, rising from the disk. Style subulate. Ovary 1. Leaves impari-pinnate.

24 Hue'rtea. Calyx 5-toothed. Petals 5, sessile. Stamens 5. Style bifid, acute. Drupe obovate, containing a 1-seeded, 1-celled nut. Leaves impari-pinnate.

25 Ru'mphia. Calyx tubular, 3-cleft. Petals 3. Stamens 3. Style 1. Drupe coriaceous, turbinate, 3-furrowed, containing a 3-celled, 3-seeded nut.

26 Ba'rbylus. Calyx 4-5-cleft, campanulate. Petals 4-5, rising from the margin of the calyx. Stamens 8-10, rising from the bottom of the calyx. Capsule 3-celled; cells 2-seeded. Leaves pinnate.

* * *Petals wanting. Stamens 10-12.*

27 Luna'nea. Flowers polygamous. Calyx coloured, 5-parted. Disk concave, 10-toothed. Stamens 10, inserted in the disk, and adnate to the outside of it. Ovary crowned by 5 stigmas. Capsule 1-celled, valveless (Rafin), half locular, 2-valved (Lunan). Leaves simple.

28 Heterode'ndron. Flowers hermaphrodite. Calyx 4-5-toothed. Stamens 10-12, hypogynous. Anthers 2-celled. Ovary bluntly 2-4-gonal, 2-4-celled, hairy. Style hardly any. Leaves simple.

29 Styloba'sium. Calyx urceolate, bluntly 5-lobed. Stamens 10, hypogynous. Anthers 2-celled. Ovary biovulate, bearing a filiform style laterally at the base, crowned by a capitate stigma. Drupe 1-celled, 1-seeded, girded by the calyx. Leaves simple. Flowers usually polygamous from abortion.

30 Gneo'rum. Flowers hermaphrodite. Calyx 3-4-toothed. Petals 3-4, imbricate in æstivation. Torus subglobose. Stamens 3-4. Stigmas 3-4. Drupes 3-4, baccate, joined to an axis, each containing a 2-celled putamen; cells 1-seeded. Leaves entire.

31 Suria'na. Flowers hermaphrodite. Calyx 5-parted. Petals 5, hypogynous. Stamens 5-10, some of them usually abortive. Carpels 5, bearing each on the side laterally a filiform style. Seed exalbuminous.

Tribe I.

ANACARDIE'Æ (trees agreeing with *Anacárdium* in important characters) or CASSUVIE'Æ. R. Br. congo. p. 12. D. C. prod. 2. p. 62. Petals and stamens inserted in the calycine disk or in the calyx. Ovary 1 from abortion, 1-celled, containing 1 ovum. Seed sustained by a funicle rising from the bottom of the cell, which is inflexed at the apex, without albumen. Cotyledons thick, replicate above the radicle.

I. ANACA'RDIUM (from *ανα*, *ana*, without, and *καρδια*, *kardia*, a heart; the nut is heart-shaped, and borne on the outside of the fruit). Rottb. coll. hafn. 2. p. 252. D. C. prod. 2. p. 62.—Acájuba, Gært. fruct. 1. t. 40. Acajòu, Tourn. inst. 435. Cassùvium, Lam. dict. 1. p. 22. ill. 322.

Lin. syst. *Polygàmia, Diœ̀cia.* Flowers polygamo-dioecious. Calyx 5-parted. Petals 5, linear, acuminated. Stamens 10, connate at the base, the tenth elongated and fertile. Style and stigma 1, lateral. Nut reniform, umbilicated, seated laterally on a fleshy, wide, pear-shaped peduncle, or what may be called a nut, seated on a fruit. Seed in conformity to the nut. Embryo erect, with half-moon-shaped cotyledons, and an exserted radicle.—Trees with entire, feather-nerved leaves, and terminal panicles of flowers.

1 A. occidenta'le (Lin. spec. 548.) leaves oval, cuneated, very blunt, somewhat emarginate, obovate-oblong, entire, smooth; panicle terminal, divaricate. ♄. S. Flowers small, of a dirty red colour, sweet-scented.

Var. α, *Americànum* (D. C. prod. 2. p. 62.) peduncle thick, about 10-times larger than the nut; longest filament bearing a globe-shaped anther, which is a little dilated at the apex. ♄. S. Native of the West Indies, and of most parts of South America. Jacq. amer. 1. t. 181. f. 35. pict. t. 121. Black. herb. t. 369. Catesb. car. 3. t. 9.

Var. β, *Indicum* (D. C. prod. 2. p. 62.) peduncle thick, scarcely 3-times larger than the nut; longest filament bearing a thick anther, the rest abortive. ♄. S. Native of the East India Islands. Rumph. amb. 1. p. 177. t. 69. Rheed. mal. 3. t. 54. Probably the American plant is a distinct species.

The *Cashew-nut* never exceeds 20 feet in heigth; it commonly rises to 12 or 16 feet, with spreading branches. The fruit or apple, or what is called above the thickened peduncle, has an agreeable, somewhat acid flavour, with some degree of astringency. It is sometimes of a yellowish, sometimes of a red colour. The juice expressed from it and fermented, yields a pleasant wine, and distilled a spirit is drawn from it, far exceeding arrack or rum, making an admirable punch, and powerfully promoting urine. Some planters in the West Indies and elsewhere roast the ripe fruit, or slice one or two into a bowl of punch to give it a pleasant flavour. The astringency of the juice has recommended it as a very signal remedy in dropsical habits. The nut springs from one end of the apple or peduncle. It is of the size and shape of a hare's kidney, but is much larger at the end next the fruit than at the other. The outer shell is of an ash-colour and very smooth, under this is another which covers the kernel, between these there is a thick inflammable oil, which is very caustic, this will raise blisters on the skin and has often been very troublesome to those who have incautiously put the nuts into their mouths to break the shell. This oil has been used with great success in eating off ring-worms, cancerous ulcers, and corns, but it ought to be applied with caution. The kernel, when fresh, has a most delicious taste, and abounds with a sweet milky juice. The broken kernels are sometimes imported for mixing with old Madeira wines, the flavour of which they improve. It is an ingredient in puddings, &c. &c. When older it is usually roasted, and in this state is not so proper for costive habits. Ground with cacao it makes an excellent chocolate. When kept too long it becomes shrivelled, and loses its flavour and best qualities. The thick oil of the shell tinges linen of a rusty iron colour, which can hardly be got out; and if any wood be smeared with the oil it prevents it from decaying. It would therefore be an excellent preserver to house timbers. From the body of the tree is procured by tapping or incision a milky juice, which will stain linen of a deep black that cannot be washed out again. The tree also annually exudes from 5 to 10 or 12 pounds weight of a fine semitransparent gum, similar to gum Arabic, and not inferior to it in virtue or quality, which perhaps renders it in some respects more valuable.

Cashew-nut or *Western* Anacardium. Fl. year. Clt. 1699. Tree 16 feet.

Cult. A light loamy soil answers the species of *Cashew-nut*, and ripened cuttings, with their leaves on, root freely in sand under a hand-glass, in heat.

II. RHINOCA'RPUS (from *ῥιν rhin*, a snout, and *καρπος*, *karpos*, a fruit; fruit ending in a snout). H. B. et Kunth, nov. gen. amer. 7. p. 5. t. 601.

LIN. SYST. *Polygàmia, Diœ'cia.* Flowers polygamous. Petals oblong, reflexed. Stamens 10, very unequal, 2 or 4 bearing anthers, the rest sterile, with the filaments connate at the base and adnate to the petals. Style sublateral, crowned by an obtuse stigma. Fruit oblique, compressed? 1-seeded, on a thick fleshy pedicel.—A tree with the habit of *Anacárdium*, having simple, scattered, entire, obovate, exstipulate leaves, and a terminal corymbose raceme of flowers, with racemose bracteate pedicels.

1 R. EXCE'LSA (Bert. ined. H. B. et Kunth, l. c.). ♄. S. Native of South America in St. Martha, Tobago, and New Granada. Anacárdium rhinocárpus, D. C. prod. 2. p. 62.

Tall Rhinocarpus. Tree 140 feet.

Cult. For culture and propagation see last genus.

III. SEMECA'RPUS (from *σημειον*, *semeion*, a mark, and *καρπος*, *karpos*, a fruit; use of juice). Lin. fil. suppl. 25. Kunth, gen. tereb. p. 5. D. C. prod. 2. p. 62.—Anacárdium, Lam. dict. 1. p. 139. ill. t. 208. Gært. fruct. 40.

LIN. SYST. *Polygàmia, Diœ'cia.* Flowers polygamo-dioecious. Calyx flat, 5-cleft. Petals 5, oblong. Stamens 5, all bearing anthers. Disk urceolar in the bottom of the flower. Ovary 1, sessile, girded by a tumid ring, 1-celled? Styles 3. Stigmas obtuse, emarginate. Nut compressed, heart-shaped, seated on a depressed, thickened torus. Seed conforming to the nut. Embryo inverted, with fleshy cotyledons and a 2-leaved plumule, with a small radicle lying at the top between the cotyledons.—Trees with entire feather-nerved leaves and axillary and terminal panicles of flowers.

1 S. ANACA'RDIUM (Lin. fil. suppl. 182.) leaves oblong, bluntish, glaucous beneath, more or less covered on the nerves beneath with scabrous down; panicle terminal, tomentose. ♄. S. Native of the East Indies, on mountains. Anacárdium orientàle officinàle, Anacàrdium officinàrum, Gært. fruct. 1. p. 192.

Var. α, angustifòlium (D. C. prod. 2. p. 62.) leaves taper-pointed at both ends. Rumph. amb. 1. t. 70. Anacárdium longifòlium, Lam. dict. 1. p. 140. S. Cassùvium, Spreng. syst. 1. p. 936.

Var. β, cuneifòlium (D. C. prod. 2. p. 62.) leaves wedge-shaped and acuminated at the base, blunt at the apex.

Var. γ, obtusiúsculum (D. C. prod. 2. p. 63.) leaves obovate, blunt at both ends. Roxb. cor. 1. t. 12. Anacárdium latifòlium, Lam. dict. 1. p. 139.

P. S. Perhaps all these varieties are as many species.

These are lofty trees with spreading branches. Leaves about eighteen inches long, and about 4 or 5 broad. Flowers small, of a greenish-yellow colour. Receptacle of the fruit when ripe yellow, about the size of the nut, which is black; the cover or shell is composed of 2 laminæ, the inner hard, the outer less so and leathery, between them are cells, which contain the black, corrosive, resinous juice, for which this nut has been long known; the juice is of a pale milk-colour till perfectly ripe, when it becomes black. The wood of this tree is reckoned of no use, not only on account of its softness, but also because it contains much acrid juice, which renders it dangerous to cut down and work upon. The fleshy receptacles on which the seeds rest are roasted in the ashes and eaten by the natives; their taste is very like that of roasted apples: unroasted they taste astringent and acrid, leaving a painful sensation on the tongue for some time. The kernels are rarely eaten. The green fruit, well pounded into a pulp, makes good bird-lime. The pure, black, acrid juice of the shell is employed by the natives externally to remove rheumatic pains, aches, and sprains: in tender constitutions it often produces inflammation and swelling; but where it has not these effects it is an efficacious remedy. It is employed by the Telinga physicians in the cure of almost every kind of venereal complaint. It is in general use for marking cotton cloths; the colour is improved and prevented from running by a little mixture of quick-lime and water. This juice is not soluble in water, and is only diffusable in spirits of wine, for it soon falls to the bottom, unless the menstruum be previously alkalised. The solution is then pretty complete, and of a deep black colour. It sinks in expressed oils, but unites perfectly with them: alkaline lixivium acts upon it with no better success than plain water.

Officinal *Anacardium* or Marking Fruit. Fl. July, Aug. Clt. 1820. Tree 50 feet.

Cult. For culture and propagation see *Anacárdium*.

IV. HOLIGA'RNA (from the appellation of the tree in the language of Karnata). Roxb. hort. beng. p. 22. cor. 3. p. 79. t. 282. D. C. prod. 2. p. 63.

LIN. SYST. *Polygàmia, Diœ'cia.* Flowers polygamous, male and female flowers in different divisions of the tree. Calyx 5-toothed. Petals 5, broadest at the base, and somewhat concrete, oblong, villous. Stamens 5, shorter than the corolla. Ovary in the hermaphrodite flowers adnate to the calyx, 1-celled, 1-seeded. Nut olive-formed, ovate, somewhat compressed, containing a valveless nut. Albumen wanting. Embryo inverted. Cotyledons thick. Radicle oblong, situated above the apex.—A tall Indian tree, with oblong, acuminated, feather-nerved, entire, smooth, coriaceous leaves, which are crowded towards the tops of the branches. Petioles short, bearing a bristle on each side. Panicles axillary. Flowers white. This genus is allied to *Semecárpus*.

1 H. LONGIFÒLIA (Roxb. cor. 3. t. 282.) ♄. S. Native of the East Indies, on the mountains of Malabar and Chittagong. —Rheed. mal. 4. p. 20. t. 9. ex Roxb. and therefore referable to Mangífera racemòsa, Lam. ill. 2. p. 113. The natives of Malabar by incision extract an exceedingly acrid juice, which they use as varnish. The nut is about the size of an olive, containing between the lamina numerous cells filled with black, rather thick, acrid fluid, as that of *Semecárpus*, which is also used as varnish.

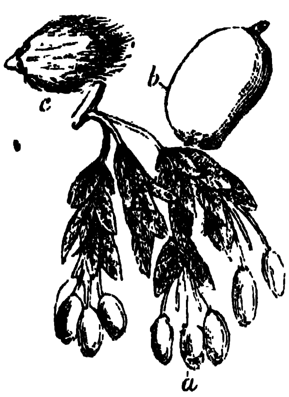
Long-leaved Holigarna. Tree 60 feet.

Cult. For culture and propagation see *Anacárdium.*

V. MANGI'FERA (from *Mango*, the name of the fruit, and *fero*, to bear). Lin. gen. no. 278. Gært. fruct. 2. t. 100. Kunth. gen. tereb. p. 3. D. C. prod. 2. p. 63.

Lin. syst. *Polygàmia, Monœ̀cia.* Flowers polygamous. Calyx 5-parted, deciduous. Petals 4-5. Stamens 5, 4 of these are usually barren. Style 1. Drupe baccate, somewhat compressed (f. 13. *b.*), containing a woody fibrous nut (f. 13. *c.*). Seed ovate-oblong. Embryo erect, with fleshy cotyledons, and a short radicle.—Indian trees, with long, entire, feather-nerved leaves, and terminal panicles of flowers. Fruit eatable.

FIG. 13.



1 M. I'ndica (Lin. spec. 290.) leaves oblong-lanceolate, stalked; panicle terminal, erect; petals spreading at the apex; 1 stamen fertile, the rest abortive; drupe somewhat kidney-shaped, smooth. ♄. S. Native of the East Indies, but now cultivated in every part of the world within the tropics. Lam. ill. t. 138.—Rheed. mal. 4. t. 1 and 2. M. A'mba, Forsk. descr. 205. M. doméstica, Gært. l. c.—Rumph. amb. 1. p. 93. t. 95. The Mango tree is tall, with a spreading top, and when in flower not unlike sweet-chesnut. The wood is a little brown, and used only for indifferent works. The leaves are 7 or 8 inches long, and 2 or more broad, of a fine strong green, and grow in bunches at the extremity of the branches. The flowers are whitish, streaked with yellow; these are disposed in loose terminal bunches or panicles. The fruit when fully ripe is yellow and reddish, or speckled with black, replete with a fine agreeable juice; some are full of fibres, and the juice runs out of these on cutting, or with a little handling; but those which have few or no fibres are much the finest; they cut like an apple, but are more juicy, and some are said to be as large as a man's fist, but the most common are about the size and appearance of a small golden pippin apple. It is esteemed a very wholesome fruit, and is considered the finest tropical fruit, with the exception of mangostan, and some of the finest pine apples. In India jellies, preserves, tarts, &c. are made from the unripe fruit. Gentlemen within the tropics eat hardly any other fruit in the hot months, but if no wine be drank with it, the Mango is apt to throw out boils, at least with new comers, which are, however, conducive to health. In Europe we have only the unripe fruit brought over in pickle. There are numerous varieties of the Mango, chiefly differing in the size, colour, flavour, and figure of the fruit, as apples and pears do in Europe. Retsius says, there are numerous species, the number of stamens being double in some, the racemes in others compound; the fruit kidney-shaped, globular, fleshy or almost juiceless. The fruit of the finest Mangos have a rich sweet-perfumed flavour, accompanied by a grateful acidity.

Indian or Common Mango. Fl. Ju. Sep. Clt. 1690. Tr. 50 ft.

2 M. macroca'rpa (Blum. bijdr. 1158.) leaves scattered on long stalks, elongated, linear-lanceolate; fruit large. ♄. S. Native of Java.

Long-fruited Mango-tree. Tree 60 feet.

3 M. fœ'tida (Lour. fl. cochin. 160.) leaves cuneated, lanceolate, acute, stiff, on short stalks; panicles of flowers erect, terminal, spreading; corolla funnel-shaped, with the segments at length, reflexed; drupe heart-shaped, downy. ♄. S. Native of Cochin-china, Java, and the Moluccas. Rumph. amb. 1. t. 28. Leaves about the size of those of the common mango, on long petioles, and scattered. Flowers red, disposed in terminal panicles, usually monandrous. The fruit is fleshy, strong-scented, of an acid flavour, and unwholesome, but is eaten by the Malays. The wood, though not very good, is used for floors, and lasts very well if it be soaked a considerable time in water.

Fetid Mango. Clt. 1824. Tree 50 feet.

4 M. glau'ca (Blum. bijdr. 1158.) leaves on short petioles, scattered, large, elliptic-oblong, tapering to both ends, glaucescent beneath; panicle terminal, divaricated, shorter than the leaves. ♄. S. Native of the Moluccas, where it is called *Manga utan*.

Glaucous Mango. Fl. July. Tree 50 feet.

5 M. laxiflòra (Desr. in Lam. dict. 3. p. 97.) leaves broad-lanceolate, sessile; panicles loose, pendulous; flowers pentandrous; drupe roundish. ♄. S. Native of the Mauritius. This is probably referable to M. pentándra of Lour. Flowers white. Fruit eatable?

Lax-flowered Mango. Tree 40 feet.

6 M. oppositifòlia (Roxb. hort. beng. 18.) leaves opposite, stalked, lanceolate, tapering to both ends; panicles axillary and terminal, shorter than the leaves; stamens 4-5, fertile; drupe smooth, compressed. ♄. S. Native of Pegu and Java, where it is called *Gandaria*, and *Meriam* at Rangoon. Flowers pale-yellow. Drupe pale-yellow, the size of a small pullet's egg, and is universally eaten in Burma.

Opposite-leaved Mango. Tree 30 feet.

7 M. sylva'tica (Roxb. l. c. fl. ind. 2. p. 438.) leaves alternate, lanceolate, glossy; panicles terminal; flowers monandrous; drupe smooth, obliquely-conical, with the point turned to one side. ♄. S. Native of Silhet, in the East Indies. *Lukshmee* is the vernacular name of this tree in Silhet. The fruit is like that of the common mango, and yellow; and is eaten by the natives, though by no means so palatable as the worst kind of the common mango. It is also dried by the natives and kept for medicinal purposes.

Wood Mango. Tree.

8 M. quadri'fida (Jack. mss. Wall. fl. ind. 2. p. 440.) leaves alternate, lanceolate, tapering to the base; panicles loose, axillary; flowers quadrifid, monandrous; petals 4, glandular in the middle. ♄. S. Native of Sumatra, &c. Flowers small, white. Nectary of 4 round fleshy lobes. Fruit roundish, becoming very dark.

Quadrifid-flowered Mango. Tree 60 feet.

9 M. cæ'sia (Jack. mss. Wall. fl. ind. 2. p. 441.) leaves alternate, stiff, broad-lanceolate, tapering to the base; panicle terminal, erect, tomentose, glaucous; flowers monandrous; petals erect; fruit oblong. ♄. S. Native of Sumatra. Corolla purple within, but paler without. Fruit oblong-ovate, of a pale-red colour.

Grey Mango. Tree 60 feet.

Cult. This is a fine genus of tropical fruit trees. Sandy loam, or a mixture of loam and peat, is the best soil for them. Fresh seed brought from the places of their natural growth will vegetate freely. The species may also be increased by ripened cuttings. In tropical countries, the best varieties are preserved by grafting, as apples are with us.

VI. BUCHANA'NIA (in honour of Francis Hamilton, M.D. formerly Buchanan, of Leny in Scotland, an excellent botanist, and great traveller in the East; formerly superintendent of the botanical garden at Calcutta). Roxb. hort. beng. p. 32. D. C. prod. 2. p. 63.—Láunzan, Buch. in asiat. res. 5. p. 123.—Buchanània and Cambessèdea, Kunth. gen. tereb. p. 4 and 6.

Lin. syst. *Decándria, Pentagýnia.* Flowers hermaphrodite. Calyx 5-cleft, rarely 3-4-cleft, obtuse. Petals 5, inserted under the disk, oblong, revolute, imbricate in æstivation. Stamens 10, shorter than the petals. Disk furnished with 10 crenatures, involving the ovary. Ovaries 5, concrete, or approximate, 4 of which are abortive, reduced to the styles. Styles therefore 5, and ovary single, almost covered by the disk. Drupe obovate, rather fleshy, 1-seeded. Seed recurved, resting on a funicle, which rises from the bottom of the cell.—Indian trees, with simple, quite entire, coriaceous, smooth, feather-nerved leaves, and axillary panicles of flowers, crowded at the tops of the branches. Flowers small, white. Fruit red. Nut oily. In the leaves this genus appears to be allied to *Mangífera*, but in the fruit it is more nearly allied to *Spóndias*.

1 B. LATIFÒLIA (Roxb. hort. beng. 32.) branches of panicle hairy, crowded with flowers, assuming the appearance of a corymb at the tops of the branches. ♄. S. Native of the East Indies. Leaves 6 inches long, and 3 broad, blunt at both ends. Fruit eatable ?

Broad-leaved Buchanania. Clt. 1820. Tree 30 feet.

2 B. ANGUSTIFÒLIA (Roxb. hort. beng. 32.) branches of panicle smooth, rather loose, axillary. ♄. S. Native of the East Indies, particularly in Mysore. Mangífera axillàris, Lam, dict. 3. p. 697. Spóndias simplicifòlia, Rottl. in Willd. nov. act. nat. cur. ber. 4. p. 87. Lúndia mangiferoìdes, Puer. herb. Cambessèdea, Kunth, gen. tereb. p. 4. Leaves oval-oblong, 3-4 inches long, 1½ broad, blunt or emarginate at the apex. Fruit the size of a large cherry, and perhaps eatable.

Narrow-leaved Buchanania. Clt. 1820. Tree 50 feet.

3 B. LANCEÆFÒLIA (Roxb. l. c.) ♄. S. Native of Chittagong, in the East Indies. This species is only known by name.

Lance-leaved Buchanania. Tree.

Cult. A light loamy soil is the best for these trees, and ripened cuttings will root freely in sand under a hand-glass, in heat.

VII. CONIOGE'TON (meaning unknown). Blum. bijdr. 1156.

Lin. syst. *Decándria, Tetra-Pentagýnia.* Calyx inferior, 5-parted. Petals 5. Stamens 10, equal. Ovaries 4-5, 1-styled, 1-ovulate, girded by a denticulated urceolus. Stigmas obtuse. Drupe solitary, baccate, containing a 1-seeded lenticular nut.—A tree, with alternate, simple, cuneate-oblong, obtuse, quite entire, smooth leaves ; flowers in terminal panicles.

1 C. ARBORE'SCENS (Blum. bijdr. 1156.) ♄. S. Native of Java.

Arborescent Coniogeton. Tree 30 feet.

Cult. For culture and propagation see *Buchanània.*

VIII. PISTA'CIA (*πιστακια* is altered from the Arabic word *foustaq*, the name of *P. vèra*). Lin. gen. no. 1108. Lam. ill. t. 811. Kunth, gen. tereb. p. 7. D. C. prod. 2. p. 64.—Terebínthus, Juss. gen. 371.

Lin. syst. *Diœ'cia, Pentándria.* Flowers dioecious, apetalous. Male ones disposed in amentaceous scaly racemes, with a flower to each scale. Calyx 5-cleft. Stamens 5 ; anthers almost sessile, tetragonal. Female flowers disposed in more loose racemes, with a 3-4-cleft calyx. Ovary 1-3-celled. Stigmas 3, thickish. Drupe dry, ovate, containing a somewhat bony nut, usually 1-celled, and 1-seeded, sometimes bearing laterally 2, abortive cells. Seeds solitary in the cells, fixed to the bottom of the cells, without albumen. Cotyledons thick, fleshy, oily, with a superior lateral radicle. Trees with pinnate leaves.

§ 1. *Leaves impari-pinnate, deciduous.—Terebinthus, Tourn. inst. t. 345.*

1 P. VE'RA (Lin. spec. 1454.) leaves pinnate ; leaflets ovate, tapering a little to the base, rather mucronate at the apex ; fruit ovate, pointed. ♄. H. Native of Syria, from whence it has been introduced to Italy by the emperor Vitellius, when he was legate in that province. It is now to be found throughout the whole region of the Mediterranean.—Pistàcia officinàrum, Hort. kew.—Black. icon. t. 461. Duh. ed. nov. 4. t. 17. Flowers small, brownish, green. Fruit panicled, about an inch long, ovate, with an oblique point, reddish, well known for the sake of its nut at our tables. The green internal hue of the kernel is remarkable. The Pistachia or Pistach nut is brought from several parts of Asia, chiefly from Aleppo and Persia. When wrapped in all its coats, it is the size of a green almond, but when stript of all but its shell it resembles a small nut. The kernel is red without, and green within, and its taste very agreeable. Pistachias have been reckoned aperitive, and proper to give vigour, and used in emulsions, &c. in phthisical and nephritical cases. They also enter into several ragouts, and are comfited, made into conserves, &c. The fruit is rarely eaten raw, because of the ill effects it produces. There is a kind of false Pistachia nut brought from the West Indies, which is sometimes confounded with the real one.

True Pistachia-nut-tree. Fl. Ap. May. Clt. 1770. Tree 20 ft.

2 P. RETICULA'TA (Willd. spec. 4. p. 751.) leaves ternate and pinnate, with roundish, abrupt, somewhat pointed leaflets, which taper to the base, and are strongly reticulated with prominent veins ; fruit roundish-oval, obtuse. ♄. H. Native of Sicily and Syria. P. trifòlia, Lin. spec. 1454. P. Narbonénsis, Lin. spec. 1454.—Bocc. mus. 2. t. 93. Leaflets usually 5, rarely 3, when young downy at the margin. The fruit of this species is as good as the true Pistachia-nut.

Reticulated-leaved Pistachia-nut. Fl. April, Aug. Clt. 1752. Tree 20 feet.

3 P. TEREBI'NTHUS (Lin. spec. 1455.) leaflets usually numerous, ovate-lanceolate, rounded at the base, acute, and mucronate at the apex. ♄. H. Native of the south of Europe, and north of Africa. Woodv. med. bot. 415. t. 153.—Blackw. t. 478. Duh. arb. ed. 1. vol. 2. t. 87. P. vulgàris, Tourn. inst. 579. There is a fine female tree of this species in Chelsea garden, near the gate, which for want of male blossoms can never perfect its fruit. Leaves with 3 to 6 pair of leaflets, with an odd one. Their red hue when young is beautiful. Flowers in large compound panicles. Anthers dull-yellow, Stigmas crimson. Fruit hardly bigger than a large pea. Galls of the same shape are found on the leaves, and very large oblong ones like legumes are often produced from the young branches. The resin of this tree is the Chian or Cyprus-turpentine, generally preferred for medical use to what is obtained from the fir tribe, but it is scarcely to be had without adulteration. This resin is obtained by wounding the bark of the trunk in several places, during the month of July, leaving a space of about 3 inches between the wounds ; from these the turpentine is received on stones, upon which it becomes so much condensed by the coldness of the night, as to admit of being scraped off with a knife, which is always done before sunrise ; in order to free it from all extraneous admixture it is again liquified by the sun's heat, and passed through a strainer ; it is then fit for use. The quantity produced is very inconsiderable, 4 large trees, 60 years old, only yielding 2 pounds 9 ounces and 6 drachms, but in the eastern part of Cyprus and Chio the trees afford somewhat more, though still so little as to render it very costly, and on this account it is commonly adulterated, especially with other turpentines. The best Chio turpentine is usually about the consistence of thick honey, very tenacious, clear, and almost transparent, white, inclining to yellow, and of a fragrant smell, moderately warm to the taste, but free from acrimony and bitterness. For the medicinal qualities of the turpentine, see Pinus Làrix, vol. iv.

Var. β, sphærocárpa (D. C. prod. 2. p. 64.) fruit larger, and rounder than in the species.—J. Bauh. hist. 1. p. 278. with a figure. Native of the Levant, and is said to be cultivated in the garden of *Nemaus.*

Turpentine Pistacia or Venetian or Chian Turpentine-tree. Fl. June, July. Clt. 1656. Tree 30 feet.

4 P. ATLA'NTICA (Desf. atl. 2. p. 364.) leaflets usually 9, lanceolate, tapering to the base; petiole between the terminal pair a little winged. ♄. H. Native of Barbary, very common in sandy uncultivated fields near Coffa, where many being in rows it is plain that this tree was cultivated at the foot of the mountains near Mayane and Tlemsen, &c. This is a large tree, with a thick roundish head. Leaflets 7 to 9. Male flowers disposed in terminal thyrse-like racemes. Stamens 5, but sometimes 7. Anthers deep red. Pollen yellow. Female flowers disposed in loose panicled racemes. Style purple. Drupe rather fleshy, about the size of a pea when ripe, blueish, containing a roundish nut. From the bark of the trunk and branches flows at different seasons of the year, but especially in summer, a resinous juice, hardening in the air, of a pale-yellow colour, of an aromatic smell, and taste that is not unpleasant, scarcely to be distinguished from oriental mastick, and known by the same name of *Heule* among the Moors. It is inspissated into lamellæ round the branchlets, or into irregular globules, differing in thickness and shape, frequently as big as the end of the finger or thumb, some of which drop from the tree, and are found scattered on the ground. The Arabs collect this substance in autumn and winter, and make the same use of it as of the mastick from Chio, chewing it to give a pleasant smell to the mouth and brightness to the teeth. At the foot of Mount Atlas this tree is larger than any other which grows there, but the resinous juice is softer, and of a much less pleasant smell and taste than that which flows from the trees of the desert, which is probably occasioned by the climate being cooler, and the soil more moist and fertile. The leaves have often red galls on them resembling berries. The Moors eat the drupes, and bruise them to mix with their dates.

Var. β, latifòlia (D. C. prod. 2. p. 64.) leaflets rounded and broader at the base than in those of the species. ♄. F. Native of the island of Chio, and is said to be the same as that which grows about Constantinople.

Atlas Mastick or Turpentine-tree. Clt. 1790. Tree 40 feet.

5 P. MEXICA'NA (H. B. et Kunth. nov. gen. amer. 7. p. 22. t. 608.) leaflets 16-20, alternate and opposite, oblong, unequal-sided, acute at both ends, mucronate, membranous, smoothish, pubescent on the middle nerve beneath, as well as on the inside of the rachis; fruit turgid, lenticular. ♄. G. Native of Mexico, near Chilpancingo.

Mexican Turpentine-tree. Tree 30 feet.

6 P. FAGAROIDES (Willd. enum. suppl. 66.) leaflets ovate, blunt; petioles winged. ♄. G. Native of? Fruit unknown.

Fagara-like Pistachia-tree. Shrub 10 feet.

7 P. OLEÒSA (Lour. fl. coch. 615.) leaves impari or abruptly pinnate; leaflets 4-7, ovate-lanceolate; young fruit echinated. ♄. G. Native of Cochin-china, as well as the Moluccas. Cussámbium, Rumph. amb. 1. t. 57. The nuts of fruit contain a yellow, bitterish, sweet-scented, thin oil, which thickens on exposure to the air. It is used to anoint the heads of the natives, and also to scent ointments.

Oily Turpentine-tree. Tree 20 feet.

§ 2. *Lentiscus* (from *lentesco*, to be clammy; it is from the *P. Lentiscus* that mastick is obtained, which comes from the word *mastico*, to chew; because it is thus used in Chio, and by the Turkish women to sweeten their breath). *Tourn. inst. p.* 380. *Leaves permanent, abruptly pinnate.*

8 P. LENTI'SCUS (Lin. spec. 1455.) leaflets 8, lanceolate; petiole winged. ♄. H. Native of the south of Europe and north of Africa, both wild and cultivated in gardens. Woodv. med. bot. t. 152. Blackw. t. 195. Duh. arb. ed. nov. 4. t. 18. Leaves with 3 or 4 pairs of small leaflets. Both male and female flowers come out in loose racemes from the sides of the branches; they are of a green colour. The fruit when ripe is brownish. Fabricius remarks, that the male plant in time produces hermaphrodite flowers, with 6 stamens and 5 styles. It has been observed by Gouan that the buds are different from those of the other sorts, the branch-bearing buds being terminating, the flowering buds in both sexes axillary and in pairs; hence the aments are also in pairs. The leaves have sometimes 5 leaflets on each side. The petioles are so much winged that the leaves may be called articulately-pinnate; they are usually terminated by a thread instead of a leaflet. Desfontains informs us that the Lentiscus or Mastick-tree in Barbary is little if at all resinous, though the branches and bark of the trunk were wounded at different seasons; that the wood, however, yields an aromatic smell on burning; and that the berries yield an oil fit both for the lamp and the table. In the island of Chio the officinal mastick is obtained most abundantly by making transverse incisions in the bark of the tree, whence the mastick exudes in drops, which is suffered to run down to the ground, and after they are concreted, they are collected for use. These incisions are made at the beginning of August, when the weather is very dry, and are continued to the end of September. Mastick is a resinous substance, brought to us in small, yellowish, transparent, brittle grains or tears; it has a light agreeable smell, especially when rubbed or heated; on being chewed it first crumbles, soon after sticks together, and becomes soft and white like wax, without impressing any considerable taste. It totally dissolves, except the earthy impurities, which are commonly in no great quantity, in rectified spirit of wine, and then discovers a greater degree of warmth and bitterness, and has a stronger smell than the resin in substance. Boiled in water, it impregnates the liquor with its smell, but gives out little or nothing of its substance; distilled with water, it yields a small quantity of limpid essential oil, in smell very fragrant, in taste moderately pungent. Rectified spirit brings over also in distillation the more volatile odorous matter of the mastick. It is a common practice with the Turkish women to chew this resin, especially in the morning, not only to render their breath more agreeable, but to whiten the teeth, and strengthen the gums; they also mix it with their fragrant waters, and burn it with other odoriferous substances in the way of fumigation. It is used in Europe by japanners in some of their varnishes. As a medicine, mastick is considered to be a mild corroborant and astringent; and as possessing a balsamic power it has been recommended in hæmoptysis proceeding from ulceration, fluor albus, debility of the stomach, and in diarrhœas and internal ulcers. Chewing this drug has likewise been said to be of use in pains of the teeth and gums, and in some catarrhal complaints; it is now, however, seldom used either externally or internally. The wood is received into the Materia Medica in some foreign Pharmacopœias, and is highly extolled in dyspeptic, gouty, hæmorrhagic, and dysenteric affections; but its chief fame at present is in Portugal, where it serves for toothpicks. These are rather neater than if made of common deal.

Var. β, angustifòlia (D. C. prod. 2. p. 65.) leaflets almost linear. ♄. H. P. Massiliénsis, Mill. dict. P. angustifòlia Massiliénsis, Tourn. 580. This shrub scarcely ever exceeds 10 feet in height.

Var. γ, Chìa (Duham. ed. nov. 4. p. 72.) leaflets ovate. ♄. F. Native of the island of Chio. P. Chìa, Desf. cat. hort. par. This is the tree from which they procure the resin called mastick. It is probably a distinct species from the true Lentiscus, which yields little or no resin. See the preceding account.

Mastick-tree. Fl. April, May. Clt. 1664. Tree 20 feet.

Cult. All the hardy species require to be planted in a sheltered situation, or against a wall; they may either be increased by seeds, layers, or ripe cuttings planted under a hand-glass. The greenhouse kinds grow well in a mixture of loam and sand, and ripened cuttings will root in sand under a hand-glass.

IX. ASTRO'NIUM (from *αστρον*, *astron*, a star; in allusion to the shape of the calyx when expanded). Jacq. amer. 261. t. 181. f. 96. Kunth. gen. tereb. p. 9. D. C. prod. 2. p. 65.

LIN. SYST. *Diœ'cia, Pentándria.* Flowers dioecious. Calyx of 5 coloured sepals. Petals 5, ovate. Male flowers with a spreading corolla and calyx. Glands 5 in the disk. Stamens 5. Calyx and corolla of the female flower connivent and permanent. Calyxes after flowering accrete, and stellately spreading. Petals much smaller. Ovary 1. Styles 3, reflexed. Pericarp membranous, indehiscent, oblong, acute, 1-seeded. Seed pendulous, destitute of albumen, with thick oblong cotyledons, and an oblique radicle.—A small tree, abounding every where in a nauseous clammy turpentine juice. Leaves impari-pinnate, smooth. Flowers in loose panicles. After the fruit in the female plants, and the flowers in the male plants have fallen off, new branches are put forth.

1 A. GRAVE'OLENS (Jacq. l. c.) ♄. S. Native of Carthagena, in woods, and of St. Martha. Leaflets 3 pairs, with an odd one, stalked, ovate, acuminated, a little serrated.

Strong-scented Astronium. Tree 20 feet.

Cult. A mixture of loam and peat will answer this tree, and ripened cuttings will root in sand under a hand-glass in heat.

X. MELANORRHŒ'A (from *μελας*, *μελανος*, *melas*, *melanos*, black, and *ρεω*, *rheo*, to flow; the tree when wounded yields a black juice). Wall. pl. rar. asiat. 1. p. 9 t. 11, 12.

LIN. SYST. *Polyándria, Monogýnia.* Flowers hermaphrodite. Sepals 5, cohering valvately into a 5-nerved caducous calyptra. Petals 5, rarely 6, imbricate in æstivation, permanent, borne beneath the fruit. Style 1, rather lateral in the vertex of the ovarium, crowned by a small convex stigma. Fruit indehiscent, coriaceous, depressedly reniform, oblique, pedicellate, furnished with a stellately spreading corolla-like involucre. Seeds exalbuminous. Cotyledons fleshy, thick. Radicle lateral, lying in the fissure of the cotyledons. Large trees, with the habit of *Semecárpus*, full of viscid ferruginous juice, becoming black on exposure to the atmosphere, with large, simple, deciduous leaves, and panicles of flowers.

1 M. USITA'TA (Wall. l. c. p. 9.) leaves obovate, very blunt, villous. ♄. S. Native of Hindostan, in a large valley called Kadbbu, in the kingdom of Munipur, Silhet, and Tipperah, as well as in the Burmese empire, on the banks of the Irrawadi, where it is called *Theet-tsee* or *Zit-si.* This is identical with the majestic *Kheu* or varnish-tree of Munipur, on the north-east frontier districts of Silhet and Tipperah. Mr. M. R. Smith, who has resided a long time in Silhet, considers this the same as the varnish-tree of the Chinese, in the eastern and north eastern provinces. It is procurable in great quantities from Munipur, where it is used for painting river craft, and for varnishing vessels destined to contain liquid. The drug is conveyed to Silhet for sale by the merchants. On being handled it occasions extensive erysipetalous swellings, attended with pain and fever, but never of long duration. In the neighbourhood of Prome a considerable quantity of varnish is extracted from the tree, but very little at Martaban, owing, it is supposed, to the poorness of the soil, and partly also to there being none of the people in that part whose business is to perform the process, although it is very simple. Short joints of a thin sort of bamboo, sharpened at one end, and shut up at the other, are inserted in a slanting direction into holes made in the trunk and principal branches, and left there for 24 or 48 hours; after which they are removed, and their contents emptied into a basket previously varnished over. Sometimes a hundred bamboos may be seen sticking into the tree at once during the collecting season, which lasts as long as the tree is destitute of leaves, namely, from January until April, and they are renewed as long as the juice will flow. In its pure state it is sold at Prome at the rate of one tical or 2*s.* 6*d.* the viss, and at Martaban 2 Madras rupees the viss, although of an inferior quality to that sold at Prome, being usually mixed with oil of Sesamun. A tree is reckoned to produce 2 to 3 or 4 viss annually, a viss being equal to 3½lbs. Every article of household furniture destined to contain solid or liquid food is lacquered over with it. The article to be varnished with it must be prepared with calcined bones, after which the varnish is laid on thinly, either in its pure state or variously coloured. The process of drying is the most difficult part, being effected in a very slow and gradual manner by the articles thus varnished being placed in subterraneous vaults for several months. The drug is also used as a size glue in the process of gilding; nothing more being required than to besmear the surface of the article to be gilded with it, and immediately to apply the gold leaf. If it is considered how very extensively that art is practised by the Burma nation, it being among their most frequent acts of devotion and piety to contribute to the gilding of their numerous religious edifices and idols, it will be evident that a great quantity of the drug must be consumed for that purpose alone. Finally, the beautiful Pali writing of the religious order of the Burmas on ivory, palm-leaves, or metal, is entirely done with this varnish in its native and pure state.

Useful Black varnish-tree. Clt. 1828. Tree 100 feet.

Cult. For culture and propagation see *Astrònium.*

XI. COMOCLA'DIA (from *κομη*, *kome*, a tuft, and *κλαδος*, *klados*, a branch; the leaves are crowded at the tops of the branches). P. Browne, jam. 124. Jacq. amer. 12. Lam. ill. t. 27. Kunth, gen. tereb. p. 9. D. C. prod. 2. p. 65.—Dodonæ'a, Plum. but not of Lin.

LIN. SYST. *Tri-Tetrándria, Monogýnia.* Flowers hermaphrodite or monoecious. Calyx 3-4-parted, permanent. Petals 3-4, long, large. Stamens 3-4, short. Ovary 1. Style none. Stigma 1. Drupe ovate, 1-celled, 1-seeded. Ovum rather pendulous, fixed to the bottom of the ovary by a funicle which is curved at the apex. Albumen none. Cotyledons thick. Radicle superior, curved.—South American trees, abounding every where in clammy juice. Leaves impari-pinnate, with opposite leaflets. Flowers small, purple, sometimes 4-cleft, on short pedicels, disposed in loose branched panicles.

1 C. ILICIFÒLIA (Swartz, 2. fl. ind. occ. 1. p. 75.) leaflets ovate or roundish, sessile, smooth, with spiny angles; spines 1-3 on each side. ♄. S. Native of the West Indies, on calcareous rocks. Flowers small, of a deep red colour, without scent. Leaves long. Dodonæ'a, Plum. ed. Burm. t. 118. f. 1. I'lex Dodonæ'a, Lin. spec. 182. C. tricuspidàta, Lam. act. par. 1784. p. 347. and C. ilicifòlia, Lam. ill. t. 27. f. 2. C. angulòsa, Willd. spec. 1. p. 188. Petioles puberulous. There is a variety with angular leaves, not spiny.

Var. β, glàbra (Schult. mant. 1. p. 350.) leaves smooth on both surfaces as well as the petioles. ♄. S. Native of Porto Rico. C. glàbra, Spreng, syst. 1. p. 176.

Holly-leaved Maiden Plum. Clt. 1778. Tree 20 feet.

2 C. ACUMINA'TA (Moc. et Sesse, fl. mex. icon. ined. D. C. prod. 2. p. 65.) leaflets sessile, lanceolate, acuminated, smooth, somewhat cordate at the base, with 6-7 spiny teeth on each side. ♄. S. Native of Mexico. An intermediate species between *C. ilicifòlia* and *C. dentàta.* Flowers dark red. Stamens opposite the petals in the figure quoted above.

Acuminated-leaved Maiden Plum. Tree 20 feet.

3 C. denta'ta (Jacq. amer. 13. t. 173. f. 4.) leaflets on short footstalks, oblong, erosely-toothed, smooth above and downy beneath. ♄. S. Native of Cuba in woods, as well as of St. Domingo, where it is called *Guao*. H. B. et Kunth, nov. gen. amer. 7. p. 16. This species is very like *C. ilicifòlia*. Leaflets from 6 to 10. The whole tree abounds in a milky glutinous juice, turning very black, not to be washed from cloth. If the tree be ever so slightly wounded it has a very unpleasant smell. The natives have a notion that it is dangerous to sleep under it.

Toothed-leaved Maiden Plum. Fl. Jul. Clt. 1790. Tree 29 ft.

4 C. propi'nqua (H. B. et Kunth, nov. gen. amer. 7. p. 16.) leaflets lanceolate-oblong, acute, almost entire, smoothish above, hairy-pubescent beneath and ferruginous. ♄. S. Native of the island of Cuba near La Trinidad, where it is also called *Guao*.

Allied Maiden Plum. Tree 12 feet.

5 C. mollíssima (H. B. et Kunth, nov. gen. amer. 7. p. 16. t. 607.) leaflets small, oblong, acute, rounded at the base, downy-pubescent above, but clothed with soft silky tomentum beneath. ♄. S. Native of Mexico, between Acapulco and Venta del Exido. C. tomentòsa, Willd. herb. ex Schult. mant. 1. p. 350.

Very soft Maiden Plum. Tree 20 feet.

6 C. integrifòlia (Jacq. amer. 12.) leaflets stalked, lanceolate, quite entire, smooth. ♄. S. Native of Jamaica. Sloan. jam. 2. t. 222. f. 1. Lam. ill. t. 27. f. 1. Flowers small, deep red, without scent. Drupes black and succulent when ripe; they are eatable but not inviting. The wood is hard, of a fine grain, and reddish colour. Leaves about 2 feet long, with about 8 leaflets on each side. The whole tree abounds in a watery juice, slightly glutinous, which grows black in the air, and dies the hand of a deep black colour, that can hardly be washed out.

Entire-leaved Maiden-plum. Clt. 1778. Tree 20 feet.

† *Species not sufficiently known.*

7 C.? Tapa'culo (H. B. et Kunth, l. c. p. 66.) leaflets oblong, acuminated, acutish at the base, quite entire, smooth. ♄. S. Native on the banks of the river Orinoco, near Maypures and Carichana, where it is called *Tapacula*. The Indians near St. Fernando de Atabapo use a preparation of the leaves against chigars.

Tapacula Maiden-plum. Tree 50 feet.

8 C.? Loxe'nsis (H. B. et Kunth, l. c.) leaflets oblong, somewhat acuminated, acute at the base, quite entire, shining, and smooth above, pubescent and downy beneath, with the middle nerve, rachis, and branches clothed with rufescent down. ♄. S. Native of New Granada, near Loxa, in woods.

Loxa Maiden-plum. Tree 30 feet.

Cult. See *Astrònium* for culture and propagation, p. 67.

XII. CYRTOCA'RPA (from κυρτος, *kyrtos*, gibbous, and καρπος, *karpos*, a fruit; in allusion to the 5 gibbosities above the middle of the fruit). H. B. et Kunth, nov. gen. amer. 7. p. 19. D. C. prod. 2. p. 91.

Lin. syst. *Polygàmia, Diœ'cia.* Flowers polygamous? Calyx 5-parted, permanent, spreading. Petals 5, sessile, longer than the calyx, imbricate in æstivation. Stamens 10, length of calyx. Disk large, 10-crenate. Ovary 1. Style 1. Stigma 4-cleft. Drupe obovate-elliptical, with 5 tubercles above the middle, containing a hard nut.—An American tree, with impari-pinnate leaves and quite entire sessile leaflets. Flowers almost sessile, disposed in glomerated spikes, white. This tree has the appearance of a species of *Comoclàdia*.

1 C. pro'cera (H. B. et Kunth, l. c. t. 609.). ♄. S. Native of New Spain.

Tall Cyrtocarpa. Tree 60 feet.

Cult. See *Astrònium* for culture and propagation, p. 67.

XIII. SPATHE'LIA (from σπαθη, *spathe*, a palm-tree; the upright habit and want of branches of *S. simplex* has caused it to be likened to a palm-tree). Lin. gen. no. 373. Gært. fruct. 1. p. 278. t. 58. Kunth, gen. tereb. 25. D. C. prod. 2. p. 84.

Lin. syst. *Diœ'cia, Pentándria.* Female flowers. Calyx 5-parted, membranous, coloured. Petals 5, hypogynous, imbricate in æstivation. Stamens 5, with short, 3-pointed filaments, which are dilated and villous at their base. Ovary somewhat conical, 3-angled, 3-celled, each cell containing 2 ova. Style wanting. Stigmas 3. Drupe oblong, 3-celled, trigonal, sometimes 2-angled, 2-celled; angles winged. Seeds oblong, solitary in the cells. Albumen fleshy. Embryo straight, inverted, with oblong-linear, thin cotyledons, and a short radicle.—Trees with impari-pinnate leaves, and subterminal racemose panicles of flowers. This genus perhaps does not belong to this order.

1 S. si'mplex (Lin. spec. 386.) leaves with about 20 pairs of oblong, toothed leaflets. ♄. S. Native of Jamaica. Ker. bot. reg. t. 670. Sloan. hist. 2. t. 171. Trunk hardly branched. Leaves like those of *Sórbus*. The habit of the plant that of *Comoclàdia*. The fruit is full of a resinous juice. The flowers are red.

Simple-stemmed Spathelia. Fl. July. Clt. 1778. Tr. 20 ft.

2 S.? rhoifòlia (D. C. prod. 2. p. 84.) leaves with about 6 pairs of ovate, acuminated, quite entire leaflets. ♄. G. Native of Mexico. Rhùs pterocárpa, Moc. et Sesse, fl. mex. icon. ined.

Red-leaved Spathelia. Tree 20 feet.

Cult. See *Astrònium* for culture and propagation, p. 67.

XIV. PICRA'MNIA (from πικραμος, *picramos*, derived from πικρος, *picros*, bitter; the plants are bitter in every part). Swartz, fl. ind. 1. p. 218. t. 4. Schreb. gen. no. 1517. D. C. prod. 2. p. 66.

Lin. syst. *Diœ'cia, Tri-Pentándria.* Flowers dioecious. Calyx 3 or 5-parted. Petals 3 or 5, oblong. Male flowers with exserted stamens, equal in number with the petals. Female flowers with an ovate ovary, and 2 sessile stigmas. Drupe ovate, containing a 2-celled, 2-seeded nut. Seeds oblong.—Small trees with impari-pinnate leaves, alternate, stalked, quite entire, ovate-lanceolate leaflets. Racemes of flowers elongated, pendulous, opposite the leaves. The character of the seed being unknown, the place which this genus should occupy in this order is truly doubtful.

1 P. antide'sma (Swartz, fl. ind. occ. 1. p. 218.) flowers triandrous; racemes longer than the leaves; leaflets elliptical, acuminated. ♄. S. Native of Jamaica and St. Domingo, on mountains in woods. Sloane, hist. t. 208. f. 2. Flowers small, greenish-white. Fruit at first scarlet, but black when ripe, about the size of a gooseberry. Swartz informs us that the negroes in Jamaica look upon this shrub as antivenereal, and that they commonly use an infusion of it in colic. The whole plant is exceedingly bitter, and is called *Majo Bitters* in Jamaica.

Antidesma-like Majo-bitters. Fl. Aug. Clt. 1793. Sh. 8 ft.

2 P. Fessònia (D. C. prod. 2. p. 66.) flowers triandrous; racemes shorter than the leaves; leaflets ovate, acuminated. ♄. S. Native of Mexico. Fessònia depéndens, Moc. et Sesse, fl. mex. icon. ined. Flowers greenish-white? Fruit red, with 3 scales in the female flowers in place of the stamens.

Fesson's Majo-bitters. Shrub 8 feet.

3 P. penta'ndra (Swartz, fl. ind. occ. 1. p. 220.) flowers pentandrous; racemes shorter than the leaves; leaflets ovate-elliptical, acuminated. ♄. S. Native of the islands of Montserrát and St. Domingo. P. pseùdo-Brazílium, Hort. par.? in Juss. gen. 370. and hence *Comoclàdia Brasiliástrum*, Poir. suppl. 2. p. 325. Flowers greenish-white.

Pentandrous Majo-bitters. Clt. 1822. Shrub 8 feet.

4 P. Tari'ri (D. C. prod. 2. p. 4.) flowers? leaflets broadly and unequally ovate, acuminated, with villous edges, and bearing glands in the axillæ of the veins. ♄. S. Native of Guiana in woods. Taríri Guianénsis, Aubl. guian. suppl. p. 37. t. 390. It is called *Tariri* by Caribbees.

Tariri Majo-bitters. Shrub 10 feet.

Cult. See *Astrònium* for culture and propagation, p. 67.

XV. BISCHO'FIA (in honour of — Bischoff, of the Botanical Academy of Munich). Blum. bijdr. 1168.

Lin. syst. *Diœ'cia, Pentándria.* Flowers dioecious. Calyx inferior, 5-sepalled. Corolla wanting. Male flowers with 5 short stamens, which are joined into an urceolus, hardly free at the apex. Anthers 2-celled. Female flowers with the rudiments of filaments scale-formed, sometimes 2. Ovary ovate, globose, 3-celled; cells 2-ovulate; ovula pendulous. Stigmas 3, sessile, linear, reflexed, approximate at the base. Fruit containing 3 1-seeded nuts.—A strong tree, with very hard red wood, alternate, trifoliate leaves, serrulated leaflets, axillary and lateral panicles of flowers, with each pedicel furnished with 13 bracteas at the base. This genus agrees better with *Rutàceæ* than *Terebinthàceæ.*

1 B. Java'nica (Blum. bijdr. 1168.). ♄. S. Native of Java, in mountain woods in the western provinces, where it is called *Gadok.*

Java Bischofia. Fl. Sept. Tree 60 feet.

Cult. See *Astrònium* for culture and propagation, p. 67.

XVI. SA'BIA (*Soobja* is the Bengalese name of one of the species). Colebr. in Lin. trans. 12. p. 351. and 355. Wall. in fl. ind. 2. p. 308.

Lin. syst. *Pentándria, Monogýnia.* Calyx inferior, 5-cleft. Petals 5, lanceolate, imbricate in æstivation. Stamens 5, opposite the petals, inserted round the base of a perigynous 5-lobed disk. Anthers bursting by a dorsal longitudinal fissure. Style furrowed, or 2 contiguous, crowned by a blunt stigma. Drupe deeply 2-lobed; lobes kidney-shaped, 1-seeded, one of them usually abortive. Embryo erect, folded. Climbing shrubs, with simple exstipulate leaves, and axillary, 1 or many-flowered peduncles. Notwithstanding many anomalies in this genus, Dr. Wallich seems to think it belongs to the present tribe of *Terebinthàceæ.*

1 S. lanceola'ta (Colebr. l. c. t. 14.) smooth; leaves oblong, lanceolate, slightly blistered; corymbs axillary and terminal. ♄. ◡. S. Native of Silhet. An extensively rambling shrub. Flowers very fragrant, marked with linear purple dots.

Lanceolate-leaved Sabia. Shrub cl.

2 S. parviflòra (Wall. fl. ind. 2. p. 310.) young shoots slightly pubescent; leaves ovate, with membranous, waved margins; peduncles axillary, few-flowered; petals lanceolate. ♄. ◡. G. Native of Nipaul. An extensive climber. Flowers smaller than those of the last species, purple.

Small-flowered Sabia. Shrub cl.

3 S. campanula'ta (Wall. in fl. ind. 2. p. 311.) leaves oblong, with membranous margins; flowers solitary, axillary, cup-formed, with large, round, concave petals. ♄. ◡. G. Native of Sheopore, in Nipaul. Flowers green, large. Anthers 2-celled.

Bell-flowered Sabia. Shrub cl.

Cult. Loam and sand, with a little peat, is a good soil for this genus, and ripened cuttings will root in sand under a hand-glass. The species are not worth cultivating, except in botanical gardens.

Tribe II.

SUMACHI'NEÆ (plants agreeing with *Sumach* in important characters). D. C. prod. 2. [illegible] 66. Petals and stamens inserted in the calycine disk or in the calyx. Ovary solitary (from abortion), 1-celled, containing only 1 ovulum. Seed pendulous, exalbuminous, sustained by a funicle rising from the base of the cell. Cotyledons leafy, with the radicle bent in above the fissure of the cotyledons.

XVII. RHU'S (derived from ροος or ρους, in Greek, which is derived from *rhudd*, a synonyme of *rub* in Celtic, red; in allusion to the colour of the fruit and leaves of some species in autumn). Lin. gen. no. 369. Lam. ill. t. 207. Kunth, gen tereb. p. 5. D. C. prod. 2. p. 66.

Lin. syst. *Pentándria, Trigýnia,* or *Diœ'cia, Pentándria.* Calyx permanent, small, 5-parted. Petals 5, ovate, spreading. Stamens 5, all antheriferous, both in the male and female flowers. Ovary 1, somewhat globose, 1-celled. Styles 3, short, or stigmas 3, sessile. Drupe almost dry, 1-celled, containing a bony, 1-seeded nut from abortion, and sometimes 2 or 3 seeds. Seeds without albumen, sustained by a funicle rising from the bottom of the cell. Cotyledons leafy, with the radicle lying on the upper suture of the cotyledons. Gært. fruct. 1. p. 205. t. 44.—Shrubs with alternate, various, but usually compound leaves. Flowers usually polygamous, or dioecious from abortion.

Sect. I. Co'tinus (κοτινος, *cotinos*, is a name under which Pliny speaks of a tree with red wood, which is supposed to grow in the Apennines). Tourn. inst. p. 380. D. C. prod. 2. p. 77. Flowers hermaphrodite. Drupe half cordate, veiny, smooth, containing a triangular nut. Leaves simple. Flowers loosely panicled, many of which are abortive, and of these the pedicels are elongated and hairy after flowering.

1 R. Co'tinus (Lin. spec. 383.) leaves obovate. ♄. H. Native of the south of Europe from Spain to Caucasus, in places exposed to the sun. Jacq. aust. t. 210. Mill. fig. t. 270. Cótinus Coggýgria, Scop. carn. ed. 2. no. 368. Mœnth. meth. 73.—Lob. icon. 99. Cótinus coriàcea, Duh. arb. 1. t. 78. Flowers greenish-yellow. This is rather an ornamental shrub, and the wood is much used by the modern Athenians for dyeing wool of a most beautiful and rich yellow. The whole plant is used for tanning in Italy, where it is called *Scotino.*

Venus-Sumach or Wild-olive. Fl. June, July. Clt. 1656. Shrub 4 to 6 feet.

2 R. velutìna (Wall. mss. in Lin. soc. herb.) leaves simple, oblong, on long petioles, repand-toothed, clothed beneath with velvety white pubescence, as well as the branches; peduncle racemose, terminal. ♄. G. Native of Kamoon, in the East Indies. Flowers small, white.

Velvety Sumach. Shrub.

3 R. læ'vis (Wall. mss. in herb. Lin. soc.) leaves simple, ovate, or obovate-oblong, mucronate at the apex on long petioles, entire, quite smooth, and rather glaucous beneath; panicle terminal. ♄. G. Native of the East Indies. Flowers small, white.

Smooth Sumach. Shrub.

Sect. II. Metòpium (*Metopion* is a name under which Pliny speaks of a resinous tree unknown to us; it is derived from *οπος*, juice). D. C. prod. 2. p. 67. Flowers hermaphrodite. Drupe ovate, rather oblong, dry, smooth, containing a large, ample membranous nut. Seed, according to Linnæus, arillate and 2-lobed. Leaves impari-pinnate, with 2 pairs of ovate, quite entire, long-stalked leaflets.

4 R. Metòpium (Lin. amœn. 5. p. 395.) leaves quite smooth. ♄. S. Native of Jamaica, in woods on the mountains. Sloan. hist. 2. t. 199. f. 5.—Browne, jam. 177. t. 13. f. 3. Drupes reddish. This tree yields a great quantity of gummy resin called Doctors' gum, which, when pure, is of a yellow colour, and after a short time, acquires a hard brittle consistence. It

is daily used in strengthening plaisters, for which it is deservedly much recommended. It is of a warm discutient nature, and may be used in all swellings arising from colds, both externally and internally. The gum, dissolved in water, is an easy purgative, and thought to be extraordinarily diuretic. In Jamaica the tree is frequent enough, and the hogs are said to have recourse to it when wounded in the woods.

Metopium or Hog gum-tree. Clt. 1823. Tree 20 feet.

SECT. III. SU'MACH (*el-simac* or *es-simac* is the Arabian name of some species). D. C. prod. 2. p. 67.—Rhùs and Toxicodéndron, Tourn. inst. 381. Mœnch. meth. 72. Flowers polygamous, dioecious, or hermaphrodite. Drupe ovate-roundish, usually villous, containing a smooth or striped nut.—Shrubs with impari-pinnate leaves or palmately trifoliate ones. Petioles naked or a little winged. Flowers panicled.

§ 1. *Leaves impari-pinnate.*

* *Petioles naked.*

5 R. FILÍCINA (Moc. et Sesse, fl. mex. icon. ined.) leaves 7-9 pairs; petiole naked; leaflets sessile, pinnatifid, pilose, oblong; lobes blunt, awned, with a hair. ♄. G. Native of Mexico, on the mountains, where it is called *Tetlazian*, but it is not the *Tetlacian* of Hern. mex. p. 153. Fruit covered with violet hairs.

Fern-like Sumach. Shrub.

6 R. TYPHÌNA (Lin. spec. 380.) leaves with 8 or 10 pairs of leaflets; petioles naked, and are as well as the branches hairy; leaflets lanceolate, acuminated, serrated, rather pilose beneath. ♄. H. Native of North America, from Canada to Carolina, in rocky dry situations. Duh. arb. ed. nov. 2. t. 47. Wats. dend. brit. t. 17. and 18. R. Virginiàna, Bauh. pin. p. 517. The purple velvety berries appear in large close clusters. The leaves change in autumn first to a purplish, but just before they fall to a feuillemort colour. This species, as well as *R. coriària* is used for tanning leather; and the roots are prescribed as a febrifugal medicine in the country of its natural growth.

Var. α, *arboréscens* (D. C. prod. 2. p. 67.) leaves somewhat pubescent beneath. ♄. H. Willd. enum. 323. Tree 20 feet.

Var. β, *frutéscens* (Willd. l. c.) leaves white, with pubescence beneath. ♄. H. Shrub 8 feet.

Fever or Virginian Sumach. Fl. July, Aug. Clt. 1629. Shrub 8 to 20 feet.

7 R. VIRIDIFLÒRA (Poir. dict. 7. p. 504.) leaves with 8-10 pairs of leaflets; petioles naked, and are as well as the branches pilose; leaflets lanceolate-oblong, serrated, pubescent beneath. ♄. H. Native of North America, in Pennsylvania and Virginia, on the edges of woods in dry sunny situations. R. Canadénsis, Mill. dict. no. 5. Flowers yellowish-green, probably not much more than a variety of the following species. Racemes of flowers erect.

Green-flowered Sumach. Fl. July, Aug. Clt. ? Tree 15 ft.

8 R. GLA'BRA (Lin. spec. 380.) leaves with 8 or 10 pairs of leaflets, and are as well as the branches smooth; petioles naked; leaflets lanceolate-oblong, serrated, whitened beneath. ♄. H. Native of North America from New England to Carolina, common in old fields. Flowers greenish-red. Fruit silky, red. They are used for dyeing the same colour, and they are eaten by children with impunity, but they are very sour. On cutting the stem a yellow juice comes out between the bark and the wood. The bark boiled with the fruit affords a black ink-like tincture.

Var. α, *hermaphrodìta* (D. C. prod. 2. p. 67.) flowers hermaphrodite, greenish. R. glàbra, Willd. spec. 1. p. 1478.—Dill. elth. t. 243. f. 314.

Var. β, *dioica* (D. C. prod. 2. p. 67.) flowers dioecious, greenish. Lam. ill. t. 207. f. 1.

Var. γ, *coccinea* (D. C. prod. 2. p. 67.) flowers dioecious, red. Fruit scarlet. R. élegans, Ait. hort. kew. 1. p. 162. R. Caroliniànum, Mill. dict. no. 4.—Cat. car. app. t. 4. Native of South Carolina.

Smooth or Scarlet Sumach. Fl. July, Aug. Clt. 1726. Shrub 8 feet.

9 R. PU'MILA (Mich. fl. bor. amer. 1. p. 182.) a humble shrub wholly covered with pubescence; leaves with many pairs of deeply-toothed oval leaflets, which are downy on the under surface; petioles? ♄. H. Native of Upper Carolina. Fruit silky. This is the most poisonous of the genus, according to information from Mr. John Lyon, who by collecting the seed of this species was poisoned all over his body and was lamed for a considerable time.

Dwarf Sumach. Fl. July. Clt. 1806. Shrub 1 foot.

10 R. ACUMINA'TA (D. C. prod. 2. p. 68.) leaves with 3 or 4 pairs of leaflets, and are as well as the branches smooth; petioles naked; leaflets oval, quite entire, with long taper-points, paler beneath, and full of parallel feather nerves. ♄. H. Native of Nipaul. Lateral veins of leaves 20-30, parallel. Panicle of flowers axillary, shorter than the leaves. Flowers dioecious.

Acuminated-leaved Sumach. Shrub.

11 R. SUCCEDA'NEA (Lin. mant. 221.) leaves with 5-7 pairs of leaflets, smooth, permanent; petioles wingless; leaflets ovate-lanceolate, taper-pointed, shining, netted with veins and glaucous beneath, self-coloured. ♄. G. Native of Japan, Fasi-no-Ki. Kæmpf. amœn. 793. t. 795.—Thunb. jap. 121. Drupe ovate, white, about the size of a cherry, containing a smooth nut. The oil of the seeds, expressed whilst warm, acquires the consistence of suet, and serves for making candles. The trunk yields a varnish, but in so small a quantity as not to be worth collecting. Osbeck informs us that this is called *Tay-sha* in China.

Succedaneous or Red Lac Sumach. Fl. June, July. Clt. 1768. Shrub 10 to 15 feet.

12 R. NODÒSA (Blum. bijdr. 1164.) leaflets 3-4 pairs, ovate-oblong, entire, bluntly acuminated, a little obliquely attenuated at the base, smooth; petioles wingless, terete, geniculately knotted; panicle terminal, fastigiate. ♄. S. Native of Java, on the mountains of Salak, where it is called *Kadondang-aroy*.

Knotted-petioled Sumach. Tree.

13 R. PUBI'GERA (Blum. bijdr. 1165.) leaflets 3-7 pairs, ovate-lanceolate, entire, acuminated, a little obliquely attenuated at the base, opaque on both surfaces, and are as well as the petioles somewhat pubescent; panicles axillary. ♄. S. Native of Java.

Pubigerous Sumach. Tree.

14 R. VERNICÍFERA (D. C. prod. 2. p. 68.) leaves with 5-6 pairs of leaflets; petioles naked, and are as well as the branchlets clothed with soft down; leaflets elliptic, acute, quite entire, smoothish above, but velvety beneath from pubescence. ♄. G. Native of Japan, where it is called *Sitz* or *Urus* (ex Kœmpf. amœn. 791. t. 792.), and of Nipaul. R. vérnix, Lin. mat. med. 151. Thunb. jap. 121. but not of others. R. juglandifòlia, Wall. in Litt. D. Don, prod. fl. nep. 248. but not of Willd. Leaves long, resembling those of a walnut. Thunberg affirms that the very best Japan varnish is prepared from this tree, which grows in great abundance in many parts of that country, and is likewise cultivated in many places on account of the great advantages derived from it. This varnish, which oozes out of the tree on being wounded, is procured from stems that are three years old, and is received in some proper vessel. At first it is of a lightish colour and of the consistence of cream, but grows thicker and black on being exposed to the air. It is so transparent when laid pure and unmixed upon boxes or fur-

niture, every vein of the wood may be clearly seen. For the most part a dark ground is spread underneath it, which causes it to reflect like a mirror, and for this purpose recourse is frequently had to the fine sludge, which is got in the trough under a grind-stone, or to ground charcoal; occasionally a red substance is mixed with the varnish, and sometimes leaf-gold, ground very fine. This varnish hardens very much, but will not endure any blows, cracking and flying almost like glass, though it can stand boiling water without any damage. With this the Japanese varnish over the posts of their doors, and most articles of household furniture, which are made of wood. It far exceeds the Chinese and Siamese varnish, and the best is collected about the town of Jassino. It is cleared from impurities by wringing it through very fine paper; then about a hundredth part of an oil called *toi*, which is expressed from the fruit of *Bignònia tomentòsa* is added to it, and being put into wooden vessels, either alone or mixed with native cinnabar, or some black substance, it is sold all over Japan. The expressed oil of the seeds serves for candles. The tree is said to be equally poisonous with the *Rhùs venenàta*, or American poison-tree.

Varnish-bearing Sumach or Japan Varnish-tree. Clt. 1818. Tree 30 feet.

15 R. VENENA'TA (D. C. prod. 2. p. 68.) leaves with 6-7 pairs of smoothish deciduous leaflets; petioles naked; leaflets ovate-lanceolate, acuminated, quite entire, netted with veins beneath. ♄. H. Native of North America, from Canada to Carolina, in low copses, where it is called *Poison-sumach* or *Poison-wood.*—Dill. elth. t. 292. R. vérnix, Lin. spec. 380. Big. med. bot. 1. p. 96. t. 10. Wats. dend. brit. t. 19. Toxicodéndron pinnàtum, Mill. dict. no. 5. Flowers dioecious, green. Fruit white, smooth, containing a furrowed nut. The milky juice of this tree stains linen a dark brown. The whole shrub is in a high degree poisonous, and the poison is communicated by touching or smelling any part of it. In forty-eight hours, inflammation appears on the skin in large blotches, principally on the extremities and on the glandulous parts of the body; soon after small pustules rise in the inflamed parts, and fill with watery matter, attended with burning and itching. In two or three days the eruptions suppurate, after which the inflammation subsides and the ulcers heal in a short time. It operates, however, somewhat differently on different constitutions; and some are incapable of being poisoned with it at all. Persons of irritable habits are most liable to receive it. Kalm gives much the same account of the American poison-tree or Swamp Sumach. An incision being made, a whitish-yellow juice, which has a nauseous smell, comes out between the bark and the wood; it is noxious to some persons, but does not in the least affect others. On himself it had no effect, except on a hot day, when being in some perspiration, he cut a branch and carried it in his hand for half an hour, smelling it now and then. It produced a violent itching in his eyelids and the parts thereabouts; during a week his eyes were very red, and the eyelids very stiff, but the disorder went off by washing the eyelids with very cold water. The Abbé Sauvages stained linen black with the juice of this tree, which it retained after a great number of washings in ley. The Abbé Mazeas made trial of that of *R. toxicodéndron.* The instant, he says, the cloth was exposed to the sun, it became the finest black he had ever seen.

Poison Sumach, Poison-wood, or Swamp Sumach. Fl. July. Clt. 1713. Tree 20 feet.

16 R. RUFE'SCENS (Hamilt. prod. fl. ind. occ. p. 32.) rufescent; leaflets 5 pairs, nearly sessile, obliquely cordate, oblong, acuminated, adpressedly serrated, shining above, covered with rufescent tomentum beneath, with the veins parallel; flowers axillary, subcymose, tomentose. ♄. S. Native of Jamaica.

Rufescent Sumach. Tree 2[illegible] feet.

17 R. COMMERSÒNII (Poir. suppl. 5. p. 264.) leaves with 3-4 pairs of smooth leaflets; petioles? leaflets tapering to the base, but blunt at the apex, somewhat mucronated and quite entire. ♄. S. Native of Brazil. Like *R. venenàta* or *vernicifera*, ex Poir. R. meridionàlis, Spreng. syst. 1. p. 936.

Commerson's Sumach. Clt. 1818. Tree 30 feet.

18 R.? PERNICIÒSA (H. B. et Kunth. nov. gen. amer. 7. p. 10.) leaves with 7-8 pairs of leaflets, and are smooth, as well as the branches; petioles naked; leaflets on long stalks, elliptical or rhomboid-ovate, quite entire, membranous. ♄. S. Native of New Spain, near St. Theresa and Tapecuacuilca. Flowers, as well as fruit, unknown. This species resembles in its poisonous effects the *R. venenàta*, no. 15.

Pernicious Sumach. Shrub 3 to 4 feet.

19 R. JUGLANDIFÒLIA (Willd. in Schult. syst. 6. p. 649. but not of Wall.) leaves with 11-15 pairs of oblong, acuminated, quite entire, smooth (but rather pilose beneath) leaflets, which are rounded on the upper edge at the base, but narrowed at the lower edge; panicles axillary, much branched; calyxes smooth. ♄. S. Native of New Granada, where it is commonly called *Caspi de Pasto.* H. B. et Kunth. nov. gen. amer. 7. p. 6. t. 603 and 604. Allied to *R. copallina*, but the petioles are wingless. The juice is very acrid and poisonous.

Walnut-leaved Sumach. Shrub 5 to 6 feet.

20 R. FRAXINIFÒLIA (D. Don, prod. fl. nep. p. 248.) flowers hermaphrodite; leaflets 7, lanceolate, acuminated, serrated, glabrous, shining, oblique at the base; rachis rather terete, simple; panicle much branched, villous. ♄. G. Native of Nipaul. A large tree, with leaves nearly 2 feet long.

Ash-leaved Sumach. Clt. 1820. Tree 40 feet.

21 R. STRIA'TA (Ruiz et Pav. fl. per. 3. p. 29. t. 252.) leaves pinnate, with quite entire ovate-lanceolate leaflets, downy beneath; racemes large; fruit striated. ♄. G. Native of Peru, in the groves of Chinchao. Flowers white.

Striped-fruited Sumach. Tree 20 feet.

* * *Leaves with the petioles more or less winged.*

22 R. CORIA'RIA (Lin. spec. 379.) leaves with 5-7 pairs of villous leaflets; petioles naked or somewhat marginate at the apex; leaflets elliptical, bluntly and coarsely toothed. ♄. H. Native of the south of Europe, on rocks in exposed situations, from Portugal to Tauria. Duh. ed. nov. 2. t. 46. Wats. dend. brit. t. 136. Blackw. t. 486.—Plenck. icon. t. 232. Leaves of a yellowish-green colour. Flowers whitish-green, disposed in terminal panicles. The branches of this tree are used instead of oak bark for tanning leather, and it is said that Turkey leather is all tanned with it. The leaves and seeds are used in medicine, and are esteemed very restringent, stiptic, tonic, and cooling. The Tripoli merchants sell the seeds at Aleppo, and they are in common use there to provoke an appetite. The taste of the fruit is very acid and astringent, and does not possess the dangerous qualities for which some species of this genus are so remarkable.

Hide or Elm-leaved Sumach. Fl. July, Aug. Clt. 1629. Tree 20 feet.

23 R. SEMIALA'TA (Mur. comm. gœtt. 6. 1784. p. 27. t. 3.) leaves with 5-7 pairs of leaflets; petioles naked or somewhat margined from the middle to the apex; leaflets ovate, acuminated, serrated, downy beneath. ♄. G. Native of the East Indies and Cochin-china. R. Javánicum, Lour. cochin. 183. Flowers white, bell-shaped. Leaflets clothed with rusty down on the under surface. The Chinese extract an oil from the berries by bruising them, and boiling them in water; they use it as a varnish, which is beautiful, but does not keep its polish so well as the true sort.

Half-winged-petioled Sumach. Clt. 1780. Shrub 6 feet.

24 R. Java'nica (Lin. spec. 380.) leaflets 5-7 pairs, ovate-oblong, acuminated, bluntly-toothed, tomentose beneath; petioles submarginate; panicle terminal, tomentose. ♄. G. Native of Japan and China, but introduced to Java. R. semialàta, var. β, Osbéckii, D. C. prod. 2. p. 67.

Java Sumach. Clt. 1799. Tree 30 feet.

25 R. Chine'nsis (Mill. dict. no. 7.) leaves with 3 or 4 pairs of leaflets; petioles membranous, and are, as well as the branches, clothed with downy villi; leaflets ovate, bluntly-serrated. ♄. G. Native of China.

Chinese Sumach. Clt. 1800. Shrub 5 to 6 feet.

26 R. Ame'la (D. Don, prod. fl. nep. 248.) leaves with 6-7 pairs of leaflets; petioles with a narrow wing; leaflets elliptical, acuminated, serrated, sessile, odd one only stalked, all covered with greyish-down beneath. ♄. F. Native of Nipaul, at Narainhetty. R. Bucki-amèlam, Roxb. hort. beng. p. 22. Flowers dioecious, disposed in large terminal panicles. Berries silky. Leaves 1-2 feet long. *Bucku-amela* is the vernacular name of the tree.

Bucku-Amela Sumach. Clt. 1823. Tree 40 feet.

27 R. paucifl'ora (Lin. fil. suppl. 183.) leaves pinnate; petioles winged, covered with very fine villi; leaflets alternate, wedge-shaped, serrated at the apex; panicles sessile, few-flowered. ♄. G. Native of the Cape of Good Hope. Thunb. fl. cap. 2. p. 225.

Few-flowered Sumach. Shrub 6 feet.

28 R. obli'qua (Thunb. fl. cap. 2. p. 224.) leaves with many pairs of smooth, ovate, quite entire, dimidiate leaflets. ♄. G. Native of the Cape of Good Hope. Flowers and fruit unknown. Allied to *R. pauciflòra*.

Oblique-leafletted Sumach. Clt. 1825. Shrub 6 feet.

29 R. ala'ta (Thunb. fl. cap. 2. p. 225.) leaves pinnate; petioles winged, tomentose; leaflets alternate, ovate, serrated at the apex; peduncles axillary. ♄. G. Native of the Cape of Good Hope.

Winged-petioled Sumach. Clt. 1824. Shrub 10 feet.

30 R. copallìna (Lin. spec. 380.) leaves of 5-7 pairs of leaflets, which are smooth above, and rather pilose beneath; petioles winged, jointed; leaflets elliptic, quite entire. ♄. H. Native of North America, in dry fields and woods, particularly in a sandy soil, from New Jersey to Carolina. Jacq. hort. schœnb. 341.—Pluk. alm. t. 56. f. 1. Root stoloniferous. Flowers dioecious, yellowish-green. Berries red. The leaves of this species change to purple in the autumn, and are used as tobacco by the Indians of the Missouri and Mississippi.

Var. β, *leucántha* (Jacq. schœnb. t. 342.) root not stoloniferous; flowers white; panicles more contracted. ♄. H. Native of North America. Leaflets many pairs, narrow.

Gum *Copal-like* or Lentiscus-leaved Sumach. Fl. July, Aug. Clt. 1688. Shrub 8 feet.

31 R. tri'juga (Poir. dict. 7. p. 508.) leaves with 3 pairs of coriaceous ovate leaflets, which are pubescent beneath; petioles flat, striated. ♄. S. Native of Brazil, at Rio Janeiro. Fruit globose, shining.

Three-paired-leaved Sumach. Tree.

§ 2. *Toxicodéndron* (from τοξικον, *toxikon*, poison, and δενδρον, *dendron*, a tree; tree very poisonous). *Tourn. inst. t.* 381. *Mœnch. meth.* 73. *but not of Gærtn. nor Thunb.—Pocóphorum, Neck. elem. no.* 964. *Leaves pinnately trifoliate, with the middle leaflet stalked.*

32 R. radi'cans (Lin. spec. 381.) leaflets ovate, smooth, entire. ♄. H. Native of North America, from Canada to Georgia, common in all woods, fields, and along fences. Berries white. Flowers dioecious, greenish.

Var. α, vulgàris (D. C. prod. 2. p. 69.) plant climbing and rooting; leaflets large, entire or rarely toothed, ovate. R. Toxicodéndron, var. *α*, vulgàre, Pursh. fl. amer. sep. 1. p. 205. Sims, bot. mag. t. 1806. Duh. ed. nov. 2. t. 48. Toxicodéndron vulgàre, Mill. dict. This plant having in common with ivy the quality of not rising without the support of a wall, tree, or hedge; it is called in some parts of America creeping ivy. It will climb to the top of high trees in woods, the branches every where throwing out fibres, which penetrate the trunk of the tree which it grows on. When the stem is cut it emits a pale-brown sap, of a disagreeable scent, and so sharp that letters or marks made upon linen cannot be got out again, but grows blacker the more it is washed. Like *R. venenàta* it is poisonous to some persons, but in a less degree. Kalm relates of two sisters, one could manage the tree without being affected by its venom, while the other felt its exhalation as soon as she came within 3 feet of it, or even when she stood to windward of it, at a greater distance; that it had not the least effect upon him, though he had made many experiments upon himself, and once the juice squirted into his eyes; but that on another person's hand, which he had covered very thick with it, the skin a few hours afterwards became as hard as a piece of tanned leather, and peeled off afterwards in scales.

Var. β, *volùbilis* (D. C. prod. 2. p. 69.) stem climbing, scarcely rooting; leaflets ample, ovate. Toxicodéndron volùbile, Mill. dict.

Var. γ, *microcárpa* (D. C. prod. 2. p. 69.) leaflets oblong-ovate, with long taper points; fruit much smaller than in the two preceding varieties. R. Toxicodéndron microcárpon, Pursh. fl. sept. amer. 1. p. 205.—Dill. elth. t. 291. f. 375.

These two last varieties possess the same poisonous qualities as the first, but in a less degree.

Rooting Poison-oak or Sumach. Fl. June, July. Clt. 1640. Shrub creeping or climbing.

33 R. toxicode'ndron (Lin. spec. 381.) leaflets deeply-angled or sinuated, pubescent. ♄. H. Native of North America, along with R. radicans. R. Toxicodéndron quercifòlium, Michx. fl. bor. amer. 1. p. 182. Pursh. fl. sept. amer. 1. p. 205. Toxicodéndron pubéscens, Mill. dict. no. 2. According to Nuttal, this is a truly distinct species from the preceding. Perhaps the T. serràtum, Mill. dict. is a variety of this plant. Flowers greenish. The juice of this tree is milky when it first exudes, but becomes jet black by exposure to the air. It is poisonous to the touch. It was first tried as a medicine by Dr. Alderson of Hull, in imitation of experiments of M. Fresnoi, with the *Rhùs radicans*. He gave it in four cases of paralysis in doses of half a grain or a grain three times a day, and all his patients recovered to a certain degree the use of their limbs. The first symptom of amendment was always an unpleasant feeling of prickling or twitching in the paralytic limbs. Dr. Duncan has given it in larger doses without experiencing the same success; it was not however inactive. In one case the patient discontinued its use on account of the disagreeable pricking it occasioned, and in general it operated as a gentle laxative, notwithstanding the torpid state of the bowels of such patients.

Common *Poison-tree* or Poison-oak. Fl. June, July. Clt. 1640. Shrub creeping upon walls or trees.

34 R. Bahame'nsis; leaflets ovate, acuminated, entire, lateral ones oblique at the base, pubescent beneath, especially on the nerves; petioles and branches hairy; racemes axillary, rather compound. ♄. H. Native of the Bahama Islands. The plant is poisonous like the two preceding.

Bahama Poison-tree. Fl. June, July. Shrub cr. or cl.

35 R. lineatifòlia (Ort. dec. p. 89.) leaflets ovate, acuminated, toothed, quite entire at the base, lined, with the edges rather villous, lateral ones on short stalks, middle one on a long stalk; racemes axillary; berries striped. ♄. S. Native of the Island

of Cuba. Rhámnus Cubénsis, Pers. ench. 1. p. 240. no. 35. Rhámnus lineatifòlius, Schult. syst. 5. p. 294. Rhús lineàta, Spreng. syst. Flowers cream-coloured.

Lined-leaved Sumach. Clt. 1818. Shrub 2 feet.

§ 3. *Leaves palmately-trifoliate, that is to say, that the three leaflets rise from the top of the petiole.*

* *Leaflets entire, more or less downy, as well as the petioles and branches.*

36 R. GLAU'CA (Desf. arb. 2. p. 326.) leaflets obcordate, flat, usually covered with glaucous powder, smooth, quite entire. ♄. G. Native of the Cape of Good Hope. Pers. ench. 1. p. 326.

Glaucous-leaved Sumach. Fl. July. Clt. 1821. Shrub 4 ft.

37 R. VILLÒSA (Lin. fil. suppl. 183.) leaflets obovate, bluntish, quite entire, rather hairy on both surfaces, as well as the petioles and branchlets; racemes axillary, much shorter than the leaves. ♄. G. Native of the Cape of Good Hope. R. incàna, Mill. dict. no. 8.—Pluk. alm. t. 219. f. 8. In cultivation this species is sometimes smooth. It is perhaps not distinct from *R. æquàlis*, Pers. ench. 1. p. 326. Flowers yellowish-green.

Villous Sumach. Fl. July. Clt. 1714. Shrub 6 feet.

38 R. PYROÌDES (Burch. cat. 1796. voy. 1. p. 340.) leaflets subequal, obovate-oblong, quite entire, mucronated, and are, as well as the branchlets, covered with close-pressed pubescence; racemes axillary, shorter than the leaves, disposed in a terminal, elongated, leafless panicle. ♄. G. Native of the Cape of Good Hope. Leaves pale.

Pear-like Sumach. Clt. 1816. Shrub 6 feet.

39 R. ATOMA'RIA (Jacq. hort. schœnb. t. 343.) leaflets obovate, mucronate, quite entire, smoothish above, but clothed with velvety villi beneath, as well as the branches and petioles; panicle terminal, much branched. ♄. G. Native of the Cape of Good Hope. Flowers greenish-yellow. The leaves when bruised have the smell of turpentine.

Atomed-leaved Sumach. Fl. July. Clt. 1800. Sh. 6 to 8 ft.

40 R. ELLI'PTICA (Thunb. fl. cap. 2. p. 214.) leaflets elliptical, entire, acute, downy beneath; petioles filiform; branches smooth; panicles axillary. ♄. G. Native of the Cape of Good Hope. Flowers greenish-yellow.

Elliptical-leaved Sumach. Fl. July. Clt. 1818. Shrub 6 feet.

41 R. CILIA'TA (Licht. in Schult. syst. 6. p. 661.) leaflets linear-lanceolate, quite entire, puberulous beneath, and fringed on the margins; branches spiny; panicle terminal. ♄. G. Native of the Cape of Good Hope. Burch. cat. 1946. Flowers greenish-yellow.

Fringed-leaved Sumach. Clt. 1816. Shrub 6 feet.

42 R. BI'COLOR (Licht. in Schult. syst. 6. p. 661.) leaflets oblong, acute, downy beneath; racemes axillary. ♄. G. Native of the Cape of Good Hope.

Two-coloured-leaved Sumach. Shrub 6 feet.

43 R. ANGUSTIFÒLIA (Lin. spec. 381. exclusive of Burmann's synonyme,) leaflets stalked, linear-lanceolate, quite entire, downy beneath. ♄. G. Native of Ethiopia. Pluk. phyt. t. 217. f. 6. R. argentèa; Mill. dict. Panicles axillary. Flowers greenish.

Narrow-leaved Sumach. Clt. 1714. Shrub 7 feet.

44 R. ROSMARINIFÒLIA (Vahl. symb. 3. p. 50.) leaflets linear, acute, with revolute, quite entire edges, clothed with rusty down beneath; panicles axillary and terminal. ♄. G. Native of the Cape of Good Hope.—Burm. afr. t. 91. f. 1. R. rosmarinifòlia, Thunb. fl. cap. 2. p. 212. is probably a distinct plant.

Rosemary-leaved Sumach. Clt. 1800. Shrub 6 feet.

* * *Leaflets entire, smooth, but the petioles and branchlets are more or less downy.*

45 R. CIRRHIFLÒRA (Lin. fil. suppl. 184.) leaflets obovate, quite entire, smooth; petioles pubescent; tendrils axillary, filiform; stem climbing. ♄. ◡. G. Native of the Cape of Good Hope, in woods. Thunb. fl. cap. 2. p. 218. Flowers yellowish-green.

Tendril-flowered Sumach. Shrub cl.

46 R. PUBE'SCENS (Thunb. fl. cap. p. 215.) leaflets obovate, quite entire, mucronate, smooth; petioles very short; branchlets pubescent. ♄. G. Native of the Cape of Good Hope. Flowers greenish-yellow.

Pubescent Sumach. Clt. 1800. Shrub 6 feet.

47 R. PENDULÌNA (Jacq. ex Willd. enum. 324.) leaflets lanceolate, quite entire, smooth on both surfaces, but fringed; petioles pubescent; branches pendulous; panicle racemose, terminal. ♄. G. Native of the Cape of Good Hope. Flowers greenish-yellow.

Pendulous-branched Sumach. Shrub 6 feet.

* * * *Leaflets entire, and are, as well as petioles and branchlets, smooth.*

48 R. THUNBERGIA'NA (Schult. syst. 6. p. 651.) leaflets obcordate, glaucous, with revolute, smooth, quite entire edges. ♄. G. Native of the Cape of Good Hope. R. glaúcum, Thunb. fl. cap. 2. p. 218. but not of Desf. Flowers greenish-yellow.

Thunberg's Sumach. Shrub 6 feet.

49 R. LU'CIDA (Lin. spec. 382.) leaflets obovate, quite entire, very blunt, somewhat emarginate, smooth on both surfaces; racemes shorter than the leaves, in terminal panicles. ♄. G. Native of the Cape of Good Hope. R. lùcida β, Ait. hort. kew. ed. 2. vol. 2. p. 166.—Comm. hort. 1. t. 93.—Pluk. phyt. t. 219. f. 9.—Burm. afr. 252. t. 91. f. 2. Flowers whitish. Fruit reddish.

Var. β, *subdentàta* (D. C. prod. 2. p. 69.) some of the leaves are a little toothed. Jacq. hort. schœnb. t. 347.

Shining-leaved Sumach. Fl. July, Aug. Clt. 1694. Sh. 8 ft.

50 R. CAVANILLE'SII (D. C. prod. 2. p. 69.) leaflets obovate, very blunt, somewhat emarginate, quite entire, smooth on both surfaces; racemes longer than the leaves. ♄. G. Native of Mexico. R. lùcidum, Cav. icon. 2. p. 27. t. 132. exclusive of the synonyms. Flowers greenish-yellow. Fruit reddish.

Cavanilles's Sumach. Fl. July, Aug. Clt. 1697. Shrub 6 ft.

51 R. BURMA'NNI (D. C. prod. 2. p. 69.) leaflets obovate, blunt, mucronate, quite entire, pale beneath, smooth on both surfaces, as well as the branches; racemes interrupted, a little shorter than the leaves. ♄. G. Native of the Cape of Good Hope. Burm. afr. p. 232. t. 91. f. 2. R. lùcidum α, Ait. hort. kew. ed. 2. vol. 2. p. 166. Flowers greenish-yellow or whitish.

Burmann's Sumach. Fl. July, Aug. Clt. 1797. Shrub 6 feet.

52 R. PANICULA'TA (Wall. mss. in herb. Lin. soc.) leaves palmately-trifoliate; leaflets smooth, coriaceous, obovate-oblong, emarginate at the apex; panicles axillary and terminal. ♄. S. Native of Asia.

Panicled-flowered Sumach. Shrub.

53 R. NERVÒSA (Poir. suppl. 5. p. 264.) lateral leaflets small, cuneately-obovate, very blunt, mucronulate, shining on both surfaces, and are, as well as the branches, quite smooth; racemes rather shorter than the leaves, disposed in a terminal panicle. ♄. G. Native of the Cape of Good Hope. Burch. cat. no. 2871. Flowers greenish-yellow.

Var. β, *mucronàta* (Thunb. fl. cap. 2. p. 216.) petioles very short; panicles axillary.

Nerved-leaved Sumach. Clt. 1800. Shrub 6 feet.

54 R. LÆVIGA'TA (Lin. spec. 1672.) leaflets oblong, quite entire, acute at both ends, and are, as well as the petioles and branches, smooth; panicle terminal, elongated, loose. ♄. G.

Native of the Cape of Good Hope. R. elongàta, Jacq. hort. schœnb. t. 345. Flowers yellowish-white.

Smooth Sumach. Fl. July, Sept. Clt. 1758. Sh. 7 ft.

55 R. LA'NCEA (Lin. fil. suppl. 184.) leaflets linear, acuminated at both ends, and are smooth, as well as the branches, lateral ones diverging in a straight angle; panicle loose, terminal. ♄. G. Native of the Cape of Good Hope. Thunb. fl. cap. 2. p. 212.

Lance-leafletted Sumach. Clt. 1810. Shrub 10 feet.

56 R. VIMINA'LIS (Vahl. symb. 3. p. 50.) leaflets linear-lanceolate, very long, quite entire, somewhat tapering to the base, and are, as well as the branches, quite smooth; panicles axillary, shorter than the leaves. ♄. G. Native of the Cape of Good Hope. Jacq. hort. schœnb. t. 344. Flowers greenish-yellow.

Green-twiggy Sumach. Fl. Sept. Nov. Clt. 1774. Sh. 8 ft.

57 R. FRA'GRANS (Licht. in Schult. syst. 6. p. 661.) leaflets linear-lanceolate, mucronate, smooth. ♄. G. Native of the Cape of Good Hope. Probably quite distinct from *R. rigida*.

Fragrant Sumach. Fl. July, Sep. Clt. 1824. Shrub 6 feet.

58 R. DENUDA'TA (Licht. in Schult. syst. 6. p. 661.) leaflets lanceolate-linear, and are smooth, as well as the branches; panicles capillary, axillary, shorter than the leaves. ♄. G. Native of the Cape of Good Hope. Flowers greenish-yellow.

Naked Sumach. Shrub 6 feet.

59 R. TRIDA'CTYLA (Burch. cat. no. 1667. voy. 1. p. 340.) leaflets smooth, quite entire, linear, very blunt, broadest towards the base; branches stiff, spreading, unarmed. ♄. G. Native of the Cape of Good Hope. Flowers greenish-yellow.

Three-fingered-leaved Sumach. Clt. 1816. Shrub 6 feet.

* * * * *Leaflets toothed, crenate or serrated, more or less downy.*

60 R. PARVIFLÒRA (Roxb. hort. beng. p. 22.) leaflets obovate, crenate-toothed, somewhat velvety, and are as well as the petioles and branchlets velvety-villous beneath; middle one much larger than the rest; panicle terminal, villous. ♄. G. Native of Nipaul. This species is allied to *R. atomària*, but the leaves are not entire. Flowers greenish-yellow.

Small-flowered Sumach. Shrub 6 feet.

61 R. A'LBIDA (Schousb. muroc. 128.) leaflets wedge-shaped, entire, or somewhat crenated, obtuse, whitish-glaucous, and lepidoted, smooth; petioles a little winged; panicles axillary and terminal. ♄. G. Native of Mogodor. R. albicáns, Willd. enum. 325.

Whitened-leaved Sumach. Clt. 1816. Shrub 2 feet.

62 R. OXYACA'NTHA (Schousb. in act. soc. hafn. p. 71.) leaflets cuneate-obovate, usually entire, middle one longest, hoary on both surfaces, as well as the branches and petioles; branches unarmed; racemes axillary and terminal; flowers probably dioecious. ♄. G. Native of Mogodor. R. cratægifórme, Pers. ench. 1. p. 326.? This species is perhaps sufficiently distinct from *R. dioíca* and *R. álbida*. Flowers greenish-yellow.

Sharp-spined Sumach. Clt. 1823. Shrub 6 feet.

63 R. SINUA'TA (Thunb. fl. cap. 2. p. 222.) leaflets ovate, obtuse, sinuated, villous beneath, as well as the branches; panicles axillary. ♄. G. Native of the Cape of Good Hope. Mýrica trifoliàta, Lin. ex Thunb.?

Sinuate-leafletted Sumach. Clt. 1820. Shrub 6 feet.

64 R. MYSORE'NSIS; leaflets obovate, middle one long, all retuse, sinuately-lobed, brown and pubescent beneath. ♄. S. Native of Mysore. Racemes panicled, axillary, and terminal.

Mysore Sumach. Shrub.

65 R. DIMIDIA'TA (Thunb. fl. cap. 2. p. 220.) leaflets sessile, smooth above but villous beneath, obovate, middle one 3-toothed, lateral one dimidiate, sinuately toothed. ♄. G. Native of the Cape of Good Hope. This species is allied to *R. tridentàta*. Flowers greenish-yellow.

Dimidiate-leaved Sumach. Shrub 6 feet.

66 R. TRIDENTA'TA (Lin. fil. suppl. 184.) climbing; leaflets on short petioles, ovate, hoary, serrated; serratures 3-5; tendrils axillary. ♄. ◡. G. Native of the Cape of Good Hope. Thunb. fl. cap. 2. p. 220. Flowers yellowish-green.

Three-toothed-leafletted Sumach. Clt. 1816. Shrub cl.

67 R. DISSE'CTA (Thunb. fl. cap. 2. p. 223.) leaflets sharply cut, pinnatifid, smooth above, but clothed with white down beneath; branches smooth. ♄. G. Native of the Cape of Good Hope. Flowers greenish-yellow.

Dissected-leaved Sumach. Clt. 1820. Shrub 6 feet.

68 R. TOMENTÒSA (Lin. spec. 382.) leaflets elliptical, acuminated at both ends, coarsely serrated from the middle to the apex, clothed with white down beneath, but smoothish above, as well as the branches; panicles terminal, downy. ♄. G. Native of the Cape of Good Hope. Comm. hort. amst. 1. t. 92.—Pluk. phyt. t. 219. f. 7. Flowers greenish-yellow.

Downy-leaved Sumach. Clt. 1691. Shrub 8 feet.

69 R. INCI'SA (Lin. fil. suppl. 183.) leaflets obovate, wedge-shaped, obtuse, deeply pinnatifid, clothed with white down beneath, but pubescent above, as well as the branches; calyxes downy. ♄. G. Native of the Cape of Good Hope. Flowers greenish-yellow.

Incised-leaved Sumach. Clt. 1789. Shrub 6 feet.

* * * * * *Leaflets toothed, serrated, smooth, but the petioles and branchlets are sometimes downy.*

70 R. EXCÌSA (Thunb. fl. cap. 2. p. 216.) leaflets obovate or somewhat oblong, entire or a little cut, smooth; branches divaricate, smooth. ♄. G. Native of the Cape of Good Hope. Flowers and fruit unknown.

Cut-leaved Sumach. Clt. 1816. Shrub 6 feet.

71 R. RÍGIDA (Mill. dict. no. 14.) leaflets linear, acuminated, smooth, stiff, entire, or with a few acute teeth; panicles terminal; branches smooth. ♄. G. Native of the Cape of Good Hope. Burch. cat. no. 2929. Flowers greenish-yellow.

Stiff-leaved Sumach. Clt. 1700. Shrub 6 feet.

72 R. SERRÆFÒLIA (Burch. cat. no. 1697.) leaflets linear, acuminated, elongated, serrated, and are, as well as the branches, smooth; panicles terminal. ♄. G. Native of the Cape of Good Hope. Flowers greenish-yellow.

Saw-leaved Sumach. Clt. 1816. Shrub 6 feet.

73 R. UNDULA'TA (Jacq. hort. schœnb. t. 346.) leaflets obovate, tapering to the base, somewhat serrated, wavy; panicles axillary, length of leaves. ♄. G. Native of the Cape of Good Hope. Pers. ench. 1. p. 326. Flowers whitish-yellow.

Wavy-leaved Sumach. Clt. 1816. Shrub 6 feet.

74 R. DIOI'CA (Brouss. in Willd. enum. p. 325.) leaflets obovate, middle one largest, 3-5-toothed, cuneated at the base, smooth; branches spiny, smooth; racemes short, axillary; flowers dioecious. ♄. G. Native of Mogodor. R. oxyacántha, Cav. ann. 3. p. 36. R. oxyacanthoides, Dum. Cours. bot. cult. 6. p. 662. Flowers greenish-yellow.

Dioecious Sumach. Clt. 1825. Shrub 6 feet.

75 R. LOBA'TA (Poir. suppl. 5. p. 264.) leaflets wedge-shaped at the base, and entire, but furnished with lobe-like teeth at the apex, and are, as well as the branches, smooth; racemes axillary. ♄. G. Native of Teneriffe, in bushy places. This species is sometimes furnished with simple leaves, rising from the axillæ of the others. Flowers greenish-yellow.

Lobed-leaved Sumach. Clt. 1800. Shrub 6 feet.

76 R. ERÒSA (Thunb. fl. cap. 2. p. 212.) leaflets lanceolate, erosely-toothed, shining, and are, as well as the branches, quite smooth; panicles axillary. ♄. G. Native of the Cape of Good Hope. Flowers greenish-white.

Erose-leaved Sumach. Shrub 6 feet.

77 R. cuneifòlia (Desf. cat. par. ed. 2. p. 227.) leaflets wedge-shaped, smooth, with 5 or 6 blunt teeth at the apex; branches pubescent. ♄. G. Native of the Cape of Good Hope. Perhaps the same as *R. cuneifòlia*, Thunb. fl. cap. 2. p. 222. Flowers greenish-white.

Wedge-leaved Sumach. Clt. 1816. Shrub 6 feet.

78 R. saxa'tilis (Moc. et Sesse, fl. mex. icon. ined. D. C. prod. 2. p. 71.) leaflets ovate-lanceolate, acuminated, coarsely-serrated, and are, as well as the branches, smooth; racemes axillary, length of petioles. ♄. G. Native of Mexico, on rocks, where it is called *Metzquaquitli*. Flowers whitish-green.

Rock Sumach. Shrub 6 feet.

79 R. grandidenta'ta (D. C. prod. 2. p. 72.) leaflets obovate, cuneated at the base, with 3 or 4 deep teeth at the apex; panicles terminal; fruit round, smooth. ♄. G. Native of the Cape of Good Hope. Burch. cat. no. 3079. Flowers whitish-green.

Large-toothed-leaved Sumach. Shrub 6 feet.

80 R. micra'ntha (Thunb. fl. cap. 2. p. 221.) leaflets ovate, acute, toothed at the apex; panicles axillary, supra-decompound. ♄. G. Native of the Cape of Good Hope. Flowers greenish-white.

Small-flowered Sumach. Clt. 1818. Shrub 6 feet.

81 R. denta'ta (Thunb. fl. cap. 2. p. 219.) leaflets obovate, mucronately-toothed; stem covered with scabrous tubercles. ♄. G. Native of the Cape of Good Hope. Flowers yellowish-green.

Toothed-leaved Sumach. Clt. 1793. Shrub 6 feet.

82 R. crena'ta (Thunb. fl. cap. 2. p. 219.) leaflets wedge-shaped, crenately trifid at the apex, smooth, but rufous beneath; branches villous; racemes terminal. ♄. G. Native of the Cape of Good Hope. Flowers greenish-yellow.

Crenate-leaved Sumach. Clt.? Shrub 3-6 feet.

83 R. spica'ta (Thunb. fl. cap. 2. p. 217.) leaflets obovate, toothed at the apex, and are, as well as the branches, smooth; flowers spicate. ♄. G. Native of the Cape of Good Hope. Perhaps this species is referable to section *Lobàdium*.

Spike-flowered Sumach. Shrub 6 feet.

84 R. Africa'na (Mill. dict. no. 11.) leaflets ovate, nerved, usually toothed, green on both surfaces. ♄. G. Native of the Cape of Good Hope. Flowers greenish-yellow.

African Sumach. Shrub 6 feet.

85 R. Meerburgia'na (Rœm. et Schult. syst. 6. p. 663.) leaflets linear-lanceolate, smooth. ♄. G. Native of? R. pùmilum, Meerb. icon. pict. t. 14. but not of Michx.

Meerburgh's Sumach. Shrub 8 feet.

Sect. IV. Theze'ra (from θηζας, *thezas*, a point; in reference to the prickles). D. C. prod. 2. p. 72. Flowers dioecious. Styles 3, distinct, short. Drupe roundish, marked with 3 tubercles at the apex, containing a compressed nut. Leaves palmately 3-5-foliate; leaflets sessile. Flowers disposed in short racemes.

86 R. pentaphy'lla (Desf. fl. atl. 1. p. 267. t. 77.) branches spiny; petioles a little winged; leaflets 3-5, linear-lanceolate, broadest at the apex, blunt, entire or 3-toothed. ♄. H. Native of Sicily and Barbary. Rhámnus pentaphýllus, Jacq. obs. 2. p. 27.—Bocc. sic. t. 21. R. Thezèra, Pers. ench. 1. p. 325. Tin. pug. 1. p. 7. Flowers pale-yellow. Fruit red when ripe, with a subacid, rather pleasant taste. The bark dyes red, and is used for tanning leather.

Five-leaved Sumach. Clt. 1816. Shrub 10 feet.

87 R. zizy'phina (Tin. pug. sic. 1. p. 8.) leaflets 3, wedge-shaped, toothed beyond the middle, smooth, shining above; branches spiny, divaricate; racemes terminal. ♄. H. Native of Sicily, on the mountains. Schrank. in flora, 1819. p. 384. Rhámnus tripartìta, Ucria and Zízyphus tripartìta, Rœm. et Schult. syst. 5. p. 342. and 6. p. 663. Flowers yellowish.

Zizyphus-like Sumach. Clt. 1800. Shrub 4 feet.

Sect. V. Loba'dium (from *loba*, a stalk of wheat; similarity in the dense aments of flowers). Rafin. in journ. phys. 89. t. 98. D. C. prod. 2. p. 73.—Turpínia, Rafin. in Desv. journ. 1809. 2. p. 170.—Schmálzia, Desv. journ. Flowers polygamous. Glands 2-lobed, alternating with the stamens under the ovary. Styles 3, short, distinct. Drupe somewhat compressed, villous, containing a smooth nut.—Aromatic shrubs, with palmately-trifoliate leaves, rising from the top of the common petiole, sessile, coarsely and deeply serrated. Flowers disposed in dense aments.

88 R. suave'olens (Ait. hort. kew. 1. p. 368.) leaflets sessile, ovate-rhomboid, deeply serrated, smooth. ♄. H. Native of Carolina. Mýrica trifoliàta, Hortul. and perhaps of Lin.? Toxicodéndron crenàtum, Lam. dict. no. 5. Flowers greenish-yellow.

Sweet-scented Sumach. Fl. May. Clt. 1759. Shrub 6 feet.

89 R. aroma'tica (Ait. hort. kew. 1. p. 367.) leaflets sessile, ovate-rhomboid, deeply serrated, covered with longish pubescence. ♄. H. Native of North America, in Pennsylvania, Carolina, and Kentucky, in rocky situations, about springs. Flowers yellow in catkins, as well as those of the preceding species, which give them quite a distinct appearance from the rest of the genus.

Aromatic Sumach. Fl. May, June. Clt. 1772. Shrub 6 ft.

† *Species not sufficiently known.*

* *Leaves simple.*

90 R. A'tha (Forst. prod. 142.) leaves simple, ovate-oblong; flowers polygamous. ♄. G. Native of New Caledonia.

Atha Sumach. Shrub.

91 R. Sæ'neb (Forsk. suppl. 207.) leaves long, lanceolate, serrated, clothed with white down beneath; fruit globose, hispid, crowded. ♄. F. Native of Arabia, on the mountains about Hadio, where it is called *Sæneb*.

Sæneb Sumach. Shrub.

92 R. mo'llis (H. B. et Kunth, nov. gen. amer. 7. p. 10. t. 602.) leaves simple, oblong-elliptical, cordate, almost entire, coriaceous, and are, as well as the branchlets, clothed with soft hairs; racemes axillary, few-flowered; calyxes closed, covered with long pubescence. ♄. G. Native of Mexico, near Quaretaro. The branches of this shrub, when immersed in water, turns it blue. Fruit unknown. This is probably a genuine species of the genus.

Soft Sumach. Shrub.

93 R. cau'stica (Hook. bot. Beech. p. 15. t. 7.) leaves simple, coriaceous, elliptical, quite entire, with cartilaginous margins; racemes subpanicled, axillary, and terminal; flowers dioecious, decandrous; fruit drupaceous, dry. ♄. G. Native of Chili, at Conception. Laúrus caústica, Molini, Willd. and others.—Litri or Llithi, Feull. per. vol. 3. t. 23. A much branched shrub, of which there are two varieties; the one with rather pubescent branches and smooth leaves, the other with the branches pubescent, as well as the leaves beneath. This is so extremely poisonous that individuals resting or sleeping under it at certain times of the year are afterwards attacked with eruptions all over the body.

Caustic Sumach or Llithi-tree. Shrub 10 feet.

* * *Leaves pinnate.*

94 R.? heterophy'lla (D. C. cat. hort. monsp. 1813. p. 136.) leaves impari-pinnate, with 5-7 ovate, rarely 3 or 1, oblong, quite smooth leaflets; petioles a little winged at the apex; flowers dioecious from abortion. ♄. G. Native of? Fruit unknown. Stamens 5. Stigmas 3. Perhaps R. heterophýlla,

Balb. cat. taur. 1813. p. 64. and Poir. suppl. 5. p. 262. is the same, or a distinct species. It is also probably the R. variifolium, Moc. et Sesse, fl. mex. icon. ined.

Variable-leaved Sumach. Shrub.

95 R. DIGITA'TA (Lin. fil. suppl. 184.) climbing; leaves pinnate; leaflets 5, oblong, quite entire, smooth, obtuse; tendrils axillary. ♄. ◡. G. Native of the Cape of Good Hope. Flowers and fruit unknown.

Digitate-leaved Sumach. Clt. 1820. Shrub cl.

* * * *Leaves trifoliate.*

96 R. ARBÒREA (D. C. prod. 2. p. 73.) leaflets lanceolate, unequally serrated, downy beneath; petioles and branches piloselytomentose; stem arborescent. ♄. S. Native of Jamaica, on hills, as well as of Campeachy. Toxicodéndron arbòreum, Mill. dict. no. 8. Berry orange, smooth. Sloan. cat. 170.

Tree Sumach. Tree 20 feet.

97 R. ARBORE'SCENS (D. C. prod. 2. p. 73.) leaflets ovatelanceolate, acuminated, smooth, oblique at the base; stem shrubby, branched; flowers dioecious. ♄. S. Native about Carthagena. Toxicodéndron arboréscens, Mill. dict. no. 9.

Arborescent Sumach. Shrub 6 feet.

Cult. The hardy species of this genus are very proper for shrubberies; some of them are propagated freely from cuttings of the roots, and others from cuttings and layers. The greenhouse and stove species will grow in any kind of soil, and ripened cuttings of them root freely under a hand-glass in sand; those of the stove species require heat.

XVIII. MAU'RIA (in honour of Antonio Mauri, an Italian botanist, author of Floræ Romanæ Prodromus, 8vo. 1818). H. B. et Kunth, nov. gen. amer. 7. p. 11. gen. tereb. p. 6.

LIN. SYST. *Octo-Decándria, Monogýnia.* Flowers hermaphrodite. Calyx 4-5-lobed, urceolate, permanent. Petals 4-5, broad at the base. Stamens 8-10, inserted under the disk. Disk annular. Ovary 1, sessile, 1-celled, 1-ovulate. Style very short. Stigma thick, 3-5-angled. Fruit obliquely-elliptical, compressed, rather fleshy. Seed without albumen, pendulous. Cotyledons flat. Radicle superior, hooked.—Peruvian trees, with simple or impari-pinnate leaves, and axillary and terminal panicles of flowers.

1 M. SIMPLICIFÒLIA (H. B. et Kunth, l. c. t. 605.) leaves simple, somewhat elliptical. ♄. S. Native of South America. Flowers pale-red.

Simple-leaved Mauria. Tree 20 feet.

2 M. HETEROPHY'LLA (H. B. et Kunth. l. c. t. 606.) leaves with 1 or 2 pairs of leaflets, with an odd one, which is oblong. ♄. S. Native of Peru, between Loxa and Ayavaca. Fruit unknown. Flowers pale-red.

Variable-leaved Mauria. Tree 20 feet.

Cult. For culture and propagation see the stove species of *Rhús.*

XIX. STAGMA'RIA (from *σταζω, stazo,* to run out; the bark exudes a resin). Jack, mal. misc. no. 1. p. 12.

LIN. SYST. *Pentándria, Mono-Trigýnia.* Calyx inferior, tubular, deciduous, with the mouth irregularly ruptured. Petals 5, inserted in the stipe of the ovary. Stamens 5, alternating with the petals; filaments about the length of the corolla; anthers oblong. Ovary 3-lobed; lobes 1-seeded, 1-2 of which are usually abortive. Styles 1-3, rising from the tops of the lobes of the ovary. Stigmas obtuse. Berry kidney-shaped, furrowed, 1-seeded, warted. Seed exalbuminous. Embryo falsely monocotyledonous.—A tree, full of resinous juice, with simple exstipulate leaves, and panicles of flowers.

1 S. VERNICIFLU'A (Jack, l. c.) ♄. S. Native of Sumatra and Borneo, and other East India Islands.—Rumph. amb. 2. p. 259. t. 86. A large tree, with alternate elliptic-lanceolate leaves. It is dangerous to handle, or even to sit or sleep under its shade. The bark exudes a resin, which soon becomes hard and black on exposure, and is collected and employed as a varnish. According to Rumphius, this is the celebrated varnish-tree of Japan, and probably the Aúgia of Loureiro.

Varnish-flowing Stagmaria. Tree 50 feet.

Cult. For culture and propagation see stove species of *Rhús.*

XX. DUVA'UA (in honour of M. Duvau, a French botanist). Kunth, gen. tereb. p. 8. D. C. prod. 2. p. 74.

LIN. SYST. *Monœ'cia* or *Diœ'cia, Octándria.* Flowers monoecious or dioecious. Calyx 4-cleft, permanent. Petals 4, concave. Stamens 8-10, inserted under the disk, alternate ones longer than the petals, they are barren in the female flowers. Disk urceolar, 8-toothed. Ovary sessile, conical, containing only one ovulum, sterile in the male flowers. Styles 3-4, very short. Stigmas capitate. Drupe globose, containing a coriaceous nut. Seed 1, pendulous, destitute of albumen, with flat cotyledons and a long superior radicle.—Smooth, somewhat spinescent trees, natives of Chili, with simple, almost entire leaves, and axillary, many-flowered racemes. Flowers sometimes 5-cleft.

1 D. DEPE'NDENS (D. C. prod. 2. p. 74.) leaves ovate-lanceolate, entire, and sometimes trifid; racemes simple, length of leaves; flowers usually octandrous. ♄. F. Native of Chili, where it is called *Huinghan.* Amýris polýgama, Cav. icon. 3. p. 20. t. 239. Schìnus depéndens, Ort. dec. 8. p. 102. Flowers yellowish-white. Berries black. The flowers are occasionally polygamous, monoecious, and dioecious.

Dependent-branched Duvaua. Clt. 1790. Tree 20 feet.

2 D.? DENTA'TA (D. C. prod. 2. p. 74.) leaves lanceolate, toothed; racemes compound, a little longer than the leaves; flowers decandrous. ♄. F. Native of the island of Owhyhee. Schìnus dentàtus, Andr. bot. rep. t. 620. Flowers white, numerous, in compound axillary racemes. Berries black, the size of a small currant, with a sweet fleshy pulp, each having many cells, though generally perfecting but one seed.

Toothed-leaved Duvaua. Fl. May, Jul. Clt. 1795. Tr. 20 ft.

Cult. For culture and propagation see greenhouse species of *Rhús.*

XXI. SCHI'NUS (*σκινος, schinos,* is the Greek name for the mastick; a resinous juice exudes from this tree similar to mastick). Lin. gen. no. 1130. Lam. ill. t. 822. Kunth, gen. tereb. p. 7. D. C. prod. 2. p. 74.

LIN. SYST. *Diœ'cia, Decándria.* Flowers dioecious. Calyx 5-parted. Petals 5. Male flowers with 10 stamens and the rudiment of an ovary. Female flowers with sterile stamens and one sessile ovary. Style wanting. Stigmas 3-4, collected into a dot. Drupe globose, with a thin epicarp, and very little pulp, containing a 1-seeded bony nut, having 6 hollows or cavities in the circumference. Seed without albumen, compressed, suspended by a funicle, which rises from the side of the parietes. Embryo with flat cotyledons and an inferior radicle.—Shrubs or little trees, natives of America, abounding in peppery, balsamiferous gum. Racemes or panicles axillary. Leaves impari-pinnate. This genus agrees with *Spóndias* in the radicle being inferior.

1 S. MU'LLI (Lin. spec. 1467.) leaves with numerous pairs of lanceolate, serrated leaflets, terminal one longest; flowers panicled. ♄. G. Native of Brazil and Peru. Mill. fig. t. 246. Lam. ill. t. 822. Flowers small, yellowish-green. Berries about as large as a pea, of a singularly beautiful rose-colour, and highly polished. The Peruvians are reported to make a vinous drink by boiling these berries, as well as a kind of honey, and a sort of vinegar, according to the mode of management. A resinous gum exudes from the stem, which par-

takes of the nature of mastick. The fresh leaves have a singular motion when immersed in water, and emit a turpentine odour when bruised. *Mulli* is the Peruvian name of the tree.

Var. β, *Areìra* (Lin. spec. 1467.) leaflets almost quite entire. ♄. G. Mólle, Clus. cur. post. p. 94. with a figure. Both varieties are beautiful shrubs in England, but they are said to grow to considerable trees in the places of their natural growth. The first variety stands in the open air in Sicily.

Mulli or Peruvian Mastick-tree. Fl. July, Aug. Clt. 1597. Tree 20 feet.

2 S. TEREBINTHIFÒLIUS (Raddi, pl. bras. p. 20.) leaves impari-pinnate, with 7 somewhat serrated, almost equal leaflets; flowers racemose. ♄. S. Native of Brazil. C. Aroèiri, Marcg. bras. p. 90. Flowers greenish-white.

Terebinthus-leaved Schinus. Clt. 1830. Tree 20 feet.

3 S. HU'YOAN (Mol. chil. ed. gall. 337.) leaves impari-pinnate; leaflets serrated; stalked; the odd one very short. ♄. G. Native of Chili, where it is called *Huinghan*. Flowers greenish-white.

Huinghan Schinus. Tree.

Cult. For culture and propagation see greenhouse and stove species of *Rhús*, p. 76.

† *Genera allied to Terebinthiàceæ, Tribe Sumachìneæ, but are not sufficiently known.*

* *Petals 4-5. Stamens usually 3-5.*

XXII. TRICE'ROS (from τρεις, *treis*, three, and κερας, *keras*, a horn; in allusion to the fruit being crowned by three horns). Lour. fl. coch. 184. D. C. prod. 2. p. 89.

LIN. SYST. *Pentándria, Trigýnia.* Calyx 5-parted, permanent, spreading. Petals 5. Stamens 5. Ovary roundish. Styles 3, distant at the base and simple. Berry coriaceous, 3-horned, 3-celled. Seeds 2? roundish.—A tree with impari-bipinnate leaves, having 2 pairs of pinnæ. Racemes loose, subterminal.

1 T. COCHINCHINE'NSIS (Lour. l. c.). ♄. G. Native of Cochin-china, on the mountains. Flowers white.

Cochin-china Triceros. Tree 25 feet.

Cult. See *Cneòrum* for culture and propagation, p. 78.

XXIII. TRATTINI'CKIA (in honour of Trattinick, a German botanist). Willd. spec. 4. p. 975. but not of Pers. nor Esp. D. C. prod. 2. p. 89.

LIN. SYST. *Monœ'cia, Pentándria.* Male and female flowers mixed. Calyx campanulate, 3-toothed. Corolla campanulate, 3-toothed. Stamens 5, rising from the torus. Ovary 1, ovate. Style awl-shaped, simple. Fruit unknown.—A large tree, with the appearance of *Rhús*. Leaves impari-pinnate. Panicles of flowers terminal. From the petals being connected, it would appear that this tree is closely allied to *Hedwígia*.

1 T. RHOIFÒLIA (Willd. l. c.). ♄. S. Native of Brazil, in the province of Para.

Red-leaved Trattinickia. Tree 66 feet.

Cult. See stove species of *Rhús*, for culture and propagation, p. 76.

XXIV. HUE'RTIA (in honour of Jerome Huerta, a Spaniard, who translated Pliny into his own langurge). Ruiz et Pav. fl. per. prod. 34. t. 6. syst. 1. p. 63. D. C. prod. 2. p. 90.

LIN. SYST. *Pentándria, Monogýnia.* Calyx 5-toothed. Petals 5, ovate, sessile. Stamens 5. Ovary free. Style 1. Stigma bifid, acute. Drupe? obovate, containing a 1-celled, 1-seeded nut?—A tree with impari-pinnate leaves, and stalked, oval-lanceolate, serrated leaflets, which are villous at the origin of the veins beneath, bearing 2 glands at the base of each. Racemes axillary and terminal. Flowers yellow.

1 H. GLANDULÒSA (Ruiz et Pav. fl. per. 3. p. 5. t. 227. f. a.). ♄. S. Native of Peru in groves.

Glandular Huertia. Tree 70 feet.

Cult. See stove species of *Rhús*, for culture and propagation, p. 76.

XXV. RU'MPHIA (in honour of George Everard Rumphius, Consul of Amboyna, author of Herbarium Amboinense, 1750 in fol.; died 1706). Lin. gen. no. 47. Lam. ill. t. 25. D. C. prod. 2. p. 90.

LIN. SYST. *Triándria, Monogýnia.* Calyx tubular, 3-cleft. Petals 3, oblong. Stamens 3, exserted equal with the petals. Ovary 1, somewhat trigonal. Style 1. Drupe coriaceous, turbinate, 3-furrowed, containing a 3-celled, 3-seeded nut.—A tree, with simple leaves and axillary racemes of white flowers. This genus is excluded from *Terebinthàceæ* by S. Kunth.

1 R. TILIÆFÒLIA (Lam. dict. 6. p. 352.). ♄. S. Native of Malabar, not of Amboyna. R. Amboinénsis, Lin. spec. 49.—Rheed. mal. 4. t. 11. Leaves cordate, ovate, crenate, hairy, rough.

Lime-tree-leaved Rumphia. Tree 60 feet.

Cult. See stove species of *Rhús* for culture and propagation, p. 76.

XXVI. BA'RBYLUS (a name by which Theocritus and others have called the common damask prune). P. Browne, jam. 116. D. C. prod. 2. p. 91.—Baròla, Adans. fam. 344.

LIN. SYST. *Octo-Decándria, Monogýnia.* Calyx 4-5-cleft, campanulate. Petals 4-5, rising from the margin of the calyx. Stamens 8-10, rising from the bottom of the calyx. Ovary free. Style and stigma 1. Capsule 3-celled, each cell containing 2 seeds.—A tree with alternate, pinnate leaves, and racemes of white flowers. This genus is hardly known, but according to Adanson it is allied to *Terebinthàceæ*.

1 B. JAMAICE'NSIS (D. C. prod. 2. p. 91.) ♄. S. Native of Jamaica.

Jamaica Barbylus. Tree 20 feet.

Cult. See stove species of *Rhús* for culture and propagation, p. 76.

* * *Petals wanting. Stamens* 10-12.

XXVII. LUNA'NEA (in honour of John Lunan, author of Hortus Jamaicensis). D. C. prod. 2. p. 92.—Edwárdsia, Rafin. speech. 1. p. 158. but not of Salisb.—Bíchy, Lunan, hort. jam. 1. p. 86.

LIN. SYST. *Polygàmia, Diœ'cia.* Flowers polygamous. Calyx coloured, 5-parted; lobes erectly-spreading, thick, and pilose on the outside. Petals wanting. Disk concave, 10-toothed. Stamens 10, exserted from the disk; anthers with coalescent teeth on the outside. Ovary roundish, crowned by 5 stigmas. Capsule somewhat ovate, gibbous, 1-celled, valveless (ex Rafin), semilocular, 2-valved (ex Lunan). This genus is allied to *Poupártia*, according to Rafin. Seeds fixed by the back.

1 L. BÍCHY (D. C. prod. 2. p. 92.). ♄. S. Native of Guinea, from whence it has been introduced to the West Indies by the negroes, under the name of *Bichy*. Edwárdia lùrida, Rafin. l. c. Amýris Lunàni, Spreng. syst. 2. p. 217. Leaves alternate, stalked, oblong, acuminated, smooth, waved, veiny, and compound racemes of yellow flowers, which are striped with purple and have an ungrateful smell.

Bichy Lunania. Tree.

Cult. For culture and propagation see stove species of *Rhús*, p. 76.

XXVIII. HETERODE'NDRON (from ἑτερος, *heteros*, variable, and δενδρον, *dendron*, a tree; tree variable in form). Desf. mem. mus. 4. p. 9. t. 3. D. C. prod. 2. p. 92.

LIN. SYST. *Decándria, Monogýnia.* Flowers hermaphrodite.

Calyx small, permanent, sinuately 4-5-toothed. Petals wanting. Stamens 10-12, hypogynous; anthers 2-celled, inserted by the base. Ovary bluntly 2-4-sided, 2-4-celled, hairy. Style scarcely any. Fruit unknown.—A shrub, with the appearance of *Cneòrum.* Leaves simple, oblong-lanceolate, quite entire. Flowers in axillary racemes.

1 H. OLEÆFÒLIUM (Desf. l. c.). ♄. G. Native of New Holland. Flowers yellowish-green.

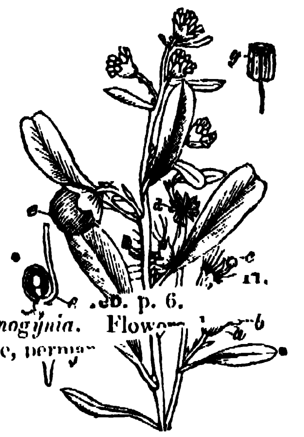
Olive-leaved Heterodendron. Shrub.

Cult. See *Cneòrum* for culture and propagation.

XXIX. STYLOBA'SIUM (from στυλος, *stylos*, a style, and βασις, *basis*, a base; style at the base of the ovary). Desf. mem. mus. 5. p. 37. t. 2. D. C. prod. 2. p. 92.

LIN. SYST. *Decándria, Monogýnia.* Calyx urceolar, bluntly 5-lobed (f. 14. *a.*), coloured. Petals wanting. Stamens 10 (f. 14. *b.*), hypogynous; anthers 2-celled (f. 14. *g.*). Ovary obovate (f. 14. *f.*), containing 2 ovula, bearing from the side at the base a filiform style (f. 14. *f.*), which is capitate at the apex (f. 14. *c.*). Drupe (f. 14. *e.*), 1-celled, 1-seeded, roundish, girded by the calyx.—A shrub, with alternate, somewhat spatulate, quite entire, smooth leaves. Flowers usually polygamous from abortion, on short pedicels from the axillæ of the upper branches. This genus probably belongs to *Terebinthàceæ* near *Heterodéndron* or perhaps to *Rosàceæ*, Tribe CHRYSOBALA'NEÆ.

FIG. 14.



1 S. SPATULA'TUM (Desf. l. c.). ♄. G. Native of New Holland, on the eastern coast.

Spatulate-leaved Stylobasium. Shrub 6 feet.

Cult. See *Cneòrum* for culture and propagation.

XXX. CNEO'RUM (κνεωρον, *cneoron*, a name given to some shrub resembling an olive by Hippocrates and Theophrastus). Lin. gen. no. 48. Lam. ill. t. 27. Kunth, gen. tereb. p. 25. D. C. prod. 2. p. 83.—Chamæ'lea, Tourn. inst. t. 421.

LIN. SYST. *Tri-Tetrándria, Monogýnia.* Flowers hermaphrodite. Calyx 3-5-toothed, small, permanent. Petals 3-4, equal, imbricate in æstivation. Torus somewhat globose. Stamens 3-4. Stigmas 3-4. Drupes baccate, 3-4, joined together by the axis; putamen 2-celled; cells 1-seeded. Seed pendulous. Albumen fleshy. Radicle recurved downwards and beyond the cotyledons. Cotyledons semicylindrical (Gært. fruct. 1. t. 70.)—Subshrubs, with entire linear-oblong, dotless leaves, and axillary, yellow flowers. This genus is perhaps more nearly allied to *Dodonæàceæ.*

1 C. TRICÓCCON (Lin. spec. 49.) smooth; flowers axillary; pedicels free from the floral leaves. ♄. G. Native of Spain and the south of France, in gravelly and rocky places. Sims, bot. mag. icon. Lam. ill. 27.—Cam. epit. t. 973. Jaume, pl. fr. t. 5. Flowers usually 3-cleft. This is a dwarf spreading shrub with narrow leaves, having fruit resembling some species of *Euphórbia.*

Three-berried Widow-wail. Fl. April, Sept. Clt. 1793. Shrub 1 to 2 feet.

2 C. PULVERULE'NTUM (Vent. hort. cels. t. 77.) plant covered with greyish powder; flowers axillary; pedicels adhering to the base of the floral leaves. ♄. G. Native of Teneriffe, among rocks in hot situations. Flowers usually 4-cleft.

Powdery Widow-wail. Fl. April, Sept. Clt. 1822. Sh. 1 to 3 ft.

Cult. The species thrive well in a mixture of loam and peat, or any light loamy soil. They will survive the winter in the open air in mild winters. Ripened cuttings root freely in sand, under a hand-glass. Seeds ripen in abundance.

XXXI. SURIA'NA (in honour of Joseph Donat Surian, once a physician at Marseilles, who accompanied Plumier in his travels). Plum. gen. 37. Lin. gen. no. 581. Lam. ill. t. 389. D. C. prod. 2. p. 91.

LIN. SYST. *Penta-Decándria, Pentagýnia.* Calyx 5-parted. Petals 5, hypogynous, or inserted in the bottom of the calyx. Stamens 5-10. Carpels 5, bearing each a filiform style on the inside laterally, ending in a valveless, indehiscent, coriaceous nut. Seed 1 from the base, obovate, kidney-shaped, destitute of albumen. Embryo replicate, with a terete radicle directed downwards, and flat incumbent cotyledons.—A shrub with simple, oblong, spatulate, thickish, rather velvety, exstipulate leaves, which are crowded at the tops of the branches, and yellow, bracteate, subterminal flowers. From the embryo this genus is allied to *Cneòrum*, not to *Rosàceæ*, and perhaps with it and *Heterodéndron* will constitute a distinct order. According to Kunth it is more nearly allied to *Geraniàceæ.*

1 S. MARÍTIMA (Lin. spec. 284.). ♄. S. Native of South America, by the sea-side as well as of India and New Caledonia, &c. Plum. ed Burm. t. 249. f. 1. Flowers yellowish.

Sea-side Suriana. Clt. 1733. Shrub 3 to 4 feet.

Cult. Loam and sand is a good mixture for this tree, and ripened cuttings will root in sand under a hand-glass, in heat.

ORDER LXXIV. SPONDIA'CEÆ (plants agreeing with *Spóndias* in important characters). Kunth in ann. scienc. nat. 2. p. 362. Lindl. introd. nat. ord. p. 362. Terebinthàceæ, Tribe III. Spondiàceæ, D. C. prod. 2. p. 74.

Flowers sometimes unisexual. Calyx 5-cleft (f. 15. *a.*), regular, permanent or deciduous. Petals 5 (f. 15. *b.*), inserted below the disk which surrounds the ovary, somewhat valvate or imbricate in æstivation. Stamens 10, perigynous, inserted with the petals. Disk annular in the male flowers, orbicular, 10-toothed. Ovary superior, sessile, from 2-5-celled, with one pendulous ovum in each cell. Styles 5, very short, crowned by obtuse stigmas. Fruit drupaceous (f. 15. *d.*), containing a 2-5-celled nut (f. 15. *c.*). Seeds exalbuminous. Cotyledons plano-convex. Radicle superior, pointing towards the hilum, but inferior in *Spóndias*, according to Gærtner.—Trees, with unequally-pinnate, alternate, dotless leaves, a few simple ones occasionally intermixed, all exstipulate. Flowers axillary and terminal, disposed in panicles or racemes.—This order comes very near *Terebinthàceæ* in the structure of its fruit, which is almost that of *Mangifera*, except that it is compound and not simple, destitute however of the resinous juice of that order.

Synopsis of the Genera.

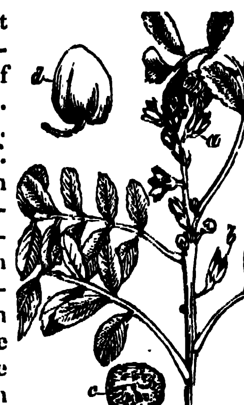
1 SPÓNDIAS. Flowers sometimes unisexual. Calyx 5-cleft (f 15. *a.*). Petals 5 (f. 15. *b.*), rather valvate in æstivation. Stamens 10, glandular, exserted from the disk. Ovary 1. Styles 5. Drupe (f. 15. *d.*) containing a 5-celled fibrous nut (f. 15. *c.*), each cell containing 2 ova, one of which only comes to maturity.

2 POUPA'RTIA. Flowers unisexual. Calyx 5-parted. Petals 5, imbricate in æstivation. Stamens 10. Ovary 5-celled? with some of the cells abortive. Styles 5. Drupe containing a 2-3-celled fibrous nut.

I. SPO'NDIAS (*σπονδιας*, *spondias*, one of the Greek names for the plum; the fruit exactly resembles a plum). Lin. gen. no. 577. Gært. fruct. 2. t. 104. Kunth. gen. tereb. p. 31. D. C. prod. 2. p. 74.

Lin. syst. *Decándria, Pentagýnia.* Flowers sometimes of separate sexes. Calyx 5-cleft (f. 15. *a.*), coloured. Petals 5 (f. 15. *b.*), oblong, spreading, somewhat valvate in æstivation. Stamens 10, glandular, exserted, rising from the crenate disk. Ovary 1, ovate. Styles 5, erect, distant, simple. Drupe ovate (f. 15. *d.*) or roundish, crowned by the punctiform vestiges of the styles, containing a fibrous 5-celled nut (f. 15. *c.*), each cell containing 2 ovula. Seed solitary from abortion, without albumen. Embryo straight, with somewhat fleshy cotyledons, and an inferior radicle.—Trees, with impari-pinnate leaves, very rarely simple. Racemes axillary or terminal, simple or panicled. This genus agrees with *Schìnus* in the radicle being inferior.

FIG. 15.



1 **S. purpu'rea** (Lin. spec. 613.) leaves impari-pinnate; petioles compressed. ♄. S. Native of the West Indies and South America. S. Mómbin, Lin. syst. veg. 357. but not of Jacq. S. myrobálanus, Jacq. amer. t. 88. Gært. fruct. 2. p. 102. t. 104. —Sloan. jam. 2. p. 126. t. 219. f. 3, 4, and 5. Flowers small, red, in simple racemes. Fruit ovate or oblong, purple or variegated with yellow, an inch long; pulp yellow, with a singular, but agreeable acid aromatic flavour, but is not held in much esteem by Europeans. The tree is very variable in size; the boughs are set in the ground when in flower as hedges, and in the course of 2 or 3 months they are laden with fruit. It is called *Spanish plum-tree.*

Purple-fruited Hog-plum or Spanish plum. Clt. 1800. Tree 30 to 40 feet.

2 **S. Za'nzee**; leaves impari-pinnate, with entire leaflets; fruit small, black, edible; panicle terminal. ♄. S. Native of Guinea, where it is called *Zanzee.*

Zanzee Hog-plum. Tree 60 feet.

3 **S. lu'tea** (Lin. spec. 613.) leaves impari-pinnate, with 7-9 ovate, oblong, shining leaflets, which are gradually acuminated; petioles round. ♄. S. Native of South America and the West Indies, where it is called *Mombin, Hobo,* &c. S. myrobálanus, Lin. syst. 357. S. Mómbin, Jacq. amer. 138. Gært. fruct. 2. p. 102.—Sloan. hist. t. 219. f. 1 and 2. Racemes in branched panicles. The fruit of this tree is yellow, and as large as a plum; the flesh is of an agreeable acid aromatic flavour, eaten by children and some of the inhabitants, but furnishing excellent food for hogs. There is a variety of this species in Jamaica, esteemed by some persons. As the branches grow very readily, the tree is used by some for hedges, and one or two is planted in pastures to afford shade for sheep.

Yellow-fruited Hog-plum. Clt. 1739. Tree 50 feet.

4 **S. Oghi'gee**; leaves impari-pinnate; leaflets ovate, acute, entire; panicle spreading, terminal; flowers pentandrous. ♄. S. Native of Guinea, where it is called *Oghigee.* Fruit about the size of a pigeon's egg, yellow, of a fine sweetish acid taste. Flowers small, white.

Oghigee Hog-plum. Tree 60 feet.

Cult. Loam and sand is a good mixture for the species of *Spóndias*, and large cuttings will root if planted in sand or mould, in heat.

II. POUPA'RTIA (the tree is called in the island of Bourbon *Bois de Poupart*). Comm. in Juss. gen. 372. Kunth. gen. tereb. p. 31. D. C. prod. 2. p. 75.

Lin. syst. *Diœ'cia, Decándria.* Flowers of separate sexes. Calyx 5-parted, deciduous. Petals 5, spreading very much, imbricate in æstivation. Stamens inserted on the margin of a hypogynous disk. Ovary 5-celled? cells 1-seeded, with some of the cells usually abortive. Styles 5, approximate or subconnate, crowned by obtuse truncate stigmas. Drupe baccate, containing a 2-5-celled nut; cells remote from the axis. Seeds flattish, without albumen, somewhat falcate. Embryo exalbuminous, inverted with plano-convex cotyledons, and a lateral or centrifugal radicle.—Trees, with impari-pinnate leaves, and quite entire acuminated leaflets, and subterminal panicles of flowers. This genus is said to belong to *Burseriàceæ* by R. Brown.

1 **P. Borbónica** (Lam. dict. 5. p. 606.) leaves pinnate; racemes compound. ♄. S. Native of the island of Bourbon, where it is called *Bois de Poupart.* Leaves some of them simple, others with numerous leaflets, 11-19. Flowers dark-purple.

Bourbon Poupart-wood. Clt. 1825. Tree 40 feet.

2 **P. mangi'fera** (Blum. bijdr. 1160.) leaflets ovate or elliptic-oblong, acuminated, oblique at the base, quite entire, veiny, and smooth; panicle divaricate. ♄. S. Native of Java, and other parts of the East Indies, where it is called *Daho.* Mangífera pinnàta, Lin. fil. suppl. 156. Spóndias mangífera, Pers. ench. p. 509. Spóndias amàra, Lam. dict. 4. p. 261. The leaves of this tree are said by Rheede to be agreeably acid. The fruit oval, of a yellowish-green colour, an inch and a half long, eatable, and agreeably fragrant. The cat-ambalan of Rheed. mal. p. 93. appears to be a wild state of the same plant.

Mango-bearing Poupartia. Clt. 1820. Tree.

3 **P. du'lcis** (Blum. bijdr. 1161.) leaflets elliptic-oblong, acuminated, repandly-crenulated, smooth, with parallel veins; panicle divaricate. ♄. S. Native of Java, Moluccas, and the Society Islands. Spóndias dúlcis, Forst. prod. 198. Spóndias Cytheræ'a, Sonn. itin. 2. t. 123. Lam. dict. 4. p. 160. ill. t. 384. Gært. fruct. 2. p. 101. t. 103. The fruit is large, and very smooth, of a golden-yellow colour, and a somewhat nauseous fetid smell, containing a sweet, aromatic, succulent pulp. The tree is cultivated to a great extent in the Society and Friendly Islands, especially in Otaheite, for the sake of its fruit, which is esteemed one of the most wholesome; it has almost the flavour of a pine-apple, and not only assuages thirst, but is given to the sick without distinction.

Sweet Otaheite-apple. Clt. 1792. Tree 30 feet.

Cult. For culture and propagation see *Spóndias.*

Order LXXV. BURSERIA'CEÆ (*plants agreeing with Bursèra in important characters*). Kunth, in ann. sci. nat. 2. p. 333. Lindl. introd. nat. ord. Terebinthàceæ, Tribe IV. D. C. prod. 2. p. 75. Terebinthàceæ, part. Juss. gen. 368.

Flowers hermaphrodite (f. 16.), but occasionally unisexual (f. 18.). Calyx permanent, nearly regular, with from 2-5 divisions (f. 16. *a.*). Petals 3-5 (f. 16. *c.*), inserted below the disk, rising from the calyx, usually valvate in æstivation. Stamens 2 (f. 16. *d.*), or 4-times as many as there are petals, perigynous, all fertile. Disk orbicular (f. 18. *d.*), or annular (f. 16. *b.*). Ovary 2-4-celled, superior, sessile (f. 16. *e.* f. 18. *e.*). Style short or wanting, with the stigmas equal in number to the cells of the ovary. Ovula in pairs, attached to the axis, collateral. Fruit drupaceous (f. 18. *e.*), 2-5-celled, with the outer part often splitting into valves. Seeds exalbuminous. Cotyledons either wrinkled or plaited or fleshy. Radicle superior, straight, turned towards the hilum.—Trees or shrubs, abounding in balsamic resin or gum. Leaves alternate, unequally pinnate, occasionally stipulate, usually without pellucid dots. Flowers axillary or terminal, disposed in racemes or panicles. This order differs from *Terebinthàceæ*, to which it is closely allied, in the compound ovary and pinnate leaves, and also in the very generally valvate æstivation of the calyx. The plants abound in a fragrant resinous juice, which, however, is destitute of the acridity and staining properties of that of *Terebinthàceæ*. The resin of *Boswéllia* is used in India as incense, and also as pitch. It is hard and brittle, and according to Dr. Roxburgh, is boiled with some low-priced oil to render it soft and fit for use. The native doctors prescribe it mixed with ghee (clarified butter) in cases of gonorrhœa, and also in what they call *ritta*. A substance like gum elemi is produced by *Icìca Icicariba* and *I. Carana*, and a yellow essential oil by *Bursèra acuminàta*, which has the same properties as those of balsam of capaiva; the 3-horned nuts of *Canàrium commùne* are eaten in Java both raw and dressed, and an oil is expressed from them which is used at table when fresh, and for lamps when boiled. The raw nuts, however, are apt to bring on diarrhœa.

Synopsis of the Genera.

1 Boswe'llia. Flowers hermaphrodite (f. 16.). Calyx 5-toothed (f. 16. *a.*). Petals 5 (f. 16. *c.*), with the edges incumbent in æstivation. Disk cup-shaped (f. 16. *b.*), crenated, staminiferous. Stamens 10 (f. 16. *d.*). Style crowned by a capitate stigma. Capsule trigonal (f. 16. *e.*), 3-valved, 3-celled. Seeds solitary in the cells, girded by a membrane.

2 Balsamode'ndron. Flowers unisexual. Calyx 4-toothed. Petals 4, induplicately-valvate in æstivation. Stamens 8, inserted under the annular disk, with elevated warts between them. Ovary 1. Style 1, short, obtuse. Berry or drupe ovate, acute, marked by 4 sutures, 1-2-celled; cells 1-seeded.

3 Icìca. Flowers usually hermaphrodite. Calyx 4-5-toothed. Petals 4-5, inserted under the disk, valvate in æstivation. Stamens 8-10. Ovary 4-5-celled; cells 2-ovulate. Disk orbicular. Style short, crowned by 3-4 stigmas. Fruit coriaceous, 2-3-valved, containing 4-5 little, 1-seeded nuts involved in pulp.

4 Pròtium. Flowers unisexual. Calyx 5-cleft. Petals 5, inserted under the disk, valvate in æstivation. Stamens 10. Style 1. Disk truncate, 10-ribbed. Drupe indehiscent, containing 3 nuts, 2 of which are usually abortive.

5 Burse'ra. Flowers polygamous (f. 18.). Calyx small, 3-5-parted. Petals 3-5 (f. 18. *b.*), valvate in æstivation. Stamens 6-10 (f. 18. *c.*). Disk annular, 8-crenate (f. 18. *d.*). Ovary 3-celled. Style short, trifid. Drupe (f. 18. *e.*), 3-valved, containing 3 1-2-seeded nuts, 2 of which are abortive.

6 Mari'gnia. Flowers hermaphrodite. Calyx 5-cleft. Petals 5, valvate in æstivation. Disk entire. Stamens 10. Ovary 5-celled. Stigma nearly sessile, somewhat 5-lobed. Drupe containing 1-5 1-seeded nuts, covered with pulp.

7 Colopho'nia. Calyx urceolate, 3-lobed. Petals 3, inserted under the disk, imbricate in æstivation. Stamens 6. Disk 6-toothed.

8 Cana'rium. Flowers dioecious or polygamous. Calyx 3-toothed. Petals 3, imbricate in æstivation. Stamens 6. Disk urceolate. Ovary 3-celled. Style short, crowned by 3 punctiform stigmas. Drupe baccate, containing a 3-celled nut.

9 Hedwígia. Flowers polygamous or hermaphrodite. Calyx 4-toothed. Petals 4, concrete to the middle, valvate in æstivation. Stamens 8, adnate to the corolla. Disk cup-shaped, 8-lobed. Ovary 4-celled, 8-furrowed. Stigma sessile, 4-furrowed. Berry 4-furrowed, containing 4 nuts, one of which only comes to maturity.

10 Sorinde'ia. Flowers polygamo-dioecious. Calyx urceolate, 5-toothed. Petals 5, valvate in æstivation. Stamens about 20 (16-28), inserted in the bottom of the calyx in the male flowers, and 5 fertile in the hermaphrodite ones. Stigmas 3, sessile. Drupe containing a filamentose nut.

11 Garu'ga. Flowers hermaphrodite. Calyx campanulate, 5-toothed. Petals 5, inserted in the calyx as well as the stamens, which are 10 in number, with 5 pairs of glands between the stamens. Style filiform, crowned by a 5-lobed stigma. Drupe fleshy, containing 5 irregular 1-seeded nuts, or only 2-3 from abortion.

12 Ela'phrium. Flowers hermaphrodite. Calyx 4-parted. Petals 4. Stamens 8. Style short, crowned by a bifid stigma. Capsule 1-celled, 1-seeded. Seeds covered with pulp.

13 Fagara'strum. Flowers hermaphrodite. Calyx 3-4-parted. Petals 3-4. Stamens 6-8, unequal. Ovary stipitate, with the stipe bearing the petals and stamens, tubercled, 3-4-lobed at the apex, 3-4-celled; cells 2-ovulate. Style 3-4-angled, 3-4-lobed at the apex.

I. BOSWE'LLIA (in memory of the late Dr. John Boswell, of Edinburgh). Roxb. cor. t. 207. hort. beng. p. 32. Kunth, gen. tereb. p. 16. D.C. prod. 2. p. 76.

Lin. syst. *Decándria, Monogýnia.* Flowers hermaphrodite (f. 16.). Calyx 5-toothed (f. 16. *a.*), permanent. Petals 5 (f. 16. *c.*), obovate-oblong, spreading, with the margins incumbent in æstivation. Disk cup-shaped, crenate (f. 16. *b.*), staminiferous, surrounding the base of the ovary. Stamens 10 (f. 16. *d.*). Ovary oblong, trigonal, 3-celled; cells 2-ovulate; ova attached to the axis. Style 1. Stigma capitate, 3-furrowed. Capsule trigonal (f. 16. *e.*), 3-valved, 3-celled, opening from the base. Seed solitary in the cells, girded by a broad membranous wing.—Indian trees abounding in balsam. Leaves imparipinnate, with opposite serrated leaflets. Flowers small, disposed in racemes or panicles. This genus differs from the rest of *Burseriàceæ* in the fruit being capsular, not drupaceous.

1 B. gla'bra (Roxb. cor. 3. p. 4. t. 207.) leaflets broad, lanceolate, blunt, serrated, smooth; racemes aggregate, simple, terminal, shorter than the leaves. ♄. S. Native of Coromandel and the Moluccas. Rumph. amb. 2. t. 50. ex Roxb. and therefore Canàrium balsamíferum, Willd. spec. 4. p. 760. This is one of the largest trees on the coast of Coromandel, where it is called *Gugulapootschittoo*. The wood is hard, heavy, and durable. The wounded bark yields a kind of resin, which is burnt as incense in the Hindu temples, and is also employed

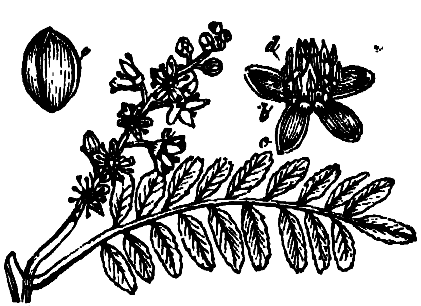
with vegetable oil for the more useful purpose of marine pitch. Leaves crowded at the ends of the branches, a span long, deciduous. Flowers small, white, with a red nectary and yellow anthers.

Smooth Boswellia. Clt. 1823. Tree 70 feet.

2 B. HIRSU'TA (Smith, in Rees' cycl. no. 2.) leaflets oblong-lanceolate, hairy, deeply serrated; racemes axillary, simple, many-flowered. ♄. S. Native of Amboyna. Rumph. amb. 2. t. 51. ex Smith, and therefore Canàrium hirsùtum, Willd. spec. 4. p. 760.

Hairy Boswellia. Tree 50 feet.

FIG. 16.



3 B. SERRA'TA (Stack: extr. bruc. p. 19. t. 3.) leaflets ovate-oblong, taper-pointed, serrated, pubescent; racemes axillary, simple. ♄. S. Native of the mountainous parts of India. From this tree is collected the gum olibanum ex Colebr. in asiat. res. 9. p. 377. with a coloured figure. B. thurífera, Roxb. hort. beng. p. 32. Flowers whitish-yellow. It is generally agreed that the gum resin, called olibanum, is the frankincense which was used in the religious ceremonies of the ancients, but there is not the same agreement as to the plant supposed to produce it. Linnæus has referred it to the Lycian juniper, and the chemical writers agree with him; but the French botanists deny it, and say that Linnæus made the assertion without proof. This remark is evidently well founded. A great degree of obscurity has always hung over this subject; and we learn from Theophrastus and from Pliny that the Greek writers differed in their description of the tree. *Olibanum* is named *Luban* and *Cundur* by the Arabs. But *benzoin* having been introduced into general use as incense, in place of *Olibanum*, the name of *Luban* is given to that fragrant balsam, but the Mahommedan writers of India on materia medica apply only the term *Cundur* to *Olibanum*. From the Hebrew *Lebonah* or Arabic *Luban*, the Greeks obtained their names for the tree and gum *Libanos* and *Libanotos*. They seem likewise to have been acquainted with the term *Cundur*, from which *κονδρω* is probably derived. The Hindoo writers on materia medica notice a fragrant resinous gum under the name of *Cunduru*, which their grammarians consider as a Sanscrit word, and accordingly date an etymology of it from a Sanscrit root. They concur in declaring it to be the produce of the *Sallaci*, a tree which they affirm to be vulgarly called *Salai*. The tree which is known by that name is the *Boswéllia serràta*. Mr. Turnbull, who was surgeon to the residency of Nagpore in the East Indies, and on his return to the station of Mirzapore he had procured considerable quantities of the gum of the *Salai*, which he sent to Europe at different times, first without assigning the name of *Olibanum*, and afterwards under that designation. It was in England recognised for *Olibanum*, though offered for sale as a different gum; and annual consignments of it have been since regularly sold at the East India Company's sales. The experience of several years at a market such as that of London, where a mistake, if any had been committed, would have been soon discovered, seems to be conclusive. *Olibanum* is said to be principally collected in Arabia and brought from Mecca to Cairo, from whence it is imported into Europe. It consists of various brittle grains of different sizes, not larger than a chesnut, of a red or yellow colour, having little taste and a peculiar aromatic smell. Newmann got from 480 grains, 346 alcoholic and 125 watery extract, and inversely 200 watery and 273 alcoholic. The distilled spirit and water both smelt of *Olibanum*, but no oil separated. *Olibanum* forms a transparent solution with alcohol, and a milky fluid when triturated with water; it is not fusible but inflammable, and burns with an agreeable smell. It is said to be the frankincense of the ancients; and the diffusion of its vapour around the altar still forms part of the religious ceremonies of the Greek and Roman Catholic churches.

Serrated-leaved Boswellia. Clt. 1820. Tree 40 feet.

Cult. A mixture of loam, peat and sand will suit these trees, and ripened cuttings will root in sand, under a hand-glass, in heat.

II. BALSAMODE'NDRON (from *βαλσαμον*, *balsamon*, balsam, and *δενδρον*, *dendron*, a tree; the tree produces the balsam of Mecca). Kunth, gen. tereb. p. 16. D. C. prod. 2. p. 76.—Balsàmea, Gled. act. soc. cur. nat. berl. 3. p. 127.

LIN. SYST. *Diœ'cia, Octándria.* Flowers of separate sexes. Calyx 4-toothed, permanent. Petals 4, linear-oblong, induplicately valvate in æstivation. Stamens 8, inserted under the annular disk, with elevated warts between the stamens. Ovary 1. Style 1, short, blunt. Berry or drupe ovate, acute, 1-2-celled, marked with 4 sutures; cells 1-seeded.—Eastern balsamiferous trees. Leaves with 3-5 sessile, dotless leaflets. This genus is not well known.

1 B. GILEADE'NSE (Kunth, l. c.) leaves palmately trifoliate; leaflets blunt, quite entire; pedicels 1-flowered, 3 together, shorter than the petiole. ♄. G. Native of Arabia, near Haes. Amỳris Gileadénsis, Lin. mant. 65. Vahl. symb. 1. p. 28. t. 11. Amỳris Opobálsamum, Forsk. descr. p. 79. Flowers small, whitish. The tree which produces the balsam of Gilead has purplish branches, but whether it is obtained from the same tree as balsam of Mecca is very doubtful. This substance, which has also the names of *Balsamum Judaicum*, *Syriacum de Mecca*, and *Opobalsamum*, is a resinous juice obtained from an evergreen tree, growing spontaneously, particularly on the Asiatic side of the Red Sea, near Mecca. The true *Opobalsamum*, according to Alpinus, is at first turbid and white, of a very strong pungent smell, like that of turpentine, but much sweeter, and of a bitter, acrid, astringent taste; upon being kept for some time it becomes thin and limpid, of a greenish hue, then of a golden yellow, and at length of the colour of honey. The balsam is in high esteem among the eastern nations, both as a medicine and as an odoriferous unguent and cosmetic. But in Europe it is never obtained genuine, and as all the signs of its goodness are fallacious, it has been very rarely employed; nor need it be regretted, for any of the other resinous fluids will answer equally as well, such as the balsam of Canada or Capaiva. The dried berries were formerly kept under the title of *Carpo-balsamum*, and the wood under that of *Xylo-balsamum*.

Balsam of Gilead. Tree 20 feet.

2 B. OPOBA'LSAMUM (Kunth, l. c.) leaves with 1 or 2 pairs of acutish, quite entire leaflets; odd one sessile; pedicels 1-flowered, shorter than the petioles. ♄. G. Native of Arabia, P. Alp. eg. 2. t. 60. Amỳris Opobálsamum, Lin. amœn. 7. p. 68. Baléssan, Bruce's trav. French ed. t. 25. This is probably only a variety of the first.

Var. β, Meccanénse (D. C. prod. 2. p. 76.) leaves bipinnate. Balsàmea Meccanénsis, Gled. l. c. 3. p. 127. t. 3 f. 2.

The *Opobalsamum*, *Balsam of Mecca*, and *Balsam of Gilead* are supposed to be the produce of one and the same tree. Gerlach relates that the tree which produces the *Opobalsamum*, or *Balsam of Mecca*, grows near Bederhunin, a village between Mecca and Medina, in a sandy rocky soil, confined to a tract about a mile in length. In the beginning of April the trees drop their juice, from gashes which are made in the smaller branches, into vessels set under them to receive it. A tree will not yield more than 10 to 15 drachms in one season. The inhabitants use it as a sudorific, particularly in rheumatism, but it is adulterated upon the spot. Lady Mary Wortley Montague says that the *Balm of Mecca* of the best quality is not easy to be got, even at Constantinople; that on applying some of it to her face it became swelled and red during three days, but that her complexion was much mended by the operation; and that the ladies all use it in Constantinople, and have the loveliest bloom in the world. An inferior sort of balsam is prepared from boiling the twigs in a quantity of water, and the balsamic matter rises to the surface and is skimmed off. After they have thus procured all they can, it is said that they push the fire, and a large quantity of thicker balsam, like turpentine, rises, which is preserved by itself, and is that principally which we have in Europe. The other can only be obtained by presents; and that which naturally distils from the trees hardly supplying the seraglio and great officers, there is none of it sent out of the country. Hasselquist describes the *Balsam of Mecca* as being yellow and pellucid, with a most fragrant resinous balsamic smell, as being very tenacious, and drawing out into long threads; that it is taken to the quantity of 3 grains to strengthen a weak stomach, and that it is a most excellent remedy for wounds. To know whether it is adulterated, drop some in a glass, and if it remains still on the surface it is of little or no use, but if it extends itself over the surface it is then of the best kind. The drugs used to adulterate this balsam are oil of sesamum, Cyprus turpentine, and ostrich fat. According to Bruce the tree is 5 or 6 feet high, branching much, with the aspect of a standard cherry-tree, having red branches and white flowers. The young shoots were formerly cut off and tied up in faggots, and sent to Venice to make the Theriaca or Venice treacle, when bruised or drawn by fire. From very early ages great value has been set upon this drug in the East. We know from Scripture, that the Ishmaelites, or Arabian carriers and merchants, trafficking with Indian commodities to Egypt, brought with them balm as part of their cargo. Strabo alone, of all the ancients, has given us an account of the place of its origin. "Near to this," he says, "is the most happy land of Sabeans, and they are a very great people. Among them frankincense, myrrh, and cinnamon grow, and in the coast that is about Saba the balsam also. Among the myrrh trees behind Azab, all along the coasts to the straits of Babelmandeb is its native country." We need not doubt but that it was early transplanted into Arabia, that is into the south part of Arabia Felix, immediately fronting Azab. The first plantation that succeeded seems to have been at Petra, the ancient metropolis of Arabia, now called Beder or Beder Hunein. Afterwards being transplanted into Palestine, it obtained the name of *Balsamum Judaicum* and *Balm of Gilead*, and became an article of commerce there. There were three productions obtained from the tree much esteemed among the ancients, the first was called *Opobalsamum*, or juice of balsam, which was the finest kind, composed of the greenish liquor found in the kernel of the fruit; the next was *Carpobalsamum*, made by the expression of the fruit when at maturity; the third was *Xylobalsamum*, worst of all; it was an expression or decoction of the young twigs, of a reddish colour. But the principal quantity of balsam at all times was produced by incision, as at the present day. The wound is made by an axe when the juice is in its strongest circulation, in July and August. It is then received into small earthen bottles, and every day's produce is poured into a larger, which is kept closely corked. The *balsam of Judea* appears to be the same balsam adulterated.

Opobalsamum or Balsam of Mecca tree. Tree 14 feet.

3 B. Ka'taf (Kunth, l. c.) leaves palmately trifoliate; leaflets smooth, serrated at the apex; pedicels bifid; berry globose, umbilicate at the apex. ♄. G. Native of Arabia Felix. Amyris Kátaf, Forsk. descr. p. 80. Vahl. symb. 1. p. 28. Mart. akad. munch. 6. p. 178. This tree probably also produces *Balsam of Mecca*. There is a red sweet-scented powder obtained from it, which the women in Arabia use to wash and cleanse their heads.

Kataf-tree. Tree 14 feet.

4 B. Ka'fal (Kunth, l. c.) leaves palmately-trifoliate; leaflets serrated at the apex, younger ones villous; berry compressed, with a prominent dot at the apex. ♄. G. Native of Arabia, where it is called *Kafal*. Amyris Káfal, Forsk. æg. p. 80. The balsam obtained from this tree is purgative.

Kafal-tree. Tree 20 feet.

† *A species perhaps allied to the present genus.*

5 B.? Zeyla'nicum (Kunth, l. c.) leaves impari-pinnate, with 5-7 stalked, ovate, acute leaflets; racemes of flowers interrupted, downy; flowers 3-petalled, hexandrous. ♄. S. Native of Ceylon. Amyris Zeylánica, Retz. obs. 4. p. 25. From this tree flows the Gum elemi of the East, but it is truly distinct from the American elemi. Calyx 3-toothed. Drupe dry, containing a 3-celled bony nut. Flowers glomerated, involucrated. This is probably a proper genus, or a species of *Colophònia*, judging from the number of parts.

Ceylon Balsam-tree. Tree.

Cult. See *Boswéllia* for culture and propagation, p. 81.

III. ICI'CA (*Icica* is the name of one of the species in Guiana). Aubl. guian. 1. p. 337. Juss. gen. 370. Kunth, gen. tereb. 17. D. C. prod. 2. p. 77.

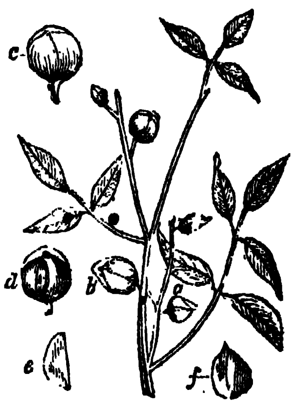
Lin. syst. *Octo-Decándria, Monogýnia.* Flowers usually hermaphrodite. Calyx 4-5-toothed, permanent. Petals 4-5, broadest at the base, and inserted under the disk, valvate in æstivation. Stamens 8-10. Ovary 4-5-celled, each cell containing 2 ovula. Disk orbicular. Style short. Stigmas 4-5. Fruit coriaceous (f. 17. *c.*), 2-3-valved, including 4-5 little nuts (f. 17. *d.*), which are covered with pulp, each containing 1 seed. Seeds without albumen, resinous. Leaves impari-pinnate, free of dots. Racemes panicled, axillary, and terminal, usually simple. Flowers of all the species white.

1 I. enneа'ndra (Aubl. guian. 1. p. 345. t. 134.) leaflets 3-5, stalked, ovate, entire, acuminated, tapering to the base, netted with veins; panicles racemose, longer than the petioles. ♄. S. Native of French Guiana in woods, where it is called *Arouaou.* Petals 5-6. Stamens 9. Amyris enneándra, Willd. spec. 2. p. 335. A very fragrant resinous juice flows from the bark of the tree.

Nine-stamened Icica. Clt. 1822. Tree 30 feet.

2 I. heterophy'lla (D. C. prod. 2. p. 77.) leaves ternate or pinnate; leaflets stalked, ovate, acuminated, entire, simply veined; racemes simple, rather shorter than the leaves. ♄. S. Native of Guiana, in woods at the river Courou, where it is called *Aracouchini.* Icica Aracouchìni, Aubl. guian. 1. p. 344. t. 133. Amyris heterophylla, Willd. spec. 2. p. 335. On the slightest incision being made in the bark of this tree, a yellow, balsamic, aromatic fluid resembling turpentine flows out in great quantities, which retains its fluidity a long time, even when exposed to the air. The inhabitants of Guiana use this fluid to cure wounds, and they carry with them always the little nuts of the fruit, which retain their scent, and which they name *Aracouchini.* They send presents of them to their friends as something very precious. The Caribbees perfume with the balsam the oil

FIG. 17.



of carape and fecula of arnotta mixed together, with which they anoint their bodies as well as their hair, to preserve them against rain and against the bites of insects.

Variable-leaved Icica. Tree 50 feet.

3 I. Guiane'nsis (Aubl. guian. 1. p. 340. t. 131.) leaflets 3-5, nearly sessile, ovate, taper-pointed, entire; peduncles corymbose, many-flowered, much shorter than the petioles, furnished with scales at the base. ♄. S. Native of Cayenne, where it is called *Bois d'encens.* Amy̆ris Guianénsis, Willd. l. c. Flowers greenish. The balsam obtained from this tree has the same properties as that obtained from the next species, and is used for the same purposes.

Guiana Icica. Clt. 1823. Tree 50 feet.

4 I. heptaphy'lla (Aubl. guian. 1. p. 337. t. 130.) leaflets 5-7, stalked, oblong, acuminated; racemes somewhat corymbose, few-flowered, 6-times or more shorter than the petiole. ♄. S. Native of the woods in Guiana, where it is called *Arbre d'encens.* Amy̆ris ambrosìaca, Willd. spec. 2. p. 335. exclusive of the synonym of Marcg. Fruit ovate, 4-celled, resembling that of the laurel, with the nut involved in a brittle covering, containing 4 stones or 4 cells wrapped up in viscid pulp, which has a balsamic smell and taste, hardens into a grey resin, and is used to burn as a perfume. The whole tree is very sweet-scented, and pours out a very odorous clear balsam from the wounded trunk or branches, which is used in dysentery; the dose is one drachm in red wine; it is also used in houses and churches to burn as a perfume. The Caribbee name is *Arouaou.*

Seven-leaved Icica. Clt. 1826. Tree 30 feet.

5 I. Tacamaha'ca (H. B. et Kunth, nov. gen. amer. 7. p. 33.) leaflets 5, elliptic-oblong, acuminated, somewhat coriaceous, shining; panicles axillary, 3-times shorter than the petioles; flowers octandrous. ♄. S. Native of South America, frequent near Calabozo in Los Llanos, where it is called *Tacamahaca.* Allied to *I. heptaphy̆lla.* Branchlets angular, powdery.

Tacamahac Icica. Clt. 1819. Tree 30 feet.

6 I. Icicari'ba (D. C. prod. 2. p. 77.) leaflets 3-5, stalked, oblong, acuminated; flowers almost sessile, crowded in the axillæ of the leaves. ♄. S. Native of Brazil, where it is called *Icicariba* and *Resina icica.* Amy̆ris ambrosìaca, Lin. fil. suppl. 216.? This tree produces sweet-scented gum like the rest, which is used as incense, and as a substitute for *gum elemi.*

Icicariba. Tree 40 feet?

7 I. deca'ndra (Aubl. guian. 1. p. 346.) leaflets 5, stalked, oblong, acuminated at both ends, entire; panicles loose, a little longer than the petioles. ♄. S. Native of Guiana, in woods, where it is called *Chipa.* Amy̆ris decándra, Willd. spec. 2. p. 335. I. pentándra, Aubl. guian. 1. t. 135. When the bark of this tree is wounded, a whitish liquid flows out, which has the scent of citrons, when dry becoming a yellow transparent resin, which is found in small pieces under the bark. This resin is carried by the Caribbees to Cayenne, where it is employed in churches as incense.

Decandrous Icica. Tree 40 feet.

8 I. macrophy'lla (H. B. et Kunth, nov. gen. amer. 7. p. 33.) leaflets 7 (9-13), oblong, somewhat coriaceous, with short taper points; racemes axillary, crowded in fascicles, much shorter than the petioles; flowers decandrous. ♄. S. Native of South America, near Maraquita in New Granada, where the tree is called *Guacharaco.* Branchlets round, smooth. Very nearly allied to *I. altíssima,* and probably the same.

Long-leaved Icica. Tree 80 feet.

9 I. altíssima (Aubl. guian. 1. t. 132.) leaflets 7, stalked, ample, ovate, bluntly acuminated; racemes simple, shorter than the petioles. ♄. S. Native of Guiana, in woods. Amy̆ris altíssima, Willd. spec. 2. p. 336. There are two varieties of this tree, the one called *Cedre blanc* the other *Cedre rouge.* The wood of the *Cedre rouge* is considered more durable than the *Cedre blanc* for household furniture and for carpentering, and canoes and boats made with it last longer than those made with the other kind.

Tall Icica. Tree 100 feet.

† *Species not sufficiently known.*

10 I. serra'ta (D. C. prod. 2. p. 77.) leaflets almost sessile, oblong, acuminated, serrated; racemes simple, numerous, terminal. ♄. S. Native of Mexico, on the warmer mountains. A. ambrosìaca, Moc. et Sesse, fl. mex. icon. et descrip. ined. but not of Lin. Drupe oblong, acute, 2-celled.

Serrated-leaved Icica. Tree.

11 I.? Cara'na (H. B. et Kunth, nov. gen. amer. 7. p. 34.) leaves trifoliate (and pinnate?); leaflets oblong, acuminated, smooth, shining above, white and glittering beneath. ♄. S. Native of South America, near Javita, at the river Temi in the Mission of Orinoco, where it is called *Carana.* Amy̆ris Caràna, Humb. relat. 2. p. 421. and 435. Flowers and fruit unknown. A grateful white resin is found closely adhering to the bark of this tree, which at length becomes yellowish, and is used against bruises.

Carana Icica. Tree 50 feet.

12 I.? cuspida'ta (H. B. et Kunth, l. c.) leaves impari-pinnate with 3 pairs of elliptical leaflets, having cuspidate points, which are smooth, and full of pellucid dots, shining above, but white and pruinose beneath. ♄. S. Native with the preceding species. Flowers and fruit unknown. Glue is made of the resin of this tree mixed with tortoise oil.

Cuspidate-leaved Icica. Tree 100 feet.

13 I. acumina'ta (D. C. prod. 2. p. 78.) leaflets 9, very large, lanceolate, acuminated; racemes short, lateral, crowded. ♄. S. Native of Cayenne. Amy̆ris acuminàta, Poir. suppl. 2. p. 136. but not of Roxb.

Acuminate-leaved Icica. Tree.

14 I.? denta'ta (D. C. prod. 2. p. 78.) leaflets 9, stalked, ovate, acuminated, toothed; racemes axillary, simple; pedicels elongated. ♄. S. Native of the East Indies. Amy̆ris dentàta, Willd. spec. 2. p. 337.

Tooth-leaved Icica. Tree 60 feet.

15 I.? Timorie'nsis (D. C. prod. 2. p. 78.) leaflets 11, stalked, ovate, acuminated, unequal at the base, almost quite entire; panicles racemose, shorter than the petioles. ♄. S. Native of the island of Timor.

Timor Icica. Tree.

Cult. For culture and propagation see *Boswéllia,* p. 81.

IV. PRO'TIUM (meaning unknown). Burm. ind. 88. Kunth, gen. tereb. p. 18. D. C. prod. 2. p. 78.

Lin. syst. *Diœ'cia, Decándria.* Flowers of separate sexes. Calyx 5-parted. Petals 5, sessile, spreading, inserted under the disk and valvate in æstivation. Stamens 10, shorter than the petals. Ovary 3-celled, each cell containing 2 ovula. Style 1, simple. Disk truncate, 10-ribbed. Drupe indehiscent, containing 3 nuts, two of which are usually abortive.—A tree from Java, with impari-pinnate leaves and axillary panicles of flowers. This genus is hardly distinct from *Bursèra.*

1 P. Java'nicum (Burm. l. c.). ♄. S. Native of Java. Amy̆ris Pròtium, Lin. mant. 65.—Rumph. amb. 7. t. 23. f. 1. Leaflets 7, stalked, oblong, acute, wavy.

Java Protium. Tree.

Cult. For culture and propagation see *Boswéllia,* p. 81.

V. BURSE'RA (in honour of Joachim Burser, a disciple of Caspar Bauhin). Jacq. amer. 94. Lin. gen. no. 440. Swartz, obs. 130. Kunth, gen. tereb. p. 18. D. C. prod. 2. p. 78.

Lin. syst. *Polygàmia, Diœ'cia.* Flowers polygamous (f. 18.).

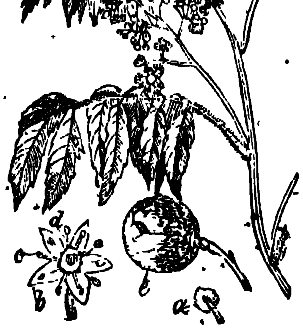
Calyx small, 3-5-toothed, with blunt teeth. Petals 3-5 (f. 18. *b.*), spreading, valvate in æstivation. Stamens 6-10 (f. 18. *c.*). Disk annular, with usually 6-10 teeth (f. 18. *d.*). Ovary ovate, 3-5-angled, 3-5-seeded. Style short, trifid at the apex. Drupe oblong, covered by a 3-valved succulent rind (f. 18. *e.*), containing 3-5 nuts, 2 or 4 of which are abortive, the fertile one is fleshy, and containing 1 seed or 1 nut. Seed baccate according to Swartz, pendulous, without albumen. Cotyledons leafy, corrugated, and plaited or 3-lobed, with a straight superior radicle.—American balsam-bearing trees, with impari-pinnate or simple leaves, and axillary and terminal racemes of flowers.

1 B. GUMMÍFERA (Jacq. amer. 94. t. 65. Lin. spec. 741.) leaves deciduous, usually impari-pinnate; leaflets ovate, acute, membranous; racemes axillary; flowers hexandrous. ♄. S. Native of the West Indies.—Sloan. hist. t. 109. There are varieties of this plant with simple, trifoliate, and impari-pinnate leaves, with 5-9 leaflets. Nut not exactly trigonal, but rather roundish, very like *Pistachia*. The tree is common in all the sugar islands of the West Indies. The bark is very thick, and exudes a clear transparent resin, which soon hardens in the air, and looks like the mastick of the shops; but by incision it yields a considerable quantity of a more fluid substance, which has much the smell and appearance of turpentine, and may be used for the same purposes. In the French islands it is called *Gommier blanc*, and an infusion of the buds and young leaves is recommended in disorders of the breast.

Var. β, polyphýlla (D. C. prod. 2. p. 78.) leaflets 11-13. Native of the Bahama islands. Cat. carol. 1. t. 30.

Gum-bearing Bursera. Clt. 1690. Tree 80 feet.

FIG. 18.



2 B. SERRA'TA (Wall. ex Coleb. in Lin. trans. vol. 15. t. 4. f. 1.) leaves impari-pinnate, with 3-5 pairs of broad-lanceolate, bluntly-acuminated, serrulated leaflets; petioles pubescent, as well as the pedicels and young roots; panicles axillary, shorter than the leaves; flowers decandrous. ♄. S. Native of the forests bordering on Bengal. The timber is close-grained and hard, and is much esteemed, and used for furniture by the inhabitants. It is as tough as oak, and heavier. Its vernacular name is *Najor* or *Neyor*.

Serrated-leaved Bursera. Clt. 1818. Tree 70 feet.

3 B. ACUMINA'TA (Willd. spec. 4. p. 1120.) leaves impari-pinnate; leaflets oblong, acute at the base, acuminated at the apex; racemes axillary. ♄. S. Native of Caraccas, as well as of Porto-Rico and St. Domingo. Flowers and fruit unknown. This tree contains a concrete yellow essential oil.

Acuminated-leaved Bursera. Tree 60 feet.

4 B. LEPTOPHLÆ'OS (Mart. bot. zeit. July 1828.) trunk branched at the base; bark shining, smooth, papyraceous, soluble; leaves impari-pinnate, and are, as well as the branches, pubescent; leaflets 5-7, oblong, acute; lobed in front; racemes few-flowered, lateral and axillary. ♄. S. Native of Brazil. A tree full of thin resinous juice.

Thin-juiced Bursera. Tree 50 feet.

5 B. SIMPLICIFÒLIA (D. C. prod. 2. p. 79.) leaves simple, oblong-obovate, obtuse, somewhat emarginate, coriaceous; racemes terminal, somewhat corymbose; nut exactly trigonal, with the angles a little winged. ♄. S. Cultivated in Jamaica.

Simple-leaved Bursera. Tree.

Cult. For culture and propagation see *Boswéllia*, p. 81.

VI. MARI'GNIA (meaning unknown.) Comm. ined. Kunth. nov. gen. tereb. p. 19. D. C. prod. 2. p. 79.—Dámmara, Gært. fruct. 2. p. 109. t. 103, but not of Lam. nor Link.

LIN. SYST. *Decándria, Monogýnia.* Flowers hermaphrodite. Calyx 5-cleft, permanent, with acute lobes. Petals 5, twice as long as the calyx, valvate in æstivation. Disk entire. Stamens 10, length of calyx. Ovary roundish, 5-celled. Stigma almost sessile, somewhat 5-lobed. Drupe crowned by the stigma, containing 1-5 1-seeded nuts, with the bark coriaceous, and perhaps soluble; nuts covered with pulp. Seed pendulous, without albumen. Cotyledons leafy, finely contortuplicate (Gært.), but flat in the immature seeds (Kunth.). Radicle superior.—Balsamiferous trees, with impari-pinnate leaves, and numerous coriaceous, variable leaflets. Racemes of flowers axillary and terminal.

1 M. OBTUSIFÒLIA (D. C. prod. 2. p. 79.) leaflets obovate, obtuse. ♄. S. Native of the Mauritius, where it is called *Colophane Batard.* Bursèra obtusifòlia, Lam. dict. 2. p. 768. Dámmara gravèolens, Gært. fruct. l. c. Leaflets blunt, glaucous, and shining above.

Blunt-leaved Marignia. Tree 50 feet.

2 M. ACUTIFÒLIA (D. C. prod. 2. p. 79.) leaflets acute. ♄. S. Native of the Moluccas. Dámmara nigra, Rumph. amb. 2. p. 160. t. 52.

Acute-leaved Marignia. Tree.

Cult. For culture and propagation see *Boswéllia*, p. 81.

VII. COLOPHO'NIA (called in the Isle of France *Bois de Colophone*). Comm. ined. Kunth. gen. tereb. p. 20. D. C. prod. 2. p. 79.

LIN. SYST. *Hexándria, Monogýnia.* Calyx urceolar, bluntly 3-lobed. Petals 3, inserted under the disk, roundish-ovate, imbricate in the bud. Stamens 6, one-half shorter than the petals, equal in length to the calyx. Disk 6-lobed. Ovary? —Resinous trees, with impari-pinnate, coriaceous, dotless leaves, and panicles of unisexual flowers.

1 C. MAURITIA'NA (D. C. prod. 2. p. 79.) ♄. S. Native of the Mauritius. Bursèra paniculàta, Lam. dict. 2. p. 768. Flowers purple. Fruit unknown. Leaflets 5-7, oval, acute, entire, smooth.

Mauritian Colophonia. Tree.

Cult. For culture and propagation see *Boswéllia*, p. 81.

VIII. CANA'RIUM (derived from its vernacular name *Canari*, in the Malay language). Lin. mant. 127. Gært. fruct. 2. t. 102. Kœn. ann. bot. 1. p. 360. Kunth. gen. tereb. p. 20. D. C. prod. 2. p. 79.—Pimèla, Lour. fl. coch. p. 407.

LIN. SYST. *Polygàmia, Diœ'cia.* Flowers dioecious or polygamous. Calyx urceolate, 3-toothed. Petals 3, concave, connivent, imbricate in æstivation. Stamens 6, rarely 7-8, connate at the base into a tube girding the ovary. Ovary ovate-globose, 3-celled, 2 of which are usually abortive. Style short, thick, crowned by a trigonal stigma. Drupe baccate, containing a trigonal 3-celled nut, each cell containing 1 pendulous seed, but sometimes solitary from abortion, destitute of albumen. Cotyledons 2, each divided into 3 oblong, somewhat leafy lobes, which are twisted in various ways.—Indian trees, with impari-pinnate leaves and stalked leaflets; stipulas deciduous. Flowers racemose or panicled.

SECT. I. CANA'RIA (see genus for derivation). D. C. prod. 2. p. 79. Drupe containing a 1-celled nut when mature.

1 C. COMMU'NE (Lin. mant. 127.) leaflets 7-9, on long stalks, ovate-oblong, bluntly acuminated, quite entire, smooth; stipulas toothed or undivided; panicle terminal; flowers glomerate, nearly sessile, bracteate; stamens connate into a membranous

tube at the base. ♄. S. Native of the East Indies, and the Moluccas, where it is also cultivated for the sake of its fruit. C. vulgàre, Rumph. amb. 2. t. 47. C. Mehenbethene, Gært. fruct. 2. p. 102.—Kœn. ann. bot. 1. p. 260. t. 7. f. 2. Flowers white. Fruit ovate, with a thin olive skin. When the nuts are mature, they contain a sweet kernel, which does not become rancid, and which resembles a sweet chesnut; they are eaten both raw and dressed by the inhabitants of the Moluccas, Banda, and New Guinea; and an oil is expressed from them, which is used at the table when fresh, and for lamps when stale; bread is also made from them, cakes, biscuits, &c. for the table. Eaten fresh, they are apt to bring on diarrhœas and dysenteries, and to occasion an oppression of the breast.

Var. β, *Zephýrinum* (D. C. prod. 2. p. 79.) leaflets 15.—Rumph. amb. 2. t. 48.

Common Canarium. Tree 50 feet.

2 C. SYLVE'STRE (Gært. fruct. 2. p. 99. t. 102.) leaflets 3-5, oblong, tapering to both ends, quite entire; flowers racemose, terminal. ♄. S. Native of Amboyna, on the mountains.—Rumph. amb. 2. t. 49. Flowers white. Fruit obovate, rounded, not 3-cornered. The kernels of the nuts are eatable, and it is difficult to get them out of the shell, on account of their brittleness and singular form.

Wild Canarium. Tree 50 feet.

3 C. MICROCA'RPUM (Willd. spec. 4. p. 760.) leaflets 5-9, ovate-lanceolate, acuminated, smooth, quite entire; racemes axillary, elongated, many-flowered; fruit drooping. ♄. S. Native of the Molucca Islands and Cochin-china.—Rumph. amb. 2. t. 54. Amyris oleòsa, Lam. dict. 1. p. 362. Pimèla oleòsa, Lour. coch. 408. Flowers white. Drupe small, oval, of a blueish-black colour, not eatable. By incisions made in the trunk of the tree, a viscid, odorous, yellowish oil flows out, very like Capaiva, which is mixed with the Chinese varnish; used medicinally it is vulnerary and resolvent. It is frequently used in the naval yards, and is commonly called Damar; it is mixed with a little chalk, and used with oakum made of the bark of reeds to fill up the seams in ships and boats, and becomes as hard as a piece of stone.

Small-fruited Canarium. Tree 50 feet.

SECT. II. PIME'LA (from πιμελη, *pimele*, fat; the trees yield a very fat oil and resin). D. C. prod. 2. p. 80. Drupe when mature containing a 3-celled nut.

4 C. DECUMA'NUM (Gært. fruct. 2. p. 99. t. 102.) leaflets 9-11, elliptical, quite entire, acute; racemes few-flowered, axillary; drupe containing a 3-celled putamen. ♄. S. Native of the Molucca Islands.—Rumph. amb. 2. t. 55. Flowers white. Fruit larger than the others; shell of nut 3-cornered.

Huge Canarium. Tree 80 feet.

5 C. PIME'LA (Kœn. ann. bot. 1. p. 361. t. 7. f. 1.) leaflets 9-11, oblong, acuminated, quite entire, somewhat unequal, smooth; stipulas wanting; racemes lateral, aggregate; flowers fascicled, naked; stamens connate into a membranous tube; drupe containing a somewhat 2-celled nut. ♄. G. Native of Cochin-china, China, and Java, in woods. Pimèla nìgra, Lour. fl. cochin. 407. Flowers white. Fruit black, sometimes pickled, and has somewhat the taste of an olive, but is heavy on the stomach.

Fat Canarium. Tree 50 feet.

6 C. A'LBUM (Ræusch. nom. D. C. prod. 2. p. 80.) leaflets 11-13, scabrous, ovate-lanceolate; racemes crowded, almost terminal; drupe containing a 3-celled nut. ♄. S. Native of China and Cochin-china, in woods. C. Sinénse, Rumph. amb. 2. p. 154.—Pimèla álba, Lour. cochin. 408. Flowers white. Fruit greenish-yellow; it is pickled and used like olives, and is similar both in taste and form, and is reckoned very wholesome, and considered good for digestion and provoking the appetite. Leaflets half a foot long.

White-fruited Canarium. Tree 40 feet.

7 C. DENTICULA'TUM (Blum. bijdr. 1162.) leaflets elliptic-oblong, acuminated, obsoletely denticulated above, smoothish; stipulas stem-clasping, jagged; panicle subterminal; flowers glomerate, sessile, bibracteolate; stamens connate into a membranous tube at the base. ♄. S. Native of Java, in woods, on the mountains of Salak, Parang, &c. where it is called *Kipella*.

Denticulated-leafletted Canarium. Tree.

8 C. HI'SPIDUM (Blum. bijdr. 1163.) leaflets oblong, acuminated, subcordate at the base, unequal-sided, quite entire, hispid beneath, as well as the fruit; stipulas petiolar, small; racemes subterminal, aggregate; flowers fascicled, naked; stamens seated on the margin of a villous disk. ♄. S. Native of Java, on mountains about Bantam, where it is called *Surian*.

Var. β, *scàbrum* (Blum. bijdr. 1163.) leaves larger, scabrous beneath; racemes compound. ♄. S. Native of Java, on the mountains of Salak.

Hispid Canarium. Tree.

9 C. ALTI'SSIMUM (Blum. bijdr. 1163.) leaflets oblong, cuspidate, subcordate at the base, quite entire, rather pilose on both surfaces, ciliated; stipulas petiolar, small, subulate; racemes axillary, simple; fruit hispid; stamens seated on the margin of a villous disk. ♄. S. Native of Java, on the mountains about Parang, where it is called *Kiharpan*.

Very-tall Canarium. Fl. Jan. Tree 70 feet.

10 C. LITTORA'LE (Blum. bijdr. 1164.) leaflets elliptic-oblong, acuminated, denticulated, tomentose on the veins beneath; stipulas none; panicle terminal, effuse; flowers densely glomerate, bracteate; stamens seated on the margin of a villous disk. ♄. S. Native of the Islands of Nusa and Kambanga on the sea shore.

Shore Canarium. Fl. Nov. Tree 50 feet.

Cult. For culture and propagation see *Boswéllia*, p. 81.

IX. HEDWI'GIA (in honour of John Hedwig, the celebrated muscologist; died 1799.) Swartz, fl. ind. occ. 2. p. 670. t. 13. Kunth. gen. tereb. p. 21. D. C. prod. 2. p. 80. but not of Hedw. Tetragástris, Gært. fruct. 2. p. 130. t. 109.

LIN. SYST. *Octándria, Monogýnia*. Flowers polygamous or hermaphrodite. Calyx 4-5-toothed, permanent. Petals 4-5, valvate in æstivation, connected together to the middle into a 4-5-cleft corolla. Stamens 8-10, adnate to the base of the corolla. Disk cup-shaped, 8-lobed. Ovary 4-celled, 8-10-furrowed. Style wanting. Stigma 4-furrowed, blunt. Berry 4-furrowed, 4-lobed at the bottom, containing 4 1-celled nuts (or from abortion only 2-3), with a thin coriaceous flesh. Seed pendulous, destitute of albumen. Cotyledons thick, fleshy, plano-convex. Radicle retracted, superior.—Balsamiferous West Indian trees, with impari-pinnate leaves, and stalked, coriaceous, quite entire leaflets. Flowers in panicled racemes.

1 H. BALSAMI'FERA (Swartz. l. c.) flowers 4-cleft, octandrous, with no glands between the stamens. ♄. S. Native of St. Domingo, in woods, on the mountains. Tetragástris O'ssea, Gært. fruct. l. c. Bursèra balsamífera, Pers. ench. 1. p. 413. Bois cochon, Nich. hist. 169. Flowers small, whitish. This tree is called in its native country *Bois de Cochon* or *Wild-boar's-tree*, because those animals are, when wounded, reported to strip off its bark and heal their wounds with the gum which exudes from it. This exudation is, according to Sloane, of a balsamic nature, very like balsam of Capaiva, both in scent and virtues. It is given in complaints of the chest or lungs, and is copiously procured by wounding the trunk of the tree.

Balsam-bearing Hedwigia. Tree 60 feet.

2 H. MEXICA'NA (D. C. prod. 2. p. 80.) flowers 5-cleft, decandrous, with roundish glands between the stamens. ♄. S. Native of Mexico. Knórrea Mexicàna, Moc. et Sesse, fl. mex. icon. ined. Flowers white. Fruit 4-seeded.

Mexican Hedwigia. Tree 56 feet.

Cult. For culture and propagation see *Boswéllia*, p. 81.

X. SORINDE'IA (meaning unknown). Pet. Th. gen. mad. p. 24. D. C. prod. 2. p. 80.

Lin. syst. *Polygàmia, Diœ'cia.* Flowers polygamo-diœcious. Calyx urceolate, 5-toothed. Petals 5, lanceolate, broadest at the base, valvate in the bud. Male flowers with about 20 stamens inserted in the bottom of the calyx (sometimes from 16 to 28). Hermaphrodite flowers with 5 fertile stamens? filaments short. Ovary conical. Stigmas 3, sessile. Drupe containing a thready, compressed, oblong nut. Embryo naked, thick.—African or East Indian shrubs, with impari-pinnate leaves, and alternate entire leaflets. Panicles branched, axillary or terminal. Flowers purple.

1 S. Madagascarie'nsis (D. C. prod. 2. p. 80.) ♄. S. Native of Madagascar, where it is called *Manguier à grappes*, from the fruit being similar to that of the Mango. A weak shrub, with alternate leaves, standing on woody petioles. Flowers small, in axillary racemes.

Madagascar Sorindeia. Clt. 1828. Shrub 12 feet.

2 S. Africa'na (D. C. prod. 2. p. 80.) Native of the western coast of Africa, along the banks of the river Congo. See R. Br. cong. p. 12.

African Sorindeia. Tree.

Cult. For culture and propagation see *Boswéllia*, p. 81.

XI. GARU'GA (called *Garuga* or *Garoogoo* by the Telingas). Roxb. hort. beng. p. 33. cor. 3. t. 208. D. C. prod. 2. p. 80.

Lin. syst. *Decándria, Monogýnia.* Flowers hermaphrodite. Calyx small, campanulate, 5-cleft. Petals 5, inserted in the calyx, connivent. Stamens 10, inserted with the petals. Glands 5, inserted between the pairs of stamens. Ovary ovate. Style 1, filiform. Stigma 5-lobed. Drupe globose, fleshy, containing 2 or more 1-seeded nuts.—Trees, with impari-pinnate leaves; leaflets almost sessile, crenate. Flowers yellowish, in axillary panicles.

1 G. pinna'ta (Roxb. cor. 3. t. 208.) leaves somewhat villous; leaflets oblong, lanceolate, bluntly crenate. ♄. S. Native of the East Indies, in mountainous districts. Rheed. mal. 4. p. 69. t. 33. Rheed's and Roxburgh's plants may be distinct species. A deciduous tree, the wood of which being soft and spongy is very little used. The fruit is eaten raw by the natives, but is chiefly used for pickling; it has a rough austere taste, which renders it unpalatable as taken from the tree, though very fit for pickling.

Pinnate-leaved Garuga. Clt. 1808. Tree 60 feet.

2 G. Java'nica (Blum. bijdr. 1165.) leaflets many pairs, oblong-lanceolate, acuminated, oblique at the base, serrated, tomentose beneath; flowers panicled; fruit densely villous. ♄. S. Native of Java, in mountain woods.

Java Garuga. Fl. May. Tree 60 feet.

3 G. Madagascarie'nsis (D. C. prod. 2. p. 81.) leaves smooth; leaflets acutely serrated. ♄. S. Native of Madagascar. This may be Roxburgh's G. pinnàta?

Madagascar Garuga. Tree 50 feet.

Cult. For culture and propagation see *Boswéllia*, p. 81.

XII. ELA'PHRIUM (from ελαφρος, *elaphros*, contemptible; trees without beauty, and with wood of no value). Jacq. amer. 105. D. C. prod. 1. p. 723. H. B. et Kunth. nov. gen. amer. 7. p. 27.

Lin. syst. *Octándria, Monogýnia.* Calyx 4-parted, permanent. Petals 4, inserted in the disk, spreading, broadest at the base. Stamens 8, inserted in the disk. Anthers 2-celled. Ovary superior, sessile, 2-celled, with 2 collateral ova in each cell attached to the central axis. Disk orbicular in the bottom of the calyx. Style short, crowned by a bifid stigma. Drupe pea-formed, 2-3-valved, soluble. Seeds suborbicular, with a double integument, without albumen. Cotyledons suborbicular, corrugated or plaited, with a superior radicle.—Unarmed balsamiferous trees or shrubs, having white smooth wood. Leaves crowded at the tops of the branches, impari-pinnate, and exstipulate, with dotless opposite leaflets, having the rachis usually winged. Racemes axillary, simple. Flowers insignificant, of a whitish-green colour or yellowish. Pedicels bracteate. Bark of the fruit containing balsam.

1 E. tomentòsum (Jacq. amer. 105. t. 71. f. 1-2.) leaves tomentose; leaflets 9, ovate, toothed; racemes few-flowered, shorter than the leaves. ♄. S. Native of Curacoa and the islands adjacent, in rocky gravelly places. Lam. ill. t. 304. f. 1. Fagàra octándra, Lin. mant. 40. Amỳris tomentòsa, Spreng. syst. 2. p. 219. A balsamic, glutinous, odorous resin flows from this tree, which much resembles that which flows from *Bursèra*.

Tomentose Elaphrium. Tree 20 feet.

2 E. gla'brum (Jacq. amer. 106. t. 71. f. 4.) leaves quite glabrous; leaflets oblong-lanceolate, bluntly toothed; racemes few-flowered, twice the length of the leaves. ♄. S. Native of Carthagena, in bushy places by the sea side. Lam. ill. 304. f. 2. Fagàra Elàphrium, Willd. spec. 1. p. 668. Amỳris Elàphrium, Spreng. syst. 2. p. 219.

Smooth Elaphrium. Clt. 1818. Tree 20 feet.

3 E. penicella'tum (Moc. et Sesse, fl. mex. ined. D. C. prod. 1. p. 724.) leaves subglabrous; leaflets oval-oblong, acuminated, coarsely toothed; petioles pilose at the base, and with fascicles of hairs at the origin of the pairs of leaflets; racemes few-flowered, much shorter than the leaves. ♄. S. Native of Mexico. Amỳris penicellàta, Spreng. syst. 2. p. 219.

Pencilled-haired Elaphrium. Tree 20 feet.

4 E. fagaroìdes (H. B. et Kunth, nov. gen. amer. 7. p. 27. t. 611.) branches angularly furrowed, flexuous, and are as well as the leaves smooth; leaflets 7, obtuse, serrate-crenate, terminal one elliptical-rhomboid, lateral ones unequal-sided; rachis wingless. ♄. S. Native of Mexico. Fruit 4-valved. Amỳris fagaroides, Spreng. syst. append. 148.

Fagara-like Elaphrium. Tree 12 feet.

5 E. glabrifòlium (H. B. et Kunth, nov. gen. amer. 7. p. 28.) branches twisted and flexuous, terete, tomentose; leaflets 7-9, obtuse, coarsely crenated, smooth, shining above, terminal one elliptic-oblong, lateral ones unequal-sided; rachis winged; wing subdentate. ♄. S. Native of Mexico, between Pazcuaro and the burning mount Jorullo, near Ario. E. glàbrum, Jacq. amer. 106.?

Smooth-leaved Elaphrium. Tree 12 to 20 feet.

6 E. Jorulle'nse (H. B. et Kunth, nov. gen. 7. p. 28. t. 612.) branches round, smooth; leaflets 15-17, oblong, obtuse, doubly crenated, wrinkled, and tomentose on both surfaces, hoary above, and rufescent beneath; rachis winged; wings doubly crenated. ♄. S. Native of Mexico, at the bottom of Mount Jorullo.

Jorullo Elaphrium. Tree 20 feet.

7 E. Jaquinia'num (H. B. et Kunth, nov. gen. amer.) branches terete, covered with rusty tomentum above; leaflets 7-9, coarsely crenated, wrinkled above, hairy and shining, but covered with rufescent tomentum beneath, younger ones rusty, terminal one rhomboid-ovate, lateral ones unequal-sided; rachis winged; wings entire. ♄. S. Native of South America, in the province of Venezuela, near La Victoria. E. tomentòsum, Jacq. amer. 105. t. 71.? Fagàra octándra, Lin.? A glutinous juice flows from this tree when cut or broken, which thickens to a resinous gum

on exposure to the air, which is generally used to erase cicatrices occasioned by ulcers or wounds. The wood and bark have a strong grateful scent.

Jacquin's Elaphrium. Tree 40 feet.

8 E. EXCE'LSUM (H. B. et Kunth, nov. gen. amer. 7. p. 30. t. 611.) branches terete, tomentose above; leaflets 5-9, obtuse, coarsely crenated, rugose, soft, pubescent above and rusty beneath, terminal one ovate-elliptic, lateral ones subelliptic, nearly equal at the base; rachis winged; wings crenate. ♄. S. Native of Mexico, between Acapulco and La Venta del Exido. E. copallíferum, Moc. et Sesse, fl. mex. ined. D. C. prod. 1. p. 724. Amỳris copallífera, Spreng. syst. 2. p. 219. A fragrant resin flows spontaneously from this tree, which is called gum-copal in Mexico.

Tall Elaphrium or Mexican Copal. Tree 50 feet.

9 E. ARIE'NSE (H. B. et Kunth, nov. gen. amer. 7. p. 31.) branches angularly furrowed, villous; leaflets 5-7 pairs, oblong, somewhat acuminated, crenate-serrated, hairy above, and covered with canescent hairs beneath; rachis somewhat winged ♄. S. Native of Mexico, between Pazcuaro and Mount Jorullo, near Ario.

Ario Elaphrium. Tree 30 feet.

10 E. GRAVE'OLENS (H. B. et Kunth, nov. gen. amer. 7. p. 31.) leaflets 7, oblong, acuminated, coarsely serrate-crenate, smooth; rachis winged at the top; wings entire. ♄. S. Native of South America, on the banks of the river Magdalena, where it is called *Capa o Carani*. Amỳris gravèolens, Spreng. syst. append. 148.

Strong-scented Elaphrium. Tree 40 feet.

11 E. LANUGINÒSUM (H. B. et Kunth, nov. gen. amer. 7. p. 31.) branches terete, rather flexuous, finely tomentose; branchlets woolly; leaflets 9-13, oblong, crenated, younger ones villously-tomentose above, and white and woolly beneath. ♄. S. Native of New Spain.

Woolly Elaphrium. Tree 40 feet.

Cult. For culture and propagation see *Boswéllia*, p. 81.

XIII. FAGARA'STRUM (from *Fagara* and *astrum*, an affixed signification, like; resembling *Fagara*).

LIN. SYST. *Hexa-Octándria, Monogýnia.* Flowers hermaphrodite. Calyx 3-4-parted, short. Petals 3-4. Stamens 6-8, alternate ones shortest; filaments thickened above the base. Anthers large. Ovary simple, tapering to the base into a stipe, which bears the petals and stamens at its base, tubercled, 3-4-lobed at the apex, 3-1-celled; cells 2-ovulate. Ovula suspended from the inner angle. Style prismatic, 3-4-angled, thick, smooth, 3-1-lobed at the apex. Fruit? Shrubs, with alternate, pinnate leaves, and alternate, oblique leaflets, full of pellucid dots. Flowers disposed in axillary panicles and racemes, with the peduncles and pedicels bracteate at the base.

1 F. INÆQUA'LE; petioles puberulous; leaflets stalked, ovate, irregularly crenated, glabrous; racemes few-flowered, much shorter than the leaves; flowers octandrous. ♄. G. Native of the Cape of Good Hope. Elàphrium inæquàle, D. C. prod. 1. p. 724.—Burch. cat. 3082 and 3051. Amỳris inæquàlis, Spreng. syst. 2. p. 218.

Unequal-leafletted Fagarastrum. Shrub.

2 F. CAPE'NSE; leaflets ovate, obtuse, erect, nearly sessile, crenated; branches prickly, flexuous; flowers octandrous. ♄. G. Native of the Cape of Good Hope. Fagàra Capénsis, Thunb. fl. cap. 1. p. 516. H. B. et Kunth, nov. gen. amer. 6. p. 6. Elàphrium Capénse, D. C. prod. 1. p. 724. Amỳris Capénsis, Spreng. syst. 2. p. 218.

Cape Fagarastrum. Shrub.

3 F. THUNBE'RGII; prickly; leaflets sessile, ovate, finely crenated; petioles prickly, with a narrow margin; flowers octandrous? ♄. G. Native of the Cape of Good Hope. Fagàra armàta, Thunb. fl. cap. 1. p. 141. Zanthóxylum Thunbérgii, D. C. prod. 1. p. 726.

Thunberg's Fagarastrum. Shrub.

4 F. ANISA'TA; leaflets 13, stalked, ovate-lanceolate, obsoletely toothed, unequal; panicles corymbose, axillary; flowers octandrous? ♄. G. Native of? Amỳris anisàta, Willd. spec. 2. p. 337.

Anise-scented Fagarastrum. Shrub.

Cult. For culture and propagation see *Boswéllia*, p. 81.

ORDER LXXVI. AMYRI'DEÆ (plants agreeing with *Amỳris* in important characters). R. Br. congo. 431. Kunth. in ann. scienc. nat. 2. p. 353. Lindl. introd. nat. p. 364.—Terebinthàceæ, Tribe V. Amyrídeæ, D. C. prod. 2. p. 81.—Terebinthàceæ, part. Juss. gen. 368.

Calyx small, regular, permanent, in 4-5 divisions. Petals 4- (f. 19. *a.*) 6, hypogynous, imbricate in æstivation. Stamens double the number of the petals, also hypogynous. Ovary superior, 1-celled, seated on a thickened disk, containing 2 pendulous ovula. Stigma sessile, capitate. Fruit indehiscent, somewhat drupaceous (f. 19. *b.*), 1-seeded, glandular. Seeds without albumen (f. 19. *c.*). Cotyledons fleshy. Radicle superior, very short.—Trees or shrubs, abounding in resinous juice, with opposite compound leaves, full of pellucid dots, and axillary and terminal panicles of flowers. Pericarp covered with granular glands, filled with aromatic oil. The general structure of this order is that of *Terebinthàceæ*, but the qualities more nearly resemble those of *Burseriàceæ*. In consequence of the leaves being full of dots filled with resinous oil, as well as in the hypogynous insertion of the petals and stamens, it comes nearer to *Aurantiàceæ*. The order contains fragrant shrubs. Gum elemi of the Island of Nevis is related to *Amỳris*, which Dr. Hamilton calls *Amỳris hexándra*, prod. fl. ined. 35. The gum resin called Bdellium is probably produced by a species of *Amỳris*, the Nioutout of Adanson, according to Verey, hist. nat. des. med. 291. is probably also a species of *Amỳris*. The layer of the liber or inner bark of a species of *Amỳris* was found by M. Gailliaud to be used by the Nubian Mahommedans as paper, on which they write their legends. Delile. cart. 13. *Amỳris ambrosiaca?* is said to be poisonous. The resin of Coumia is the produce of *Amỳris ambrosiaca*.

Synopsis of the Genera.

1 AMY'RIS. Calyx 4-toothed. Petals 4 (f. 19. *a.*). Stamens 8.

2 PACHY'LOBUS. Fruit egg-shaped, superior, 1-celled, containing a large embryo, with 3-parted, fleshy, angular, twisted cotyledons.

I. AMY'RIS (from *a* intensive, and *μυρον*, *myron*, balm; the whole of the trees in this genus smell strong of balm or myrrh). Lin. gen. no. 473. exclusive of some species, Kunth. gen. tereb. p. 22. D. C. prod. 2. p. 81.

LIN. SYST. *Octándria, Monogýnia.* Flowers hermaphrodite. Calyx 4-5-toothed, permanent. Petals 4 (f. 19. *a.*) -6, hypogynous, cuneate, unguiculate, imbricate in the bud. Stamens 8-12, shorter than the petals. Ovary 3-4-celled; cells 2-seeded, girded by a ring, seated on the thick disk-like torus. Style short, crowned by an obtuse stigma. Drupe (f. 19. *b.*) containing a 1-seeded chartaceous nut (f. 19. *c.*), some of the cells full of diaphanous mucilage.—Trees or shrubs, abounding in a resinous fluid. Leaves compound; leaflets full of pellucid dots. Flowers white, disposed in panicles. Drupe turgid, with an aromatic oil.

§ 1. *Americànæ. Leaves with* 1-3 *pairs of opposite leaflets, odd one stalked or sessile.*

1 A. MARI'TIMA (Jacq. amer. 107.) leaflets 3, sessile, odd one stalked, ovate, crenate, obtuse. ♄. S. Native of Jamaica and of Cuba, about the Havanna, on rocks by the sea-side. The shrub abounds in a juice which smells like rue.

Sea-side Amyris. Fl. June, July. Clt. 1810. Shrub 8 feet.

2 A. FLORIDA'NA (Nutt. in Sillim. journ. 5. 1822. p. 294.) leaflets 3, ovate, quite entire, obtuse, smooth; flowers somewhat panicled; berries almost globose, tapering to the base. ♄. G. Native of Eastern Florida. Leaves reticulately-veined, glandulary resinous, and fragrant. Berries black, the size of black pepper.

Florida Amyris. Shrub 10 feet.

3 A. SYLVA'TICA (Jacq. amer. 107.) leaflets 3, ovate, acuminated, somewhat crenate, all stalked, odd one longest. ♄. S. Native of Carthagena, St. Domingo, and St. Thomas, in shady woods by the sea-side. A. cymòsa, Reich. in Sieb. pl. exsic. fl. trinid. no. 29. is probably distinct from this. The whole shrub abounds in a turpentine juice, of a strong disagreeable smell. Gum elemi has erroneously been supposed to be yielded by this plant. Berry red, about the size of a pea.

Wood Amyris. Fl. June, July. Clt. 1793. Tree 15 feet.

4 A. BRASILIE'NSIS (Spreng. syst. 2. p. 217.) leaflets lanceolate, tapering to the base, rounded at the apex, mucronate, quite entire, veiny, shining above, discoloured beneath; petioles triquetrous; panicles axillary, shorter than the leaves. ♄. S. Native of Brazil.

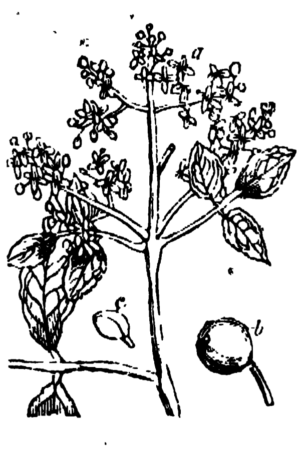
Brazilian Amyris. Clt. 1818. Tree.

5 A. DYA'TRIPA (Spreng. neue, entd. 3. p. 48.) leaflets 3, ovate, quite entire, obtuse, somewhat emarginate, all stalked, odd one longest. ♄. S. Native of St. Domingo. The specific name appears to be derived from *dyas*, two, and *tripes*, having three feet; perhaps in allusion to the stalked leaflets.

Dyatripa Amyris. Shrub 10 feet.

6 A. PLUMIE'RI (D. C. prod. 2. p. 81.) leaflets 3-5, all stalked, somewhat serrated, ovate, acuminated, villous beneath. ♄. S. Native of the Antilles.—Plum. ed. Burm. t. 100. A. elemífera, Lin. spec. p. 495.? but Catesby's figure is cited by the author, and therefore the country; this is referred to *Ptelea*. The fruit is the shape and size of an olive, but red, having an odoriferous pulp within it. Gum elemi is said to be extracted from this tree; it is brought to this country in roundish cakes, wrapped up in leaves. This resin is only used as an ingredient in a digestive ointment, called Unguentum elemi.

FIG. 19.



Plumier's Amyris or Gum-elemi-tree. Clt. 1820. Tree 20 ft.

7 A.? HEXA'NDRA (Hamilt. prod. fl. ind. occ. p. 34.) branched; leaves impari-pinnate, with 3 pairs of quite entire, ovate, bluntly and obliquely acuminated leaflets, which are somewhat decurrent down the petiole, smooth above, and reticulately veined beneath; flowers panicled, small, greenish, always hexandrous; panicles axillary and terminal; calyx cup-shaped, entire; petals 3, greenish, entire; ovary oblong, smooth, inferior; style short, with an obtuse stigma; drupe membranous, elliptic, acuminated at both ends, 1-valved. ♄. S. Native of the island of Nevis, in cold subhumid groves.—A tall tree, full of resinous fragrant juice, differing from *A. elemifera* in the leaves being smooth on both surfaces, not tomentose beneath. The tree is called *Gum Elemi-tree, Gum Elem-tree* in its native country.

Hexandrous Amyris. Fl. June, Sept. Tree 40 feet.

8 A. TOXI'FERA (Willd. spec. 2. p. 336.) leaflets 5-7, stalked, ovate, somewhat cordate, acuminated; racemes simple, about the length of the petioles. ♄. G. Native of Carolina (Cat. car. 1. t. 40.), as well as the West India islands. Lucínium, Pluk. t. 201. f. 3. A. balsamífera, Lin. spec. 496. exclusive of the synonyme of Sloane. Elemífera fòliis pinnàtis, Lin. hort. cliff. 486. The fruit hangs in bunches, of the shape of a pear, of a purple colour. A juice distils from the trunk of the tree, as black as ink, which the inhabitants of Carolina say is poisonous. The Janca-tree is said to be a very valuable timber tree, the wood bears a fine polish, and has a pleasant smell. The berries have much the taste of balsam of Capaiva. An infusion of the leaves has a very pleasant flavour, is highly cephalic, and is particularly restorative to weak eyes.

Poison-wood or White Candle-wood Amyris. Clt. 1820. Tr. 50 ft.

9 A. PINNA'TA (H. B. et Kunth, nov. gen. amer. 7. p. 37. t. 610.) leaflets 5-7, ovate, somewhat crenate, terminal one roundish-elliptical; panicles axillary, much branched. ♄. S. Native of South America, between the tropics. Branchlets and petioles puberulous. Leaves membranous, smooth. Fruit unknown.

Pinnate-leaved Amyris. Tree 20 feet.

§ 2. *Asiáticæ. Leaflets alternate, all stalked.*

10 A. HEPTAPHY'LLA (Roxb. hort. beng. p. 28.) leaflets 3-4 pairs, simple, obliquely-lanceolate, acuminated, entire; panicles branched, axillary, and terminal. ♄. S. Native of the East Indies, on the mountains bordering Silhet, where it is called *Karum-phul*. Flowers whitish-yellow. Berry oblong, 1-celled. Seed filling the berry. Disk fleshy, contracted in the middle, the lower swelling receiving the petals and stamens.

Seven-leaved Amyris. Clt. 1823. Tree.

11 A. NA'NA (Roxb. l. c.) leaflets 7, ovate-lanceolate, serrated; racemes simple, axillary, nearly the length of the leaves. ♄. S. Native of Amboyna.

Dwarf Amyris. Clt. 1822. Shrub 6 feet.

12 A. PUNCTA'TA (Roxb. hort. beng. ex Colebr. in Lin. trans. 15. t. 5. f. 3.) branches spreading; bark smooth, rusty; leaflets about 20 pairs, obliquely-oblong, crenulate, full of glandular dots, terminal one largest; petioles rather hairy; panicles terminal. ♄. S. Native of Chittagong. Flowers small, white. Disk fleshy, bearing the petals and stamens. Ovary 4-celled, tetragonal. Berry 1-celled, 1-seeded.

Dotted-leaved Amyris. Shrub.

† *Species not sufficiently known.*

13 A.? TECOMA'CA (D. C. prod. 2. p. 82.) leaves on long petioles, hanging down, trifoliate; leaflets oblong, acute, serrated; peduncles numerous, terminal, loosely panicled, dependent. ♄. S. Native of Mexico, where it is called *Tecomaca* and *Tacamahaca*, but it is distinct from the *Tacamahaca* of Hern. A. marítima, Moc. et Sesse, fl. mex. icon. ined.

Tecomaca Amyris. Clt. 1827. Tree 30 feet.

14 A.? PHILIPPÆ'A (Lunan, hort. jam. 1. p. 149.) petioles margined; leaflets 3, obovate, shining, obliquely veined. ♄. S. Native of Jamaica.

Philippean Amyris. Tree.

15 A. DENTA'TA (Willd. spec.? Blum. bijdr. 1160.) leaflets

stalked, 5-9, oblong-lanceolate, bluntly acuminated, repandly-crenulated at the top; racemes axillary, simple. ♄. S. Native of Java, where it is called *Katos.*

Toothed-leaved Amyris. Fl. Aug. Tree.

16 A.? ROBINSONII (D. C. prod. 2. p. 82.) leaves trifoliate; petioles margined; racemes lateral. ♄. S. Native of Jamaica. Lunan. hort. jam. 1. p. 169.

Robinson's Amyris. Shrub 8 feet.

17 A. BIPINNA'TA (Moc. et Sesse, fl. mex. icon. ined. D. C. prod. 2. p. 82.) leaves bipinnate at the base; leaflets numerous, small, ovate, quite entire; peduncles terminal, rather hairy, longer than the leaves. ♄. S. Native of Mexico.

Bipinnate-leaved Amyris. Shrub.

18 A. PAPYRIFERA (Gailliaud, voy. a Meroe. cent. ex Bull. scien. Aug. 1827. p. 285.) trunk arboreous, coated, with vertical, somewhat diaphanous lamina; flowers racemosely-pannicled, decandrous. ♄. G. Native of Africa, at the White River. The Nubian Mahomedans use the bark of this tree for writing their legends upon.

Paper-bearing Amyris. Tree.

Cult. The species of *Amyris* grow freely in a mixture of loam and peat, and cuttings root freely in sand, under a hand-glass, those of the stove species in heat.

II. PACHY'LOBUS (from παχυς, *pachys*, thick, and λοβος, *lobos*, a lobe; the lobes of the cotyledons are thick).

LIN. SYST. unknown. Fruit oval, black, superior, about the size of a hen's egg, 1-celled, containing a large embryo, having 2 3-parted cotyledons, the lobes large, thick, angular, and twisted.—A large tree with impari-pinnate, smooth leaves, with the leaflets nearly opposite, ovate, acuminated, entire, the young branches rather tomentose.

1 P. EDU'LIS. ♄. S. Native of the island of St. Thomas, in the Gulf of Guinea, where the fruit is much esteemed by the inhabitants, and sold in great quantities in the market of St. Ann de Chaves, under the name of *Safu:* in taste it is bitter and astringent. It is usually roasted. There is another species, which goes under the name of *Pasco*, which appears only to differ in having hairy leaves, and in the shape of the fruit. The whole description of this tree is given from memory, as we have had no specimen to examine.

Edible Safu. Fl. Nov. Tree 40 feet.

Cult. For culture and propagation see stove species of *Amyris.*

ORDER LXXVII. CONNARA'CEÆ (plants agreeing with *Connàrus* in important characters). Kunth, in ann. scienc. nat. 2. p. 359. Lindl. introd. nat. ord. 125. Terebinthàceæ, part. Juss. gen. 369. Terebinthàceæ, Tribe VII. Connaràceæ, D. C. prod. 2. p. 84.

Flowers hermaphrodite, rarely unisexual. Calyx 5-parted, regular, permanent, either imbricate or valvular in æstivation. Petals 5 (f. 20. *b.*), inserted in the calyx, imbricate, rarely valvate in æstivation. Stamens twice the number of the petals (f. 20. *c.*), hypogynous, those opposite the petals shorter than the others, usually monadelphous at the base (f. 20. *d.*). Ovary solitary or simple, or several together, each with a separate style, with an usually dilated stigma. Ovula 2, collateral, ascending. Capsules usually several, rarely single (f. 20. *k.*), dehiscent, splitting lengthwise internally. Seeds erect, in pairs, or solitary, with or without albumen, but usually furnished with aril. Radicle superior at the extremity most remote from the hilum. Cotyledons thick in the species without albumen, and leafy in those with albumen.—Trees or shrubs, with compound, dotted, alternate, exstipulate leaves, and terminal racemes or panicles of bracteate flowers. *Connàrus* can only be distinguished from *Leguminòsæ* by the relation the parts of the embryo have to the umbilicus of the seed (R. Brown, congo. 432.) that is to say by the radicle being at the extremity most remote from the hilum. The want of stipulas is, however, usually sufficient to distinguish them. It differs from *Terebinthàceæ* in the want of resinous juice.

Synopsis of the Genera.

1 CONNA'RUS. Calyx 5-parted. Petals imbricate in æstivation. Stamens somewhat monadelphous at the base. Carpels 5, each bearing a style, biovulate, some of them are usually abortive. Capsules sessile, 2-valved, 1-seeded; seeds exalbuminous. Leaves trifoliate or impari-pinnate.

2 OMPHALÒBIUM. Calyx 5-parted. Petals 5 (f. 20. *b.*), imbricate in æstivation. Stamens monadelphous (f. 20. *d.*), or somewhat polyadelphous at the base. Carpels 5, each bearing a style. Capsules 1-5, legume-formed (f. 20. *k.*), 2-valved, dehiscent. Seeds twin or solitary, exalbuminous. Leaves trifoliate or impari-pinnate.

3 EURY'COMA. Flowers polygamous. Calyx 5-parted. Petals 5, covered with glandular hairs. Stamens 5. Glands 10, twin, between the stamens. Carpels 5, joined at the base, 1-seeded. Seeds exalbuminous. Leaves pinnate.

4 CNE'STIS. Calyx 5-cleft, tomentose, valvate in æstivation. Stamens free, inserted in the calyx. Carpels 5, distinct, each bearing a style, coriaceous, 2-valved, legume-formed, opening on the back, usually prurient, 2-ovulate. Seed solitary in the capsule. Albumen fleshy. Leaves impari-pinnate.

† *A genus allied to Connaràceæ, but is not sufficiently known.*

5 TAPI'RIA. Calyx 5-parted. Petals 5. Stamens 10, both rising from the hypogynous disk. Stigmas 5, sessile. Capsule 5-furrowed, 5-valved, 5-seeded. Seeds arillate. Leaves impari-pinnate.

I. CONNA'RUS (κονναρος, *connaros*, is the name of a tree described at length by Athenæus). Lin. gen. no. 914. D. C. prod. 2. p. 84.—Roúrea, Aubl. guian. 1. p. 467. t. 187. Robérgia, Schreb. gen. no. 787. Malbráncia, Neck. elem. no. 1171.

LIN. SYST. *Decándria, Pentagýnia.* Calyx 5-parted, permanent, girding the fruit closely at the base; lobes ovate, imbricate in æstivation. Petals 5, also imbricate in æstivation. Stamens 10, somewhat monadelphous at the base, inserted in the base of the calyx. Ovaries 5, each bearing a style and containing 2 ova, 4 of which are almost always abortive, or reduced to the styles. Capsule baccate, sessile, 2-valved, bursting at the side, ovate, 1-seeded. Seed erect, inserted in the bottom of the cell, arillate at the base, destitute of albumen. Cotyledons thick.—Shrubs, with impari-pinnate leaves with 1 or many pairs of leaflets. Flowers disposed in racemose panicles, white.

1 C. MONOCA'RPUS (Lin. spec. 1. p. 678.) leaves trifoliate; leaflets ovate, acuminated, quite smooth; panicles terminal. ♄. S. Native of Ceylon. Lin. fl. zeyl. no. 248. exclusive of the synonym of Burm. Flowers yellowish.

One-fruited Connarus. Clt. 1768. Shrub 10 feet.

2 C. PUBE'SCENS (D. C. prod. 2. p. 85.) climbing; leaflets 5, oval, acute, smooth above, covered beneath with rather white pubescence. ♄. ◡. S. Native of French Guiana. Roúrea

frutéscens, Aubl. guian. 1. p. 467. t. 187. Robérgia frutéscens, Willd. spec. 2. p. 752. Flowers white, sweet-scented, disposed in axillary and terminal panicles. Fruit very like that of *C. monocárpus.*

Pubescent Connarus. Clt. 1822. Shrub 5 feet.

3 C. JAVA'NICUS (Blum. bijdr. 1166.) leaves ternate and pinnate, ovate, or elliptical-oblong, obtusely acuminated, veiny, smooth; racemes crowded, axillary; flowers pentagynous; stem sarmentose. ♄. S. Native of Java.

Java Connarus. Fl. May. Shrub 8 feet.

† *Species not sufficiently known.*

4 C.? GLA'BER (D. C. prod. 2. p. 85.) leaflets 3-5, oblong, somewhat cordate, acuminated, quite smooth; panicles axillary, twin, simple, much shorter than the leaves. ♄. S. Native of South America, on the banks of the river Orinoco, near Caycara. Roúrea glàbra, H. B. et Kunth, nov. gen. amer. 7. p. 41. Flowers white. Fruit unknown.

Smooth Connarus. Shrub 6 feet.

5 C.? SANTALOÌDES (Vahl. symb. 3. p. 87.) leaves with 2-4 pairs of ovate, acuminated, smooth leaflets, with an odd one; peduncles axillary, aggregate; flowers disposed in racemes, monogynous. ♄. S. Native of the East Indies. Santaloìdes, Lin. fl. zeyl. no. 408. Segments of calyx rounded (ex Lin.) acute (ex Vahl.). Flowers white. Fruit not sufficiently known. It is probably a species of *Omphalòbium.*

Santalum-like Connarus. Shrub 6 feet.

6 C. MIMOSOÌDES (Vahl. symb. 3. p. 87.) leaflets about 10 pairs, with an odd one, oval-oblong, emarginate; petioles and branchlets pubescent; racemes axillary; flowers monogynous. ♄. S. Native of the islands of Nicobar. This is also probably a species of *Omphalòbium.*

Mimosa-like Connarus. Shrub 6 feet.

Cult. A mixture of loam and peat will answer the species of this genus, and ripened cuttings will root in sand, under a hand-glass, in heat.

II. OMPHALO'BIUM (from ομφαλος, *omphalos*, a navel, and λοβος, *lobos*, a pod). Gært. fruct. 1. p. 217. t. 46. D. C. diss. prod. 2. p. 85.—Connàrus, species of authors.

LIN. SYST. *Monadélphia, Decándria.* Calyx 5-parted, permanent, girding the fruit loosely at the base; lobes oblong, acute, imbricate in æstivation. Petals 5 (f. 20. *b.*). Stamens 10 (f. 20. *c.*), monadelphous at the base (f. 20. *d.*), or somewhat polyadelphous. Carpels 5, each bearing a style, and containing 2 ova, some of them usually abortive. Capsules 1 (f. 20. *k.*) -5, legume-formed, 2-valved, dehiscent (f. 20. *k.*), narrowed or stipitate at the base. Seeds twin, but usually solitary, not inserted at the base, but in the lower part along the suture, arillate, without albumen. Cotyledons thick.—Trees and shrubs with imparipinnate leaves, having 1 or many pairs of leaflets. Racemes axillary, usually disposed in a terminal panicle.

§ 1. *Connaroìdea* (from their similarity to *Connàrus*, in having a solitary carpel). *D. C. prod.* 2. *p.* 85. *Carpels solitary* (f. 20. *k.*).

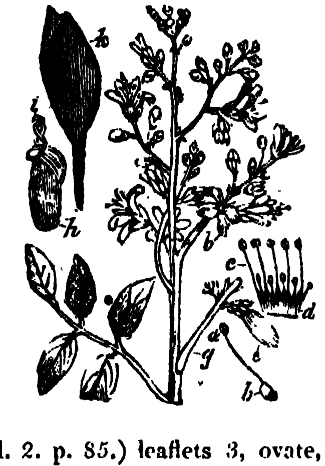
1 O. I'NDICUM (Gært. fruct. 1. p. 217. t. 46.) leaflets 3, ovate, somewhat acute, quite smooth on both surfaces, coriaceous; flowers panicled; carpels solitary, stipitate. ♄. S. Native of Ceylon. Rhús, &c. Burm. zeyl. 199. t. 89.? and therefore Connàrus Asiáticus, Willd. spec. 3. p. 691. Rhús Rædælijável, Mill. dict. no. 13.? Flowers panicled, and the stamens are, according to Gærtner, somewhat polyadelphous. Capsules nearly an inch and a half long, and evidently stalked. Radicle at the vertex of the seed.

Indian Omphalobium. Clt.? Shrub 6 feet.

2 O. AFRICA'NUM (D. C. prod. 2. p. 85.) leaflets 3, oval, acuminated, smooth on both surfaces, somewhat membranous and feather-nerved; flowers panicled; carpels solitary, stipitate. ♄. S. Native of Sierra Leone. Connàrus Africànus, Lam. dict. 2. p. 95. Cav. diss. 7. p. 375. t. 221. Connàrus venòsus, Smeathm. mss. Flowers white. Capsule about an inch and a half long, and evidently stipitate. Radicle under the top of the seed, usually germinating in a simple or branched root in the fruit (f. 20. *i.*).

African Omphalobium. Fl. Mar. Clt. 1822. Shrub 8 feet.

FIG. 20.



3 O. NERVÒSUM; leaflets 3, obovate, acuminated, 3-nerved at the base, pubescent beneath, smooth above, on long pubescent petioles; flowers terminal, panicled. ♄. S. Native of Sierra Leone.

Nerved-leaved Omphalobium. Shrub 10 feet.

4 O. GAUDICHA'UDI (D. C. prod. 2. p. 85.) leaflets 3, ovate, acuminated, quite smooth on both surfaces; fruit racemose; carpels solitary, stipitate, somewhat obovate, obtuse, smooth. ♄. S. Native of the Moluccas, in marshes by the sea-side at Rawak. Capsule 12-14 lines long, 7-8 broad. Radicle at the top of the seed.

Gaudichaud's Omphalobium. Shrub 6 feet.

5 O. LAMBE'RTII (D. C. prod. 2. p. 85.) leaflets 3, elliptical-oblong, acuminated, smooth on both surfaces, somewhat membranous; flowers panicled; carpels solitary, stipitate, incurved, a little striated, smooth. ♄. S. Native of Guiana, in the interior or sandy savannahs. Connàrus Guianénsis, Lamb. herb. Flowers white? Capsule 8-10 lines long, 5-8 broad. Radicle at the vertex of the seed.

Lambert's Omphalobium. Shrub 6 feet.

6 O. FASCICULA'TUM (D. C. prod. 2. p. 86.) leaves? fruit rising in fascicles from the branches; carpels solitary, stipitate, compressed. ♄. S. Native of French Guiana. Capsule an inch long, 5 lines broad. In the disposition of the flowers this species is very distinct.

Fascicled-flowered Omphalobium. Shrub 6 feet.

7 O. PATRI'SII (D. C. diss. with a figure,) leaflets 5-9, oval-oblong, acuminated, quite smooth on both surfaces, coriaceous; flowers panicled; carpels solitary, stipitate, obovate, blunt, smooth. ♄. S. Native of Cayenne. Leaves smooth, with 3-4 pairs of leaflets and an odd one. Carpels dehiscent. Seeds arillate.

Patris's Omphalobium. Shrub 6 feet.

8 O. THONNI'NGII (D. C. prod. 2. p. 86.) leaflets 3-5, elliptical, acute, smooth on both surfaces, somewhat membranous, feather-nerved, and almost veinless between the lateral nerves; panicle terminal; ovary hairy, solitary. ♄. S. Native of Guinea. Connàrus floruléntus, Thonn. in herb. Pucr. Leaves somewhat membranous. Flowers very numerous. Petals oblong-linear. Fruit unknown.

Thonning's Omphalobium. Shrub 6 feet.

9 O. PINNA'TUM (D. C. prod. [illegible] p. 86.) leaflets 3-5, oval-oblong, acute, quite smooth on both surfaces, feather-nerved, with the lateral veins confluent at the apex; panicle terminal, elongated; ovary solitary, downy; petals with two bristles at the base of each. ♄. S. Native of the East Indies. Connàrus pinnàtus, Lam. dict. 2. p. 95. ill. t. 572. Cav. diss. 7. p. 376. t. 222. Flowers white.

Pinnate-leaved Omphalobium. Shrub 6 feet.

10 O. SMEATHMA'NNI (D. C. prod. 2. p. 86.) leaflets 3-5, elliptical-oblong, acuminated, smooth above, somewhat ferrugineous and somewhat pubescent, feather-nerved, and finely reticulated; panicles terminal; ovary solitary, somewhat pubescent. ♄. S. Native of Sierra Leone. Leaflets 3 inches long, and about 1½ broad.

Smeathmann's Omphalobium. Shrub 12 feet.

11 O. PEROTTE'TII (D. C. prod. 2. p. 86.) leaflets elliptical-oblong, acuminated, smooth above and shining, but covered with short woolly ferrugineous down beneath; panicle terminal; carpels solitary, obovate, obtuse, somewhat stipitate, young ones clothed with deciduous rusty down, but they are smooth at length. ♄. S. Native of French Guiana. Leaflets 3-6 inches long and 1-2 inches broad.

Perottet's Omphalobium. Shrub 6 feet.

§ 2. *Cnestoídea* (plants agreeing with *Cnéstis* in having numerous carpels). *D. C. prod.* 2. *p.* 86. *Carpels numerous.*

12 O. VILLÒSUM (D. C. prod. 2. p. 86.) leaflets 3, oval, acute, tapering to the base, somewhat membranous, feather-nerved, smooth above, but clothed beneath with rusty velvety villi, as well as the panicles and carpels. ♄. S. Native of Sierra Leone. Cnéstis trifòlia, Lam. dict. 3. p. 34. Spondioìdes villòsa, Smeathm. herb. Lobes of calyx imbricate in æstivation. Carpels 1-5, tapering very much to the base. Cotyledons thick. Radicle superior. Albumen wanting.

Villous Omphalobium. Shrub 6 feet.

13 O. PENTA'GYNUM (D. C. prod. 2. p. 86.) leaflets 3, coriaceous, orbicular, acuminated, quite smooth on both surfaces, 3-nerved; panicles axillary and terminal; calyxes and ovaries villous. ♄. S. Native of Madagascar. Connàrus pentágynus, Lam. dict. 2. p. 95. Cav. diss. 7. p. 376. t. 223.

Five-styled Omphalobium. Shrub 6 feet.

Cult. See *Connàrus* for culture and propagation, p. 90.

III. EURY'COMA (from ευρυς, *eurys*, wide, and κομη, *kome*, hair; in allusion to the tufts of leaves at the tops of the branches). Jack. in Roxb. fl. ind. 2. p. 307. D. C. prod. 2. p. 86.

LIN. SYST. *Polygàmia, Diœ'cia.* Flowers polygamous. Calyx 5-parted. Petals 5, covered with glandular hairs. Stamens 5, with a pair of glands between each. Ovary 5-lobed, crowned by 5 joined styles, and 5 separate stigmas. Carpels 3-5, 1-seeded. Seeds destitute of aril and albumen.—A small tree, with pinnate, fastigiate leaves. Panicle axillary. Corolla purple.

1 E. LONGIFÒLIA (Jacq. et Wall. l. c.). ♄. S. Native of Sumatra and Singapore. Leaves 2 feet long. Flowers purple.

Long-leaved Eurycoma. Tree 20 feet.

Cult. See *Connàrus* for culture and propagation, p. 90.

IV. CNE'STIS (from κνεω, *kneo*, to scratch; in allusion to the capsules being covered with stinging hairs on the outside). Juss. gen. p. 374. Kunth, gen. tereb. D. C. prod. 2. p. 86.

LIN. SYST. *Decándria, Pentagýnia.* Calyx 5-cleft, downy on the outside, valvate in the bud. Petals 5, inserted in the bottom of the calyx as well as the 10 stamens, free. Carpels 5, (1-4) distinct, 1-styled, somewhat stipitate at the base, coriaceous, 2-valved, pod-formed, opening on the back, usually clothed with stinging hairs both inside and outside, with 2 ova in each carpel. Seeds solitary, rising from the base of the carpel, erect, destitute of aril. Albumen fleshy. Embryo straight. Cotyledons leafy. Radicle superior.—Usually scandent shrubs, with impari-pinnate leaves, and racemose panicles of flowers.

1 C. GLA'BRA (Lam. dict. 2. p. 23. ill. t. 387. f. 1.) leaflets 5-7 pairs, ovate-oblong, smooth; small racemes in fascicles; carpels obovate, obtuse, prurient. ♄. S. Native of the islands of the Mauritius and Bourbon.

Smooth Cnestis. Shrub 6 feet.

2 C. POLYPHY'LLA (Lam. dict. 2. p. 23. ill. t. 387. f. 2.) le with 8-9 pairs of ovate-oblong leaves, which are villous beneath: racemes tomentose; carpels very blunt, velvety. ♄. S. Native of Madagascar.

Many-leaved Cnestis. Clt. 1823. Shrub 8 feet.

3 C. FERRUGÍNEA (D. C. prod. 2. p. 87.) leaves with 8-10 pairs of oval-oblong leaflets, which are somewhat cordate at the base and acuminated at the apex, smooth above, but downy beneath from ferrugineous hairs as well as the petioles and branchlets. ♄. S. Native of Sierra Leone. Spondioìdes ferrugínea, Smeathm. herb.

Rusty Cnestis. Shrub 8 feet.

4 C. CORNICULA'TA (Lam. dict. 3. p. 23.) leaves with 4-5 pairs of oval-oblong, acuminated, smooth leaflets, but with the midrib beset with rusty hairs; carpels oblong, covered with stinging hairs, and drawn out at the apex into a long acumen. ♄. S. Native of Sierra Leone. Spondioìdes prùriens, Smeathm. Petals pale-red.

Horned-capsuled Cnestis. Shrub 5 feet.

5 C. RACEMÒSA; leaves pinnate; leaflets ovate-elliptic, entire, acuminated, smooth on both surfaces; racemes simple, lateral; capsules obovate, arched, very villous. ♄. S. Native of Sierra Leone.

Racemose-flowered Cnestis. Shrub 10 feet.

6 C. MONADE'LPHA (Roxb. hort. beng. p. 34.) leaves with 2-3 pairs of quite smooth, shining, ovate-lanceolate, acuminated leaflets. ♄. S. Native of the East Indies, in the province of Silhet.

Monadelphous Cnestis. Shrub 10 feet.

7 C.? PINNA'TA (Beauv. fl. d'ow. 1. p. 98. t. 60.) leaves impari-pinnate; leaflets ovate, acute; flowers corymbose, axillary, bibracteolate. ♄. S. Native of Guinea, in the kingdom of Waree. This is probably a species of *Omphalòbium.*

Pinnate-leaved Cnestis. Shrub 8 feet.

8 C. OBLÌQUA (Beauv. fl. d'ow. p. 98. t. 59.) leaflets 3, ovate, acuminated, lateral ones oblique at the base, the odd one a great distance from the lateral ones; flowers in panicles. ♄. S. Native of Guinea, in the kingdom of Waree.

Oblique-leafletted Cnestis. Shrub 6 feet.

Cult. See *Connàrus* for culture and propagation, p. 90.

V. TAPI'RIA (*Tapiriri* is the Caribbean name of the tree). Juss. gen. 372. D. C. prod. 2. p. 90.—Tapirìra, Aubl. guian. 1. p. 470. t. 188.—Salabérria, Neck. elem. no. 985.—Joncquètia, Schreb. gen. no. 785.

LIN. SYST. *Decándria, Pentagýnia.* Calyx 5-parted, deciduous, equal; sepals roundish. Petals 5, exserted from the hypogynous prominent disk, as well as the 10 stamens. Styles none. Stigmas 5. Capsule 5-furrowed, 5-valved, 5-seeded. Seeds arillate (perhaps the capsule is composed of 5 1-seeded carpels?).—A tree, with impari-pinnate leaves, having 2-3 pairs of almost opposite leaflets, and axillary and terminal panicles of flowers. This genus is excluded from *Connaràceæ* by S. Kunth, but a more apt place for its insertion in the natural system is not known to De Candolle.

1 T. GUIANE'NSIS (Aubl. l. c.). ♄. S. Native of Guiana, in the woods of Sinemari. Joncquètia paniculàta, Willd. spec. 2. p. 750. Flowers white.

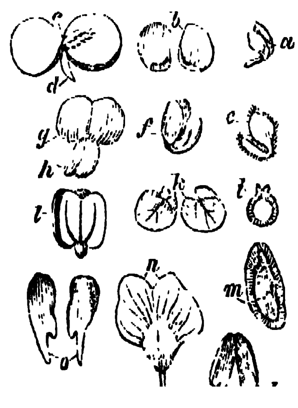
Guiana Tapiria. Tree 50 feet.

Cult. See *Connàrus* for culture and propagation, p. 90.

ORDER LXXVIII. LEGUMINO'SÆ (this order is composed of plants bearing legumes or pods like the pea). Juss. gen. 345. Gært. fruct. 2. p. 301. D. C. fl. franc. ed. 3. vol. 4. prof. med. ed. 2. p. 131. D. C. prod. 2. p. 93.—Papilionàceæ and Lomentàceæ, Lin. ord. ed. gies. p. 415.

Calyx constantly of 5 sepals (f. 31. *a.*), which are more or less connected at the base, forming a 5-cleft (f. 31. *a.*) or 5-toothed (f. 27. *a.*) calyx, never 5-sepalled, in the strict sense of the word, it is, however, sometimes composed of 1 (f. 52. *g.*) or 2 sepals from coalition or abortion (f. 43. *a.*), the teeth or segments of the calyx usually unequal, sometimes connected into 2 lips (f. 48. *a.*); the upper lip bidentate (f. 48. *a.*); the lower one trifid (f. 48. *a.*). Petals usually 5 (f. 27. *c.* f. 47. *c.*), generally unequal, inserted in the bottom of the calyx, rarely in the torus, usually variously imbricated in æstivation, rarely valvate, generally free, rarely joined into a gamopetalous corolla (sometimes, however, the petals are wanting, and sometimes the corolla is formed of 1, 2, 3, or 4 petals only). Stamens inserted with the petals, usually double the number of the petals, rarely triple or quadruple that number or fewer, sometimes all free (f. 54. *b.* f. 56. *c.* f. 24. *c.*), sometimes variously connected or monadelphous, with the staminiferous tube entire (f. 29. *c.*), or cleft in front (f. 27. *d.*), or diadelphous, usually with 9 joined and 1 free (f. 44. *d.*), rarely joined in 2 equal bundles, containing 5 stamens each, and more rarely connected into 3 bodies. Anthers 2-celled (f. 23. *f.*), sometimes some of them are changed into abortive threads. Ovary oblong (f. 23. *d.*) or ovate, sessile (f. 25. *d.*) or stipitate (f. 58. *d.*), usually free, rarely with the stipe adnate to the calyx. Style filiform (f. 25. *c.* f. 31. *d.*), rising from the top of the upper suture of the ovary, crowned by a terminal (f. 44. *c.*) or lateral stigma. Legume usually 2-valved (f. 29. *d.*), membranous, coriaceous, rarely fleshy or drupaceous, dehiscent (f. 29. *d.*) or indehiscent (f. 44. *g.*), 1-celled (f. 52. *h.*), sometimes longitudinally 2-celled from the upper suture being bent in so much, or often transversely many-celled in consequence of the seeds being separated by spongy or membranous substance (f. 49. *e.*), often separating into 1-celled joints (f. 41. *c.*). Seeds usually numerous (f. 29. *d.*), rarely solitary (f. 36. *c.*) or twin (f. 56. *c.*) from abortion, fixed to the upper suture of the legume (f. 56. *e.* f. 52. *h.* f. 29. *d.*), alternately inserted in both valves, usually oval (f. 29. *d.*) or kidney-shaped (f. 51. *e.*), hanging by various shaped funicles, rarely expanded into aril. Testa or spermaderm smooth, usually very smooth and hard. Endopleura usually tumid, appearing like albumen. Embryo sometimes straight (f. 21. *i. l. m.*), sometimes with the radicle curved back upon the edge of the cotyledons, and lying in the commisure formed by them (f. 21. *e. f. b.*), but in either case the radicle is directed towards the hilum (f. 21. *i. m.*). Cotyledons leafy, flat (f. 21. *a. f.*), changing through germination, or fleshy (f. 21. *c. g.*), (the flesh farinaceous or oily), in a few they are exserted from the spermaderm (f. 21. *c.*), others are inclosed in it, as the common pea, never changing through germination (f. 20.).

FIG. 21.



This order is composed of trees, shrubs, or herbs, with very variable habits. The leaves usually alternate and bistipulate, simple, but usually variously compound, generally pinnate or bipinnate, petiolate. Petioles usually bicallous at the base, sometimes the petiole is dilated into a leafy limb, when this is the case it is called a phyllodium. Flowers of various hues, axillary or terminal, disposed in racemes or panicles, rarely solitary.

Leguminòsæ is a vast and very natural order, diffused throughout the world, and is supposed by Humboldt to be a twelfth of all the phænogamous plants or vasculares, and we think he has not underrated it. This is the family to which the various kinds of pulse belong, and is one of the most familiar to the world. Their papilionaceous or pea flowers characterize the greater number, and their legumes or pea pods the remainder, with very few exceptions. As objects of ornament many are possessed of unrivalled beauty; for example, *Robìnia*, *Labúrnum*, *Wistària*, *Lupìnus*, *Astrágalus*, *Erythrìna* or *Coral-flower*, &c. Great, however, as is the beauty of the *Leguminòsæ* which can brave the inclemencies of the seasons of northern Europe, it must give way before the splendour and elegance of those of the tropics. The flowers of *Amhèrstia* and *Erythrìna* are of the deepest crimson, and borne in profusion upon some of the loftiest trees of the forest. But these are surpassed by the elegant fine-leaved *Acacias*, with their golden flowers, which cast a charm even over the most sterile deserts of Africa. While the forests of hot countries are thus indebted to species of this order for their timber, the meadows and pastures of the same latitudes are enamelled with the flowers of myriads of *Indigóferas*, *Hedysàrums*, and *Desmòdiums*, and animated by the wonderful motion of the sensitive plants. In our own country, the gayest part of our scenery is in many places indebted to the furze and broom, so in other countries the same effect is produced by other genera of *Leguminòsæ*; by *Lipària* and *Aspálathus* at the Cape of Good Hope, and by the *Pultenæ'as* and *Davièsias*, and similar genera in New Holland. The wood of the order is very hard and durable, with a yellow tinge, sometimes changing into green, as in the *Laburnum* of Europe, and in the better known Brazil-wood of commerce, produced by *Cæsalpìnia Brasiliénsis*.

The following remarks upon the properties of the order are made by M. de Candolle: The family of Leguminous plants, though established upon characters of primary importance, offers nevertheless so large a number of species, and such singular botanical anomalies, that it is easy to foresee that its properties will exhibit little uniformity. Still more exceptions may be anticipated, if one reflects that the chemical principle which is found most abundantly in every part of leguminous plants, and to which we must attribute their principal properties, is the extractive. It is probable that this principle, either from its own nature or from its peculiar power of uniting with different matters, or perhaps instead of being a simple principle, it is rather a compound of different matters; it is probable, I say, that this extractive principle exhibits much less uniformity in its results than any other. It is without doubt to the presence of the extractive principle in considerable quantities that many leguminous plants owe their purgative properties, which are common to several extracts, and which many chemists attribute to the acetate of potass, which they are almost universally found to contain. Thus the leaves and pods of *Càssia sénna*, and several other species, the *Colùtea arboréscens* of *Genista púrgans*, and of *Coronilla E'merus* act as brisk purgatives, and often cause pain in the bowels. The juice of *Coronílla vària* excites vomiting. It is perhaps from a different cause that the pulp, which is contained in the husks of leguminous plants, operates upon the human body, being gently laxative without causing the least pain; such is the character of *Cathartocárpus fístula*, *Tamaríndus I'ndica*, *Ceratónia síliqua*, and probably some species of *I'nga* and *Párkia*. There is a juice which surrounds the seeds in the tumid pods of *Gleditschia* and *Sophòra*, which differs altogether in its very astringent nauseous flavour. It is undoubtedly to a secretion from the external part of the seed, or of the pericarp, or some one of these modifications, that the singular property of the *Piscídia* and many *Galègas* is derived, which are employed in America to stupify fish, which are taken by this means as readily as by *Nux vomica*. The decoction of the root of *Galèga Virginiàna* is considered in America as a powerful vermifuge. It is perhaps to the extractive principle that the rubefacient powers of the fresh leaves of some leguminous plants are to be attributed, which act readily upon the skin if applied in plasters; as for example, the leaves of *Ornìthopus scorpioìdes* and *Morínga pterogospérma*. It appears that it is to the greater or less considerable mixture of the extractive principle with the fæcula contained in the seed, that the different properties of the pulse of leguminous plants may be attributed. If found in small quantities, the seed may serve as food for man and animals, as we see in French beans, scarlet runners, beans and peas, &c. If found in a more considerable quantity, it will render them purgative or emetic, as in *Cýtisus Labúrnum* and *Anagỳris fœ'tida*, &c., and most of those belonging to the subdivision *Phyllólobæ*. The seeds of leguminous plants also present many other anomalies more difficult to reduce to any fixed laws; thus some are found which contain a rather large portion of fixed oil, such as the seed of the *A'rachis hypogyæ'a* and *Morínga pterogospérma*, which produces oil of ben; there are some of which the smell and flavour are rather powerful, as the seed of *Dípterex odòra* or Tonquin bean; there are others, which, like the chick pea, have rather a bitter taste and exciting properties, and are on that account administered for the jaundice. There are others again, like those of the *Andìra*, which are so bitter as to be used in Java and Brazil as tonic, alexiteric, and vermifuge. In short, are not the aperient and diuretic qualities which are observable in the roots and herbage of many leguminous plants, such as broom, beans, *Onònis*, &c. to be attributed to a modification of this extractive principle? There are, in another view, roots which are tuberous, and furnish mankind with wholesome food, as *Láthyris tuberòsus*, *Dólichos tuberòsus*, and *D. bulbòsus*, which last the Indians use for food. The roots of liquorice have a sweet and mucilaginous taste, which, united to an acrid and rather exciting principle, causes it to be employed as a pectoral. It may be here added, that the sweet flavour of liquorice and its properties are not confined to the genus, but is found equally in the roots of many other plants of the order, as *A'brus precatòrius*, various species of *Trifòlium*, &c. The bark of some trees of leguminous plants is remarkable for its bitterness, and is used as febrifuges; the different kinds of *Geoffroya* and *Andìra* possess this bitter and febrifugal quality in a remarkable degree. In India the barks of the *Agàti grandiflòra* and of the *Guilandìna Bonducélla* are employed for the same purpose. The barks of many leguminous plants are also remarkable for their astringent qualities, caused by the quantity of tannin which they are found to contain; this is observable in the *Acàcia Cátechu* and *A. Arábica*, which are used for tanning leather. It is well known that almost all colouring matter proceeds from the extractive principle, and this principle abounds in *Leguminòsæ*. To this family belong the principal blue colours known by the name of Indigo, extracted from every kind of *Indigófera*, and from some *Tephròsias*; and the red colours are yielded by all the species of *Cæsalpinia*, and of *Hæmatóxylon* or Logwood. We may add the red juice which is drawn from the *Pterocárpus Dràco* and *Santalìnus*, under the name of Sandal and Dragon's blood; from *Butea*, under the name of Gum lac, and also from *Dalbérgia Monetària*. The red juice of *Erythrophlèum* or Gregree-tree, is used as an ordeal in Africa. These juices appear to differ in many particulars, but their history and analysis being unknown, it is impossible to form an estimate of the nature of their differences.

Among the exotic drugs employed in the arts, are the balsam of Copiva, produced by the *Copaifera*; the balsam of Peru, which Mutis says is produced by *Myrospérmum peruíferum*, and the balsam of Tolu from *Myrospérmum toluíferum*, the cachou, which has been found to be almost pure tannin, and which is supposed to be produced by *Acàcia Cátechu*. Of the same character is that remarkable resin that is yielded by *Hymenæ'a Coúrbaril*; gum Arabic, produced by the bark and roots of *Acàcia vèra*, *Sénegal*, *Arábica*, and others; gum tragacanth, obtained from *Astrágalus Créticus*, *gúmmifer*, and *vèrus*; and, finally, manna is secreted by *Alhàgi Mauròrum*.

It is remarkable that the botanical characters of *Leguminòsæ* should so strictly agree with the properties of their seeds; the latter may be divided into two sections, namely, the first *Sarcólobæ*, or those of which the cotyledons are thick (f. 21. *c. g.*), and filled with fecula, and destitute of cortical pores, and which, moreover, in germination do not undergo any change, but nourish the young plant by means of that supply of food which they already contain; second, the *Phyllólobæ*, or those of which the cotyledons are thin (f. 21. *a. f.*), with a very little fecula, and furnished with cortical pores, and which change at once into leaves at the time of germination, for the purpose of elaborating food for the young plant. All the seeds of *Sarcólobæ* are used as food in different countries, and none of those of *Phyllólobæ* are ever so employed.

M. de Candolle's arrangement of *Leguminòsæ* being here adopted, it will be useful to explain the principles on which it is founded. He divides *Leguminòsæ* into two grand divisions.

the first of which consists of plants, the radicle of whose embryo is curved back upon the edge of the cotyledons (f. 21. *b. e. f.*); the second, of those whose radicle and cotyledons are straight (f. 21. *i. k. l. m.*); the former is called *Curvémbriæ*, the latter *Rectémbriæ*. In the *Curvémbriæ* certain diversities in the structure of the calyx and corolla again divide into two principal forms, one of which, comprehending all the genera with papilionaceous flowers (f. 27.), is called *Papilionàceæ*, and the other consisting of a very small number of species with 1 or 2 petals or more, and an obscurely lobed calyx, is called *Swartzièæ* (f. 52.). The last is not subdivided, but the *Papilionaceæ* resolve themselves into two great tribes, namely, those with fleshy cotyledons (f. 21. *c.*) and catable pulse called *Sarcólobæ*, and those with foliaceous cotyledons (f. 21. *a. f.*), and seeds which are not catable, called *Phyllólobæ*, each of these is divisible by three upon slight differences in the fructification. In the *Rectémbreæ* two suborders, *Mimòseæ* (f. 53. f. 54.) and *Cæsalpineæ* (f. 56. f. 57.), are formed upon variations in the æstivation of the calyx and corolla; in the former it is valvate, in the latter imbricated; the first constitutes a single tribe, the latter divides into three. Having thus explained the principles upon which *Leguminòsæ* is arranged, the following synopsis of the genera will be intelligible.

Synopsis of the Genera.

DIVISION I.

CURVE'MBRIÆ. Radicle bent back upon the edge of the lobes of the cotyledons in embryo (f. 21. *b. c. f.*).

SUBORDER I.

PAPILIONA'CEÆ. Embryo with the radicle lying in the fissure of the cotyledons (f. 21. *b. e. f.*). Sepals imbricate in æstivation or somewhat valvate. Petals disposed in a papilionaceous manner (f. 24. *b.* f. 25. *b.* &c.). always irregular, the upper one is called a vexillum (f. 21. *n.*), the two side ones wings (f. 21. *o.*), and the lower one, which is usually composed of 2 petals, the keel (f. 21. *p.*). Stamens inserted in the bottom of the calyx, or perigynous.

§ 1. *Phyllólobæ. Cotyledons thin, leafy* (f. 21. *a. f.*).

TRIBE I.

SOPHO'REÆ. *Flowers papilionaceous* (f. 24. *b.* f. 22. *c.* &c.). *Stamens* 10, *unconnected* (f. 23. *f.* f. 24. *c.*). *Legume continuous, not articulated* (f. 22. *d.*). *Cotyledons flat, leafy* (f. 21. *a. f.*).

1 MYROSPE'RMUM. Calyx campanulate, 5-toothed, superior petal larger than the rest. Legume stipitate, naked at the base, and winged at the apex, indehiscent, 1-celled, 1-2-seeded. Seeds enveloped in balsamic juice. Trees, with pinnate leaves.

2 SOPHÒRA. Calyx 5-toothed (f. 22. *a.*), campanulate. Petals of keel usually concrete at the apex. Legume wingless, moniliform, many-seeded (f. 24. *d.*). Trees, with impari-pinnate leaves, and variable flowers.

3 EDWA'RDSIA. Calyx oblique, 5-toothed. Petals connivent. Keel long. Legume moniliform, 2-valved, 4-winged, many-seeded. Shrubs, with impari-pinnate leaves, and yellow flowers.

4 ORMÒSIA. Calyx 5-parted, bilabiate. Vexillum roundish, hardly longer than the keel and wings. Legume woody, compressed, 2-valved, 1-3-seeded. Trees, with impari-pinnate leaves, and blue or purple flowers.

5 VIRGI'LIA. Calyx 5-cleft. Petals about equal in length. Vexillum flat. Legume compressed, oblong, 2-valved, many-seeded. Trees, with impari-pinnate leaves, and purplish and yellow flowers.

6 MACRÓTROPIS. Calyx cup-shaped, inflated, 5-toothed. Keel longer than the vexillum. Legume straight, compressed or subterete, many-seeded. Shrubs, with impari-pinnate leaves and white flowers.

7 ANAGY'RIS. Calyx 5-toothed, somewhat bilabiate. Wings longer than the vexillum and keel. Legume on a short stipe, compressed, many-seeded, 2-valved. Shrubs, with trifoliate leaves and yellow flowers.

8 PIPTA'NTHUS. Calyx 5-toothed, somewhat bilabiate at the apex. Vexillum with subincurved edges. Wings involute at the apex. Keel obtuse, bifid. Legume linear, stipitate, many-seeded. A shrub, with trifoliate leaves and yellow flowers.

9 THERMÓPSIS. Calyx campanulate, 4-5-cleft, somewhat bilabiate, convex behind. Petals nearly equal. Vexillum with reflexed sides. Legume compressed, falcate or linear, many-seeded. Perennial herbs, with trifoliate leaves and yellow flowers.

10 BAPTÍ'SIA. Calyx half 4-5-cleft, bilabiate. Petals nearly equal. Vexillum with reflexed edges. Legume ventricose, pedicellate, many-seeded. Perennial herbs, with trifoliate, rarely simple leaves, and yellow and blue flowers.

11 CYCLÒPIA. Calyx 5-cleft, thrust in at the base. Stigma bearded. Vexillum large. Wings with a transverse plait. Keel mucronate. Legume compressed, pedicellate, 1-celled, many-seeded, coriaceous. Shrubs, with sessile trifoliate leaves and yellow flowers.

12 PODALY'RIA. Calyx 5-cleft, thrust in at the base. Vexillum large. Keel covered by the wings. Stamens rather connate at the base. Legume sessile, ventricose, many-seeded. Shrubs, with simple leaves and red or white flowers.

13 CHORIZE'MA. Calyx half 5-cleft, bilabiate. Keel ventricose, shorter than the wings. Legume ventricose, 1-celled, many-seeded, sessile or subsessile. Shrubs, with simple, toothed or entire leaves, and yellow and red flowers.

14 PODOLÒBIUM. Calyx 5-cleft, bilabiate. Vexillum spreading. Legume stalked, linear-oblong, smooth inside, 4-seeded. Shrubs, with simple, lobed or entire leaves, and yellow and red flowers.

15 OXYLÒBIUM. Calyx deeply 5-cleft (f. 23. *a.*), somewhat bilabiate. Vexillum spreading (f. 23. *b.*). Legume sessile (f. 23. *d.*) or subsessile, many-seeded, ventricose, ovate, acute. Little shrubs, with whorled leaves and yellow flowers.

16 CALLI'STACHYS. Calyx 5-cleft, bilabiate. Vexillum erect. Legume stipitate, woody, opening at the top, many-seeded. Shrubs, with entire, scattered, or whorled leaves, and yellow flowers.

17 BRACHYSE'MA. Calyx 5-cleft, ventricose. Vexillum shorter than the wings or keel. Legume ventricose, many-seeded. Procumbent or climbing shrubs, with simple entire leaves, and scarlet or greenish-yellow flowers.

18 GOMPHOLÒBIUM. Calyx 5-parted. Vexillum spreading.

Legume many-seeded, rather spherical, and very obtuse. Shrubs, with impari-pinnate or palmately 3-5-foliate leaves, and yellow flowers.

19 BURTÒNIA. Calyx deeply 5-cleft. Petals about equal in length. Legume roundish, rather ventricose. Shrubs, with awl-shaped, trifoliate, sessile leaves, and yellow flowers.

20 JACKSÒNIA. Calyx 5-parted. Petals and stamens deciduous. Legume rather ventricose, ovate or oblong, with the valves pubescent inside. Shrubs, almost leafless in the adult state, with filiform branches, and yellow flowers.

21 VIMINA'RIA. Calyx 5-toothed, angular. Petals equal in length. Legume valveless, ovate. Shrubs, in the adult state leafless. Flowers yellow.

22 SPHÆROLÒBIUM. Calyx 5-cleft, bilabiate. Legume spherical, 1-2-seeded, pedicellate. Shrubs, in the adult state nearly leafless, when present simple, with red or yellow flowers.

23 AÒTUS. Calyx 5-cleft, bilabiate. Petals and stamens deciduous. Legume 2-valved, 1-2-seeded. Shrubs, with simple narrow leaves and yellow flowers.

24 DILLWY'NIA. Calyx 5-cleft, bilabiate, tapering to the base. Vexillum large, 2-lobed. Legume ventricose, 1-2-seeded. Seeds strophiolate. Shrubs, with simple leaves and yellow flowers.

25 EUTA'XIA. Calyx 5-cleft, bilabiate. Vexillum broad. Legume rather ventricose, 1-2-seeded. Seed strophiolate. Shrubs, with simple leaves and yellow flowers.

26 SCLEROTHA'MNUS. Calyx 5-cleft, bilabiate, bibracteate at the base. Keel length of wings. Legume ventricose, pedicellate, 2-seeded. A shrub, with simple leaves and yellow flowers.

27 GASTROLÒBIUM. Calyx 5-cleft, bilabiate. Keel length of wings. Legume ventricose, 2-seeded. Seeds strophiolate. Shrubs, with simple leaves, disposed 4 in a whorl, and yellow flowers.

28 EUCHI'LUS. Calyx deeply 5-cleft, bibracteolate at the base, bilabiate, lower lobes setaceous. Keel length of wings. Legume compressed, pedicellate, 2-seeded. Seed strophiolate. Shrubs, with opposite simple leaves and yellow flowers.

29 PULTENÆ'A. Calyx 5-cleft, somewhat bilabiate (f. 24. *a.*), bibracteolate at the base. Legume sessile (f. 24. *d.*), 2-seeded. Shrubs, with simple alternate leaves.

30 DAVIE'SIA. Calyx angular, 5-toothed. Keel shorter than the wings. Legume compressed, angular, opening elastically at the lower suture, 2-seeded, pedicellate. Seeds strophiolate. Spiny or unarmed shrubs, with simple leaves, sometimes leafless, and yellow flowers.

31 MIRBE'LIA. Calyx 5-cleft, bilabiate. Legume 2-seeded, longitudinally 2-celled, from the suture being bent inwards above. Shrubs, with ternately verticillate leaves and purple flowers.

TRIBE II.

LO'TEÆ. *Corolla papilionaceous* (f. 25. *b.*). *Stamens* 10, *monadelphous* (f. 25. *c.* f. 29. *c.*) *or diadelphous, that is to say,* 9 *joined, and* 1 *free. Legume continuous,* 1-*celled* (f. 29. *d.*), *rarely* 2-*celled, from the upper suture being bent inwards. Cotyledons flat, foliaceous* (f. 21. *a. f.*).

SUBTRIBE I. GENI'STEÆ. *Legume* 1-*celled* (f. 26. *d.* f. 29. *d.*). *Stamens usually monadelphous* (f. 25. *c.* f. 27. *d.* f. 29. *c.*). *Leaves simple or palmately trifoliate, rarely pinnate. Stems usually shrubby.*

32 HÒVEA. Calyx 5-cleft, bilabiate (f. 25. *a.*). Keel obtuse (f. 25. *f.*). Stamens monadelphous (f. 25. *c.*), upper one more or less free. Legume sessile (f. 25. *d.*), roundish, ventricose, 2-seeded. Seeds strophiolate. Shrubs, with alternate simple leaves and purplish flowers.

33 PLAGIOLÒBIUM. Calyx bilabiate (f. 26. *a.*), upper lip broad, retuse, lower one 3-parted. Keel obtuse (f. 26. *c.*). Stamens diadelphous, 9 joined, and 1 free. Legume oblique (f. 26. *d.*), coriaceous, ventricose, 2-seeded. Seeds strophiolate. Shrubs, with simple spiny-toothed leaves, and blue flowers.

34 PLATYLÒBIUM. Calyx 5-cleft, bracteate, bilabiate. Stamens all connected. Legume pedicellate, compressed, flat, many-seeded, winged on the back. Shrubs, with opposite simple leaves and yellow flowers, with the base of the vexillum red.

35 BOSSLE'A. Calyx 5-cleft (f. 27. *a.*), bilabiate. Stamens monadelphous (f. 27. *d.* f. 28. *b.*). Legume compressed (f. 28. *c.*), pedicellate (f. 27. *e.*), many-seeded, with the margins thickened on both sides. Seeds strophiolate. Shrubs, with flat or terete branches, and alternate simple leaves, when present, and yellow flowers, with the keel usually red or brown.

36 GOÓDIA. Calyx 5-cleft, bilabiate. Vexillum large, flat. Stamens all connected. Legumen pedicellate, compressed. Seeds strophiolate. Shrubs, with alternate, stalked, trifoliate leaves, and yellow flowers.

37 SCO'TTEA. Calyx bracteate, 5-toothed. Stamens all connected. Vexillum very short. Legume stalked, compressed, thickened at the sutures. Seeds 3-4, strophiolate. Shrubs, with toothed simple leaves and reddish flowers.

38 TEMPLETÒNIA. Calyx 5-toothed. Stamens all connected, the tenth sometimes free. Keel oblong, rather longer than the wings. Legume pedicellate, compressed, many-seeded. Seeds strophiolate. Shrubs, with alternate, simple, wedge-shaped leaves and scarlet flowers.

39 RA'FNIA. Calyx cleft in 5 lobes to the middle, lowest lobe setaceous. Keel obtuse. Vexillum roundish. Stamens monadelphous. Legume lanceolate, compressed, many-seeded. Shrubs, with alternate simple leaves and yellow flowers.

40 VASCÒA. Calyx half 5-cleft. Lobes acute, not spinose. Vexillum roundish. Stamens monadelphous. Legume compressed, sessile, many-seeded. Shrubs, with simple, stem-clasping leaves, upper ones opposite, lower ones alternate, and yellow flowers.

41 BORBÒNIA. Calyx 5-cleft; lobes spiny at apex. Corolla villous. Vexillum emarginate. Keel obtuse. Stamens monadelphous. Legume linear, flat, many-seeded. Shrubs, with simple, alternate, stem-clasping leaves and yellow flowers.

42 ACHYRÒNIA. Calyx 5-toothed, lower tooth elongated and bifid. Stamens diadelphous. Legume compressed, many-seeded. Shrubs, with habit of last genus, with yellow flowers.

43 LIPA'RIA. Calyx thrust in at the base, 5-lobed, lower lobe very long, elliptic, petaloid. Corolla smooth. Keel acute.

Stamens diadelphous. Legume ovate, few-seeded. Shrubs, with lanceolate leaves, which are pungent at the apex, and fulvous flowers.

44 Priestle'ya. Calyx 5-lobed, subilabiate. Corolla smooth. Wings falcate. Stamens diadelphous. Legume sessile, compressed, 4-6-seeded. Shrubs, with simple leaves and yellow flowers.

45 Ha'llia. Calyx 5-cleft. Keel obtuse. Stamens monadelphous, entire. Legume membranous, 2-valved, 1-seeded. Suffruticose herbs, with simple leaves and purple flowers.

46 Heyla'ndia. Calyx 5-cleft. Keel obliquely truncate, acuminated. Stamens monadelphous, cleft in front. Legume compressed, 1-seeded. Suffruticose herbs, with cordate, roundish leaves and yellow flowers.

47 Crotala'ria. Calyx 5-lobed, subilabiate. Vexillum cordate, large. Keel falcate, acuminated. Stamens monadelphous. Style bearded laterally. Legume turgid, with ventricose valves, usually many-seeded. Herbs or shrubs, with simple or palmately compound leaves and usually yellow flowers, rarely purplish.

48 Cla'vulum. Calyx 5-cleft, somewhat bilabiate. Vexillum somewhat plicate. Keel large, short. Wings short. Stamens monadelphous, with the tube cleft. Style acute. Legume inflated, many-seeded.

49 Hypocaly'ptus. Calyx 5-lobed, thrust in at the base. Stamens monadelphous. Legume compressed, lanceolate. A smooth shrub, with trifoliate leaves and purple flowers.

50 Vibórgia. Calyx tubular, 5-toothed. Vexillum obovate. Keel obtuse. Stamens monadelphous, cleft in front. Legume compressed, 1-seeded, winged on the upper side, and with ventricose valves. Shrubs, with trifoliate leaves and yellow flowers.

51 Loddige'sia. Calyx rather inflated, acutely 5-toothed. Vexillum shorter than the wings or keel. Stamens monadelphous. Ovary oblong, 2-4-ovulate, compressed. Shrubs, with trifoliate leaves and reddish-white flowers.

52 Dichi'lus. Calyx tapering at the base, 5-toothed, deeply bilabiate; teeth all acute. Vexillum shorter than the obtuse keel. Stamens monadelphous, with the sheath cleft in front. Ovary linear, 8-ovulate. A shrub, with trifoliate leaves and white or yellow flowers.

53 Lebe'ckia. Calyx 5-cleft; lobes acute. Stamens monadelphous, with the sheath cleft in front. Legume cylindrical, many-seeded. Shrubs with the habit of *Genísta*, with simple or trifoliate leaves and yellow flowers.

54 Sarcophy'llum. Calyx 5-parted, regular, 2 superior teeth divaricate. Keel obtuse. Stamens monadelphous. Legume compressed, elongated, falcate, many-seeded. A shrub, with fascicles of filiform fleshy leaves and yellow flowers.

55 Aspa'lathus. Calyx 5-toothed. Vexillum stipitate. Stamens monadelphous, with the sheath cleft in front. Legume oblong, few-seeded. Shrubs, with fascicled leaves, usually trifoliate and sessile, and usually yellow flowers.

56 U'lex. Calyx 5-toothed, bibracteate, 2-parted. Stamens monadelphous. Legume short, turgid, few-seeded. Shrubs, with spiny branches and leaves, and yellow flowers

57 Stauraca'nthus. Calyx 5-toothed, bilabiate. Stamens monadelphous. Legume long, exserted, flat, many-seeded. Shrub with the habit of *U'lex*, with yellow flowers.

58 Spa'rtium. Calyx spathaceous, cleft above, 5-toothed, subilabiate. Vexillum roundish. Keel acuminated. Stamens monadelphous. Legume compressed, many-seeded. Shrub, with lanceolate, scattered leaves and yellow flowers.

59 Geni'sta. Calyx 5-toothed, bilabiate (f. 29. *d.*). Vexillum obtuse (f. 29. *a.*). Keel oblong (f. 29. *b.*). Stamens monadelphous (f. 29. *c.*). Legume compressed, rarely somewhat turgid (f. 29. *d.*), few or many-seeded. Unarmed or spiny shrubs, with simple or trifoliate leaves and yellow flowers.

60 Cy'tisus. Calyx bilabiate, upper lip usually entire, lower one 3-toothed. Vexillum large. Keel obtuse. Stamens monadelphous. Legume compressed, many-seeded. Shrubs or trees, with trifoliate leaves, and yellow, purple, or white flowers.

61 Adenoca'rpus. Calyx 5-cleft, obconical, usually glandular, bilabiate. Keel obtuse. Stamens monadelphous. Legume oblong, flat, covered with pedicellate glands. Shrubs, with trifoliate leaves and yellow flowers.

62 Onónis. Calyx campanulate, 5-cleft, with the segments linear. Vexillum large. Stamens monadelphous, one of which is sometimes nearly free. Legume usually turgid, few-seeded. Herbs or shrubs, with simple, trifoliate, rarely impari-pinnate leaves and variable flowers.

63 Requie'nia. Calyx 5-toothed, acute. Keel obtuse. Stamens monadelphous, with the sheath cleft in front. Legume oval, compressed, 1-seeded. Shrubs, with bistipulate, obcordate, simple leaves.

64 Anthy'llis. Calyx tubular, 5-toothed, more or less inflated after flowering. Petals about equal in length. Stamens monadelphous. Legume ovate, 1-2-seeded, rarely oblong-linear and many-seeded, covered by the calyx. Shrubs or herbs, with trifoliate or impari-pinnate leaves, and yellow, white, or red flowers.

Subtribe II. Trifolie'æ. *Legume 1-celled* (f. 30. *c.* f. 31. *c.*). *Stamens diadelphous* (f. 31. *b.*). *Stems herbaceous, rarely frutescent. Leaves usually palmately 3-5-foliate, rarely impari-pinnate, primordial ones alternate.*

65 Medica'go. Calyx subcylindrical, 5-cleft. Keel remote from the vexillum (f. 30. *b.*). Legume many-seeded, of various forms, usually spirally twisted (f. 30. *c.*). Herbs or shrubs, with yellow or red flowers.

66 Hymenoca'rpus. Calyx subcylindrical, 5-cleft. Keel remote from the vexillum. Legume membranous, compressed, arched. Herbs, with yellow flowers.

67 Trigone'lla. Calyx campanulate, 5-cleft. Keel small, but with the wings and vexillum spreading, appearing like a 3-petalled corolla. Legume oblong, compressed, or cylindrical, many-seeded. Herbs, with yellow and white flowers.

68 Pocóckia. Calyx campanulate, 5-toothed. Keel shorter than the wings and vexillum. Legume longer than the calyx, membranous, compressed, winged. An upright herb, with yellow flowers.

69 MELILÒTUS. Calyx tubular, 5-toothed. Keel shorter than the wings or vexillum. Legume longer than the calyx, coriaceous, 1 or many-seeded, of various forms. Herbs, with yellow or white flowers.

70 TRIFÒLIUM. Calyx tubular, 5-cleft (f. 31. *a.*). Keel shorter than the wings and vexillum. Legume small (f. 31. *c.*), hardly dehiscent, shorter than the calyx, usually ovate, 1-2-seeded, rarely oblong, 3-4-seeded, and a little longer than the calyx. Herbs, with variable flowers.

71 ACROPÒDIUM. Calyx 5-cleft. Vexillum short, hispid. Wings bidentate. Stamens diadelphous. Legume ovate-oblong, usually 2-seeded, stalked. A subshrub, with fascicled leaves, and 3-flowered axillary racemes.

72 DORY'CNIUM. Calyx subcampanulate, bilabiate, rather gibbous at the base. Wings shorter than the vexillum. Keel almost mutic. Stigma capitate. Herbs or subshrubs, with white or red flowers.

73 LÒTUS. Calyx tubular, 5-cleft. Wings and vexillum nearly equal. Keel beaked. Legume cylindrical or compressed, wingless. Stigma subulate. Herbs, usually with yellow flowers.

74 TETRAGONÒLOBUS. Calyx tubular, 5-cleft. Wings shorter than the vexillum. Keel beaked. Stigma funnel-shaped, at length obliquely beaked. Legume furnished with 4 marginal wings. Herbs, with red or yellow flowers.

75 HOSA'CKIA. Calyx campanulate, 5-cleft (f. 32. *a.*). Wings equal in length to the vexillum (f. 32. *b.*). Keel beaked. Stigma capitate. Legume cylindrical, or rather compressed, straight. Herbs, with impari-pinnate leaves, and variegated flowers.

76 CARMICHÆ'LIA. Calyx cup-shaped, 5-toothed. Vexillum broad. Ovary many-seeded. Legume few-seeded, with the valves separating at both margins, leaving the dissepiments upon the plant after the seeds have fallen. A shrub, with flat branches and blue flowers, and the leaves pinnate when present.

77 CYAMÒPSIS. Calyx turbinately-tubular, 5-cleft; lobes lanceolate-awl-shaped, 2 upper ones remote. Flowers with a roundish vexillum, oblong wings, and a 2-petalled, straight, acute keel, all nearly equal in length. Stamens monadelphous. Stigma capitate. Legume compressed, many-seeded. An herb, with purple flowers.

SUBTRIBE III. CLITÒRIÆ. *Legume 1-celled* (f. 34. *c.*). *Stamens usually diadelphous* (f. 31. *d.*). *Stems herbaceous or suffrutescent, usually climbing. Leaves various, primordial ones opposite. Flowers usually blue, red, or purple, rarely yellow.*

78 PSORA'LEA. Calyx tubular, 5-cleft, usually glandular; lobes acuminated, lowest one longest. Legume valveless, 1-seeded, length of calyx. Shrubs or herbs. Flowers blue.

79 INDIGÓFERA. Calyx 5-cleft; lobes acute. Vexillum roundish, emarginate (f. 33. *a.*). Keel having an awl-shaped spur on both sides. Legume terete (f. 33. *c.*), flat, or tetragonal, 2-valved, rarely few-seeded, usually many-seeded. Herbs or shrubs, with simple, impari-pinnate or trifoliate leaves, and red, blue, or white flowers.

80 OU'STROPIS. Calyx tubular, 5-cleft. Wings equal in length to the vexillum. Keel blunt, with an auricle on each side. Legume compressed, 2-valved, 3-4-celled; cells 1-seeded. A prostrate herb, with trifoliate leaves, and heads of red flowers.

81 CLITÒRIA. Calyx bibracteate at the base, 5-cleft (f. 34. *a.*). Vexillum large (f. 34. *b.*). Stamens and petals inserted above the base of the calyx. Style rather dilated at the apex. Legume linear (f. 34. *c.*), compressed, 2-valved, 1-celled, many-seeded. Climbing herbs, with trifoliate or impari-pinnate leaves. Flowers large, white, blue, or purple.

82 NEUROCA'RPUM. Calyx tubular, with 5 acuminated, nearly equal teeth, and furnished with 2 bracteas at the base. Vexillum large, roundish. Keel obtuse. Legume stipitate, compressed, sub-tetragonal, from the middle nerve of the valves being rather prominent, 4-8-seeded. Usually climbing subshrubs, with trifoliate leaves, and large white or purplish flowers.

83 MARTIU'SIA. Calyx tubular, somewhat bilabiate, with 5 acute teeth, lowest one longest. Corolla none. Stamens 4, 2 fertile and 2 sterile, distinct. Legume stipitate, compressed, somewhat tetragonal in consequence of the valves being furnished with a prominent middle nerve. A climbing shrub, with trifoliate leaves.

84 COLOGA'NIA. Calyx tubular, 5-cleft, bibracteate at the base, somewhat bilabiate. Vexillum roundish. Ovary stipitate, linear, very hispid, girded by the disk. Style smooth, obtuse. Procumbent or twining herbs, with simple or trifoliate leaves, and violaceous flowers.

85 GALA'CTIA. Calyx bibracteate at the base, 4-cleft. Petals 5, oblong, distinct, with the vexillum broader than the rest. Stigma obtuse. Legume terete or compressed, many-seeded, elongated. Climbing herbs or subshrubs, with trifoliate or impari-pinnate leaves, and usually red flowers.

86 ODÒNIA. Calyx 4-parted. Vexillum erectly spreading. Wings having a tooth each at the apex. Keel 2-parted, reflexed, remote from the vexillum. Legume compressed, usually 8-seeded. A twining herb, with trifoliate leaves.

87 STEGANÒTROPIS. Calyx 5-toothed, bibracteate, permanent. Vexillum cucullate, bicallous at the base, and spurred behind, inclosing the wings and keel, which are membranous. Style membranous, dilated and bearded at the apex. Legume linear, many-seeded. A twining herb, with ternate leaves, and 2-flowered peduncles.

88 VILMORÍNIA. Calyx cylindrical, 4-toothed, somewhat bilabiate. Wings shorter than the keel. Style acute. Legume stalked, lanceolate, compressed, tapering. A shrub, with impari-pinnate leaves, and purple flowers.

89 DÍPLONYX. Calyx urceolate, bilabiate. Vexillum reflexed, standing on a glandular claw. Wings biauriculate. Keel biauriculate. Stamens diadelphous. Legume terete, many-seeded. A twining shrub, with impari-pinnate leaves, and axillary racemes of violaceous flowers.

90 BARBIE'RIA. Calyx tubular, 5-cleft, bibracteate at the base. Wings shorter than the keel, and keel shorter than the vexillum. Style bearded at the apex. Stigma obtuse. Legume linear, villous, many-seeded. A shrub, with impari-pinnate leaves, and scarlet-purplish flowers.

91 KIESE'RIA. Calyx campanulate, gibbous at the base, 5-toothed, lower tooth longer and keeled. Vexillum orbicular.

Stamens diadelphous. Style villous in front. Legume linear, compressed, hooked at the end, many-seeded. A tomentose herb, with pinnate leaves, and racemes of white flowers.

92 Gròna. Calyx 4-cleft; upper lobe emarginate. Wings obtuse. Vexillum obcordate. Keel concave, adnate to the middle of the wings. Stigma simple. Legume linear, compressed, many-seeded. A prostrate shrub, with simple leaves, and purple flowers.

93 Collæ'a. Calyx 5-cleft; upper lobe a little broader than the rest. Petals unguiculate. Vexillum biauriculate at the base. Stigma capitate. Legume compressed, tomentose, 4-6-seeded. Shrubs, with trifoliate leaves, and purple flowers.

94 Oto'ptera. Calyx 5-cleft, 2 superior lobes approximate. Vexillum large, roundish. Wings oblong, furnished with an auricle on the stipe. Keel 2-edged. Stigma bilabiate, obtuse. Ovary linear, straight, compressed, many-ovulate. A twining shrub, with trifoliate leaves, and purplish flowers.

95 Puera'ria. Calyx bilabiate, upper lip entire or hardly bidentate, lower one trifid. Keel obtuse. Vexillum obovate. Stamens monadelphous. Legume compressed, stipitate, many-seeded. Climbing shrubs, with trifoliate leaves, and yellowish flowers.

96 Duma'sia. Calyx obliquely truncate, toothless, bibracteate at the base. Claws of petals length of calyx. Keel obtuse. Legume tapering to the base, compressed, few-seeded. Climbing herbs, with trifoliate leaves, and purplish or yellow flowers.

97 Glycìne. Calyx 5-cleft, somewhat bilabiate. Style acute. Legume linear, compressed, straight, many-seeded, hooked at the end. Climbing herbs, with trifoliate leaves, and usually yellowish flowers.

98 Chæto'calyx. Calyx bilabiate, with awl-shaped segments, those of the upper lip recurved and those of the lower lip adpressed, beset with glandular bristles. Vexillum roundish, emarginate. Keel conforming to the wings. Ovary linear, many-seeded. Style filiform, villous. A climbing shrub, with imparipinnate leaves, and yellow flowers.

Subtribe IV. Gale'geæ. *Legume* 1-*celled* (f. 36. *c*. f. 37. *c*.). *Stamens diadelphous, rarely monadelphous. Stems herbaceous, shrubby, or arboreous. Leaves alternate or opposite, usually impari-pinnate.*

99 Petaloste'mum. Calyx 5-cleft or 5-toothed. Petals unguiculate, like each other in shape. Stamens 5, monadelphous. Vexillum conduplicate, free. Legume covered by the calyx, 1-seeded, indehiscent. Herbs, with white or purple flowers.

100 Da'lea. Calyx 5-cleft (f. 36. *a*.), or 5-toothed. Wings and keel adnate to the base of the stamens (f. 36. *b*.). Vexillum short, free. Stamens 10, monadelphous. Legume ovate, 1-seeded (f. 36. c.), shorter than the calyx. Herbs, with white or blue flowers.

101 Glycyrrhi'za. Calyx tubular, 5-cleft, bilabiate, especially the 2 upper lobes are joined together, higher up than the others. Vexillum ovate-lanceolate. Keel 2-edged or 2-petalled, acute. Legume ovate or oblong, compressed, 1-4-seeded. Herbs, with sweet roots, and bluish or white flowers.

102 Gale'ga. Calyx of 5 awl-shaped, equal teeth. Vexillum obovate-oblong. Keel obtuse. Stamens monadelphous. Stigma dot-formed. Legume terete, tomentose. Herbs, with blue, red, or white flowers.

103 Callótropis. Calyx of 5 equal filiform teeth. Vexillum erect, ovate. Wings shorter than the keel, which is incurved. Style incurved, tipped by a hairy stigma. Stamens diadelphous, the 9 joined ones incurved. Legume stipitate, compressed, tapering to both ends, many-seeded. Herbs, with blue flowers.

104 Tephrósia. Calyx 5-toothed (f. 37. *a*.). Vexillum large (f. 37. *b*.), roundish, silky or pubescent outside, reflexed. Wings adhering to the obtuse keel. Stamens either monadelphous or diadelphous. Legume compressed, linear, many-seeded (f. 37. c.). Shrubs or herbs, with purple or white flowers.

105 Amórpha. Calyx 5-toothed. Vexillum ovate, concave. Wings and keel wanting. Stamens exserted, monadelphous at the base. Legume compressed, ovate, or lunulate, 1-2-seeded. Shrubs, with bluish-purple flowers.

106 Eysenha'rdtia. Calyx campanulate, 5-toothed, upper teeth more remote, lowest one longest. Vexillum oblong, distinct from the keel. Ovary biovulate. Style hooked at the apex. A tree, with white flowers.

107 Nissólia. Calyx campanulate, 5-toothed. Stamens monadelphous, with a dorsal fissure, or diadelphous. Legume stipitate, ending in a leafy wing, 1 or many-seeded. Climbing shrubs.

108 Mulle'ra. Calyx campanulate, 5-toothed, circumcised at the base after flowering. Petals deciduous. Stamens 8-10, monadelphous, falling off with the calyx. Legume moniliform; links 1-5, distinct, indehiscent, 1-seeded. A tree.

109 Lonchoca'rpus. Calyx urceolate, 5-toothed. Vexillum orbicular, about equal in length with the wings and keel. Stamens monadelphous and diadelphous. Legume on a short stipe, flat, membranous, 4-8-seeded. Trees, with purplish flowers.

110 Robìnia. Calyx 5-toothed; teeth lanceolate, 2 superior ones shorter and approximate. Vexillum large. Keel obtuse. Stamens deciduous. Style bearded in front. Legume nearly sessile, many-seeded, margined at the seminiferous suture. Spiny trees, with white or rose-coloured flowers.

111 Poitæ'a. Calyx obliquely truncate, 5-toothed, 2 upper teeth very short. Petals connivent. Vexillum retuse, shorter than the wings, but with the keel longer than the wings. Stamens a little exserted. Legume stipitate, mucronate, compressed, many-seeded. Shrubs, with white or red flowers.

112 Sabìnea. Calyx cup-shaped, with a truncate somewhat entire margin. Keel very blunt, rather shorter than the vexillum. Legume compressed, elongated, mucronate, many-seeded. Shrubs, with abruptly-pinnate leaves, and purplish flowers.

113 Course'tia. Calyx 5-cleft, 2 superior lobes shorter than the rest, and joined together a little higher. Vexillum obcordate. Keel obtuse, shorter than the wings. Style bearded at the apex. Stigma capitate. Legume compressed, 5-8-seeded, mucronate. Woolly trees, with abruptly pinnate leaves, and yellow flowers.

114 Sesba'nia. Calyx 5-cleft, or 5-toothed (f. 38. *a*.). Vexillum roundish, complicated (f. 38. *b*.), larger than the keel,

which is obtuse, and 2-edged at the base. Sheath of stamens biauriculate at the base. Legume elongated, slender (f. 38. *c.*). Shrubs or herbs, with abruptly pinnate leaves, and usually with yellow flowers.

115 Aga'ti. Calyx campanulate, bluntly 5-toothed. Vexillum oval-oblong, shorter than the oblong wings. Keel large, straight. Sheath of stamens furnished with large auricles. Legume stipitate, compressed, transversely many-celled. Trees, with abruptly pinnate leaves, and red flowers.

116 Glottídium. Calyx 5-toothed, somewhat bilabiate, lower teeth longer than the rest. Vexillum kidney-shaped. Legume stipitate, compressed, 1-celled, 2-seeded. Herbs, with simple and abruptly-pinnate leaves, and yellow flowers.

117 Piscídia. Calyx campanulate, 5-cleft. Keel obtuse. Legume stalked, linear, having 4 membranous wings, with the seeds interrupted by spongy substance. Trees, with white flowers variegated with red.

118 Daubentònia. Calyx campanulate, 5-toothed. Keel very blunt. Vexillum roundish, stipitate. Legume stalked, oblong, compressed, furnished with 4 wings, and with the seeds interrupted by spongy substance. Shrubs, with abruptly pinnate leaves, and yellow or scarlet flowers.

119 Coryne'lla. Calyx somewhat bilabiate, 5-toothed. Petals with short claws. Keel obtuse. Style clavate. Legume lanceolate, compressed, marginate, many-seeded. Shrubs, with abruptly pinnate leaves and purplish flowers.

120 Caraga'na. Calyx tubular, 5-toothed. Wings and vexillum about equal in length. Stigma truncate. Legume sessile and subterete, many-seeded. Shrubs, with abruptly pinnate leaves, and yellow and white flowers.

121 Halimode'ndron. Calyx campanulate, 5-toothed. Keel obtuse. Wings acute, auricled. Legume stipitate, inflated, ovate, few-seeded, depressed at the seminiferous suture. A shrub, with abruptly pinnate leaves, and purplish flowers.

122 Diphy'sa. Calyx 5-cleft, 2 upper lobes roundish. Vexillum obovate, reflexed. Wings flat. Keel falciform. Legume linear, compressed, 5-6-seeded, furnished with a large membranous vesicle at each side on the sutures, opposite each other. Shrubs, with yellow flowers.

123 Calo'phaca. Calyx 5-cleft; lobes acuminated. Keel obtuse. Style hairy, incurved at the apex. Legume sessile, oblong, nearly terete, mucronate, hairy. A shrub, with yellow flowers.

124 Colu'tea. Calyx 5-toothed. Vexillum bicallous, larger than the obtuse keel. Stigma lateral, hooked. Style bearded behind. Legume stipitate, boat-shaped, inflated. Shrubs, with yellow flowers.

125 Sphærophy'sa. Calyx 5-toothed. Vexillum broad. Keel obtuse. Style bearded lengthwise. Legume stipitate, inflated, spherical. Herbs, with red flowers.

126 Swainsònia. Calyx bicallous, 5-toothed. Vexillum large. Keel obtuse, rather longer than the wings. Style bearded lengthwise behind. Shrubs, with purple, scarlet, and white flowers.

127 Lesse'rtia. Calyx half 5-cleft. Vexillum broad. Keel obtuse. Stigma capitate. Style with a transverse beard in front. Legume indehiscent, compressed, or inflated. Herbs or subshrubs, with nodding purple flowers.

128 Sutherla'ndia. Calyx 5-toothed. Vexillum with replicate sides. Keel oblong. Wings very short. Style bearded lengthwise behind. Legume inflated. Shrubs, with scarlet flowers.

Subtribe V. Astraga'leæ. *Legume* (f. 39. *c.* f. 40. *c.*) *bilocular or half bilocular from one of the sutures being bent innards lengthwise. Stamens diadelphous,* 9 *joined and* 1 *free. Stems herbaceous or suffrutescent. Leaves impari-pinnate, primordial ones alternate.*

129 Pha'ca. Calyx 5-toothed (f. 39. *a.*), 2 upper teeth remote. Keel obtuse (f. 39. *b.*). Stigma capitate. Legume somewhat turgid (f. 39. *c.*), 1-celled, upper suture tumid, seminiferous. Herbs, with yellow or white flowers.

130 Oxy'tropis. Calyx 5-toothed (f. 40. *a.*). Keel ending on the back in a mucrone. Legume turgid (f. 40. *c.*). Herbs, with radicle spikes of white or blue flowers.

131 Astra'galus. Calyx 5-toothed. Keel obtuse. Herbs or subshrubs, with blue, purple, red, white, or yellow flowers.

132 Guldenstæ'dtia. Calyx campanulate, bibracteate at the base, 5-cleft, 2 superior segments broadest. Vexillum entire, about the length of the wings. Keel minute. Legume subcylindrical, 1-celled, many-seeded. Stemless herbs, with simple or impari-pinnate leaves, and red or violaceous flowers.

133 Bise'rrula. Calyx 5-cleft. Keel obtuse. Legume depressed, flat, sinuately toothed on the back. An herb, with blue flowers.

Tribe III.

Hedysa'reæ. *Embryo with the radicle bent back upon the edge of the cotyledons* (f. 21. *c. f.*). *Corolla papilionaceous* (f. 42. *b.*). *Stamens rarely free, usually monadelphous* (f. 43. *c.*) *or diadelphous,* 9 *joined and* 1 *free* (f. 44. *d.*), *or* 5 *in each bundle. Legume dividing transversely into* 1-*seeded cells or joints* (f. 41. *e.*). *Cotyledons flat* (f. 21. *f.*). *This tribe is easily distinguished from the rest in the legumes dividing transversely into joints or cells.*

Subtribe I. Coronílleæ. *Flowers umbellate* (f. 41. *b.* f. 42. *b.*). *Legume terete* (f. 41. *e.*) *or compressed. Stamens diadelphous,* 9 *joined and* 1 *free.*

134 Scorpiu'rus. Calyx with 5 acute lobes. Keel 2-edged. Style acute. Legume revolute, rather spiral, 3-6-jointed, muricated. Herbs, with simple leaves, and yellow flowers.

135 Coronílla. Calyx 5-toothed (f. 41. *a.*), 2 upper teeth approximate. Petals unguiculate. Keel acute. Legume rather terete, many-jointed (f. 41. *e.*). Shrubs or herbs, with impari-pinnate leaves, and yellow, white, or purple flowers.

136 Astrolòbium. Calyx 5-toothed. Keel small, compressed. Legume rather terete, many-jointed. Herbs with impari-pinnate leaves, and yellow flowers.

137 Orni'thopus. Calyx bracteate, 5-toothed. Keel small,

compressed. Legume compressed, many-jointed. Herbs, with impari-pinnate leaves, and white or rose-coloured flowers.

138 Hippocre'pis. Calyx 5-cleft (f. 42. *a.*), lobes acute. Keel 2-edged (f. 42. *d.*). Style acute. Legume curved, many-jointed (f. 42. *e.*). Herbs, with impari-pinnate leaves, and yellow flowers.

139 Securi'gera. Calyx bilabiate, lower lip 3-parted, upper one bidentate. Petals unguiculate. Keel acute. Legume compressed, ending in a long beak. An herb, with impari-pinnate leaves, and yellow flowers.

Subtribe II. Euhedysa'reæ. *Flowers disposed in racemes* (f. 43. *g.* f. 44. *c.*). *Legumes compressed* (f. 43. *i.* f. 44. *g.*).

140 Di'phaca. Calyx 5-cleft, bibracteate at the base. Stamens disposed in two 5-anthered bodies. Legume compressed, jointed. A shrub, with impari-pinnate leaves.

141 Picte'tia. Calyx 5-cleft, 2 upper lobes obtuse, 3 lower ones spiny. Vexillum roundish, complicated. Keel obtuse, a little shorter than the wings. Stamens diadelphous (9-1). Legume stipitate, compressed, few-seeded. Shrubs, with impari-pinnate leaves and yellow flowers.

142 Ormoca'rpum. Calyx bracteate, 5-cleft; lobes acute. Vexillum broad, entire. Keel obtuse, 2-edged. Stamens diadelphous (9-1). Legume stipitate, many-jointed. Shrubs, with simple or impari-pinnate leaves, and yellow flowers.

143 Amícia. Calyx 5-cleft, very unequal. Vexillum orbicular. Wings applied to the keel. Stamens monadelphous, with the sheath cleft in front. Legume linear, compressed, many-jointed. Climbing shrubs, with abruptly-pinnate leaves, and yellow flowers.

144 Poire'tia. Calyx bilabiate; upper lip bidentate, lower one 3-toothed. Vexillum semiorbicular, emarginate, with reflexed sides. Wings spreading. Stamens 8-10, monadelphous, with the tube cleft above. Stigma capitate. Legume compressed, 3-4-jointed. Climbing shrubs, with abruptly-pinnate leaves.

145 Plana'rium. Calyx subcampanulate. Stamens diadelphous. Legume stipitate, compressed, 8-jointed, marked with a prominent nerve on the sides. A climbing shrub, with impari-pinnate leaves.

146 Myriade'nus. Calyx inclosed in 2 opposite, leafy bracteas, 5-toothed. Legume many-seeded. An herb, with abruptly-pinnate leaves, and yellow flowers.

147 Zórnia. Calyx bilabiate; upper lip emarginate; lower one trifid. Vexillum with revolute edges. Keel bifidly lunulate. Stamens monadelphous. Legume compressed, 3-5-jointed. Leaves with 2-4 leaflets, and yellow flowers.

148 Stylosa'nthes. Calyx long, tubular, 5-parted, unequal. Petals inserted in the tube of the calyx. Keel minute, bifid at the apex. Style very long. Stamens monadelphous, with the tube cleft. Stigma capitate, hispid. Legume 2-jointed. Herbs or subshrubs, with trifoliate leaves, and yellow flowers.

149 Ade'smia. Calyx 5-cleft; lobes acute. Vexillum complicated above the wings when young. Keel curved and truncate at the apex. Stamens distinct, but approximate. Legume compressed, many-jointed. Herbs, with abruptly-pinnate leaves, and usually yellow flowers.

150 Æchynómene. Calyx 5-cleft, bilabiate; upper lip bifid or bidentate, lower one 3-toothed. Stamens 10, diadelphous in 2 equal bundles. Legume compressed, jointed, straight. Herbs or shrubs, with impari-pinnate leaves, and usually yellow flowers.

151 Smíthia. Calyx bipartite. Stamens diadelphous, divided in 2 equal bundles. Legume plicate, jointed, inclosed in the calyx. Herbs, with impari-pinnate leaves, and yellow flowers.

152 Lou'rea. Calyx campanulate, 5-cleft (f. 43. *a.*), when in fruit inflated. Vexillum obcordate (f. 43. *d.*). Keel obtuse (f. 43. *b.*). Legume 4-6-jointed (f. 43. *i.*), plaited, or rather spiral (f. 43. *i.*). Herbs, with simple or trifoliate leaves, and white or purple flowers.

153 Ura'ria. Calyx 5-cleft; segments setaceous. Legume with few joints, plaited, or rather spiral. Herbs or subshrubs, with impari-pinnate, ternate, or simple leaves, and purplish or yellow flowers.

154 Nicolsònia. Calyx 5-parted; segments subulate, bearded. Corolla shorter than the calyx. Legume straight, exserted, compressed, many-jointed. Herbs, with trifoliate leaves, and bluish-purple flowers.

155 Desmòdium. Calyx bibracteolate at the base, obscurely bilabiate; upper lip bifid, lower one 3-parted (f. 44. *a.*). Vexillum roundish (f. 44. *c.*). Keel obtuse (f. 44. *b.*), shorter than the wings. Legume compressed, many-jointed (f. 44. *g.*); joints separating at maturity. Herbs or shrubs, with trifoliate, rarely simple leaves, and purple, blue, or white flowers.

156 Dice'rma. Calyx bibracteolate, bilabiate; upper lip entire, lower one trifid. Vexillum obovate, about equal in length to the keel and wings. Keel obtuse. Legume 2-3-jointed. Shrubs, with trifoliate leaves, and yellow flowers.

157 Tavernie'ra. Calyx bibracteolate, half 5-cleft; segments lanceolate-linear. Vexillum somewhat obovate. Wings shorter than the calyx. Keel obtuse. Style long, flexuous. Legume of 2 orbicular, flat joints. Shrubs, with simple or trifoliate leaves, and rose-coloured or yellow flowers.

158 Hedy'sarum. Calyx 5-cleft; segments linear-awl-shaped. Vexillum large. Keel obliquely truncate, longer than the wings. Legume many-jointed, compressed. Herbs or subshrubs, with impari-pinnate leaves, and rather large, purple, white, or cream-coloured flowers.

159 Onobry'chis. Calyx 5-cleft; segments subulate. Keel obliquely truncate. Wings short. Legume sessile, compressed, 1-seeded, echinated, crested or winged. Herbs, with impari-pinnated leaves, and red or white flowers.

160 Eleiòtis. Calyx campanulate, truncate, hardly 5-toothed. Vexillum obovate. Keel obtuse. Legume compressed, 1-celled, 1-seeded, rather membranous. Herbs, with trifoliate leaves, and yellow flowers.

161 Lespede'za. Calyx 5-parted, bracteate at the base. Keel transversely obtuse. Legume 1-seeded, compressed, unarmed. Herbs and subshrubs, with trifoliate leaves, and purplish or cream-coloured flowers.

162 E'benus. Calyx 5-cleft, with the tube at length rather

ventricose; segments linear-awl-shaped, equal in length to the corolla. Wings small, shorter than the tube of the calyx. Stamens monadelphous. Legume roundish, 1-2-seeded. Leaves usually impari-pinnate, and flowers red.

163 Flemi'ngia. Calyx acutely 5-cleft; lower segment longest. Vexillum striated. Legume sessile, oval, turgid, 2-valved, 1-celled, 2-seeded. Herbs or subshrubs, with simple or trifoliate leaves, and red or purple flowers.

Subtribe III. Alha'geæ. *Flowers disposed in racemes* (f. 45. *h.*) *or spikes. Legumes rather terete* (f. 45. *d.*).

164 Alha'gi. Calyx 5-toothed. Petals equal in length. Vexillum obovate, complicate. Keel straight, obtuse. Style filiform, acute. Legume stipitate, terete, few-seeded, not articulated. Subshrubs or herbs, with simple leaves, and red flowers.

165 Alysica'rpus. Calyx campanulate, 5-cleft (f. 45. *a.*). Legume many-jointed, terete (f. 45. *d.*) or somewhat compressed. Herbs, with simple leaves, and yellow or purple petals, which are hardly longer than the calyx.

166 Bremontie'ra. Calyx campanulate, subtruncate, hardly 5-toothed. Corolla 3 times longer than the calyx. Legume many-jointed, somewhat compressed. Shrubs, with simple leaves, and small purple flowers.

§ 2. Sarcólobæ. *Embryo with thick fleshy cotyledons* (f. 21. *b.*).

Tribe IV.

Viciéæ. *Corolla papilionaceous* (f. 46. *d.*). *Stamens diadelphous* (f. 46. *g.*), *that is, 9 joined together, and 1 free. Cotyledons thick, mealy, not changing even in germination, when above the earth, but remaining inclosed in the spermaderm. Radicle curved inwards* (f. 21. *f.*). *The leaves of all are abruptly pinnate (except in Cìcer), and the common petiole either terminates in a bristle or tendril, and it is not articulated above the stem.*

167 Cìcer. Calyx 5-lobed, with the tube rather gibbous at the base, 2 or 4 of the upper lobes lying over the vexillum. Legume turgid, few-seeded. Tendrilled herbs, with white flowers, and impari-pinnate or abruptly-pinnate leaves.

168 Fa'ba. Character the same as that of *Vìcia*, but the legume is large and coriaceous, containing large flat seeds, and the leaves are almost without tendrils, and the stem is erect. Flowers white or red.

169 Vìcia. Calyx tubular, 5-cleft (f. 46. *a.*) or 5-toothed, 2 superior teeth shortest. Style villous at the apex (f. 46. *f.*). Legume many-seeded (f. 46. *h.*). Usually climbing herbs, with the leaves generally ending in a branched tendril (f. 46. *i.*). Flowers white, purple, or yellow.

170 E'rvum. Calyx 5-cleft, with linear acute segments, about equal in length to the corolla. Stigma smooth. Legume oblong, 2-4-seeded. Tendrilled herbs, with small white flowers.

171 Pìsum. Calyx 5-cleft; segments leafy, 2 superior ones shortest. Style compressed, keeled, villous above. Legume rather compressed. Seeds globose. Climbing tendrilled herbs, with white or purple flowers.

172 La'thyrus. Calyx campanulate, 5-cleft, 2 superior lobes shortest. Style flattened, dilated at the apex, villous or pubescent in front. Legume many-seeded. Usually climbing tendrilled herbs, with purple, white, or yellow flowers.

173 O'chrus. Calyx campanulate, 5-cleft, 2 upper segments conniving. Vexillum furnished with a tooth on each side. Style flattened, villous above. Legume few-seeded, winged on the seminiferous suture. An herb, with bifoliate tendrilled leaves, and solitary white flowers.

174 O'robus. Calyx campanulate, 5-cleft, 2 superior lobes shortest. Style slender, linear, villous at the apex. Legume, cylindrical, many-seeded. Erect herbs, with the leaves having one or many pairs of leaflets, and with the common petiole ending in a bristle. Flowers of various hues.

175 Platy'stylis. Calyx campanulate, 5-cleft, 2 superior lobes shortest. Style broad-spatulate, villous at the apex. Legume oblong, many-seeded. Erect herbs, with abruptly-pinnate few-paired leaves, ending in a simple tendril at the apex. Flowers bluish-purple.

Tribe V.

Phaseòleæ. *Corolla papilionaceous* (f. 47. *c.* f. 48. *b.*). *Stamens monadelphous* (f. 47. *g.*), *but usually diadelphous* (f. 48. *e. f.*), *that is, 9 joined together, and 1 free. Legume many-seeded* (f. 49. *c.*), *dehiscent, with a cellular transverse membrane between each seed, usually subdivided, but not articulated. Radicle bent in above the fissure of the lobes of the cotyledons* (f. 21. *e. f.*). *Cotyledons not changing by germination* (f. 21. *c*), *but grow into thick leaves, and when above the earth they are usually exserted beyond the spermaderm. Primordial leaves opposite, the rest with the leaflets usually pinnately, rarely palmately disposed.*

176 A'brus. Calyx obsoletely 5-lobed, upper lobe broadest. Vexillum acute. Stamens 9 joined, the 10th wanting. Stigma obtuse. Legume compressed, 4-6-seeded. Seeds intercepted by cellular substance. Twining shrubs, with abruptly-pinnate leaves.

177 Swee'tia. Calyx 4-cleft; lobes lanceolate, acuminated. Vexillum wedge-shaped. Keel bluntly 2-edged. Stamens diadelphous. Legume linear, compressed, many-seeded. Twining slender herbs, suffruticose at the base, with trifoliate leaves, and purple flowers.

178 Macra'nthus. Calyx tubular, 4-cleft; lobes acute, 2 lateral ones shortest. Vexillum emarginate, concave. Stamens diadelphous. Style pilose. Stigma obtuse. Legume straight, nearly terete, thick, many-seeded. A twining herb, with trifoliate leaves, and white flowers.

179 Ròthia. Calyx 5-cleft, 2 superior segments coadunate and arched. Vexillum deflexed. Keel 2-edged. Stamens monadelphous, with the sheath cleft behind. Legume linear-ensiform, many-seeded. A prostrate herb, with trifoliate leaves, and sulphur-coloured flowers.

180 Tera'mnus. Calyx bilabiate, upper lip longest and bifid, lower one 3-parted. Keel small. Stamens monadelphous, 5 alternate ones sterile. Stigma sessile, capitate. Legume linear, compressed, 2-valved, many-seeded. Twining subshrubs, with trifoliate leaves, and axillary racemes of small reddish flowers.

181 Amphicárpæa. Calyx campanulate, 4-toothed; teeth equal, obtuse. Vexillum broad, incumbent. Stamens diadelphous. Style filiform, crowned by a capitate stigma. Legume compressed, stipitate, 1-4-seeded. Twining herbs, with trifoliate leaves, and apetalous flowers.

182 Kennédya. Calyx bilabiate (f. 47. *a.*), upper lip bidentate, lower one trifid. Vexillum recurved (f. 47. *b.*). Stamens diadelphous (f. 47. *g.*). Stigma obtuse (f. 47. *f.*). Legume linear, compressed, transversely many-celled. Twining shrubs, with simple or trifoliate leaves, and scarlet, red, or purple flowers.

183 Rhynchósia. Calyx 5-cleft, somewhat bilabiate. Corolla usually shorter than the calyx. Stamens diadelphous, free, filaments jointed at the base. Style filiform, bent. Legume sessile, compressed, rather falcate, 2-seeded. Climbing herbs or shrubs, with simple or trifoliate leaves, and yellow flowers.

184 Euriósma. Calyx 5-cleft, subbilabiate. Stamens diadelphous. Vexillum silky or villous. Legume straight, 1-celled. Subshrubs, with trifoliate leaves, and yellow flowers.

185 Fagélia. Calyx 5-cleft; segments linear, acute, 2 upper ones adhering together a greater length than the others. Vexillum reflexed. Keel obtuse, longer than the wings. Stamens diadelphous. Legume ovate, cylindrical, turgid, 6-seeded. Decumbent or twining shrubs, beset with clammy hairs, having trifoliate leaves, and yellowish flowers.

186 Wistária. Calyx campanulate, somewhat bilabiate (f. 48. *a.*), upper lip with 2 short teeth, lower one with 3 subulate lobes. Vexillum bicallous. Wings conforming to the keel (f. 48. *b.*). Keel 2-edged. Stamens diadelphous (f. 48. *c. f.*). Legume coriaceous (f. 48. *c.*). Climbing shrubs, with impari-pinnate leaves, and lilac-blue flowers.

187 Ápios. Calyx campanulate, 5-toothed, the tooth under the keel elongated and acute. Keel falcate, linear. Stamens diadelphous. Stigma emarginate. Legume many-seeded. Seeds intercepted by dissepiments. A climbing herb, with tuberous roots, impari-pinnate leaves, and brownish-purple flowers.

188 Phaséolus. Calyx campanulate, bilabiate, upper lip bidentate, lower one 3-parted. Keel, as well as the diadelphous stamens and style, twisted together, rarely incurved. Legume compressed or cylindrical, many-seeded. Seeds intercepted by cellular substance. Twining herbs or subshrubs, with trifoliate leaves, and scarlet, red, or white flowers.

189 Cyrtótropis. Calyx bilabiate, upper lip 1-toothed, lower one tridentate. Vexillum reflexed. Keel linear, falciform. Wings wedge-shaped, short. Stamens diadelphous. Legume sessile, linear, compressed, many-seeded. Seeds separated by spongy substance. A twining herb, with impari-pinnate leaves, and pendulous racemes of flesh-coloured flowers.

190 Sója. Calyx bibracteate at the base, 5-cleft, with 2 of the teeth approximate or joined at the base. Vexillum ovate, with a short unguis. Keel oblong, straight. Stamens diadelphous. Legume 2-5-seeded. Seeds intercepted by cellular substance. Hispid climbing herbs, with trifoliate leaves, and violaceous flowers.

191 Dólichos. Calyx bibracteolate at the base, campanulate, 5-toothed, 2 of which are approximate or joined. Vexillum roundish, having 2-4 callosities at the base. Wings oblong, obtuse. Keel obtuse. Stamens diadelphous. Style bearded above the middle. Legume compressed. Seeds intercepted by cellular substance. Climbing herbs or shrubs, with trifoliate leaves, and white or purple flowers.

192 Tæniocárpum. Calyx bilabiate, 5-cleft, upper lip bidentate, lower one 3-parted. Vexillum ovate. Wings spurred. Keel obtuse, compressed. Stamens 10, diadelphous. Legume hispid, compressed, many-celled, somewhat articulated.

193 Vígna. Calyx 4-cleft. Vexillum broad, reflexed, with callosities at the base. Wings rhomboid. Stamens diadelphous. Legume terete, incurved. Twining herbs, with trifoliate leaves, and yellow flowers.

194 Láblab. Calyx tubular, 4-cleft, 3 lower ones acute. Vexillum with 4 callosities at the base. Stamens diadelphous. Style compressed, bearded below. Legume compressed. Seeds separated by cellular substance. Twining herbs, with trifoliate leaves, and white or purple flowers.

195 Pachyrhízus. Calyx urceolate, 4-lobed, upper lobe broader and emarginate. Vexillum roundish. Stamens diadelphous. Legume compressed, 7-8-seeded. Twining subshrubs, with trifoliate leaves, and violaceous flowers.

196 Paróchetus. Calyx 4-cleft. Vexillum 2-lobed. Keel obtuse, covering the wings. Stigma obtuse. Legume many-seeded. Creeping herbs, with trifoliate leaves, and shewy purple flowers.

197 Dióclea. Calyx bibracteate at the base, 4-cleft, 2 lateral segments narrowest. Vexillum obovate-oblong, reflexed. Stamens diadelphous. Stigma subclavate. Legume linear, compressed, winged on the upper suture. Twining shrubs, with trifoliate leaves, and red flowers.

198 Psophocárpus. Calyx urceolate, unequally bilabiate. Vexillum roundish, reflexed, bearing 2 callosities at the base. Wings stipitate. Keel oblong, 2-edged. Stamens diadelphous. Legume oblong, 4-winged, 7-8-seeded. A tuberous rooted herb, with trifoliate leaves, and bluish flowers.

199 Canavália. Calyx tubular, bilabiate (f. 49. *b.*), lower lip 3-toothed, upper lip with 2 large rounded lobes. Vexillum large (f. 49. *d.*), bicallose at the base. Wings stipitate, oblong, auriculate. Keel 2-petalled (f. 49. *c.*). Stamens monadelphous (f. 49. *a.*). Legume compressed (f. 49. *e.*), 3-keeled, with a membrane between each seed. Twining herbs or subshrubs, with trifoliate leaves, and large purplish flowers.

200 Ámphodus. Calyx bilabiate, upper lip bidentate, lower one trifid. Vexillum reflexed, with a tooth on each side at the base. Wings and keel linear. Stamens diadelphous. Legume compressed, many-seeded. A climbing plant, with trifoliate leaves, and dark-red flowers.

201 Mucúna. Calyx campanulate, bilabiate, lower lip trifid, upper one entire. Vexillum shorter than the wings and keel. Keel acute. Stamens diadelphous. Legume hispid, oblong, torose, having cellular substance between the seeds. Twining herbs or subshrubs, with trifoliate leaves, and large, purplish, white, or yellow flowers.

202 Calopógonum. Calyx bractless, inclosing the corolla, 5-cleft; segments elongated, rather unequal, pinnately bearded. Legume straight, depressed, rather hooked, pilose, 8-seeded. A herbaceous twining plant, with trifoliate leaves.

203 Caja'nus. Calyx campanulate, 5-cleft. Segments awl-shaped. Vexillum large, bicallous at the base. Keel obtuse, straight. Stamens diadelphous. Legume oblong, compressed, torulose. Seeds each intercepted by a membrane. Shrubs, with trifoliate leaves, and yellow flowers.

204 Lupìnus. Calyx bilabiate. Vexillum reflexed on the sides. Keel acuminated. Stamens monadelphous, the sheath entire, bearing 5 small round anthers, and 5 oblong ones, which are later of coming to perfection. Style filiform, crowned by a bearded roundish stigma. Legume coriaceous, compressed, torulose. Erect herbs, with digitate leaves, composed of 5-9 leaflets, rarely simple, and racemose-spikes of blue, white, or yellow flowers.

205 Cylísta. Calyx 4-cleft, larger than the corolla, upper segment emarginated or bifid, lower one largest. Corolla shorter than the calyx. Keel 2-edged. Stamens diadelphous. Legume 2-seeded. Climbing shrubs, with trifoliate leaves, and yellow flowers.

206 Erythrìna. Calyx tubular (f. 50. *a.*), with a truncate subdentate mouth (f. 50. *a.*) or spathaceous. Vexillum oblong (f. 50. *b.*), very long. Wings and dipetalous keel shorter than the vexillum (f. 50. *c.*). Stamens diadelphous (f. 50. *c.*), straight. Legume long (f. 50. *d.*), torulose, many-seeded (f. 50. *d.*). Trees or shrubs, rarely herbs, with trifoliate leaves, and racemes of scarlet flowers.

207 Rudólphia. Calyx tubular, bilabiate, upper segment obtuse, lower one acute, 2 lateral ones very short. Vexillum oblong-linear, very long. Wings shorter than the calyx, very narrow. Stamens diadelphous. Legume compressed, many-seeded. Climbing shrubs, with simple leaves, and scarlet flowers.

208 Bu'tea. Calyx campanulate, 5-toothed, 2 upper teeth approximate. Vexillum lanceolate, spreading, equal in length to the wings and keel. Stamens diadelphous. Legume stipitate, compressed, membranous, 1-seeded at the apex. Trees, with trifoliate leaves, and large scarlet flowers.

TRIBE VI.

Dalbergie'æ. *Corolla papilionaceous* (f. 51. *b.*), *perigynous. Stamens variously connected. Embryo with the radicle bent back upon the edge of the cotyledons* (f. 21. *e. f.*). *Cotyledons fleshy* (f. 21. *c.*). *Legume* 1-3-*seeded* (f. 51. *d.*), *indehiscent. Usually climbing shrubs, with impari-pinnate, rarely trifoliate leaves, or reduced to the terminal leaflet.*

209 De'rris. Calyx tubular, 5-toothed. Keel lunate. Stamens 10, monadelphous. Legume membranous, compressed, 1-seeded. Climbing shrubs, with trifoliate or impari-pinnate leaves, and white flowers.

210 Endespe'rmum. Calyx bibracteate at the base, bilabiate, upper lip 2-lobed, lower one 3-toothed. Wings and keel unguiculate. Stamens 9, monadelphous. Legume stipitate, leafy, indehiscent, 1-seeded. A climbing shrub, with abruptly or impari-pinnate leaves, and bluish flowers.

211 Ponga'mia. Calyx cup-shaped, 5-toothed. Petals unguiculate. Stamens 10, monadelphous, with the tube cleft in front. Legume substipitate, compressed, indehiscent, beaked, 1-2-seeded. Trees, with impari-pinnate leaves, and white flowers.

212 Dalbe'rgia. Calyx campanulate, 5-toothed (f. 51. *a.*). Stamens 8-10, monadelphous, with the tube cleft in front, sometimes disposed in 2 equal bundles. Legume stipitate (f. 51. *d.*), membranous, compressed, tapering to both ends, 1-3-seeded (f. 51. *d.*). Usually climbing shrubs, with impari-pinnate leaves, and red, white, or blue flowers.

213 Pteroca'rpus. Calyx 5-toothed. Stamens 10, monadelphous or diadelphous. Legume indehiscent, suborbicular, girded by a wing, 1-seeded. Trees or shrubs, with impari-pinnate leaves, and usually yellow flowers.

214 Drepanoca'rpus. Calyx bibracteate at the base, 5-toothed. Stamens 10, monadelphous, with the tube cleft in front or equally diadelphous. Legume compressed, indehiscent, wingless, falcate, 1-seeded. Shrubs, with impari-pinnate leaves.

215 Ecastaphy'llum. Calyx campanulate, somewhat bilabiate, upper lip emarginate, lower one trifid. Stamens 8-10, equally diadelphous. Legume nearly orbicular, membranous, indehiscent, 1-seeded. Shrubs, with impari-pinnate or simple leaves.

216 Ameri'mnum. Calyx 5-toothed, somewhat bilabiate. Stamens 10, monadelphous, with the tube cleft in front. Legume 2-valved, 1-seeded, with the upper suture straight, and a little winged. Shrubs, with simple leaves, and whitish flowers.

217 Bry'a. Calyx 5-toothed. Stamens monadelphous. Legume 2-jointed; joints 1-seeded. Trees with simple leaves.

218 Degue'lia. Calyx bilabiate, upper lip entire, lower one trifid. Wings and keel equal in length, larger than the vexillum. Stamens 10, diadelphous, one of which is free. Legume globose, 2-valved, 1-seeded. Seeds covered with farina. A climbing shrub, with impari-pinnate leaves.

SUBORDER II. OR TRIBE VII.

Swartzie'æ. *Sepals closely joined into a globose or oblong alabastrum before expansion* (f. 52. *b.*), *but at length ruptured, valvately* (f. 52. *g.*). *Petals few, irregular* (f. 52. *c.*) *or wanting, and are, as well as the stamens, hypogynous* (f. 52. *d.*). *Radicle incurved. Cotyledons thick. Germination unknown. Leaves simple or simply pinnate. This is a very distinct tribe, agreeing with* Deta'rium *in the valveless calyx, with* Mimo'seæ *in the hypogynous stamens, and in habit with* Dalbergie'æ.

219 Swa'rtzia. Calyx ovate, globose, ruptured valvately. Petals few or wanting. Stamens 10-15-25, 2-4 of which are larger and sterile, the rest connected at the base. Legume stipitate, 2-valved, few-seeded. Seeds arillate. Trees or shrubs, with simple or pinnate leaves, and white flowers.

220 Ba'phia. Calyx calyptriform, ruptured under the keel. Vexillum spreading, somewhat roundish. Wings linear, length of vexillum. Stamens 10, distinct. Legume falciform, 6-seeded. A tree, with impari-pinnate leaves, and white flowers.

221 Zolle'rnia. Calyx entire, cleft laterally, reflexed (f. 52. *g.*). Petals 5, nearly equal (f. 52. *c.*). Stamens 9 (f. 52. *d.*) -13. Legume stipitate (f. 52. *e.*), 1-celled, 2-valved (f. 52. *h.*), few-seeded. Trees or shrubs, with simple leaves, and axillary racemes of yellow flowers.

Division II.

Recte'mbriæ. Radicle and cotyledons straight (f. 21. *i. k. l. m.*).

Suborder III. or Tribe VIII.

Mimòseæ. *Embryo straight* (f. 21. *m.*), *with the radicle bent a little above the lobes. Flowers regular* (f. 53. *a.*), *usually polygamous* (f. 53. *b.*), *rarely all hermaphrodite* (f. 54. *b.*). *Sepals 4-5, equal, valvate in æstivation, usually connected at the base into a 4-5-toothed calyx* (f. 54. *a.*). *Petals 4-5, equal* (f. 53. *a.*), *also valvate in æstivation, usually hypogynous. Stamens inserted with the petals, rarely in the bottom of the calyx, sometimes free* (f. 53. *b.* f. 54. *b.*), *sometimes more or less connected at the base, equal in number to the petals, or multiple that number* (f. 53. *b.*). *Embryo straight. Funicle usually twisted. Leaves abruptly-pinnate or bipinnate. Cotyledons all foliaceous, except in* Enta'da, *and some species of* I'nga.

222 Enta'da. Flowers polygamous. Petals 5, distinct. Stamens 10-25. Anthers glandular at the apex. Legume compressed, 2-jointed; joints 1-seeded. Cotyledons fleshy. Climbing unarmed shrubs, with bipinnate or conjugately-pinnate leaves, with the rachis usually ending in a tendril, and numerous spikes of white flowers.

223 Mimòsa. Flowers polygamous. Corolla 4-5-cleft, funnel-shaped. Stamens 4-5-10-15, inserted in the bottom of the corolla, or in the stipe of the ovary. Legume compressed, one or many jointed; joints 1-seeded. Leaves conjugately digitate, or doubly pinnate. Flowers white or red, in small round heads.

224 Gagnebìna. Flowers hermaphrodite. Calyx 5-toothed. Petals 5, distinct. Stamens 10. Legume flat, indehiscent, winged on the sutures, transversely many-celled; cells 1-seeded. Elegant shrubs, with bipinnate leaves, and axillary cylindrical spikes of yellow flowers.

225 I'nga. Flowers polygamous. Calyx 5-toothed. Corolla 5-cleft. Stamens indefinite, exserted, monadelphous. Legume compressed, 1-celled. Seeds covered with pulp or farina. Trees or shrubs, usually unarmed, with variously pinnate leaves, and spikes or heads of red or white flowers.

226 Pa'rkia. Flowers hermaphrodite. Calyx tubular, bilabiate, imbricate in æstivation. Petals 5, nearly equal, rather imbricate in æstivation. Stamens 10, monadelphous. Legume compressed, many-seeded. Seeds covered with farinaceous substance. Trees, with bipinnate leaves, and pendulous globular heads of crimson flowers.

227 Schra'nkia. Flowers polygamous. Petals connected together into a 5-cleft corolla. Stamens 8-10, free. Legume echinated, tetragonal, and as if it were 4-valved, the valves separating lengthwise. Seeds numerous. Herbs, with bipinnate leaves, and globose heads of rose-coloured flowers.

228 Darlingtònia. Flowers hermaphrodite. Petals 5, distinct. Stamens 5. Legume lanceolate, few-seeded. Herbs, with bipinnate leaves, and heads of white flowers.

229 Desma'nthus. Flowers polygamous. Calyx 5-toothed. Petals 5, distinct. Stamens 10, rarely 5, in the lower flowers sterile, membranous or filiform. Legume 2-valved. Herbs or shrubs, with bipinnate leaves, and pedunculated spikes of white flowers with yellow filaments.

230 Adenanthe'ra. Flowers hermaphrodite. Calyx 5-toothed. Petals 5, sessile. Stamens 10; anthers each tipped with a deciduous pedicellate gland. Legume compressed, transversely many-celled, rather torulose, membranous. Trees or shrubs, with bipinnate leaves, and racemose spikes of flowers.

231 Prósopis. Flowers polygamous. Calyx 5-toothed. Petals 5, free. Stamens 10, hardly connate at the base. Legume filled with pulp, torulose. Unarmed or prickly trees or shrubs, with bipinnate leaves, and loose spikes of yellow flowers.

232 Lagony'chium. Flowers hermaphrodite. Calyx 5-toothed. Petals free. Stamens 10, free. Legume stipitate, indehiscent, subdidymous, filled with pulp. A prickly shrub, with bipinnate leaves.

233 Aca'cia. Flowers polygamous (f. 53. *c.* f. 54. *b.*). Calyx 4-5-toothed (f. 54. *a.*). Petals 4-5, connected or free (f. 53. *a.*) Stamens from 10 to 200. Legume dry, 2-valved. Unarmed or prickly trees or shrubs, with very variable leaves, and spikes or heads of white or yellow, rarely red, flowers.

234 Erythrophle'um. Flowers hermaphrodite, regular. Calyx 5-cleft. Petals 5, equal. Stamens perigynous. Legumen compressed, 2-valved, many-seeded. Large unarmed trees, with bipinnate leaves, and terminal racemes of flowers.

Suborder IV.

Cæsalpi'neæ. *Flowers more or less irregular, sometimes papilionaceous, but usually regular* (f. 55. *c.* f. 56. *b.*). *Petals irregularly imbricate in æstivation, sometimes wanting, always free* (f. 55. *c.* f. 56. *b.*). *Stamens more or less unequal* (f. 56. *c.* f. 57. *d.*), *always perigynous, usually free, rarely with the filaments concrete, as in tribe* Geoffre'æ. *Embryo straight* (f. 21. *g. h. l. m.*), *with a large plumule.*

Tribe IX.

Geoffre'æ. *Petals perigynous, unequal, disposed in a papilionaceous manner* (f. 55. *c.*), *imbricate in æstivation. Stamens monadelphous or diadelphous. Cotyledons fleshy or oily* (f. 21. *l.*). *This is an artificial tribe, and perhaps should have been brought in among the* Papiliona'ceæ, *but it agrees with* Cassie'æ *in the embryo being straight.*

235 Ara'chis. Calyx tubular, bilabiate. Corolla resupinate. Stamens inserted in the calyx with the petals, 9 joined and 1 free, the last is sterile. Legume ovate-oblong, obtuse, indehiscent, 2-4-seeded. Seeds thick. Herbs, with abruptly pinnate leaves, and yellow flowers.

236 Voandze'ia. Flowers polygamous. Calyx campanulate. Wings horizontal. Stamens diadelphous. Legume roundish,

fleshy, 1-seeded. An herb, with trifoliate leaves and yellow flowers.

237 Pera'ltea. Calyx bibracteolate, bilabiate, lower lip trifid, upper one bidentate. Stamens diadelphous. Legume compressed, 4-8-seeded. Subshrubs, with impari-pinnate leaves and large purplish flowers.

238 Brononia'rtia. All as in *Perâltea*, but the legume has a longer stipe, and the seminiferous suture is without a margin.

239 Andìra. Calyx campanulate, 5-toothed. Vexillum roundish, emarginate, longer than the keel. Stamens diadelphous, 9 joined, and 1 free. Legume stipitate, orbicular, &c. hard, 1-celled, 1-seeded. Trees, with impari-pinnate leaves, and terminal panicles of purple flowers.

240 Geoffròya. Calyx campanulate, somewhat bilabiate, half 5-cleft. Wings and keel about equal in length, shorter than the vexillum. Stamens diadelphous, 9 joined, and 1 free. Legume drupaceous, egg-shaped, 1-celled, 1-seeded. Trees, with impari-pinnate leaves, and axillary racemes or panicles of yellowish flowers.

241 Bro'wnea. Calyx with 2 connate bracteas at the base, constituting a sheath (f. 55. *a.*). Calyx 5-cleft (f. 55. *b.*). Petals 5 (f. 55. *c.*), unguiculate (f. 55. *e.*). Stamens 10-15, monadelphous, with the sheath cleft in front. Legume 1-celled, many-seeded, acinaciform, compressed. Trees, with abruptly pinnate leaves, and rose-coloured flowers, rising in fascicles from the buds.

242 Di'pterix. Calyx 3-5-cleft, 2 upper segments largest, wing-formed, 1-3 lower ones small. Corolla papilionaceous. Stamens 8-10, monadelphous, with the sheath cleft in front. Legume somewhat compressed, thick, 2-valved, 1-seeded. Trees, with abruptly pinnate leaves and panicled flowers.

Tribe X.

Cassie'æ. *Lobes of calyx imbricate before expansion* (f. 57. *a.*). *Petals perigynous* (f. 56. *b.* f. 57. *b.*), *nearly equal, rarely sub-papilionaceous, imbricate in æstivation. Stamens distinct* (f. 57. *c.* f. 56. *c.*). *Legume usually dry and 2-valved* (f. 58. *g.* f. 56. *e.*). *Cotyledons leafy, rarely fleshy. Leaves bi or tripinnate, sometimes abruptly or impari-pinnate, sometimes simple. Habit variable.*

243 Mori'nga. Petals 5, nearly equal. Stamens 10, unequal, sometimes 5 of which are sterile. Legume siliqueformed, 3-valved. Trees, with bi-tripinnate leaves.

244 Gledi'tschia. Flowers unisexual or hermaphrodite. Calyx 3-4-5-cleft. Petals 3-4-5, the 2 lowest ones joined into a keel. Stamens equal in number to the petals, and opposite the sepals. Legume transversely many-celled, rarely 1-celled, 1-seeded. Spinose trees, with abruptly pinnate or bipinnate leaves, and spikes of greenish flowers.

245 Gymnócladus. Flowers dioecious. Calyx tubular, 5-cleft. Petals 5, equal. Stamens 10, inclosed. Legume oblong, thick, pulpy inside. An unarmed tree, with bipinnate leaves, and racemes of white flowers.

246 Anòma. Calyx 5-cleft. Petals 5, equal. Stamens 10, the 5 alternate ones sterile. Legume oblong, thick, 2-valved, 1-celled, many-seeded. A tree, with opposite bipinnate leaves, and panicles of white flowers.

247 Guilandìna. Calyx urceolate, 5-cleft. Petals 5, sessile, nearly equal. Stamens 10, villous at the base. Legume ovate, echinated, 2-valved, 1-3-seeded. Seeds bony, shining. Trees or shrubs, beset with hooked prickles, with abruptly bipinnate leaves, and racemose spikes of yellow flowers.

248 Coulte'ria. Calyx turbinate, 5-cleft, lower segment largest, edged with glandular teeth. Petals 5, upper one largest. Stamens 10, bearded at the base, with a nectariferous gland on the upper side of the ovary. Stigma ciliated with glands. Legume compressed, spongy, hardly dehiscent, transversely many-celled. Seeds 4-6. Spinose shrubs or trees, with abruptly pinnate leaves, and racemes of yellow flowers.

249 Cæsalpi'nia. Calyx 5-cleft, lower segment largest and arched. Petals 5, unequal, unguiculate, upper one shortest. Stamens 10, villous at the base, ascending. Legume unarmed, compressed, 2-valved, many-seeded. Prickly or unarmed trees or shrubs, with abruptly bipinnate leaves, and yellow flowers.

250 Poincia'na. Calyx 5-cleft, unequal, lower segment arched. Petals 5, unguiculate, upper one difformed. Stamens 10, long, hairy at the base. Legume compressed, 2-valved, many-celled. Trees or shrubs, with abruptly bipinnate leaves, and usually with variegated flowers.

251 Mezoneu'rum. Calyx 5-cleft; lower segment arched, the other suborbicular. Petals 5, unguiculate, upper one smallest. Stamens 10, declinate, villous at the base. Legume leafy, flat, ovate-oblong, indehiscent, 1-celled, many-seeded, expanded into a wing on the upper suture. Prickly trees, with abruptly bipinnate leaves.

252 Richa'rdia. Calyx campanulate, 5-toothed. Petals 6-10, unequal, sub-papilionaceous. Stamens 10, declinate, cohering by a beard below the middle. Legume samaroid, expanded into a wing. A genus hardly known.

253 Labi'chea. Calyx 5-cleft, regular, deciduous. Petals 5, roundish, obovate, nearly equal. Stamens 2, hypogynous, very short. Anthers 2-celled, bursting by a sub-operculate pore. Ovary on a short stipe, ovate-oblong, 2-ovulate. Style subulate. Stigma simple. A shrub, with impari-pinnate leaves, and terminal racemes of flowers.

254 Hoffmanse'ggia. Calyx 5-cleft. Petals 5, unguiculate, glandular at the base, upper one broadest. Stamens 10, covered with glandular hairs, one usually abortive. Legume linear, compressed, many-seeded. Herbs or subshrubs, with impari-bipinnate leaves, and racemes of yellow flowers.

255 Melanosti'cta. Calyx 5-cleft. Petals 5, nearly equal, tapering to the base, length of calyx. Stamens 10, villous at the base. Legume compressed, ovate-oblong, hairy. Subshrubs, with impari-bipinnate leaves.

256 Poma'ria. Calyx 5-cleft (f. 56. *a.*). Petals 5 (f. 56. *b.*), unguiculate, upper one concave and shorter. Stamens 10 (f. 56. *c.*), declinate, hairy at the base. Legume oblong (f. 56. *d.*), compressed, 2-seeded (f. 56. *e.*). Shrubs, with abruptly bipinnate leaves.

257 HÆMATO'XYLON. Calyx 5-cleft. Petals 5, hardly longer than the calyx. Stamens 10, pilose at the base. Legume compressed, acuminated at both ends, 1-celled, 2-seeded, with the valves ruptured longitudinally in the middle. A tree, with abruptly pinnate or bipinnate leaves.

258 PARKINSÒNIA. Calyx 5-cleft. Petals 5, upper one roundish, unguiculate. Stamens 10, declinate. Legume linear, acuminated at both ends, torose. A spiny shrub, with pinnate leaves and yellow flowers.

259 CA'DIA. Calyx campanulate, 5-cleft, beset with glands on the inside of the tube. Petals 5, equal, inserted in the calyx. Stamens 10, joined at the base. Legume linear, many-seeded, stipitate. An unarmed shrub, with impari-pinnate leaves and whitish flowers.

260 ZUCCA'GNIA. Calyx turbinate, 5-cleft, lower segment longest. Petals 5. Stamens 10, pilose at the base. Stigma funnel-shaped. Legume subovate, compressed, 1-seeded, hairy. A clammy shrub, with abruptly pinnate leaves and red flowers.

261 CERATÒNIA. Flowers polygamous or dioecious. Calyx 5-parted. Petals wanting. Stamens 5. Stigma sessile, orbicular. Legume broad, indehiscent, many-seeded, transversely many-celled, pulpy inside. Trees, with abruptly pinnate leaves.

262 CASTANOSPE'RMUM. Calyx coloured, somewhat bilabiate. Wings and keel about equal in length. Stamens 10, free. Legume large, 2-valved, 4-seeded, spongy inside, stipitate. Seeds large. A tree, with large impari-pinnate leaves, and racemes of coloured flowers.

263 HARDWI'CKIA. Sepals 4-5, hardly connected at the base. Corolla none. Stamens 8-10. Stigma peltate. Legume lanceolate, 1-seeded, dehiscent at the apex. Trees, with abruptly pinnate leaves and yellowish flowers.

264 JONE'SIA. Calyx bibracteate at the base, coloured, funnel-shaped, 4-lobed. Petals wanting. Stamens 8, sometimes only 6-7, exserted. Legume 4-8-seeded, compressed, acinaciform. Trees, with abruptly pinnate leaves, and orange-coloured flowers.

265 TACHIGA'LIA. Calyx 5-cleft, unequal, obtuse. Petals 5, inserted in the mouth of the calyx, unequal. Stamens 10, exserted, villous at the base, unequal. Legume compressed, membranous, indehiscent, 1-seeded. Trees, with abruptly-pinnate leaves and yellow flowers.

266 BARY'XYLUM. Sepals 5, hardly connected at the base, equal. Petals 5, rather unguiculate. Stamens 10, unequal, hypogynous? Anthers 4-celled. Legume rather terete, curved, many-seeded. Trees, with abruptly-pinnate leaves and yellow flowers.

267 MOLDENHAWE'RA. Calyx 5-cleft. Petals 5, on long claws. Stamens 10, smooth, one of which is sterile, longer, and furnished with hairs. Legume linear-oblong. A tree, with pinnate and bipinnate leaves and yellow flowers.

268 HUMBÓLDTIA. Calyx 4-cleft. Petals 5, inserted in the mouth of the calyx. Stamens 5, smooth. Legume oblong, compressed. Trees, with abruptly pinnate leaves.

269 HETEROSTE'MON. Calyx 4-cleft, bibracteate at the base. Petals 3, inserted in the mouth of the calyx. Stamens 8, declinate and monadelphous at the base, and pilose above, 3 lower ones longest and fertile, and 4 bearing barren 2-lobed anthers. Legume flat, tapering to both ends, many-seeded. Trees, with abruptly pinnate leaves, winged petioles, and large flowers.

270 AMHE'RSTIA. Calyx tubular, 5-toothed, with the stamens inserted in it near the apex, bibracteate at the base, valvate in æstivation. Petals unequal, upper one large, unguiculate, obcordate, lateral ones wedge-shaped, 2 lower ones awl-shaped. Stamens diadelphous, 9 joined, and 1 free, adhering to the pedicel of the ovary. Anthers versatile. Legume stalked, flat, oblong, few-seeded. A tree, with abruptly pinnate leaves, and pendulous racemes of shewy scarlet flowers, some of the petals tipped with yellow.

271 TAMARI'NDUS. Calyx 5-cleft, unequal. Petals 3, 2 of which are ovate, and the middle one cucullate. Stamens 9-10, 2 or 3 longer, monadelphous, and fertile, 7 short and sterile. Legume stalked, acinaciform, compressed, 3-6-seeded, pulpy inside. Trees, with abruptly pinnate leaves.

272 CA'SSIA. Sepals hardly connected at the base (f. 57. *a.*), more or less unequal. Petals 5, unequal (f. 57. *b.*). Stamens 10, free (f. 57. *c. d.*), unequal, 3 upper ones abortive (f. 57. *d.*); anthers bursting by 2 pores at the apex (f. 57. *f.*). Legume compressed, transversely many-celled; cells 1-seeded. Shrubs or herbs, with abruptly pinnate leaves and yellow flowers.

273 DELA'RIA. Calyx 5-toothed, spathaceous. Vexillum large, spreading. Stamens 10. Stigma acute. Legume elongated, few-seeded. Shrubs, with simple leaves.

274 CHAMÆFI'STULA. The same as *Cássia*, but the legume is terete, and hardly dehiscent and pulpy inside. Trees and shrubs, with abruptly-pinnate leaves and yellow flowers.

275 CATHARTOCA'RPUS. The same as *Cássia*, but differs in the long terete, woody, indehiscent pod, which is filled with pulp inside. Trees, with abruptly-pinnate leaves and racemes of yellow flowers.

276 EXÓSTYLIS. Calyx clavate, 5-cleft, 3 of the segments revolute. Petals 5, nearly equal, imbricately conniving, inserted in the middle of the calyx. Stamens 10, nearly equal, dilated at the base; anthers sagittate, cuspidate. Style elongated, simple. Legume thick, many-seeded. A tree, with impari-pinnate leaves, and racemes of rose-coloured flowers.

277 METROCY'NIA. Calyx 5-cleft. Petals 5. Stamens 10, hairy. Legume short, somewhat reniform, 1-seeded, warted or plicate. A tree, with abruptly-pinnate leaves.

278 AFZE'LIA. Calyx 4-cleft. Petals 4, unguiculate, upper one largest. Stamens 10, 2 upper ones sterile. Legume woody, many-celled. Seeds arillate. A genus hardly known.

279 MELANÓXYLON. Calyx deeply 5-cleft. Petals 5, nearly equal. Stamens 10, hairy. Legume compressed, falcate. Seeds with winged aril. A tree, with impari-pinnate leaves, and panicled racemes of rusty flowers.

280 ACO'SMIUM. Calyx campanulate, 4-5-cleft. Petals 5, spreading. Stamens 10, inserted in the bottom of the calyx. Ovary elongated, perhaps a legume. A tree, with impari-pinnate leaves, and racemes of yellow flowers.

281 SCHÓTIA. Calyx 5-cleft. Petals 5, lateral ones incum-

bent. Stamens 10, smooth. Ovary pedicellate. Trees, with abruptly-pinnate leaves, and racemes of vermillion flowers.

282 Copai'fera. Calyx 4-cleft, unequal. Petals wanting. Stamens 10. Legume stipitate, coriaceous, compressed, 2-valved, 1-seeded. Seed arillate. Trees, with abruptly-pinnate leaves.

283 Cynome'tra. Calyx 4-parted; segments reflexed, pencilled at the apex. Petals 5, equal. Stamens 10; anthers bifid at the apex. Legume roundish, fleshy, indehiscent, tubercled, 1-seeded. Trees, with bifoliate leaves, and red flowers, rising from the trunk.

284 In'tsia. Calyx campanulate, 5-parted. Petal one, unguiculate. Stamens 9, 3 of which are fertile, longer, and declinate. Legume compressed, 3-4-seeded. Trees, with abruptly or impari-pinnate leaves.

285 Epe'rua. Calyx urceolate, 4-cleft. Petal one, fringed, inserted in the middle of the calyx. Stamens 10, long, villous, and rather monadelphous at the base. Legume compressed, falciform, 1-4-seeded. A tree, with abruptly-pinnate leaves and red flowers.

286 Parivòa. Calyx bibracteolate, 3-5-parted. Petal one, large, convolute, inserted in the calyx. Stamens 10, 9 joined at the base, and 1 free. Legume thick, compressed, 1-seeded. A tree, with abruptly-pinnate leaves and purple flowers.

287 Anthonòta. Calyx 4-cleft, unequal, girded by a 2-lobed bractea at the base. Petal one, on a long claw, emarginate. Stamens 10, 3 of which are very long. Legume compressed, hardly dehiscent, 1-celled, many-seeded. A tree, with abruptly-pinnate leaves.

288 Ou'tea. Calyx 5-cleft, bibracteate at the base. Petals 5, one of which is very large and undulated. Stamens 3-4, free, one sterile. Legume compressed, 1-seeded. Trees, with abruptly-pinnate leaves.

289 Voua'pa. Calyx 4-cleft, bibracteate at the base. Petal one, flat. Stamens 3. Legume stalked, 1-seeded. Trees, with bifoliate leaves.

290 Hymenæ'a. Calyx bibracteate at the base, 4-5-parted. Petals 5, glandular. Stamens 10, distinct, inflated in the middle. Legume woody, mealy inside, 1-celled, many-seeded. Trees, with bifoliate leaves.

291 Schne'lla. Calyx 5-toothed. Petals 5, unguiculate, nearly equal. Stamens 10. Style none. Legume truncate. Shrubs, with 2-lobed leaves and white flowers.

292 Bauhi'nia. Calyx 5-cleft. Petals 5, upper one distant from the rest. Stamens 10, sometimes 9 of which are sterile (f. 58. *c.*), and joined, and 1 free (f. 58. *e.*) and bearing an anther, sometimes all monadelphous at the base and fertile, or 5 or 3 fertile. Legume (f. 58. *g.*) 2-valved, 1-celled, many-seeded (f. 58. *h.*). Shrubs, with 2-lobed leaves.

293 Ce'rcis. Calyx urceolate, 5-toothed. Petals 5, unguiculate, sub-papilionaceous, all distinct, the wings largest. Stamens 10, free, unequal. Legume oblong, compressed, 1-celled, many-seeded. Trees, with simple cordate leaves.

294 Palo'vea. Calyx girded by a 2-lobed bractea, 4-5-lobed. Petals 3-4. Stamens 9, rising from the tube of the calyx. Legume compressed, 6-7-seeded. A shrub, with simple leaves.

295 Aloe'xylon. Calyx 4-parted; lower lobe falcate and longer than the rest. Petals 5, unequal. Stamens 10, distinct. Style filiform. Legume woody, falcate, 1-seeded. A tree, with simple, alternate leaves, and terminal flowers.

296 Ama'ria. Calyx 5-cleft. Petals 5, equal, keeled. Stamens 10, monadelphous. Legume long, compressed, torose, many-seeded. Shrubs, with simple leaves.

297 Bowdi'chia. Calyx 5-toothed. Petals 5, free, lateral ones longest, therefore disposed in a papilionaceous manner. Stamens 10, free. Legume compressed, membranous, winged, many-seeded, indehiscent. A tree, with impari-pinnate leaves and violaceous flowers.

298 Cru'dya. Calyx bibracteate at the base, 4-cleft. Petals wanting. Stamens 8-10, inserted in the tube of the calyx, free. Legume coriaceous, 1-2-seeded. Trees, with impari-pinnate leaves.

299 Dia'lium. Calyx 5-parted, 2 exterior lobes rather broadest. Petals wanting. Stamens 2, inserted in the upper side of the receptacle. Legume velvety, 1-2-seeded, pulpy inside. Trees, with impari-pinnate leaves.

300 Coda'rium. Calyx 5-parted. Petal one, linear-lanceolate. Stamens 2, inserted in the calyx. Legume velvety, 1-seeded, filled with mealy pulp inside. Trees, with impari-pinnate leaves.

301 Vata'irea. Flowers unknown. Legume coriaceous, roundish, compressed, 1-celled, 1-seeded. Seed large, flat. A tree, with impari-pinnate leaves.

Tribe XI.

Detarieæ. *Calyx 4-lobed, globose before expansion, with valvate lobes. Petals wanting. Stamens 10-25, perigynous, nearly free. Legume fleshy. Cotyledons thick. Trees, with impari-pinnate leaves. It differs from all the other tribes of this order in the drupaceous fruit, and therefore comes near to* Rosa'ceæ.

302 Deta'rium. Stamens 10, distinct. Drupe orbicular, 1-celled, 1-seeded. A tree, with impari-pinnate leaves.

303 Cordy'la. Stamens 30-35, somewhat monadelphous at the base. Legume stipitate, 1-celled, many-seeded. A tree, with impari-pinnate leaves.

† *Genera belonging to Leguminòsæ, but they are not sufficiently known, and are therefore not received among the tribes.*

304 Crumi'nium. Calyx cup-shaped, truncate. Legume compressed, flat, many-seeded, margined on both sides.

305 Phyllolòbium. Calyx campanulate, 5-cleft; teeth equal, awl-shaped. Corolla papilionaceous, the vexillum a little larger than the other petals. Legume turgid, compressed at the sutures, falcate, 6-10-seeded, opening at one of the sutures. A flexuous herb, with impari-pinnate leaves and whitish flowers.

306 Amphinòmia. Calyx ventricose, 5-cleft; segments lan-

ceolate, spreading. Petals 5, unguiculate. Stamens 10, monadelphous. Style lateral. Legume roundish, 1-celled, 2-valved, many-seeded, the most of which are abortive. A decumbent hairy herb, with trifoliate leaves.

307 Sarcódum. Calyx cup-shaped, 3-toothed. Vexillum ovate, ascending. Wings short. Keel falcate. Stamens diadelphous. Legume fleshy, terete, many-seeded. A climbing shrub, with pinnate leaves, and spikes of rose-coloured flowers.

308 Vare'nnea. Calyx tubular, 5-toothed, unequal. Vexillum wedge-shaped, emarginate. Wings falcate, concave above. Keel of 2 spatulate petals, concave above. Stamens 10, diadelphous, 9 joined, and one free. Legume compressed, rather falcate, 1-seeded. A shrub, with impari-pinnate leaves, and racemes of white flowers.

309 Crafórdia. Calyx campanulate, 5-cleft. Vexillum large, reflexed. Wings adpressed, auricled at the base. Keel obtuse, longer than the wings. Stamens 10, diadelphous. Legume linear, torulose, usually 2-seeded. Leaves impari-pinnate. Flowers white.

310 Ammode'ndron. Calyx calyculate. Legume flat, membranous, winged, 1-seeded in the middle. A spiny shrub, with bifoliate leaves.

311 Laca'ra. Calyx campanulate, 5-toothed. Petals 5, unequal, unguiculate. Stamens 10, free, inserted at the bottom of the calyx, pilose at the base. Legume? pilose. A shrub, with simple leaves.

312 Harpaly'ce. Calyx bilabiate, deciduous, bibracteolate at the base; lips equal, entire. Corolla papilionaceous. Vexillum obovate. Wings auricled. Keel 2-edged, twisted. Legume compressed, narrow at the base, 4-5-seeded. A subshrub, with impari-pinnate leaves, and large rose-coloured flowers.

313 Diplo'trion. Calyx tubular, 5-toothed. Corolla papilionaceous. Stamens 10, monadelphous. Legume 1-celled, many-seeded, spirally involute. A hairy annual herb, with trifoliate leaves and heads of yellow flowers.

314 Rivi'ria. Flowers unknown. Legume stipitate, obliquely-elliptic, flattish, mucronate, 2-valved, 1-seeded. Cotyledons thick. A tree, with impari-pinnate leaves, with the rachis winged.

Division I.

CURVE'MBRIÆ (from *curvus*, curved, and embryo, (f. 21. *b. e. f.*). Radicle curved back upon the edge of the cotyledons.

Suborder I.

PAPILIONA'CEÆ (from *papilio*, a butterfly; in allusion to the disposition of the petals resembling that of a butterfly f. 22. f. 23. &c.). Lin. ord. nat. 32. D. C. prod. 2. p. 94. Curvémbryæ, Bronn dis. p. 131. Cyteophýtum, Neck. elem. 3. p. 1. Leguminòsæ, Batsch. tabl. aff. 95.

Embryo with the radicle curved back upon the edge of the cotyledons, lying above the commissure formed by the lobes (f. 21. *b. e. f.*). Sepals usually imbricate in æstivation, rarely somewhat valvate. Petals disposed into a papilionaceous corolla or a pea flower (f. 24. *b.* f. 25. *b.*, &c.), therefore always irregular. Stamens inserted in the bottom of the calyx (f. 22. *c.*), or perigynous.—Plants with simple, trifoliate or simply pinnate leaves.

§ 1. *Phyllólobæ* (from φυλλον, *phyllon*, a leaf, and λοβος, *lobos*, a lobe; in reference to the lobes of embryo or cotyledons being foliaceous). *D. C. Cotyledons thin, foliaceous* (*f.* 21. *a. f.*).

Tribe I.

SOPHO'REÆ (plants agreeing with *Sophòra* in important characters). Spreng. anl. 2. p. 741. Bronn. diss. p. 131. D. C. legum. mem. V. prod. 2. p. 94.

Corolla papilionaceous (f. 22. *c.* f. 24. *b.*). Stamens free (f. 23. *f.* f. 24. *c.*). Legume continuous (f. 22. *d.*), never articulated. Cotyledons flat, leafy (f. 21. *a. b.*). This is a very natural tribe, known by its papilionaceous flowers, free stamens, and unarticulated pods.

I. MYROSPE'RMUM (from *μυρον*, *myron*, myrrh, and *σπερμα*, *sperma*, a seed; the seeds and cells yield a balsam that has a strong smell). Jacq. amer. (1736) p. 120. Lam. ill. 341. D. C. leg. mem. V. prod. 2. p. 94. Myróxylon, Lin. fil. suppl. 233. but not of Forst. et Toluífera, Lin. gen. 524.

Lin. syst. *Decándria, Monogýnia.* Calyx campanulate, 5-toothed. Petals 5, the upper one larger than the rest. Stamens 10, free. Ovary stipitate, oblong, membranous, 2-6-ovulate, bearing a lateral, ascending, filiform style towards the apex. Legume with a naked stipe at the base, but amply winged at the apex, samaroid, indehiscent, 1-celled, 1-2-seeded, bearing the style laterally towards the apex. Seed enwrapped in balsamic resin. Radicle incurved in the first section, in the rest unknown. Cotyledons thick and flat.—American trees, with abruptly-pinnate leaves, and with the leaflets usually full of pellucid dots, the glands or dots are oblong-linear, as in *Samýdeæ.* The terminal leaflet usually solitary. Perhaps a proper tribe.

Sect. I. Calu'sia (meaning unknown). Bert. ined. D. C. prod. 2. p. 94. Myrospérmum, H. B. et Kunth. nov. gen. amer. 6. p. 572. Stamens with permanent filaments.

1 M. frute'scens (Jacq. amer. 120. t. 174. f. 34.) leaves membranous, deciduous; legume with a reticulately-veined wing; style permanent. ♄. S. Native of South America, in bushy places at Carthagena and St. Martha, on the declivities of mountains in Caraccas, as well as on the banks of the Rio Guarico. H. B. et Kunth, nov. gen. amer. t. 570. and 571. Leaflets 7-8 pairs, alternate, somewhat crenulated, oval, emarginate, marked with pellucid lines. Legume nearly 2 inches long, with the stipe inclosed in the calyx. According to Jacquin this is an inelegant shrub. Leaves alternate, pinnate, deciduous, with commonly 3 pairs of leaflets and an odd one, which are quite entire and smooth. Flowers of a whitish rose-colour, disposed in terminal, simple, or bifid racemes. The seeds and the cell of the legume yield a balsam that has a strong unpleasant smell.

Shrubby Balsam-seed. Shrub 10 feet.

Sect. II. Myróxylon (from *μυρον*, *myron*, myrrh, and ξυλον, *xylon*, wood; the wood is resinous and sweet-scented). Mutis, Lin. fil. et Kunth. Stamens deciduous.

2 M. pube'scens (D. C. prod. 2. p. 95.) branches and petioles hairy; leaflets ovate-lanceolate or oblong, rather membranous, smooth above and pubescent beneath, rather acuminated, emarginate. ♄. S. Native of South America, near Carthagena and Popayan. Myróxylon pubéscens, H. B. et Kunth, nov. gen. amer. 6. p. 374. M. peruiferum, Lamb. ill. cinch. 92. t. 1. Leaves rather membranous, marked with line-like dots. An elegant tree, with white flowers disposed in terminal racemes. The bark is filled with white resin, which, according as it abounds more or less, changes the colour to citron-yellow, red, or dark chesnut; the smell and taste are grateful, balsamic, and aromatic, resembling those of Red Peruvian Balsam, and sold in druggists' shops under the name of white balsam. The legume contains 1

seed, which is crescent-shaped, projecting from the cell, and between this and the lining of the pericarp is filled with a yellow liquid balsam, which in time dries and becomes a hard resin. The tree grows in the mountains of Panatahuas, in the forests of Puzuzo, Muna, Cuchero, and in many other countries near the river Maranon, in low, warm, and sunny situations. The natives of these countries call the tree by the name of *Quinquino*, and its bark and fruit by that of *Quinquina*, a plant very different to the Quina. The Indians of Puzuzo and the above-mentioned countries do not collect the balsam of this tree, they only collect the barks most filled with resin, condensed into drops and lumps, and the fruits, in order to sell them in the neighbouring provinces, both of which are used for the purpose of perfuming cloth and apartments. It is called perfume of quinquina, to distinguish it from the true perfume, which is a composition of Benzoin, storax, and ambergris, these substances being formed into a paste, from which they make pastiles. The fruit as well as the bark being reduced to a coarse powder, they mix it with oil of maria, carana, jacamaca, lera, or sebo, and make with it little plasters, which they apply upon the temples and behind the ears, to mitigate the pains of the head-ache and the tooth-ache. It closes recent wounds, strengthens the brain, mitigates pains proceeding from agues, and dissipates the shivering produced by fevers. The balsam of quinquino is procured by incision at the beginning of spring, when the showers are gentle, frequent, and short; it is collected into bottles, where it keeps liquid for some years, in which state it is called white liquid balsam. But when the Indians deposit this liquid in mats or calabashes, which is commonly done in Carthagena, it hardens into a resin and is then denominated dry white balsam. The wood of the quinquino is compact, heavy, and durable, but is difficult to work on account of its uneven grain. It is never exposed to attacks of worms, wherefore the Indians make use of the trunks for beams and stanchions.

Pubescent Myrrh-seed, White Balsam, or Quinquino. Fl. Aug. Sept. Tree 40 feet.

3 M. PERUI'FERUM (D.C. prod. 2. p. 95.) leaflets coriaceous, permanent, and are as well as the branches glabrous; legume with a very thick wing; style deciduous. ♄. S. Native of Peru, New Granada, Colombia, Mexico. Myróxylon peruíferum, Lin. fil. suppl. 233. Bert. amœn. p. 26. t. 1. H. B. et Kunth, nov. gen. amer. 6. p. 374. M. pedicellàtum, Lam. dict. 4. p. 191. ill. t. 341. f. 1. Flowers white, disposed in axillary racemes. Legume coriaceous, with the stipe inclosed in the calyx, about 3 inches long. There are varieties of this tree, or perhaps distinct species, differing in having quite entire or crenated, oval, or ovate, obtuse or emarginate leaflets, marked with oblong or roundish pellucid dots. The lower leaflets alternate, and the upper ones more or less opposite, to the number of 2-5 pairs. It is a very beautiful tree, with a smooth bark full of resin, as are all parts of the plant. The leaves are abruptly pinnate, usually with about 2 pairs of ovate-lanceolate, entire, emarginate leaflets, which are full of transparent, linear, resinous dots. The balsam of Peru is the produce of this tree, according to Joseph Cælastine Mutis. This balsam, when brought to us, is of the consistence of thin honey, of a reddish-brown colour, inclining to black, an agreeable aromatic smell, and a very hot biting taste. It is said to be obtained by boiling the cuttings of the twigs in water, and skimming off with a spoon the balsam, which swims on the top. Peruvian balsam consists of a volatile oil, resin, and benzoic acid; it is accordingly entirely soluble in alcohol and in essential oils. Water dissolves part of the benzoic acid, and fixed oil combines with the resin. It may be suspended in water by trituration with mucilage and yoke of eggs. Balsam of Peru is a very warm aromatic medicine, considerably hotter and more acrid than copaiva. Its effects are stimulating and tonic. Hence its use in some kinds of asthmas, gonorrhœas, dysenteries, suppressions of the uterine discharges, and other disorders proceeding from debility. It is also employed externally for cleansing and healing wounds and ulcers, and sometimes against palsies, and rheumatic pains.

Balsam of *Peru*-tree. Tree 40 feet.

4 M. TOLUI'FERUM (Ach. Rich. ann. sc. nat. 1824. jun. p. 172.) branches and leaves glabrous; leaflets oblong, acuminated, equal-sided, rounded at the base. ♄. S. Native of South America, on the mountains of Tolu, Turbaco, and on the banks of the river Magdalena, between Carapata and Mompox. Balsàmum Tolutànum, C. Bauh. pin. 401. Toluífera Balsàmum, Mill. dict. Lin. mat. med. 201. Woodv. med. bot. 3. p. 526. t. 193. Myróxylon toluíferum, H. B. et Kunth, nov. gen. amer. 6. p. 375. A large spreading tree, with very thick, rough, brown bark. Leaves oblong-ovate. Flowers yellowish, disposed in small axillary racemes. The balsam of Tolu is the produce of this tree; it flows from incisions made in the bark, during the hot season, and is brought to us in little gourd shells. It is of a yellowish-brown colour, inclining to red; in consistence thick and tenacious; by age it grows hard and brittle. The smell of this balsam is extremely fragrant, somewhat resembling that of lemon, its taste warm and sweetish. Lewis says that he has sometimes procured benzoic acid from it. It yields very little volatile oil, although it impregnates the distilled water strongly with its flavour. By dissolving a proper quantity of sugar in this water a more elegant syrup is obtained than that prepared in the common way with a decoction of the balsam; in its medical virtues it agrees with other balsams.

Balsam of *Tolu*-tree. Clt. 1733. Tree 40 feet.

Cult. Fresh imported seeds of any of the species will grow, if sown in a pot immediately on their arrival in this country, and placed in a hot-bed. The plants are to be potted off separately when they are 3 inches high, in a mixture of peat and loam; young cuttings will also root, if planted in sand, with a hand-glass placed over them, in heat.

II. SOPHO'RA (altered from *sophero*, the Arabic name of a papilionaceous flowering tree). R. Br. hort. kew. ed. 2. vol. 3. p. 2. D. C. leg. mem. 5. prod. 2. p. 95.—Sophòræ, spec. Lin. gen. no. 508. exclusive of some anomalous species.

LIN. SYST. *Decándria, Monogýnia.* Calyx 5-toothed (f. 22. *a.*), campanulate at the base, or somewhat attenuated. Petals of the keel usually concrete at the apex. Legume somewhat moniliform (f. 22. *d.*), wingless, many-seeded.—Trees, shrubs, or herbs, with impari-pinnate leaves, which are usually exstipulate and terminal, simple racemes or panicles of yellow, white, or blue flowers.

SECT. I. EUSOPHÒRA (from ευ, *eu*, well or good, and *sophora;* genuine species). D. C. prod. 2. p. 95. Stamens 10, free.

1 S. JAPÓNICA (Lin. mant. 68.) arboreous; leaflets 11-13, oblong-ovate, acute, glabrous; panicle terminal, loose; legumes glabrous. ♄. H. Native of Japan. Red. in Duh. ed. nov. 3. t. 21. S. Sinica, Rosier. journ. phys. 14. p. 248. D. C. leg. t. 4. f. 1. germ. Flowers beautiful cream-coloured. Legume with from 1-7 rather distant contractions, when young replete with an austere pulp inside. An elegant tree when in flower, and well fitted for ornamental plantations.

Var. β, variegàta; leaves variegated.

Var. γ, péndula; branches pendulous.

Japan Sophora. Fl. Aug. Sept. Clt. 1763. Tr. 30 to 40 ft.

2 S. CHINE'NSIS (Lodd. cat. Loud. hort. brit. p. 162.). We have not been able to obtain a description of this species. It is

usually confounded in gardens with the preceding. ♄. H. Native of China.

China Sophora. Fl. Aug. Sept. Clt. 1763. Tr. 30 to 40 ft.

3 S. GLAU´CA (Lesch. ined. D. C. ann. sci. nat. 4. p. 98.) shrubby; leaflets 19-23, elliptic, mucronate, velvety, and glaucous on the upper surface, but villous beneath; racemes terminal, crowded. ♄. S. Native of the East Indies, on the mountains of Nelligery, where it is called by the natives *Houbbey*. Branches, petioles, and peduncles velvety. Flowers purplish.

Glaucous Sophora. Clt. 1818. Shrub 7 feet.

4 S. TOMENTÒSA (Lin. spec. 533.) arboreous; leaflets 15-19, oval-roundish, clothed with hoary tomentum on both surfaces, as well as the calyxes; racemes terminal, elongated. ♄. S. Native of the Caribbee Islands and the East Indies? Lam. ill. t. 325. f. 2. S. occidentàlis, Lin. spec. 533.—Plum. ed Burm. t. 101. Trew. ehr. t. 59. —Browne, jam. 289. t. 31. f. 1.—Sloane, jam. 2. p. 40. t. 107. f. 3. Flowers yellow.

Tomentose Sophora. Fl. June, Jul. Clt. 1739. Sh. 7 to 8 ft.

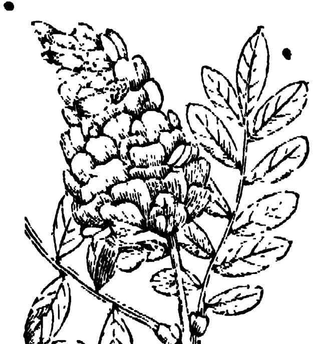
5 S. CRASSIFÒLIA (Jaum, in Duh. ed. nov. 3. p. 87.) arboreous; leaflets 15-19, oblong, obtuse, oblique at the base, dilated on the inner side, pubescent beneath; racemes terminal, elongated. ♄. S. Native of Senegal. Very like *S. tomentòsa*. Leaves coriaceous, pale.

Thick-leaved Sophora. Clt. 1818. Tree.

6 S. HAVANE´NSIS (Jacq. amer. 118. t. 173. f. 1. a flower) shrubby; leaflets 25, oblong-ovate, obtuse, emarginate, and are as well as the branches villous; raceme terminal, elongated. ♄. S. Native of Cuba, about the Havannah, in bushy places. Flowers yellow.

Havannah Sophora. Fl. Aug. Clt. 1823. Shrub 6 feet.

FIG. 22.



7 S. SECUNDIFLÒRA (Lag. in D. C. cat. hort. monsp. 148.). shrubby; leaflets 9-13, elliptic-oblong, obtuse, coriaceous, smoothish; racemes terminal, crowded with secund flowers. ♄. S. Native of New Spain. Broussonètia secundiflòra, Ort. dec. 5. p. 61: t. 7. Virgília secundiflòra, Cav. icon. 5. t. 401. Flowers rather large, blue. Legume, according to Lagasca is moniliform. A beautiful shrub.

Side-flowered Sophora. Clt. 1820. Shrub 6 feet.

8 S. MACROCA´RPA (Smith, in Rees' cycl. no. 6.) arboreous; leaves with 13-19 elliptic-oblong, obtuse, coriaceous leaflets, which are silky beneath; racemes short, axillary. ♄. G. Native of Chili, where it is called *Mayo*. Lodd. bot. cab. t. 1125. Legume silky, wingless. An elegant shrub with yellow flowers. Allied to *Edwárdia*.

Long-fruited Sophora. Clt. 1822. Shrub 8 to 10 feet.

9 S. LITTORA´LIS (Schrad. in Neuw. reis. no. 9. goett. anz. 1821. p. 709.) shrubby: leaflets few pairs, roundish-elliptic, glabrous above, but strigosely-canescent beneath; racemes terminal. ♄. S. Native of Brazil. Pluk. alm. t. 104. f 3. S. arenicola, Nees, in flora, 1821. p. 297. Flowers probably yellow.

Sea-shore Sophora. Clt. 1820. Shrub 6 feet.

10 S. HEPTAPHY´LLA (Lin. spec. 533.) arboreous; leaflets 7, glabrous. ♄. S. Native of the East Indies. This is a very obscure species and perhaps the same as *S. flavéscens*.—Rumph. amb. 4. p. 50. t. 22. Flowers yellow.

Seven-leafletted Sophora. Shrub 6 feet.

11 S. FLAVE´SCENS (Ait. hort. kew. 2. p. 43.) herbaceous; leaflets 9-13, ovate-oblong, smoothish; racemes terminal. ♃. H. Native of Siberia. S. macrospérma, Jaume, in Duh. ed. nov. 3. p. 87. ex herb. Juss. S. glàbra, Mœnch. ex Steud. Stipulas awl-shaped. Flowers yellowish. Stamens distinct. Legume slender, tomentose.

Yellowish-flowered Sophora. Fl. June, July. Clt. 1785. Pl. 2 to 3 feet.

12 S. GALEGOÌDES (Pall. astrag. p. 118. t. 88.) herbaceous; leaflets 9-13, ovate, acute, rather large, smoothish; racemes terminal. ♃. H. Native of Eastern Siberia, particularly at Lake Baical. Flowers of a violet colour.

Galega-like Sophora. Fl. June, Jul. Clt. 1817. Pl. 2 to 3 ft.

SECT. II. DISEMÆ´A (δις, *dis*, twice, and *σημα*, *sema*, a standard; vexillum bifid). Lindl. bot. reg. 1185. Petals imbricate. Calyx 5-toothed, equal. Stamens irregularly monadelphous at the base.

13 S. VELUTÌNA (Lindl. bot. reg. 1185.) shrubby; leaflets 23, alternate, elliptic, mucronate, velvety on both surfaces, as well as the peduncles and branches; racemes cylindrical, terminal; petals imbricate; vexillum bifid. ♄. F. Native of Nipaul. Flowers in long racemose spikes, pale-purple. This species being very shewy, it would be worth attention to graft it on the common *Sophòra Japónica*, by which means it would be rendered so hardy as to stand our winters in open shrubberies, for which purpose it would be a very desirable addition.

Velvety Sophora. Fl. May, Jun. Clt. 1820. Shrub 4 to 6 ft.

SECT. III. PSEUDOSOPHÒRA (from ψευδης, *pseudes*, false, sophòra; called false sophoras because the stamens are diadelphous, and not monadelphous, as in the preceding section). D. C. prod. 2. p. 96. Stamens 10, somewhat diadelphous, that is 9 joined at the base and the tenth free.

14 S. ALOPECUROÌDES (Lin. spec. 533.) herbaceous; leaflets 15-25, oblong, young ones silky on both surfaces, adult ones only on the under surface; racemes terminal. ♃. H. Native of Siberia, Iberia, Tauria, and Persia. Pall. astr. t. 87.—Dill. hort. elth. f. 136.—Buxb. cent. 3. t. 46. S. álbicans, Jaume, in Duh. ed. nov. 3. p. 86. There is a variety of this plant with the leaves less villous. Racemes many-flowered. Flowers yellowish. Legume moniliform, tapering to both ends, sometimes only 1-seeded from abortion. Root creeping much. The plant seldom or ever flowers in England from the shortness of the summer.

Fox-tail Sophora. Fl. Sept. Oct. Pl. 3 to 4 feet.

15 S. SERÍCEA (Nutt. gen. amer. 1. p. 280.) herbaceous, dwarf; leaflets 21, cuneate-oval, or subelliptic, silky below; spikes nearly sessile. ♃. H. Native of elevated plains on the banks of the Missouri. Astràgalus carnòsus, Pursh, fl. sept. amer. 2. p. 740. ex Nutt. Patrínia serícea, Rafin. in journ. phys. aug. 1819. p. 97.? Calyx 5-toothed and stamens diadelphous. ex Nutt. 4-toothed, and stamens free, ex Rafin. Keel mucronate, Nutt. Flowers white.

Silky Sophora. Fl. June, July. Clt. 1820. Pl. 1 foot.

† *A species not sufficiently known.*

16 S. ACUMINA´TA (Desf. journ. bot. 1814. 1. p. 75.) leaflets 39-41, lanceolate, acute, pubescent, rather cinereous; legume tomentose, moniliform. ♃.? H. Native of North America.

Acuminated-leafletted Sophora. Pl. ?

Cult. The *S. Japónica* and *S. Chinénsis* are very handsome trees, well adapted to stand singly in lawns; while young they require a little protection in winter. These may be raised from layers, but they are generally increased by seeds. The stove species will thrive well in a light loamy soil, and cuttings will root if planted in a pot of sand, with a hand-glass placed over them, in heat. The hardy herbaceous kinds will grow well in a dry light soil, and they are easily increased by dividing them at the root in spring, or by seed, which sometimes ripen.

III. EDWA'RDSIA (in honour of Sydenham Edwards, a celebrated English botanical draughtsman, who executed most of the drawings in the first volumes of the Botanical Register). Salisb. Lin. trans. 9. p. 299.

Lin. syst. *Decándria, Monogýnia.* Calyx obliquely 5-toothed, with the upper side cleft. Petals 5, distinct, conniving into a papilionaceous corolla. Keel long. Stamens 10, with the filaments deciduous, according to Salisbury, and inserted into a cup-shaped, 10-angled torus. Legume moniliform, 1-celled, 2-valved, 4-winged, many-seeded. Shrubs or little trees, with impari-pinnate, exstipulate leaves, having numerous pairs of leaflets, which fall off late in the autumn. Flowers golden, axillary, disposed in short racemose spikes.

1 E. MICROPHY'LLA (Salisb. l. c.) leaves with 12-15 pairs of obovate-roundish, emarginate leaflets, smooth or pubescent beneath; petals of keel elliptic, hooked on the back. ♄. F. Native of New Zealand. Sophòra microphýlla, Ait. hort. kew. 2. p. 43. Lam. ill. t. 325. Jacq. hort. schœnbr. t. 269. Sophòra tetráptera, Lin. fil. suppl. 230. Leaflets 25-41, 2-3 lines long. This is a magnificent shrub when in flower, displaying large pendulous bunches of golden flowers.

Small-leaved Edwardsia. Fl. May, June. Clt. 1722. Shrub 6 to 10 feet.

2 E. GRANDIFLÒRA (Salisb. l. c.) leaflets 17-21, oblong-linear, somewhat lanceolate, rather villous beneath; petals of keel broadly falcate. ♄. F. Native of New Zealand. Sophòra tetráptera, Ait. hort. kew. 2. p. 43. Mill. icon. 1. Curt. bot. mag. 167. Lam. ill. t. 325. f. 3. Red. in Duh. ed. nov. 3. t. 20. E. macrophýlla, Wanderoth, l. c. Leaflets 13-19, 5-10 lines long. This is an elegant tree when in flower, bearing large pendulous clusters of golden flowers, which rise in spring before the leaves.

Great-flowered Edwardsia. Fl. April, May. Clt. 1772. Shrub 6 to 10 feet.

3 E. MYRIOPHY'LLA (Wanderoth, in Schlecht. Linnæa 5. p. 202.) arborescent; leaves having 20 pairs of obovate, entire, emarginate leaflets, the odd one emarginate, smooth, or pubescent beneath. ♄. F. Native of New Zealand. E. mínima, Lodd. cat. Flowers yellow.

Many-leafletted Edwardsia. Fl. May, June. Clt. 1818. Shrub 4 to 6 feet.

4 E. CHRYSOPHY'LLA (Salisb. l. c. t. 26. f. 1.) leaflets 17, obovate, younger ones clothed with yellow pubescence; petals of keel elliptic, with the dorsal margin straight. ♄. G. Native of the Sandwich Islands. Leaflets 8-10 lines long. Ker. bot. reg. 738. Flowers smaller than those of the preceding species, yellow.

Golden-leaved Edwardsia. Fl. May, June. Clt. ? Shrub 6 to 10 feet.

5 E. NÍTIDA (D. C. prod. 2. p. 97.) leaflets 21-25, elliptic, somewhat obovate, retusely emarginate, silky on both surfaces; wings of flower oblong, with the dorsal margin straight; legume villous. ♄. S. Native of the Island of Bourbon. Sophòra nítida, Smith, in Rees' cycl. no. 7. S. serícea, Jaume, in Duh. ed. nov. 3. p. 86.

Shining Edwardsia. Clt. 1820. Shrub 8 feet.

6 E. DENUDA'TA (D. C. prod. 2. p. 97.) leaflets 17-21, elliptic, obtuse, retusely emarginate, pale beneath, and clothed with silky pubescence, smooth above, younger ones as well as branchlets sericeous. ♄. S. Native of the Island of Bourbon. Sophòra denudàta, Bory. voy. 2. p. 399. Sophòra retùsa, Pers. ench. 2. p. 452. Calyx clothed with rusty shining wool, and the legume tomentose.

Naked Edwardsia. Shrub.

Cult. This is a genus of elegant shrubs. The four first species are hardy enough to survive our winters, in the open air, when they are not too severe, but it is much better to protect them under a frame in winter; they are generally propagated by seeds, which usually ripen; they may also be increased by young cuttings planted in sand, with a hand-glass placed over them. The stove species, or those natives of the Island of Bourbon, will grow freely in a mixture of loam, peat, and sand, and young cuttings of them will root readily if planted in a pot of sand, with a hand-glass placed over them, in heat.

IV. ORMO'SIA (from *ορμος, ormos*, a necklace; the seeds of *O. coccinea*, are strung for necklaces; they are red, and have a black spot at one end). Jacks. in Lin. trans. 10. p. 360. R. Br. in hort. kew. ed. 2. vol. 3. p. 3.

Lin. syst. *Decándria, Monogýnia.* Calyx bilabiate, upper lip 2-lobed, lower one 3-parted. Vexillum roundish, hardly longer than the wings and keel. Stamens 10, with the filaments dilated at the base. Style incurved, crowned by 2 approximate stigmas. Legume woody, compressed, 2-valved, young ones 5-6-ovulate, 1-2-seeded. South American trees, with the branches clothed with rusty villi. Leaves large, impari-pinnate, usually with 4 or 6 pairs of leaflets. Stipulas distinct from the petioles. Flowers panicled, blue, or purplish.

1 O. DASYCA'RPA (Jacks. l. c. t. 26.) leaflets acuminated, glabrous on both surfaces; legumes tomentose. ♄. S. Native of the Caribbee Islands. Sophòra monospérma, Swartz. fl. ind. occ. 2. p. 722. Podalýria, Poir. dict. 5. p. 440. Flowers large, blue. Legume containing only 1 large, round, spherical, scarlet seed, which has a large black spot at one end. Browne calls the tree the Red Bead-tree.

Thick-fruited Bead-tree. Fl. June, July. Clt. 1793. Tree 10 to 20 feet.

2 O. COCCÍNEA (Jacks. l. c. t. 25.) leaflets somewhat ovate, thick, with revolute margins, glabrous on both surfaces; legume glabrous, shining. ♄. S. Native of Guiana and Brazil. Robínia coccínea, Aubl. guian. 2. p. 773. Flowers blue. Seeds scarlet, with a black spot at one end, as in the preceding.

Scarlet-seeded Bead-tree. Fl. June, July. Clt. 1823. Tree 10 to 20 feet.

3 O. COARCTA'TA (Jacks. l. c. t. 27.) leaflets unequal, glabrous above, but covered with rusty hairs beneath. ♄. S. Native of Guiana. Seeds colour and shape of those of the two preceding, but much smaller.

Coarctate Bead-tree. Tree.

Cult. For culture and propagation see stove species of *Edwárdsia.*

V. VIRGI'LIA (dedicated to the poet Virgil, whose Georgics contain many things interesting to botanists). Lam. ill. t. 326. Pers. ench. 1. p. 453. R. Brown, in hort. kew. ed. 2. vol. 3. p. 4.

Lin. syst. *Decándria, Monogýnia.* Calyx 5-cleft. Petals 5, about equal in length. Vexillum with the edges not reflexed. Stigma beardless. Legume compressed, oblong, 2-valved, many-seeded.—Trees or shrubs with impari-pinnate leaves, and with the flowers disposed in racemes.

1 V. CAPE'NSIS (Lam. ill. 326. f. 2.) stamens deciduous, woolly at the base; ovaries as well as legumes tomentose; keel acuminated; leaflets numerous, opposite, linear-lanceolate, mucronate, pubescent beneath. ♄. G. Native of the Cape of Good Hope. Sophòra Capénsis, Burm. fl. cap. prod. 12. Lin. mant. 67. Sophòra oroboìdes, Berg. cap. 142. Hypocalýptus Capénsis, Thunb. fl. cap. 570. Galèga sericea β. Lam. ex herb. Juss. Podalýria Capénsis, Andr. bot. rep. 347. Virgílìa Capénsis. Sims, bot. mag. 1590. Flowers large, pink, rather

darker towards the base of the vexillum, disposed in dense racemes.

Cape Virgilia. Fl. July, Aug. Clt. 1767. Sh. 3 to 10 feet.

2 V. INTRU'SA (R. Br. in Ait. hort. kew. 3. p. 4.) stamens permanent; ovaries smooth; calyx thrust in at the base; leaflets oval, obtuse, mucronate. ♄. G. Native of the Cape of Good Hope. Flowers pale-yellow.

Thrust-in-calyxed Virgilia. Fl. May, June. Clt. 1790. Shrub 4 to 8 feet.

3 V. AU'REA (Lam. ill. t. 326. f. 1.) stamens permanent; ovaries tomentose; legumes glabrous; leaflets oppòsite, oval, obtuse, mutic, smoothish. ♄. G. Native of Abyssinia. Robínia subdecándra, Lher. stirp. nov. t. 75. Podalýria aúrea, Willd. spec. 2. p. 502. D. C. leg. t. 4. f. 2. germ. Flowers large, golden, drooping. The roots taste like liquorice. The bark affords a yellow dye.

Golden-flowered Virgilia. Fl. July. Clt. 1777. Shrub 6 ft.

4 V. SYLVA'TICA (D. C. prod. 2. p. 98.) stamens permanent; ovaries glabrous; leaflets opposite, 6-7 pairs, oval, obtuse, glabrous; panicle terminal. ♄. G. Native of the Cape of Good Hope. Sophòra sylvática, Burch. cat. geogr. 3138. Legume plano-compressed, glabrous, tapering to both ends. Flowers yellow.

Wood Virgilia. Fl. June, Aug. Clt. 1816. Shrub 6 feet.

5 V. LU'TEA (Michx. fil. arb. amer. 3. p. 266. t. 3.) stamens deciduous, smooth; ovaries puberulous: legumes stipitate, glabrous: leaflets 9-11, alternate, ovate, acuminated, glabrous. ♄. H. Native of North America, between the mountains of Cumberland and the Mississippi. Delaun. herb. amat. t. 197. Flowers yellow, disposed in pendulous racemes. The whole tree strongly resembles the *Robínia pseudacàcia*. The bark affords a yellow dye.

Yellow-flowered Virgilia. Fl. June, July. Clt. 1812. Tree 10 to 16 feet.

6 V. ROBINIOÌDES (D. C. prod. 2. p. 98.) leaves with 3 pairs of leaflets and an odd one, obovate, obtuse, glaucous, smooth; racemes axillary, length of leaves, clothed with adpressed pubescence; pedicels very short. ♄. G. Native of the Cape of Good Hope. Robínia Capénsis, Burm. fl. cap. 22. Branches glabrous, terete. Stipulas callous, small. Flowers yellow.

Robinia-like Virgilia. Fl. June, Aug. Clt. 1818. Shrub 6 ft.

7 V.? RUBIGINÒSA (D. C. in ann. sc. nat. 4. p. 98.) stamens permanent; ovaries tomentose; leaflets oval-oblong, acuminated, opposite, glabrous; racemes panicled, and are, as well as the branches, rusty and velvety. ♄. S. Native of Guadaloupe. Flowers violaceous. Leaflets 3-4 inches long. Young legumes compressed, oblong, not moniliform.

Rusty Virgilia. Tree.

Cult. *Virgília lùtea* being an elegant hardy tree, is well adapted for shrubberies or pleasure-grounds, as it is covered with innumerable pendulous racemes of flowers early in summer. It is generally propagated by laying down the shoots in autumn or spring, and sometimes by seeds, which are annually received from the places of its natural growth by some nurserymen. It may also be propagated by young cuttings planted in a shady situation under a hand-glass. The green-house kinds are elegant plants when in flower; they will grow freely in a mixture of loam, peat, and sand, and young cuttings will root readily if planted in a pot of sand, with a hand-glass placed over them.

VI. MACRO'TROPIS (from μακρος, *macros*, long, and τροπις, *tropis*, a keel; keel of flower long). D. C. leg. mem. v. prod. 2. p. 98.—Anagỳris, Lour. coch. p. 260. but not of Lin.

LIN. SYST. *Decándria, Monogýnia.* Calyx cup-shaped or inflated, 5-toothed. Keel petals 2, equal in length to the wings, but much exceeding the vexillum. Legume straight, compressed or somewhat terete, many-seeded.—Shrubs, with imparipinnate glabrous leaves, and racemes of white flowers.

1 M. FŒ'TIDA (D. C. prod. 2. p. 98.) leaflets lanceolate-ovate; flowers panicled; calyx cup-shaped; legume somewhat terete. ♄. F. Native of China, near Canton. Anagỳris fœ'tida, Lour. cochin. p. 260. A. Sinénsis, Steud. nom. Panicle terminal. Flowers white. Wood and leaves fetid.

Fetid Macrotropis. Fl. April, May. Clt. 1820. Shrub 8 ft.

2 M. INODÒRA (D. C. prod. 2. p. 99.) leaflets oblong, acuminated, glabrous; flowers racemose; calyx inflated; legume straight, compressed. ♄. F. Native of Cochin-china, in woods. Anagỳris inodòra, Lour. l. c. Racemes terminal. Flowers white. Branches somewhat scandent. Wood, leaves, and bark scentless.

Scentless Macrotropis. Shrub 10 feet.

Cult. Beautiful shrubs, which will thrive in a mixture of loam, sand, and peat; and young cuttings will strike root if planted in a pot of sand placed under a hand-glass. The shrubs only require to be protected from frost.

VII. ANAGY'RIS (from ανα, *ana*, backwards, and γυρος, *gyros*, a circle; in allusion to the pods being curved backwards at their extremities). Tourn. inst. t. 415. Lin. gen. no. 509. Lam. ill. t. 325.

LIN. SYST. *Decándria, Monogýnia.* Calyx 5-toothed, somewhat bilabiate. Wings longer than the vexillum, but shorter than the 2-petalled keel. Legume on a short stipe, compressed, many-seeded, 2-valved, irregularly interrupted by a kind of spongy substance.—Shrubs, with trifoliate leaves and entire leaflets. Stipulas 2, concrete in one, placed opposite the leaves. Flowers disposed in short racemes, yellow.

1 A. FŒ'TIDA (Lin. spec. 534.) leaflets lanceolate, acute; legume acuminated. ♄. F. Native of the south of Europe, on hills in dry places. Lodd. bot. cab. 740. D. C. leg. t. 4. f. 3. germ.—Clus. hist. 1. p. 93. with a figure. The shrub is fetid in every part when bruised. The flowers hairy, like those of the *Labúrnum.*

Var. β, *glaúca* (Hortul. D. C. prod. 2. p. 99.) leaves more glaucous on both surfaces.

Fetid Bean-Trefoil. Fl. May, June. Clt. 1570. Sh. 6 to 8 ft.

2 A. LATIFÒLIA (Willd. enum. 489.) leaflets elliptic, obtuse; legumes torose, obtuse, apiculated by the style. ♄. F. Native of Teneriffe.

Broad-leaved Bean-Trefoil. Fl. April, May. Clt. 1815. Shrub 6 to 10 feet.

Cult. See *Macrótropis* for culture and propagation.

VIII. PIPTA'NTHUS (from πιπτω, *pipto*, to fall, and ανϑος, *anthos*, a flower; the teeth of the calyx fall off, as well as the petals and stamens very soon). Sweet. fl. gard. 264.

LIN. SYST. *Decándria, Monogýnia.* Calyx bilabiate, lower lip trifid, with the middle segment reflexed, upper lip 2-lobed; all the segments soon falling off. Petals deciduous. Vexillum large, obcordate, rufescent. Wings cuneated, somewhat cordate at the base. Keel cucullate, accumbent. Stamens 10, free, deciduous. Stigma minute. Legume broad-linear, compressed, 6-seeded, stipitate.—An elegant shrub, with trifoliate leaves, young ones rather silky; leaflets elliptical-oblong, acute, broad. Stipulas 2, large, joined together, entire, bicuspidate at the apex, placed opposite the leaves. Peduncles tern, 1-flowered. Flowers large, yellow.

1 P. NIPAULE'NSIS (Sweet, fl. gard. 264.) ♄. H. Native of Nipaul, on Shreenugur. Thermòpsis Laburnifòlia, D. Don, prod. fl. nep. p. 239. Anagỳris In'dica, Wall. mss. Baptísia Nipaulénsis, Hook. exot. fl. t. 131.

Nipaul Piptanthus. Fl. May, June. Clt. 1821. Sh. 8 to 10 ft.

Cult. This is an elegant shrub when in flower, being clothed with beautiful yellow flowers during the months of May and June. It is sufficiently hardy to stand our climate without any protection, and therefore is a great acquisition to hardy flowering shrubs. It is increased by laying down the shoots, or young cuttings will root if planted in sand under a hand-glass.

IX. THERMO'PSIS (from ϑερμος, *thermos*, a lupine, and *οψις, opsis*, resemblance; so named on account of the resemblance of the species to lupines). R. Br. in Ait. hort. kew. ed. 2. vol. 3. p. 3. D. C. prod. 2. p. 99. Thérmia, Nutt. gen. amer. 1. p. 282.

LIN. SYST. *Decándria, Monogýnia.* Calyx oblong or campanulate, 4-5-toothed, somewhat bilabiate, convex behind, and attenuated at the base. Petals 5, about equal in length. Vexillum with reflexed sides. Keel obtuse. Stamens permanent. Legume compressed, falcate or linear, many-seeded. —Perennial herbs, clothed with silky villi. Leaves trifoliate. Stipulas ovate-lanceolate, leafy. Racemes terminal. Flowers pedicellate, twin, or somewhat verticillate, yellow.

1 T. RHOMBIFÒLIA (Nutt. gen. amer. 1. p. 283. under *Thérmia,*) leaves stalked; leaflets rhomb-ovate, somewhat cuneated, rather silky-pubescent; stipulas obliquely ovate, acute, shorter than the petiole; lower flowers of the raceme twin, on very short pedicels. ♃. H. Native of North America, on naked hills, near Fort Mandan. Cýtisus rhombifòlius, Fras. cat. 1813. Pursh, fl. sept. amer. 2. p. 741. Roots creeping horizontally. Racemes interrupted. Flowers yellow. Legume falcate, compressed.

Rhomb-leaved Thermopsis. Fl. June, Jul. Clt. 1811. Pl. 1 ft.

2 T. FABA'CEA (D. C. prod. 2. p. 99.) leaves stalked; leaflets broad-oval; stipulas broad-ovate, obtuse, shorter than the petioles; racemes with alternate flowers. ♃. H. Native of Kamtschatka. Sophòra fabàcea, Pall. astr. p. 122. t. 90. f. 2. S. lupinoìdes var. *α*, Lin. amœn. 2. p. 250. Flowers yellow.

Bean-like Thermopsis. Fl. Ju. July. Clt. 1818. Pl. 1 to 2 ft.

3 T. LANCEOLA'TA (R. Br. in Ait. hort. kew. ed. 2. vol. 3. p. 3.) leaves nearly sessile, lower and upper ones simple, like stipulas, the rest trifoliate; leaflets oblong-lanceolate; stipulas twice the length of the petioles or more; flowers twin on the racemes; pedicels shorter than the calyx. ♃. F. Native of Siberia, Dahuria, Kamtschatka, and Nootka Sound. Sophòra lupinoìdes, Pall. astr. t. 89. Podalýria lupinoìdes, Willd. spec. 2. p. 504. Flowers yellow.

Lanceolate-leaved Thermopsis. Fl. June, July. Clt. 1779. Pl. 1 foot.

4 T. CORGONE'NSIS (D. C. prod. 2. p. 99.) leaves sessile, or on very short stalks; leaflets ovate, acute; stipulas like the leaves, and with them constituting a kind of half whorl; flowers twin on the racemes, nearly sessile; calyx villous. ♃. H. Native of the Corgon mountains, contiguous to the Altaian chain. Sophòra alpìna, Pall. astr. p. 121. t. 90. f. 1. Podalýria alpìna, Willd. enum. suppl. 22.

Corgon Thermopsis. Fl. June, July. Clt. 1820. Pl. 1 to 2 ft.

Cult. The species of this genus are very elegant, but preserved with difficulty. They grow best in light soils, and they should be increased by seed, as dividing the plants at the root, is apt to injure them.

X. BAPTI'SIA (from *βαπτω, bapto*, to dye; so named from the economical use of some of the species). Vent. dec. p. 9. R. Br. in Ait. hort. kew. ed. 2. vol. 3. p. 5. Podalýria, Michx. fl. amer. bor. 1. p. 263, but not of R. Br. Crotalópsis, Michx. herb.

LIN. SYST. *Decándria, Monogýnia.* Calyx semi 4-5-cleft, bilabiate. Petals 5, nearly equal in length. Vexillum with reflexed sides. Stamens deciduous. Legume ventricose, pedicellate, many-seeded.—North American herbs, with trifoliate, rarely simple leaves, and racemes of yellowish or blue flowers.

* *Leaves simple.*

1 B. PERFOLIA'TA (R. Br. in Ait. hort. kew. 3. p. 4.) quite smooth; leaves perfoliate, roundish, quite entire, rather glaucous; flowers axillary, solitary. ♃. H. Native of Georgia and Carolina, on dry sandy hills. Crotalària perfoliàta, Lin. spec. 1003. Ráfnia, Willd. spec. 3. p. 949. Sophòra, Walt. car. 135. Podalýria, Michx. fl. 1. p. 263.—Dill. elth. f. 122. Flowers small, yellow.

Perfoliate-leaved Baptisia. Fl. Aug. Clt. 1793. Pl. 3 feet.

* * *Leaves trifoliate.*

2 B. LANCEOLA'TA (Ell. sketch. 167.) leaves sessile, and are, as well as the branches, rather pubescent; leaflets stalked, cuneate-lanceolate, obtuse; flowers axillary, solitary, on short pedicels, upper ones disposed in a raceme. ♃. H. Native of Carolina and Georgia, in sandy places. Sophòra lanceolàta, Walt. car. 135. P. uniflòra, Mich. fl. bor. amer. 1. p. 263. Flowers yellow.

Lanceolate-leafletted Baptisia. Pl. 1 foot.

3 B. LEUCOPHÆ'A (Nutt. gen. amer. 1. p. 282.) leaves sessile, and are, as well as the stem, somewhat villous; leaflets rhomboid-obovate; stipulas and bracteas ovate, acute, broad, leafy; racemes many-flowered, lateral, with the flowers leaning to one side; legumes acuminated. ♃. H. Native of Georgia and Louisiana, abundant about St. Lewis. Flowers cream-coloured. Plant divaricate, but not very high, dichotomous.

Cream-coloured-flowered Baptisia. Pl. 1 foot.

4 B. BRACTEA'TA (Muhl. ex Ell. sketch. 169.) leaves stalked, and are, as well as the branches, pubescent; leaflets broad-lanceolate, rather obtuse; stipulas longer than the petioles; racemes axillary, reclinate; bracteas large, broad-subulate, permanent. ♃. H. Native of Georgia, in a bog about Writhsborough. Flowers rather large, greyish.

Bracteate Baptisia. Pl. 1 to 2 feet.

5 B. AUSTRA'LIS (R. Br. in Ait. hort. kew. 3. p. 6.) stem branched, diffuse; leaves stalked, and are, as well as the branches, smooth; leaflets oblong-cuneated, obtuse, 4 times longer than the petiole; stipulas lanceolate, acute, twice the length of the petioles; racemes few-flowered, elongated, shorter than the branches; calyx quadrifid, lower segment obtuse; legumes apiculated. ♃. H. Native of Western Carolina, along rivulet banks. D. C. leg. t. 4. f. 4. germ. Sophòra austràlis, Sims, bot. mag. 509. Podalýria austràlis, Vent. cels. t. 56. P. cærùlea, Pursh, fl. sept. amer. 1. p. 307. Flowers blue.

Southern Baptisia. Fl. June, July. Clt. 1758. Pl. 2½ feet.

6 B. CONFU'SA (Sweet, fl. gard. ined.) stem branched; leaves stalked, and are, as well as the branches, smooth; leaflets oblong-cuneated or obovate; stipulas linear-lanceolate, twice the length of the petioles; racemes elongated; flowers alternate, bracteate; bracteas permanent, lanceolate, acuminated, a little longer than the pedicels. ♃. H. Native of North America. Like *B. austràlis.* Flowers dark-blue.

Confused Baptisia. Fl. Ju. July. Clt. 1758.? Pl. 1 to 2 ft.

7 B. EXALTA'TA (Sweet, fl. gard. 97.) stem erect, branched; leaves ternate, stalked; leaflets lanceolate-obovate, 5 times longer than the petioles; stipulas lanceolate, acuminated, 3 times longer than the petioles; racemes many-flowered, elongated, twice the length of the branches; flowers scattered, distinct; calyx 4-cleft, lower division acute. ♃. H. Native of North America. Flowers deep-blue.

Exalted Baptisia. Fl. June, Aug. Clt. 1812. Pl. 3 to 4 ft.

8 B. MÌNOR (Lehm. in nov. act. bom. vol. 14. This

plant we believe has not yet been described, and as we have no specimen the description must remain a desideratum. ♃. H. Native of North America.

Small Baptisia. Fl. June, July. Clt. 1828. Pl. 1 foot.

9 B. MÓLLIS (Nutt. gen. amer. 1. p. 281.) leaves stalked, and are, as well as the stem and calyxes, minutely pubescent; leaflets somewhat rhomboid-lanceolate; stipulas foliaceous, linear-lanceolate; racemes spicate, terminal; teeth of calyx acute. ♃. H. Native of Upper Carolina, principally on the Catawba ridge, where it occurs abundantly in the open bushy forests. Stems purplish, decumbent. Leaves often 2 inches long and 1 broad. Flowers blue. Legume subulate, apiculated.

Soft Baptisia. Fl. June, July. Clt. 1824. Pl. decumbent.

10 B. VILLÒSA (Ell. sketch. 168.) leaves nearly sessile, pubescent; stems and calyxes clothed with appressed pubescence; leaflets lanceolate, obtuse; stipulas linear, longer than the petioles; racemes terminal. ♃. H. Native of Virginia and North Carolina, in low sandy grounds. Sophòra villòsa, Walt. Podalýria villòsa, Michx. fl. bor. amer. 1. p. 264. Flowers yellow, resembling a lupine. Calyx semi 4-cleft. Legume oblong, obtuse, cylindrical.

Villous Baptisia. Fl. June, July. Clt. 1811. Pl. 1 to 2 ft.

11 B. A'LBA (R. Br. in Ait. hort. kew. 3. p. 6.) leaves stalked, and are, as well as the branches, glabrous; leaflets elliptic-oblong, obtuse; stipulas deciduous, subulate, shorter than the petioles; racemes terminal; ovaries glabrous. ♃. H. Native in the western parts of Virginia and Carolina, on the banks of rivers. Sophòra álba, Walt. car. 134. Podalýria álba, Willd. spec. 2. p. 503. Sims, bot. mag. 1177. Crotalària álba, Lin. spec. 1006. Branches divaricate. Flowers white.

White-flowered Baptisia. Fl. June, July. Clt. 1724. Pl. 2 ft.

12 B. TINCTÒRIA (R. Br. in Ait. hort. kew. 3. p. 6.) leaves stalked, and are, as well as the branches, glabrous, upper ones nearly sessile; leaflets roundish-obovate; stipulas setaceous, almost obsolete; racemes terminal. ♃. H. Native from Canada to Carolina, on dry hills in woods. Flowers yellow, with wings each furnished with a callosity or a lateral tooth. This plant was formerly used as Indigo by dyers. The root and herbage have been found to possess antiseptic and subastringent properties. They have also a cathartic and emetic effect. Barton, 2. p. 57.

Dyers' Baptisia or Wild Indigo. Fl. June, July. Clt. 1759. Pl. 1½ foot.

Cult. This genus contains very ornamental border flowers of easy culture. The species are usually increased by dividing the plants at the root.

XI. CYCLO'PIA (from κυκλος, *kyklos*, a circle, and πους, *pous*, a foot; in allusion to the replicate circle, which is found round the base or foot of the pods). Vent. dec. p. 8. R. Br. in Ait. hort. kew. ed. 2. vol. 3. p. 5.—Ibbetsònia, Sims, bot. mag. t. 1259.

LIN. SYST. *Decándria, Monogýnia.* Calyx 5-cleft, unequal, thrust in at the base, the lowest tooth longest. Vexillum large, with longitudinal wrinkles. Wings having a transverse plait. Keel inflexedly mucronate. Stamens deciduous. Stigma bearded. Legume compressed, pedicellate, 1-celled, many-seeded, coriaceous.—Smooth broom-like shrubs, with sessile trifoliate leaves, and axillary, bracteate, yellow flowers.

1 C. GENISTOÌDES (R. Br. l. c.) smooth; leaflets awl-shaped; calyx mutic; bracteas oblong-ovate. ♄. F. Native of the Cape of Good Hope. Sims, bot. mag. 1259. Gompholòbium maculàtum, Andr. bot. rep. t. 427. Podalýria genistoides, Thunb. Sophòra, Berg. cap. 140. Sophòra genistoides, Burm. cap. 12.—Pluk. phyt. t. 413. f. 5.

Genista-like Cyclopia. Fl. July, Aug. Clt. 1787. Shrub 8 ft.

2 C. GALIOÌDES (D. C. prod. 2. p. 101.) plant smooth below, but the branches are hairy at the top, as well as the upper leaves; leaflets awl-shaped, mucronate; segments of calyx ending in an acuminated mucrone; bracteas ovate-lanceolate. ♄. G. Native of the Cape of Good Hope. Sophòra galioìdes, Berg. cap. 141. —Pluk. alm. t. 413. f. 4. Aspálathus callòsa, Burm. fl. cap. prod. 21.

Galium-like Cyclopia. Fl. July, Aug. Clt. 1820. Shrub 4 ft.

3 C. TENUIFÒLIA (Lehm. in cat. sem. hort. hamb.) smooth; leaflets setaceous, acute; segments of the calyx obtuse; bracteas roundish, keeled. ♄. G. Native of the Cape of Good Hope.

Fine-leaved Cyclopia. Fl. July, Aug. Clt. 1826. Shrub 2 to 4 feet.

4 C. LATIFÒLIA (D. C. in ann. sc. nat. 4. p. 98.) smooth; leaflets almost sessile, elliptic or ovate, somewhat mucronulate; lobes of calyx acute. ♄. G. Native of the Cape of Good Hope. Genísta buxifòlia, Burm. cap. prod. 21. Upper leaves simple. Flowers few, pedicellate; pedicels bibracteate at the base.

Broad-leaved Cyclopia. Fl. July, Aug. Clt. 1820. Shrub 3 to 6 feet.

Cult. An elegant genus of greenhouse shrubs, which will thrive in an equal mixture of loam and peat, and very young cuttings, planted in a pot of sand with a bell-glass placed over them, will root.

XII. PODALY'RIA (*Podalyrius* was the son of Æsculapius in mythology). Lam. ill. t. 327. exclusive of some species. Salisb. par. 7. R. Br. in hort. kew. ed. 2. vol. 3. p. 6. but not of Michx.—Aphòra, Neck. elem. no. 1370.

LIN. SYST. *Decándria, Monogýnia.* Calyx 5-cleft, with unequal lobes, thrust in at the base. Vexillum large, covering the keel and wings. Stamens 10, permanent, somewhat connate at the base. Stigma capitate. Legume sessile, ventricose, many-seeded.—Cape shrubs, usually clothed with silky hairs, with simple alternate leaves, and with narrow adpressed stipulas. Peduncles axillary, 1 or many-flowered. Bracteas caducous. Flowers purplish, rose-coloured or white.

* *Peduncles 1-flowered.*

1 P. BURCHE'LLII (D. C. prod. 2. p. 101.) leaves elliptic or oblong, obtuse or emarginate, pubescent above, and rather hairy beneath; peduncles very short, 1-flowered, and are, as well as the calyxes, very hairy; wings of flower longer than the calyx. ♄. G. Native of the Cape of Good Hope. Burch. cat. no. 3475. Sophòra cordàta, Thunb. prod. 79.? Hypocalýptus cordàtus, Thunb. fl. cap. 569.? Flowers of a rose-purplish colour. Calyx clothed with straight rufous hairs.

Burchell's Podalyria. Fl. May, July. Clt. 1816. Sh. 4 to 8 ft.

2 P. HIRSU'TA (Willd. spec. 2. p. 505.) leaves villous, stalked, upper ones ovate, lower ones roundish; peduncles 1-flowered; segments of calyx villous, length of wings. ♄. G. Native of the Cape of Good Hope. Sophòra hirsùta, Ait. hort. kew. 2. p. 46. Flowers red.

Hairy Podalyria. Fl. July, Aug. Clt. 1774. Shrub 2 to 4 ft.

3 P. SERI'CEA (R. Br. in Ait. hort. kew. ed. 2. vol. 3. p. 6.) leaves oblong-ovate, mucronate, silky on both surfaces; pedicels 1-flowered, much shorter than the leaves, and are, as well as the calyxes, clothed with appressed silky pubescence. ♄. G. Native of the Cape of Good Hope. Sims, bot. mag. t. 1923. Sophòra serícea, Andr. bot. rep. t. 440. Hypocalýptus sericeus, Thunb. fl. cap. 569.? Flowers pale-purple.

Silky Podalyria. Fl Jan. Oct. Clt. 1778. Shrub 4 to 6 feet.

4 P. CUNEIFÒLIA (Vent. cels. 99.) leaves cuneiform, obtuse, somewhat emarginate, silky on both surfaces, nearly sessile;

pedicels 1-flowered, one-half shorter than the leaves, and are, as well as the calyxes, clothed with appressed silky pubescence. ♄. G. Native of the Cape of Good Hope. Flowers white.

Wedge-leaved Podalyria. Fl. May, Aug. Clt. 1804. Shrub 4 to 6 feet.

5 P. MYRTILLIFÒLIA (Willd. spec. 2. p. 505.) leaves oblong-obovate, bluntish, silky on both surfaces; pedicels 1-flowered, about equal in length to the leaves, and are, as well as the calyxes, clothed with silky appressed pubescence. ♄. G. Native of the Cape of Good Hope. Sophòra myrtillifòlia, Retz. obs. 1. p. 56. Sophòra rotundifòlia, Berg. cap. 138. Flowers purple, with a paler keel.

Whortle-berry-leaved Podalyria. Fl. April, Oct. Clt. 1795. Shrub 4 to 6 feet.

6 P. BUXIFÒLIA (Willd. spec. 2. p. 505?) leaves oval or obovate, bluntish, glabrous above, and silky beneath; pedicels 1-flowered, about the length of the leaves; calyxes clothed with rusty villi. ♄. G. Native of the Cape of Good Hope. Ker. bot. reg. 869. Sophòra buxifòlia, Retz. obs. 1. p. 35. Flowers purple, with paler wings.

Box-leaved Podalyria. Fl. May, July. Clt. 1790. Shrub 2 to 4 feet.

7 P. STYRACIFÒLIA (Sims, bot. mag. 1580.) leaves oval or obovate, mucronate, pubescent, reticulated beneath; pedicels 1-flowered, about equal in length to the leaves; calyx clothed with rusty tomentum; vexillum reflexed, broadly emarginate. ♄. G. Native of the Cape of Good Hope. P. calyptràta, Willd. spec. 2. p. 504. Sophòra calyptràta, Retz. obs. 1. p. 36. Hypocalýptus calyptràtus, Thunb. fl. cap. 568. Flowers pale-purple.

Styrax-leaved Podalyria. Fl. May, July. Clt. 1792. Sh. 6 ft.

8 P. GLAU'CA (D. C. prod. 2. p. 102.) leaves oval, glabrous above, and silky beneath; pedicels 1-flowered, much longer than the leaves. ♄. G. Native of the Cape of Good Hope. Hypocalýptus glaùcus, Thunb. fl. cap. 569. P. buxifòlia, Lam. dict. 5. p. 445. ill. 327. f. 4. Flowers pale-purple.

Glaucous Podalyria. Fl. May, July. Clt. 1810. Shrub 4 to 6 feet.

9 P. CORU'SCANS (Reichb. ex Spreng. syst. append. p. 171.) leaves nearly sessile, crowded, ovate-lanceolate, acute, clothed on both surfaces with silky villi; flowers axillary, nearly sessile. ♄. G. Native of the Cape of Good Hope.

Glittering Podalyria. Fl. July, Aug. Shrub 2 to 4 feet.

* * *Peduncles 2-flowered.*

10 P. ARGE'NTEA (Salisb. par. lond. t. 7.) leaves oval, acute, silky on both surfaces, marginate; peduncles 2-3-flowered, longer than the leaves; calyxes tomentose, rather scabrous. ♄. G. Native of the Cape of Good Hope. P. biflòra, Sims, bot. mag. 753. Sophòra biflòra var. Retz. obs. 1. p. 36. Burm. fl. cap. prod. p. 12. Lam. ill. 327. f. 3. Hypocalýptus pedunculàtus, Thunb. fl. cap. 569. Flowers white, according to Sims, or purplish at the margin of the vexillum, or pale-pink.

Silvery Podalyria. Fl. Feb. June. Clt. 1789. Shrub 3 to 6 ft.

11 P. LIPARIOÌDES (D. C. prod. 2. p. 102.) leaves oval, acutish, silky on both surfaces; peduncles 2-flowered, much longer than the leaves; calyx clothed with appressed silky down. ♄. G. Native of the Cape of Good Hope. Very like the preceding species, but differs in the leaves being much more silky, by the calyx being clothed with appressed pubescence, not hairy, and by the corolla being flesh-coloured.

Liparia-like Podalyria. Fl. Feb. June. Clt. 1820. Shrub 3 to 6 feet.

12 P. SUBBIFLÒRA (D. C. prod. 2. p. 102.) leaves oval, mucronulate, pubescent on both surfaces, and reticulated beneath; peduncles 1-2-flowered, longer than the leaves; calyxes clothed with rusty appressed pubescence. ♄. G. Native of the Cape of Good Hope. Sophòra biflòra, var. Rets. l. c. Flowers pale-purple. Perhaps the three last species are merely varieties of one plant.

Somewhat-two-flowered Podalyria. Fl. Feb. July. Clt. 1810. Shrub 3 to 6 feet.

13 P. CORDA'TA (R. Br. in hort. kew. ed. 2. vol. 3. p. 8.) leaves cordate, roundish, nearly sessile, very villous; peduncles 2-flowered, calyxes villous, with the segments shorter than the wings. ♄. G. Native of the Cape of Good Hope. Flowers purplish.

Cordate-leaved Podalyria. Fl. May, July. Clt. 1794. Shrub 3 to 4 feet.

14 P. RACEMULÒSA (D. C. prod. 2. p. 102.) leaves oval, mucronulate, clothed with appressed silky pubescence on both surfaces; peduncles twice the length of the leaves, 2-4-flowered; calyxes clothed with appressed, silky, rusty pubescence. ♄. G. Native of the Cape of Good Hope. Lobes of calyx bluntish. Corolla pale-purple.

Racemulose-flowered Podalyria. Shrub 3 to 4 feet.

15 P. PARVIFLÒRA (D. C. prod. 2. p. 102.) leaves ovate, acute, tomentose; peduncles very short, 1-2-flowered; legume ovate, tumid. ♄. G. Native of the Cape of Good Hope. Crotalària parviflòra, Thunb. fl. cap. 571.

Small-flowered Podalyria. Shrub.

Cult. A genus of elegant silky shrubs. The species thrive best in a mixture of loam and peat, and young cuttings will root if planted in a pot of sand, with a bell or hand-glass placed over them, but they are usually increased by seeds.

XIII. CHORIZE'MA (derived from χορος, *choros*, a dance, and ζεμα, *zema*, a drink. This plant was originally discovered by Labillardiere upon the south-west coast of New Holland, at the foot of the mountains near a spot where, after being tantalized with finding many salt springs, his party had just met with an ample supply of fresh water. This welcome refreshment, of which he speaks feelingly in his book, seems to have suggested the name). Labill. voy. 1. p. 105. R. Br. in hort. kew. p. 8. D. C. prod. 2. p. 102. Chorozemàtis spec. Smith in Lin. soc. trans. 9. p. 251.

LIN. SYST. *Decándria, Monogýnia.* Calyx half 5-cleft, bilabiate, upper lip bifid, lower one 3-parted. Keel of flower ventricose, shorter than the wings. Style short, hooked, crowned by an obliquely-obtuse stigma. Legume ventricose, 1-celled, many-seeded, sessile or subsessile. Australian subshrubs, with alternate, simple, sinuately-toothed, or entire leaves.

1 C. ILICIFÒLIA (Labill. voy. 1. p. 105. t. 21.) leaves pinnatifidly-toothed, spinose, oblong-lanceolate, with an entire acumen, which is longer than the teeth; bracteoles at the top of the pedicels. ♄. G. Native of New Holland, on the south-west coast. A diffuse spreading shrub, pubescent on the branches and lower surface of the leaves. Flowers red, with the vexillum yellow at the base.

Holly-leaved Chorizema. Fl. Mar. Oct. Clt 1803. Shrub 1 foot, straggling.

2 C. NA'NA (Sims, bot. mag. 1032.) leaves sinuately-toothed, spiny, oblong, with an entire acumen, which is equal in length with the teeth, rather obtuse; bracteoles below the apex of the pedicel. ♄. G. Native with the first. Pultenæ'a nàna, Andr. bot. rep. 434. Flowers red, with the vexillum yellow at the base.

Dwarf Chorizema. Fl. Mar. Oct. Shrub straggling.

3 C. RHÓMBEA (R. Br. in hort. kew. 3. p. 9.) leaves quite entire, flat, mucronate, lower ones rhomboidal-orbicular, upper ones elliptic-lanceolate; peduncles few-flowered; legumes large, oblong, reticulated. ♄. G. Native with the two preceding. Sweet, fl. aust. 40. Flowers with dark copper-coloured wings

and keel, and with the vexillum orange-coloured, with a yellow base.

Rhomboid-leaved Chorizema. Fl. April, July. Clt. 1803. Shrub procumbent.

4 C. PLATYLOBIOÌDES (D. C. prod. 2. p. 103.) leaves quite entire, flat, ovate, acuminated, reticulated, smooth above, younger ones as well as calyxes clothed with hoary villi; flowers 2-3, axillary, nearly sessile; ovary very villous. ♄. G. Native of New Holland. Platylòbium reticulàtum, Sieb. pl. exsic. nov. holl. no. 371. Calyx 5-cleft. Stamens 10, distinct. Perhaps a proper genus.

Platylobium-like Chorizema. Shrub 2 feet.

5 C. BAXTE'RI (Graham, in edinb. new phil. journ. june, 1831.) leaves somewhat crenate, oblong-lanceolate, farinose above, but beset with adpressed villi beneath; flowers terminal, disposed in verticillate heads. ♄. G. Native of New Holland. Mirbèlia Baxtèri Hortulan. Lindl. bot. reg. 1434. Stèms numerous, much branched, diffuse, slender, covered with adpressed hairs. Corolla yellow. Vexillum reniform, with a dark base.

Baxter's Chorizema. Fl. April, Ju. Clt. 1824. Sh. diffuse.

6 C. HENCHMA'NNII (R. Br. in bot. reg. 986.) plant hoary; leaves acicular; flowers axillary. ♄. G. Native of New Holland. Flowers beautiful scarlet.

Henchmann's Chorizema. Fl. April, Ju. Clt. 1824. Shrub 2 to 3 feet.

Cult. A genus of pretty little shrubs. An equal mixture of loam, peat, and sand will suit the species. Young cuttings, planted in a pot of sand with a bell-glass placed over them, will strike root. Seeds of many of the species ripen in abundance, by which the plants may easily be increased.

XIV. PODOLO'BIUM (from πους ποδος, *pous podos*, a foot, and λοβος, *lobos*, a pod; in allusion to the legume standing on a stalk within the calyx). R. Br. in hort. kew. ed. 2. vol. 3. p. 9. D. C. Leg. mem. V. Chorozemàtis, spec. Smith.

LIN. SYST. *Decándria, Monogýnia.* Calyx 5-cleft, bilabiate, upper lip bifid, lower lip 3-parted. Carina compressed, length of wings, and about equal to the wide vexillum. Ovary 4-seeded. Style ascending. Stigma simple. Legume pedicellate, linear-oblong, rather ventricose, smooth inside.—Small shrubs, with the habit of *Chorizèma.*

§ 1. *Leaves opposite, lobed, spiny.—False Chorizèmas.*

1 P. TRILOBA'TUM (R. Br. l. c. Sims, bot. mag. 1477.) leaves opposite, spiny-toothed, somewhat 3-lobed, with a transverse base; lateral lobes much shorter than the terminal one, which is entire or toothed; ovary silky. ♄. G. Native of New South Wales. Chorozèma trilobàtum, Smith, in Lin. trans. 9. p. 253. Pultenæ'a ilicifòlia, Andr. bot. rep. 320. Racemes axillary, shorter than the leaves. Flowers yellow, with the keel and vexillum red at the base. Leaves coriaceous, usually pubescent beneath.

Three-lobed-leaved Podolobium. Fl. April, July. Clt. 1792. Shrub 1 to 2 feet.

2 P. STAUROPHY'LLUM (Sieb. pl. exsic. nov. holl. no. 393.) leaves opposite, trifid; lobes about equal, entire, spiny at the apex; ovary smooth. ♄. G. Native of New Holland, on the eastern coast. Lindl. bot. reg. 959. P. aquifòlium, Lodd. cat. Leaves coriaceous, quite smooth. This plant is sometimes confused with the preceding in herbaria.

Cross-leaved Podolobium. Fl. Mar. April. Clt. 1822. Sh. 1 to 3 feet.

§ 2. *Leaves opposite, quite entire, unarmed.—False Davièsias.*

3 P. SCA'NDENS (D. C. prod. 2. p. 103.) leaves opposite, oblong-elliptic, quite entire, mucronate; ovary villous. ♄. G. Native of New Holland, on the eastern coast. Chorozèma scándens, Smith, in Lin. soc. trans. 9. p. 253. A smooth climbing shrub, with terminal racemes of flowers, and with the calyx clothed with adpressed pubescence. Wings equal in length to the carina, but shorter than the vexillum. Davièsia umbellàta, Sieb. pl. exsic. nov. holl. no. 392. but not of Smith. Flowers yellow.

Climbing Podolobium. Fl. June. Clt. 1824. Shrub cl.

4 P. HUMIFU'SUM; leaves opposite; ovate-elliptic, quite entire; stems procumbent; ovary villous. ♄. G. Native of New Holland. Davièsia humifùsa, Sieb. pl. exsic. nov. holl. no. 392. but not of Smith. Flowers yellow.

Trailing Podolobium. Fl. April, Ju. Clt. 1824. Sh. proc.

5 P. SERÍCEUM (D. C. prod. 2. p. 103.) leaves somewhat alternate, elliptic; racemes axillary, length of leaves; calyx silky; vexillum narrow; ovary bristly. ♄. G. Native of New Holland, at King George's Sound. Chorozèma seríceum, Smith, in Lin. trans. 9. p. 253. Shrub climbing, with the upper leaves opposite. Calyx campanulate. Flowers yellow.

Silky-calyxed Podolobium. Shrub cl.

§ 3. *Leaves alternate.—False Oxylòbiums.*

6 P. CORIA'CEUM (D. C. prod. 2. p. 103.) leaves alternate, roundish-elliptic, retuse, coriaceous; umbels axillary, stalked; calyx hairy. ♄. G. Native of New Holland, with the preceding species. Chorozèma coriàceum, Smith, l. c. An erect stiff shrub. Leaves with cartilaginous margins and reticulately veined above. Flowers yellow.

Coriaceous-leaved Podolobium. Fl. April, June. Clt. 1824. Shrub 1 to 2 feet.

7 P.? ACICULA'RE (D. C. in ann. sc. nat. 4. p. 98.) leaves alternate, linear, with a pungent taper-point, and with revolute edges, glabrous, reticulated with transverse veins above; branches and pedicels pubescent. ♄. G. Native of New Holland, on the eastern coast. A much-branched shrub, with stiffly spreading leaves, bearing small branches and leaves in the axillæ, hence the leaves appear ternate. Legume stipitate, ovate, 12-16-seeded, pubescent outside and smooth inside. Calyx 5-cleft, tapering to the base, bibracteolate. Perhaps a proper genus, but the corolla is unknown. Perhaps a species of *Oxylòbium.*

Acicular-leaved Podolobium. Shrub 1 foot.

Cult. An elegant genus of small shrubs. The species will thrive best in an equal mixture of peat, loam, and sand, and young cuttings will root if planted in a pot of sand, with a bell-glass placed over them. Seeds sometimes ripen, by which the plants may also be propagated. The plants grow much better and flower more freely if planted in the ground in a conservatory, than if grown in pots.

XV. OXYLO'BIUM (from οξυς, *oxys*, sharp, and λοβος, *lobos*, a pod; in allusion to the pods or legumes having a sharp point). Andr. bot. rep. 492. B. Br. in hort. kew. ed. 2. vol. 3. p. 9.

LIN. SYST. *Decándria, Monogýnia.* Calyx profoundly 5-cleft (f. 23. *a.*), somewhat bilabiate. Carina compressed, length of wings (f. 23. *b.*), but about equal in length to the broad vexillum. Stamens inserted in the torus or in the bottom of the calyx. Style ascending, crowned by a simple stigma (f. 23. *c.*). Legume sessile or subsessile, many-seeded, ventricose, ovate, acute. Small Australian shrubs, with 3 or 4 entire leaves in a whorl. Flowers disposed in corymbs, yellow.

1 O. ARBORE'SCENS (R. Br. l. c.) leaves linear-lanceolate;

pedicels having permanent bracteas at their apex; corymbs of flowers crowded; legume hardly longer than the calyx. ♄. G. Native of Van Diemen's Land. Ker. bot. reg. 392. Lodd. bot. cab. 163. Sims, bot. mag. 2442. Flowers yellow.

Arborescent Oxylobium. Fl. April, June. Clt. 1805. Shrub 3 to 6 feet.

2 O. ELLI'PTICUM (R. Br. l. c.) leaves oval-oblong, mucronate; pedicels having caducous bracteoles beneath their apex; corymbs crowded; legume twice the length of the calyx on a short stipe. ♄. G. Native of Van Diemen's Land. Gompholòbium ellípticum, Labill. nov. holl. spec. 1. p. 166 [illegible] 135. Callístachys ellíptica, Vent. malm. 115. Flowers yellow. Legume villous.

Elliptic-leaved Oxylobium. Fl. May, Sept. Clt. 1805. Shrub 2 to 3 feet.

3 O. RETU'SUM (R. Br. in bot. reg. 913.) leaves oblong, retuse, coriaceous, reticulated, glabrous; corymbs axillary, stalked, crowded, shorter than the leaves. ♄. G. Native of New Holland. Flowers orange-coloured. Chorozèma coriàceum, Smith. Podolòbium, D. C.?

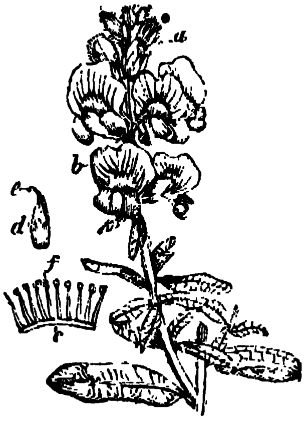
Retuse-leaved Oxylobium. Fl. April, May. Clt. 1823. Sh. 1 to 3 feet.

4 O. CORDIFÒLIUM (Andr. bot. rep. 492.) leaves ovate, cordate, rather pilose; umbels terminal, sessile. ♄. G. Native of New South Wales. Sims, bot. mag. 1544. Lodd. bot. cab. 937. Flowers of a coppery-red colour.

Cordate-leaved Oxylobium. Fl. April, Sept. Clt. 1807. Shrub 1 to 2 feet.

5 O. OBTUSIFÒLIUM (Sweet, fl. austr. 5.) leaves oblong-linear, obtuse, smooth above, but clothed with silky tomentum beneath, with revolute edges; corymbs loose, verticillately racemose; pedicels with permanent bracteoles at the apex; calyx clothed with silky tomentum; wings of corolla reflexed. ♄. G. Native of New Holland, at King George's Sound. Flowers with carina and wings crimson, and with the vexillum deep orange-coloured, and yellow at the base.

FIG. 23.



Obtuse-leaved Oxylobium. Fl. April, May. Clt. 1825. Shrub 1 to 3 feet.

6 O. SPINÒSUM (D. C. prod. 2. p. 104.) leaves broadly-ovate, with the middle nerve terminating in a long spine; stipulas spiny, short. ♄. G. Native of New Holland. Leaves 3 in a whorl, glabrous. Bracteoles 2, pressed to the base of the 5-cleft calyx. Keel, wings, and vexillum about equal in length.

Spiny Oxylobium. Fl. April, July. Clt. 1825. Sh. 1 to 2 ft.

7 O. PULTENE'Æ (D. C. leg. mem. 5. prod. 2. p. 104.) leaves 3 or 4 in a whorl, or alternate, linear, rather obtuse, with revolute margins, glabrous, but with the middle nerve as well as branches pubescent; flowers pedicellate, umbellate; pedicels furnished with deciduous bracteoles in the middle. ♄. G. Native of New Holland. Pultenæ'a sylvática, Sieb. pl. exsic. nov. holl. no. 403. Calyx 5-cleft, permanent, with the short tube girding the fruit, the lobes reflexed. Stamens and petals deciduous, hypogynous. Ovary sessile, containing 8 ovula. Funicle dilated into a strophiola. Perhaps a proper genus. Flowers dark-orange.

Pulteney's Oxylobium. Fl. Mar. Clt. 1824. Sh. 1 to 2 ft.

Cult. Elegant shrubs, requiring the same treatment as that recommended for *Podolòbium*, see p. 116.

XVI. CALLI'STACHYS (from καλλος, *callos*, beauty, and σταχυς, *stachys*, a spike; in allusion to the fine spikes of yellow flowers). Vent. malm. 115. D. C. prod. 2. p. 104.—Callistàchya, Smith, in Lin. trans. 9. p. 266.

LIN. SYST. *Decándria, Monogýnia.* Calyx bilabiate; upper lip bifid, lower one 3-parted. Vexillum erect, longer than the keel and wings, which are about equal in length. Stamens inserted in the disk. Style incurved. Stigma simple, acute. Legume stipitate, woody, dehiscent at the apex, young ones many-celled, but with the transverse dissepiments at length vanishing.—Elegant Australian shrubs, with entire leaves, which are either scattered or disposed in whorls, silky on the under surface, and with long terminal racemes of yellow flowers. Calyxes and fruit very villous.

1 C. LANCEOLA'TA (Vent. malm. t. 115.) leaves lanceolate, acuminated, scattered, opposite, or 3 or 4 disposed in a whorl. ♄. G. Native of New Holland, on the eastern coast. Ker. bot. reg. 216.

Lanceolate-leaved Callistachys. Fl. June, Aug. Clt. 1815. Shrub 3 to 4 feet.

2 C. OVA'TA (Sims, bot. mag. 1925.) leaves obovate, mucronulate, usually disposed 3 in a whorl. ♄. G. Native of New Holland.

Ovate-leaved Callistachys. Fl. June, Aug. Clt. 1815. Shrub 3 to 6 feet.

3 C. LINARIÆFÒLIA (Hortulan.) leaves linear-lanceolate, scattered, or disposed in whorls. ♄. G. Native of New Holland.

Toad-flat-leaved Callistachys. Fl. June, Aug. Clt. 1824. Shrub 3 to 4 feet.

4 C. CUNEA'TA (Smith, in Lin. trans. 9. p. 267.) leaves wedge-shaped, emarginate; peduncles axillary, solitary, longer than the leaves. ♃. G. Native of New Holland. An herbaceous dwarf plant. Calyx pilose. Flowers large, yellow, but with the keel purple. This species, according to Mr. R. Brown, should be removed from this genus, but its real situation in the order is uncertain.

Wedge-leaved Callistachys. Fl. Ju. Aug. Clt. 1824. Pl. 1 ft.

Cult. See *Podolòbium* for culture and propagation, p. 116.

XVII. BRACHYSE'MA (from βραχυς, *brachys*, short, and σημα, *sema*, a standard; the standard of the flower is very short). R. Br. in hort. kew. vol. 3. p. 10. D. C. prod. 2. p. 105.

LIN. SYST. *Decándria, Monogýnia.* Calyx 5-cleft, a little unequal, with a ventricose tube. Vexillum shorter than the wings and keel, which are compressed and about equal in length. Ovary with its pedicel girded by a little sheath at the base. Style filiform, elongated. Legume ventricose, many-seeded.—Elegant Australian, procumbent, or climbing shrubs, with alternate, oval, or ovate, entire, mucronate leaves, which are silky on the under surface, and axillary and terminal few-flowered racemes.

1 B. LATIFÒLIUM (R. Br. l. c.) leaves ovate, flat, silky beneath; calyx bractless at the base, 4-times shorter than the petals; vexillum oblong-obovate. ♄. G. Native of New Holland, on the south-west coast. Ker. bot. reg. 118. Sims, bot. mag. 2008. Flowers large, scarlet.

Broad-leaved Brachysema. Fl. April, July. Clt. 1803. Shrub procumbent or climbing.

2 B. UNDULA'TUM (Ker. bot. reg. 642.) leaves elliptic, undulated; calyx bracteolate under the base, 3-times shorter than the petals; vexillum oblong, cordate, convolute, and bluntish above. ♄. G. Native of New South Wales, in the interior of the country. Lodd. bot. cab. 778. Ker. bot. reg. 642. Flowers greenish-yellow, inconspicuous.

Waved-leaved Brachysema. Fl. Mar. May. Clt. 1820. Sh. pr.

Cult. For culture and propagation see *Podolòbium*, p. 116. however, the species of this genus are easiest propagated by layers.

XVIII. GOMPHOLO'BIUM (from γομφος, *gomphos*, a club, and λοβος, *lobos*, a pod; in reference to the shape of the pod being like that of a club or wedge). Smith, in Lin. trans. 4. p. 220. 9. p. 249. R. Br. in hort. kew. ed. 2. vol. 3. p. 11.

LIN. SYST. *Decándria, Monogýnia.* Calyx 5-parted, nearly equal. Carina of 2 concrete petals. Vexillum broad. Stigma simple. Legume many-seeded, nearly spherical, very blunt.—Australian stiff shrubs, with alternate, compound leaves, standing on short petioles. Pods glabrous both inside and outside. Pedicels furnished with 2 bracteoles in the middle, or at the base. Calyx usually finely fringed with wool. Flowers yellow.

1 G. GLAUCE'SCENS (Cung. in Fields' new south wales, p. 346.) leaves ternate; leaflets linear, mucronate, with revolute margins; branchlets angular, glabrous; keel of flower beardless; calyx length of corolla before the expansion of the vexillum. ♄. G. Native of New Holland, on the Blue Mountains.

Glaucescent Gompholobium. Fl. April, Jul. Clt. 1824. Sh. ½ ft.

2 G. BARBÍGERUM (D. C. prod. 2. p. 105.) leaves ternate; leaflets linear, acutish; stem erect; branches angular; keel bearded along the suture; vexillum large, longer than the calyx and keel. ♄. G. Native of New Holland. G. fimbriàtum, Sieb. pl. exsic. nov. holl. no. 36. but not of Smith. Flowers golden-yellow, about an inch in length, larger than those of *G. grandiflòrum.*

Bearded-keeled Gompholobium. Fl. April, Aug. Clt. 1824. Shrub 1 to 2 feet.

3 G. GRANDIFLÒRUM (Smith, in Lin. trans. 9. p. 249. exot. bot. t. 5.) leaflets 3, linear, acute; stem erect; branches angular; keel beardless; vexillum twice the length of the calyx and carina. ♄. G. Native of New Holland, on the eastern coast. Ker. bot. reg. 484. Flowers large, yellow. Leaflets hardly a line broad, but nearly an inch long.

Var, β, setifòlium (Sieb. pl. exsic. nov. holl. no. 363.) leaflets narrow-linear, somewhat revolute and bristle-formed. ♄. G. Native of New Holland, on the eastern coast.

Great-flowered Gompholobium. Fl. Mar. Sept. Clt. 1803. Shrub 1 to 3 feet.

4 G. VIRGA'TUM (Sieb. pl. exsic. nov. holl. no. 360.) leaflets 3, linear, obtuse; stem erect; branches nearly terete; carina of flower beardless; vexillum hardly longer than the calyx and keel. ♄. G. Native of New Holland, on the eastern coast. The habit of the plant is that of *G. latifòlium*, but the keel of the flower is beardless.

Twiggy Gompholobium. Fl. Mar. Dec. Clt. 1820. Shrub 1 to 3 feet.

5 G. LATIFÒLIUM (Smith, in Lin. soc. trans. 9. p. 249.) leaflets 3, cuneate-linear, or oblong-linear; stem erect; keel fringed; calyx reflexed when in fruit. ♄. G. Native of New Holland, on the eastern coast. R. Br. in hort. kew. 3. p. 11. Labill. nov. holl. t. 133. G. fimbriàtum, Smith, exot. bot. t. 58. G. psoraleæfòlium, Salisb. par. t. 6. Leaflets 1-2 lines broad, and 6-12 lines long. Flowers large, yellow.

Broad-leaved Gompholobium. Fl. Mar. Sept. Clt. 1803. Shrub 1 to 2 feet.

6 G. MARGINA'TUM (R. Br. l. c.) leaflets 3, obovate, marginated, flat; stipulas equal in length to the petioles; corolla length of calyx. ♄. G. Native of New Holland, on the southern coast.

Marginate-leaved Gompholobium. Fl. March, Sept. Clt. 1803. Shrub 1 foot.

7 G. PEDUNCULA'RE (D. C. prod. 2. p. 105.) leaflets 3, with somewhat revolute margins, lower ones obovate, mucronate, upper ones lanceolate-linear, acuminated; stipulas length of petioles; stems diffuse; pedicels much longer than the leaves, and bibracteolate at the apex; corolla longer than the calyx. ♄. G. Native of the eastern coast of New Holland. Stems somewhat herbaceous. Legume oval, rather compressed. This plant, along with the following species, will probably form a distinct genus.

Pedunculate-flowered Gompholobium. Fl. April, July. Clt. 1824. Pl. ½ foot.

8 G. TETRATHECOÌDES (Sieb. pl. exsic. nov. holl. 359.) leaflets 3. linear, with subrevolute margins; branches terete, hispid from short down; pedicels scarcely longer than the leaves; carina beardless, and is as well as the vexillum hardly longer than the calyx. ♄. G. Native of New Holland, on the eastern coast. Leaves on short stalks; leaflets 2 lines long.

Tetratheca-like Gompholobium. Fl. April, July. Clt. 1824. Shrub ½ to ¾ foot.

9 G. POLYMÓRPHUM (R. Br. in hort. kew. ed. 2. vol. 3. p. 11.) leaflets 3-5, linear, or oblong-cuneated, mucronate, with recurved margins; stem procumbent, weak, twining; stipulas shorter than the petioles; pedicels much longer than the leaves, bibracteolate, both at the base and the apex or in the middle. ♄. G. Native of New Holland, on the south-west coast. Vexillum large, scarlet on the inside with a yellow base, and purplish on the outside. G. grandiflòrum, Andr. bot. rep. 642. ex Sims, bot. mag. 1533.

Polymorphus Gompholobium. Fl. Mar. Aug. Clt. 1803. Shrub ½ to 1 foot.

* * *Leaves impari-pinnate.*

10 G. TOMENTÒSUM (Labill. nov. holl. 1. p. 106. t. 134.) leaves impari-pinnate, with 2-4 pairs of leaflets; leaflets awl-shaped-linear, mucronate, scabrous above; peduncles usually solitary; calyx hairy, shorter than the legume; keel ciliated, with silky hairs. ♄. G. Native of New Holland, on the south coast, and in Van Diemen's Land. R. Br. in hort. kew. 3. p. 12. Shrub tomentose.

Tomentose Gompholobium. Fl. April, Jul. Clt. 1803. Sh. 1 ft.

11 G. [illegible]ANA'TUM (Cung. mss. ex G. Don, in Loud. hort. brit. p. 163.) branches and leaves villous; leaves impari-pinnate; leaflets linear-subulate, with revolute edges; pedicels solitary, shorter than the leaves, terminal or axillary at the tops of the branches; keel bearded. ♄. G. Native of New Holland. Corolla twice the length of the calyx, of a coppery-yellow colour.

Woolly Gompholobium. Fl. Mar. Ju. Clt. 1824. Sh. ½ to 1 ft.

12 G. GLABRA'TUM (D. C. prod. 2. p. 106.) leaves impari-pinnate, with 2-3 pairs of linear-subulate leaflets, with revolute edges; peduncles usually solitary; calyx glabrous, one-half shorter than the legume. ♄. G. Native of New Holland. Branches lepidotted with tubercles. Leaflets approximate along the petiole. Legume ovate. Calyx glabrous on the outside, ciliated along the margins of the lobes with fine wool. Corolla unknown.

Smooth Gompholobium. Fl. April, Aug. Clt. 1820. Sh. ½ to 1 foot.

13 G. HETEROPHY'LLUM (Cung. mss.) leaves trifoliate or impari-pinnate, usually with 3-5 or 7 leaflets, which are obovate, lanceolate, or linear, all mucronate, terminal one broadest, perfectly glabrous; racemes short, terminal; pedicels rather longer than the bracteas, which are linear. ♄. G. Native of New Holland. Keel beardless? Flowers reddish.

Variable-leaved Gompholobium. Fl. April, June. Clt. 1823. Shrub ½ foot.

14 G. VENU'STUM (R. Br. in hort. kew. ed. 2. vol. 3. p. 12.) leaves impari-pinnate, with many pairs of leaflets; leaflets awl-

shaped, veiny, with revolute margins, and are as well as the calyxes glabrous; corymb stalked, many-flowered. ♄. G. Native of New Holland, on the south-west coast. Corolla purple.

Beautiful Gompholobium. Fl. April, July. Clt. 1803. Sh. 1 to 3 feet.

15 G. pinna'tum (Smith, in Lin. soc. trans. 9. p. 251.) leaves impari-pinnate, with many pairs of smooth leaflets; stem terete, flexuous, glabrous. ♄. G. Native of New Holland, near Port Jackson. Plant very small, and probably an annual.

Pinnate-leaved Gompholobium. Fl. April, July. Clt. 1820. Pl. ½ foot.

Cult. *Gompholòbium* is a genus of most elegant plants: its species thrive well in an equal mixture of loam, peat, and sand, but care must be taken not to give them too much water, as they are extremely tenacious of moisture, and difficult to preserve in a living state. Young cuttings will root freely if planted in a pot of sand, with a bell-glass placed over them, but some of the species produce seed in abundance, which is the best way of increasing them, as they make better plants from seeds than from cuttings.

XIX. BURTO'NIA (Burton, evidently the name of some botanist). R. Brown, in hort. kew. ed. 2. vol. 3. p. 13. D. C. prod. 2. p. 106.

Lin. syst. *Decándria, Monogýnia.* Calyx profoundly 5-cleft. Petals 5, deciduous, about equal in length, 2 of which are concrete into a keel on the back. Ovary 2-seeded. Style subulate, dilated at the base. Stigma obtuse, bearded. Legume roundish, ventricose. Seeds without a strophiola.—Australian subshrubs, with subulate leaflets or leaves; branches usually puberulous, and pedicels solitary. Flowers of all yellow.

1 B. sca'bra (R. Br. l. c.) leaflets 3, linear-subulate, scabrous, rather hooked at the points, and mutic; branches terete, pubescent. ♄. G. Native of New Holland, on the south-west coast. Gompholòbium scàbrum, Smith, in Lin. trans. 9. p. 250. Calyx smooth. Style beardless beyond the middle. Keel beardless.

Scabrous Burtonia. Fl. May, July. Clt. 1803. Sh. ½ to 1 ft.

2 B. mìnor (D. C. prod. 2. p. 106.) common petiole almost wanting; leaflets 3, glabrous, hooked, mucronate, erect; branches terete, hairy. ♄. G. Native of New Holland. Gompholòbium mìnus, Smith, in Lin. soc. trans. 9. p. 251. Flowers yellow, with the keel beardless.

Small Burtonia. Fl. Mar. July. Clt. 1812. Shrub ½ foot.

3 B. sessilifòlia (D. C. prod. 2. p. 106.) leaflets 3, sessile, or 3 leaflets ternately approximate, linear-subulate, smooth, mucronate, and somewhat hooked; branches terete, pubescently-hairy. ♄. G. Native of New Holland, on the eastern coast. Calyx smooth, but ciliated on the edges of the lobes. Vexillum deeply obcordate. Keel beardless. This plant hardly differs from the preceding species unless in the length of the leaves.

Sessile-leaved Burtonia. Fl. May, Jul. Clt. 1824. Sh. ½ to 1 ft.

4 B. confe'rta (D. C. prod. 2. p. 106.) leaves simple, crowded very much, linear-subulate, with revolute margins, and are as well as the branches smooth. ♄. G. Native of New Holland, on the southern coast. Calyx glabrous, with the lobes much acuminated. Leaves 6-8 lines long, usually incurved. The plant is in habit like *Dillwýnia*, but the calyx is that of *Burtònia*.

Crowded-leaved Burtònia. Shrub 1 foot.

Cult. See *Gompholòbium* for culture, propagation, and management.

XX. JACKSO'NIA (in honour of George Jackson, an acute Scotch botanist, once Librarian to A. B. Lambert, Esq. F.R.S. V.P.L.S. &c.). R. Br. in hort. kew. ed. 2. vol. 3. p. 12.

Lin. syst. *Decándria, Monogýnia.* Calyx 5-parted, nearly equal. Petals and stamens deciduous. Ovary 2-seeded. Style filiform and subulate, crowned by a simple stigma. Legume a little ventricose, ovate, or oblong; valves pubescent inside. Seeds without a strophiola.—Australian shrubs, and when in an adult state they are usually leafless; branches usually angular, and with the branchlets branched, very like leaves in form. Flowers of all yellow.

1 J. scopa'ria (R. Br. l. c.) arborescent, unarmed; branches angular; racemes terminal. ♄. G. Native of New South Wales. Lodd. bot. cab. 427. Habit nearly of *Genista monospérma*.

Broom Jacksonia. Fl. Ju. Aug. Clt. 1803. Sh. 2 to 6 ft.

2 J. spinòsa (R. Br. l. c.) shrubby; branches pubescent, dichotomous, and trichotomous, spreading, angular; flowers usually solitary; bracteoles at the tops of the pedicels, adpressed and very short. ♄. G. Native of New Holland, on the south-west coast. Gompholòbium spinòsum, Labill. nov. holl. 1. p. 107. t. 136.

Spinose Jacksonia. Fl. April, Sept. Clt. 1803. Sh. 2 to 4 ft.

3 J. hórrida (D. C. prod. 2. p. 107.) shrubby; branches angularly compressed, branched, spinescent, leaf-formed; racemes terminal; pedicels furnished with bracteoles in the middle. ♄. G. Native of New Holland, on the eastern coast. Branches terete, furnished with prominent angles; branchlets glabrous or pubescent at the flowers. Rachis angularly compressed.

Horrid Jacksonia. Shrub 1 to 3 feet.

4 J. furcella'ta (D. C. prod. 2. p. 107.) shrubby; branches terete; branchlets compressed and striated, forked, linear, unarmed; racemes terminal; pedicels furnished with bracteoles at the apex. ♄. G. Native of New Holland, on the eastern coast. Gompholòbium furcellàtum, Bonpl. nav. p. 30. t. 11. Branches and branchlets pubescent.

Forked-branched Jacksonia. Fl. April, Sept. Clt. 1824. Shrub 1 to 2 feet.

5 J. reticula'ta (D. C. prod. 2. p. 107.) shrubby; branches and branchlets terete; leaves lanceolate, pungent, reticulately-veined on both surfaces; flowers axillary, solitary. ♄. G. Native of New Holland, on the eastern coast. Davièsia reticulàta, Smith. in Lin. soc. trans. 9. p. 256. In this and the two preceding species the legumes are villous on the outside, and clothed with velvety pubescence on the inside.

Reticulated-leaved Jacksonia. Fl. April, Sept. Clt. 1820. Shrub 1 to 2 feet.

Cult. Loam and peat is the best mixture for the species of this genus, and young cuttings are easily struck in sand under a bell-glass, or ripened ones under a hand-glass.

XXI. VIMINA'RIA (from *vimen*, a twig; the appearance of the species is that of a bundle of naked twigs, being destitute of leaves). Smith, ann. bot. 1. p. 507. Lin. trans. 9. p. 261. R. Br. in hort. kew. ed. 2. vol. 3. p. 13. D. C. prod. 2. p. 107.

Lin. syst. *Decándria, Monogýnia.* Calyx 5-toothed, angular. Petals of unequal length. Style capillary, longer than the ovary, which is 2-seeded. Stigma simple. Legume valveless, ovate. Seeds without a strophiola.—Australian shrubs, with twiggy branches, with simple or trifoliate leaves on the young plants, but the adult plants are without leaves. Flowers disposed in racemes, yellow, with the pedicels destitute of bracteas.

1 V. denuda'ta (Smith, exot. bot. t. 27.) flowers racemose; teeth of calyx erect, short. ♄. G. Native of New Holland and Van Diemen's Land. Sims, bot. mag. 1190. Davièsia denudàta, Vent. choix. t. 6. Sophòra júncea, Schrad. sert. hann. t. 3.

Naked Viminaria. Fl. June, Sept. Clt. 1790. Sh. 2 to 4 ft.

2 V. LATERIFLO'RA (Link. enum. 2. p. 105.) flowers subracemose; teeth of calyx lanceolate, reflexed. ♄. G. Native of New Holland. Flowers larger than those of *V. denudata*. Leaves wanting. Fruit unknown.

Side-flowered Viminaria. Fl. June, Sept. Clt. 1824. Shrub 2 to 3 feet.

Cult. Elegant shrubs when in flower. For culture and propagation see *Jacksonia*, p. 119.

XXII. SPHÆROLO'BIUM (from σφαιρα, *sphaira*, a sphere, and λοβος, *lobos*, a pod; in allusion to the spherical legumes). Smith, ann. bot. 1. p. 509. Lin. trans. 9. p. 261. R. Br. in hort. kew. ed. 2. vol. 3. p. 14. D. C. prod. 2. p. 107.

LIN. SYST. *Decándria, Monogýnia.* Calyx 5-cleft, bilabiate, bractless at the base. Style furnished with a membrane at the apex, beardless. Stigma terminal. Legume spherical, 1-2-seeded, pedicellate.—Little Australian shrubs, with twiggy few-leaved branches, but the adult ones are perfectly leafless. Leaves simple. Flowers disposed in loose racemose spikes.

1 S. VIMI'NEUM (Smith, l. c.) tube of calyx a little shorter than the lips; style inclosed, arched at the base. ♄. G. Native of New Holland and Van Diemen's Land. Sims, bot. mag. 969. S. minus, Labill. nov. holl. t. 138. Flowers yellow.

Twiggy Sphærolobium. Fl. May, Aug. Clt. 1802. Sh. 1 ft.

2 S. ME'DIUM (R. Br. l. c.) tube of calyx one-half shorter than the lips. ♄. G. Native of New Holland, on the south-west coast. Flowers red.

Intermediate Sphærolobium. Fl. July, Aug. Clt. 1803. Sh. 1 to 3 feet.

Cult. The species of this genus are elegant when in flower; their culture and propagation are the same as that for *Jacksònia*, p. 119.

XXIII. AO'TUS (from α priv. and ωτα, *ota*, ears; in allusion to the want of appendages in the calyx, which in *Pultenæ'a* are very distinct, a genus which is most nearly allied). Smith, ann. bot. 1. p. 501. in Lin. trans. 9. p. 249. R. Br. in hort. kew. ed. 2. vol. 3. p. 14. D. C. prod. 2. p. 108.

LIN. SYST. *Decándria, Monogýnia.* Calyx 5-cleft, bilabiate, bractless at the base. Petals and stamens deciduous. Ovary 2-seeded. Style filiform. Legume 2-valved. Seeds without a strophiola.—Australian shrubs, with simple, linear-subulate leaves, revolute at the margins, alternate or nearly opposite, or 3 in a whorl. Flowers axillary, yellow.

1 A. VILLÒSA (Smith, l. c.) leaves smoothish on the upper surface; flowers axillary, disposed in racemose spikes along the branches. ♄. G. Native of New Holland. Calyx clothed with silky appressed villi. Legume pedicellate. Seeds covered with wrinkled dots.

Villous Aotus. Fl. April, June. Clt. 1790. Sh. 1 to 2 ft.

2 A. ERICOÌDES; leaves linear, very acute, hairy; flowers solitary, axillary, appearing in axillary racemose spikes along the branches; branches clothed with cinereous spreading hairs. ♄. G. Native of New Holland. Pultenæ'a ericoìdes, Vent. malm. t. 35. A. villòsa, Sims, bot. mag. 919. Pultenæa rosmarinifòlia, Sieb. pl. exsic. nov. holl. no. 387? A. villòsa var. α, ericoìdes, D. C. prod. 2. p. 108.

Heath-like Aotus. Fl. April, June. Clt. 1810. Sh. 1 to 2 ft.

3 A. FERRUGÍNEA (Labill. nov. holl. 1. t. 132.) leaves linear, obtuse, scabrous from tubercles above; flowers twin, axillary, rising along the branches; branches clothed with rusty down, when young with silky rusty down. ♄. G. Native of Van Diemen's Land. A. villòsa var. β, ferrugínea, D. C. prod. 2. p. 108.

Rusty Aotus. Fl. April, June. Clt. 1820. Sh. 2 to 4 feet.

4 A. VIRGÀTA (D. C. prod. 2. p. 108.) leaves scabrous from tubercles above; flowers axillary, disposed into ovate, capitate, terminal spikes. ♄. G. Native of New Holland. Pultenæ'a virgàta, Sieb. pl. exsic. nov. holl. no. 389. Branches grey from velvety pubescence. Leaves disposed 3 in a whorl. Bracteas wanting. Calyx clothed with appressed pubescence.

Twiggy Aotus. Fl. April, June. Clt. 1824. Sh. 1 to 2 feet.

Cult. Elegant little shrubs when in flower. For culture and propagation see next genus.

XXIV. DILLWY'NIA (in honour of Lewis Weston Dillwyn, F.R.S. F.L.S. whose labours on British *Confértoæ* are well known). Smith, ann. bot. 1. p. 510. Lin. trans. 9. p. 262. R. Br. in hort. kew. ed. 2. vol. 3. p. 15. D. C. prod. 2. p. 108.

LIN. SYST. *Decándria, Monogýnia.* Calyx 5-cleft, bilabiate, tapering at the base. Petals inserted in the middle of the tube of the calyx. Lamina of vexillum twice the breadth of the length, 2-lobed; lobes spreading. Ovary 2-seeded. Style hooked. Stigma capitate. Legume ventricose. Seeds strophiolate.—Australian subshrubs, with simple leaves and yellow flowers on short pedicels. Stipulas wanting or very small, deciduous.

SECT. I. DILLWYNIA'STRUM (see genus for derivation). Petals and stamens deciduous.

1 D. FLORIBU'NDA (Smith, exot. bot. t. 26.) flowers crowded, axillary, twin; leaves crowded, subulate, mucronulate, scabrous from tubercles. ♄. G. Native of New Holland, on the south and east coasts. D. ericifòlia, Sims, bot. mag. 1544.

Bundle-flowered Dillwynia. Fl. April, July. Clt. 1794. Sh. 2 to 6 feet.

2 D. ERICIFÒLIA (Smith, exot. bot. t. 25.) corymbs of flowers terminal; leaves subulate, pungent, scabrous from points, divaricate, scattered; branches pubescent. ♄. G. Native of New Holland, on the eastern coast. Pultenæ'a retórta, Wendl. hort. herrenh. 2. p. 13. t. 9.

Heath-leaved Dillwynia. Fl. March, July. Clt. 1794. Sh. 2 to 4 feet.

3 D. JUNIPE'RINA (Lodd. bot. cab. 401.) leaves nearly filiform, smooth, ending in a pungent mucrone, spreading, straight, serrated; heads of flowers terminal; pedicels bibracteate; branches twiggy, spreading, pubescent. ♄. G. Native of New Holland and Van Diemen's Land. Corolla orange-coloured, with the vexillum and wings streaked in their lower part with red.

Juniper-like Dillwynia. Fl. March, May. Clt. 1818. Sh. 1 to 3 feet.

4 D. GLABE'RRIMA (Smith in Lin. trans. 9. p. 263.) corymbs terminal; leaves filiform, erect, smooth, ending in a soft recurved mucrone. ♄. G. Native of New Holland, on the eastern coast. Sims, bot. mag. 944. Lodd. bot. cab. 582. Labill. nov. holl. 1. p. 109. t. 139. Legumes puberulous.

Very smooth Dillwynia. Fl. March, July. Cult. 1800. Sh. 2 to 4 feet.

5 D. PARVIFÒLIA (R. Br. in Sims, bot. mag. t. 1527.) corymbs terminal, few-flowered, rather capitate; leaves short, crowded in a decussate manner, and spreading; pedicels bibracteate; stigma capitate. ♄. G. Native of New Holland. Lodd. bot. cab. 559. D. microphy'lla, Sieb. l. c. no. 410 and 553.

Small-leaved Dillwynia. Fl. March, July. Clt. 1800. Sh. 1 to 3 feet.

6 D. ACICULA'RIS (Sieb. pl. exsic. nov. holl. no. 401.) racemes naked, terminal; branches and pedicels covered with adpressed canescent down; leaves ascicular, straight, rather mucronate, smooth. ♄. G. Native of New Holland. Leaves 8-10 lines long. Racemes 8-12-flowered. Calyx rather pubescent.

Acicular-leaved Dillwynia. Fl. April, June. Clt. 1826. Sh. 1 to 4 feet.

7 D. RU'DIS (Sieb. pl. exsic. nov. holl. no. 400.) racemes terminal, leafy; branches villous; leaves acicular, straight, rather mucronate, and scabrous from tubercles, glabrous. ♄. G. Native of New Holland. Flowers axillary, on short pedicels, approximate, and therefore disposed in racemose spikes. Bracteas 2, at the base of each pedicel, and 2 smaller along the pedicels, all deciduous. Leaves 5-6 lines long. Flowers yellow, but with the base of the vexillum purple.

Var. β, *brevifòlia* (D. C. prod. 2. p. 109.) leaves a little shorter, and distinctly mucronate. Sieb. l. c. no. 402.

Var. γ, *teretifòlia* (D. C. prod. l. c.) leaves evidently tubercled, glabrous; branches with a few hairs; calyx glabrous. D. teretifòlia, Sieb. l. c. no. 404.

Var. δ, *hispidula* (D. C. prod. l. c.) leaves distinctly tubercled; tubercles for the most part bearing tufts of hairs; calyx pubescent.

Rustic Dillwynia. Fl. April, June. Clt. 1824. Sh. 2 to 4 ft.

8 D. TENUIFÒLIA (Sieb. pl. exsic. nov. holl. no. 409.) flowers subterminal, and usually solitary; leaves linear, very slender, rather obtuse, straight; branches puberulous. ♄. G. Native of New Holland. Legume pubescent. Leaves much less stiff and acute than in the rest of the species.

Fine-leaved Dillwynia. Fl. April, June. Clt. 1824. Shrub 1 to 3 feet.

9 D. PHYLICOÌDES (Cung. in Field's new south wales, p. 347.) flowers corymbose, terminal, pedicellate; leaves linear, short, mucronate, erectly-spreading, with reflexed, somewhat twisted margins; calyxes and branches villous; stem reclinate. ♄. G. Native of New Holland, on hills about Bathurst. This species is nearly allied to *D. ericifòlia.*

Phylica-like Dillwynia. Fl. April, June. Clt. 1824. Shrub 2 to 3 feet.

10 D. SERI'CEA (Cung. l. c.) canescent; flowers usually twin, axillary; leaves linear, straight, rather terete. ♄. G. Native of New Holland, around Bathurst.

Silky Dillwynia. Fl. April, June. Clt. 1824. Sh. 2 to 3 feet.

SECT. II. XEROPE'TALUM (from ξηρος, *xeros*, dry, and πεταλον, *petalon*, a petal; in reference to the petals and stamens being permanent, even when dry). R. Br. in bot. mag. 2247. Petals and stamens permanent even when dry.

11 D. CINERA'SCENS (R. Br. ex Sims, bot. mag. t. 2247.) corymbs terminal, sessile; leaves filiform, spreading, ending in a short innocuous mucrone; branches and calyxes silky. ♄. G. Native of Van Diemen's Land. Lodd. bot. cab. 527. D. junipérina, Sieb. pl. exsic. nov. holl. no. 411. Mucrone of leaves straight.

Var. β, *recúrva*; leaves erect, mucrone of leaves somewhat recurved. R. Br. l. c.

Greyish Dillwynia. Fl. March, July. Clt. 1819. Sh. 2 to 4 ft.

† *A species not sufficiently known, and the genus to which it should be referred is extremely doubtful.*

12 D. GLYCINIFÒLIA (Smith in Lin. trans. 9. p. 264.) flowers disposed in racemes; leaves ovate and linear, reticulated, with revolute edges. ♄. G. Native of New Holland, at King George's Sound. Flowers purple. Style curved so much as to form a circle. Stems decumbent. Leaves pungent. Fruit unknown. Perhaps a species of *Chorizèma*, or perhaps a proper genus.

Glycine-leaved Dillwynia. Pl. procumbent.

Cult. The species of *Dillwynia* are very elegant shrubs when in flower, and deserve to be cultivated in every collection of greenhouse plants. They should be grown in an equal mixture of loam, sand, and peat, and the pots should be well drained with sherds. Young cuttings root freely in a pot of sand, with a bell-glass placed over them.

XXV. EUTA'XIA (from ευταξια, *eutaxia*, modesty; in allusion to the delicate and modest appearance of the plants when in bloom). R. Br. in hort. kew. ed. 2. vol. 3. p. 16. D. C. prod. 2. p. 109.

LIN. SYST. *Decándria, Monogýnia.* Calyx bilabiate, upper lip somewhat emarginate, lower lip trifid. Vexillum broader than long. Ovary 2-seeded. Style hooked. Stigma capitate. Legume a little ventricose. Seeds strophiolate.—Smooth Australian shrubs, with simple opposite leaves, and golden flowers.

1 E. MYRTIFÒLIA (R. Br. l. c.) leaves lanceolate or obovate-lanceolate, mucronate; pedicels axillary, twin; appendages of wings very short. ♄. G. Native of New Holland. Dillwýnia myrtifòlia, Smith in Lin. trans. 9. p. 263. D. obovàta, Labill. nov. holl. t. 140. Sims, bot. mag. 1274. Flowers numerous along the branches, elegant. Stipulas small.

Myrtle-leaved Eutaxia. Fl. Aug. Clt. 1803. Sh. 2 to 6 feet.

2 E. PU'NGENS (Sweet, fl. austr. 28.) leaves scattered or verticillate, acicular, somewhat recurved, ending in a pungent mucrone, glabrous, with revolute margins; peduncles few-flowered, axillary, crowded; ovary villous; branches and pedicels clothed with adpressed canescent down. ♄. G. Native of New Holland. Dillwýnia púngens, Cung. mss. Branches slender, thickly clothed with acerose leaves. Flowers crowded towards the tops of the branches, yellow, but with a dark-orange circle round the base of the vexillum.

Pungent-leaved Eutaxia. Fl. April, June. Clt. 1825. Shrub 2 to 4 feet.

Cult. The species of *Eutáxia* are very elegant plants when in flower. For culture and propagation see *Dillwýnia.*

XXVI. SCLEROTHA'MNUS (from σκληρος, *skleros*, hard, and θαμνος, *thamnos*, a shrub; rigid shrubs, with stiff hard leaves). R. Br. in hort. kew. ed. 2. vol. 3. p. 16. D. C. prod. 2. p. 109.

LIN. SYST. *Decándria, Monogýnia.* Calyx 5-cleft, bilabiate, bibracteate at the base. Carina of flower length of wings. Ovary 2-seeded, pedicellate. Style ascending, filiform. Stigma simple. Legume ventricose. Flowers yellow.

1 S. MICROPHY'LLUS (R. Br. l. c.) ♄. G. Native of New Holland, on the southern coast.

Small-leaved Sclerothamnus. Fl. May, July. Clt. 1803. Shrub 1 to 2 feet.

Cult. An elegant plant when in flower. For its culture and propagation see *Dillwýnia.*

XXVII. GASTROLO'BIUM (from γαστηρ, *gaster*, the belly, and λοβος, *lobos*, a pod; in reference to the pods being inflated). R. Br. in hort. kew. ed. 2. vol. 3. p. 16. D. C. prod. 2. p. 110.

LIN. SYST. *Decándria, Monogýnia.* Calyx 5-cleft, bilabiate, bractless. Petals about equal in length. Ovary 2-seeded, pedicellate. Style subulate, ascending. Stigma simple. Legume ventricose. Seeds strophiolate.—Australian shrubs, with simple leaves, disposed 4 in a whorl. Stipulas subulate, distinct. Flowers yellow, disposed in a terminal ovate raceme.

1 G. BÌLOBUM (R. Br. l. c.) ♄. G. Native of New Holland, on the south-west coast. Ker. bot. reg. t. 411. Lodd. bot. cab. 70. Turp. dict. sc. nat. with a figure. Leaves uncinate, wedge-shaped, retuse or emarginately 2-lobed, with a mucrone in the notch, silky on the under surface. Legume pedicellate, about equal in length to the tube of the calyx.

Two-lobed-leaved Gastrolobium. Fl. March, May. Clt. 1803. Shrub 1 to 2 feet.

Cult. A pretty plant when in flower. For its culture and propagation see *Pultenæ'a.*

XXVIII. EUCHI'LUS (from ευ, *eu*, well or good, and χειλος, *cheilos*, a lip; well-lipped, the upper lip of the calyx is very large). R. Br. in hort. kew. ed. 2. vol. 3. p. 17. D. C. prod. 2. p. 110.

Lin. syst. *Decándria, Monogýnia.* Calyx profoundly 5-cleft, bibracteolate at the base, bilabiate; lobes of the upper lip ovate and large, of the lower one setaceous. Carina length of wings. Ovary 2-seeded, pedicellate. Style subulate, ascending. Stigma simple. Legume compressed. Seeds strophiolate, with the lobes of the strophiola entire behind.—An Australian shrub, with opposite, simple, minutely-stipulate leaves. Flowers axillary, pedicellate. Pedicels furnished with 2 setaceous bracteoles at their base.

1 E. obcorda'tus (R. Br. l. c.) ♄. G. Native of New Holland, on the south-west coast. Ker. bot. reg. t. 403. Lodd. bot. cab. t. 60. Branches terete, canescent. Leaves obcordate or wedge-shaped, villous beneath. Flowers yellow, with a purplish keel.

Obcordate-leaved Euchilus. Fl. March, June. Clt. 1803. Shrub 1 to 3 feet.

Cult. A very elegant plant when in flower. For its culture and propagation see *Pultenæ'a.*

XXIX. PULTENÆ'A (in honour of William Pulteney, M.D. author of a view of the writings of Linnæus, and various other works of merit). Smith, ann. bot. 1. p. 501. Lin. trans. 9. p. 245. R. Br. in hort. kew. ed. 2. vol. 3. p. 17. D. C. mem. leg. v. prod. 2. p. 110.

Lin. syst. *Decándria, Monogýnia.* Calyx 5-cleft, bilabiate (f. 24. *a.*); lips equal in length, bibracteolate at the base; bracteoles sometimes adhering to the tube. Ovary sessile (f. 24. *d.*), 2-seeded. Style subulate, ascending (f. 24. *e.*). Stigma simple. Strophiola of seed with the lobes cut behind.—Small neat Australian shrubs, with simple alternate leaves. Stipulas usually concrete between the leaves. Flowers yellow, usually disposed in heads at the tops of the branches.

Sect. I. Hymenòta (from ὑμην, *hymen*, a membrane, ους ωτος, *ous otos*, an ear; in reference to the membranous stipulas). D. C. prod. 2. p. 110. Stipulas setaceous, scarious or membranous, upper ones usually concrete or dilated. Bracteoles conforming to the upper stipulas.

1 P. daphnoìdes (Smith, l. c.) heads of flowers terminal; leaves obovate-oblong, flat, quite glabrous, smooth, 3 times longer than broad, ending in a pungent mucrone. ♄. G. Native of New Holland, on the eastern coast. Andr. bot. rep. 98. Wendl. hort. herrenh. 3. t. 17. Sims, bot. mag. 1394. Leaves nearly an inch long.

Daphne-like Pultenæa. Fl. June, July. Clt. 1792. Shrub 2 to 3 feet.

2 P. obcorda'ta (Andr. bot. rep. t. 574.) heads of flowers terminal; leaves cuneate and obcordate, retuse, flat, quite glabrous, smooth, scarcely twice longer than broad, ending in a pungent mucrone. ♄. G. Native of Van Diemen's Land and New Holland, on the south coast. Leaves half an inch long. R. Br. in hort. kew. ed. 2. vol. 3. p. 18.

Obcordate-leaved Pultenæa. Fl. May, July. Clt. 1808. Sh. 1 to 3 feet.

3 P. bi'loba (R. Br. in bot. mag. 2091.) heads terminal, few-flowered; leaves cuneiform, dilated and 2-lobed at the apex, scabrous from tubercles on the upper surface, but silky beneath, ending in a short mucrone, and with the margins recurved. ♄. G. Native of New Holland, on the eastern coast. P. scàbra, R. Br. in hort. kew. ed. 2. vol. 3. p. 18. P. deltoìdea, Sieb. pl. exsic. nov. holl. no. 388. Flowers yellow, with a purplish keel.

Var. β, scàbra (Sieb. pl. exsic. nov. holl. no. 386.) branches and calyxes clothed with hairy down, not with adpressed villi. ♄. G. Native of New Holland. Leaves a little larger than those of the species.

Two-lobed-leaved Pultenæa. Fl. April, May. Clt. 1817. Shrub 1 to 3 feet.

4 P. ferrugi'nea (Rudge in Lin. trans. 11. p. 300. t. 23.) flowers axillary and terminal; leaves obovate, and appearing emarginate in consequence of the point being curved back, pilose. ♄. G. Native of New Holland, near Port Jackson. Stipulas subulate, dilated into a membrane. Leaves apparently dotted under a microscope. Branches villous. Ovary pilose. P. lanàta, Sieb. pl. exsic. nov. holl. no. 420.

Rusty-haired Pultenæa. Fl. April, June. Clt. 1810. Shrub 1 to 3 feet.

5 P. incurva'ta (Cung. in Field's new south wales, p. 346.) heads of flowers terminal, and are, as well as the branches, villous; leaves lanceolate, obtuse, concave, incurved. ♄. G. Native of New Holland, on the margins of peat bogs, on King's Table Land. A slender shrubby plant.

Incurved-leaved Pultenæa. Fl. May, June. Clt. 1823. Sh. 1 to 2 feet.

6 P. racemulòsa (D. C. prod. 2. p. 111.) flowers axillary, forming a leafy raceme; leaves obovate-elliptic, obtuse, smooth beneath, but scabrous above; branches hairy-pubescent. ♄. G. Native of New Holland. The leaves appear full of dots under a microscope, hardly 2 lines long. Like *P. ferruginea*, but differs from it in the disposition of the flowers, as well as from all the rest. Sieb. pl. exsic. nov. holl. no. 594.

Racemulose-flowered Pultenæa. Fl. April, June. Clt. 1820. Shrub 1 to 3 feet.

7 P. parviflòra (Sieb. pl. exsic. nov. holl. no. 399.) heads terminal, few-flowered; leaves obovate-cuneated, almost veinless, glabrous, younger ones clothed with adpressed villi, as well as the branches, all terminating in a short, callose, somewhat recurved point. ♄. G. Native of New Holland. Stipulas rufous, oblong, membranous, adpressed, a line or more long. Leaves 2-3 lines long.

Small-flowered Pultenæa. Fl. April, July. Clt. 1824. Sh. 1 to 3 feet.

8 P. stri'cta (Sims, bot. mag. 1588.) heads of flowers terminal; leaves obovate, mucronate, quite glabrous; stem straight; calyxes and legumes pilose. ♄. G. Native of Van Diemen's Land. Lodd. bot. cab. 974.

Straight Pultenæa. Fl. April, July. Clt. 1803. Sh. 1 to 3 ft.

9 P. elli'ptica (Smith in Lin. trans. 9. p. 246.) heads of flowers terminal, roundish, and with oblong ones along the branches; stem straight; leaves elliptic or obovate-oblong, concave, rather pilose; stipulas 2, joined in one; bracteas and calyxes membranous and ciliated; legume glabrous. ♄. G. Native of New Holland, on the eastern coast. Rudge in Lin. trans. 1. t. 24. Sieb. pl. exsic. nov. holl. no. 394. P. tuberculàta, Pers. ench. 1. p. 454.

Var. β, oblongifòlia (Sieb. l. c. no. 397.) leaves oblong.

Elliptic-leaved Pultenæa. Fl. April, June. Clt. 1810. Sh. 1 to 3 feet.

10 P. plumòsa (Sieb. pl. exsic. nov. holl. no. 385.) heads of flowers terminal, roundish; stem straight, clothed with velvety villi between the leaves; leaves oblong, concave, veinless, lower ones nearly glabrous, superior ones, especially the floral ones, clothed with silky velvety villi. ♄. G. Native of New Hol-

land. Stipulas brown, membranous, erect, adpressed. Like *P. elliptica.*

Feathered Pultenæa. Fl. April, Jul. Clt. 1824? Sh. 1 to 2 ft.

11 P. thymifòlia (Sieb. pl. exsic. nov. holl. no. 398.) heads of flowers terminal, roundish; stem branched, and rather villous; leaves elliptic-oblong, rather concave and veinless, stalked, for the most part glabrous, floral ones clothed with soft villi, oval, and on longer petioles. ♄. G. Native of New Holland. Calyx clothed with silky, long, white hairs.

Thyme-leaved Pultenæa. Fl. April, June. Clt. 1810. Sh. 1 to 3 feet.

12 P. hypola'mpra (Sieb. pl. exsic. nov. holl. no. 396.) heads of flowers terminal, leafy, protruding beyond the branches, and somewhat verticillate; leaves elliptic-oblong, stalked, rather acute, usually 3-nerved, shining below, and glabrous on both surfaces; floral ones ciliated, with long white hairs. ♄. G. Native of New Holland. Stipulas brown, membranous, longer than the petioles, pressed to the stem, hiding the branches. Consistence and form of leaves very like that of *Eutáxia myrtifòlia.*

Brightish Pultenæa. Fl. April, June. Clt. 1824. Shrub 1 to 3 feet.

13 P. villi'fera (Sieb. pl. exsic. no. 396.) flowers axillary or subcapitate at the tops of the branches; leaves lanceolate-oblong, acuminated, somewhat 3-nerved, shining beneath, bearing long white hairs on the margins. ♄. G. Native of New Holland, near Port Jackson. Leaves rusty.

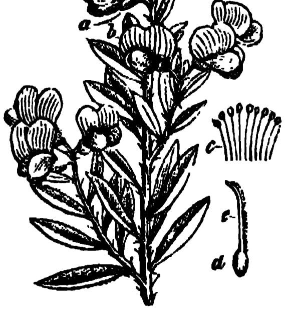
Hair-bearing Pultenæa. Fl. April, June. Clt. 1824. Shrub 1 to 3 feet.

14 P. polygalæfòlia (Rudge in Lin. trans. 11. p. 303. t. 25.) flowers axillary and terminal; leaves linear-oblong, obtuse, mucronulate, concave above, and glabrous, rather pilose beneath, as well as the calyxes; stipulas lanceolate-subulate, adpressed; branches and branchlets clothed with rusty villi; bracteas subulate, shorter than the calyx. ♄. G. Native of New Holland, in the neighbourhood of Sydney. Sweet, fl. aust. 37.

Polygala-leaved Pultenæa. Fl. April, June. Clt. 1824. Sh. 2 to 4 feet.

15 P. fle'xilis (Smith in Lin. trans. 9. p. 248.) racemes terminal, rather leafy; leaves obovate-linear, mucronate, flat, glabrous above, and rather glaucous; calyx glabrous on the outside, bibracteate at the base, with the segments ovate, acute, and ciliated; stipulas setaceous, longer than the petioles. ♄. G. Native of New Holland. Sweet, fl. austr. t. 35. Dillwýnia teucrioìdes, Sieb. l. c. no. 423. (f. 24.)

FIG. 24.



Flexile Pultenæa. Fl. April, Ju. Clt. 1801. Sh. 1 to 2 feet.

16 P. euchìla (D. C. prod. 2. p. 112.) flowers axillary and racemose; leaves cuneate-linear, obtuse, pale beneath, and 1-nerved, glaucous above, glabrous on both surfaces, as well as the branches and calyxes; upper lobes of calyx ovate, obliquely and bluntly apiculated; stipulas and bracteas small and setaceous. ♄. G. Native of New Holland. Calyx almost like that of *Euchìlus.* Corolla and style of *Pultenæ'a.* Pedicels length of calyx. Dillwýnia cuneàta, Sieb. pl. exsic. nov. holl. 422.

Well-lipped Pultenæa. Fl. April, June. Clt. 1820. Sh. 1 to 3 feet.

17 P. retu'sa (Smith in Lin. trans. 9. p. 248.) heads terminal, few-flowered; leaves linear, retuse, mutic, flat, glabrous; bracteas a little longer than the calyx. ♄. G. Native of New Holland, on the eastern coast. Ker. bot. reg. 378. Sims, bot. mag. 2081. Stipulas minute. Bracteoles inserted in the middle of the tube of the calyx.

Retuse-leaved Pultenæa. Fl. April, May. Clt. 1789. Sh. 1 to 2 feet.

18 P. capitella'ta (Sieb. pl. exsic. nov. holl. no. 413.) heads of flowers terminal, imbricated with bracteas, villous; leaves cuneated, rather acute, glabrous above, and canescent from adpressed villi beneath. ♄. G. Native of New Holland. Flowers broader and heads smaller than in *P. linophýlla.*

Capitellate-flowered Pultenæa. Fl. April, June. Clt. 1823. Shrub 1 to 2 feet.

19 P. linophy'lla (Smith in Lin. trans. 9. p. 248.) bracteas shorter than the few-flowered terminal head; leaves linear, with edges and mucrone recurved, silky beneath; stipulas shorter than the petioles; calyxes villous. ♄. G. Native of New Holland, on the eastern coast. Schrad. sert. hannov. 3. t. 18. P. glaucéscens, Sieb. pl. exsic. nov. holl. no. 417. Stem much branched. Leaves half an inch long.

Var. β, amœ'na (Sieb. l. c. no. 414.) branches more loose; heads few-flowered.

Flax-leaved Pultenæa. Fl. May, July. Clt. 1789. Shrub 1 to 3 feet.

20 P. cane'scens (Cung. in Field's new south wales, p. 346.) heads many-flowered; bracteas a little shorter than the calyx; leaves linear-oblong, concave and glabrous above, but canescent beneath, as well as the bracteas and calyx; stems tufted. ♄. G. Native of New Holland, on the Blue Mountains, in barren woods on the verge of swamps.

Canescent Pultenæa. Fl. April, May. Clt. 1822. Sh. 1 ft.

21 P. polifòlia (Cung. l. c.) heads many-flowered; leaves ovate-lanceolate or oblong-linear, mucronate, with revolute margins; branches and heads of flowers villous; bracteas a little shorter than the calyx. ♄. G. Native of New Holland, on bushy hills.

Polium-leaved Pultenæa. Fl. April, June. Clt. 1824. Sh. 1 to 2 feet.

22 P. microphy'lla (Sieb. pl. exsic. nov. holl. no. 418.) flowers axillary and somewhat capitate at the tops of the branches; leaves linear and somewhat cuneated, terminated by a short, callous, somewhat incurved mucrone, glabrous above, but clothed with minute, pressed pubescence beneath as well as the calyxes; branches hoary from adpressed down. ♄. G. Native of New Holland.

Small-leaved Pultenæa. Fl. April, June. Clt. 1810. Shrub 1 to 3 feet.

23 P. palea'cea (Smith, in Lin. trans. 9. p. 246.) heads terminal, few-flowered; bracteas membranous, very much acuminated, exceeding the calyx; leaves linear, glabrous, with revolute margins, ending in a recurved point; stipulas concrete, membranous, somewhat sheathing. ♄. G. Native of New Holland, on the east coast. Lodd. bot. cab. 3. t. 291.

Chaffy Pultenæa. Fl. May, July. Clt. 1789. Sh. 1 to 2 ft.

24 P. arista'ta (Sieb. pl. exs. nov. holl. no. 283.) heads of flowers terminal; leaves linear, convolute, nerveless, scabrous from tubercles beneath and ciliated at the base, bracteate at apex, and each as well as the calycine lobes ending in a stiff bristle; calyxes villous. ♄. G. Native of New Holland. Leaves crowded, erect. Stipulas long, subulate, and are as well as the bristles fuscous.

Awned-leaved Pultenæa. Fl. April, June. Clt. 1824. Shrub 1 to 2 feet.

25 P. echi'nula (Sieb. pl. exs. nov. holl. no. 384.) heads of flowers terminal; leaves crowded, rather incurved, terete, and

subulate, mucronate, scabrous from tubercles, with one furrow above, floral ones bearing long hairs. ♄. G. Native of New Holland. Stipulas subulate, permanent, black, and stiff, particularly on the old heads, in which they appear like spines. Stipulas and bracteas crowded.

Small prickly Pultenæa. Fl. April, June. Clt. 1823. Shrub 1 to 2 feet.

26 P. ARGE'NTEA (Cung. in Field's new south wales, p. 347.) heads terminal, villous; leaves linear-lanceolate, mutic, acute, rather concave above and glabrous, but silvery beneath. ♄. G. Native of New Holland, on hills at Cox's River.

Silvery-leaved Pultenæa. Fl. April, June. Clt. 1824. Shrub 1 to 2 feet.

27 P. PROCU'MBENS (Cung. l. c.) branches prostrate, stipulaceous; racemes leafy; leaves ovate-lanceolate, acute, rather concave above, ending in a refracted mucrone, but villous beneath as well as the calyxes. ♄. G. Native of New Holland, on exposed hills on the western interior. Allied to *P. villòsa.* A reclining shrub.

Procumbent Pultenæa. Fl. April, May. Clt. 1823. Sh. pr.

28 P. VESTÌTA (R. Br. in hort. kew. ed. 2. vol. 3. p. 19.) flowers axillary; leaves linear-lanceolate, mucronate, glabrous, with inflexed margins; stipulas imbricate, ciliated; calyxes and bracteas awned. ♄. G. Native of New Holland, on the southern coast.

Clothed Pultenæa. Fl. April, Ju. Clt. 1803. Pl. 1 to 2 ft.

29 P. DENTA'TA (Labill. nov. holl. 1. p. 103. t. 131.) heads of flowers terminal; bracteas rather orbicular, toothed, length of calyx; leaves linear, tubercled, glabrous; stipulas distinct, minute. ♄. G. Native of New Holland in Van Leuwin's Land. Legume ovate, acuminated, gibbous.

Toothed-bractead Pultenæa. Shrub 1 foot.

30 P. JUNIPE'RINA (Labill. l. c. t. 130.) flowers axillary and terminal; bracteas entire, hardly longer than the pedicels; leaves linear, somewhat triquetrous, acuminated, pungent, glabrous; stipulas subulate, a little longer than the petioles. ♄. G. Native of Van Diemen's Land and New Holland. Leaves 3 or 4 lines long.

Juniper-like Pultenæa. Fl. April, Ju. Clt. 1824. Sh. 2 to 8 ft.

31 P. TENUIFÒLIA (R. Br. in bot. mag. t. 2086.) heads terminal, usually 2-flowered; fruit lateral; leaves linear-subulate, mutic, concave above and convex beneath, and are as well as the branches rather pilose. ♄. G. Native of New Holland, on the southern coast.

Fine-leaved Pultenæa. Fl. April, Ju. Clt. 1817. Sh. 1 to 3 ft.

32 P. VILLÒSA (Smith, in ann. bot. 1. p. 503.) racemes leafy; leaves linear-oblong, pilose beneath as well as the branches and calyxes. ♄. G. Native of New Holland, on the eastern coast. Sims, bot. mag. 967. Stipulas setaceous, length of petioles. Leaves spreading, 2-3 lines long. Flowers pure yellow.

Villous Pultenæa. Fl. April, May. Clt. 1790. Sh. 1 to 3 ft.

33 P. STIPULA'RIS (Smith, l. c. et nov. holl. spec. t. 12.) heads many-flowered; bracteas about equal in length to the calyxes; leaves linear, flat, acute, younger ones ciliated; stipulas 2 joined in one, which is bifid at the apex, flat, imbricate, much longer than the petioles. ♄. G. Native of New Holland, on the eastern and southern coast. Curt. bot. mag. 435. P. protæoìdes, Sieb. pl. exsic. nov. holl. no. 382.

Stipular Pultenæa. Fl. April, Jul. Clt. 1792. Sh. 1 to 3 ft.

34 P. PEDUNCULA'TA (Hook, bot. mag. 2860.) pedicels axillary, twin, elongated; stipulas setaceous, twin at the base of the leaves; leaves linear-lanceolate, flat, and are as well as the branches clothed with adpressed pili. ♄. G. Native of New Holland. A weak shrub. Flowers yellow, but with the keel and edges of calyx reddish.

Stalked-flowered Pultenæa. Fl. May, Ju. Clt. 1820. Sh. 1 ft.

35 P. STENOPHY'LLA (Cung. mss.) heads few-flowered, terminal; leaves linear, mucronate; stipulas numerous; calyx villous; branches villous. ♄. G. Native of New Holland.

Narrow-leaved Pultenæa. Fl. April, June. Clt. 1824. Shrub 1 to 3 feet.

36 P. STAPHYLEOÌDES (Cung. mss.) flowers sessile, solitary, axillary; leaves ovate, acute, stiff, ending in a pungent mucrone, reflexed, rather villous beneath when young, but only at the edges in the adult state; stipulas twin, linear; branches pubescent or villous. ♄. G. Native of New Holland. Habit of *Sprengèlia incarnàta.*

Staphylea-like Pultenæa. Fl. April, Jul. Clt. 1824. Sh. 1 ft.

SECT. II. PHYLLÒTA (φυλλον, *phyllon*, a leaf, and ους ωτος, *ous otos*, an ear; in allusion to the twin leafy bracteas). D. C. prod. 2. p. 113. Stipulas wanting. Flowers bearing opposite or twin, leafy bracteas at the base, which are usually longer than the calyx. Pods unknown. Perhaps a proper genus.

37 P. A'SPERA (Sieb. pl. exsic. nov. holl. no. 408.) flowers axillary at the tops of the branches, disposed in terminal, capitate, leafy spikes; bracteoles length of calyx; leaves linear, with revolute margins, smoothish above but scabrous beneath from tubercles, without stipulas; branches and calyxes pubescent. ♄. G. Native of New Holland, on the eastern coast. Bracteoles oval-oblong, glabrous. Lobes of calyx acute. Shrub, with the habit of *Dillwýnia floribúnda.*

Rough Pultenæa. Fl. April, July. Clt. 1824. Sh. 1 to 3 ft.

38 P. COMÒSA (Sieb. pl. exsic. nov. holl. no. 407.) flowers axillary, disposed in a somewhat terminal leafy spike; bracteoles longer than the calyx; leaves exstipulate, linear, with revolute margins, scabrous from tubercles above, but clothed beneath with adpressed pubescence as well as the calyxes and branches. ♄. G. Native of New Holland. Shrub almost with the habit of *Aòtus virgàta.*

Tufted Pultenæa. Fl. April, June. Clt. 1825. Sh. 1 to 3 ft.

39 P. SQUARRÒSA (Sieb. pl. exsic. nov. holl. no. 406.) flowers axillary, disposed in a leafy terminal head; leaves exstipulate, linear, acute, with revolute margins, scabrous from tubercles above, young and floral ones villous and mucronate; bracteoles longer than the calyx; lobes of calyx ending in spiny mucrones. ♄. G. Native of New Holland.

Squarrose Pultenæa. Fl. April, July. Clt. 1825. Sh. 1 to 3 ft.

40 P. PHYLICOÌDES (Sieb. pl. exsic. nov. holl. no. 405.) heads terminal, roundish; leaves linear, bluntish, with revolute margins, scabrous from tubercles above, but pubescent beneath on the nerves and on the branches; bracteoles length of calyx; lobes of calyx short, bluntish. ♄. G. Native of New Holland.

Phylica-like Pultenæa. Fl. April, Ju. Clt. 1822. Sh. 1 to 3 ft.

41 P. CA'NDIDA (Lodd. bot. cab. 1236.) flowers axillary, very small; leaves linear, obtuse, crowded, beset with long hairs, as well as the branches, giving the whole plant a white or hoary aspect. ♄. G. Native of New South Wales. Flowers yellow, tinged with red.

White-leaved Pultenæa. Fl. April, July. Clt. 1825. Shrub 1 to 2 feet.

Cult. *Pultenæ'a* is a genus of elegant small shrubs; they succeed best in an equal mixture of loam, peat, and sand, and cuttings root readily in a pot of sand, with a bell-glass placed over them. The species shew to most advantage when planted out into a border or conservatory.

XXX. DAVIE'SIA (in honour of the Rev. Hugh Davies, F.L.S. a Welsh botanist). Smith, in Lin. trans. 4. p. 222. 9. p. 255. R. Br. in hort. kew. ed. 2. vol. 3. p. 20.

LIN. SYST. *Decándria, Monogýnia.* Calyx angular, bractless, 5-toothed, somewhat bilabiate. Carina shorter than the vexillum. Ovary pedicellate, 2-seeded. Style straight. Stigma simple. Legume compressed, angular, bursting elastically at the lower suture, which is dilated, almost semi-trapezoid. Strophiola of seeds entire behind.—Smooth Australian, spiny, or unarmed shrubs, with the appearance of furze. Leaves either simple or wanting. Pedicels axillary, bibracteate at the base. Flowers usually yellow.

* *Leaves oval, oblong, or lanceolate, unarmed.*

1 D. LATIFÒLIA (R. Br. in hort. kew. 3. p. 20.) leaves elliptic or oval, veiny, rather tapering to the base, mucronate, and are unarmed as well as the branches; racemes axillary, many-flowered, a little shorter than the leaves. ♄. G. Native of Van Diemen's Land. Sims, bot. mag. 1757. Flowers yellow, with the vexillum copper-coloured, spotted. Bracteoles numerous along the peduncles under the raceme.

Broad-leaved Daviesia. Fl. May, Aug. Clt. 1805. Sh. 2 to 4 ft.

2 D. CORYMBÒSA (Smith, in Lin. trans. 9. p. 258.) leaves linear-oblong, flat, apiculated by a callous mucrone, and are as well as the branches unarmed; racemes solitary or twin, 3-times shorter than the leaves, having many bracteas at the base, and bearing a corymb of flowers at the apex. ♄. G. Native of New Holland, on the eastern coast. Flowers white, with a violet keel. Leaves 1-2 inches long and 4 lines broad, with few veins.

Corymbous-flowered Daviesia. Fl. May, Aug. Clt. 1804. Shrub 2 to 4 feet.

3 D. MIMOSOÌDES (R. Br. in hort. kew. 3. p. 20.) leaves linear, lanceolate, apiculated by an innocuous point, and are as well as the branches unarmed; racemes solitary or twin, 4-times shorter than the leaves, having many bracteas at the base, and corymbiferous at the apex. ♄. G. Native of New Holland, on the south coast. Andr. bot. rep. 526. D. glaùca, Lodd. bot. cab. t. 43. Flowers yellow. Leaves nerved at the base; the nerves irregularly pinnate.

Mimosa-like Daviesia. Fl. Ju. Aug. Clt. 1809. Sh. 2 to 4 ft.

4 D. LEPTOPHY'LLA (Cung. mss.) leaves linear-lanceolate, strongly nerved, obtuse and mucronate, quite smooth, coriaceous; branches furrowed; peduncles few-flowered, axillary. ♄. G. Native of New Holland.

Slender-leaved Daviesia. Fl. April, June. Clt. 1824. Sh. 1 to 3 feet.

* * *Leaves lanceolate or linear, spiny at the apex.*

5 D. PHYSÒDES (Cung. mss.) leaves sessile, somewhat falcate, broadest at the apex and blunt, having 2 strong nerves, and furnished with a spiny beak on the lower side; branches furrowed. ♄. G. Native of New Holland.

Bladdery Daviesia. Fl. April, Jul. Clt. 1824. Sh. 2 to 4 ft.

6 D. RACEMULÒSA (D. C. prod. 2. p. 114.) leaves sublanceolate-linear, acuminated, pungent; racemes solitary, bracteate, a little shorter than the leaves and somewhat corymbous at the apex. ♄. G. Native of New Holland. Leaves 9-10 lines long and 2 lines broad.

Racemose-flowered Daviesia. Fl. June, Aug. Clt. 1823. Shrub 2 to 3 feet.

7 D. UMBELLULA'TA (Smith, in Lin. trans. 9. p. 258.) leaves lanceolate, terminated by a pungent point; branches spinose at the apex; peduncles axillary, very short, bearing a few-flowered umbel at the apex. ♄. G. Native of New Holland, on the eastern coast.

Var. β, *angustifòlia* (D. C. prod. 2. p. 114.) leaves linear-lanceolate. D. umbellàta, Labill. nov. holl. 1. p. 107. t. 137.

Umbellulate-flowered Daviesia. Fl. April, June. Clt. 1816. Shrub 2 to 4 feet.

8 D. INCRASSA'TA (Smith, in Lin. trans. 9. p. 253.) leaves cuneate-linear, compressed, vertical, oblique, thick, spiny; flowers axillary, solitary. ♄. G. Native of New Holland, at King George's Sound.

Thickened-leaved Daviesia. Fl. May, Ju. Clt. 1820. Sh. 1 to 3 feet.

9 D. ACICULA'RIS (Smith, l. c.) leaves linear, with callous somewhat revolute margins, pungent, straight, denticulately scabrous; flowers axillary, solitary, on very short pedicels. ♄. G. Native of New Holland, about Port Jackson. Lodd. bot. cab. 1234. Flowers yellow, variegated with scarlet.

Acicular-leaved Daviesia. Fl. Ju. Jul. Clt. 1804. Sh. 2 to 3 ft.

10 D. ULÍCINA (Smith, l. c.) leaves lanceolate or linear, with smooth margins, and are as well as the branches spinescent at the apex, spreading; flowers axillary, solitary, on very short pedicels. ♄. G. Native of New Holland, on the eastern coast. D. ulicifòlia, Andr. bot. rep. t. 304. Leaves half an inch long. Flowers yellow, with the vexillum copper-coloured at the base.

Furze-like Daviesia. Fl. April, Aug. Clt. 1792. Sh. 1 to 3 ft.

* * * *Leaves cordate at the base.*

11 D. SQUARRÒSA (Smith, l. c.) leaves cordate, acuminated, pungent, with scabrous margins, which are either reflexed or spreading; peduncles axillary, 1-flowered, nearly the length of the leaves. ♄. G. Native of New Holland, at Port Jackson. Pedicels furnished with concave obtuse bracteas at the base.

Squarrose Daviesia. Fl. May, July. Clt. 1824. Sh. 2 to 3 ft.

12 D. CORDA'TA (Smith, l. c.) leaves cordate, stem-clasping, reticulated with veins; peduncles axillary, aggregate, corymbose, many-flowered. ♄. G. Native of New Holland, at King George's Sound. Lindl. bot. reg. 1005. Stem angular. Bracteas broad, usually subcordate.

Cordate-leaved Daviesia. Fl. Ju. Jul. Clt. 1824. Sh. 1 to 3 ft.

* * * * *Leaves wanting.*

13 D. ALA'TA (Smith, l. c.) stem leafless, winged; umbels lateral; calyx and bracteas fringed; legume 1-seeded, compressed, dolabriform. ♄. G. Native of New Holland, at Port Jackson. Ker. bot. reg. 728. Stem having 3 wings, nearly like those in *Genísta sagittàlis* or in *Bossiæ'a scolopéndria*.

Winged-stemmed Daviesia. Fl. May, Aug. Clt. 1818. Shrub 1 to 3 feet.

14 D. JU'NCEA (Smith, l. c.) stem leafless, terete, furrowed, naked; umbels lateral; calyx and bracteas beardless. ♄. G. Native of New Holland, at King George's Sound. Bracteas concave, lower ones imbricate. Teeth of calyx short.

Rush-like Daviesia. Fl. April, July. Clt. 1823. Sh. 1 to 2 ft.

Cult. See *Pultenæ'a* for culture and propagation. The species are very elegant plants when in flower. The cuttings require to be nearly ripened.

XXXI. MIRBE'LIA (in honour of M. Mirbel, a distinguished French physiological botanist, whose elucidations of the reticulated structure of vegetables are well known). Smith, ann. bot. 1. p. 511. Lin. trans. soc. 9. p. 265. R. Br. in hort. kew. ed. 2. vol. 3. p. 21. D. C. prod. 2. p. 114.

LIN. SYST. *Decándria, Monogýnia.* Calyx 5-cleft, bilabiate. Legume 2-seeded, longitudinally 2-celled, from the sutures on the upper side being so much bent in.—Australian subshrubs, having the fruit of *Astrágalus*, and the stamens and habit agreeing with the present tribe. Leaves 3 in a whorl. Flowers purple.

1 M. RETICULA'TA (Smith, l. c.) leaves lanceolate-linear, reticulately-veined, quite entire, apiculated by a stiff mucrone. ♄. G. Native of New South Wales. Vent. malm. 119. Sims, bot. mag. 1211. Gompholòbium reticulàtum, Hort. Smooth, with twiggy branches. Leaves opposite or ternately verticillate. Flowers lilac, terminal, capitate, or axillary verticilate.

Reticulated-leaved Mirbelia. Fl. May, Aug. Clt. 1792. Shrub 1 to 3 feet.

2 M. RUBIÆFÒLIA; leaves lanceolate, acute, serrated, stiff, 3 in a whorl; flowers terminal, capitate, and axillary verticillate. ♄. G. Native of New South Wales. Flowers bluish-purple. Pultenæ'a rubiæfòlia, Andr. bot. rep. 351.

Rubia-leaved Mirbelia. Fl. June, Jul. Clt. 1792. Sh. 1 to 2 ft.

3 M. SPECIÒSA (Sieb. pl. exsic. nov. holl. no. 367.) leaves linear, acutish, with revolute quite entire margins; flowers disposed in a terminal, interrupted, leafy spike. ♄. G. Native of New Holland. Flowers purple.

Shewy Mirbelia. Fl. May, July. Clt. 1824. Sh. 1 to 2 ft.

4 M. DILATA'TA (R. Br. in hort. kew. 3. p. 21.) leaves cuneiform, dilated and trifid at the apex. ♄. G. Native of New Holland, on the south-west coast. Flowers purplish. Lindl. bot. reg. 1041.

Dilated-leaved Mirbelia. Fl. May, Aug. Clt. 1803. Sh.

5 M. GRANDIFLÒRA (Cung. mss. Sieb. Hook. bot. mag. 2771.) pubescent; leaves alternate, ovate, lanceolate; flowers axillary, twin. ♄. G. Native of New Holland. Perhaps Chorizèma platylobioìdes, D. C. prod. and Platylòbium reticulàtum. Flowers yellow, having a red zonate mark on the upper side of the vexillum, and streaked with the same on the outer surface, and the wings have a red blotch on one side.

Great-flowered Mirbelia. Fl. May, Ju. Clt. 1823. Sh. 1 to 2 ft.

6 M. PU'NGENS (Cung. mss.) leaves linear, ending in a long, spiny mucrone, scattered; flowers nearly sessile, axillary, smooth. ♄. G. Native of New Holland.

Pungent Mirbelia. Fl. May, July. Clt. 1823. Sh. 1 to 2 ft.

Cult. Elegant plants when in flower, the flowers of all being purplish or deep orange. Their culture and propagation are the same as that for *Pultenæ'a*, p. 126; the cuttings require to be young.

Tribe II.

LO'TEÆ (plants agreeing with *Lòtus* in important characters). D. C. Leg. mem. vi.—Genístræ, et Astrágali, Adans, fam. 2. p. 320, 324.—Genísteæ, Trifòlieæ et Galègeæ, Bronn. l. c. Embryo with its radicle curved back upon the edge of the cotyledons. Corolla papilionaceous. Stamens monadelphous, or diadelphous, 9 joined and 1 free. Legume continuous, 1-celled, rarely 2-celled, in consequence of the upper sutures being bent. Cotyledons flattish, furnished with cortical pores, and changing at once into leaves at the time of germination, for the purpose of elaborating food for the young plants. However, the germination of some of the genera contained in this tribe being unknown, a few of them may at some future time be placed in tribe *Phaseòleæ*.

SUBTRIBE I. GENÍSTEÆ (plants agreeing with *Genista* in important characters). Bronn. diss. l. c. Legume 1-celled. Stamens usually monadelphous. Leaves simple or palmately trifoliate, rarely pinnate. Stems usually shrubby.

XXXII. HO'VEA (in honour of Anthony Pantaleon Hove, a Polish botanist, who travelled in the Crimea and Persia, whence many plants were sent to Kew Gardens). R. Br. in hort. kew. ed. 2. vol. 4. p. 275. D. C. prod. 2. p. 115.—Poirètia, Smith, Lin. trans. 9. p. 304. but not of Cav.—Physicárpos, Poir. suppl.

LIN. SYST. *Diadélphia, Decándria.* Calyx bilabiate (f. 25. *a.*); upper-lip semibifid, broad, and retuse, lower one 3-parted. Keel obtuse (f. 25. *f.*). Stamens all connected (f. 25. *c.*), the tenth or upper one only more or less free. Legume sessile (f. 25. *d.*), roundish, ventricose, 2-seeded. Seeds strophiolate.—Australian shrubs, with alternate simple leaves, and axillary, purple, or violaceous flowers, which stand on short pedicels.

1 H. LONGIFÒLIA (R. Br. l. c.) leaves linear and elongated, mucronate, with somewhat revolute margins, veiny beneath, and are as well as the legumes tomentose. ♄. G. Native of New Holland, on the eastern coast. Ker. bot. reg. 614. Flowers purplish-violet.

Long-leaved Hovea. Fl. Ju. Sept. Clt. 1805. Sh. 2 to 4 ft.

2 H. LINEA'RIS (R. Br. l. c.) leaves linear, mucronate, rather pilose beneath; legumes smooth. ♄. G. Native of New Holland, on the eastern coast. Ker. bot. reg. 463. Poirètia lineàris, Smith, in Lin. trans. 9. p. 304. Flowers purplish-violet.

Linear-leaved Hovea. Fl. Mar. Jul. Clt. 1796. Sh. 2 to 4 ft.

3 H. ELLÍPTICA (D. C. prod. 2. p. 115.) leaves elliptic-oblong, emarginate, rather pubescent beneath, shining above, reticulated on both surfaces; pedicels 3-times shorter than the leaves, twin. ♄. G. Native of New Holland, at King George's Sound. Poirètia ellíptica, Smith, l. c. Flowers purplish-violet.

Elliptic-leaved Hovea. Fl. Mar. Jul. Clt. 1817. Sh. 2 to 4 ft.

4 H. LANCEOLA'TA (Sims, bot. mag. t. 1624.) leaves lanceolate, mucronate, pubescent beneath; flowers axillary, twin; branches twiggy. ♄. G. Native of New Holland. Flowers purplish-blue. Lindl. bot. reg. 1427.

Lanceolate-leaved Hovea. Fl. Mar. July. Clt. 1805. Sh. 2 to 3 feet.

5 H. APICULA'TA (Cung. mss.) leaves lanceolate, with revolute edges, tomentose beneath, but smooth above, coriaceous, with a strong middle nerve, tapering to the apex and mucronate. ♄. G. Native of New Holland. Flowers purplish-violet.

Apiculated-leaved Hovea. Fl. Mar. July. Clt. 1824. Sh. 2 to 4 feet.

6 H. MUCRONA'TA (Cung. mss.) leaves ovate-lanceolate, tapering to the apex, mucronate, tomentose beneath, but smooth above; branches villous; peduncles very short, few-flowered. ♄. G. Native of New Holland. Flowers small, purplish-blue.

Mucronate-leaved Hovea. Fl. Mar. July. Clt. 1824. Sh. 2 to 4 feet.

7 H. ACUTIFÒLIA (Cung. mss.) leaves lanceolate, tapering to both ends, mucronate at the apex, clothed with a kind of rusty tomentum on the under surface as well as on the branches, but glabrous above; peduncles short, 2-3-flowered, with the pedicels longer than the peduncles. ♄. G. Native of New Holland. Flowers purplish-blue.

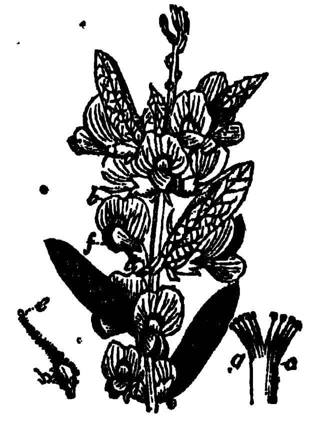
Acute-leaved Hovea. Fl. Mar. July. Clt. 1823. Shrub 2 to 4 feet.

8 H. PURPU'REA (Sweet, fl. aust. 13.) leaves oblong-linear, obtuse, mucronate, with revolute margins, smooth above, but reticulately veined and tomentose beneath; stipulas subulate, small; peduncles axillary, twin; branches clothed with rusty tomentum as well as the calyxes. ♄. G. Native of New Holland. Flowers purple, the vexillum having a pale base.

Purple-flowered Hovea. Fl. May, June. Clt. 1820. Sh. 2 to 4 feet.

9 H. PANNÒSA (Cung. mss.) leaves lanceolate, obtuse, terminating in a tuft of hairs, coriaceous, with rather revolute edges, smooth above, but clothed with dense long tomentum beneath; branches villous, as well as the pods and calyx; peduncles very short, almost sessile, 1-2-3-flowered. ♄. G. Native of New Holland. H. lanígera, Lodd. cat. A very woolly shrub, with small pale-purple flowers.

FIG. 25.



Cloth-leaved Hovea. Fl. March, July. Clt. 1824. Shrub 3 to 6 feet.

10 H. LATIFÒLIA (Lodd. bot. cab. t. 30.) leaves elliptic-oblong, acute, and are, as well as the branches, smooth; pedicels axillary, solitary, hardly longer than the petioles. ♄. G. Native of New Holland, on the east coast. Flowers with a large blue vexillum, and a purple keel.

Broad-leaved Hovea. Fl. March, July. Clt. 1820. Shrub 2 to 4 feet.

11 H. CE'LSI (Bonp. nav. t. 51.) leaves lanceolate, and somewhat rhomboid, bluntish, mucronate; peduncles axillary, many-flowered; branches, calyxes, and bracteas rather pilose. ♄. G. Native of New Holland. Ker. bot. reg. 280. Platychilum Celsiànum, Delaun. herb. amat. t. 187. Flowers beautiful blue. Filaments monadelphous with a dorsal fissure, or diadelphous. This is a most elegant plant when in flower.

Cels's Hovea. Fl. March, July. Clt. 1818. Sh. 2 to 4 feet.

12 H. ROSMARINIFÒLIA (Cung. in Field's new south wales, p. 348.) leaves linear, reticulated, revolute, covered with rusty tomentum beneath, as well as on the legumes. ♄. G. Native of New Holland, frequent on the rocky pine hills north-west of Bathurst.

Rosemary-leaved Hovea Fl. March, July. Clt. 1824. Sh. 1 to 3 feet.

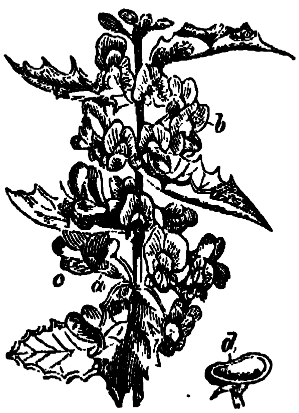
Cult. *Hòvea* is a genus of very elegant plants when in flower. The species are most readily increased by seeds, which usually ripen in our greenhouses; they also may be propagated by young cuttings planted in a pot of sand, with a bell-glass placed over them. A mixture of sand, loam, and peat is the soil best adapted for them.

XXXIII. PLAGIOLO'BIUM (from πλαγιος, *plagios*, transverse or oblique, and λοβος, *lobos*, a pod; in reference to the shape of the pod). Sweet, fl. austr. no. 2.

LIN. SYST. *Diadélphia, Decándria.* Calyx bilabiate (f. 26. *a*), upper lip broad and retuse, lower one 3-parted. Keel obtuse (f. 26. c.). Stamens diadelphous. Ovary sessile. Style permanent, unilateral. Legume inflated, coriaceous, obliquely-transverse (f. 26. *d.*), 2-seeded. Seeds strophiolate.—Australian shrub, with alternate, simple, spiny-toothed leaves, resembling those of the Holly. Stipulas spinose. Flowers axillary, blue or purple, standing on short pedicels.

1 P. CHORIZEMÆFÒLIUM (Sweet, fl. austr. no. 2.) leaves oblong-lanceolate, spiny-toothed, mucronate, coriaceous, glabrous; pedicels axillary, usually 3 or 4 together; legume transverse, glabrous both inside and outside. ♄. G. Native of New Holland, on the eastern coast, as well as at King George's Sound. Hòvea chorizemæfòlia, D. C. prod. 2. p. 116. Branches thickly clothed with rusty pubescence. Calyx and pedicels villous. Flowers large, bluish-purple, the vexillum having a white base.

FIG. 26.



Chorizema-leaved Plagiolobium. Fl. Feb. April. Clt. 1824. Shrub 1 to 2 feet.

2 P. ILICIFÒLIUM (Sweet, l. c. in a note,) leaves ovate or elliptic, spiny-toothed, mucronate, glabrous; peduncles axillary, twin; legume somewhat kidney-shaped, pubescent both on the inside and outside. ♄. G. Native of New Holland, at King George's Sound. Flowers purplish-blue. Hòvea ilicifòlia, Cung. mss.

Holly-leaved Plagiolobium. Fl. Feb. May. Clt. 1824. Sh. 1 to 2 feet.

Cult. The species of *Plagiolòbium* are worth cultivating for the sake of their beauty in every collection of greenhouse plants. Their culture and propagation are the same as that recommended for *Hòvea.*

XXXIV. PLATYLO'BIUM (from πλατυς, *platys*, broad, and λοβος, *lobos*, a pod; in reference to the broad legumes). Smith in Lin. trans. vol. 2. p. 350. vol. 9. p. 302. R. Br. in hort. kew. ed. 2. vol. 4. p. 266. D. C. prod. 2. p. 116.—Cheilocòcca, Salisb. prod. p. 412.

LIN. SYST. *Monadélphia, Decándria.* Calyx bracteate, bilabiate, upper lip bifid, roundish, large. Stamens all connected. Legume pedicellate, compressed, flat, winged on the back, many-seeded.—Australian shrubs, with opposite, simple, bistipulate leaves, and axillary yellow flowers, but with the vexillum red at the base.

1 P. FORMÒSUM (Smith, nov. holl. 17. t. 6.) leaves ovate, somewhat cordate; ovary villous; bracteas silky; stipe of legume shorter than the calyx. ♄. G. Native of New Holland, on the eastern coast. Vent. malm. t. 31. Curt. bot. mag. 469. Cheilocòcca apocynifòlia, Salisb. l. c. Flowers large.

Beautiful Platylobium. Fl. June, Aug. Clt. 1790. Shrub 2 to 4 feet.

2 P. PARVIFLÒRUM (Smith, nov. holl. 18.) leaves ovate-lanceolate; ovary ciliated, smoothish; bracteas glabrous; stipe of legume exceeding the calyx. ♄. G. Native with the preceding. Sims, bot. mag. 1520.

Small-flowered Platylobium. Fl. May, Sept. Clt. 1792. Shrub 2 to 4 feet.

3 P. OVA'TUM (Andr. ex Sieb. pl. exsic. nov. holl. no. 374.) leaves ovate-lanceolate, acuminated, glabrous on both surfaces, pale beneath; bracteas and ovaries glabrous; ovary with a very short stipe. ♄. G. Native of New Holland. Very like *P. parviflòrum*, but it differs in the leaves being more ovate-oblong, paler beneath, and by the ovary being perfectly smooth, about twice the length of the stipe.

Ovate-leaved Platylobium. Fl. May, Sept. Clt. 1792. Sh. 2 to 4 feet.

4 P. TRIANGULA'RE (R. Br. in hort. kew. 4. p. 266.) leaves deltoid, somewhat hastate, with the angles spinose; peduncles bracteate both at the base and apex, but naked in the middle; legume exceeding the calyx. ♄. G. Native of Van Diemen's Land, as well as of New Holland. Sims, bot. mag. 1508.

Triangular-leaved Platylobium. Fl. June, Sept. Clt. 1805. Sh. 2 to 4 feet.

5 P.? OBCORDA'TUM (D. C. prod. 2. p. 116.) leaves obcordate, cuneated at the base, retusely-emarginate at the apex, pubescent on both surfaces, as well as the branches. ♄. G. Native of New Holland. Leaves 4 lines long. Very like *Bossiæ'a microphýlla*, but the leaves are opposite.

Obcordate-leaved Platylobium. Shrub 1 to 2 feet.

Cult. See *Hòvea*, and *Pultenæ'a*, p. 127, for culture and propagation.

XXXV. BOSSIÆ'A (in honour of M. Bossieu Lamartinière, a French botanist, who accompanied the unfortunate La Peyrouse round the world). Vent. cels. t. 7. Smith in Lin. trans. 9. p. 302. R. Br. in hort. kew. ed. 2. vol. 4. p. 266. D. C. prod. 2. p. 116.

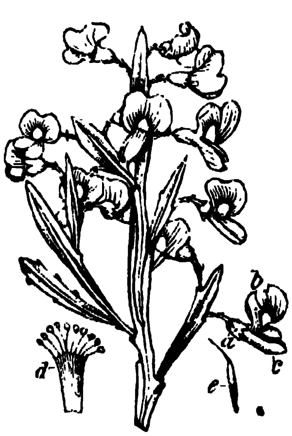
LIN. SYST. *Monadélphia, Decándria.* Calyx bilabiate (f. 27. *a.*), upper lip large, semi-bifid, obtuse. Stamens all connected (f. 27. *d.* f. 28. *b.*). Legume compressed (f. 27. *e.* f. 28. *c.*), flat, pedicellate, many-seeded, with the margins thickened on both sides. Seeds strophiolate.—Australian shrubs, with usually compressed (f. 27.), rarely with terete branches (f. 27. f. 28.). Leaves absent, but when present simple and alternate. Flowers yellow, with the keel usually purplish or dark-brown.

** Branches compressed, leafless.*

1 B. scolope'ndria (Smith, et R. Br. l. c.) branches flat, linear, leafless, toothed, with the teeth bearing the flowers; keel naked; superior bracteas permanent, imbricate, equal in length to the peduncles. ♄. G. Native of New Holland, on the eastern coast. Platylòbium scolopéndrium, Andr. bot. rep. 191. Vent. malm. t. 55. Stems erect. Calyxes very smooth. Flowers yellow, with the back of the vexillum and keel brownish red. The leaves when present are ovate and smooth.

Plank-plant Bossiæa. Fl. May, July. Clt. 1792. Shrub 3 to 10 feet.

FIG. 27.



2 B. ensa'ta (Sieb. pl. exsic. nov. holl. no. 434.) branches flat, linear, leafless, toothed, the teeth bearing the flowers; keel almost naked; upper bracteas distant from the lower ones, shorter than the pedicel. ♄. G. Native of New Holland. Sweet, fl. austr. 51. B. rùfa, Lodd. bot. cab. 1119. but not of others. Flowers yellow, with the back and base of the vexillum of a brownish orange-purple colour, and with the keel brownish-purple.

Sword-branched Bossiæa. Fl. April, June. Clt. 1825. Sh. 1 to 2 feet.

3 B. ru'fa (R. Br. l. c.) branches flat, linear, leafless, toothed, with the teeth bearing the flowers; keel fringed; upper bracteas caducous, remote from the lower ones. ♄. G. Native of New Holland, on the south-west coast. Sims, bot. mag. 1508. Calyxes quite smooth. Flowers colour of the preceding.

Rufous Bossiæa. Fl. Ju. Sept. Clt. 1805. Shrub 1 to 3 ft.

*** Branches compressed, leafy.*

4 B. linophy'lla (R. Br. l. c.) branches compressed, leafy; leaves linear, with recurved margins; legume 1-seeded. ♄. G. Native of New Holland, on the south-west coast. Lodd. bot. cab. 174. Sims, bot. mag. 2491.

Flax-leaved Bossiæa. Fl. July, Sept. Clt. 1803. Shrub 1 to 4 feet.

5 B. heterophy'lla (Vent. hort. cels. t. 7.) branches flat, leafy; leaves obovate, linear or lanceolate, flat; legume many-celled, in consequence of spongy transverse dissepiments. ♄. G. Native of New Holland, on the eastern coast. Platylòbium lanceolàtum, Andr. B. lanceolàta, Sims, bot. mag. 1144.

Variable-leaved Bossiæa. Fl. May, Dec. Clt. 1792. Shrub 1 to 4 feet.

6 B. rotundifòlia (D. C. prod. 2. p. 117.) branches and branchlets leafy, compressed; leaves roundish or broadly obovate, somewhat mucronate, flat. ♄. G. Native of New Holland, on the eastern coast. Leaves 4-5 lines long, and 5-6 broad, reticulately-veined. The whole plant very smooth.

Round-leaved Bossiæa. Fl. May, June. Clt. 1824. Shrub 1 to 2 feet.

7 B. rhombifòlia (Sieb. pl. exsic. nov. holl. no. 354.) branchlets compressed, leafy; branches terete; leaves rhomboidal-orbicular, somewhat emarginate and mucronate; legume on a long stipe, falcate. ♄. G. Native of New Holland. Plant quite smooth, and rather glaucous. Flowers yellow, the vexillum having a red zonate mark at the base. Wings red at the base. Keel brownish-purple.

Rhomb-leaved Bossiæa. Fl. April, June. Clt. 1820. Shrub 1 to 3 feet.

**** Branches terete, leafy.*

8 B. microphy'lla (Smith in Lin. trans. 9. p. 303.) branches terete, leafy, spinescent; leaves cuneiformly obcordate, glabrous. ♄. G. Native of New Holland, on the eastern and southern coast. Lodd. bot. cab. 656. Platylòbium microphýllum, Sims, bot. mag. 863. Platylòbium obcordàtum, Vent. malm. no. 31. in a note. Young branches rather compressed and pubescent. Flowers colour of the rest.

Small-leaved Bossiæa. Fl. May, Aug. Clt. 1803. Shrub 1 to 2 feet.

9 B. lenticula'ris (Sieb. pl. exsic. nov. holl. no. 425.) branches terete, leafy, at length spinescent; leaves glabrous, exactly orbicular. ♄. G. Native of New Holland. Lodd. bot. cab. 1238. Leaves hardly 2 lines in diameter. Flowers like the rest in colour.

Lentil leaved Bossiæa. Fl. May, June. Clt. 1820. Sh. 1 to 3 feet.

10 B. foliòsa (Cung. in Field's new south wales, p. 347.) branches straight, terete, villous; leaves alternate, small, orbicular, retuse, scabrous, with revolute margins, silky beneath; stipulas permanent, hooked, longer than the petioles. ♄. G. Native of New Holland, in brushy forest land near Bathurst.

Leafy Bossiæa. Fl. May, June. Clt. 1824. Sh. 1 to 3 feet.

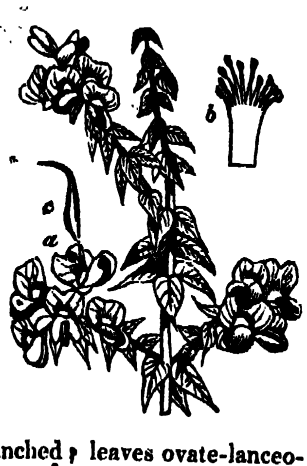
11 B. ova'ta; branches straight, terete, smooth; leaves ovate, distich, alternate, quite glabrous. ♄. G. Native of New South Wales. Platylòbium ovàtum, Andr. bot. rep. 266. The flowers yellow, but with the keel purple.

Ovate-leaved Bossiæa. Fl. May, Dec. Clt. 1792. Shrub 1 to 3 feet.

12 B. buxifòlia (Cung. in Field's new south wales, p. 348.) branches leafy, attenuated, procumbent; leaves broad-elliptic, obtuse, mucronate, rather villous, with recurved margins, cinereous beneath, as well as the branches; stipulas longer than the petioles. ♄. G. Native of New Holland, upon rocky brushy hills. A diffuse reclining shrub.

Box-leaved Bossiæa. Fl. April, June. Clt. 1824. Sh. diffuse.

FIG. 28.



13 B. cordifòlia (Sweet, fl. austr. no. 20.) branches terete, crowded with leaves, villous; leaves nearly sessile, cordate, acute, ending in a spiny mucrone, scabrous above, but pilose on the nerves beneath, with recurved margins; peduncles bibracteate, about equal in length to the leaves. ♄. G. Native of New Holland. Flowers yellow, the vexillum furnished with a purple circle at the base, and the keel is dark-purple.

Cordate-leaved Bossiæa. Fl. May, June. Clt. 1824. Sh. 1 to 3 feet.

14 B. cine'rea (R. Br. l. c.) branches terete, leafy, clothed with woolly villi; stem erect, much branched; leaves ovate-lanceolate, scabrous above, and pubescent beneath, with recurved margins. ♄. G. Native of Van Diemen's Land. Ker. bot. reg. 306.

Grey Bossiæa. Fl. May, July. Clt. 1802. Sh. 1 to 3 feet.

15 B. PROSTRA'TA (R. Br. l. c.) branches filiform, leafy; stems procumbent; leaves oval, glabrous; stipulas shorter than the petioles; legume 1-seeded. ♄. G. Native of New Holland, on the eastern coast. Sims, bot. mag. 1493.

Prostrate Bossiæa. Fl. Ju. July. Clt. 1803. Sh. prostrate.

16 B. LINNÆOÌDES; branches terete, leafy, próstrate, puberulous; leaves elliptic, mucronate; pedicels solitary, 1-flowered, elongated; bracteas puberulous; corolla about twice the length of the calyx. ♄. G. Native of New Holland. Flowers yellow. Keel dark-brown.

Linnæa-like Bossiæa. Fl. May, June. Clt. 1824. Shrub procumbent.

Cult. The species of *Bossiæ'a* are neat elegant plants when in flower; they thrive best in a mixture of turfy loam, peat, and sand, but the pots in which they are grown must be well drained with sherds, as nothing injures them more than too much water. Cuttings, neither too ripe nor too young, will strike root if planted in a pot of sand with a bell-glass over them.

XXXVI. GOO'DIA (in memory of Peter Good, a diligent botanical collector, who was employed in collecting seeds in New Holland for the botanic garden at Kew, where he died). Salisb. par. t. 41. R. Br. in hort. kew. ed. 2. vol. 4. p. 269. D. C. prod. 2. p. 117.

LIN. SYST. *Monadélphia, Decándria.* Calyx bilabiate, both lips about equal in length, upper one semibifid, acute. Vexillum flat, large. Stamens all connected. Carina truncate, 2-edged. Legume pedicellate, compressed. Seeds strophiolate.—Much-branched Australian subshrubs, with terete branches, alternate, stalked, trifoliate leaves, and racemes of yellow flowers.

1 G. LOTIFÒLIA (Salisb. par. t. 41.) leaflets obovate, and are, as well as the calyxes, smooth; legume varicose, 2-4-seeded. ♄. G. Native of Van Diemen's Land. Sims, bot. mag. 958. Flowers yellow, but with the base of the vexillum red. Glands 5 between the stamens and pistil, they are sessile and globose. Stamens monadelphous, with the sheath cleft in front.

Lotus-leaved Goodia. Fl. Ap. July. Clt. 1793. Sh. 2 to 4 ft.

2 G. PUBE'SCENS (Sims, bot. mag. 1310.) leaflets obovately-cuneated, and are, as well as the calyxes, pubescent; legume smooth, 2-seeded. ♄. G. Native of Van Diemen's Land. R. Br. in hort. kew. ed. 2. vol. 4. p. 270. Branches and peduncles rather hispid. Flowers yellow, spotted with red. Pedicels longer than the calyx.

Pubescent Goodia. Fl. April, July. Clt. 1805. Sh. 1 to 3 ft.

3 G.? POLYSPE'RMA (D. C. mem. soc. hort. gen. 2. p. 2. p. 133.) leaflets oval, acutish at both ends, and are, as well as the calyxes, pubescent; legume 8-10-seeded. ♄. G. Native of Van Diemen's Land or New Holland. Cýtisus tomentòsus, Andr. bot. rep. 237. The plant is frequently to be met with in gardens under the name of *Goòdia lotifòlia*, but differs from that plant in the legume being many-seeded and linear. Upper lip of calyx bipartite, lower lip tridentate. Flowers pure yellow, with the stamens monadelphous, and with the habit of the other species of this genus.

Many-seeded Goodia. Fl. Ap. July. Clt. 1798. Sh. 1 to 2 ft.

Cult. A mixture of sandy loam and peat suits the species, and young cuttings will root if planted in a pot of sand with a bell-glass placed over them. Seeds usually ripen in this country, by which young plants may be raised in abundance.

XXXVII. SCO'TTEA (in memory of Robert Scott, M.D., formerly professor of botany at Dublin). D. C. prod. 2. p. 118. —Scóttia, R. Br. in hort. kew. ed. 2. vol. 4. p. 268.

LIN. SYST. *Monadélphia, Decándria.* Calyx 5-toothed, imbricated with bracteas, with the teeth rather unequal. Vexillum complicated, short. Wings equal in length to the keel. Stamens all connected. Legume pedicellate, compressed, with the margin thickened on both sides. Seeds 3-4, strophiolate.

1 S. DENTA'TA (R. Br. in hort. kew. ed. 2. vol. 4. p. 268.) leaves opposite, sessile, cordate, triangular, toothed; flowers solitary, axillary, on very short pedicels. ♄. G. Native of New Holland, on the south-west coast. Lindl. bot. reg. 1233. Flowers mixed with red and green. A diffuse shrub.

Toothed-leaved Scottea. Clt. 1803. Fl. Dec. Feb. Sh. 2 to 4 ft.

2 S. ANGUSTIFÒLIA (Lindl. bot. reg. 1266.) leaves opposite, linear-oblong, truncate at the base; flowers solitary, on very short pedicels. ♄. G. Native of New Holland. Flowers greenish yellow, with the wings red on the upper side.

Narrow-leaved Scottea. Fl. Jan. June. Clt. 1825. Shrub 2 to 4 feet.

Cult. *Scóttea* is a genus of elegant shrubs, usually flowering in the winter; their culture and propagation is the same as that for *Goódia.*

XXXVIII. TEMPLETO'NIA (in honour of John Templeton, of Orange Grove, near Belfast, a gentleman to whom the editor of English Botany was under frequent obligations for Irish plants during the progress of that work). R. Br. in hort. kew. ed. 2. vol. 4. p. 269.

LIN. SYST. *Monadélphia, Decándria.* Calyx 5-toothed, with the teeth rather unequal. Keel oblong, a little longer than the wings. Stamens all connected, the tenth one sometimes rather shorter, and nearly free; anthers uniform. Legume pedicellate, plano-compressed, many-seeded. Seeds strophiolate.—Smooth Australian shrubs, with alternate, simple, cuneiform, retuse, mucronate leaves. Flowers axillary, solitary, large, crimson.

1 T. RETU'SA (R. Br. l. c.) bracteoles rather remote from the calyx; stamens all connected. ♄. G. Native of New Holland, on the south-west coast. Sims, bot. mag. 2338. Ráfnia retùsa, Vent. malm. t. 53. Leaves coriaceous, green.

Retuse-leaved Templetonia. Fl. March, June. Clt. 1803. Sh. 1 to 3 feet.

2 T. GLAU'CA (Sims, bot. mag. 2088.) bracteoles approximating the calyx; uppermost stamen shorter than the others, and nearly free. ♄. G. Native of New Holland, on the south-west coast. Lodd. bot. cab. 644. Lindl. bot. reg. 859. Leaves glaucous.

Glaucous Templetonia. Fl. Ap. May. Clt. 1818. Sh. 1 to 3 ft.

Cult. This is a genus of very showy shrubs when in bloom; their culture and propagation is the same as that for *Goòdia*, which see, p. 129.

XXXIX. RA'FNIA (in honour of C. G. Rafn, of Copenhagen, author of a Flora of Denmark and Holstein, 8vo. 1796 and 1800. in 2 vols. &c.) Thunb. prod. præf. p. post. 3. cap. 563. Willd. spec. 3. p. 949. D. C. prod. 2. p. 118. Œdmánnia, Thunb. et Willd.

LIN. SYST. *Monadélphia, Decándria.* Calyx cleft into 5 to the middle, 4 upper lobes broadest, sometimes distinct, sometimes variously connected, lower lobe setaceous and very acute. Corolla smooth, with an obtuse keel, and a roundish vexillum. Stamens monadelphous, with the sheath cleft in front at length. Legume lanceolate, compressed, many-seeded.—Smooth Cape shrubs, usually becoming of a lurid black colour on drying. Leaves simple, entire, not stem-clasping, alternate, but with the floral ones sometimes opposite. Flowers of all yellow.

1 R. CORDA'TA (Mart. acad. mun. 6. p. 189.) leaves rather orbicular, cordate, ciliated, nearly sessile; stipulas scarious;

flowers axillary, shorter than the leaves. ♄. G. Native of the Cape of Good Hope.

Cordate-leaved Rafnia. Shrub 2 to 3 feet.

2 R. ELLI'PTICA (Thunb. l. c.) leaves ovate-elliptic, acute, cauline ones alternate, floral ones opposite. ♄. G. Native of the Cape of Good Hope. Flowers axillary. Legume drooping.

Elliptic-leaved Rafnia. Fl. Ju. July. Clt. 1819. Sh. 2 to 3 ft.

3 R. CUNEIFÒLIA (Thunb. l. c.) leaves cuneiformly-obovate; branches angular. ♄. G. Native of the Cape of Good Hope. Spártium ovàtum, Berg. cap. 197. Crotalària cuneifórmis, Lam. dict. 2. p. 195. Leaves acuminated, succulent. Flowers yellowish-purple, disposed in racemose corymbs. Staminiferous tube gaping above.

Wedge-leaved Rafnia. Fl. Ju. July. Clt. 1816. Sh. 2 to 3 ft.

4 R. TRIFLÒRA (Thunb. l. c.) leaves ovate; branches angular; peduncles usually tern in the axils of the upper leaves, 1-flowered, and bibracteate. ♄. G. Native of the Cape of Good Hope. Vent. malm. t. 48. Crotalària triflòra, Berg. cap. 193. Lin. spec. 1004. Borbònia cordàta, Andr. bot. rep. t. 31. exclusive of the synonym, Sims, bot. mag. 859. Flowers large, yellow, sometimes only 1 or 2 together in the axils of the leaves.

Three-flowered Rafnia. Fl. June, July. Clt. 1786. Shrub 2 to 4 feet.

5 R. LA'NCEA (D. C. prod. 2. p. 119.) leaves lanceolate, erect, imbricated; stems ascending, terete; flowers axillary, solitary, on short pedicels; the 4 upper lobes of the calyx connected into a bifid 4-toothed lip, lower lobe setaceous. ♄. G. Native of the Cape of Good Hope. Œdmánnia láncea, Thunb. prod. 2. fl. cap. 561. act. holm. 1800. p. 281. t. 4.

Lance-leaved Rafnia. Fl. Ju. July. Clt. 1823. Sh. ascending.

6 R. OPPÓSITA (Thunb. l. c.) leaves linear-lanceolate, alternate; branches terete; branchlets axillary, bearing at the apex 2 opposite leaves and 1-2-flowers. ♄. G. Native of the Cape of Good Hope. Cýtisus Capénsis, Berg. cap. 217. Spártium Capénse, Lin. spec. 995. Crotalària oppósita, Lin. fil. suppl. 322. Lipària oppósita, Murr. syst. 554.

Opposite-leaved Rafnia. Fl. Ju. July. Clt. 1824. Sh. 2 to 3 ft.

7 R. AXILLA'RIS (Thunb. l. c.) leaves lanceolate, alternate and opposite; flowers terminal, solitary; branches axillary. ♄. G. Native of the Cape of Good Hope. Leaves like those of hyssop. Legume drooping.

Axillary-branched Rafnia. Shrub 1 to 2 feet.

8 R. ANGULA'TA (Thunb. l. c.) leaves lanceolate, alternate; peduncles lateral, 1-flowered; stem angular. ♄. G. Native of the Cape of Good Hope. Ráfnia, Burch. cat. 777. has a terete stem and angular branches. Leaves lanceolate, acute, 6-9 lines long, and 1-2 broad. Pedicels naked, reflexed after flowering. Legume pedicellate, compressed, mucronate by the style.

Angular-branched Rafnia. Shrub 2 to 3 feet.

9 R. SPICA'TA (Thunb. l. c.) leaves lanceolate, alternate; flowers axillary, racemose. ♄. G. Native of the Cape of Good Hope. Stem somewhat herbaceous. Spikes or racemes of flowers leafy, therefore the flowers may be called axillary.

Spiked-flowered Rafnia. Shrub 1 to 3 feet.

10 R. ANGUSTIFÒLIA (Thunb. l. c.) leaves lanceolate, alternate; pedicels lateral, 1-flowered; stem terete. ♄. G. Native of the Cape of Good Hope. Stem purplish.

Narrow-leaved Rafnia. Shrub 1 to 3 feet.

11 R. FILIFÒLIA (Thunb. l. c.) leaves linear-lanceolate, alternate; flowers axillary. ♄. G. Native of the Cape of Good Hope. Ráfnia, no. 228. Burch. cat. is perhaps referable to this species, of which the branches are roundish, and the leaves linear, also having axillary floriferous branchlets, bearing 2-3 leaves, and 1 flower each; legume pedicellate, inflexed, pendulous.

Thread-leaved Rafnia. Shrub 1 to 3 feet.

12 R. RETROFLE'XA (Thunb. l. c.) leaves obovate; branches reflexed and retroflexed. ♄. G. Native of the Cape of Good Hope. Stem much branched. Branches flexuous. Leaves opposite, sessile, obtuse. Flowers axillary, on very short pedicels. There is a specimen in the Linnæan Herbarium from Thunberg, which answers to the above name and character, but the leaves are rather more linear-lanceolate than obovate, and their colour is somewhat glaucous, and the flowers mostly terminal.

Retroflexed-branched Rafnia. Shrub 1 to 3 feet.

13 R. ERE'CTA (Thunb. l. c.) leaves oblong; flowers lateral; stem erect. ♄. G. Native of the Cape of Good Hope. Stem branched, terete. Leaves ovate. Flowers axillary, pedicellate.

Erect Rafnia. Shrub 2 to 3 feet.

14 R. DIFFU'SA (Thunb. l. c.) leaves ovate; stems decumbent. ♄. G. Native of the Cape of Good Hope. Root fusiform. Branches diffuse. Leaves alternate. Flowers axillary. Legume pedicellate, crowned by a recurved style.

Diffuse Rafnia. Shrub procumbent.

Cult. The species are all worth cultivating, as they are rather elegant when in flower; their culture and propagation is the same as that recommended for the species of *Borbònia*. See p. 131.

XL. VASCO'A (in honour of Vasco de Gama, the celebrated Portuguese circumnavigator). D. C. leg. mem. vi. prod. 2. p. 119.—Ráfniæ et Borbòniæ, spec. Thunb. and Willd.—Crotalàriæ, spec. Lin.

LIN. SYST. *Monadélphia, Decándria.* Calyx semi-5-cleft, with the lobes nearly equal, broadest at the base, and rather acute at the apex, but not spinose. Corolla smooth, with an obtuse keel, and a roundish vexillum. Stamens monadelphous, with the sheath cleft in front. Legume compressed, sessile, many-seeded.—Smooth Cape subshrubs, with simple, sessile, stem-clasping leaves, which are cordate at the base, the cauline ones alternate, and the floral ones opposite. The flowers disposed in fascicles in the upper axils of the leaves, and somewhat corymbose, on short pedicels, all yellow, and without any bracteas.

1 V. AMPLEXICAU'LIS (D. C. l. c.) leaves orbicular, cordate, very obtuse, floral ones coloured. ♄. G. Native of the Cape of Good Hope. Crotalària amplexicaúlis, Lin. spec. 1103. Burm. prod. Ráfnia amplexicaúlis, Thunb. fl. cap. 568. Crotalària renifórmis, Lam. dict. 2. p. 194.

Stem-clasping-leaved Vascoa. Fl. July, Aug. Clt. 1816. Shrub 3 to 5 feet.

2 V. PERFOLIA'TA (D. C. l. c.) leaves cordate, orbicular, bluntishly-mucronated. ♄. G. Native of the Cape of Good Hope.—Seb. thes. 1. t. 24. f. 5. Borbònia perfoliàta, Thunb. prod. f. cap. 122. Crotalària amplexicaúlis, Lam. dict. 2. p. 194. This species differs from the preceding in the leaves being one half smaller, more rigid, distinctly reticulated, and mucronate at the apex.

Perfoliate-leaved Vascoa. Fl. July, Aug. Clt. 1812. Shrub 2 to 3 feet.

Cult. For culture and propagation see *Borbònia*. The plants are rather elegant when in flower.

XLI. BORBO'NIA (in memory of Gaston de Bourbon, duke of Orleans, son of Henry IV. of France, a great lover and patron of botany; see also *Gastònia*). Lin. gen. no. 857. Lam. ill. 619. D. C. leg. mem. vi. but not of Plum. prod. 2. p. 120.

LIN. SYST. *Monadélphia, Decándria.* Calyx attenuated at the base, 5-cleft, with the lobes about equal in length, terminating each in a spiny acumen. Corolla villous on the outside, with the vexillum emarginate at the apex, and the keel obtuse.

Stamens all connected into a sheath, which is cleft in front. Stigma capitate, somewhat emarginate. Legume linear, plano-compressed, much longer than the calyx, many-seeded.—Cape shrubs, with simple, alternate, exstipulate, pungent leaves, which are stem-clasping, and many-nerved at the base. Flowers of all yellow, disposed in heads at the tops of the branches or axillary.

1 B. BARBA'TA (Lam. dict. 2. p. 436. ill. 610. f. 2.) leaves narrow, lanceolate, many-nerved, complicated, ciliately-bearded, and very much acuminated. ♄. G. Native of the Cape of Good Hope. Branches diverging. Flowers sessile, villous on the outside.

Bearded-leaved Borbonia. Fl. July, Aug. Clt. 1823. Sh. 3 to 4 feet.

2 B. TRINE'RVIA (Lin. spec. 994.) leaves lanceolate, 3-nerved, quite entire, glabrous. ♄. G. Native of the Cape of Good Hope. Berg. fl. cap. 188.—Pluk. alm. t. 297. f. 4. and perhaps B. angustifòlia, Lam. dict. 2. p. 436.

Three-nerved-leaved Borbonia. Fl. July, Aug. Clt. 1759. Shrub 3 to 6 feet.

3 B. LANCEOLA'TA (Lin. spec. 994.) leaves ovate-lanceolate, pungent, many-nerved, quite entire, sessile, glabrous, as well as the stem. ♄. G. Native of the Cape of Good Hope. Burm. cap. prod. 21. Jacq. schœnbr. 2. p. 217. Flowers densely villous.

Lanceolate-leaved Borbonia. Fl. July, Aug. Clt. 1752. Shrub 2 to 3 feet.

4 B. CORDA'TA (Lin. spec. 994.) leaves cordate, many-nerved, quite entire, glabrous, but the branches are villous. ♄. G. Native of the Cape of Good Hope. Jacq. schœnbr. 2. t. 218. B. cordifòlia, Lam. dict. 2. p. 436. Burm. prod. fl. cap. 21. Corolla densely villous, with the vexillum obcordate.

Cordate-leaved Borbonia. Fl. July, Aug. Clt. 1759. Sh. 3 to 6 feet.

5 B. RUSCIFÒLIA (Sims, bot. mag. t. 2128.) leaves cordate, many-nerved, minutely-ciliated, but are otherwise glabrous, as well as the branches. ♄. G. Native of the Cape of Good Hope.—Breyn. cent. 1. t. 28.—Seb. thes. 1. t. 24. f. 3. and Lam. ill. t. 610. f. 1. Flowers sparingly villous.

Butcher's-broom-leaved Borbonia. Fl. July, Aug. Clt. 1790. Shrub 2 to 4 feet.

6 B. PARVIFLO'RA (Lam. dict. 2. p. 437.) leaves cordate, many-nerved, minutely denticulated, and are, as well as the branches, glabrous. ♄. G. Native of the Cape of Good Hope. Flowers small, sessile, few, usually terminal.

Small-flowered Borbonia. Shrub 2 to 3 feet.

7 B. CRENA'TA (Lin. spec. 994.) leaves cordate, roundish, acute, denticulated, many-nerved, and reticulated between the nerves, and are, as well as the branches, glabrous. ♄. G. Native of the Cape of Good Hope. Curt. bot. mag. 274. Burm. cap. 21. Lois. herb. amat. t. 222. Flowers less villous than in the rest of the species.

Crenated-leaved Borbonia. Fl. July, Aug. Clt. 1774. Sh. 3 to 6 feet.

8 B. CILIA'TA (Willd. spec. 3. p. 923.) leaves cordate, rather orbicular, obtuse or acute, many-nerved, reticulated, denticulated, with the nerves and margin ciliated with long hairs; branches piliferous. ♄. G. Native of the Cape of Good Hope. Flowers small, few. The hairs on the leaves when young are frequently long and spreading.

Ciliated-leaved Borbonia. Fl. July, Aug. Clt. 1816. Sh. 2 to 6 feet.

† *Species not sufficiently known.*

9 B.? MONOSPE'RMA (D. C. prod. 2. p. 120.) leaves lanceolate, 3-nerved, very acute; pedicels 1-flowered, reflexed after flowering; legume 1-seeded, pendulous. ♄. G. Native of the Cape of Good Hope.

One-seeded Borbonia. Shrub.

10 B.? UNDULA'TA (Thunb. prod. 122.) leaves stem-clasping, undulated, ending in a reflexed mucrone. ♄. G. Native of the Cape of Good Hope. Perhaps this is a species of *Vascòa* allied to *V. amplexicaùlis* or *V. perfoliàta.*

Waved-leaved Borbonia. Shrub 2 to 4 feet.

11 B.? VILLÒSA (Thunb. fl. cap. 560.) leaves lanceolate, veinless; stem hairy; flowers terminal, sessile; corolla hairy. ♄. G. Native of the Cape of Good Hope. Perhaps a species of *Priestlèya.*

Villous Borbonia. Shrub 2 to 3 feet.

Cult. The species of *Borbònia* are shewy when in flower. They thrive best in a mixture of loam and peat, and young cuttings strike root freely in sand, under a bell-glass.

XLII. ACHYRO'NIA (from αχυρον, *achyron*, chaff; in reference to the branches and leaves being covered with chaffy hairs). Wendl. obs. bot. 39. D. C. prod. 2. p. 120.

LIN. SYST. *Diadélphia, Decándria.* Calyx 5-toothed, lower tooth elongated and bifid. Stamens diadelphous. Legume compressed, many-seeded.—A shrub, with the appearance of *Borbònia.*

1 A. VILLÒSA (Wendl. l. c. et hort. herrenh. 1. t. 12.). ♄. G. Native of New Holland. Erect, with the branches beset with silky hairs. Leaves lanceolate, acute, smooth, with the margins beset with silky villi. Flowers yellow, axillary, pedicellate.

Villous Achyronia. Fl. July, Aug. Clt. 1819. Sh. 2 to 3 ft.

Cult. See *Borbònia* for culture and propagation.

XLIII. LIPA'RIA (from λιπαρος, *liparos*, brilliant; in allusion to the surface of the leaves being shining). Lin. mant. 156. exclusive of numerous species. D. C. leg. mem. vi. prod. 2. p. 121.

LIN. SYST. *Diadélphia, Decándria.* Calyx thrust in at the base, with a short tube and a 5-lobed limb, the 4 superior lobes lanceolate and acute, and about equal in length, lower one very long, elliptic, and petaloid. Corolla glabrous, with an oval-oblong vexillum and oblong wings, the one involving the other in æstivation. Keel straight, acute, narrow, 2-edged. Stamens diadelphous. Ovary sessile, very short. Style filiform. Legume ovate, few-seeded.—Cape shrubs, smooth in every part except the pedicels, which are very short, and the ovary, which is very villous. Leaves lanceolate, exstipulate, quite entire, thin, many-nerved, pungent at the apex. Flowers disposed in subspherical heads, of a yellowish-brown colour, drying black.

1 L. SPHÆ'RICA (Lin. mant. 268.). ♄. G. Native of the Cape of Good Hope. Lodd. bot. cab. 642. Sims, bot. mag. 1241. Borbònia sphæ'rica, Lam. dict. 2. p. 437. Leucadéndron splèndens, Burm. fl. cap. prod. 4.

Globe-flowered Liparia. Fl. Jul. Aug. Clt. 1794. Sh. 3 to 6 ft.

Cult. See *Priestlèya* for culture and propagation.

XLIV. PRIESTLE'YA (in honour of M. Priestley, a physiological botanist). D. C. leg. mem. vi. D. C. prod. 2. p. 121.—Lipàriæ, spec. of authors.

LIN. SYST. *Diadélphia, Decándria.* Calyx nearly equally 5-lobed, somewhat bilabiate. Corolla glabrous, with a roundish vexillum, which stands on a short stipe, falcate obtuse wings, and a 2-edged convex keel which is curved on the back. Stamens diadelphous. Style filiform. Stigma capitate, sometimes furnished with an acute tooth behind. Legume sessile, plano-compressed, oval-oblong, apiculated by the style, 4-6-seeded. —Cape shrubs, with simple, quite entire, exstipulate leaves, and with yellow flowers, which are disposed either in heads, umbels, or spikes. This genus differs from *Borbònia* and *Aspálathus* in the stamens being diadelphous, and from *Lipària* in the calycine lobes being nearly equal, and in the form and æstivation of the petals.

Sect. I. Eisò'thea (from ειαω, *eiso*, within, or in, and θεω, *theo*, to run; in reference to the calyx being run or thrust in at the base, and therefore becoming in consequence diminished). D. C. prod. 2. p. 121. Calyx thrust in at the base.

1 P. myrtifòlia (D. C. l. c. t. 29.) leaves quite smooth, ovate-lanceolate, acute, almost nerveless; bracteas shorter than the pedicels, and involving them at the base, and are as well as the calyxes glabrous; legumes clothed with adpressed villi. ♄. G. Native of the Cape of Good Hope. Lipària myrtifòlia, Thunb. fl. cap. 565. Calyx yellowish when dry, very much thrust in at the base, having equal, ovate, rather acute lobes. Heads of flowers rather loose; pedicels elongating after flowering.

Myrtle-leaved Priestleya. Fl. April, Dec. Clt. 1823. Sh. 2 to 4 feet.

2 P. hirsu'ta (D. C. l. c.) leaves obovate-oblong, acute, glabrous, but with the branches, bracteas, and calyxes hairy; stigma bifurcate. ♄. G. Native of the Cape of Good Hope. Lipària hirsùta, Thunb. fl. cap. 557. Ker. bot. reg. t. 8. but not of Mœnch. Racemes of flowers somewhat capitate, usually twin. Bracteas inclosing the pedicels and longer than them, spacelate at the apex.

Hairy Priestleya. Fl. April, Dec. Clt. 1792. Sh. 2 to 4 ft.

3 P. lævigа'ta (D. C. l. c. t. 30.) leaves oblong-linear, acutish, nerveless, lower ones glabrous, the upper and floral ones clothed with adpressed silky pubescence; flowers disposed in capitate umbels; calyxes obtuse, clothed with adpressed villi; ovary villous. ♄. G. Native of the Cape of Good Hope. Lipària lævigàta, Thunb. fl. cap. 566. Borbònia lævigàta, Lin. mant. 100. L. umbellàta, Lin. mant. 110. Calyx at length thrust in at the base, with obtuse lobes.

Smooth Priestleya. Fl. July, Aug. Clt. 1820. Sh. 2 to 4 ft.

Sect. II. Aneisòthea (from α priv. ειαω, *eiso*, within or in, θεω, *theo*, to run: the calyx in the species of this section are not thrust in at the base, as in the preceding). D. C. prod. 2. p. 121. Calyx not thrust in at the base but ovate or obconically attenuated.

4 P. capita'ta (D. C. prod. 2. p. 121.) leaves oblong-linear, acute, somewhat convolute, nerveless, and are as well as the branches quite glabrous; bracteas, calyxes, and legumes very hairy. ♄. G. Native of the Cape of Good Hope. Lipària capitàta, Thunb. prod. 124. fl. cap. 566. Burch. cat. no. 591. Flowers capitate. Calyx ovate at the base. Stamens diadelphous, permanent around the fruit.

Capitate-flowered Priestleya. Fl. July, Aug. Clt. 1812. Shrub 2 to 4 feet.

5 P. graminifòlia (D. C. prod. 2. p. 122.) leaves lanceolate, and are as well as the angular stems glabrous; flowers spicate, hairy. ♄. G. Native of the Cape of Good Hope. Lipària graminifòlia, Lin. mant. 268. Thunb. fl. cap. 566. Leaves 1-nerved beneath. Perhaps sufficiently distinct from *P. capitàta*.

Grass-leaved Priestleya. Fl. Ju. Jul. Clt. 1800. Sh. 2 to 4 ft.

6 P. te'res (D. C. l. c.) leaves obovate-oblong, and are as well as the stem glabrous; stem terete; flowers racemose, hairy. ♄. G. Native of the Cape of Good Hope.

Terete-stemmed Priestleya. Fl. July, Aug. Clt. 1816. Sh. 2 to 4 feet.

7 P. ericæfòlia (D. C. l. c.) leaves linear-lanceolate, rather acute, with somewhat revolute margins, hairy beneath, but at length glabrous above; branches and calyxes silky; flowers capitate, terminal, or in fascicles in the upper axils of the leaves. ♄. G. Native of the Cape of Good Hope. Borbònia ericifòlia, Lin. amœn. 6. p. 92. Burm. cap. 20. Keel of a fuscous purple colour at the apex. Ovary very villous. Leaves 3 lines long.

Var. [illegible] leaves silky on the upper surface. ♄. G. The plant, when dry, has the habit of *Chenòlea diffùsa*, D. C. leg. mem. t. 31.

Heath-leaved Priestleya. Fl. Ju. Jul. Clt. 1812. Sh. 1 to 3 ft.

8 P. serícea (D. C. l. c.) leaves ovate, acute, flat, 1-nerved, clothed with silky adpressed pubescence on both surfaces as well as on the branchlets; flowers disposed in a short terminal spike, clothed with adpressed pubescence; legumes hairy. ♄. G. Native of the Cape of Good Hope. Lipària serícea, Lin. syst. 555. Borbònia serícea, Lam. dict. 1. p. 438.—Pluk. alm. t. 388. f. 3. Indigófera serícea, Lin. mant. 271.? ex Lam. dict. 3. p. 252. Crotalària imbricàta, Burm. cap. 21. Lin. spec. 1004.?

Silky Priestleya. Fl. June, July. Clt. 1794. Sh. 2 to 3 ft.

9 P. axilla'ris (D. C. leg. vi. t. 32.) leaves ovate, acute, flat, 1-nerved, clothed with adpressed villi on both surfaces as well as on the branchlets; flowers solitary in the axils of the upper leaves; calyx and legumes hairy. ♄. G. Native of the Cape of Good Hope. Borbònia axillàris, Lam. dict. 1. p. 438.

Axillary-flowered Priestleya. Fl. June, July. Clt. 1822. Shrub 2 to 3 feet.

10 P. ellíptica (D. C. leg. mem. vi. t. 33.) leaves elliptic, flat, 1-nerved, ending in a callous mucrone, covered with adpressed villi on both surfaces; flowers capitate, and are as well as the calyxes and branchlets velvety. ♄. G. Native of the Cape of Good Hope. Flowers 5-6, umbellately capitate at the tops of the branches. Calyx clothed with silky pubescence. Branches rather hairy. Leaves rather canescent.

Elliptic-leaved Priestleya. Clt. 1825. Shrub 2 to 4 feet.

11 P. villòsa (D. C. prod. 2. p. 122.) leaves ovate-elliptic, acute, 1-nerved, flat, hairy on both surfaces, as well as the branchlets, calyxes, and legumes; flowers capitate. ♄. G. Native of the Cape of Good Hope. Borbònia tomentòsa, Lin. spec. 994. Lipària villòsa, Lin. mant. 438.—Seba, thes. 1. t. 24. f. 2.—Lòtus fruticòsus, Houtt. p. fl. syst. 10. p. 1179.

Villous Priestleya. Fl. June, July. Clt. 1774. Sh. 2 to 4 ft.

12 P. vestìta (D. C. prod. 2. p. 122.) leaves ovate, concave, obtuse, nerveless, glabrous above, but clothed with hairy wool beneath as well as the calyxes and branches; flowers capitate. ♄. G. Native of the Cape of Good Hope. Lipària vestìta, Thunb. fl. cap. 568. Sims, bot. mag. 2223. Lipària villòsa, Andr. bot. rep. 382.—Seba, thes. 1. t. 24. f. 1.

Clothed Priestleya. Fl. May, June. Clt. 1800. Sh. 2 to 4 ft.

† *The calyx of the following species being unknown, consequently are not arranged in any section.*

13 P. te'cta (D. C. prod. 2. p. 122.) leaves ovate, concave, spreading, tomentose; flowers axillary, stalked. ♄. G. Native of the Cape of Good Hope. Lipària técta, Thunb. prod. 124. fl. cap. 568.

Covered Priestleya. Shrub 2 to 3 feet.

14 P. tomentòsa (D. C. prod. 2. p. 122.) leaves lanceolate, and are as well as the calyxes tomentose; flowers capitate. ♄. G. Native of the Cape of Good Hope. Lipària tomentòsa, Thunb. l. c. Corolla glabrous.

Tomentose Priestleya. Fl. Jul. Aug. Clt. 1812. Sh. 2 to 4 ft.

15 P. umbellífera (D. C. l. c.) leaves lanceolate, villous; branches umbellate; flowers somewhat umbellately capitate, tomentose. ♄. G. Native of the Cape of Good Hope. Lipària umbellífera, Thunb. l. c.

Umbelliferous Priestleya. Shrub 2 to 4 feet.

Cult. The species of this genus thrive very well in a mixture of sandy loam and peat, but they do not require to be watered so freely as many other plants of this order; for if they are watered too much over their leaves, it is certain to kill them. The very young tops taken off and made into cuttings, and planted in a pot of sand, with a bell-glass placed over them, are not difficult to root, if the bell-glasses are taken off and wiped regularly to prevent damp. They are all elegant plants when in flower.

XLV. HA'LLIA (named after Berger Martin Hall, a pupil of Linnæus, and the student under whose name the thesis called *Nectaria florum* stands in the Amœnitates Academicæ). Thunb. prod. in præf. 2. fl. cap. 593. Desf. journ. bot. 3. p. 125. t. 6. f. 30. but not of Jaume. D. C. prod. 2. p. 122.

LIN. SYST. *Monadélphia, Decándria.* Calyx 5-cleft, with the segments about equal. Keel obtuse. Stamens monadelphous, with the sheath complete. Legume compressed, membranous, 2-valved, 1-seeded.—Cape herbs or subshrubs, with simple leaves and with the stipulas adhering to the petioles, and purple flowers standing on solitary axillary pedicels. This genus is allied to *Psoràlea* or *Anthýllis*, not to *Hedýsarum.*

1 H. ALA'TA (Thunb. fl. cap. 593.) stem 2-edged; stipulas rather decurrent, adnate to the petioles and longer than them; leaves lanceolate or oblong, younger ones rather villous and complicated, adult ones glabrous; flowers on short pedicels, ultimate ones according to Thunberg disposed in a terminal raceme. ♃. G. Native of the Cape of Good Hope beyond Cape Town, a little to the westward.

Winged-stemmed Hallia. Fl. July, Aug. Clt. 1818. Pl. 1 ft.

2 H. FLA'CCIDA (Thunb. l. c.) stem filiform, trigonal at the apex; stipulas ovate, acute, striated, hardly adnate to the petioles at the base, and rather longer than them; leaves lanceolate, mucronate, glabrous; peduncles 1-flowered, length of leaves. ♃. G. Native of the Cape of Good Hope. The stipulas according to Thunberg are reflexed, but in the specimen they are obviously erect.

Flaccid Hallia. Fl. Aug. Sept. Clt. 1789. Pl. 1 to 2 feet.

3 H. ANGUSTIFÒLIA (D. C. prod. 1. p. 123.) stem filiform; stipulas lanceolate, erect, adnate even to the middle of the very short petioles and longer than them; leaves linear, acute, glabrous; pedicels 1-flowered, a little shorter than the leaves. ♃. G. Native of the Cape of Good Hope. Hállia, no. 181. Burch, cat. pl. afr. aust.

Narrow-leaved Hallia. Pl. 1 foot.

4 H. VIRGA'TA (Thunb. fl. cap. l. c.) stem terete; stipulas lanceolate, erect; petioles very short; leaves lanceolate, mucronate, glabrous; pedicels much shorter than the leaves. ♃. G. Native of the Cape of Good Hope.

Twiggy Hallia. Pl. 1 foot.

5 H. CORDA'TA (Thunb. l. c.) stem filiform, trigonal, pilose; stipulas lanceolate, spreading, reflexed, about equal with the petioles in length; leaves cordate, acuminated, pilose; pedicels 1-flowered, 3-times longer than the petioles. ♃. G. Native of the Cape of Good Hope, in grassy places. Hedýsarum cordàtum, Thunb. nov. act. ups. 6. p. 41. t. 1. Glycine monophýlla, Jacq. schœnbr. 3. t. 296.

Var. β, Burchéllii (D. C. prod. 2. p. 123.) petioles twice or thrice longer than the stipulas; leaves cordate, rather obtuse, mucronate. ♃. G. Burch. cat. no. 371.

Cordate-leaved Hallia. Fl. Aug. Clt. 1787. Pl. 1 foot.

6 H. ASA'RINA (Thunb. l. c.) stem filiform, striated, pilose; stipulas ovate, acute, reflexed, longer than the very short petioles; leaves cordate, roundish, mucronate, villous; pedicels 1-flowered, length of leaves. ♃. G. Native of the Cape of Good Hope. Crotalària asárina, Berg. cap. 194.

Asarum-like Hallia. Fl. July, Aug. Clt. 1810. Pl. 1 ft.

7 H. IMBRICA'TA (Thunb. l. c.) stems terete, striated; branches villous; stipulas ovate-oblong, acute, membranous, deflexed; leaves nearly sessile, cordate, acute, complicated. ♃.? ♄.? G. Native of the Cape of Good Hope. Sims, bot. mag. 1850. Hedýsarum imbricàtum, Lin. fil. suppl. 330. Thunb. nov. act. ups. 6. p. 42. t. 1. f. 2. Flowers sessile.

Imbricate-leaved Hallia. Fl. Aug. Clt. 1812. Pl. 1 to 2 ft.

Cult. The species of *Hállia* are very pretty plants, with purple flowers; they thrive well in a mixture of sandy loam and peat, and young cuttings strike freely in sand under a bell-glass, or they may be raised from seeds, which sometimes ripen.

XLVI. HEYLA'NDIA (in honour of M. Heyland, an artist employed by De Candolle). D. C. leg. mem. vi. prod. 2. p. 123.

LIN. SYST. *Monadélphia, Decándria.* Calyx 5-cleft, with the lobes about equal. Keel obliquely truncate and acuminated, as in *Onònis.* Stamens monadelphous, with the sheath cleft in front. Style filiform, bent, almost forming a straight angle. Legume compressed, 1-celled, 1-seeded.—East Indian herbs or subshrubs, slender, dichotomous, and hairy, without stipulas. Leaves on short petioles, cordate, roundish. Flowers axillary, solitary, nearly sessile, yellow, and small.

1 H. HEBECA'RPA (D. C. leg. mem. vi. t. 34.) legumes covered with long scattered hairs; leaves on very short stalks, roundish and cordate. ♄.? ♃.? S. Native of Ceylon, in the interior of the country. Ovary very hairy. Leaves 4-5-lines long.

Hairy-fruited Heylandia. Fl. Jul. Aug. Clt. 1820. Shrub procumbent.

2 H. LEIOCA'RPA (D. C. l. c.) legumes smooth; leaves on very short petioles, roundish, and cordate. ♃.? ♄.? S. Native of the East Indies. Hállia hírta, Willd. spec. 3. p. 1169.—Pluk. alm. t. 454. f. 8. Lens Madraspatàna, Elatines folio, Petiv. gaz. t. 30. f. 11. Hállia monophýlla, Desv. in herb. Desf. Leaves 2-3 lines long.

Smooth-fruited Heylandia. Fl. July, Aug. Clt. 1820. Sh. pr.

3 H. LATEBRÒSA (D. C. l. c.) legumes rather pilose; leaves sessile, ovate, cordate, acute. ♄. S. Native of the East Indies. Hedýsarum latebròsum, Lin. mant. 270. exclusive of the synonym of Petiv. Lespedèza latebròsa, Pers. ench. Branches and bracteas ciliated with long hairs.

Latebrose Heylandia. Shrub procumbent.

Cult. The culture and propagation of this genus is the same as that recommended for *Hállia*, but being stove plants require heat.

XLVII. CROTALA'RIA (from κροταλον, *krotalon*, a castanet; the pods of this genus are inflated, and the seeds rattle when the pods are shaken.). Lin. gen. 862. Gært. fruct. 2. t. 148. Lam. ill. t. 67. D. C. prod. 2. p. 124.

LIN. SYST. *Monadélphia, Decándria.* Calyx 5-lobed, somewhat bilabiate, upper lip bifid, lower one trifid. Vexillum large, cordate. Keel falcate, acuminated. Filaments all connected with the sheath, cleft in front. Style bearded laterally, pubescent. Legume turgid, with the valves ventricose, usually many-seeded, pedicellate.—Herbs or subshrubs, with simple or palmately compound leaves, these last have usually 3 leaflets, very rarely 5-foliate. Flowers usually yellow, with small bracteas along the pedicels, or at the base of the calyx. The greater number of the species being not sufficiently known, the whole are disposed in an artificial order.

§ 1. *Leaves simple.*

* *Stipulas decurrent. Flowers disposed in racemes, the ra-*

cemes terminal or opposite the leaves. Stems all herbaceous. Corolla smaller than the calyx, or about equal in length to it.

1 C. ALA'TA (Hamilt. ex Roxb. in D. Don, prod. fl. nep. 241.) stipulas ovate, acute, rather convex on the inner side, running down the stem a great way in a wing; leaves oval or oval-oblong, retuse, pubescent as well as the stem, which is ascendent; bracteas ovate. ⊙. F. Native of Nipaul, at Sucmbu. Racemes few-flowered. Bracteas and bracteoles ovate. Calycine lobes acuminated. Flowers pale-yellow.

Winged-stemmed Crotalaria. Fl. Jul. Aug. Clt. 1818. Pl. 1 ft.

2 C. STIPULA'RIA (Desv. journ. bot. 1814. 2. p. 76.) stipulas ovate, acuminated, rather cut on the inner side, ending in a long broad wing; leaves oval, obtuse, and are villous as well as the stem, which is erect; bracteas linear, acuminated. ⊙.? S. Native of Cayenne. Legume smooth, an inch long.

Var. β, serpyllifòlia (D. C. prod. 2. p. 124.) leaves oval-oblong, smaller than those of the species. ⊙.? S. Native of? C. serpyllifòlia, herb. Lamb.

Stipular Crotalaria. Fl. July, Aug. Clt. 1823. Pl. 1 foot.

3 C. GENISTE'LLA (H. B. et Kunth, nov. gen. amer. 6. p. 398.) plant covered with strigose silky hairs, herbaceous, erect; stipulas short, decurrent, acute; leaves lanceolate, acute, silvery beneath; racemes axillary and terminal, many-flowered, panicled; legume many-seeded, smooth. ♃. S. Native on the Andes, about Popayan.

Genista-like Crotalaria. Pl. 1 foot.

4 C. PTEROCAU'LA (Desf. l. c.) stipulas obtuse, decurrent; leaves linear-lanceolate, acute, silky from adpressed hairs; legume oblong, smooth. ⊙.? S. Native of South America.

Winged-stemmed Crotalaria. Pl. 1 foot.

5 C. PLATYCA'RPA (Link. enum. 2. p. 227.) branches winged above, from the decurrent stipulas, lower leaves oblong, upper ones lanceolate, acute, hairy; racemes lateral; bracteoles linear. ⊙. H. Native of North America. Corolla yellow, but with the vexillum brownish.

Broad-podded Crotalaria. Fl. July. Clt. 1823. Pl. 1 foot.

6 C. PU'RSHII (D. C. prod. 2. p. 124.) stipulas lanceolate, acuminated, decurrent; leaves lanceolate-oblong, glabrous; stem erect, simple, clothed with adpressed villi; racemes usually 3-flowered. ⊙. H. Native of North America, in Virginia and Carolina. C. lævigàta, Pursh, fl. sept. amer. 2. p. 469. but not of Lam.—Pluk. alm. t. 277. f. 2.

Pursh's Crotalaria. Fl. June, July. Clt. 1800. Pl. 1 foot.

7 C. PARVIFLÒRA (Roth. cat. 2. p. 83.) stipulas oblong, acute, short, superior ones decurrent; leaves linear-lanceolate, very hairy as well as the stem, which is erect and branched. ⊙. H. Native of North America, from New York to Carolina. Willd. spec. 3. p. 973. Pursh, l. c.

Small-flowered Crotalaria. Fl. Aug. Sept. Clt. 1817. Pl. 2 ft.

8 C. SAGITTA'LIS (Lin. spec. 1003. var. *a.*) stipulas lanceolate, acuminated, decurrent; leaves oblong-lanceolate, hairy as well as the stem which is branched and erect; racemes usually 3-flowered. ⊙. H. Native of North America, from Virginia to Georgia, in pine barrens. Herm. lugd. bot. p. 203. icon. C. bialàta, Schrank. ex Ræusch.

Arrow Crotalaria. Fl. June, July. Clt. 1731. Pl. 1 foot.

9 C. ESPADÍLLA (H. B. et Kunth, l. c.) stipulas large, acuminated, triangularly falcate, decurrent; leaves lanceolate or oblong, obtuse, younger ones golden-yellow, and are as well as the erect stem beset with strigose silky hairs; racemes opposite the leaves, few-flowered; legume many-seeded, glabrous. ⊙.? S. Native of South America, in sandy places near Caricnana, where it is called *Espadilla.* Very like *C. sagittàlis.*

Espadilla Crotalaria. Pl. 1 foot.

10 C. OVA'LIS (Pursh, l. c.) stipulas acuminated, upper ones decurrent; leaves almost sessile, oval, hairy as well as the stems, which are diffuse; racemes elongated, 4-6-flowered, opposite the leaves. ♃. F. Native of Georgia and Carolina, in pine barrens. Hook, bot. mag. 3006. C. sagittàlis, var. ovalifòlia, Michx. fl. bor. amer. p. 55. Anónymos rotundifòlia, Walt. no. 278. C. rotundifòlia, Poir. suppl. 2. p. 402. The leaves are sometimes exstipulate, as has been noticed by Nuttall.

Oval-leaved Crotalaria. Fl. July, Aug. Clt. 1810. Pl. 1 ft.

11 C. RUBIGINÒSA (Willd. spec. 3. p. 973.) stipulas linear, acuminated, upper ones decurrent; leaves oval-lanceolate, mucronate, villous, as well as the stem, which is branched and diffuse; racemes usually 3-flowered and elongated. ⊙. S. Native of the East Indies. This is very like the preceding species.

Rusty Crotalaria. Fl. July. Clt. 1807. Pl. ½ to 1 foot.

* * *Stipulas not decurrent, and sometimes wanting altogether. Flowers disposed in racemes, which are either terminal or opposite the leaves.*

12 C. VERRUCÒSA (Lin. spec. 1005.) stipulas lunate, declinate; leaves oval, obtuse; branches acutely tetragonal; racemes terminal; ovaries villous. ⊙. S. Native of the East Indies. Andr. bot. rep. t. 308. Lindl. bot. reg. 1137. Hook, bot. mag. 3034. C. cœrùlea, Jacq. icon. rar. t. 144. C. angulòsa, Lam. dict. 2. p. 195. Cav. icon. 4. t. 321. Corolla with the vexillum greenish-white, streaked with pale-blue inside and with the wings obovate, yellowish white at the base, the rest blue, and with the keel whitish, but yellowish at the point. Anthers yellow.

Warted Crotalaria. Fl. June, July. Clt. 1731. Pl. 1 to 2 ft.

13 C. ACUMINA'TA; stipulas lunate, declinate; leaves ovate, but rather hastate at the base, and acuminated at the apex; branches tetragonal; racemes terminal; ovaries villous? ⊙. S. Native of the Mauritius and the islands in the East Indies. C. verrucòsa *β*, hastàta, Pers. ench. no. 20. C. verrucòsa, var. *a*, acuminàta, D. C. prod. 2. p. 125.—Burm. zeyl. t. 34. Leaves acute at both ends. Flowers bluish.

Acuminated-leaved Crotalaria. Fl. June, July. Clt. 1731. Pl. 1 feet.

14 C. SEMPERFLÒRENS (Vent. hort. cels. t. 17.) stipulas lunate, nearly lanceolate, declinate; leaves oval, emarginate, mucronate; stems terete, striated, suffruticose at the base; ovaries clothed with adpressed pubescence. ♃.? ♄. S. Native of the East Indies. Flowers golden-yellow, crowded at the tops of the racemes. Leaves clothed with adpressed pubescence beneath, and usually a little warted, as in *C. verrucòsa.*

Ever-flowering Crotalaria. Fl. Mar. Sept. Clt. 1816. Pl. 1 to 2 feet.

15 C. RETU'SA (Lin. spec. 1004.) stipulas setaceous, straight; leaves oblong-cuneiform, retuse, full of very minute, pellucid dots; racemes terminal; ovaries glabrous. ⊙. S. Native of the East Indies, from whence it has been introduced to the Mauritius and to the West India Islands. Ker. bot. reg. 253. Flowers yellow but with the vexillum usually purplish. Leaves variable, more or less villous beneath, sometimes mucronate at the apex, with the mucrone either straight or recurved.—Rumph. amb. 5. t. 96. f. 1.—Rheed. mal. 9. t. 25. Burm. ind. 155.

Retuse-leaved Crotalaria. Fl. Ju. Jul. Clt. 1731. Pl. 2 to 3 ft.

16 C. LESCHENAU'LTII (D. C. prod. 2. p. 125.) stipulas triangular, acuminated, cuneate-elliptic, mucronate, clothed with silky villi beneath and full of pellucid dots; racemes terminal; ovaries glabrous. ⊙. S. Native of the East Indies, on the Nelligerry mountains, where it is called *Guili-guedje* by the natives. Flowers yellow. This is an intermediate species between *C. retùsa* and *C. spectábilis.*

Leschenault's Crotalaria. Pl. 8 to 9 feet.

17 C. SPECTA'BILIS (Roth. nov. spec. 341.) stipulas lanceolate, cordate, somewhat sagittate; leaves cuneate, mucronate, clothed with hoary tomentum beneath, full of pellucid dots; lower leaves obovate and obtuse, middle ones oblong-elliptic, superior ones nearly linear; stem obtuse-angled; ovaries glabrous. ⊙. S. Native of the East Indies. Flowers of a dusky-purple colour. Allied to *C. retùsa*, but differs in the stipulas being dilated at the base, not setaceous.

Shewy Crotalaria. Fl. June, Aug. Clt. 1820. Pl. 1 to 1½ ft.

18 C. PULCHE'RRIMA (Roxb. cat. calc. 54. ex Sims, bot. mag. 2027.) leaves cuneate-obovate, clothed with silky pubescence on both surfaces; bracteas and calyxes coloured; legume sessile, few-seeded, covered by the permanent calyx; stem shrubby, with the branches terete. ♄. S. Native of Mysore. Flowers yellow, very like those of *Spártium júnceum.*

Fairest Crotalaria. Fl. June, July. Clt. 1814. Sh. 1 to 3 ft.

19 C. BENGALE'NSIS (Lam. dict. 2. p. 196.) leaves lanceolate, mucronate, almost sessile, pubescent; stem twiggy; racemes loose, elongated, terminal; legume clothed with rufous tomentum or villi. ⊙. S. Native of Bengal.—Pluk. alm. t. 169. Allied to *C. júncea*, and perhaps the *C. tenuifòlia* of Horn. cat. hort. hafn. suppl. 151. Flowers yellow.

Bengal Crotalaria. Fl. June, July. Clt. 1806. Pl. 2 to 3 ft.

20 C. JU'NCEA (Lin. spec. 1004.) stipulas setaceous, almost wanting; leaves cuneately lanceolate, on short petioles, clothed with adpressed pubescence, as well as the furrowed stems; racemes terminal; legume clothed with villous tomentum. ⊙. S. Native of the East Indies. Roxb. cor. 2. t. 193. Andr. bot. rep. 422.—Burm. ind. 155.—Rheed. mal. 9. t. 26. Flowers yellow, resembling those of *Genísta júncea.* Legume pendulous, 12-15 lines long and 6 broad, 6-10-seeded. This plant is cultivated in India for its fibre, as a substitute for hemp; it is prepared in the same way. It is also very nourishing food for cows, when young.

Var. β, *punctulàta* (D. C. prod. 2. p. 126.) vexillum and wings marked at the apex with black lines and dots.

Rushy Crotalaria. Fl. June, July. Clt. 1700. Pl. 4 to 8 ft.

21 C. TENUIFÒLIA (Roxb. hort. beng. 54.) leaves linear, acute, clothed with silky pubescence; stem twiggy, simple; raceme loose, elongated, terminal; calyxes and ovaries silky. ♄. S. Native of Coromandel. Ker. bot. reg. 982. Flowers yellow. Allied to *C. Bengalénsis* and *C. acuminàta.*

Fine-leaved Crotalaria. Fl. Ju. Jul. Clt. 1816. Sh. 1 to 2 ft.

22 C. FENESTRA'TA (Sims, bot. mag. 1933.) stipulas setaceous; leaves ovate-lanceolate, silky beneath and ciliated; stems pubescent, furrowed; vexillum rather orbicular, acuminated. ⊙. S. Native of the East Indies. Lower segments of the calyx cohering at the apex.

Windowed Crotalaria. Fl. June, Jul. Clt. 1815. Pl. 1 to 2 ft.

23 C. SERÍCEA (Retz. obs. 3. p. 26.) stipulas semi-cordate; leaves lanceolate, acute, silky beneath as well as the legumes; stem furrowed; racemes terminal, elongated. ⊙. S. Native of the East Indies. Allied to *C. júncea.* Flowers yellow.

Silky Crotalaria. Fl. June, July. Cl. 1807. Pl. 1 to 2 ft.

24 C. TE'CTA (Roth. nov. spec. 334.) plant exstipulate, clothed with silky pubescence; leaves oblong, mucronate, approximate, sessile, lower ones obovate, superior ones linear; stem straight, divided at the apex; legumes and styles glabrous. ⊙. ? S. Native of the East Indies. Flowers about the size of those of *C. parviflòra*, yellow and striped with blackish-brown.

Covered Crotalaria. Pl. 1 to 2 feet.

25 C. BURMA'NNI (D. C. prod. 2. p. 126.) stipulas and bracteas setaceous; branches and leaves villous or clothed with silky pubescence beneath; lower leaves obovate, emarginate, superior ones oblong, mucronate; stem straight, divided at the apex; racemes usually terminal, simple. ⊙. S. Native of the East Indies. C. sericea, Burm. ind. 156. t. 48. f. 1. but not of Retz. Flowers yellow, one half smaller than those of *C. júncea*, pubescent on the outside.

Burmann's Crotalaria. Fl. June, Jul. Clt. 1800. Pl. 1 to 2 ft.

26 C. HIRSU'TA (Willd. spec. 3. p. 978.) stipulas subulate, reflexed; leaves ovate, acute, glabrous above and pubescent beneath; stem hairy; raceme subterminal; legume hairy. ⊙. S. Native of the East Indies, near Hydrabad. Flowers yellow.

Hairy Crotalaria. Fl. July, Aug. Clt. 1818. Pl. 1 to 2 ft.

27 C. MYSORE'NSIS (Roth. nov. spec. 338.) plant hairy; stipulas linear-lanceolate; leaves oblong, obtuse, stalked; racemes terminal, elongated; bracteas length of calyx; legumes ovate, glabrous. ⊙. S. Native of Mysore, in the East Indies. Flowers yellow.

Var. β, *pauciflòra* (D. C. prod. 2. p. 126.) stems slenderer, having a few long hairs as well as the leaves. Roth, l. c.

Var. γ, *angustifòlia* (D. C. prod. 2. p. 126.) leaves narrower, and are as well as the stem densely clothed with rusty silky hairs. Roth, l. c.

Mysore Crotalaria. Pl. 1 to 2 feet.

28 C. MONTA'NA (Roth, l. c.) plant exstipulate, covered with silky brown strigæ; leaves oblong, obtuse, almost sessile; stem terete; racemes terminal; legume nearly globose, dotted, glabrous, one half shorter than the style, which is pilose at the apex. ⊙. ? S. Native of the East Indies. Corolla length of calyx.

Mountain Crotalaria. Pl. 1 to 2 feet.

29 C. A'LBIDA (Roth. l. c.) plant exstipulate; leaves oblong-obtuse, mucronate, petiolate, clothed with hoary tomentum beneath; stem terete; racemes elongated; calyx strigose; legume oblong-ovate, longer than the pilose style. ⊙. ? S. Native of the East Indies. Corolla white, a little smaller than the calyx.

White-flowered Crotalaria. Pl. 1 to 2 feet.

30 C. PANICULA'TA (Willd. spec. 3. p. 982.) stipulas and bracteas linear-subulate, reflexed; leaves oblong, obtuse, mucronate, silky-villous; panicle terminal, bracteate. ♄. S. Native of Malabar, Java, and China. C. Chinénsis, Lam. dict. 2. p. 195. but not of Lin. Vexillum silky on the outside. Keel acuminated. Style plicate, the upper plait deciduous. Legume ovate, villous, length of calyx.

Panicled Crotalaria. Fl. June, July. Clt. 1820. Sh. 2 to 3 ft.

31 C. PU'LCHRA (Andr. bot. rep. t. 601. Ait. hort. kew. 4. p. 272.) stipulas setaceous, erect; leaves oval-oblong, acute, silky on both surfaces, as well as the calyxes and vexillum; racemes terminal, bracteate. ♄. S. Native of the East Indies. Flowers large, yellow. Legume, according to Andrews, length of calyx, and 4-seeded, and hence perhaps the same as *C. tetraspérma*, Dietr. Ovary villous. Vexillum acuminated. Bracteas 2, ovate.

Fair Crotalaria. Fl. March, May. Clt. 1807. Sh. 2 feet.

32 C. NI'TENS (H. B. et Kunth, nov. gen. amer. 6. p. 399.) suffruticose, silky; branches rather angular; leaves oblong, obtuse, cuneated at the base, younger ones clothed with golden rusty down; racemes terminal or opposite the leaves, many-flowered; legume many-seeded, glabrous. ♄. S. Native of New Granada, near Mariquita and Honda. The plant from Honda is more densely pilose, the bracteas smaller, and the flowers larger than those of the plant from Mariquita.

Shining Crotalaria. Shrub 1 to 3 feet.

33 C. BERTERIA'NA (D. C. prod. 2. p. 127.) stipulas subulate, small; leaves elliptic, obtuse, mucronate, clothed on both surfaces with shining silky villi; racemes terminal. ♄. S. Native of Guadaloupe, in gardens. Branches villous. Bracteas ovate, acute. Flowers yellow. Legume pubescent, 3-4-seeded, length of calyx.

Bertero's Crotalaria. Fl. May, July. Clt. 1818. Sh. 2 to 3 ft.

34 C. Nòvæ-Holla'ndiæ (D. C. prod. 2. p. 127.) stipulas wanting; leaves elliptic-obovate, tapering to the base, obtuse at the apex, clothed beneath with adpressed silky pubescence, as well as the petioles and branches; racemes terminal. ♃. G. Native of New Holland, on the eastern coast. Branches terete. Petioles nodose and articulated at the apex; hence its affinity to the trifoliate species of the genus. The flowers purplish in the dried state, and middle-sized.

New Holland Crotalaria. Fl. May, July. Clt. 1823. Pl. 1 to 2 feet.

35 C. Paulìna (Schrank, pl. rar. mon. t. 88.) stipulas wanting; leaves oblong-lanceolate, attenuated at the base, bluntish, mucronulate, hoary and sericeous beneath; racemes terminal; bracteas linear, much shorter than the pedicel. ♃. S. Native of Brazil, at the town of St. Paulo. Link. enum. 2. p. 227. Flowers yellow, about the size of those of *Spártium júnceum.*

St. Paulo Crotalaria. Fl. Aug. Sept. Clt. 1823. Pl. 1 to 2 ft.

36 C. breviflòra (D. C. prod. 2. p. 127.) stipulas wanting; leaves elliptic, attenuated at both ends, acute and mucronate, pubescent on both surfaces, palest beneath, the nerves and branches silky-villous; racemes terminal; bracteas linear, about equal in length to the pedicels. ♃. ? S. Native of Brazil. Very like the preceding species, but the corolla is very much smaller, hardly exceeding the calyx in length.

Short-flowered Crotalaria. Pl. 1 to 2 feet.

37 C. bifa'ria (Lin. fil. suppl. 422.) stipulas reflexed; lower leaves orbicular, superior ones oblong; peduncles terminal, 1-flowered; stems diffuse, pubescent. ♄. ? S. Native of the East Indies, where it is cultivated in gardens. The stipulas, according to Linnæus the younger, are ovate-subulate, and the legume oblong and hispid or pubescent. Corolla large, bluish.

Bifarious Crotalaria. Fl. July, Aug. Clt. 1817. Sh. 1 to 3 ft.

38 C. dichótoma (Roth. nov. spec. 340. but not of Graham,) stipulas linear-subulate, horizontal; leaves ovate, acuminated, rather scabrous, petiolate, superior ones lanceolate; stem erect, dichotomous; peduncles opposite the leaves, usually 2-flowered; flowers nodding; legumes ovate, pilose. ♄. ? S. Native of the East Indies. Like *C. bifària.*

Dichotomous-stemmed Crotalaria. Shrub 1 to 3 feet.

39 C. Rothia'na (D. C. prod. 2. p. 127.) plant exstipulate, pilose; leaves ovate, obtuse, rather mucronate, distich, petiolate; stems prostrate; peduncles opposite the leaves, 2-flowered; legume subglobose, hairy. ♄. ? S. Native of the East Indies. C. hírta, Roth. nov. spec. 339. but not of Willd. Flowers yellowish.

Var. β, *ferruginea* (D. C. l. c.) plant beset with long, spreading, rusty pili.

Roth's Crotalaria. Shrub prostrate.

40 C. diffu'sa (Link, enum. 2. p. 228.) leaves lanceolate, obtuse, hairy, on short petioles; flowers terminal; calyx pilose, about equal in length to the corolla. ⊙. S. Native of? Flowers yellow.

Diffuse Crotalaria. Fl. June, July. Clt. 1818. Pl. diffuse.

41 C. na'na (Burm. fl. ind. 156. t. 48. f. 2.) leaves oblong, nearly sessile, glabrous, obtuse, mucronate; stems diffuse; peduncles opposite the leaves, 3-flowered; calyxes pilose; legume oblong, obtuse, hardly twice the length of the calyx. ⊙. S. Native of Malabar. Flowers yellow. Lam. dict. 2. p. 196. C. Malabárica, Garcin, in herb. Burm. C. biflòra, Lin. mant.

Dwarf Crotalaria. Pl. ½ foot.

42 C. biflo'ra (Lin. mant. 570.) stem prostrate, herbaceous; leaves oval-oblong, obtuse or suborbicular, pilose; peduncles opposite the leaves, and terminal, and longer than the stem, 2-8-flowered; legume tumid, globose, rather villous. ⊙. S. Native of the East Indies. Pet. gaz. t. 30. f. 10. Astrágalus biflòrus, Lin. mant. 273. This species differs from the preceding in the legumes being globose, not oblong. Corolla yellow.

Two-flowered Crotalaria. Fl. July, Aug. Clt. 1790. Pl. prostrate.

43 C. glau'ca (Willd. spec. 3. p. 974.) stem glabrous, erect; leaves linear-lanceolate, glabrous; peduncles opposite the leaves, usually 3-flowered, rather shorter than the leaves, filiform. ⊙. S. Native of Guinea. Flowers yellow.

Glaucous Crotalaria. Fl. July, Aug. Clt. 1824. Pl. 1 to 2 ft.

44 C. pusílla (Roth. nov. spec. 335.) plant exstipulate, clothed with greyish hairs; leaves linear, obtuse, rather mucronate, petiolate; stem much branched from the base, filiform; branches approximate; racemes terminal, rather secund; legume oblong-oval, obtusely-mucronate, hairy. ⊙. ? S. Native of the East Indies. Flowers small.

Small Crotalaria. Pl. ½ foot.

45 C. pu'mila (Schrank, acad. mun. 6. p. 188.) plant tomentosely hairy; leaves linear-lanceolate, almost sessile; stems nearly simple, decumbent; flowers axillary, disposed in a terminal few-flowered raceme. ⊙. ? S. Native of? Legume ovate, erect, minute, tomentose.

Dwarf Crotalaria. Fl. July, Aug. Clt. 1816. Sh. ½ foot.

46 C. tetrago'na (Andr. bot. rep. 593.) leaves long, lanceolate, pubescent; stem tetragonal; raceme terminal; legume villous. ♂. S. Native of the East Indies. Ait. hort. kew. ed. 2. vol. 4. p. 271. Stipulas lanceolate, horizontally deflexed, deciduous. Flowers pubescent, large, yellow; the vexillum dotted with black outside, and lined on the inside. Ovary and style villous.

Tetragonal-stemmed Crotalaria. Fl. Oct. Nov. Clt. 1806. Pl. 2 to 3 feet.

47 C. linifo'lia (Lin. fil. suppl. 328.) leaves linear, oblong, obtuse, mucronate, nearly sessile, pilose beneath, as well as the stem; raceme terminal; stem somewhat striated, erect; legume glabrous, hardly larger than the calyx. ⊙. S. Native of the East Indies and Nipaul, ex D. Don, prod. p. 241. Flowers yellow, in long racemes, secund. Willd. spec. 4. p. 975. Stems diffuse, simple, and branched. Stipulas and bracteas small. Calyx silky.

Flax-leaved Crotalaria. Fl. July, Sept. Clt. 1820. Pl. 1 foot.

48 C. pellìta (Bert. ined. ex D. C. prod. 2. p. 128.) leaves oblong-linear, mucronate, young ones hairy; stem terete, very much branched; racemes terminal; bracteas and calycine lobes callous, somewhat revolute; legume ovate, villous, length of calyx, 1-2-seeded. ♄. ? S. Native of Jamaica, in gardens. Peduncles, pedicels, and tube of calyx hispid. Bracteas and calycine lobes partly callous and glabrous.

Clad Crotalaria. Fl. July, Aug. Clt. 1820. Pl. 1 to 2 feet.

49 C. genistoìdes (Lam. dict. 2. p. 196.) leaves linear-lanceolate, mucronate, glabrous, scattered, sessile; racemes short, few-flowered; branches filiform, twiggy, glabrous; calyxes and legumes hairy. ♄. G. Native of the Cape of Good Hope. The racemes are said to be both axillary and lateral.

Genista-like Crotalaria. Shrub 1 to 2 feet.

50 C. virgulta'lis (Burch. cat. no. 1742.) plant exstipulate; leaves oblong-linear, mucronate, stalked, young ones, calyxes, and branches clothed with adpressed silky pubescence; racemes opposite the leaves, elongated; flowers erect; legume pendulous, young ones clothed with adpressed villi. ♄. G. Native of the Cape of Good Hope. Flowers resembling those of *Spártium júnceum,* but a little smaller.

Twiggy Crotalaria. Shrub.

51 C. acumina'ta (D. C. prod. 2. p. 128.) stipulas ovate, lanceolate, shorter than the petioles, acuminated; leaves stalked, linear, mucronately-acuminated, silky pubescent beneath, as well as the calyxes and branches; peduncles opposite the leaves, 1-

2-flowered; ovaries glabrous. ♄. G. Native of the Cape of Good Hope. Burch. cat. afr. aust. no. 2327. Flowers smaller than in the preceding species.

Acuminated-leaved Crotalaria. Shrub.

52 C. SPARTIOÌDES (D. C. prod. 2. p. 128.) plant exstipulate; leaves linear-subulate, acute, distant, the young ones and branches pubescent, the adult ones glabrous; branches twiggy, striated; racemes terminal; ovaries pubescent. ♄. G. Native of the Cape of Good Hope. Burch. cat. no. 2336. Flowers yellow, about the size of those of *Spártium júnceum.* Bracteoles 2, small, deciduous at the base of the calyx.

Spartium-like Crotalaria. Shrub 2 to 3 feet.

53 C. PERROTTE'TII (D. C. prod. 2. p. 128.) plant exstipulate; leaves linear-subulate, very few; branches and calyxes villously-hairy; stems much branched, twiggy, at length smooth and leafless; racemes crowded; corolla length of calyx; legume 3-4-seeded, ovate, somewhat compressed, villous. ♄. S. Native of Senegal. C. tomentòsa, Perr. but not of Thunb. Stamens 10, 5 alternate ones sterile. Style thick at the base, bent abruptly. Perhaps a distinct genus between *Heylándia* and *Crotalària.*

Perrottet's Crotalaria. Shrub 2 feet.

54 C. THEBA'ICA (D. C. prod. 2. p. 128.) plant exstipulate, pubescent, much branched; old branches spiny; leaves oval or oblong, villous, undulated; flowers few at the tops of the branches, distant, disposed in something like a spike; legume ovate, pubescent, 1-2-seeded. ♄. G. Native of the island of Phila, by way sides, and about Theba. Flowers yellow, lined with brown. Spártium Thebàicum, Del. fl. egypt. p. 107. t. 37. f. 1.

Theba Crotalaria. Fl. May, July. Clt. 1818. Sh. 2 to 3 ft.

* * * *Stipulas not decurrent, or wanting. Flowers disposed in terminal heads.*

55 C. SPECIO'SA (Roth. nov. spec. 336.) plant exstipulate, clothed with silky rusty villi; leaves oblong, obtuse, nearly sessile; heads of flowers dense, ovate, roundish; bracteas broad-lanceolate, length of flowers, and are covered with silky hairs, as well as the calyxes, vexillum, and keel. ♄. S. Native of the East Indies.

Shewy Crotalaria. Shrub 2 to 3 feet.

56 C.? REFLE'XA (Thunb. fl. cap. 571.) leaves ovate, acute, tomentose, reflexed; heads of flowers crowded; branches retroflexed. ♄. G. Native of the Cape of Good Hope. Calyx woolly. Corolla purple, glabrous. Leaves imbricated downwards.

Reflexed Crotalaria. Shrub 2 to 3 feet.

57 C. CAPITA'TA (Lam. dict. 2. p. 195. ill. t. 617. f. 3.) villous; leaves lanceolate, scattered, crowded, sessile; heads terminal; ovaries villous. ♄. G. Native of the Cape of Good Hope. The stamens are said by Lamarck to be diadelphous, and therefore the plant ought, perhaps, to be removed from this genus. Flowers white or violet.

Capitate-flowered Crotalaria. Shrub 1 to 2 feet.

* * * * *Stipulas not decurrent, or wanting. Flowers axillary, pedunculate or sessile.*

58 C. SCA'NDENS (Lour. coch. p. 433.) stem shrubby, scandent; leaves oblong, acuminated, glabrous; peduncles many-flowered, axillary. ♄. ◡. G. Native of Cochin-china. Flowers white. Legume turgid, tapering to both ends.

Climbing Crotalaria. Shrub cl.

59 C. PROCU'MBENS (Moc. et Sesse, fl. mex. icon. ined. D. C. prod. 2. p. 129.) stems procumbent, herbaceous; leaves ovate, rather mucronate, pubescent; peduncles axillary, 2-flowered, 3 times longer than the leaves. ♃.? G. Native of Mexico. Flowers yellow. Legume cylindrical.

Procumbent Crotalaria. Fl. May, July. Clt. 1823. Pl. pr.

60 C. NUMMULA'RIA (Willd. spec. 3. p. 979.) procumbent; leaves roundish-ovate or lanceolate, obtuse, pilose beneath; peduncles axillary, 1-2-flowered, hairy, 4 times longer than the leaves. ♄.? S. Native of the East Indies. Legume roundish, ovate.

Money-wort-leaved Crotalaria. Pl. procumbent.

61 C. LANA'TA (Thunb. fl. cap. 571.) leaves ovate, sessile, acute, woolly; flowers axillary, nearly sessile; legume ovate, acute. ♄. G. Native of the Cape of Good Hope.

Woolly Crotalaria. Shrub.

62 C. SESSILIFLÒRA (Lin. spec. 1004.) erect, herbaceous; leaves lanceolate, almost sessile, glabrous above, and pilose beneath; flowers sessile, axillary or lateral. ⊙. G. Native of China. Flowers blue.

Sessile-flowered Crotalaria. Pl. 1 foot.

63 C. TUBERÒSA (Hamilt. in D. Don, prod. fl. nep. 241.) root tuberous; stem branched, villous; leaves lanceolate-linear, acute, very villous at the base and beneath; pedicels axillary, 1-flowered, adpressed to the stem; legume compressed, villous. ♃. G. Native of Nipaul. Flowers bluish-purple in a dried state.

Tuberous-rooted Crotalaria. Fl. June, July. Clt. 1821. Pl. decumbent.

* * * * * *Stipulas not decurrent or wanting. Flowers lateral and terminal. Calyx 5-parted, very hispid, with two of the lobes or segments wing-formed.*

64 C. ANTHYLLOÌDES (Lam. dict. 2. p. 195.) leaves linear, acute, clothed with adpressed villi beneath; flowers subsessile, disposed in a short terminal raceme; pedicels and calyxes rusty, and very hispid. ⊙. S. Native of Java. Leaves 2-lines broad, and 2 inches long. Sepals of calyx unequal in breadth, the 2 superior ones broadest, obtuse, and mucronate. Legume glabrous, many-seeded, length of calyx.

Anthyllis-like Crotalaria. Fl. Aug. Sept. Clt. 1789. Pl. 1 ft.

65 C. CALYCÌNA (Schrank, pl. rar. mon. t. 12.) leaves lanceolate, acute, canescently-pubescent beneath; flowers lateral, on short pedicels; calyx rusty and very hispid. ⊙. S. Native of Bengal. C. ramosíssima, Roxb. hort. beng. p. 54. Corolla sulphur-coloured, a little shorter than the calyx. Leaves 4-5 lines broad, and 2 inches long.

Large-calyxed Crotalaria. Pl. 1 foot.

66 C. NIPAULE'NSIS (Link. enum. 2. p. 228.) leaves lanceolate, hairy; flowers almost sessile, disposed in a short terminal raceme; calyx very hispid, and rusty. ⊙. S. Native of Nipaul. Corolla blue, hardly larger than the calyx.

Nipaul Crotalaria. Fl. June, July. Clt. 1823. Pl. 1 foot.

67 C. ROXBURGHIA'NA (D. C. prod. 2. p. 129.) leaves oblong-linear, acute, clothed with adpressed pubescence beneath, as well as the branches; flowers lateral, on short stalks; calyx and bracteas very hispid and acuminated. ♄. S. Native of the East Indies and Nipaul. C. strícta, Roxb. hort. beng. p. 54. but not of Roth. C. anthylloìdes, D. Don, prod. fl. nep. 241. but Lamarck's plant from Java appears to be distinct.

Roxburgh's Crotalaria. Fl. Ju. July. Clt. 1820. Shrub 2 feet.

68 C. CHINE'NSIS (Lin. spec. 1003.) leaves ovate, on short petioles, bluntish, rather pilose on both surfaces; racemes few-flowered; calyx hairy. ♄. G. Native of China. Corolla yellow, length of calyx. Perhaps this and the two following species are referable to the present division, but they are too imperfectly known to speak with certainty.

China Crotalaria. Fl. June, July. Clt. 1818. Sh. 2 to 3 ft.

69 C. HI'RTA (Willd. enum. 747.) leaves linear-lanceolate, pilose; peduncles subterminal, disposed in something like a raceme; stem branched, diffuse, pilose. ⊙. S. Native of the

East Indies. C. pilòsa, Roxb. Rottl. nov. act. nat. cur. 1808. C. hírta, Mart. acad. mun. 6. p. 156. t. F. Calyx densely clothed with rusty villi, hardly shorter than the corolla.

Hairy Crotalaria. Fl. Ju. Aug. Clt. 1816. Pl. 1 to 2 feet.

70 C. PROSTRA'TA (Rottl. in Willd. enum. 747.) leaves elliptic-lanceolate, obtuse, pubescent beneath; racemes opposite the leaves on long peduncles, few-flowered; stem prostrate, pubescent. ⊙. S. Native of the East Indies. Mart. acad. mun. 6. p. 155. t. F. Calyx tomentose, about the length of the corolla, which is white. Legume glabrous, sessile. Perhaps C. prostràta of D. Don, in prod. fl. nep. 241. is the same plant.

Prostrate Crotalaria. Fl. July. Clt. 1804. Pl. prostrate.

§ 2. *Leaves composed of 3-7 leaflets.*

* *Leaves trifoliate. Racemes terminal or opposite the leaves. Stipulas broad, leafy.*

71 C. ARBORE'SCENS (Lam. dict. 2. p. 199.) stipulas on short petioles, obovate, emarginate, deciduous; leaflets obovate; petioles and branchlets canescent; legume pedicellate. ♄. S. Native of the Mauritius and of the Cape of Good Hope. C. incanéscens, Lin. fil. suppl. C. Capénsis, Thunb. fl. cap. 572. Jacq. hort. vind. t. 64. Flowers yellow, about the size of those of *Colutèa*.

Arborescent Crotalaria. Fl. Ju. Oct. Clt. 1774. Sh. 6 to 10 ft.

72 C. LUNA'RIS (Lin. spec. 1005.) stipulas semi-cordate, lunate; leaflets ovate, acuminated, clothed beneath with white villi; flowers terminal, solitary, girded by a 3-leaved involucre. ⊙. ? G. Native of Africa. Lin. hort. cliff. 357. C. lunàris, Burm. cap. prod. 21.

Moon-shaped-stipuled Crotalaria. Pl.

73 C. TU'RGIDA (Delaum. herb. amat. t. 238) stipulas roundish; leaflets ovate, glabrous; flowers terminal, somewhat corymbose. ♄. S. Native of?

Turgid Crotalaria. Fl. July, Aug. Clt. 1820. Sh. 2 to 3 ft.

* * *Leaves trifoliate. Racemes* [illegible] *acuminated, terminal. Stipulas setaceous* [illegible] lanceolate; st[illegible]

74 C. [illegible] opposite the l[illegible] *the leaves, rarely* ti[illegible] nodding; legumes [illegible] *wanting.*

the East Indies. Lin. [illegible]

Dicho[illegible] OBOVA'TA; suffruticose, branched; leaflets obovate, en-[illegible], somewhat emarginate at the apex, and rather pilose beneath; racemes terminal, spike-formed; legume hairy. ♄. S. Native of Guinea. Flowers yellow.

Obovate-leafletted Crotalaria. Shrub 1 to 2 feet.

75 C. OCHROLEU'CA; shrubby, erect, branched; leaflets linear-lanceolate, entire, acuminated, clothed beneath with silky pili; racemes terminal, spike-formed, few-flowered. ♄. S. Native of Guinea. Flowers cream-coloured.

Cream-coloured-flowered Crotalaria. Shrub 2 to 3 feet.

76 C. LABURNIFO'LIA (Lin. spec. 1005. fl. zeyl. p. 278.) stipulas wanting; leaflets oval, acute, glabrous; racemes opposite the leaves; legumes pendulous, on long stipes, which are 4-times longer than the calyx. ⊙. S. Native of Malabar and Ceylon.—Rheed. mal. 9. t. 27. Burm. zeyl. t. 35. Legume cylindrical, glabrous, length of stipe. Corolla large, yellow. Keel acuminated, much longer than the wings.

Laburnum-leaved Crotalaria. Fl. July, Sept. Clt. 1739. Shrub 5 to 6 feet.

77 C. PE'NDULA (Bert. ined. D. C. prod. 2. p. 130.) stipulas wanting; leaflets oval, obtuse, glabrous; racemes opposite the leaves; legumes pendulous, stipitate; stipe twice the length of the calyx, but one-half shorter than the legume. ♄. S. Native of Jamaica. Very like the preceding species.

Pendulous-legumed Crotalaria. Fl. Jul. Sept. Clt. 1820. Sh.

78 C. ANAGYROÌDES (H. B. et Kunth, nov. gen. amer. 6. p. 404.) arborescent; stipulas subulate, minute; leaflets lanceolate-oblong, acute, mucronate, cuneated at the base, cl beneath with adpressed pubescence, younger ones with brown pubescence; racemes many-flowered, opposite the lea legumes many-seeded, and are, as well as the calyxes, pubesc ♄. S. Native of Caraccas. Allied to *C. arboréscens.*

Anagyrus-like Crotalaria. Fl. Ju. July. Clt. 1823. Sh. 6

79 C. BRÓWNEI (Bert. ined. D. C. prod. 2. p. 130.) stipulas deciduous or wanting; leaflets oval, attenuated at both ends, apiculately mucronate, adult ones glabrous; racemes terminal, opposite the leaves; legume pendulous, cylindrical, glabrous, on a very short stipe. ♄. S. Native of Jamaica, on the sides of rivulets frequent. Leaflets and young legumes clothed with shining, silky, appressed pubescence. Flowers yellowish-brown, striated.

Browne's Crotalaria. Fl. July, Aug. Clt. 1816. Shrub 4 ft.

80 C. BRACTEA'TA (Roxb. hort. beng. p. 54.) stipulas wanting; leaflets oval, tapering to the base, and acuminated at the apex, smooth above, but clothed with very minute pubescence beneath: racemes opposite the leaves: legumes pendulous, almost sessile, densely clothed with hairs. ♄. G. Native of the East Indies and Chittagong. Flowers smaller than in the two preceding species, but the bracteas are reflexed as in them. Perhaps *C. bracteàta* of Fischer is the same.

Bracteated Crotalaria. Fl. July, Aug. Clt. 1820. Sh. 2 to 4 ft.

81 C. CYTISOÌDES (Roxb. hort. beng. 54.) stipulas subulate, deciduous; leaflets elliptic, acuminated at both ends, glabrous above, but clothed with fine pubescence beneath; racemes opposite the leaves, nearly terminal; ovary pubescent, on a very short stipe. ♄. G. Native of Nipaul. C. psoraleoides, D. Don, prod. fl. nep. 242. This species comes very near to *C. bracteàta*, but the ovarium is pubescent, not as in that species densely hairy.

Cytisus-like Crotalaria. Fl. July, Aug. Clt. 1826. Shrub 2 to 4 feet.

82 C. CAJANIFO'LIA (H. B. et Kunth, nov. gen. amer. 6. p. [illegible]

glabrous. [illegible]

[illegible].) stipulas? leaflets oblong, obtuse, mucronate, cuneated at the base, glabrous above, puberulous beneath and canescent; racemes many-flowered, almost terminal; legumes many-seeded, and are, as well as the calyxes, clothed with appressed pubescence. ♄. G. Native of Mexico, on the declivity of mount Jorullo.

Pigeon-pea-leaved Crotalaria. Fl. July, Sept. Clt. 1824. Shrub 4 to 6 feet.

83 C. GRAHA'MI; shrubby, diffuse; leaves ternate; leaflets cuneate-elliptic, rather pilose, mucronate; stipulas subulate, reflexed, permanent; racemes sub-capitate, opposite the leaves. ♄. S. Native of Mexico. C. dichótoma, Graham in edinb. new phil. journ. dec. 1826. Flowers yellow.

Graham's Crotalaria. Fl. Ju. July. Clt. 1824. Sh. 1 to 2 ft.

84 C. STRIA'TA (D. C. prod. 2. p. 131.) stipulas wanting; leaflets elliptic, obtuse, mucronate, nearly glabrous; racemes terminal, and nearly opposite the leaves; bracteas setaceous, deciduous. ⊙. S. Native of the East Indies. Flowers yellow, pendulous. Keel acuminated, striped with black lines; the vexillum also striped a little.

Striped-flowered Crotalaria. Shrub 2 to 4 feet.

85 C. LÆVIGA'TA (Lam. dict. 2. p. 198.) glabrous; stipulas wanting; leaflets elliptic-oblong, obtuse; racemes opposite the leaves, 3-6-flowered; legume pedicellate. ♄. S. Native of Madagascar.

Smooth Crotalaria. Shrub 1 to 2 feet.

86 C. HETEROPHY'LLA (Lin. fil. suppl. 323.) stipulas subulate, spreading; lower leaves simple, the rest trifoliate; leaflets elliptic, emarginate. ⊙. S. Native of the East Indies. Corolla yellow, and striped. Legume smooth.

Variable-leaved Crotalaria. Pl. 1 foot.

87 C. foliòsa (Willd. enum. 747.) leaflets obovate, emarginate, covered beneath with strigose pili; racemes terminal, usually 4-flowered; stem diffuse, branched. ♄. S. Native of the East Indies. Indigófera foliòsa, Rottl.

Leafy Crotalaria. Fl. Ju. July. Clt. 1818. Sh. 2 to 3 feet.

88 C. Havane'nsis (Guss. ex Schlecht. Linnæa. 4. p. 36.) smooth; leaflets oblong, emarginate, tapering to the base; flowers racemose; legume oblong, cylindrical. ♄. S. Native of Cuba, about the Havannah.

Havannah Crotalaria. Shrub.

89 C. Orixe'nsis (Rottl. in Willd. enum. 747.) stipulas lanceolate, and bracteas ovate, both reflexed; leaflets obovate, covered beneath with strigose pili; racemes terminal; stems diffuse; legume stipitate, ovate, obtuse, glabrous. ⊙. S. Native of the East Indies. Flowers more minute than in any other species of the genus. Mart. in acad. mun. 6. p. 157. t. H.

Orixa Crotalaria. Fl. July, Aug. Clt. 1816. Pl. 1 foot.

90 C. virga'ta (Roxb. ex Mart. acad. mun. 6. p. 157. t. G.) stipulas small; leaflets obcordate, destitute of a mucrone, glabrous; raceme few-flowered, opposite the leaves, lateral; branches diffuse, rather twiggy. ♄. S. Native of Coromandel. Legume unknown.

Twiggy Crotalaria. Fl. Ju. Aug. Clt. 1816. Sh. 2 to 4 ft.

91 C. Cube'nsis (D. C. prod. 2. p. 131.) stipulas linear-setaceous; leaflets obovate-roundish; racemes nearly opposite the leaves; stem erect, hairy. ⊙. S. Native of Cuba. C. hírta, Lag. nov. spec. hort. madr. p. 22. but not of Willd.

Cuba Crotalaria. Fl. July, Aug. Clt. 1820. Pl. 1 to 2 ft.

92 C. seti'fera (Moc. et Sesse, fl. mex. ined. D. C. prod. 2. p. 131.) stipulas linear-setaceous; leaflets obovate, mucronate; racemes opposite the leaves, and are hairy, as well as the petioles and branches; legume pendulous, cylindrical, hairy, nearly sessile. ⊙. H. Native of Mexico. Flowers yellow. Keel acute, shorter than the vexillum and wings.

Bristle-bearing Crotalaria. Pl. 1 to 2 feet.

93 C. coluteoìdes (Lam. dict. 2. p. 200.) leaflets obovate, obtuse, mucronate, rather pilose beneath, longer than the petioles; racemes terminal, loose; legume glabrous, stipitate, bladdery, destitute of a style. ♄. ? S. Native of Africa. Pluk. t. 185. f. 3.

Colutea-like Crotalaria. Shrub 3 to 4 feet.

94 C. purpura'scens (Lam. dict. 2. p. 200.) stipulas setaceous, villous; leaflets obovate-cuneiform, retuse, mucronate, glabrous; racemes opposite the leaves almost terminal; calyx villous, about equal in length to the corolla; legume pendulous, sessile, oblong, bladdery. ⊙. S. Native of Madagascar, and the Mauritius. Vexillum purplish above. Branches and petioles clothed with hispid villi.

Purplish-flowered Crotalaria. Fl. July, Aug. Clt. 1824. Pl. 2 to 3 feet.

95 C. inca'na (Lin. spec. 1005.) stipulas and bracteas setaceous, villous, deciduous; leaflets oval or obovate, villous beneath; racemes spike-formed, opposite the leaves; calyxes glabrous; keel with a tomentose margin; legume pendulous, subsessile, hairy. ⊙. S. Native of the Caribbee Islands. Flowers yellow. Jacq. obs. 4. t. 82. Cav. icon. 4. t. 322. Ker. bot. reg. 377. C. pubéscens, Mœnch.

Hoary Crotalaria. Fl. Ju. July. Clt. 1714. Pl. 2 to 3 feet.

96 C. Dombeya'na (D. C. prod. 2. p. 132.) stipulas and bracteas setaceous, villous, deciduous; leaflets oval-oblong, acute, pubescent beneath; racemes spike-formed, opposite the leaves; ovarium pubescent; legume pendulous, sessile, glabrous. ♄. ? S. Native of Peru. C. incàna β, Lam. dict. 2. p. 200. Very near to *C. incàna*, but the flowers are double the size, and disposed in dense spikes.

Dombey's Crotalaria. Shrub 2 to 3 feet.

97 C. pu'bera (Vahl. eclog. 2. p. 55.) stipulas subulate, deciduous; leaflets oblong, obtuse, clothed beneath with adpressed canescent villi; racemes terminal and axillary; legume pendulous, oblong, villous. ♄. S. Native of the island of St. Martha. Branches rather villous. C. púbera, Schrank. pl. rar. mon. t. 14. differs from Vahl's plant in the racemes being opposite the leaves, and therefore the plant is more nearly allied to *C. incàna*.

Downy Crotalaria. Shrub 2 to 3 feet.

98 C. affi'nis (D. C. prod. 2. p. 132.) stipulas and bracteas setaceous and deciduous; leaflets obovate-cuneated, truncate, smoothish; petioles, branches, and legumes villous; racemes opposite the leaves. ♄. ? S. Native of the Mauritius. Allied to *C. incàna*. Calyxes villous. Legume sessile, very hairy.

Allied Crotalaria. Shrub 2 to 3 feet.

99 C. pu'mila (Ort. dec. 2. p. 23.) stipulas subulate, spreading; leaflets obovate, emarginate, glabrous, rather fleshy; racemes opposite the leaves and lateral; legumes nearly sessile, pendulous, pubescent; stem ascending. ⊙. S. Native of Cuba. Flowers yellow, smaller than those of *C. incàna*, to which the plant is very nearly allied. Stem and petioles hardly pubescent.

Dwarf Crotalaria. Fl. Ju. July. Clt. 1823. Pl. ½ to 1 foot.

100 C. falca'ta (Vahl. ined. ex herb. Puer. D. C. prod. 2. p. 132.) stipulas small, deciduous; leaflets elliptic, somewhat cuneated at the base, clothed with minute pubescence beneath, but glabrous above; racemes opposite the leaves: vexillum shorter than the keel, which is falcate. ♄. S. Native of Guinea. Flowers small. Young legumes pendulous and terete.

Falcate-keeled Crotalaria. Shrub 2 feet.

101 C. mucrona'ta (Desv. journ. bot. 1814. vol. 1. p. 76.) leaflets ovate, mucronate, clothed beneath with powdery pubescence; flowers sessile, spicate, terminal. ♄. ? S. Native of the Antilles.

Mucronate-leaved Crotalaria. Shrub.

102 C. mìcans (Link, enum. 2. p. 228.) stipulas wanting; leaflets oval, acute, beset with scattered shining hairs; racemes opposite the leaves; filaments of stamens hairy. ♃. S. Native of? Legume unknown.

Glittering-haired Crotalaria. Fl. July, Aug. Clt. 1820. Pl. 1 to 2 feet.

103 C. curta'ta (Link. l. c.) leaflets oval, obtuse, beset with scattered hairs; the nerves, petioles, and branches hoary; racemes terminal, elongated; keel shorter than the vexillum. ⊙. S. Native of?

Short-keeled Crotalaria. Fl. April, May. Clt. ? Pl. 1 foot.

104 C. pedunculòsa (Desv. journ. bot. 1814. vol. 1. p. 76.) leaflets somewhat ovate, acute; flowers in racemose spikes; racemes opposite the leaves, on long peduncles. ♄. ? S. Native of the East Indies.

Peduncled Crotalaria. Shrub.

105 C. molli'cula (H. B. et Kunth, nov. gen. amer. 6. p. 403.) branchlets terete; stipulas linear-subulate; leaflets lanceolate, obtuse, clothed with soft pubescence on both surfaces, but canescent beneath; racemes many-flowered, opposite the leaves, almost terminal: calyx clothed with adpressed pubescence. Ovary 16-ovulate, stipitate. ♄. G. Native of Mexico, near Guanaxuato. Flowers about the size of those of *C. incàna*.

Soft Crotalaria. Shrub 2 feet.

106 C. Maypure'nsis (H. B. et Kunth, nov. gen. amer. 6. p. 403.) branchlets angular; stipulas capillary; leaflets lanceolate, obtuse, somewhat mucronate, glabrous above, and clothed with adpressed pubescence beneath; racemes many-flowered, almost terminal; calyxes clothed with adpressed pubescence; legume many-seeded, hairy. ♄. S. Native on the banks of the river Orinoco, near Maypures.

Maypures Crotalaria. Shrub 2 to 3 feet.

107 C. VITELLI′NA (Ker. bot. reg. t. 447.) plant exstipulate, pubescent; leaflets oval-lanceolate, acute, twice the length of the petioles, which are covered with hairs; legume oblong, pendulous, silky-pubescent. ♄. S. Native of Brazil. Racemes 3-5 inches long. Flowers of a fulvous-yellow colour, but with the vexillum spotted with violet at the base.

Yolk-like Crotalaria. Fl. May, June. Clt. 1819. Sh. 2 to 3 ft.

108 C. HOLOSERI′CEA (Nees et Mart. nov. act. bonn. 12. p. 26.) the whole plant clothed with silky villi; stipulas subulate; leaflets rhomboidal, oval, obtuse, mucronate; racemes opposite the leaves; vexillum bicallous at the base; legume villous, elliptic, 5-6-seeded. ♄. S. Native of Brazil, in fields. Flowers yellow. An intermediate species between *C. vitellina* and *C. purpuráscens*.

Whole-silky Crotalaria. Shrub 5 to 6 feet.

109 C. CYLINDROCA′RPA (D. C. prod. 2. p. 133.) stipulas dimidiate-oblong, acute at both ends, rather falcate; leaflets elliptic-oblong, rather pubescent beneath as well as the branchlets; racemes opposite the leaves; legumes sessile, cylindrical, 26-30-seeded, rather pubescent, apiculated by the style, rather spreading; stem erect, somewhat panicled. ♄. S. Native of Senegal. C. paniculàta, Pers. in litt. but not of Willd.

Cylindrical-fruited Crotalaria. Shrub.

110 C. SENEGALE′NSIS (Bacle in litt. 1820.) stipulas small, subulate, spreading, deciduous; leaflets oval, obtuse, smoothish; racemes opposite the leaves; legumes sessile, pendulous, pubescent, obovate, 8-10-seeded, crowned by the hooked style; stem erect, much branched, pubescent. ⊙. S. Native of Senegal. C. uncinàta γ, Lam. Pers. l. c. C. gràcilis, Perr. in litt. 1825.

Senegal Crotalaria. Fl. June, July. Clt. 1819. Pl. 1 foot.

111 C. PODOCA′RPA (D. C. prod. 2. p. 133.) plant erect, hispid all over from spreading hairs; stipulas dimidiate, oval-oblong, erect, leafy; leaflets obovate, obtuse, mucronate; racemes opposite the leaves; legume stipitate, turgid, ovate, glabrous, apiculated by the style, 12-18-seeded. ⊙. S. Native of Senegal, in the Sahara desert. The plant has the habit of *Lòtus hirsùtus*.

Foot-fruited Crotalaria. Pl. 1 to 2 feet.

112 C. UNCINE′LLA (Lam. dict. 2. p. 200.) stipulas small or wanting; leaflets oval, mucronate, pubescent beneath; racemes opposite the leaves; legume stipitate, somewhat globose, hooked from the style, silky-velvety, 2-4-seeded; stem erect, much branched, pubescent. ⊙. S. Native of the island of Bourbon.

Var. β, glàbra (D. C. prod. 2. p. 133.) leaves and legumes glabrous; leaflets oblong, somewhat elliptic. ⊙. S. Native of Bourbon. Perhaps a species.

Hooked-styled Crotalaria. Pl. 1 to 2 feet.

113 C. SPHÆROCA′RPA (Perr. in litt. 1825.) stipulas small; leaflets oblong-obovate, pubescent beneath; racemes opposite the leaves; legumes sessile, ovate-globose, clothed with fine pubescence, apiculated by the filiform style, 2-4-seeded; stem erect, much branched, pubescent. ♄. S. Native of Senegal. An intermediate species between the preceding and the following. Stamens permanent, at the base of the legume.

Round-fruited Crotalaria. Shrub 1 to 2 feet.

114 C. MEDICAGÍNEA (Lam. dict. 2. p. 201.) stipulas subulate, spreading; leaflets obovate-cuneated, emarginate, clothed beneath with adpressed pubescence, shorter than the petioles; racemes opposite the leaves or terminal, elongated, and with some of the flowers disposed in axillary bundles; legume sessile, roundish, hooked from the thick base of the style, 2-4-seeded, minutely pubescent. ⊙. ? S. Native of the East Indies. C. trifoliástrum. Willd. spec. 3. p. 983. Lupìnus trifoliàtus, Rottl. nov. act. nat. cur. 4. 1803. p. 223. t. 5.

Medick-like Crotalaria. Fl. June, July. Clt. 1816. Pl. 1 ft.

115 C. LUPULI′NA (D. C. prod. 2. p. 133.) stipulas setaceous, small; leaflets lanceolate, acute, mucronate, clothed with adpressed pubescence beneath as well as the calyxes; racemes 9-10-flowered, opposite the leaves; legume ovate, many-seeded, puberulous. ⊙. G. Native of Mexico, on the burning Mount Jorullo.

Hop Crotalaria. Pl. 1 foot.

116 C. STRÍCTA (Roth. nov. spec. 342.) stipulas setaceous, adpressed; leaflets cuneated, emarginate, mucronate, canescent beneath, length of petioles; stem straight; lower flowers axillary, in fascicles, upper ones disposed in a terminal raceme; legume pilose, globose, hooked at the apex. ⊙. ? S. Native of the East Indies. Perhaps sufficiently distinct from the preceding species.

Straight Crotalaria. Pl. 1 to 2 feet.

117 C. RÍGIDA (Roth. l. c.) stipulas lanceolate-subulate; leaflets cuneiform, emarginate, covered with hoary pili beneath, length of petioles; stem divaricate; lower flowers axillary, in fascicles, upper ones disposed in terminal racemes. ♄. S. Native of the East Indies.

Stiff Crotalaria. Shrub 1 to 2 feet.

118 C. PURPU′REA (Vent. malm. t. 66.) stipulas subulate; leaflets obovate, retuse, somewhat emarginate, glabrous above, and minutely pubescent beneath; racemes terminal; legume ovate, glabrous, apiculated by the style, on a very short stipe, many-seeded. ♄. G. Native of the Cape of Good Hope. Ker. bot. reg. 128. C. élegans, Hortul. Flowers deep purple.

Purple Crotalaria. Fl. Mar. May. Clt. 1790. Sh. 3 to 6 ft.

119 C. LITTORA′LIS (H. B. et Kunth, nov. gen. amer. 6. p. 401.) suffruticose, procumbent; stipulas subulate, very minute; leaflets 3, obovate-oblong, emarginate, beset with adpressed pili; peduncles 5-7-flowered, opposite the leaves and terminal; legume usually 2-seeded, clothed with adpressed pubescence as well as the calyxes. ♄. S. Native of Cuba, near Havannah?

Shore Crotalaria. Shrub 2 to 3 feet.

120 C. MICROPHY′LLA (Vahl. symb. 1. p. 52.) stipulas setaceous, spreading; leaflets oblong, glabrous, thickish, length of petioles; peduncles opposite the leaves and terminal, 2-flowered; legume glabrous, oblong, on a short stipe; stem decumbent. ♄. G. Native of Arabia Felix. Leaflets 2 lines long.

Small-leaved Crotalaria. Fl. June, Aug. Clt. 1820. Pl. 1 ft.

121 C. MICRA′NTHA (Link, enum. 2. p. 229.) leaflets oblong, obtuse, mucronulate, beset beneath with scattered adpressed pili; racemes short, terminal; calyxes silky. ⊙. S. Native of Ceylon.

Small-flowered Crotalaria. Fl. July, Aug. Clt. 1823. Pl. 1 ft.

122 C. PA′LLIDA (Ait. hort. kew. ed. 1. vol. 3. p. 20.) leaflets lanceolate, glabrous; racemes terminal, spike-formed. ⊙. G. Native of Africa.

Pale-flowered Crotalaria. Fl. Ju. Jul. Clt. 1775. Pl. 1 to 2 ft.

123 C.? ARGE′NTEA (Jacq. hort. schœnbr. 2. p. 220.) clothed with white tomentum; leaflets lanceolate, shorter than the petiole; peduncles 1-flowered, opposite the leaves, nearly terminal; legume stipitate, compressed, clothed with silvery wool. ♄. G. Native of the Cape of Good Hope. Flowers yellow. Habit of *Lòtus* or *Coronílla*. Calyx tripartite.

Silvery Crotalaria. Fl. June, July. Clt. 1823. Sh. 2 feet.

124 C. PULCHE′LLA (Andr. bot. rep. t. 417.) leaflets linear-lanceolate, acute, longer than the petioles, clothed with adpressed pubescence beneath, as well as the branches and petioles; racemes terminal; legume cylindrical, many-seeded, tapering into a stipe at the base. ♄. G. Native of the Cape of Good Hope. Sims, bot. mag. t. 1699. Flowers large, yellow, about the size of those of *Spártium júnceum*.

Neat Crotalaria. Fl. July, Aug. Clt. 1800. Sh. 2 to 4 ft.

125 C. ANGUSTIFÒLIA (Jacq. hort. schœnbr. 2. p. 49. t. 219.) stipulas wanting; leaflets lanceolate, hoary, and silky, shorter

than the petioles; racemes terminal, elongated. ♄. G. Native of the Cape of Good Hope. Flowers cream-coloured, 6 lines long.

Var. β, elongàta (Thunb. fl. cap. 571.) leaflets ovate, obtuse; flowers yellow.

Narrow-leaved Crotalaria. Fl. May, Sept. Clt. 1815. Sh. 4 to 6 feet.

126 C. MACILE′NTA (Gailliaud, fl. meroe. 2. t. 62.) branches somewhat dichotomous, slender; petiole about the length of the leaves; leaflets 3, ovate, clothed with short hairs beneath; spike elongated, not much crowded with flowers; fruit few-seeded. ⊙.? H. Native of Egypt, at the White River. The Chamois at Sennaar eat the herb.

Lean Crotalaria. Pl. 1 to 2 feet.

127 C. WILLDENOWIA′NA (D. C. prod. 2. p. 134.) pubescent; stipulas subulate; leaflets linear, cuneated, emarginate; petioles very short; racemes terminal, 4-6-flowered; legume roundish-ovate, acuminated. ♄. G. Native of the Cape of Good Hope. C. genistoìdes, Willd. spec. 3. p. 987. but not of Lam. Flowers small, yellow. Habit of a species of *Genísta.*

Willdenow's Crotalaria. Shrub 2 to 4 feet.

128 C. ASPALATHOÌDES (Lam. dict. 2. p. 202.) plant exstipulate; leaflets linear, cuneated, hairy; racemes pedunculate, terminal, 3-6-flowered; ovary very villous. ♄. G. Native of the Cape of Good Hope. Leaflets very small.

Aspalathus-like Crotalaria. Shrub 1 to 2 feet.

129 C. OBSCU′RA (D. C. prod. 2. p. 134.) herbaceous, beset with rusty hairs; leaflets ovate, mucronate, glabrous above; flowers terminal, pedunculate; legume subcylindrical, villous. ⊙. G. Native of the Cape of Good Hope. Legume an inch long. C. pilòsa, Thunb. fl. cap. 572. but not of Mill.

Obscure Crotalaria. Fl. June, July. Clt. 1820. Pl. 1 foot.

130 C. VILLÒSA (Thunb. fl. cap. 572.) herbaceous, decumbent; branches villous, diffusely retroflexed; leaflets obovate, mucronulate, hairy; stipulas lanceolate; spikes terminal; legume oblong, pubescent. ⊙. G. Native of the Cape of Good Hope.

Villous Crotalaria. Pl. decumbent.

131 C. SALTIA′NA (Andr. bot. rep. 648.) branches downy; leaflets ovate, tomentose; stipulas wanting; racemes elongated, opposite the leaves. ♄. G. Native of Abyssinia. Flowers yellow. An elegant plant.

Salt's Crotalaria. Fl. June, July. Clt. 1810. Sh. 2 to 4 ft.

132 C. DECU′MBENS (Pers. ench. no. 50.) herbaceous, decumbent, hairy; leaflets ovate-oblong, pubescent above, and clothed beneath with silky tomentum, nerved; flowers terminal, somewhat spicate; legume pubescent. ⊙. G. Native of the Cape of Good Hope. C. lineàta, Thunb. fl. cap. 572. but not of Lam.

Decumbent Crotalaria. Pl. decumbent.

* * * *Leaves trifoliate. Flowers all axillary.*

133 C. LOTIFÒLIA (Lin. spec. 1005.) leaflets oblong-cuneated, emarginate, clothed with silky villi beneath; peduncles axillary, solitary, 1-flowered; legume sessile. ♄. S. Native of Jamaica and Santa Cruz.—Sloane, hist. 2. t. 176. f. 1-2.—Dill. elth. t. 102. f. 131. The plant is said by many authors to be glabrous, but by Vahl the leaves are said to be silky beneath.

Lotus-leaved Crotalaria. Fl. June, July. Clt. 1732. Shrub 2 to 4 feet.

134 C. VOLU′BILIS (Thunb. fl. cap. 572.) plant glabrous, between decumbent and twining; leaflets obovate, obtuse; flowers axillary, solitary, on short pedicels; legume ovate, pedicellate, glabrous. ♄. G. Native of the Cape of Good Hope.

Twining Crotalaria. Shrub decumbent.

135 C. AXILLA′RIS (Ait. hort. kew. ed. 2. vol. 3. p. 20.) leaflets oblong-lanceolate, acute, covered beneath with silky pili; pedicels axillary, twin, 1-flowered. ⊙. S. Native of Guinea. Willd. spec. 3. p. 984. Stipulas small, lanceolate-subulate. Flowers yellow. Legume pilose. In a specimen of this plant sent to M. De Candolle from the English gardens, the leaves were pubescent beneath, and the pedicels 2-4 together, not all twin.

Axillary Crotalaria. Fl. Ju. Jul. Clt. 1781. Pl. 1 to 2 ft.

136 C. TRIA′NTHA (Moc. et Sesse, fl. mex. ined. D. C. prod. 2. p. 135.) leaflets oblong, obtuse, somewhat emarginate, glabrous; peduncles 3-flowered, bearing bristles at the apex, longer than the leaves; legumes pendulous, oblong, cylindrical, sessile. ⊙. S. Native of Mexico. Flowers yellow, reddish on the outside.

Three-flowered Crotalaria. Fl. Ju. Jul. Clt. 1824. Pl. 1 to 2 ft.

* * * * *Leaves having 5 or 7 leaflets.*

137 C. QUINQUEFÒLIA (Lin. spec. 1006.) leaflets 5, narrow-lanceolate, obtuse, young ones silky-pubescent; racemes opposite the leaves, terminal; bracteas linear, at length reflexed; legume glabrous, apiculated by the style, on a short stipe. ⊙. S. Native of Malabar and Java.—Burm. fl. ind. 157. exclusive of the 3-leaved variety —Rheed. mal. 9. t. 28. Habit of a lupine.

Five-leaved Crotalaria. Fl. Ju. Jul. Clt. 1792. Pl. 1 to 2 ft.

† *Species not sufficiently known.*

138 C. PILÒSA (Mill. dict. no. 2.) leaves simple, lanceolate, pilose; petioles decurrent. Native of New Spain, at Vera Cruz.

Pilose Crotalaria. Clt. ? Pl. 1 to 2 feet.

139 C. FRUTICÒSA (Mill. dict. no. 4.) leaves simple, linear-lanceolate, hairy; petioles decurrent; stem fruticose. ♄. S. Native of Jamaica.

Shrubby Crotalaria. Fl. June, July. Clt. 1716. Tr. 28 ft.

140 C. ANGULA′TA (Mill. dict. no. 9.) leaves simple, ovate, sessile; branches angular, hairy; flowers lateral. ⊙. S. Native of Campechy.

Angular-stemmed Crotalaria. Fl. June, July. Clt. 1700. Pl. 2 to 3 feet.

141 C. STYRACIFÒLIA (Horn. hort. hafn. suppl. 151.) leaves simple, broad-ovate, nearly sessile, pubescent on both surfaces, hoary; stipulas subulate. ♄. S. Native of the Cape of Good Hope. Perhaps the same as *C. styracifòlia* of Desf. hort. par. Perhaps a species of *Podalýria.*

Styrax-leaved Crotalaria. Shrub 2 to 4 feet.

142 C. HEPTAPHY′LLA (Lour. coch. p. 433.) leaves imparipinnate, with 3 pairs of leaflets; leaflets ovate-oblong, rather tomentose; spikes elongated, axillary, and terminal, legume stipitate, turgid, villous. ♄. G. Native of Cochin-china. Flowers white. Stamens monadelphous. This plant ought certainly to be removed from the genus in consequence of its pinnate leaves.

Seven-leaved Crotalaria. Shrub 10 feet.

143 C. MACRO′STYLA (D. Don, prod. fl. nep. 242.) leaves trifoliate; leaflets obovate, retuse, coriaceous, mucronulate, clothed with silky villi beneath as well as the branches; racemes axillary; legume ovate, compressed, 1-seeded, very villous. ♄. S. Native of Shreenagur. In consequence of the stamens being diadelphous, and the style being very long and plumose, it recedes from the present genus.

Long-styled Crotalaria. Shrub 2 to 4 feet.

Cult. All the species of this genus are free flowerers, and several of them are very handsome when in bloom. All of them thrive well in any light rich soil, and young cuttings of the shrubby kinds root freely in a pot of sand, with a bell-glass placed over them; but this is generally unnecessary, as most of them ripen their seeds in abundance. The seeds of the annual kinds should be sown on a hot-bed in spring, and when the plants have attained the height of 2 or 3 inches, they may be placed separately in pots, and some may be planted out into the open border in summer, especially those natives of colder countries.

XLVIII. CLA'VULUM (diminutive of *clavus*, a club; form of legume). Desv. obs. legum. ex Schlecht. Linnæa. 2. p. 510.

Lin. syst. *Monadélphia, Decándria.* Calyx 5-cleft, somewhat bilabiate; teeth broad, acute; vexillum somewhat plicate. Keel large, short. Wings short. Stamens monadelphous, with the sheath cleft in front. Style long, acute. Ovary stalked. Legume oblong, inflated, many-seeded. Shrubs, with trifoliate leaves and racemes of flowers, which are either opposite the leaves or terminal.

1 C. MUCRONA'TUM (Desv. l. c.) leaflets ovate, mucronate, covered beneath with powdery pubescence; flowers sessile, spicate, terminal. ♄. S. Native of the Antilles. Crotalària mucronàta, Desv. journ. bot. 1814. vol. 1. p. 76. D. C. prod. 2. p. 132.

Mucronate-leaved Clavulum. Shrub.

2 C. PEDUNCULÒSA (Desv. l. c.) leaflets obovate, acute; flowers disposed in racemose spikes, which are opposite the leaves, and on very long peduncles. ♄. S. Native of the East Indies. Crotalària pedunculòsa, Desv. journ. bot. 1814. vol. 1. p. 76.

Stalked-racemed Clavulum. Shrub.

Cult. See shrubby stove species of *Crotalària* for culture and propagation.

XLIX. HYPOCALY'PTUS (ὑπο, *hypo*, under, and καλυπτω, *calypto*, to veil, meaning not evident). Thunb. prod. 124. D. C. prod. 2. p. 135.

Lin. syst. *Monadélphia, Decándria.* Calyx with 5 short lobes, thrust in at the base. Stamens monadelphous. Legume compressed, lanceolate.—A smooth shrub, with trifoliate leaves and purple flowers. All the species of *Hypocalýptus* of Thunberg have been discovered to be either species of *Podalýria* or *Virgilia*, except the present plant.

1 H. OBCORDA'TUS (Thunb. l. c.). ♄. G. Native of the Cape of Good Hope. Spártium sophoroìdes, Berg. cap. 198. Crotalària cordifòlia, Lin. mant. 266. The plant has the habit of a species of *Podalýria* or *Rǽfnia*. Leaflets obcordate, mucronate, complicated, longer than the petiole.

Obcordate-leafletted Hypocalyptus. Fl. Ju. July. Clt. 1823. Shrub 1 to 2 feet.

Cult. For culture and propagation see *Loddigèsia*.

L. VIBO'RGIA (in honour of Eric Viborg, an acute Danish botanist). Spreng. but not of Mœnch. Wibórgia, Thunb. fl. cap. p. 560. but not of Roth.

Lin. syst. *Monadélphia, Decándria.* Calyx campanulately-tubular, permanent, 5-toothed, with the recesses round. Vexillum obovate. Keel 2-edged, obtuse. Stamens monadelphous, with the sheath at length cleft in front. Style filiform, smooth, crowned by a simple terminal stigma. Legume stipitate, compressed, ovate, indehiscent, mucronate from the style, 1-seeded, subalate at the upper suture; valves rather ventricose, coriaceous, transversely nerved.—Cape shrubs, about 2 or 3 feet high, with trifoliate leaves, the leaflets rather longer than the petioles. Flowers yellow, disposed in racemes, with the pedicels reflexed. Stipulas wanting or very small. Perhaps all the three species are sufficiently distinct from each other.

1 V. OBCORDA'TA (Thunb. fl. cap. p. 560.) leaflets glabrous, oblong-cuneated, obtusely emarginate; racemes elongated; branches loose. ♄. G. Native of the Cape of Good Hope, in sandy places. Hedýsarum Capénse, Burm. cap. p. 22. Crotalària obcordàta, Berg. cap. 195. Crotalària floribúnda, Lodd. bot. cab. 509. Leaflets 2-3 lines long.

Obcordate-leafletted Viborgia. Fl. July, Aug. Clt. 1810. Shrub 2 to 3 feet.

2 V. FU'SCA (Thunb. l. c.) leaflets glabrous, ovate, mucronate; branches twiggy, erect. ♄. G. Native of the Cape of Good Hope.

Brown Viborgia. Shrub 2 to 3 feet.

3 V. SERÍCEA (Thunb. l. c.) leaflets clothed with silky pubescence, obovate, obtuse; branches twiggy. ♄. G. Native of the Cape of Good Hope. Leaves about a line long.

Silky Viborgia. Fl. July, Aug. Clt. 1810. Sh. 2 to 3 feet.

Cult. See *Loddigèsia* for culture and propagation.

LI. LODDIGE'SIA (in honour of Conrad Loddiges, nurseryman at Hackney, near London; died 1820). Sims, bot. mag. t. 956.

Lin. syst. *Monadélphia, Decándria.* Calyx somewhat inflated, acutely 5-toothed. Vexillum much smaller than the wings and keel. Stamens all connected. Ovary oblong, 2-4-ovulate, compressed.—A Cape shrub, with trifoliate leaves, and pinkish flowers.

1 L. OXALIDIFÒLIA (Sims, l. c.) ♄. G. Native of the Cape of Good Hope. Shrub much branched, smooth. Leaves stalked. Stipulas subulate. Leaflets obcordate, mucronate. Flowers 3-8, in an umbel. Keel dark-purple at the apex.

Oxalis-leaved Loddigesia. Fl. May, Sept. Clt. 1802. Shrub 1 to 3 feet.

Cult. *Loddigèsia* is an elegant plant when in flower. An equal mixture of sandy loam and peat suits it best, and young cuttings strike freely if planted in a pot of sand, with a bell-glass placed over them.

LII. DICHI'LUS (from δις, *dis*, twice, and χειλος, *cheilos*, a lip; in reference to the calyx being deeply two lipped).

Lin. syst. *Monadélphia, Decándria.* Calyx attenuated at the base, profoundly bilabiate, upper lip bidentate, lower one tridentate, the teeth all acute. Vexillum shorter than the obtuse keel. Wings nearly equal, longer than the calyx. Stamens monadelphous, with the sheath cleft above. Style filiform. Ovary linear, erect, 8-ovulate.—Smoothish Cape subshrubs, with terete branches, and with hardly any stipulas. Leaves ternate. Pedicels 1-flowered, bibracteate.

1 D. LEBECKIOÌDES (D. C. l. c. t. 35.) stem suffruticose, erect, smooth; leaves ternate, on short petioles, smooth; pedicels 1-flowered, bibracteolate. ♄. G. Native of the Cape of Good Hope.

Lebeckia-like Dichilus. Shrub 1 to 2 feet.

2 D. SERI'CEUM (Spreng. syst. tent. suppl. p. 20.) stem suffruticose, erect, silky; leaves ternate, stalked; leaflets obovate, smooth above, but with the margins fulvous and ciliated, and clothed with silky silvery-pubescence beneath; racemes stalked; legume linear-ensiform. ♄. G. Native of the Cape of Good Hope. Zeyher, no. 10.

Silky Dichilus. Shrub 1 to 2 feet.

3 D. CILIA'TUM (Spreng. l. c.) stem herbaceous, erect, smoothish; leaves ternate, on long stalks; leaflets ovate-rhomboid, rather oblique, ovate, acute, mucronate, smoothish above, ciliated with silky hairs, sparingly pilose beneath; peduncles axillary, leafy in the middle; racemes few-flowered. ♄. G. Native of the Cape of Good Hope. D. hypótrichum, Spreng. cur. post. p. 273. no. 2.

Ciliated-leaved Dichilus. Pl. 1 foot.

Cult. For culture and propagation see *Loddigèsia*.

LIII. LEBE'CKIA (from *Lebeck*, some obscure botanist).

Thunb. prod. 2. præf. fl. cap. 561. Willd. spec. 3. p. 946. D. C. prod. 2. p. 136.

Lin. syst. *Monadélphia, Decándria.* Calyx 5-cleft; lobes acute, nearly equal, with the recesses rounded. Stamens all connected, with the sheath cleft above. Legume cylindrical, many-seeded.—Shrubs or subshrubs, natives of the Cape of Good Hope, with simple or trifoliate leaves. Habit of *Genista.*

* *Leaves simple.*

1 L. subnu'da (D. C. prod. 2. p. 136.) leaves almost wanting, but at the tops of the branches they are few, linear, and deciduous, and are, as well as the branches, clothed with adpressed pubescence; flowers disposed in long racemes. ♄. G. Native of the Cape of Good Hope. Petals stipitate, with the stipes a little longer than the calyx. Perhaps the same as *L. aphýlla,* Thunb. prod. 122. but omitted in his Flora Capensis.

Nearly-naked Lebeckia. Fl. April, May. Clt. 1824. Shrub 1 to 2 feet.

2 L. contamina'ta (D. C. prod. 2. p. 136.) leaves linear-filiform, scattered, glabrous; racemes axillary, pedunculated, and elongated. ♄. G. Native of the Cape of Good Hope, in sandy places. Spártium contaminàtum, Lin. mant. 268. The bases of the leaflets are spotted with purple. Flowers yellow. Perhaps L. contaminàta of Thunb. fl. cap. 561. Flowers said to be umbellate by Thunberg; it is therefore perhaps a distinct species from the plant of Linnæus.

Contaminated Lebeckia. Fl. April, May. Clt. 1787. Shrub 2 to 6 feet.

3 L. sepia'ria (Thunb. l. c.) leaves filiform, rather crowded, glabrous; racemes subterminal, pedunculated, elongated, crowded. ♄. G. Native of the Cape of Good Hope.—Pluk. alm. t. 424. f. 1. Spártium sepiàrium, Lin. spec. 995. Genísta sepiària, Lam. Spártium pinastrifòlium, Burm. cap. p. 21.

Hedge Lebeckia. Fl. Ap. May. Clt. 1820. Sh. 3 to 6 feet.

4 L.? linea'ris (D. C. prod. 2. p. 137.) leaves in fascicles, linear-subulate, acute, glabrous, straight; flowers tern, somewhat pedicellate at the tops of the branches. ♄. G. Native of the Cape of Good Hope. Psoràlea lineàris, Burm. cap. 22.

Linear-leaved Lebeckia. Fl. April, May. Sh. 2 to 4 feet.

5 L. pu'ngens (Thunb. l. c.) leaves obovate; branches and branchlets spinescent, tomentose; flowers solitary. ♄. G. Native of the Cape of Good Hope. Erect, clothed with fine tomentum, the branches terete. Legume oblong, falcate, tomentose.

Pungent Lebeckia. Shrub 2 to 4 feet.

* * *Leaves trifoliate.*

6 L. subterna'ta (Link. enum. 2. p. 225.) leaves 1-2 or trifoliate, sessile, lanceolate, acute, scabrous. ♄. G. Native of the Cape of Good Hope. Pedicels axillary, shorter than the leaves. Flowers yellow. Vexillum longer than the wings, and acute keel.

Subternate-leaved Lebeckia. Fl. June, July. Clt. 1824. Shrub 2 to 4 feet.

7 L. arma'ta (Thunb. fl. cap. 561.) leaves trifoliate, stalked, glabrous; leaflets oblong; branches numerous, rather spinescent, terete, grey; flowers racemose. ♄. G. Native of the Cape of Good Hope. L. scórpius, Thunb. prod. 122. in fl. cap. omitted. Stem very much branched.

Armed Lebeckia. Shrub 2 to 4 feet.

8 L. de'nsa (Thunb. fl. cap. 562.) leaves trifoliate, clothed with adpressed silky-canescent down; leaflets oblong-linear, complicated; racemes few-flowered, on long peduncles, somewhat spicate; flowers erect, silky. ♄. G. Native of the Cape of Good Hope. Burch. cat. no. 2603. Leaflets 12-15 lines long, and 1 to 3 broad. Petioles, branches, and pedicels clothed with adpressed pubescence.

Dense Lebeckia. Shrub 2 to 4 feet.

9 L. hu'milis (Thunb. fl. cap. 562.) leaves trifoliate, pubescently-villous; leaflets linear-oblong; flowers racemose, reflexed; branches incurved. ♄. G. Native of the Cape of Good Hope. Stem glabrous, hardly an inch in height.

Humble Lebeckia. Shrub ½ foot.

10 L. seri'cea (Thunb. fl. cap. 562.) leaves trifoliate, silky; leaflets linear-oblong, flat; racemes few-flowered, short; flowers erect; corolla glabrous. ♄. G. Native of the Cape of Good Hope. Spártium serìceum, Ait. hort. kew. 3. p. 12. Cýtisus serìceus, Lam. dict.

Silky Lebeckia. Fl. April. Clt. 1774. Shrub 1 to 3 feet.

11 L. cytisoìdes (Thunb. l. c.) leaves trifoliate, clothed with adpressed pubescence; leaflets linear-oblong; racemes elongated; flowers erect, smoothish. ♄. G. Native of the Cape of Good Hope.—Comm. hort. amst. 2. p. 107. Spártium cytisoìdes, Lin. fil. suppl. 320. E'benus Capénsis, Lin. mant. 264. Cýtisus Capénsis, Lam. Flowers large, yellow, resembling those of a species of *Crotalària.*

Cytisus-like Lebeckia. Fl. April. Clt. 1774. Sh. 2 to 4 ft.

Cult. For culture and propagation see *Loddigèsia,* p. 142.

LIV. SARCOPHY'LLUM (from σαρξ σαρκος, *sarx sarcos,* flesh, and φυλλον, *phyllon,* a leaf; leaves fleshy). Thunb. prod. part. 2. D. C. prod. 2. p. 137.—Sarcophýllus, Thunb. fl. cap. 2. p. 573.

Lin. syst. *Monadélphia, Decándria.* Calyx campanulate, 5-parted, regular, 2 superior teeth divaricate. Carina obtuse. Stamens monadelphous. Legume compressed, elongated, falcate, many-seeded, acuminated by the style.—A smooth Cape shrub, with the appearance of *Lebéckia sepiària.*

1 S. carnòsum (Thunb. l. c.) ♄. G. Native of the Cape of Good Hope, on the mountains near False Bay. Sims, bot. mag. 2502. Leaves fleshy, filiform, articulated above the middle, disposed in fascicles. Flowers yellow, pedicellate, lateral.

Fleshy-leaved Sarcophyllum. Fl. May, Aug. Clt. 1812. Sh. 2 to 4 feet.

Cult. This plant being of a rather succulent nature care must be taken not to over water it. A mixture of loam and peat is the best soil for it, and young cuttings root readily in a pot of sand under a bell-glass.

LV. ASPALATHUS (said to be derived from α privative and σπαω, *spao,* to extract; in reference to the thorns). Lin. gen. no. 860. Lam. ill. t. 620. Thunb. fl. cap. 573. D. C. prod. 2. p. 137. Aspálathus and Erióeylax, Neck.

Lin. syst. *Monadélphia, Decándria.* Calyx with the tube hardly attenuated at the base, 5-toothed or 5-cleft, with the lobes about equal. Vexillum on a short stipe. Carina 2-edged. Stamens monadelphous, having the sheath cleft above. Legume oblong, usually oblique, few-seeded.—Shrubs or subshrubs, all natives of the Cape of Good Hope, with the exception of one. Leaves at first sight in fascicles, but are compounded of 3-5 leaflets, disposed palmately, rarely pinnately, having scarcely any or very short petioles, therefore the leaflets are sessile. Flowers furnished each with 3 bracteoles, or a leaf composed of 3 leaflets. The species are mostly known from the descriptions of Thunberg. Flowers usually yellow.

§ 1. *Flowers almost sessile.*

* *Leaves in fascicles.*

1 A. spinòsa (Lin. spec. 1000.) leaves in fascicles, linear, glabrous; branches axillary, spiny; flowers axillary, solitary, glabrous. ♄. G. Breyn. cent. t. 26. Lam. ill. t. 620. f. 3.

Thunb. fl. cap. 584. Calyx 5-toothed. Carina longer than the wings and keel. Legume pubescent, rather oblique.

Spiny Aspalathus. Fl. July, Aug. Clt. 1824. Sh. 1 to 2 ft.

2 A. ACULEA'TA (Thunb. fl. cap. 584.) leaves in fascicles, linear, hairy; flowers capitate; buds prickly. ♄. G. A villous shrub, with very short branches. Prickles yellowish under the fascicles of leaves. Flowers yellow, hairy.

Prickly Aspalathus. Shrub 2 to 3 feet.

3 A. ACUMINA'TA (Lam. dict. 1. p. 287. ill. 620. f. 4. but not of Thunb.) leaves in fascicles, very short, lanceolate, ending in a pungent acumen, rather puberulous; branchlets spinescent; flowers axillary, solitary. ♄. G.—Pluk. alm. t. 297. f. 6. Teeth of calyx spiny. Petals silky on the outside. Keel and vexillum about equal in length, but longer than the wings.

Acuminated-leaved Aspalathus. Shrub 1 foot.

4 A. SPINE'SCENS (Thunb. fl. cap. 584.) leaves in fascicles, filiform, rather fleshy; flowers lateral, solitary, glabrous; branches spinescent. ♄. G. Calyx acutely 5-cleft. Corolla 4 lines long. Petals equal among themselves. Ovary glabrous.

Spinescent Aspalathus. Shrub 2 to 4 feet.

5 A. LARICIFÒLIA (Lam. dict. 1. p. 287. but not of Thunb.) leaves in fascicles, filiform-subulate, glabrous; branches and stipulas spinescent; flowers lateral, solitary, silky-pubescent. ♄. G. A. pùngens, Thunb. prod. 129. Leaves length of those of *Pinus làrix*. Calyx pubescent, acutely 5-cleft. Wings falcate. Carina very much curved. Legume clothed with short villi.

Larch-leaved Aspalathus. Shrub 2 to 4 feet.

6 A. VERRUCÒSA (Lin. syst. veg. 537. Thunb. fl. cap. 583.) leaves in fascicles, filiform, mucronate, incurved, fleshy, glabrous; flowers lateral; buds warted. ♄. G. Calyx pubescent, acutely 5-cleft. Vexillum pilose. Legume villous, ovate-lanceolate, acuminated.

Warted Aspalathus. Shrub 2 to 3 feet.

7 A. CAPITA'TA (Lin. amœn. 6. p. 92.) leaves in fascicles, subulate, acute, much crowded, rather pilose; branches hairy; flowers capitate, terminal, glabrous. ♄. G.—Pluk t. 397. f. 6. Lam. ill. 620. f. 2. A. glomeràta, Lin. fil. suppl. 321. Bracteoles 3, deciduous, the middle one concave and largest. Calyx villous, 5-cleft, with the lobes broad and acute.

Capitate-flowered Aspalathus. Fl. July, Aug. Clt. 1823. Shrub 2 to 4 feet.

8 A. ASTROÌTES (Lin. spec. 1000.) leaves in fascicles, subulate, pungent, stiffly divaricate, glabrous; branchlets hairy; flowers lateral and terminal, somewhat capitate, smoothish. ♄. G.—Pluk. alm. t. 413. f. 2.—Seb. thes. t. 24. f. 6. Bracteoles spinescent. Calyx 5-cleft, the lobes subulate and spiny. Ovary glabrous.

Starry Aspalathus. Fl. July, Aug. Clt. 1818. Sh. 2 to 4 ft.

9 A. CHENÓPODA (Lin. spec. 1000.) leaves in fascicles, subulate, trigonal, ending in a pungent mucrone, stiff, pilose; flowers capitate, and are, as well as the branches, hairy. ♄. G.—Breyn. cent. t. 11.—Seb. thes. 1. t. 24. f. 4. Sims, bot. mag. 2225. Lodd. bot. cab. t. 316. Bracteoles subulate, villous. Calyx 5-ribbed, cleft into 5 beyond the middle; the lobes subulate and villous. Wings straight, rather adnate to the keel. Legume terete, with short pili at the apex. Style long, permanent.

Goose-foot Aspalathus. Fl. July, Aug. Clt. 1759. Shrub 2 to 4 feet.

10 A. A'LBENS (Thunb. fl. cap. 576.) leaves in fascicles, filiform, mutic, silvery from adpressed silky down; racemes leafy. ♄. G. Corolla glabrous, according to Thunberg, but in the specimen examined by M. De Candolle it is obviously tomentose. Calyx hoary from silky down. Flowers white.

White-leaved Aspalathus. Fl. July, Aug. Clt. 1774. Sh. 3 to 4 feet.

11 A. ARGYRÆ'A (D. C. prod. 2. p. 139.) leaves in fascicles, filiform, awnless, silky from adpressed down; flowers axillary, subterminal, solitary; calyx 5-toothed, and is, as well as the corolla, clothed with silky pubescence. ♄. G. Perhaps the same as *A. Albens*, Lin. mant. 261.

Silvery Aspalathus. Shrub 2 to 4 feet.

12 A. ARMA'TA (Thunb. fl. cap. 577.) leaves in fascicles, filiform, silvery, mucronate; racemes leafless; corolla tomentose. ♄. G. Flowers white. Branches silky. Racemes terminal.

Armed Aspalathus. Shrub 2 to 4 feet.

13 A. HY'STRIX (Lin. fil. suppl. 322. Thunb. fl. cap. 577.) leaves in fascicles, filiform, silky, mucronate, stiff; flowers lateral, solitary; corolla villous. ♄. G. Lam. dict. 1. p. 287. ill. t. 620. f. 1.

Porcupine Aspalathus. Fl. July, Aug. Clt. 1824. Shrub 2 to 4 feet.

14 A. SPICA'TA (Thunb. fl. cap. 578.) leaves in fascicles, subulate, rather pilose; flowers disposed in ovate, terminal spikes; calyx hairy, with the lobes acuminated. ♄. G.

Spike-flowered Aspalathus. Shrub 2 to 4 feet.

15 A. MICROCA'RPA (D. C. prod. 2. p. 139.) leaves in fascicles, subulate, pilose; flowers axillary, solitary; legume ovate, pubescent, a little longer than the calyx. ♄. G. Burch. cat. no. 265 and 284. Branches rather hairy. Calyxes rather villous, 5-cleft, with the lobes awl-shaped. Corolla small. Wings oblong, shorter than the smooth keel and silky vexillum. Legume 1-2-seeded. Leaves 1-2 lines long.—Pluk. alm. t. 413. f. 3. ?

Small-fruited Aspalathus. Shrub 2 to 4 feet.

16 A. THYMIFÒLIA (Lin. spec. 1000.) leaves in fascicles, filiformly-subulate, pilose; flowers lateral, pubescent, solitary; branches incurved, hairy. ♄. G.—Pluk. alm. t. 413. f. 1. Bracteoles villous. Calyx villous, 5-cleft, with the tube striated, and the lobes subulate. Corolla small, the wings very small, and oblong.

Thyme-leaved Aspalathus. Fl. July, Aug. Clt. 1825. Sh. 2 to 4 feet.

17 A. ERICÆFÒLIA (Lin. spec. 1000.) leaves in fascicles, filiform, rather obtuse, covered with soft hairs; flowers alternate, disposed in something like racemes; segments of the calyx linear, about the length of the corolla. ♄. G.—Pluk. alm. t. 413. f. 6. A. móllis, Lam. dict. 1. p. 290. Corolla with oblong smooth wings, equal in length to the keel, which is villous, as well as the vexillum. A. ericæfòlia, Berg. cap. 205. differs in segments of the calyx being obtuse.

Heath-leaved Aspalathus. Fl. July, Aug. Clt. 1789. Sh. 2 to 4 feet.

18 A. FRANKENIOÌDES (D. C. prod. 2. p. 139.) leaves in fascicles, terete, pubescently-hairy; branches canescent and velvety; flowers terminal and axillary, usually solitary, silky. ♄. G. Burch. cat. no. 3473. Calyx 5-toothed, 3 times shorter than the corolla. Leaves hardly more than a line long.

Frankenia-like Aspalathus. Shrub.

19 A. HI'SPIDA (Thunb. fl. cap. 579.) leaves in fascicles, filiform, obtuse, hispid from pili; flowers axillary; segments of the calyx shorter than the flower. ♄. G. A shrub, clothed with grey tomentum. Flowers sessile. Legume ovate, villous.

Hispid Aspalathus. Fl. July, Aug. Clt. 1818. Sh. 2 to 4 ft.

20 A. FLEXUÒSA (Thunb. fl. cap. 579.) leaves in fascicles, filiform, obtuse, hispid from pili; flowers axillary; segments of the calyx longer than the flower. ♄. G.

Flexuous Aspalathus. Shrub 2 to 3 feet.

21 A. PARVIFLÒRA (Thunb. fl. cap. 579. but not of Berg.) leaves in fascicles, filiform, obtuse, pubescent; flowers terminal, tern. ♄. G. Shrub pubescent. Corolla with the helmet tomentose.

Small-flowered Aspalathus. Shrub 2 to 4 feet.

22 A. INCOMPTA (Thunb. fl. cap. 579.) leaves in fascicles, filiform, obtuse, silky; flowers lateral. ♄. G. Branches retroflexed, clothed with very fine pubescence. Leaves [illegible] half long. Flowers yellow; the vexillum hairy.

Unsightly Aspalathus. Shrub 2 to 4 feet.

23 A. ASPARAGOIDES (Lin. [illegible] suppl. 321. Thunb. fl. cap. 579.) leaves in fascicles, subulate, [illegible], mucronate, rather pilose; flowers axillary; calycine segments subulate, rather pilose, about equal in length to the corolla. ♄. G. Vexillum and keel densely clothed with silky-velvety down, but with the wings glabrous. Hairs on the calyx tuberculate at the base.

Asparagus-like Aspalathus. Fl. July, Aug. Clt. 1812. Sh. 2 to 4 feet.

24 A. CORRUDÆFÒLIA (Berg. cap. 207.) leaves in fascicles, filiform, mucronately-pungent, smoothish, stiff; branches pubescent; flowers axillary, solitary; bracteas and calycine segments ending in a spiny mucrone. ♄. G. Burch. cat. no. 3320. Calyxes and legumes villous. Vexillum and keel rather puberulous.

Wild-Asparagus-leaved Aspalathus. Shrub 2 to 4 feet.

25 A. INCU'RVA (Thunb. fl. cap. 578.) leaves in fascicles, subulate, mucronulate, rather pilose; flowers axillary, solitary; legume ovate-lanceolate, rather oblique, very hairy. ♄. G. Leaves sometimes almost smooth, 4 lines long. Legume 5 lines long, rather turgid. Calyx villous, with the teeth subulate.

Incurved-leaved Aspalathus. Shrub 2 to 4 feet.

26 A. NÌGRA (Lin. mant. 262.) leaves in fascicles, filiform, glabrous; branches pubescent; flowers capitate, at length disposed in an ovate spike; calyx and corolla villous. ♄. G. Flowers yellow. Leaves bluntish.

Black Aspalathus. Shrub 2 to 4 feet.

27 A. MULTIFLÒRA (Thunb. fl. cap. 580.) leaves in fascicles, terete, obtuse, glabrous; flowers disposed in something like spikes; calyxes bractless; branches, calyx, and corolla pubescent. ♄. G. Leaves hardly a line in length. A. multiflòra, Sieb. exsic. cap. no. 49. is very different.

Many-flowered Aspalathus. Fl. July, Aug. Clt. 1818. Shrub 2 to 4 feet.

28 A. CYMBÆFÓRMIS (D. C. prod. 2. p. 140.) leaves in fascicles, terete, pubescently hairy; flowers terminal and axillary, usually solitary; segments of the calyx ovate, boat-shaped, obtuse. ♄. G. A. uniflòra, Lam. dict. 1. p. 285. but not of Lin. Corolla clothed with silky villi.

Var. α, *hírta* (D. C. prod. 2. p. 140.) leaves hairy, much crowded; flowers smaller.

Var. β, *pubéscens* (D. C. l. c.) leaves pubescent, rather distant; flowers larger.

Boat-shaped-sepalled Aspalathus. Shrub 2 to 4 feet.

29 A. UNIFLÒRA (Lin. spec. 1001. but not of Lam. ex mus. hort. par.) leaves in fascicles, filiform, mucronate, glabrous; flowers lateral, solitary; calycine segments ovate, boat-shaped, obtuse. ♄. G.—Pluk. mant. 88. t. 413. f. 7. ex Lin. Stipulas permanent, according to Lin. Keel of corolla tomentose.

One-flowered Aspalathus. Fl. July, Aug. Clt. 1812. Shrub 2 to 3 feet.

30 A. CARNÒSA (Lin. mant. 261.) leaves in fascicles, fleshy, terete, obtuse, glabrous; flowers terminal, in fours, capitate, bracteate; calycine segments ovate, obtuse. ♄. G. Berg. cap. 206. Sims, bot. mag. 1289. Flowers very smooth, yellow. This species is allied to the two preceding in the calycine segments being obtuse.

Fleshy Aspalathus. Fl. May, June. Clt. 1795. Shrub 2 to 4 feet.

31 A. PÍNGUIS (Thunb. fl. cap. 580.) leaves in fascicles, fleshy, ovate, trigonal, obtuse, glabrous; flowers lateral, glabrous. ♄. G. Branches tomentose. Leaves hardly 1 line long. Flowers yellow.

Fat Aspalathus. Shrub 2 to 4 feet.

32 A. CRASSIFÒLIA (Andr. bot. rep. 351.) leaves in fascicles, fleshy, terete, glabrous, setaceous at the apex; flowers capitate, terminal; calyx bracteate. ♄. G. Ait. hort. kew. ed. 2. vol. 4. p. 263. Flowers yellow.

Thick-leaved Aspalathus. Fl. July, Aug. Clt. 1800. Shrub 2 to 4 feet.

33 A. AFFÌNIS (Thunb. fl. cap. 580.) leaves in fascicles, fleshy, terete, glabrous; flowers lateral, bractless; branches twiggy. ♄. G. Flowers yellow. Legume ovate, glabrous.

Allied Aspalathus. Fl. June, July. Clt. 1822. Sh. 2 to 4 ft.

34 A. SANGUÍNEA (Thunb. fl. cap. 580.) leaves in fascicles, fleshy, terete, glabrous; flowers lateral, bractless; branches fastigiate. ♄. G. Flowers blood-coloured, smooth, on very short pedicels. Leaves one line long.

Blood-coloured-flowered Aspalathus. Shrub 2 to 4 feet.

35 A. LA'CTEA (Thunb. fl. cap. 580.) leaves in fascicles, filiform, glabrous, retuse; flowers lateral, bractless. ♄. G. A pubescent shrub, with spreading leaves, and whitish-yellow, smooth flowers.

Milk-coloured-flowered Aspalathus. Shrub 2 to 4 feet.

36 A. GENISTOÌDES (Lin. mant. 261.) leaves in fascicles, filiform, glabrous; flowers terminal, subracemose, glabrous; calycine teeth short. ♄. G. Flowers yellow. Leaves half an inch long. Calyx and corolla pubescent. Thunb. fl. cap. 581.

Genista-like Aspalathus. Shrub 9 feet.

37 A. SQUARRÒSA (Thunb. prod. 128.) leaves in fascicles, filiform, reflexed, glabrous; flowers solitary, terminal. ♄. G. A. squamòsa, Thunb. fl. cap. 581. Flowers yellow. Bracteas 3, under the calyx filiform. Calyx and the vexillum pubescent.

Squarrose Aspalathus. Fl. Jul. Aug. Clt. 1823. Sh. 2 to 4 ft.

38 A. GALIOÌDES (Berg. cap. 210.) leaves in fascicles, subulate, unarmed, glabrous; flowers twin, terminal, smooth; stem procumbent. ♄. G. ♃. Berg. Buds remote. Calyx smooth. Legume ovate-lanceolate, smoothish.

Galium-like Aspalathus. Fl. July, Aug. Clt. 1817. Shrub procumbent.

39 A. RETROFLE'XA (Lin. spec. 1001.) leaves in fascicles, subulate, glabrous; branchlets filiform, retroflexed, or much spreading; flowers terminal, usually solitary. ♄. G. Calyx pubescent, 5-cleft; lobes subulate. Corolla glabrous; petals about equal. Legume 1-2-seeded, obliquely lanceolate, young ones rather villous, at length pubescent.

Retroflexed Aspalathus. Shrub 2 to 4 feet.

40 A. VU'LNERANS (Thunb. fl. cap. 582.) leaves in fascicles, filiform, mucronate, spreading, glabrous; flowers lateral, drooping. ♄. G. Corolla yellow, smooth. Branches and calyxes pubescent.

Healing Aspalathus. Shrub 2 to 4 feet.

41 A. PÍNEA (Thunb. l. c.) leaves in fascicles, filiform, mucronate, erect, glabrous; flowers lateral, tufted. ♄. G. Shrub smooth. Calyx and vexillum hairy.

Pine-like Aspalathus. Shrub 2 to 4 feet.

42 A. DIVARICA'TA (Thunb. l. c.) leaves in fascicles, terete, acutely mucronate, glabrous; flowers in terminal racemes. ♄. G. Branches brown, divaricate. Branchlets pubescent. Flowers yellow, pubescent.

Divaricate Aspalathus. Shrub 2 to 4 feet.

43 A. SUBULA'TA (Thunb. l. c.) leaves in fascicles, rather fleshy, trigonal, mucronate, glabrous. ♄. G. Shrub branched above; branches tomentose. Flowers terminal, sessile, usually tern, glabrous, yellow. Calyx pubescent.

Subulate-leaved Aspalathus. Fl. July, Aug. Clt. 1789. Sh. 1 to 2 feet.

44 A. lari'cina (D.C. prod. 2. p. 141.) leaves in fascicles, terete, mucronate, glabrous; flowers lateral, woolly. ♄. G. A. laricifòlia; Thunb. l. c. but not of Lam.—A pubescent shrub, with spreading leaves and yellow flowers.

Larch-leaved Aspalathus. Fl. July, Aug. Clt. 1823. Shrub 2 to 3 feet.

45 A. globo'sa (Andr. bot. rep. 510.) leaves in fascicles, linear, tomentose; flowers in terminal heads, villous; branches long, slender. ♄. G. Flowers fuscous.

Globose-flowered Aspalathus. Fl. June, July. Clt. 1801. Shrub 2 to 4 feet.

46 A. junipe'rina (Thunb. l. c.) leaves in fascicles, terete, mucronate, glabrous; flowers terminal, glabrous. ♄. G. Branches pubescent. Flowers solitary or twin.

Juniper-like Aspalathus. Shrub 2 to 4 feet.

47 A. abietìna (Thunb. l. c.) leaves in fascicles, filiform, and are as well as the calyxes ending in spiny mucrones, glabrous; flowers lateral and terminal, solitary, glabrous; branches striated. ♄. G. Flowers yellow. Segments of the calyx long, awl-shaped, pungent, about equal in length to the corolla.

Fir-like Aspalathus. Shrub 2 to 4 feet.

48 A. trigo'na (Thunb. l. c.) leaves in fascicles, trigonal, mucronate, glabrous; flowers lateral. ♄. G. Branches pubescent. Flowers solitary, small, glabrous.

Trigonal Aspalathus. Shrub 2 to 4 feet.

49 A. àraneo'sa (Lin. spec. 1001.) leaves in fascicles, filiform, acute, loose, hispid from spreading hairs; flowers capitate; calycine segments subulate, hispid from pili, about equal in length to the corolla, which is silky. ♄. G.—Pluk. alm. t. 414. f. 4.—Seb. thes. 1. t. 23. f. 6. Flowers yellow, but white according to Sims, in bot. mag. 829. and yellow when dry. A. pilòsa, Sieb. pl. exsic. cap. no. 48. Anthýllis quinqueflòra, Lin. fil. suppl. 325. ex herb. Burm. Stamens truly monadelphous, with the sheath cleft above.

Cobwebbed Aspalathus. Fl. Ju. Jul. Clt. 1795. Sh. 2 to 4 ft.

50 A. comòsa (Thunb. fl. cap. 577.) leaves in fascicles, filiform, pilose; flowers lateral, tufted. ♄. G. Corolla yellow, with the vexillum tomentose outside. Branches villous.

Tufted Aspalathus. Shrub 2 to 4 feet.

51 A. cephalòtes (Thunb. l. c.) leaves in fascicles, filiform, bluntish, rather villous; heads terminal, hairy. ♄. G. Calycine segments linear-subulate, hairy. Flowers larger than in any other species of the genus; the vexillum is oval and nearly an inch long, silky on the outside. Branches hairy. Leaves 2-3 lines long.

Headed Aspalathus. Shrub 2 to 4 feet.

52 A. tri'quetra (Thunb. fl. cap. 578.) leaves in fascicles, trigonal, obtuse, pilose, wrinkled; heads terminal. ♄. G. Branches rather umbellate. Corolla yellow, glabrous. Leaves hardly a line long.

Triquetrous Aspalathus. Shrub 2 to 4 feet.

53 A. cane'scens (Lin. mant. 262.) leaves in fascicles, clothed with silky tomentum, subulate, mucronulate; flowers lateral, pubescent. ♄. G. Tube of calyx ventricose, rather hairy, acutely 5-toothed. Petals equal in length. Vexillum clothed with silky tomentum outside. Ovary villous.

Canescent Aspalathus. Shrub 2 to 4 feet.

54 A. vermicula'ta (Lam. dict. 1. p. 288.) leaves in fascicles, small, obtuse, glabrous; flowers lateral, racemose, rather hairy. ♄. G. Leaves hardly half a line in length.

Vermiculate-leaved Aspalathus. Shrub 2 to 4 feet.

55 A. ru'bens (Thunb. fl. cap. 576.) leaves in fascicles, subulate, silky; flowers solitary, silky. ♄. G. Branches reddish-brown; branchlets silky, spreading much. Leaves hardly half a line long.

Reddish-branched Aspalathus. Shrub 2 to 4 feet.

56 A. cilia'ris (Lin. mant. 262.) leaves in fascicles or trifoliate, trigonal, acute, ciliated; heads terminal; calyx equal in length to the corolla. ♄. G. Sims, bot. mag. 2233. Flowers yellow. Corolla tomentose. This and the five following species are perhaps more correctly referable to the following division, with the trifoliate leaves.

Ciliary-leaved Aspalathus. Fl. July, Aug. Clt. 1799. Sh. 2 to 3 feet.

57 A. quinquefòlia (Lin. mant. 6. p. 92.) leaves in fascicles, trifoliate, linear-oblong, flat, rather hairy; heads of flowers hairy; corolla glabrous. ♄. G.—Pluk. alm. t. 278. f. 4. ex Thunb. fl. cap. 575. The heads of flowers in D. C. specimen are large and round.

Five-leaved Aspalathus. Fl. Jul. Aug. Clt. 1816. Sh. 2 to 3 ft.

58 A. ca'ndicans (Ait. hort. kew. ed. 2. vol. 4. p. 264.) leaves in fascicles, trifoliate, filiform, silky; flowers sub-lateral, with the vexillum naked. ♄. G.

Whitened Aspalathus. Fl. Ju. Jul. Clt. 1774. Sh. 2 to 4 ft.

59 A. heterophy'lla (Lin. fil. suppl. 321. Thunb. fl. cap. 575.) leaves in fascicles or trifoliate, linear, pilose; flowers spicate; calyx and corolla villous. ♄. G. Leaves of branches in fascicles, of branchlets trifoliate. Vexillum tomentose on the back. Flowers yellow. Leaves and calycine segments acuminated, rather spinose.

Variable-leaved Aspalathus. Shrub 2 to 4 feet.

60 A. arge'ntea (Lin. spec. 1001.) leaves in fascicles, trifoliate, ovate, clothed on both surfaces with appressed silky pubescence; heads of flowers tomentose; stem dichotomous. ♄. G. A. serícea, Berg. cap. 212. Flowers in spicate heads. Calyx and corolla clothed with rufous, velvety, soft down.

Silvery Aspalathus. Fl. Jul. Aug. Clt. 1759. Sh. 2 feet.

* * *Leaves trifoliate, hardly in fascicles.*

61 A. virga'ta (Thunb. fl. cap. 576.) leaves in fascicles, and trifoliate, ovate, silky; heads of flowers hairy; stem twiggy. ♄. G. Branches tomentose. Spikes elongated, hairy, ex. Thunb.

Twiggy Aspalathus. Shrub 2 to 4 feet.

62 A. tridenta'ta (Thunb. l. c.) leaves trifoliate, lanceolate, villous; prickles trifid. ♄. G. Leaves glabrous. Flowers capitate, ex Lin. spec. 1002. Heads terminal, globose, hairy, ex Thunb. l. c.

Tridentate-spined Aspalathus. Shrub 2 to 4 feet.

63 A. lotoìdes (Thunb. fl. cap. 575.) leaves trifoliate, lanceolate, acute, villous; buds unarmed; heads terminal; branchlets and calyxes hairy; keel and vexillum silky. ♄. G. Lobes of calyx acuminated. Petals about equal in length. Flowers yellow. Crotalària lunàris, Burm. cap. prod. 21.?

Lotus-like Aspalathus. Shrub 1 to 2 feet.

64 A. pilòsa (Lin. mant. 263.) leaves trifoliate, linear, clothed with adpressed silky villi; heads terminal, stalked, very pilose; petals all pubescent. ♄. G. A. villòsa, Thunb. prod. 125. fl. cap. 574. Branches with a few leaves at the apex.

Pilose Aspalathus. Shrub 2 to 4 feet.

65 A. serícea (Thunb. prod. 125. fl. 574. but not of Berg.) leaves trifoliate, oblong, acute, silky; racemes oblong, terminal; flowers silky-hairy. ♄. G. Perhaps the species in Lin. fil. suppl. 321. is the same as that of Thunb.

Silky Aspalathus. Fl. July, Aug. Clt. 1816. Sh. 2 to 4 ft.

66 A. cine'rea (Thunb. prod. 125. fl. 575.) leaves trifoliate, oblong, flat, acute, tomentose; heads terminal. ♄. G. Calyx and corolla hairy on the outside.

Grey Aspalathus. Shrub 2 to 4 feet.

67 A. linearifòlia (D. C. prod. 2. p. 142.) leaves trifoliate, sessile, ending in callous mucrones, equal, covered with very fine pubescence; heads terminal; bracteas ovate-lanceolate, and

are as well as the branches hairy. ♄. G. A'ster linearifòlius, Burm. cap. 27. Anthy̆llis linifòlia, Lin. mant. 265. Heads of flowers similar to the anthodium of an *A'ster*.

Linear-leaved Aspalathus. Shrub 2 to 4 feet.

68 A. ANTHYLLOÌDES (Lin. spec. 1002.) leaves trifoliate, ovate, rather pubescent; heads terminal. ♄. G. Anthy̆llis aspalathoìdes, Lin. amœn. 4. p. 326. A. anthylloìdes, Thunb. fl. cap. 574. according to which the flowers are globose. Corolla yellow, with the vexillum rather pubescent.

Anthyllis-like Aspalathus. Shrub 2 to 4 feet.

69 A. LAXA'TA (Lin. mant. 263.) leaves trifoliate, linear, villous; flowers terminal, 5 in a fascicle; calyxes woolly; stems prostrate, terete. ♄. G. Corolla smooth, yellow. Bracteoles wanting.

Lax Aspalathus. Shrub decumbent.

70 A. AGARDHIA'NA (D. C. prod. 2. p. 143.) leaves trifoliate, linear-subulate, acute, clothed with adpressed silky down; branches pubescent; racemules terminal, few-flowered; calyx and corolla villous. ♄. G. Calyx not attenuated at the base, but obtuse, and with 5 short teeth. Corolla a little longer than the calyx.

Agardh's Aspalathus. Shrub 2 to 4 feet.

71 A. CALLÒSA (Lin. spec. 1002.) leaves trifoliate, subulate, erect, equal, glabrous, with the cicatrices round and callous; spikes ovate, terminal; flowers glabrous. ♄. G. Sims, bot. mag. 2329.—Pluk. alm. t. 345. f. 4. Flowers yellow. Bracteoles 3, subulate.

Callous Aspalathus. Fl. July, Aug. Clt. 1[illegible]2. Sh. 2 to 4 ft.

72 A. AMBÍGUA (D. C. prod. 2. p. 143.) leaves trifoliate, ovate, obtuse; branches and branchlets spinescent. ♄. G. A. acuminàta. Thunb. fl. cap. 578. but not of Lam. A smooth shrub. Leaflets 3, concave, rising from the nodi.

Ambiguous Aspalathus. Shrub 2 to 4 feet.

73 A. RUGÒSA (Thunb. prod. 125. fl. cap. 574.) leaves trifoliate, elliptic, rugose, glabrous; umbels terminal. ♄. G. Flowers whitish. Calyx and corolla clothed with grey pubescence.

Wrinkled-leaved Aspalathus. Shrub 2 to 4 feet.

74 A. FU'SCA (Thunb. l. c.) leaves trifoliate, lanceolate, acute, spreading, crowded, and are as well as the branches glabrous; flowers terminal; calycine segments subulate, rather spiny, and are as well as the corolla smooth. ♄. G. Ovary linear, glabrous. Style incurved. Wings and keel equal. Cicatrices roundish, callous. This species is usually to be seen in herbaria under the name of *A. callòsa*, but it is not the *A. callòsa* figured in Sims, bot. mag. 2329.

Brown Aspalathus. Shrub 2 to 4 feet.

75 A. MUCRONA'TA (Lin. fil. suppl. 320. Thunb. prod. 125. fl. cap. 573.) leaves trifoliate, somewhat petiolate; leaflets lanceolate, obtuse; branches spinescent; racemes terminal; flowers glabrous. ♄. G. A smooth shrub, with yellow flowers.

Mucronate-leaved Aspalathus. Fl. June, July. Clt. 1796. Shrub 2 to 4 feet.

76 A. CYTISOÌDES (Lam. dict. 1. p. 292.) leaves trifoliate, lanceolate, mucronate, pubescent on both surfaces; stem and branches panicled; flowers terminal, fascicled, villous. ♄. G. Leaves 3-4 lines long.

Cytisus-like Aspalathus. Shrub 1 to 2 feet.

77 A. MICROPHY'LLA (D. C. prod. 2. p. 143.) leaves small, trifoliate, trigonal, mucronate, glabrous; branches somewhat pubescent; flowers scattered, solitary; segments of the calyx glabrous, subulate, rather pungent; legume obliquely lanceolate, pubescent. ♄. G. Stamens with a permanent tube, about equal in length to the legume.

Small-leaved Aspalathus. Shrub 2 to 4 feet.

78 A. ORIENTA'LIS (Lin. mant. 263.) leaves trifoliate, lanceolate, pubescent; flowers 5 in a fascicle; calyxes pubescent; stems erect, angular. ♄. G. Native of the Levant. Corolla yellow, about the size of those of *Labúrnum*. Stamens connate. Perhaps a species of *Crotalària*.

Oriental Aspalathus. Shrub 2 to 4 feet.

§ 2. *Flowers distinctly pedicellate.*

* *Leaves trifoliate.*

79 A. TENUIFO'LIA (D. C. prod. 2. p. 143.) leaves trifoliate or simple; leaflets linear, very thin, and smoothish, straight, acutish; branchlets terete, rather pubescent at the apex; flowers loosely racemose or almost solitary, pedicellate; keel shorter than the vexillum. ♄. G. Leaves an inch long. Calyx smooth, 5-toothed, bractless, or pedicellate above the bracteas. Stamens all connate, with the sheath cleft in front. Legume glabrous, linear-lanceolate.

Thin-leaved Aspalathus. Shrub 2 to 4 feet.

80 A. OBTUSA'TA (Thunb. prod. 125. fl. cap. 574.) leaves on very short stalks or sessile, trifoliate; leaflets obovate, obtuse, young ones clothed with adpressed villi, but at length becoming smooth; flowers axillary, solitary, pedicellate. ♄. G. Calyx bilabiate, bractless. Vexillum and carina equal in length, but the wings are oblong and longer. Stamens monadelphous. Legume compressed, linear, clothed with adpressed pubescence, mucronate by the style.

Obtuse-leaved Aspalathus. Shrub 2 to 4 feet.

* * *Leaves in fascicles.*

81 A. PEDUNCULA'TA (Lher. sert. angl. t. 26.) leaves in fascicles, filiform, glabrous, mucronulate; pedicels axillary, 1-flowered, longer than the leaves, almost bractless at the apex. ♄. G. Curt. bot. mag. 344. Legume linear, clothed with adpressed pubescence, shorter than the pedicel. Bracteoles small at the apex of the pedicel. A. pedunculàta, Houtt. pfl. syst. is probably different from the present plant.

Pedunculated Aspalathus. Fl. Jul. Aug. Clt. 1775. Sh. 6 ft.

82 A. SUFFRUTICÒSA (D. C. prod. 2. p. 144.) leaves 3-5, linear, subulate, acute, rising from the same dot, pubescent from a few strigæ; peduncles axillary, longer than the leaves; flowers 2-3, borne in small racemes. ♄. G. Lòtus suffruticòsus, Burm. cap. prod. 22.

Suffruticose Aspalathus. Shrub 2 to 4 feet.

83 A. BRACTEA'TA (Thunb. fl. cap. 581.) leaves in fascicles, filiform, mucronulate, glabrous; pedicels axillary, length of leaves, bearing 3 bracteoles similar to leaves. ♄. G. Allied to the preceding, but the lobes of the calyx are longer, and the legumes are broader and on longer pedicels.

Bracteate Aspalathus. Shrub 2 to 4 feet.

84 A. NÍVEA (Thunb. fl. cap. 576.) leaves in fascicles, linear, obtuse, silvery, loose; peduncles lateral, filiform, 1-flowered, bracteate; calyx and corolla silky. ♄. G. Native of the Cape of Good Hope. Flowers white.

White Aspalathus. Shrub 2 to 4 feet.

* * * *Leaves stalked, pinnate.*

85 A.? PINNA'TA (Lin. amœn. 6. p. 92.) leaves pinnate, with 5 obcordate leaflets, which are rather pilose and tomentose beneath; peduncles longer than the leaves; spike roundish; corolla tomentose on the outside. ♄. G. Perhaps a species of *Indigófera* allied to *I. coriàcea*.

Pinnate-leaved Aspalathus. Shrub.

86 A.? ARBO'REA (Lour. coch. p. 431.) leaves pinnate; leaflets 5, ovate, smooth; racemes terminal. ♄. G. Native of Cochinchina, in woods. Flowers small, white. Stamens all connected, but perhaps with a dorsal fissure. Legume oblong-ovate, compressed, mutic, usually 2-seeded.

Arboreous Aspalathus. Tree.

Cult. All the species are rather ornamental when in flower. A mixture of loam, peat, and sand is the soil best adapted for them, and young cuttings of all will strike in sand, under bell-glasses, but the glasses must be wiped occasionally or the cuttings are very liable to damp off.

LVI. U'LEX (said to be derived from *ac*, a point, in Celtic, in reference to the prickly branches). *Lin. gen. no.* 881. Lam. ill. t. 621. D. C. prod. 2. p. 144.

LIN. SYST. *Monadélphia, Decándria.* Calyx bibracteate, bipartite, one of the lips 3-toothed, the other bidentate. Stamens all connected. Legume oval-oblong, turgid, many-ovulate, but few-seeded, hardly longer than the calyx.—European much-branched shrubs, with the branchlets and leaves spinescent. Flowers solitary, yellow. Legumes villous.

1 U. EUROPÆ'US (Lin. spec. 1045. var. *a.*) erect; leaves lanceolate-linear, and with the branchlets rather villous; bracteas ovate, loose; calyx pubescent, with the teeth nearly obsolete and converging. ♄. H. Native of commons, heaths, and waste places throughout Europe. Smith, engl. bot. t. 742. U. grandiflòrus, Pourr. U. vernàlis, Thore.

Provence appears to be the boundary, south, of furze; northwards it does not grow in Sweden or Russia. Linnæus lamented that he could hardly preserve it alive in a greenhouse. Many parts of Germany are perfectly destitute of this plant. The furze is either called whins or gorse in England. In France it is called *ajonc* or *jonc-marin*, contracted to *jomarin.*

Some years ago the seeds of furze were sown for hedges, and if the soil was light it soon became strong enough for a fence against cattle, but in a few years these hedges become naked. Duhamel speaks much in favour of furze as fodder for cattle. It has also been used for fodder in Scotland. Team horses may be supported by this shrub, if the tops are cut young and bruised in a mill to break the thorns. Goats, kine, sheep, and horses feed upon the tender tops. In some parts of Britain it is cultivated for fuel, where peat or coals are dear.

Var. β, flòre-plèno; flowers double. This is a very showy plant when in flower, being profusely clothed with elegant double yellow flowers. It is well adapted for ornamenting shrubberies.

European or Common Furze or Whin. Fl. Feb. Jan. Britain. Shrub [illegible] villous; [illegible] hairy. Flowers larger than in [illegible] 3 to 6 feet.

2 U. NA'NUS (Smith, fl. brit. 757. engl. bot. t. 743.) decumbent; leaves linear, and are as well as the branches smooth; bracteas minute, adpressed; calyx glabrous, with spreading, lanceolate teeth. ♄. H. Native of England on heaths, and in the western parts of France. U. mìnor, Roth. cat. 1. p. 83. U. Europæ'us β, Lin. spec. 1045. U. autumnàlis, Thore.

Dwarf Furze. Fl. Aug. Dec. Britain. Shrub decumbent.

3 U. PROVINCIA'LIS (Lois. not. 105. t. 6. f. 2.) erect; leaves lanceolate, linear, and are as well as the branches glabrous; bracteas minute, adpressed; calyx rather pubescent, with lanceolate distant teeth, hardly exceeding the corolla. ♄. H. Native of Provence, Andegavany, and Mauritania. D. C. fl. franc. suppl. no. 3799. The characters of this species, as well as the size, are intermediate between the two preceding.

Provincial Furze. Fl. Aug. Dec. Clt. 1820. Sh. 2 to 4 ft.

4 U. HIBE'RNICA (G. Don, in Loud. hort. brit. p. 280.) erect; leaves linear, ciliated; spines branched, pubescent as well as the branches, both furrowed. ♄. H. Native of Ireland. H. strícta, Hortul. This is a very upright plant, the spines more mild than in the other species. It is an excellent plant for forming hedges.

Irish Furze. Fl. July, Aug. Ireland. Shrub 6 to 10 feet.

Cult. This, although a very elegant genus of plants, is seldom cultivated unless for hedges, except the double variety of *U. Europæ'us*, which is a very elegant plant when in bloom, and is increased by young cuttings, planted under a hand-glass. The rest are usually increased by seeds.

LVII. STAURACA'NTHUS (from *σταυρος, stauros*, a cross, and *ακανθα, akantha*, a spine; in reference to the spines each having 2 small spines at the side, giving the appearance of a cross). Link. in Schrad. neue journ. 2. p. 1. and 52.

LIN. SYST. *Monadélphia, Decándria.* Calyx bipartite; upper lip bifid, lower one tridentate. Stamens all connected. Legume compressed, many-seeded, exserted, a long way beyond the calyx. A leafless shrub, with the habit of *U'lex*, and from it not probably distinct.

1 S. APHY'LLUS (Link. l. c.). ♄. H. Native of Portugal in sandy pine woods. U'lex genistoìdes, Brot. fl. lus. 2. p. 78. Bracteoles small, under the calyx. Branches divaricate. Legume quite smooth.

Leafless Stauracanthus. Fl. May, June. Clt. 1823. Shrub 2 to 3 feet.

Cult. This is a very elegant plant when in flower, and well fitted for the front of shrubberies. It may be either increased by young cuttings planted in sand under a hand-glass, or by seeds.

LVIII. SPA'RTIUM (from *σπαρτον, sparton*, cordage; use of plant in early ages). D. C. leg. mem. v. prod. 2. p. 145.—Spartiánthus, Link. enum. 2. p. 223.—Genísta, spec. Lam. Mœnch.—Spártium, spec. Lin.

LIN. SYST. *Monadélphia, Decándria.* Calyx membranous, spathaceous, cleft above, 5-toothed at the apex, somewhat bilabiate. Corolla with a roundish, complicated vexillum, and an acuminated keel, and the petals a little agglutinated, but partable. Stamens monadelphous. Legume compressed, many-seeded, glandless.—A smooth shrub, with twiggy terete branches, and a few lanceolate leaves. Flowers large, distant, yellow, disposed in terminal racemes.

1 S. JU'NCEUM (Lin. spec. 995.). ♄. H. Native of the South of Europe, in rugged dry places. Duham. arbr. ed. nov. 2. t. 22. Sims, bot. mag. 85. Genísta júncea, Lam. G. odoràta, Mœnch. Spartiánthus júnceus, Link. Flowers sweet-scented; sometimes the plant is to be found with double flowers in gardens. Bees are very fond of the flowers, and the same qualities which are attributed to the common broom belong also to this, although in an inferior degree. In Languedoc they make thread of it, and it is there used as a green food for sheep.

Rush or Spanish Broom. Fl. July, Sept. Clt. 1548. Shrub 6 to 10 feet.

Cult. Spanish Broom is a very ornamental plant when in bloom, and therefore well fitted for shrubberies. It is usually increased by seeds, which ripen in abundance; young cuttings will root if planted under a hand-glass.

LIX. GENI'STA (from *gen*, Celtic, signifying a small bush). Lam. dict. 2. p. 616. ill. t. 619. D. C. leg. mem. VI. prod. 2. p. 145.). Genísta et Spártium, spec. Lin.

LIN. SYST. *Monadélphia, Decándria.* Calyx bilabiate, upper lip bipartite, lower one tridentate, or 5-lobed, the 3 lower lobes nearly joined to the apex. Vexillum oblong-oval (f. 29. *a.*). Carina oblong, straight (f. 29. *b.*), not always containing the genitals. Stamens monadelphous (f. 29. *c.*). Legume compressed, rarely rather turgid (f. 29. *d.*), many-seeded, rarely few-seeded, glandless. Shrubs with yellow flowers.

* *Unarmed. Leaves all, or for the most part, trifoliate.*

1 G. PARVIFLO'RA (D. C. prod. 2. p. 145.) leaves trifoliate, on very short petioles; leaflets linear-lanceolate, glabrous, usually

deciduous; racemes terminal, elongated; legumes compressed, 1-3-seeded, rather pubescent from small adpressed down, erectly spreading. ♄. H. Native of the Levant, near the Gulph of Mundania. Spártium parviflòrum, Vent. hort. cels. t. 87. Flowers yellow.

Small-flowered Genista. Fl. May, Aug. Clt. 1817. Shrub 2 to 6 feet.

2 G. CLAVA'TA (Poir. suppl. 2. p. 717.) leaves trifoliate; leaflets linear-lanceolate, silky beneath; flowers terminal, capitate; legume compressed, 1-2-seeded, attenuated at the base. ♄. H. Native of Mogodor. Spártium sericeum, Vent. hort. cels. t. 17. but not of Ait. Flowers yellow, larger than those of the preceding species. Perhaps a species of *Cýtisus*.

Clavate-calyxed Genista. Fl. May, Aug. Clt. 1812. Sh. 2 to 4 feet.

3 G. CANARIE'NSIS (Lin. spec. 997.) lower leaves on short petioles, upper ones sessile, trifoliate, and are as well as the branches and calyxes clothed with pubescence; leaflets obovate-oblong; branches angular; heads of flowers terminal; legume clothed with white villi. ♄. F. Native of the Canary Islands and Spain. Ker. bot. reg. 217.—Comm. hort. amst. 2. t. 52.—Pluk. t. 277. f. 6. Spártium álbicans, Cav. ann. 1801. p. 64. Cýtisus paniculàtus, Lois. in Duham. ed. nov. et Cýtisus ramosíssimus, Poir. suppl. 2. p. 440. does not appear to differ from this species.

Canary Island Genista. Fl. April, Sept. Clt. 1656. Shrub 6 to 10 feet.

4 G. MÓLLIS (D. C. prod. 2. p. 145.) leaves on short petioles, trifoliate, and are as well as the calyxes, branches, and legumes clothed with soft villi; flowers axillary, crowded. ♄. H. Native of Mogodor. Spártium mólle, Cav. ann. 1801. p. 57.

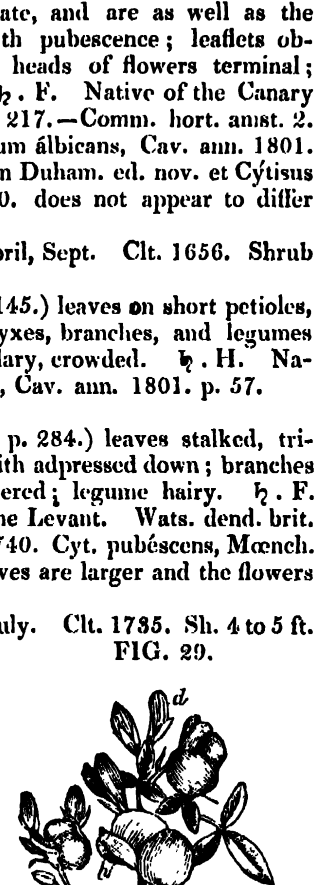
Soft Genista. Shrub.

5 G. CA'NDICANS (Lin. amœn. 4. p. 284.) leaves stalked, trifoliate; leaflets obovate, clothed with adpressed down; branches angular; heads terminal, few-flowered; legume hairy. ♄. F. Native of Mogodor, Italy, and the Levant. Wats. dend. brit. 80. Cýtisus cándicans, Lin. spec. 740. Cyt. pubéscens, Mœnch. Allied to *G. Canariénsis*, but the leaves are larger and the flowers scentless.

Whitened Genista. Fl. April, July. Clt. 1735. Sh. 4 to 5 ft.

6 G. PA'TENS (D. C. prod. 2. p. 145.) branches striated, twiggy, glabrous; leaves stalked, trifoliate; leaflets obovate, pubescent beneath; flowers in fours, pedicellate, nearly terminal; legume glabrous, 3-6-seeded. ♄. H. Native of Spain, on mountains near Albayda. Spártium pàtens, Cav. icon. 2. p. 58. t. 176. exclusive of the synonym. It differs from *Cýtisus pàtens* in the upper lip of the calyx being acutely bipartite, lower lip of 3 bristles, not with the lips nearly equal and entire.

FIG. 29.



Spreading Genista. Fl. April, July. Clt.? Shrub 4 to 8 feet.

7 G. LINIFÒLIA (Lin. spec. 405.) leaves sessile, trifoliate; leaflets linear, silky beneath, at length with the margins revolute; racemes terminal, crowded; legumes hairy; branches terete, furrowed. ♄. H. Native of the south of France, and of Spain, Canary Islands, north of Africa, and the Levant. Sims, bot. mag. 442. Spártium linifòlium, Desf. atl. 2. p. 134. t. 181. Cýtisus linifòlius, Lam. Genistoìdes linifòlia, Mœnch.

Flax-leaved Genista. Fl. Jan. Ju. Clt. 1739. Sh. 3 to 6 ft.

8 G. BIFLO'RA (D. C. prod. 2. p. 146.) leaves trifoliate, on short petioles; leaflets glabrous, linear, rather cuneiform; flowers terminal, usually twin; legume glabrous; branches angular. ♄. F. Native of the north of Africa, near Tlemsen. Spártium biflòrum, Desf. fl. atl. 2. p. 133. t. 179.

Two-flowered Genista. Shrub 1 to 3 feet.

9 G. TRIQUE'TRA (Ait. hort. kew. 3. p. 14. Lher. stirp. 183.) leaves trifoliate, the upper ones simple; leaflets ovate-lanceolate, villous; racemes terminal, short; branches triquetrous, decumbent, young ones villous. ♄. H. Native of Corsica. Curt. bot. mag. 314. G. tríquetra, Lam.?

Triquetrous-stemmed Genista. Fl. May, June. Clt. 1770. Shrub 2 to 4 feet.

10 G. BRACTEOLA'TA (Link, enum 2. p. 224.) leaves trifoliate; leaflets obovate; racemes short; branches striated, and are as well as the leaves pubescent. ♄. H. The native country of this plant as well as the legume are unknown. Calyx hairy.

Bracteolate Genista. Fl. Mar. May. Clt. 1823. Sh. 2 to 4 ft.

11 G. MICROPHY'LLA (D. C. prod. 2. p. 146.) leaves trifoliate, on short stalks; leaflets oblong-linear, and are as well as the terete branches covered with hoary-silky pubescence; flowers few, almost terminal. ♄. F. Native of the Grand Canary Island, on mountains about Ayacata. Spártium microphýllum, Cav. ann. 1801. p. 63. Legume unknown.

Small-leaved Genista. Shrub 1 to 3 feet.

12 G. SESSILIFO'LIA (D. C. leg. mem. VI.) leaflets 3, rising from the same dot on the branches, linear-subulate, silky, sometimes solitary; spike terminal, elongated, loose-flowered; corolla silky; legume ovate, acuminated, pubescent, 1-2-seeded. ♄. H. Native of Galatia, on hills. Flowers nearly like those of *G. pilòsa*, but the vexillum is shorter than the carina. Habit of *G. virgàta*, but the leaves are trifoliate.

Sessile-leaved Genista. Shrub 1 to 2 feet.

13 G. UMBELLA'TA (Poir. suppl. 2. p. 715.) leaves trifoliate, on short stalks; leaflets linear-lanceolate, rather silky; flowers in terminal, aggregate heads; calyx clothed with silky hairs; corolla and legume silky. ♄. H. Native of Barbary, on arid hills near Arzeau. Spártium umbellàtum, Desf. atl. 2. p. 133. t. 180. Lher. stirp. 183. Branches glabrous. Spártium umbellàtum, Lois. fl. gall. which is said to be from Corsica. The plant which is a native of Barbary is perhaps distinct from that from Corsica.

Var. β, *capitàtum* (D. C. prod. 2. p. 146.) branches and leaves clothed with silky villi. ♄. H. Native of Mogodor. Spártium capitàtum, Cav. annal. 1801. p. 63.

Umbellate-flowered Genista. Fl. April, June. Clt. 1799. Shrub 1 to 2 feet.

14 G. RADIA'TA (Scop. carn. no. 871.) leaves trifoliate, nearly sessile, opposite; leaflets linear, rather silky; branches angular, crowded, glabrous; heads 2-4-flowered, terminal; corolla and legumes silky. ♄. H. Native of Italy, Carniola, and Vallais. Spártium radiàtum, Lin. spec. 996. Mill. icon. t. 249. f. 1. Sims, bot. mag. 2260. G. Ilvénsis, Dalech. Legume oval, short, compressed, 2-seeded, mucronate by the style. Old branches rather spinescent.

Rayed Genista. Fl. June, July. Clt. 1758. Sh. 1 to 3 ft.

15 G. CASPARRI'NA (Guss. ex Schlect. Linnæa 4. p. 38. under *Spártium*) a beautiful shrub with slender branches, the lower leaves ternate and the upper ones simple. ♄. H. Like *G. radiàtum*.

Casparrine Genista. Shrub.

* * *Spinosæ. Leaves all or some of them trifoliate.*

16 G. HO'RRIDA (D. C. fl. fr. 4. p. 500.) leaves trifoliate, stalked, opposite; leaflets linear, complicated, rather silky; branches angular, spiny, crowded, opposite; flowers almost terminal, few; calyx pubescent. ♄. H. Native of the Pyrenees

and Arragon. Spártium hórridum, Vahl. symb. 1. p. 51. exclusive of the synonym. G. erinàcea, Gilib. bot. prat. 2. p. 239. with a figure.

Horrid Genista. Fl. May, July. Clt. 1821. Sh. 2 to 4 ft.

17 G. Lusita'nica (Lin. spec. 999. exclusive of the synonymes of Clus. and J. Bauh.) leaves trifoliate, on short stalks, opposite; leaflets linear, complicated, rather silky; branches spiny, terete, at length striated; flowers terminal, few; calyx very hairy. ♄. H. Native of Portugal. Lam. dict. 2. p. 622. exclusive of the synonymes. Andr. bot. rep. 419.

Portugal Genista. Fl. March, May. Clt. 1771. Sh. 2 to 4 ft.

18 G. acanthóclada (D. C. leg. mem. vi.) leaves trifoliate, nearly sessile; leaflets linear, complicated, rather silky; branches spinose, stiff, terete, at length striated; flowers almost opposite, disposed along the branches in a kind of interrupted spike; calyx pubescent. ♄. H. Native of the Levant, in exposed places in the island of Melos. D'Urv. enum. p. 85. Branches usually opposite, floriferous ones also spiny. Flowers silky. Ovary silky. Vexillum replicate laterally.

Spiny-branched Genista. Shrub 2 to 3 feet.

19 G. ephedroìdes (D. C. leg. mem. vi. t. 36.) leaves few, sessile, trifoliate, and simple; leaflets linear, smoothish; branches spinescent, stiff, terete, at length striated; flowers alternate, spicate; calyx rather pubescent. ♄. H. Native of Sardinia, on the sea shore. A smooth shrub, like *Ephèdra distàchya*. Corolla rather silky. Vexillum shorter than the keel. Legume compressed, ovate, acute, 1-seeded, clothed with silky-pubescence.

Ephedra-like Genista. Shrub 2 to 3 feet.

20 G. Lobe'lii (D. C. fl. fr. 4. p. 499.) leaves few, lower ones sessile, trifoliate, the rest nearly all sessile, scattered, linear-oblong, rather silky; branches crowded, spiny, striated, and rather tuberculated; flowers few, solitary, pedicellate, disposed along the branches in a kind of raceme; calyx pubescent. ♄. H. Native of Corsica and Provence, in arid places. A dwarf subshrub. Legumes 2-3-seeded, hardly pubescent.—Lob. adv. p. 409.—Chabr. sciag. p. 86. f. 1. Spártium erinaceoìdes, Lois. fl. gall. p. 441.

Lobel's Genista. Shrub 1 to 2 feet.

21 G. parvifòlia; hairy; leaves alternate, trifoliate, upper ones simple; leaflets oblong-linear, acute, complicated, smooth above, lower ones obovate; branches crowded, spiny, alternate, younger ones furrowed; flowers racemose. ♄. H. Native of Sardinia. G. microphýlla, Moris, elench. p. 13. Legume 4-5-seeded, linear, villous.

Small-leaved Genista. Fl. June, July. Shrub 1 to 2 feet.

22 G. Salzma'nni (D. C. leg. mem. vi.) leaves sessile, trifoliate or simple, oblong, obtuse, clothed with adpressed pubescence; branches at length striated, loose, spiny; flowers somewhat racemose along the branches, twin, pedicellate, clothed with adpressed silky-pubescence; the 3 lower lobes of the calyx about equal in length to the upper ones, and narrower. ♄. H. Native of Corsica, on rocks near Corfe. G. umbellàta, Salzm.

Salzmann's Genista. Shrub 2 to 3 feet.

23 G. aspalathoìdes (Lam. dict. 2. p. 620.) leaves few, lower ones sessile, trifoliate, the rest nearly all simple, scattered, linear-oblong, rather silky; branches loose, somewhat recurved, spiny, terete, at length striated; flowers twin, subracemose along the branches, pedicellate, clothed with adpressed silky pubescence; calyx trifid, the 3 lower lobes concrete into a tridentate lip. ♄. H. Native of Barbary, on rocks near Bonne. Spártium aspalathoìdes, Desf. atl. 2. p. 136.

Aspalathus-like Genista. Shrub 2 to 3 feet.

24 G. fe'rox (Poir. suppl. 2. p. 708.) leaves trifoliate, or for the most part simple, oblong, smoothish; branches striated, spinescent at the apex; flowers racemose; calyx rather pubescent; corolla smooth. ♄. H. Native of Barbary, on mountains near Lacalle. Spártium heterophýllum, Lher. stirp. 183. Spártium fèrox, Desf. atl. 2. p. 136. t. 182. Legume linear, 8-10-seeded. Seeds rather torulose, clothed with adpressed pubescence.

Fierce Genista. Fl. Ju. July. Clt. 1800. Sh. 3 to 4 feet.

25 G. Cupa'ni (Guss. cat. 1821. p. 77.) leaves sessile, trifoliate, hairy; leaflets linear-lanceolate; branches spiny; racemes terminal, few-flowered; calyx rather hairy; corolla smooth; legume 1-seeded, rather pilose. ♄. H. Native of the Nebrodes, on arid mountains. Acàcia triphýlla, &c. Cup. panph. sic. ed. 1. vol. 2. t. 233.

Cupani's Genista. Shrub 2 to 3 feet.

26 G. triaca'nthos (Brot. phyt. 130. t. 54. fl. lus. 2. p. 89.) leaves sessile, trifoliate, and simple, glabrous; leaflets linear-lanceolate; branches spiny; spines branched; racemes terminal, few-flowered; calyx, corolla, and 1-seeded legume glabrous. ♄. H. Native of Portugal, on mountains and in woods about Coimbra, and elsewhere in Beira. G. rostràta, Poir. suppl. 2. p. 719. Spines simple, trifid or branched.

Var. β, interrúpta (D. C. prod. 2. p. 147.) leaflets linear; branches usually simple and shorter. ♄. H. Native about Tangiers. Spártium interrúptum, Cav. anal. 1801. vol. 4. p. 58.

Three-spined Genista. Fl. May, July. Shrub 2 to 3 feet.

27 G. infe'sta; branches striated, spiny; leaves ternate; leaflets obovate, silky beneath; legumes compressed, and are, as well as the bracteas, covered with adpressed silky pili. ♄. H. Native of Calabria, in bushy places by the sea side. Spártium inféstum, Gussone, pl. rar. p. 290.

Troublesome Genista. Fl. May. Shrub 2 to 3 feet.

28 G. cuspidòsa (D. C. prod. 2. p. 147.) leaves trifoliate and simple; leaflets ovate, oval or lanceolate; branches spiny, terete, divaricate, young ones rather leafy; flowers alternate. ♄. G. Native of the Cape of Good Hope. Spártium cuspidàtum, Burch. cat. no. 1696. voy. 1. p. 348. A much-branched stiff shrub. Legume oblong, membranous, few-seeded.

Cuspidate Genista. Shrub 2 to 3 feet.

* * * *Spinose. Leaves all simple.*

29 G. hirsu'ta (Vahl. symb. 1. p. 51.) leaves lanceolate, and are, as well as the branches, hairy; spines trifid, striated; spikes terminal, hairy; corolla pilose, having the carina twice the length of the keel; legume pubescent, 1-seeded. ♄. H. Native of Spain and Portugal.

Var. β, cuspidàta (D. C. prod. 2. p. 148.) spines much elongated. ♄. H. Native of the north of Africa. Spártium cuspidàtum, Cav. anal. 1801. p. 56.

Var. γ, orientàlis (D. C. prod. 2. p. 148.) spines hardly longer than the leaves, trifid or simple. ♄. H. Native of the Levant, near Tschesme.

Hairy Genista. Shrub.

30 G. Algarvie'nsis (Brot. fl. lus. 2. p. 89.) leaves lanceolate; spines simple, solitary; flowers terminal, subcapitate; bracteas hairy. ♄. H. Native of Algarves. G. hirsùta var. δ Algarviénsis, D. C. prod. 2. p. 148. Calyx and corolla yellow.

Algarves Genista. Shrub 2 to 4 feet.

31 G. tricuspida'ta (Desf. atl. 2. p. 138. t. 183.) leaves lanceolate, and are, as well as the branches, hairy or glabrous; spines somewhat tetragonal, stiff, for the most part trifid; racemes spike-formed, terminal; calyx rather hairy; corolla glabrous; keel twice the length of the vexillum and wings. ♄. H. Native of Algiers, on hills. Spártium tricuspidàtum, Cav. l. c.

Tricuspidate-leaved Genista. Shrub 1 to 3 feet.

32 G. Gibralta'rica (D. C. prod. 2. p. 148.) leaves linear-lanceolate, glabrous, as well as the branches, calyxes, and corollas; branches decumbent, flexible; spines trifid and simple,

usually leafy; racemes terminal, somewhat spicate; carina longer than the vexillum and wings. ♄. H. Native on the rocks of Gibraltar, about St. Roque. This plant differs from *G. tricuspidàta* in the habit being looser, and in the calycine lobes being very acute and spiny.

Gibraltar Genista. Shrub decumbent.

33 G. trídens (Cav. anal. scienc. nat. 1801. 4. p. 59.) leaves lanceolate-oblong, glabrous; spines trifid, stiff; racemes terminal; calyxes and corollas glabrous; keel a little longer than the wings. ♄. F. Native of the north of Africa, about Tangiers. Leaves become concave when drying.

Trident-spined Genista. Shrub 2 feet.

34 G. sylve'stris (Scop. carn. no. 875.) leaves linear-lanceolate, glabrous above, but clothed with adpressed villi beneath; spines axillary, branched, slender; raceme spicate, terminal; flowers glabrous; calycine teeth rather spiny; carina longer than the vexillum and wings. ♄. H. Native of Carniola and of Croatia on hills. G. Hispánica, Jacq. icon. rar. t. 557.

Wood Genista. Fl. Ju. July. Clt. 1818. Sh. 1 to 2 feet.

35 G. Ægyptìaca (Spreng. nov. prov. 20.) leaves linear-lanceolate, ending in a spiny mucrone; spines branched; stem furrowed, beset with spreading hairs; racemes secund; corollas smooth. ♄. F. Native of Egypt. This species comes very near *G. sylvéstris*, but differs in having spreading hairs, not adpressed ones, and therefore referable to *G. Hispánica*.

Egyptian Genista. Shrub 1 to 2 feet.

36 G. falca'ta (Brot. phyt. 133. t. 55. fl. lus. 2. p. 89.) leaves ovate-lanceolate, upper and cauline ones roundish, having the margins, middle nerve, and branchlets rather villous; spines stiff, and for the most part trifid; racemes few-flowered; carina longer than the vexillum and wings; flowers glabrous; legumes falcate, many-seeded. ♄. H. Native of Portugal, in Biera and Estramadura.

Falcate-legumed Genista. Shrub 2 to 3 feet.

37 G. Córsica (D. C. fl. fr. suppl. p. 548.) plant quite smooth; leaves linear-lanceolate; stipulas rather spinescent; spines simple, rigid; flowers axillary, solitary, pedicellate; carina length of the glabrous vexillum; legume 4-8-seeded, quite smooth. ♄. H. Native of Corsica, about Bastia, Bonifacio, &c. Spártium Córsicum, Lois. fl. gall. p. 440.

Var. β, *pubéscens* (D. C. prod. 2. p. 148.) branches and young leaves clothed with adpressed pubescence. ♄. H. Native of Corsica, near Calvi.

Corsican Genista. Shrub 2 to 3 feet.

38 G. scórpius (D. C. fl. fr. 4. p. 498.) leaves very few, oblong, rather silky; spines branched, spreading, striated, smooth; flowers in fascicles, somewhat racemose, on short pedicels, glabrous; carina length of vexillum; legume 2-4-seeded. ♄. H. Native of Spain, in arid places, and south of France, as well as Barbary. Wats. dent. brit. 78. Shrub very thorny, and when in an adult state almost leafless. Spártium scórpius, Lin. spec. 995. G. spiniflòra, Lam. dict. 2. p. 621.—Clus. hist. 1. p. 106. f. 1.

Scorpion Genista. Fl. March, Ap. Clt. 1570. Sh. 2 to 3 ft.

39 G. Hispa'nica (Lin. spec. 999.) leaves lanceolate, villous; spines branched, stiff; floriferous branches unarmed; racemes terminal, somewhat capitate; carina villous, length of the vexillum, which is smooth; legume oval, 2-4-seeded, rather hispid, when mature rather smoothish. ♄. H. Native of Spain and south of France. Cav. icon. 3. t. 211. Lam. ill. t. 619. f. 3. Spines in the old branches beneath the leafy branchlets.

Spanish Genista. Fl. June, July. Clt. 1759. Sh. ½ to 1 ft.

40 G. A'nglica (Lin. spec. 999.) smooth; leaves ovate-lanceolate; spines simple; floriferous branches unarmed; racemes few-flowered, terminal; carina longer than the wings and vexillum; legume ovate-cylindrical, many-seeded. ♄. H. Native of Europe, in France, Denmark, &c. In Britain on moist, boggy, heathy commons. Smith, engl. bot. 132. G. minor, Lam. fl. fr. 2. p. 615.—Lob. icon. 2. p. 93. f. 2. Root woody, long, and creeping.

English Genista or Petty Whin. Fl. May, June. Britain. Shrub 1 to 2 feet.

41 G. Germa'nica (Lin. spec. 995.) leaves lanceolate, rather hairy; spines simple or branched; floriferous branches unarmed; racemes terminal; flowers rather villous; carina longer than the vexillum and wings; legume ovate, hairy, 2-4-seeded. ♄. H. Native of Europe, in woods, and on heaths. Scórpius spinòsus, Mœnch. meth. 134. Voglèra spinòsa, fl. Wett. 2. p. 500.—Fuchs. hist. 220. icon.

Var. β, *inérmis* (D. C. prod. 2. p. 149.) spines almost wanting.

German Genista. Fl. July, Aug. Clt. 1773. Sh. 2 to 3 feet.

* * * * *Unarmed. Leaves all simple.*

42 G. pu'rgans (Lin. spec. 999.) erect, much branched; branches terete, striated; leaves very few, lanceolate, almost sessile, rather silky; flowers axillary, solitary, on short pedicels; petals about equal in length, glabrous; young legumes clothed with adpressed pubescence. ♄. H. Native of France, on hills, especially in the Cevennes. Bull. herb. 115. Spártium púrgans, Lin. syst. 474. Perhaps nearly allied to *Cýtisus nubígenus*. The seeds are cathartic.

Purging Genista. Fl. Ju. July. Clt. 1768. Sh. 3 to 6 feet.

43 G. ramosíssima (Poir. suppl. 2. p. 715.) much branched, erect; branches striated, tuberculated; leaves few, lanceolate, villous; flowers nearly sessile along the branches, crowded; petals silky, about equal in length. ♄. H. Native of Mount Atlas, near Tlemsen. Spártium ramosíssimum, Desf. fl. atl. 2. p. 132. t. 178. Fruit unknown.

Much-branched Genista. Shrub 2 to 4 feet.

44 G. cine'rea (D. C. fl. fr. 4. p. 494.) erect, much branched; branches striated; leaves lanceolate, clothed with adpressed pubescence; flowers almost sessile along the branches, solitary; petals silky, about equal in length; legume clothed with adpressed villi, 4-6-seeded. ♄. H. Native on arid hills and mountains, from Arragon to Nice, in the limits of olives. Spártium cinèreum, Vill. prosp. 40. G. scopària, Vill. dauph. 3. p. 420. exclusive of synonymes. G. flòrida, Asso, ar. 94.

Cinereous Genista. Fl. Ju. July. Shrub 2 to 6 feet.

45 G. virga'ta (D. C. prod. 2. p. 149.) branches twiggy, terete, striated; leaves oblong-lanceolate, rather silky; flowers disposed in something like racemes; petals silky, about equal in length; legume villous, 1-3-seeded, compressed, rather torose between the seeds. ♄. F. Native of Madeira. Spártium virgàtum, Ait. hort. kew. 3. p. 11. Cýtisus tèner, Jacq. icon. rar. t. 147. G. gràcilis, Poir. suppl. 2. p. 715.

Twiggy Genista. Fl. March, Jul. Clt. 1777. Shrub 3 to 4 ft.

46 G. conge'sta (D. C. prod. 2. p. 149.) branches terete, striated, much crowded; leaves lanceolate, silky; flowers terminal, racemose, on very short pedicels; vexillum glabrous; carina pubescent. ♄. G. Native of Teneriffe. Spártium congéstum, Willd. enum. 2. p. 744. Allied to *G. virgàta*.

Crowded-branched Genista. Fl. Ap. July. Sh. 2 to 4 feet.

47 G. stylòsa (Spreng. syst. 3. p. 176.) branches slender, angular, flexuous, and are, as well as the leaves, linear and smooth; flowers in terminal racemes; calyx bracteolate; style elongated, permanent. ♄. H. Native of Portugal. Génista bracteolàta, Willd. herb. Flowers yellow.

Long-styled Genista. Shrub 2 to 4 feet.

48 G. sericea (Wulf. in Jacq. coll. 2. p. 167.) decumbent; branches erect, terete; leaves linear-lanceolate, silky beneath; flowers 3-4, terminal, sub-racemose; petals silky, about equal in length; calycine lobes oblong, acuminated. ♄. H. Native

of Austria and Croatia, in subalpine places near the shore.—Jacq. icon. rar. 3. t. 556. Floral leaves about equal in length to the calyx.

Silky Genista. Fl. May, June. Clt. 1812. Sh. ½ foot.

49 G. HUMIFU'SA (Lin. spec. 908. Vill. dauph. 3. p. 421. t. 44.) procumbent; branches twisted, tubercled, as stiff as spines at the apex, hairy, as well as the leaves, which are linear-lanceolate; flowers axillary, solitary, nearly sessile; petals silky, about equal in length; calycine lobes ovate, acutish. ♄. H. Native of the Levant and of Dauphiny, near Gap.

Trailing Genista. Fl. May, June. Clt. 1819. Sh. trailing.

50 G. APHY'LLA (D. C. prod. 2. p. 149.) branched, erect; leaves very few, linear, very short; racemes terminal, elongated, dense-flowered; legumes compressed, 2-seeded, young ones tomentose, adult ones glabrous. ♄. H. Native of Siberia, in deserts about the Volga. Flowers violaceous. Spártium aphýllum, Lin. fil. suppl. 320. Pall. itin. ed. gall. append. no. 357. t. 99. f. 2. G. virgàta, Lam. dict. 2. p. 616.

Leafless Genista. Fl. June, July. Clt. 1800. Sh. 3 to 4 feet.

51 G. MONOSPE'RMA (Lam. dict. 2. p. 616.) branches erect; leaves very few, linear-oblong, clothed with adpressed pubescence; racemes lateral, few-flowered; petals silky, about equal in length; legume ovate, inflated, membranous, glabrous, 1-2-seeded. ♄. H. Native of Portugal, Spain, Barbary, and Egypt. Spártium monospérmum, Lin. spec. 995. Curt. bot. mag. 683.—Clus. hist. 1. p. 103. G. Ræ'tam, Forsk. Flowers white. Branches slender, twiggy, flexile. The use of this shrub along the shores of Spain is very great in stopping the sand. It converts the most barren spot into a fine odoriferous garden by its flowers, which continue a long time. The leaves and young branches are delicious food for goats. The twigs are used for tying bundles. Forskœl found the plant in Arabia, and Desfontains in Barbary. The Spaniards call it *Rætamas* from its Arabian name *Rætam*.

One-seeded Genista. Fl. Ju. July. Clt. 1670. Sh. 2 to 4 ft.

52 G. SPHÆROCA'RPA (Lam. dict. 2. p. 616.) twiggy branched; leaves few, linear, smoothish; racemes lateral, many-flowered; petals glabrous, equal in length; legume ovate, rather fleshy, 1-2-seeded. ♄. H. Native of the south of Europe and Barbary. Spártium sphærocárpon, Lin. mant. 571.—Clus. hist. 1. p. 102. f. 2. Flowers small, yellow.

Round-fruited Genista. Fl. June, July. Clt. 1731. Shrub 3 to 4 feet.

53 G. ÆTHNE'NSIS (D. C. prod. 2. p. 150.) erect, much branched; leaves few, linear, silky; racemes terminal; petals rather glabrous, about equal in length; legume obliquely ovate, compressed, 2-3-seeded, young ones pubescent. ♄. H. Native of Mount Etna, in the wooded region. Spártium Æthnénse, Biv. st. sic. mant. 2. Rafin. specch. 1. p. 17. Sims, bot. mag. 2674. Spártium trispérmum, Smith in Rees' cycl. vol. 32. no. 5. Flowers yellow, twice the size of those of *G. sphærocárpa*, but one-half smaller than those of *G. júncea*.

Mount *Etna* Genista. Fl. Ju. July. Clt. 1816. Sh. 2 to 4 ft.

54 G. MULTICAU'LIS (Lam. dict. 2. p. 617.) humble; branches erect, twiggy; leaves linear-oblong, rather glabrous, tapering into the petiole at the base; flowers solitary, on short pedicels; calyx clothed with adpressed silky pubescence; corolla glabrous. ♄. H. Native of the Balearic Islands.

Many-stemmed Genista. Shrub 1 to 2 feet.

55 G. TETRAGO'NA (Besser. enum. c[illegible]t. 2. p. 73. no. 887.) stem tetragonal, furrowed, decumbent; branches ascending; leaves nearly opposite, lanceolate, young ones and calyxes rather silky; flowers somewhat racemose; corolla glabrous. ♄. H. Native of the south of Podolia, in high fields at Tyra.

Tetragonal-branched Genista. Fl. June, July. Clt. 1822. Shrub decumbent.

56 G. TENUIFO'LIA (Lois. not. 169.) stems weak; branches terete, striated, erectish; leaves linear, 1-nerved, glabrous; flowers disposed in terminal racemes, and are as well as the legumes glabrous. ♄. H. Native of Piedmont. This species is nearly allied to *G. tinctòria* and *G. depréssa*, from which it is hardly distinct, unless in the flowers being smaller.

Fine-leaved Genista. Shrub 1 to 2 feet.

57 G. DEPRE'SSA (Bieb. fl. taur. suppl. p. 460.) stems decumbent; floriferous branches triquetrous, ascending; leaves lanceolate, acute, clothed with adpressed pili; flowers in the upper axils of the leaves on short pedicels, disposed in such a manner as to appear a leafy raceme; corolla glabrous. ♄. H. Native of Tauria, on mountains, and about Constantinople. Very like *G. mánticum*.

Depressed Genista. Shrub decumbent.

58 G. SCARIO'SA (Viv. ann. bot. 1. p. 2. p. 175. fragm. fl. ital. 1. p. 5. t. 8.) quite smooth; stem ascending; young branches triquetrous; leaves, lanceolate or the lower ones are obovate, with scarious margins; flowers racemose; corolla twice the length of the calyx. ♄. H. Native of Liguria, on hills from Genoa to Sarzana, and in the kingdom of Naples, ex. Tenore, fl. nap. 2. p. 127. G. Januénsis, Viv. cat. p. 10. Bert. pl. G. Genuénsis, Pers. ench. no. 5. Legume linear, 4-7-seeded, somewhat coarctate.

Scarious-margined-leaved Genista. Fl. June, Jul. Clt. 1821. Shrub ascendent.

59 G. ANXA'NTICA (Ten. fl. nap. prod. p. 41. fl. nap. 2. p. 127. t. 66.) quite smooth; stems diffuse; branches angular; leaves ovate-elliptic, rather coriaceous, veiny; flowers racemose; corolla 3-times longer than the calyx. ♄. H. Native of valleys of Naples, called Amsantica. Corolla 8 lines long. Legume 8-10-seeded. The name is called by the author *Anxántica* in his prod. fl. nap. p. 41. and *Amsánctica* in his fl. nap. text.

Anxantic Genista. Fl. June, July. Clt. 1818. Sh. diffuse.

60 G. TINCTO'RIA (Lin. spec. 998.) root creeping; stems erect; branches terete, striated, erect; leaves lanceolate, smoothish; flowers disposed in spicate racemes, and are as well as the legumes smooth. ♄. H. Native of Europe, frequent in fields and woods; in England in pastures, thickets, and dry borders of fields. Smith, engl. bot. 44. Fuchs. hist. 809. Genistoìdes tinctòria, Mœnch. 132. The *G. tinctòria* is called *Base-broom*, *Green-weed*, *Green-wood*, *Dyers'-weed*, and *Wood-waxen*. When cows feed on it their milk and the butter or cheese made from it are said to be very bitter. A bright yellow colour may be prepared from the flowers, and for wool that is to be dyed green with woad the dyers prefer it to all others. A drachm and a half of the powdered seeds operates as a mild purgative. A decoction of the plant is sometimes diuretic, and therefore has proved serviceable in dropsical cases, and a salt prepared from the ashes is recommended to be used in that disorder.

Var. β, *latifòlia* (D. C. fl. fr. suppl. 547.) leaves broad-lanceolate. ♄. H. Native of Auvergne on the Golden Mount.

Var. γ, *hirsùta* (D. C. prod. 2. p. 151.) leaves rather villous; branches erect.

Var. δ, *praténsis* (Poll. pl. ver. 19.) leaves oblong-lanceolate, rather hairy; branches ascending. ♄. H. Native of Italy, on the upper mountains.

Dyers' Broom or Green-weed. Fl. June, Aug. Brit. Sh. 1 to 2 feet.

61 G. SIBI'RICA (Lin. mant. 571.) stems erect; branches terete, striated, erect; leaves lanceolate, glabrous; flowers disposed in spicate racemes; spikes disposed in panicles, and are as well as the legumes smooth. ♄. H. Native of Siberia. Jacq. hort. vind. t. 190. Genistoìdes elàta, Mœnch. meth. 132. The plant is very like *G. tinctòria*, but altogether smooth, erect, more slender, and usually taller.

Siberian Genista. Fl. June, Aug. Clt. 1785. Sh. 2 to 6 ft.

62 G. POLYGALÆFO'LIA (D. C. prod. 2. p. 151.) stem erect, branches terete, striated, erect; leaves lanceolate, rather silky beneath, as well as the calyxes; racemes somewhat secund, disposed in panicles; corolla smooth. ♄. H. Native of the north of Portugal. G. polygalæphy̆lla, Brot. fl. lus. 2. p. 86. G. exaltàta, Link. G. tinctòria Lusitánica máxima, Tourn. inst. 643. Allied to *G. flórida*.

Milk-wort-leaved Genista. Fl. June, Aug. Clt. 1820. Shrub 2 to 4 feet.

63 G. PERREYMÓNDI (Lois. fl. gall. ex. bull. sci. aug. 1828. p. 425.) stems decumbent; branches terete, striated, rather erect; leaves lanceolate, smoothish; flowers racemose, terminal; legume clothed with canescent villi. ♄. H. Native of France. Like *G. tinctòria*. Flowers yellow.

Perreymond's Genista. Fl. July. Shrub 2 to 3 feet.

64 G. FLÓRIDA (Lin. spec. 998.) stem erect; branches striated, terete; leaves lanceolate, and are as well as the legumes clothed with adpressed silky down; branches secund; corolla glabrous. ♄. H. Native of Spain. Legume 2-4-seeded, somewhat irregularly coarctate.

Florid Genista. Fl. June, Aug. Clt. 1752. Sh. 2 to 4 ft.

65 G. PULCHE'LLA (Visiani, pl. dalm. ex. bot. zeit. jan. 1830. p. 51.) silky; stems diffuse, much branched; branches furrowed, young ones striped, tubercled at the buds, and rufescent at the apex; leaves simple, lanceolate, entire, small; flowers in crowded racemes, the pedicels all leaning to one side; wings smooth, shorter than the keel; legumes pendulous, 2-3-seeded. ♄. H. Native of Dalmatia. Like *G. Æthnénsis* and *G. flórida*, but more silky.

Neat Genista. Shrub diffuse.

66 G. MA'NTICA (Poll. fl. ver. 2. p. 458. t. 4. f. 7.) stems numerous, prostrate, angularly striated, hairy-pubescent; leaves linear-lanceolate, pubescently-hairy; peduncles axillary, shorter than the leaves; corolla glabrous; legume clothed with silky villi. ♄. H. Native of Italy, in woods near Mantua. Spreng. pug. 2. p. 73. Horn. hort. hafn. suppl. p. 151. Allied to *G. ovàta* and *G. tinctòria*, of which last it is probably a variety.

Mantua Genista. Fl. June, Aug. Clt. 1816. Sh. prostrate.

67 G. OVA'TA (Waldst. et Kit. pl. hung. 1. t. 84.) stems numerous, hairy, erectish, somewhat herbaceous, striated, terete; leaves ovate, or ovate-oblong, and are as well as the legumes hairy; racemes short; corolla smooth. ♄. H. Native of Sclavonia and Hungary, and on the hills of Italy, from Piedmont to Naples. G. ovàta, Balb. Bert. Sav. Ten. G. nervàta, Kit. in litt. 1815. is hardly distinct.

Ovate-leaved Genista. Fl. June, Aug. Clt. 1816. Shrub 2 to 4 feet.

68 G. PA'TULA (Bieb. fl. taur. 2. p. 148.) much branched, quite smooth; branches terete, striated, panicled, spreading; leaves linear-lanceolate, acuminated; flowers and legumes glabroùs. ♄. H. Native of Tauria, on hills at the river Cyrus, near Tiflis. This species is nearly allied to *G. tinctòria*, but the flowers are one-half smaller.

Spreading Genista. Fl. Ju. Aug. Clt. 1818. Sh. 2 to 4 ft.

69 G. TRIANGULA'RIS (Willd. spec. 3. p. 939.) smooth; branches triquetrous, and are as well as the stems ascending; leaves lanceolate, mucronate; flowers axillary; legume compressed, mucronate. ♄. H. Native of Hungary, on calcareous rocks. G. triquetra, Waldst. et Kit. hung. 2. p. 165. t. 153. but not of Aiton. Legume glabrous.

Triangular-stemmed Genista. Fl. May, June. Clt. 1815. Shrub ascending, 1 foot.

70 G. SAGITTA'LIS (Lin. spec. 998.) stems prostrate; branches herbaceous, ascending, 2-edged, membranous, somewhat articulated; leaves ovate-lanceolate; flowers disposed in an ovate, terminal, leafless spike; corolla smooth, but the keel is furnished with a villous line on the back. ♄. H. Native of Europe, in mountain pastures. Mill. icon. t. 259. f. 2. Jacq. fl. austr. t. 209. G. herbàcea, Lam. fl. fr. Genistélla racemòsa, Mœnch. meth. Saltzwedèlia sagittàlis, fl. wett. 2. p. 498.

Var. β, minor (D. C. prod. 2. p. 151.) a small shrub, having the branches clothed with adpressed pubescence at the apex as well as the leaves.

Arrow-jointed Broom. Fl. May, June. Clt. 1750. Shrub prostrate, ½ foot.

71 G. TRIDENTA'TA (Lin. spec. 998.) branches shrubby, triquetrous, membranous, somewhat articulated; leaves ovate, tridentate at the apex, glabrous; flowers disposed into crowded, terminal and lateral heads; carina and legumes clothed with silky wool. ♄. H. Native of Portugal, on uncultivated hills and among bushes. Brot. fl. lus. 2. p. 86. Wings of stem rather undulated, with the margins roughly denticulated.

Tridentate-leaved Genista. Shrub 1 foot.

72 G. DIFFU'SA (Willd. spec. 3. p. 942.) branches procumbent from the neck, triquetrous; leaves lanceolate, glabrous, a little ciliated; peduncles axillary, erect, disposed in interrupted fascicles; corollas and legumes glabrous. ♄. H. Native of Italy and Styria in exposed places. G. humifùsa, Wulf. in Jacq. coll. 2. p. 169. Spártium decúmbens, Jacq. icon. rar. 3. t. 555. but not of Aiton.

Diffuse Genista. Fl. May, June. Clt. 1815. Sh. procumb.

73 G. PROSTRA'TA (Lam. dict. 2. p. 618.) stems diffuse, prostrate; branches angular, striated, rather villous; leaves ovate-oblong, rather villous beneath; flowers axillary, on long pedicels, erect; corolla glabrous; legumes villous, 3-4-seeded. ♄. H. Native of Burgundy and the Alps of Jura. G. pedunculàta, Lher. stirp. 184. G. decúmbens, Dur. bourg. 1. p. 299. Lodd. bot. cab. 718. G. Hallèri, Reyn. mem. 1. p. 211. icon.

Prostrate Genista. Fl. May, June. Clt. 1775. Sh. prostr.

74 G. PROCU'MBENS (Waldst. et Kit. in Willd. spec. 3. p. 940.) branches procumbent, terete, striated, rather pubescent; leaves lanceolate, acute, pubescent beneath as well as the calyxes; flowers pedicellate, axillary, tern; corolla glabrous. ♄. H. Native of Hungary in woods, and of Moravia. Vexillum a little shorter than the keel. Legume unknown.

Procumbent Genista. Fl. June, Aug. Clt. 1816. Sh. proc.

75 G. A'LBIDA (Willd. spec. 3. p. 942.) stems procumbent, striated, branched; leaves lanceolate or linear, clothed with white villi; flowers axillary, sessile; calyx and corolla clothed with silky villi; legume tomentose. ♄. H. Native of Tauria and Bessarabia, on stony mountains. Bieb. fl. taur. 2. p. 149. 3. p. 459. Allied to *G. pilòsa*.

Whitened Genista. Shrub procumbent.

76 G. PILÒSA (Lin. spec. 999.) stems procumbent, striated, branched, tuberculated; leaves obovate-lanceolate, obtuse, complicated, clothed beneath with adpressed silky down; flowers axillary, on short pedicels; calyx and pedicels silky; legumes pubescent, 3-4-seeded. ♄. H. Native of the south of France, Switzerland, Germany, &c.; in Britain on dry elevated downs or heaths, on high sandy ground about Bury, Suffolk. About Tornham, on the north side of Bury, also on rocks near the Lizard Point, Cornwall. At the foot of Cader Idris, North Wales. Jacq. fl. austr. t. 208. Smith, engl. bot. 208. Fl. dan. 1225.—Clus. hist. 1. p. 103. f. 2. G. rèpens, Lam. fl. fr. Genistoìdes tuberculàta, Mœnch. meth.

Pilose Genista. Fl. May, June. England. Sh. procumbent.

77 G. MICRA'NTHA (Ort. dec. 6. p. 68. t. 10. f. 1.) stems procumbent, smooth, angular; leaves linear-lanceolate; flowers disposed in terminal spikes, distant; carina rather villous; legume 2-3-seeded. ♄. H. Native of Spain, in humid places in the wood called Corazo, near Silos.

Small-flowered Genista. Fl. May, June. Sh. procumbent.

78 G. **Brote`ri** (Poir. suppl. 2. p. 720.) stems erect; branches angular, twiggy, glabrous; leaves linear-lanceolate, smoothish on both surfaces; racemes short, terminal; bracteas, calyxes, corollas, and legumes glabrous; carina longer than the vexillum, and the vexillum longer than the wings. ♃. H. Native of the north of Portugal, in glens of mountains. G. parviflòra, Brot. fl. lus. 2. p. 87.

Brotero's Genista. Shrub 4 to 6 feet.

79 G. **piloca'rpa** (Link. enum. 2. p. 223.) erect; branches angular, pubescent; leaves lanceolate, clothed beneath with silky pubescence; flowers racemose, on short pedicels; legume pilose. ♄. H. Native of?

Pilose-fruited Genista. Fl. Ju. Jul. Clt. 1823. Sh. 2 to 3 ft.

† *Species not sufficiently known.*

80 G.? **heterophy'lla** (D. C. prod. 2. p. 152.) stems erect; branches angular, sterile ones villous; leaves simple, obovate, on short petioles, clothed with silky villi; flowers usually tern, axillary, pedunculate; calyxes campanulate, villous; legume silky. ♄. H. Native of the Pyrenees, at Monney. Cýtisus heterophýllus, Lapeyr. abr. 422.

Variable-leaved Genista. Shrub 2 to 4 feet.

81 G. **angula`ta** (Rafin. prec. dec. som. p. 37. under *Spártium,*) unarmed; branches pentagonal, glabrous; leaves simple and trifoliate, stalked; leaflets thin, oblong, mucronate, almost smooth; legume solitary, pedunculate, oblong, compressed, pubescent. ♄. H. Native of Maryland, in woods.

Angular-branched Genista. Shrub 2 to 3 feet.

82 G.? **desidera`ta** (D. C. prod. 2. p. 152.) branches unarmed, terete; leaves trifoliate, petiolate; leaflets linear-subulate, pungent at the apex, clothed with adpressed silky pubescence; flowers solitary, pedicellate; calyxes and many-seeded legumes pubescent. ♄. G. Native of Port Desideratum. Calyx, stamens, and legumes nearly like *Genísta,* but the corolla is unknown. Probably a distinct genus.

Port Desideratum Genista. Shrub.

83 G.? **sca'ndens** (Lour. coch. p. 428.) stem scandent; spines simple; leaves bipinnate. ♄. ◡. G. Native of Cochinchina, on the banks of rivers. Flowers very numerous, golden yellow. This plant should certainly be removed from *Genísta.* It is perhaps a species of *Cæsalpínia.*

Climbing Genista. Shrub cl.

Cult. All the species of this genus are very elegant when in flower. The hardy species are well fitted for the front of shrubberies, as they are generally of low growth; they are usually increased by seeds or layers. The greenhouse and frame kinds thrive well in a mixture of loam, peat, and sand, and young cuttings of them root readily if planted in a pot of sand, with a bell-glass placed over them, but the glasses must be taken off and wiped occasionally, otherwise the cuttings are apt to damp off.

LX. CY'TISUS (from *Cýthnus,* one of the Cyclades, some one of the species were first found there). D. C. fl. fr. 4. p. 501. Leg. mem. VI.—Cýtisus and Calycótome, Link.—Cýtisus and Spártium, species, Lin. and Lam. &c.

Lin. syst. *Monadélphia, Decándria.* Calyx bilabiate; upper lip usually entire, lower one somewhat tridentate. Vexillum ovate, large. Carina very obtuse, inclosing the genitals. Stamens monadelphous. Legume compressed, many-seeded, glandless.—Shrubs, with the habit of the *Genista,* with trifoliate leaves. Flowers of nearly all the species yellow. Leaves of all trifoliate.

Sect. I. Alburnoìdes (*alburnum,* the white inner sap of trees; in reference to the white flowers of the species). D. C. l. c. prod. 2. p. 153. Calyx campanulate. Legume 1-4-seeded, not dilated at the upper suture. Flowers white. Leaves very few. Branches unarmed.

1 C. **nubígenus** (Link, enum. 2. p. 240.) branches terete, striated; leaves very few, petiolate; leaflets lanceolate, pilose; flowers lateral, in fascicles; legumes many-seeded, glabrous. ♄. G. Native of Teneriffe, on the sides of the Peak. Spártium nubígenum, Ait. hort. kew. 3. p. 13. Spártium supranùbium, Lin. fil. suppl. 319. Cýtisus fragrans, Lam. dict. Flowers very sweet-scented. Habit of *Genísta púrgans.*

Cloud-born Cytisus. Fl. May, June. Clt. 1779. Sh. 6 ft.

2 C. **a'lbus** (Link. enum. 2. p. 241.) branches terete, twiggy; leaves simple and trifoliate, sessile; leaflets linear-oblong, silky; flowers in fascicles, disposed in long racemes; legume 2-seeded, very villous. ♄. H. Native of Portugal and the Levant. Genísta álba, Lam. dict. 2. p. 623. Spártium álbum, Desf. fl. atl. 2. p. 132. Spártium multiflòrum, Ait. hort. kew. 3. p. 11. Spártium dispérmum, Mœnch. meth. 130.

Portugal Broom or *White*-flowered Cytisus. Fl. May. Clt. 1752. Shrub 6 to 10 feet.

Sect. II. Labu'rnum (a name formed from the Alpine name of the tree *L'Aubours*). D. C. l. c. prod. 2. p. 153. Calyx campanulate. Legume many-seeded, not dilated at the upper suture. Flowers yellow. Branches unarmed, leafy.

3 C. **labu'rnum** (Lin. spec. 1041.) branches terete, whitish; leaves petiolate; leaflets ovate-lanceolate, pubescent beneath; racemes pendulous, simple; pedicels and calyxes clothed with adpressed pubescence; legume linear, many-seeded, clothed with adpressed pubescence. ♄. H. Native of Europe, frequent on the lower mountains. Jacq. aust. t. 306. Curt. bot. mag. 176. Duham. arbr. ed. nov. 5. t. 44. C. alpinus, Lam. fl. fr. 2. p. 621.—J. Bauh. hist. 1. p. 2. p. 361. icon. *Laburnum* is usually cultivated for ornament. The wood is hard, of a fine colour, and will polish very well; it approaches near to green ebony, and is called by the French ebony of the Alps, and is there used for many kinds of furniture; but in England there are few of the trees which have been suffered to stand long enough to arrive at any considerable size. Haller observes that *Laburnum* is very bitter, that the seeds are violently purgative and emetic. He also remarks that the Latin name *Laburnum* was evidently formed from the Alpine name *L'Aubours.* In German it is called *Bohnenbaum,* and in French *Cytise des Alpes, Aubours,* and *Faux Ebenier.* The seed of *Laburnum* is frequently sown in plantations infested with hares and rabbits, who will touch no other tree as long as a twig of *Laburnum* remains. Though eaten to the ground every season, it rises again in the spring, thus affording a constant supply for these animals, so as to save the other trees till of a size to resist their attacks. The tree grows best in light loam, or sandy soil.

Var. β, quercifòlia (Hortul.) leaflets sinuated.

Laburnum. Fl. May, June. Clt. 1596. Tree 20 feet.

4 C. **alpìnus** (Mill. dict. no. 2.) glabrous; branches terete; leaves petiolate; leaflets ovate-lanceolate, rounded at the base; racemes pendulous; pedicels and calyxes puberulous; legumes glabrous, few-seeded, marginate. ♄. H. Native of Carinthia, in groves (Hoppe), in Pannonia (Willd.). In the Alps of Jura on Mount Dole and near Moret, also in the Apennines and on Mount Cenis. Waldst. et Kit. hung. 3. p. 288. t. 260. C. labúrnum β, Ait. Lam. D. C. fl. fr. Cýtisus angustifòlius, Mœnch. meth. 145. This species is nearly allied to the preceding, but is still truly distinct. The tree or *Scotch Labúrnum,* or *Cýtisus alpìnus,* is a native of Switzerland and Scotland; it is cultivated chiefly for ornament, but affords also a valuable timber; for this purpose the *C. alpìnus* is decidedly preferable to the common kind, as being more of a tree. The wood of both

the Scotch and common *Laburnum* is much used by cabinet-makers and turners, for its hardness, beauty of grain, and durability.

Alpine or Scotch Laburnum. Fl. June. Clt. 1596. Tree 15 to 20 feet.

5 C. NI'GRICANS (Lin. spec. 1041.) branches terete, twiggy; leaves stalked, clothed with adpressed pubescence beneath, as well as the branches, calyxes, and legumes; leaflets elliptic; racemes elongated, terminal, erect; calyxes bractless. ♄. H. Native of Piedmont, Vallais, and Bohemia, on hills and along way sides. Jacq. austr. t. 387. Ker. bot. reg. 802. Lam. ill. t. 618. f. 3. Dub. arb. ed. nov. 5. t. 46. f. 1. This plant turns truly black on drying.

Blackish Cytisus. Fl. Ju. July. Clt. 1730. Sh. 3 to 6 feet.

6 C. SESSILIFÒLIUS (Lin. spec. 1041.) plant quite smooth; branches terete; floral leaves almost sessile; leaflets ovate; racemes terminal, erect, short; calyxes each having a 3-leaved bractea just under it. ♄. H. Native of the south of France and Piedmont. Lam. ill. t. 618. f. 2. Duham. arb. ed. nov. 5. t. 45. f. 1. Curt. bot. mag. 255.—J. Bauh. hist. 1. p. 2. p. 374. f. 2.

Sessile-leaved Cytisus. Fl. May, June. Clt. 1629. Shrub 4 to 6 feet.

7 C. TRIFLÒRUS (Lher. stirp. 184. Desf. fl. atl. 2. p. 139. but not of Lam.) hairy; branches terete; leaves petiolate; leaflets obovate-elliptic; flowers axillary, pedicellate, terete, somewhat racemose at the tops of the branchlets. ♄. H. Native about Narbonne. In Provence, Liguria, Etruria, Sicily, and Mauritania. C. villòsus, Pourr. act. toul. 3. p. 317.—Clus. hist. 1. p. 94. f. 3. Branches rather hispid. Leaves villous. Legume hairy. It differs from *C. triflòra* of Lam. in the calyx being campanulate and broadly bilabiate, not tubular.

Three-flowered Cytisus. Fl. June, July. Clt. 1640. Shrub 3 to 4 feet.

8 C. MÓLLIS (Willd. enum. suppl. 51.) leaflets oblong, clothed with soft pubescence, acute at both ends; peduncles axillary, usually tern; calyxes subglobose, bifid, scarious. ♄. H. Native of? Perhaps sufficiently distinct from *C. triflòrus.*

Soft Cytisus. Fl. June, July. Clt. 1818. Shrub 2 to 4 ft.

9 C. PA'TENS (Lin. syst. veg. 555. ex Lher. stirp. 184.) branches striated, somewhat pubescent; leaves petiolate, trifoliate, but the upper ones are simple, and are as well as the leaflets obovate, and clothed with adpressed pubescence; flowers axillary, usually twin, pedicellate, nodding; legumes very hairy. ♄. H. Native of Portugal. C. pendulìnus, Lin. fil. suppl. 328. Genísta tomentòsa, Poir. suppl. 2. p. 719. Spártium pàtens, Lin. syst. 535. Brot. fl. lus. 2. p. 83. but not of Cav.

Spreading Cytisus. Fl. Ju. July. Clt. 1752. Sh. 4 to 6 ft.

10 C. ARBÒREUS (D. C. prod. 2. p. 154.) branches striated, glabrous; leaves stalked; leaflets obovate, clothed with fine pubescence beneath; flowers axillary, aggregate, pedicellate, nodding; legumes clothed with adpressed silky villi. ♄. H. Native of valleys about Algiers. Spártium arbòreum, Desf. atl. 2. p. 131. t. 177. Genísta péndulum, Poir. voy. 2. p. 208. A shrub 8 to 10 feet high, with a trunk about the thickness of a man's arm.

Arboreous Cytisus. Shrub 8 to 10 feet.

11 C. WELDE'NI (Visiani, pl. dalm. ex bot. zeit. jan. 1830. p. 52.) erect; leaves ternate, petiolate; leaflets elliptic, entire, cuneated at the base, and obtuse at the apex, smooth; racemes terminal, stalked, pyramidal, straight; pedicels hoary and villous; calyxes campanulate, 3-lobed; lobes tomentosely ciliated; corolla glabrous, but the carina is clothed with silky villi; legume glabrous, mucronate by the style. ♄. H. Native of Dalmatia, in woods on mounts Grab and Krivoscie. Flowers fragrant, yellow.

Welden's Cytisus. Shrub 2 to 4 feet.

12 C. GRANDIFLÒRUS (D. C. prod. 2. p. 154.) branches angular, usually glabrous; leaves in fascicles, petiolate, trifoliate, but for the most part simple, and are, as well as the leaflets, ovate-lanceolate, but the primary ones are roundish; flowers lateral, pedicellate, solitary or twin; legume woolly. ♄. H. Native of Portugal, on hills, in hedges, and in woods. Spártium grandiflòrum, Brot. fl. lus. 2. p. 80.

Great-flowered Cytisus. Fl. June, July. Clt. 1816. Shrub 3 to 4 feet.

13 C. SCOPA'RIUS (Link, enum. 2. p. 241.) branches angular, smooth; leaves trifoliate, petiolate, upper ones simple, and are oblong, as well as the leaflets; flowers axillary, pedicellate, solitary; legume pilose on the margins. ♄. H. Native of Europe, in woods and on commons; plentiful in Britain. Spártium scopàrium, Lin. spec. 996. Œd. fl. dan. t. 313. Smith, engl. bot. 1339. Genísta scopària, Lam. dict. 2. p. 623. but not of Vill. Gen. hirsùta, Mœnch. meth. 144.—Duham. arb. t. 84. The common broom is used in many parts of Britain for besoms, and in some places it serves for thatching cottages, corn, and hay ricks. The flower-buds before expansion are sometimes pickled in the manner of capers. The branches are said to be capable of tanning leather, and of being manufactured into coarse cloth, when tender they are mixed with hops in brewing, and in some places used as fodder. The old wood furnishes the cabinet-makers with the most beautiful material for vineering. The plant when burnt affords a most beautiful alkaline salt, and on this salt the efficacy of broom in dropsies must depend. The seeds of broom have a very bitter taste, and when given in decoction prove considerably diuretic. The branches have similar properties.

Var. β, álbus; flowers white.

Common-*Broom.* Fl. April, July. Britain. Sh. 3 to 10 ft.

SECT. III. CALYCÓTOME (from καλυξ, *calyx*, calyx, and τομη, *tome*, a cutting; in reference to the calyx at length falling off in part, giving it the appearance of being cut off). Link, in Schrad. neue, journ. 2. p. 2. p. 50. D. C. prod. 2. p. 154.—Calycótomon, Hoffmans. verz. plant. 1824. p. 166. Calyx campanulate, somewhat bilabiate, at length circumscisely truncate. Legume thickened on the upper suture. Shrubs, with spiny branches and yellow flowers.

14 C. SPINÒSUS (Lam. dict. 2. p. 247.) branches angular, spiny; leaves trifoliate; leaflets obovate-oblong; legumes quite glabrous. ♄. H. Native about Genoa, on hills in Corsica, and of Algiers. Spártium spinòsum, Lin. spec. 997.—J. Bauh. hist. 1. p. 2. p. 376. icon.—Lob. icon. 2. t. 95.

Spiny Cytisus. Fl. June, July. Clt. 1596. Sh. 5 to 6 feet.

15 C. LANI'GERUS (D. C. prod. 2. p. 154.) branches striated, spiny; leaves trifoliate; leaflets obovate-elliptic; legumes very hairy, and rather woolly. ♄. H. Native of Corsica, Crete, Mauritania, Gibraltar, Portugal, &c. on hills. Spártium lanígerum, Desf. atl. 2. p. 135. Sp. villòsum, Poir. voy. 2. p. 207. Calycótome villòsa, Link, l. c. Spártium spinòsum, Brot. fl. lus. 2. p. 85.

Var. β, rígidus (D. C. prod. 2. p. 154.) spines very strong. ♄. H. Native of the Great Syrtes. Spártium rígidum, Viv. fl. lib. p. 40. t. 17. f. 1.

Wool-bearing Cytisus. Fl. Ju. July. Clt. 1821. Sh. 3 to 6 ft.

SECT. IV. TUBOCY'TISUS (from *tubus*, a tube, and *cytisus;* in reference to the tubular shape of the calyx). D. C. l. c. prod. 2. p. 155.—Vibórgia,* Mœnch. meth. 132. but not of Thunb. Calyx tubular, bilabiate at the apex.—Unarmed shrubs.

* *Flowers white or whitish.*

16 C. PROLI'FERUS (Lin. fil. suppl. 328.) stems erect; branches terete, velvety; leaflets elliptic, and are, as well as the calyxes silky; flowers lateral, umbellately aggregate; legume villous.

♄. G. Native of Teneriffe, on the mountains. Ait. hort. kew. 3. p. 51. Lher. stirp. 184. Vent. cels. t. 13. Lodd. bot. cab. t. 761. Ker. bot. reg. 121. Flowers white.

Proliferous Cytisus. Fl. Ap. May. Clt. 1779. Sh. 2 to 4 ft.

17 C. LEUCA'NTHUS (Walds. et Kit. hung. 2. p. 141. t. 132.) stems erect; branches terete, and are, as well as the leaves, clothed with adpressed pubescence; leaflets elliptic, acute; flowers at the tops of the branches; heads of flowers bracteate, by two leaves. ♄. H. Native of Croatia, in woods. Willd. spec. 3. p. 1124. Sims, bot. mag. 1438. This species differs from *C. Austrìacus* in the flowers being white, not yellow.

Var. β, pállidus (Schrad. in litt.) flowers cream-coloured. ♄. H. An intermediate plant between *C. leucánthus* and *C. Austrìacus.*

White-flowered Cytisus. Fl. June, July. Clt. 1806. Shrub 3 to 4 feet.

18 C. A'LBIDUS (D. C. cat. hort. monsp. 101. no. 85.) stems erect; branches divaricate, terete, rather glabrous; leaflets oblong, pubescent beneath, as well as the calyxes; flowers axillary, usually tern, pedicellate; calyx with both lips entire. ♄. H. Native of the south of Europe and north of Africa. Flowers white. Ovary pubescent.

Whitish-flowered Cytisus. Fl. June, July. Shrub 2 to 4 ft.

* * *Flowers purple.*

19 C. PURPU'REUS (Scop. carn. no. 905. t. 43.) stems procumbent, twiggy; leaves, calyxes, and legumes glabrous; leaflets oblong; flowers axillary, solitary, on short pedicels. ♄. H. Native of Carniola and Croatia, in exposed places. Jacq. austr. append. t. 48. Lodd. bot. cab. 892. Sims, bot. mag. 1176. Flowers purple. This plant is very beautiful when in flower, but has a better effect when grafted on a rather tall laburnum.

Var. β, albiflòrus: flowers white.

Purple-flowered Cytisus. Fl. May, Aug. Clt. 1792. Shrub procumbent.

* * * *Flowers yellow.*

20 C. BIFLÒRUS (Lher. stirp. 184. Ait. hort. kew. 3. p. 52.) stems diffuse; branches terete, and are as well as the leaves rather pubescent; leaflets oblong-lanceolate; flowers on short peduncles, axillary, and usually twin; calyxes and legumes clothed with adpressed pubescence. ♄. H. Native of Austria, Pannonia, Podolia, Tauria, and Siberia. Walds. et Kit. hung. 2. p. 166. Duham. arb. ed. nov. 5. p. 45. f. 2. C. supìnus, Jacq. fl. austr. 1. t. 20. C. hirsùtus, Gmel. sib. 4. p. 17. t. 6. f. 2. C. hirsùtus and C. supìnus, Bieb. fl. taur. ex Stev. in litt. C. macrospérmus, Bess. in litt.

Var. β, glàber (Lin. fil. suppl. 325.) branches and leaves glabrous; leaflets obovate.

Var. γ, subspinéscens (D. C. prod. 2. p. 155.) branches rather hoary, more diffuse, somewhat spinescent at the apex. ♄. H. Native of Naples and Hungary.

Two-flowered Cytisus. Fl May, June. Shrub procumbent.

21 C. ELONGA'TUS (Waldst. et Kit. hung. 2. p. 200. t. 183.) stems erect; branches elongated, terete, young ones villous; leaflets obovate, clothed beneath with adpressed villi; flowers lateral, usually in fours on short pedicels; calyxes villous. ♄. H. Native of Hungary, in woods. Petioles of the upper leaves longer than the calyxes. Flowers few.

Elongated Cytisus. Fl. May, June. Clt. 1804. Sh. 3 to 4 ft.

22 C. MULTIFLÒRUS (Lindl. bot. reg. :. 1191.) stems erect; branches elongated, terete, younger ones villous; leaflets oblong, tapering to the base, villous beneath, the same colour on both surfaces; flowers usually tern; pedicels about equal in length to the petioles; vexillum emarginate, undulated. ♄. H. Native of Europe. C. elongàtus, Hortul, but not of Kit. C. elongàtus β, multiflòrus, D. C. prod.

Many-flowered Cytisus. Fl. May, June. Clt. 1800. Shrub 2 to 3 feet.

23 C. FALCA'TUS (Waldst. et Kit. hung. 3. p. 264. t. 238.) stems declinate; branches terete, twiggy, young ones, as well as the leaves clothed with adpressed villous pubescence; petioles hairy; flowers usually tern, lateral, on short peduncles; calyxes clothed with adpressed villi. ♄. H. Native of Croatia, Volhynia, Podolia, and Gallicia. Lodd. bot. cab. 520. The plant cultivated in the garden of Geneva differs from the wild plant in the flowers being almost sessile, and in the leaves being pubescent, not silky-villous.

Falcate Cytisus. Fl. Ju. Aug. Clt. 1816. Shrub 2 to 4 feet.

24 C. AUSTRI'ACUS (Lin. spec. 1042.) stems erect; branches twiggy, terete, and are, as well as the leaves, clothed with adpressed strigose pubescence; leaflets lanceolate, attenuated at both ends; flowers terminal, somewhat umbellate; calyxes and legumes sparingly villous. ♄. H. Native of Austria, upper Italy, the Ukraine, and Siberia, in woods and rough places. Mill. icon. 117. f. 2. Pall. itin. ed. gall. t. 100. f. 3. Jacq. austr. 1. t. 21.

Austrian Cytisus. Fl. Ju. Sept. Clt. 1741. Sh. 2 to 4 feet.

25 C. SUPI'NUS (Jacq. fl. austr. 1. t. 20.) stems decumbent, branched; branches terete, young ones rather hairy, adult ones smooth; leaflets obovate, obtuse, rather hairy beneath; flowers 2-4, usually terminal, pedunculate; calyxes and legumes sparingly villous. ♄. H. Native of Belgium, Austria, Pannonia, Siberia, Turkey, and Dauphiny, on exposed hills and in bushy places.—Clus. hist. p. 96. no. vii. icon. C. lotoìdes, Pourr. act. toul. 3. p. 318. Flowers pale-yellow, with the vexillum reddish.

Supine Cytisus. Fl. May, Aug. Clt. 1755. Sh. decumbent.

26 C. HIRSU'TUS (Lin. spec. 1042. Jacq. obs. 4. t. 96.) stems decumbent; branches twiggy, terete, young ones hispid, adult ones smooth; leaflets obovate, villous beneath; flowers lateral, on very short pedicels, aggregate; calyxes and legumes hairy. ♄. H. Native from Genoa to Hungary, in rugged places. C. supìnus, Bertol. pl. gen. but not of Linnæus. C. triflòrus, Lam. dict. 2. p. 250.—Clus. hist. 95. no. 4.

Hairy Cytisus. Fl. June, Aug. Clt. 1739. Sh. decumbent.

27 C. SERÒTINUS (Kit. in litt.) stems ascending; branches terete, hairy; leaflets obovate, glabrous above, rather villous beneath; flowers axillary, 2-3, pedicellate; calyxes hairy. ♄. H. Native of Hungary. This plant is sufficiently distinct from the two preceding.

Late-flowering Cytisus. Shrub 2 to 3 feet.

28 C. CAPITA'TUS (Jacq. fl. austr. t. 33.) stems erect; branches straight, hispid; leaflets ovate-elliptic, villous; flowers numerous, capitate at the tops of the branches; calyxes and legumes covered with hispid villi. ♄. H. Native of Burgundy, Italy, and Austria, on the edges of woods. Lodd. bot. cab. 497. C. supìnus, Lin. spec. 1040. C. hirsùtus, Lam. dict. 2. p. 250. Flowers sometimes lateral in the autumn.

Capitate-flowered Cytisus. Fl. June, July. Clt. 1774. Sh. 2 to 4 feet.

29 C. CILIA'TUS (Wahlenb. fl. carp. 219.) stems erect; young branches hispid, adult ones glabrous; leaflets obovate, clothed beneath with adpressed villi; flowers approximate, tern, at length lateral; legumes glabrous, ciliated. ♄. H. Native of the Carpathian mountains, on the plains of Litowa.

Ciliated-podded Cytisus. Fl. June, July. Clt. 1817. Shrub 2 to 4 feet.

30 C. POLY'TRICHUS (Bieb. fl. taur. suppl. 477.) stems declinate; branches hispid; leaflets obovate-elliptic, and are, as well as the calyxes, villous; flowers lateral, usually twin, pedicellate; legumes hairy. ♄. H. Native of southern Tauria, on the higher mountains in pine forests. This species is more hairy

than *C. capitàtus*, and the disposition of the flowers is that of *C. hirsùtus*, and the habit that of *C. supìnus*.

Many-haired Cytisus. Fl. Ju. July. Clt. 1818. Sh. 2 to 3 ft.

Sect. V. Lotoìdes (from λοτος, *lotos*, lotus, and ιδεα, form; resemblance to the genus *Lotus*). D. C. l. c. prod. 2. p. 156. Tube of calyx short, obconical, the upper lip bipartite, the lower one tridentate. Corolla hardly longer than the calyx. Many-stemmed decumbent subshrubs. Flowers few, somewhat capitate, of all yellow.

31 C. Arge'nteus (Lin. spec. 1043.) stems decumbent; leaves, calyxes, corollas, and legumes clothed with adpressed silky down; leaves petiolate, trifoliate; leaflets oblong-lanceolate; flowers 3-4, terminal. ♄. H. Native of Portugal, Spain, south of France, Italy, Carniola, and Mauritania, in rugged places. Desf. atl. 2. p. 139. Lòtus argénteus, Brot. fl. lus. 2. p. 119.—Lob. icon. 2. p. 41. f. 2.

Silvery Cytisus. Fl. Aug. Clt. 1739. Shrub decumbent.

32 C. Pygmæ'us (Willd. spec. 3. p. 1127.) stems decumbent, suffruticose; leaves petiolate, trifoliate; leaflets oblong-lanceolate, silky; flowers usually terminal; legumes oblong, villous. ♄. H. Native of Galatia.

Pygmy Cytisus. Fl. June, July. Shrub decumbent.

33 C. Calyci'nus (Bieb. fl. taur. 2. p. 166.) stems ascending; leaves, calyxes, and legumes rather hairy from spreading down; leaves petiolate, trifoliate; leaflets roundish-obovate; flowers 2-8, terminal. ♄. H. Native of Caucasus, in stony places. C. pauciflòrus, Willd. spec. 3. p. 1126.

Large-*calyxed* Cytisus. Fl. Aug. Clt. 1820. Sh. prostrate.

34 C. Lotoi'des (Willd. spec. 3. p. 1127.) stems decumbent, herbaceous, simple, and are, as well as the leaves, pubescent; leaves petiolate, trifoliate; leaflets roundish-elliptic, mucronate; flowers 7-8, capitate. ♃. H. Native of Galatia.

Lotus-like Cytisus. Shrub decumbent.

35 C. Na'nus (Willd. enum. 769.) stems erect; leaves trifoliate, obovate, clothed with strigose pubescence beneath and smooth above; raceme terminal, secund, usually 4-flowered; calyx deeply 3-parted; hairs on the stems and peduncles adpressed. Wats. dend. brit. 81. ♄. H. Native of the Levant.

Dwarf Cytisus. Fl. May, June. Clt. 1816. Sh. decumbent.

Sect. VI. Chrona'nthus (χρονος, *chronos*, a year, and ανθος, *anthos*, a flower; in reference to the permanent petals, which remain all the year). D. C. l. c. prod. 2. p. 157. Upper lip of calyx bifid, lower one trifid; lobes acute, length of the tube. Petals permanent. Legume oval, much compressed, 2-seeded. Perhaps a proper genus.

36 C. Orienta'lis (Lois. in Duham. arbr. ed. nov. p. 136.) stems erect, hairy; leaves almost sessile, trifoliate, villous; leaflets linear, acute; flowers sub-terminal, few, and are, as well as the legumes, glabrous. ♄. H. Native of the Levant. C. orientàlis, &c. Sherard and Vaill. herb. Flowers large, on short pedicels, yellow. Calyx villous, more 5-cleft than bilabiate.

Oriental Cytisus. Fl. Ju. July. Clt. 1818. Sh. 2 to 3 feet.

† *Species not sufficiently known.*

37 C. Po'nticus (Willd. spec. 3. p. 1120. exclusive of the synonyme of Tourn.) branches furrowed, ascending, and are, as well as the leaves, pubescent; leaves trifoliate; leaflets elliptic, obtuse; branches erect, terminal; calyxes villous. ♄. H. Native of Pontus. According to Willd. this plant is allied to *Adenocàrpus Hispánicus*. C. Pónticus humifusus magno flore, Tourn. cor. 44. According to Willd. the branches are terete, not sulcated, and the leaflets obovate, not elliptic.

Pontic Cytisus. Shrub ascending.

38 C. Cane'scens (Lois. in Duham. arbr. ed. nov. 5. p. 151.) the whole plant is clothed with silky hoary pubescence; leaves trifoliate; leaflets linear-oblong; racemes few-flowered, terminal; calyxes short, campanulate, canescent, 5-toothed. ♄. H. Native of? Legumes unknown.

Canescent Cytisus. Shrub.

39 C. Africa'nus (Lois. in Duham. arbr. ed. nov. 5. p. 154.) branches erect, hairy; leaves trifoliate, petiolate; leaflets linear, pilose; umbels terminal, pedunculate; calyx hairy, hardly shorter than the corolla. ♄. H. Native of the north of Africa. C. Africànus hirsùtus angustifòlius, Tourn. inst. 648. This plant is said to be allied to *Adenocárpus*.

African Cytisus. Shrub.

40 C. Pa'llidus (Poir. suppl. 2. p. 442. but not of Schrad.) branches furrowed, glabrous; leaves sessile, trifoliate; leaflets oblong-lanceolate; flowers axillary and terminal, somewhat capitate. ♄. G. Native of the Canary Islands. Corolla pale-white. Perhaps a variety of *Genísta linifòlia*.

Pale-flowered Cytisus. Shrub 2 to 3 feet.

41 C. Proce'rus (Link, enum. 2. p. 241.) branches terete, striated; leaves lanceolate, pilose; flowers solitary, axillary; legumes villous. ♄. H. Native of Portugal. Spártium procérum, Willd. enum. 742.

Tall Cytisus. Shrub 6 to 8 feet.

42 C.? Pe'rsicus (Burm. fl. ind. p. 163. t. 51. f. 1.) branches straight, divaricate, and are as well as the leaves finely pubescent; leaves petiolate, trifoliate; leaflets linear, the middle one twice the length of the others; racemes elongated, loose-flowered, opposite the leaves; ovary villous. ♄. H. Native of Persia. Spártium Pérsicum, Willd. spec. 3. p. 931. Habit almost of *Indigófera psoraleoìdes*, and if the stamens, as is suspected, are diadelphous, it is certainly referable to *Indigófera*.

Persian Cytisus. Shrub 3 to 4 feet.

43 C. Antilla'nus (D. C. prod. 2. p. 157.) spines under the origin of the leaves, shorter than the petioles; leaves trifoliate; leaflets rhomboidal-oblong, silvery beneath; flowers axillary, solitary, on short pedicels. ♄. S. Native of the Caribbee Islands. C. spinòsus, Descourt, fl. med. ant. 1. t. 8. but not of Linnæus. C. spinòsus, with yellow flowers rising from the wings. Plum. gen. p. 19. ex Desc. Calyx campanulate, bilabiate. Legume an inch long, somewhat inflated, 5-6-seeded. Stamens, according to the description, diadelphous, but from the figure monadelphous.

Antilles Cytisus. Shrub.

Cult. The species of this genus are very elegant when in flower, the hardy kinds are well adapted for ornamenting shrubberies, the trailing kinds of them are well fitted for rock-work, or to be planted on dry banks; the *C. purpùreus* is one of the handsomest of this description, and has a very beautiful appearance when grafted on a tall *Laburnum*. The larger kinds, such as the *Laburnum*, should be planted in conspicuous places. All are readily increased by seeds or layers, or by grafting the rarer on the commoner kinds. The greenhouse and frame kinds thrive best in a mixture of loam, peat, and sand, and young cuttings of them root freely if planted in a pot of sand, with a bell-glass placed over them, the glasses to be taken off and wiped occasionally.

LXI. ADENOCA'RPUS (from αδην, *aden*, a gland, and καρπος, *karpos*, a fruit; in reference to the legumes being beset with pedicellate glands). D. C. fl. fr. suppl. 549. Leg. mem. VI. prod. 2. p. 158.

Lin. syst. *Monadélphia, Decándria.* Calyx obconical, usually beset with glands, bilabiate, upper lip bipartite, lower one longer and trifid. Carina obtuse, inclosing the genitals. Stamens monadelphous. Legume oblong, compressed, bearing on all sides pedicellate glands.—Shrubs with divaricate branches, trifoliate, usually aggregate leaves, having petiolar stipulas, complicated leaflets and terminal racemes of yellow flowers, with the pedicels bracteate.

1 A. HISPA'NICUS (D. C. l. c.) calyx beset with glands and villi; lower lip of calyx with 3 equal segments, hardly longer than the upper lip; branchlets hairy; flowers crowded; vexillum smoothish. ♄. H. Native of Spain and Portugal, in shady humid places. Cýtisus Hispánicus, Lam. dict. 2. p. 248. Cýtisus anagýrius, Lher. stirp. 184.

Spanish Adenocarpus. Fl. June, Jul. Clt. 1816. Sh. 2 to 4 ft.

2 A. INTERME'DIUS (D. C. l. c.) calyx beset with glandular pubescence, with the lower lip trifid, the lateral segments shorter than the middle one, and much exceeding the upper lip; branches rather villous; flowers remotish; vexillum smoothish. ♄. H. Native of Sicily and Naples, on mountains.—Clus. hist. 1. p. 94. f. 1. Cýtisus complicàtus, Brot. fl. lus. 2. p. 92.

Intermediate Cytisus. Fl. May, July. Clt.? Sh. 3 to 4 feet.

3 A. PARVIFÒLIUS (D. C. l. c.) calyx clothed with glandular pubescence, with the middle segment of the lower lip longer than the lateral ones, much exceeding the upper lip; branches glabrous; flowers remote; vexillum pubescent. ♄. H. Native of the west of France, on exposed heaths. Cýtisus parvifòlius, Lam. dict. 2. p. 248. exclusive of the synonymes. Cýtisus divaricàtus, Lher. stirp. 184. Cyt. complicàtus, D. C. fl. fr. no. 3821. Spártium complicàtum, Lois. fl. gall. 441. Branches white.

Small-leaved Adenocarpus. Fl. May, July. Clt. 1800. Sh. 3 to 4 feet.

4 A. TELONE'NSIS (D. C. l. c.) calyx clothed with glandless pubescence, the segments of the lower lip about equal in length, a little longer than the superior lip; branchlets smoothish; flowers remote; vexillum pubescent. ♄. H. Native of the Pyrenees, Cevennes, mountains of Provence and Rome. Cýtisus Telonénsis, Lois. fl. gall. 446. and in Duh. arb. ed. nov. 5. p. 155. t. 47. f. 2. Spártium complicàtum, Gouan. hort. monsp. 356. exclusive of the synonyme.

Telone Adenocarpus. Fl. Ju. Jul. Clt. 1800. Sh. 2 to 4 ft.

5 A. FRANKENIOI'DES (Choisy. mss. in herb. D. C. prod. 2. p. 158.) calyx beset with glandular pubescence, with the lower lip having the middle segment longer than the lateral ones, and exceeding the lower lip; branches velvety; leaves much crowded, hairy; flowers crowded; vexillum pubescent at the apex. ♄. F. Native of Teneriffe, on the declivities of the Peak, at the height of 5000 feet, where it is called *Codeso*. Genìsta viscòsa, Willd. spec. 3. p. 837. It is usually confused with the following species, but differs in the calyx being glandular, as *A. parvifòlius* differs from *A. Telonénsis*.

Frankenia-like Adenocarpus. Fl. April, July. Clt. 1815. Shrub 1 to 3 feet.

6 A. FOLIOLÒSUS (D. C. l. c.) calyx covered with glandless villi, with the lower lip elongated and trifid at the apex, the segments equal; leaves and branches much crowded, hairy; vexillum pubescent. ♄. F. Native of the Grand Canary Island, among bushes, and in the woods of Laguna. Cýtisus foliòsus, Ait. hort. kew. 3. p. 49.—Pluk. alm. t. 277. f. 6. bad. Young legume furnished with a few glandular hairs, adult ones almost smooth.

Leafy Adenocarpus. Fl. May, Ju. Clt. 1629. Sh. 4 to 6 ft.

Cult. Elegant plants when in flower, and well fitted for ornamenting the front of shrubberies. Their culture and propagation is the same as that for the hardy species of *Cýtisus*. The two last species require protection in winter.

LXII. ONO'NIS (said to be from ονος, *onos*, an ass, and ονημι, *onemi*, to delight; some of the species are said to be grateful to asses). Lin. gen. no. 863. Lam. ill. t. 616. D. C. prod. 2. p. 158.—Anònis and Nàtrix, Mœnch. meth. 157. and 158.

LIN. SYST. *Monadélphia, Decándria.* Calyx campanulate, 5-cleft, with linear segments. Vexillum large, striated. Stamens monadelphous, the tenth one sometimes almost free. Legume usually turgid, sessile, few-seeded.—Herbs or subshrubs, with trifoliate leaves, seldom simple, but more rarely imparipinnate. Flowers rising from the axils of the leaves, sometimes pedunculate, sometimes sessile, yellow or purple, rarely white. Pedicels usually furnished with an awn, a floral leaf, or abortive petiole.

SECT. I. EUONÒNIS (ευ, *eu*, good, and *ononis*; genuine species. D. C. prod. 2. p. 158.). Stipulas adnate to the petiole.

§ 1. *Nàtrix* (the name of a plant which smells like a goat). *Leaves simple or trifoliate. Flowers axillary, pedunculate, yellow.*

1 O. CRÌSPA (Lin. spec. 1010. exclusive of the synonyme of Magn.) shrubby; leaves trifoliate; leaflets roundish, undulated, toothed, clothed with clammy pubescence; pedicels 1-flowered, awnless. ♄. F. Native of Spain. Wendl. in Rœm. arch. 1. p. 3. p. 106. Stipulas spreadingly-deflexed. Vexillum striped with blood-colour on the outside.

Curled-leaved Rest-harrow. Fl. June, Aug. Clt. 1739. Sh. 1 to 2 feet.

2 O. HISPA'NICA (Lin. fil. suppl. 324.) shrubby; leaves trifoliate; leaflets channelled, recurved, with the margin serrated; pedicels 1-2-flowered, furnished each with an awn. ♄. F. Native of Spain, along the Mediterranean Sea, in the sand. Sims, bot. mag. 2450. exclusive of the synonyme of Tenore.—Barr. icon. t. 775. Perhaps a variety of *O. críspa*.

Spanish Rest-harrow. Fl. May, Sept. Clt. 1799. Sh. 1 to 2 ft.

3 O. VAGINA'LIS (Vahl. symb. 1. p. 53.) shrubby; leaves crowded, sessile, trifoliate, but the upper ones are simple; stipulas sheathing; leaflets obovate, serrated; pedicels elongated, 1-flowered, permanent, each furnished with an awn. ♄. F. Native of Egypt. Vent. hort. cels. t. 32. Viv. fl. lyb. 41. t. 4. f. 4. O. Cherlèri, Forsk. descr. 130. Leaves, branches, peduncles, and calyxes clothed with clammy pubescence.

Sheathed Rest-harrow. Fl. Ju. Aug. Clt. 1815. Sh. 1 to 2 ft.

4 O. NA'TRIX (D. C. fl. fr. 4. p. 514.) shrubby; clothed with clammy pubescence; leaves trifoliate; leaflets oblong, serrated at the apex, upper ones sometimes simple; stipulas oval-lanceolate; pedicels 1-flowered, each furnished with an awn. ♄. H. Native of Europe, in places exposed to the sun.

Var. α; vexillum yellow. O. nàtrix, Lin. spec. 1008. Cam. epit. 444. with a figure. Mill. icon. t. 37. Sims, bot. mag. 329. Nàtrix pínguis, Mœnch. meth. 158.

Var. β; vexillum striated with red. O. pínguis, Lin. spec. 1009.

Goat-root Rest-harrow. Fl. June, Aug. Clt. 1683. Shrub 1 to 2 feet.

5 O. ARACHNOÌDEA (Lapeyr. abr. 409.) shrubby, villous, but not clammy; leaves pinnately trifoliate; leaflets oval-oblong, serrated at the apex, upper ones sometimes simple; pedicels 1-flowered, each furnished with an awn. ♄. F. Native of the Pyrenees, on the eastern side along the torrents. D. C. fl. fr. suppl. 552. Vexillum striated with red. Branches beset with soft hairs.

Cobwebbed Rest-harrow. Shrub 1 to 2 feet.

6 O. CUSPIDA'TA (Desf. atl. 2. p. 144.) herbaceous, villous, but not clammy; leaves trifoliate, but the upper ones are simple; leaflets elliptic, serrated; pedicels 1-flowered, each furnished with an awn, the awns broadest above. ♃. ? F. Native of Algiers. Like *O. nàtrix*, but the villi is longer and not clammy, and the corolla is not half the size.

Cuspidate Rest-harrow. Fl. May, Sept. Clt. 1818. Sh. 1 to 2 feet.

7 O. PÍCTA (Desf. fl. atl. 2. p. 144.) herbaceous, clothed with clammy villi; leaves trifoliate; leaflets elliptic, serrated; pedicels 1-flowered, each furnished with an awn, shorter than the leaves; corolla hardly higher than the calyx. ♃. F. Native of Barbary, near Mascar. Vexillum painted with purple lines.

Painted Rest-harrow. Fl. May, June. Clt. 1820. Pl. 1 ft.

8 O. LONGIFÒLIA (Willd. enum. 750.) shrubby, clothed with clammy pubescence; leaves trifoliate; leaflets linear-lanceolate, serrated at the apex; stipulas setaceous, linear; pedicels 1-flowered, each furnished with an awn. ♄. F. Native of Teneriffe and on the mountains in the Grand Canary Island.

Long-leaved Rest-harrow. Fl. June, Aug. Clt. 1816. Sh. 1 to 2 feet.

9 O. FALCA'TA (Viv. fl. lyb. 41. t. 18. f. 3.) erect, hairy; stipulas falcate, sheathing at the base; leaves all trifoliate; leaflets almost linear, toothed at the apex; pedicels 1-flowered, each furnished with a very short awn, longer than the leaves. ♄.? F. Native of Cyrenaica.

Falcate-stipuled Rest-harrow. Fl. Ju. Aug. Sh. 1 to 2 ft.

10 O. RAMOSI'SSIMA (Desf. fl. atl. 2. p. 142. t. 186.) plant suffruticose, much branched, clothed with clammy pubescence; leaves trifoliate; leaflets linear-obovate, serrated; pedicels 1-flowered, longer than the leaves, each furnished with a long awn. ♄. F. Native of Barbary, Sicily, and Nice, in the sand by the sea side. D. C. fl. fr. 4. p. 515. Vexillum striated with purple veins.

Much-branched Rest-harrow. Fl. June, Aug. Clt. 1819. Shrub ½ to 1 foot.

11 O. ARENA'RIA (D. C. cat. hort. monsp. 128. fl. fr. suppl. p. 551.) plant suffruticose at the base, much branched, clothed with clammy pubescence; leaves trifoliate; leaflets linear-obovate, serrated; pedicels 1-flowered, shorter than the leaves, hardly awned. ♄. H. Native of Montpelier, in the sand by the sea side. Anònis spinis carens lutea minor, Magn. bot. 21. Vexillum yellow, but not striated. Perhaps sufficiently distinct from the preceding.

Sand Rest-harrow. Fl. Ju. July. Clt. 1819. Sh. ½ to 1 foot.

12 O. BIFLO'RA (Desf. atl. 2. p. 143.) herbaceous? downy; leaves trifoliate; leaflets oblong, serrated; peduncles 2-flowered, nodding, each furnished with an awn, longer than the petioles. ⊙. H. Native of Barbary. Corolla yellow, painted with longitudinal lines.

Two-flowered Rest-harrow. Fl. Ju. July. Clt. 1818. Pl. 1 ft.

13 O. VESTI'TA (Viv. fl. lyb. p. 40. t. 18. f. 1.) herbaceous, flexuous, erectish, beset with glandular hairs; stipulas lanceolate, sheathing, striated with nerves; leaves trifoliate, upper ones simple; leaflets ovate, serrated; pedicels 1-flowered, awnless. ⊙. H. Native of Lybia, in the great Syrtis.

Clothed Rest-harrow. Pl. ½ foot.

14 O. VISCO'SA (Lin. spec. 1009. var. α.) herbaceous, pubescent, clammy; superior leaves simple, lower leaves trifoliate, middle leaflet largest; stipulas about equal in length to the petioles; peduncles 1-flowered, each furnished with an awn, longer than the leaves; corolla longer than the calycine lobes. ⊙. H. Native of the south of France, Spain, and Portugal.—Barr. icon. t. 1239. Awn of pedicel shorter than the calyx.

Clammy Rest-harrow. Fl. Ju. July. Clt. 1759. Pl. ½ to 1 ft.

15 O. BRACHYCA'RPA (D. C. prod. 2. p. 160.) herbaceous, pilose, rather clammy; superior leaves simple, inferior ones trifoliate; middle leaflet largest; stipulas about equal in length to the petioles; peduncles 1-flowered, each furnished with an awn, longer than the leaves, permanent; corolla and legume length of calyx. ⊙. H. Native of Spain, near Aranjuez, as well as about Madrid.

Short-podded Rest-harrow. Fl. June, July. Clt. 1823. Pl. ½ foot.

16 O. BREVIFLO'RA (D. C. prod. 2. p. 160.) herbaceous, pilose, rather clammy, upper leaves simple, lower ones trifoliate; leaflets elliptic, obtuse, serrated, middle one largest; stipulas serrated, about equal in length to the petiole; peduncles 1-flowered, each furnished with an awn, length of leaves; corolla shorter than the calycine lobes. ⊙. H. Native of Italy, Sicily, and Spain, and perhaps of the south of France. O. viscòsa β, Lin. D. C. fl. fr. 5. p. 515. Awn of pedicel about equal in length to the calyx. Legume twice the length of the calyx. Perhaps only a variety of the preceding.

Short-flowered Rest-harrow. Fl. Ju. July. Clt. 1800. Pl. ½ ft.

17 O. SI'CULA (Guss. cat. 1821. p. 78.) herbaceous, diffuse, clammy, pubescent; upper leaves simple, the rest trifoliate; leaflets linear-oblong, acute, serrated at the apex; stipulas nearly entire, about equal in length to the petiole; peduncles 1-flowered, each furnished with an awn; corolla shorter than the calyx; legumes shorter than the calyx, pendulous. ⊙. H. Native of Sicily, on the Volcanic rocks near Palagonia. Stipulas lanceolate, acuminated. Flowers yellow, reclinate. Stamens 7-18.

Sicilian Rest-harrow. Fl. Ju. July. Clt. 1817. Pl. 1 foot.

18 O. CINTRA'NA (Brot. phyt. 138. t. 57.) herbaceous, pubescent; upper leaves simple, lower ones trifoliate; leaflets oval-oblong or lanceolate, serrated; stipulas serrated, equal in length to the petioles; peduncles 1-flowered, awnless. ⊙. H. Native of Portugal, on the lower region of the Cintra mountains.

Cintra Rest-harrow. Pl. 1 foot.

19 O. PUBE'SCENS (Lin. mant. 267.) herbaceous, erect, clammy, pubescent; upper leaves simple, the rest trifoliate; leaflets oval-oblong, serrated; stipulas large, acuminated, entire; calyxes broad, striated; peduncles 1-flowered, awnless, shorter than the leaves. ⊙. H. Native of Portugal, Spain, Mauritania, and the islands of the Archipelago. D. C. fl. fr. suppl. p. 551. O. arthropòdia, Brot. phyt. 140. t. 58. O. Morisòni, Gouan. herb. 47. O. calycìna, Lam. dict. 1. p. 506. Vexillum somewhat pubescent. Legume 2-seeded; shorter than the calyx, according to Brotero, but a little longer than the calyx, and containing 4 or 6 seeds in the specimen collected in Sicily contained in the herbarum of Moricand.

Pubescent Rest-harrow. Fl. Ju. Aug. Clt. 1680. Pl. 1 to 1½ ft.

20 O. POLYMO'RPHA (Guss. pl. rar. p. 291.) plant clothed with clammy pubescence; lower leaves ternate, superior ones simple; leaflets elliptic-oblong, serrulated from the middle to the apex; peduncles 1-flowered, mutic or awned, at length exceeding the leaves; calyx nerved, equal in length to the corolla; legume pendulous, 4-6-seeded, mucronate by the reflexed style, rather longer than the calyx. ⊙. H. Native of Calabria. Flowers yellow.

Polymorphous Rest-harrow. Fl. April, May. Pl. ½ foot.

21 O. CALYCI'NA (Viv. fl. lyb. 41. t. 18. f. 3. but not of Lam.) herbaceous, erect, clothed with glandular hairs; lower leaves trifoliate, upper ones simple; leaflets obovate-cuneated, and are, as well as the stipulas, serrate-toothed; pedicels 1-flowered, awnless, shorter than the leaves; calyx equal in length to the corolla. ⊙. H. Native of the north of Africa, on the sea shore.

Large-*calyxed* Rest-harrow. Fl. July, Aug. Pl. ½ foot.

22 O. ORNITHOPODIOI'DES (Lin. spec. 1009.) herbaceous, clothed with clammy pubescence; leaves trifoliate; leaflets oblong, serrated; peduncles 1-2-flowered, each furnished with an awn; legume linear, drooping, contracted between the seeds. ⊙. H. Native of Spain, Italy, Sicily, and Mauritania. Cav. icon. 2. t. 192. Cup. panph. sic. ed. bon. t. 20. the outmost figure.

Bird's-foot-like Rest-harrow. Fl. July, Aug. Clt. 1713. Pl. ½ foot.

§ 2. *Natrídium* (from *Nàtrix* and *idea*, formed; the plants have the habit of the last division). *D. C. prod. 2. p.* 161. *Leaves simple and trifoliate. Flowers axillary, pedunculate, purplish, rarely white.*

23 O. ROTUNDIFO`LIA (Lin. spec. ed. 1. p. 719. but not ed. 2.) shrubby; leaves trifoliate; leaflets obovate-roundish, toothed; peduncles 3-flowered, bractless. ♄. H. Native of the Pyrenees and the Alps of Europe. Jacq. fl. austr. append. t. 49. Lam. ill. t. 616. Curt. bot. mag. 335.—Lob. icon. 2. p. 73. f. 1. O. latifòlia, Asso, syn. 97. mant. t. 11. f. 1. Nàtrix rotundifòlia, Mœnch.

Var. β, aristàta (D. C. prod. 2. p. 161.) peduncles 3-flowered, each furnished with an awn.

Round-leaved Rest-harrow. Fl. May, Sept. Clt. 1570. Sh. 2 to 3 feet.

24 O. TRIBRACTEA`TA (D. C. fl. fr. suppl. 553.) shrubby; leaves trifoliate; leaflets ovate, toothed; peduncles usually 3-flowered; calyx bracteated with 3 leaves. ♄. H. Native of Carinthia. O. rotundifòlia of Lin. spec. ed. 2. p. 1050. exclusive of the synonymes.

Three-bracteated-calyxed Rest-harrow. Fl. May, July. Clt. 1800. Shrub 1 to 2 feet.

25 O. FRUTICO`SA (Lin. spec. 1010.) shrubby; leaves trifoliate; leaflets sessile, lanceolate, serrated; stipulas connate into one, having 4 awns, leafless on the upper part; peduncles 3-flowered, disposed in a raceme. ♄. F. Native of Provence and Dauphiny, on the Alps. Duh. ed. nov. 1. t. 58. Mill. dict. t. 36. Sims, bot. mag. 317.

Var. β, microphýlla (D. C. prod. 2. p. 161.) leaflets small, obovate, serrated. ♄. F. Native of Arragon, on the mountains. O. fruticòsa, Asso, syn. arr. 97.

Shrubby Rest-harrow. Fl. May, Ju. Clt. 1680. Sh. 1 to 2 ft.

26 O. TRIDENTA`TA (Lin. spec. 1009.) shrubby; leaves palmately-trifoliate, smoothish, fleshy; leaflets linear-cuneated, tridentate at the apex; upper stipulas tridentate; peduncles 1-2-flowered. ♄. F. Native of Spain. Cav. icon. 2. t. 152.—Magn. bot. t. 16. O. crassifòlia, Dufour. ined. and O. arbúscula, Desv. journ. bot. 1814. 1. p. 76. ex herb. Desf.

Var. β, canéscens (Lam. dict. 1. p. 505.) branches clothed with hoary tomentum; leaflets pale, wedge-shaped, 5-toothed. ♄. F. Native of Arragon. Asso, fl. arr. no. 671. var. 2.—Barr. icon. t. 416.

Tridentate-leaved Rest-harrow. Fl. June, Aug. Clt. 1752. Shrub 1 to 2 feet.

27 O. ANGUSTIFO`LIA (Lam. dict. 1. p. 508.) shrubby; leaves palmately-trifoliate; leaflets linear, acute, serrated at the apex; peduncles 1-flowered, each furnished with an awn, longer than the leaves. ♄. F. Native of Spain, along way sides between Valentia and Denia.—Barr. icon. t. 299 or 300.

Narrow-leaved Rest-harrow. Fl. May, Ju. Clt. 1825. Sh. 1 ft.

28 O. CENE`SIA (Lin. mant. 267.) suffruticose at the base, many-stemmed, tufted, prostrate, glabrous; leaves palmately-trifoliate; leaflets cuneated, and are, as well as the stipulas serrated; peduncles 1-flowered, without an awn, longer than the leaves. ♄. H. Native of Piedmont, Provence, Dauphiny, and Savoy on rocks, in the Alps. All. fl. ped. no. 1173. t. 10. f. 2.—Barr. icon. t. 1104. O. cristàta, Mill. dict.

Var. β, subaristàta (D. C. prod. 2. p. 161.) peduncles each furnished with a kind of awn. ♄. F. Native of the Pyrenees, on the eastern side, and of Arragon. O. Cenèsia, Asso, syn. no. 674.

Mount-*Cenis* Rest-harrow. Fl. June, July. Clt. 1759. Sh. ½ to 1 foot.

29 O. FŒ`TIDA (Schousb. ex Balb. D. C. prod. 2. p. 161.) herbaceous; branchlets pilose; leaves smoothish, upper ones simple, the rest trifoliate; leaflets elliptic, serrulated, middle one largest; stipulas about equal in length to the petioles; peduncles 1-flowered, each furnished with an awn. ♄. ? F. Native of Morocco, in fields. Corolla nearly like that of *O. Cenèsia.*

Fœtid Rest-harrow. Fl. June, July. Clt. 1818. Pl. ½ foot.

30 O. GEMINIFLO`RA (Lag. nov. spec. p. 22.) herbaceous, villous; leaves trifoliate; leaflets oblong, truncate, serrate-toothed at the apex; peduncles 2-flowered, each furnished with an awn, longer than the petioles. ⊙. H. Native of Spain, near Madrid, in arid places. Legumes drooping.

Twin-flowered Rest-harrow. Fl. Ju. Aug. Clt. 1817. Pl. ½ ft.

31 O. LAXIFLO`RA (Desf. fl. atl. 2. p. 146. t. 190.) herbaceous; leaflets pubescent, obovate, and are, as well as the stipulas toothed; peduncles 1-flowered, without an awn, lax; calyx about equal in length to the corolla, but 3 times shorter than the legume. ⊙. H. Native of Algiers, on uncultivated hills. Corolla bluish.

Lax-flowered Rest-harrow. Pl. ½ to 1 foot.

32 O. BROUSSONE`TII (D. C. prod. 1. p. 161.) herbaceous; leaves trifoliate; leaflets smoothish, oblong, and are, as well as the stipulas, serrated; peduncles 1-flowered, without an awn, disposed in an almost leafless raceme; calyx one-half shorter than the corolla. ⊙. H. Native of Mogodor, in fields. Root simple. Stems numerous. Peduncles 8-10 lines long. Upper stipulas joined into a bractea-like acuminated leaf.

Broussonet's Rest-harrow. Pl. ½ foot.

33 O. SCHÓUWII (D. C. prod. 2. p. 162.) herbaceous; leaves trifoliate; leaflets oblong-obovate, smoothish, and are, as well as the stipulas, serrated; peduncles 1-flowered, without an awn, hardly the length of the calyx, aggregated into an ovate raceme; calyx shorter than the corolla and legume. ⊙. H. Native near Palermo, on mountains. Stems pilose. Allied to the following.

Schouw's Rest-harrow. Pl. ½ foot.

34 O. BROTERIA`NA (D. C. prod. 2. p. 162.) herbaceous; upper leaves simple, the rest trifoliate; leaflets pubescent, oval, and are, as well as the stipulas, serrated; peduncles 1-flowered, without an awn, shorter than the calyx, disposed in a long peduncled raceme; calyx a little shorter than the corolla; legume glabrous. ⊙. H. Native of Spain, in Estramadura, in sandy places. O. racemòsa, Brot. fl. lus. 2. p. 97. but not of Thunb.

Brotero's Rest-harrow. Pl. ½ foot.

35 O. RECLINA`TA (Lin. spec. 1011.) herbaceous, diffuse; leaves trifoliate; leaflets obovate, serrated, covered with clammy pubescence; stipulas broad-ovate, acute, serrated; peduncles 1-flowered, length of leaves, somewhat bracteolate under the apex; calyx longer than the corolla. ⊙. H. Native of the south of France, by the sea side. D. C. fl. fr. 4. p. 512.—Barr. icon. t. 761. Legume, according to Linnæus, villous, and one-half longer than the corolla.

Reclinate Rest-harrow. Fl. June, Aug. Clt. 1800. Pl. trailing.

36 O. MÓLLIS (Lag. nov. spec. p. 22.) herbaceous, erectish; leaves trifoliate; leaflets oblong-obovate, serrated at the apex; stipulas nearly entire; peduncles 1-flowered, without an awn, length of leaves; calyx equal in length to the corolla, and at length also to the legume. ⊙. H. Native of Spain and Italy, on hills in exposed places. Stems and calyxes rather hispid. O. Desfontàinii, Dufour, in litt. O. móllis, Sav. mem. soc. ital. 9. p. 351. t. 8.

Soft Rest-harrow. Pl. ½ foot.

37 O. CHERLE`RI (Lin. spec. 1007.) herbaceous, hairy; leaves trifoliate; leaflets oblong-cuneated, serrated at the apex; stipulas almost entire; peduncles 1-flowered, without an awn, shorter than the leaves, aggregate into a raceme; calyx longer than the corolla, but about equal in length to the legume. ⊙. H. Native of Montpelier, on rocks, Nice, and Barbary.—J. Bauh. hist. 2. p. 394. f. 2.

Cherler's Rest-harrow. Fl. June, July. Clt. 1771. Pl. ½ ft.

37 O. PE′NDULA (Desf. atl. 2. p. 197. t. 191.) herbaceous, rather hairy; leaves trifoliate; leaflets obovate, obtuse, and are, as well as the stipulas, serrated; peduncles 1-flowered, without an awn, nearly the length of the leaves; calyx a little shorter than the corolla and legume. ⊙. H. Native of Barbary, in corn-fields near Mascar.

Pendulous Rest-harrow. Fl. June, Aug. Clt. 1818. Pl. 1 ft.

38 O. SIEBE′RI (Besser, in litt. D. C. prod. 2. p. 162.) stem herbaceous, hairy; leaves smoothish, and for the most part simple, oval, serrated at the apex, rarely trifoliate with the lateral leaflets, oblong-linear, acute, and small; stipulas acute, entire; pedicels 1-flowered, awnless, longer than the leaves; corolla length of calyx. ⊙. H. Native of Crete. O. péndula, Sieb. herb. but not of Desf. Legume 2-4-seeded, a little longer than the calyx. This species comes very near to O. Gussoniàna, but the flowers in the dried specimens appear red.

Sieber's Rest-harrow. Pl. ½ foot.

§ 3. *Bugràna* (*Bugrane* is the French name of *Rest-harrow*). *D. C. prod. 2. p. 162. Leaves simple or trifoliate. Flowers sessile or on very short pedicels, purple or rose-coloured, rarely white.*

39 O. ARBORE′SCENS (Desf. fl. atl. 2. p. 149. t. 193.) erect; branchlets unarmed, sparingly villous; leaves trifoliate; leaflets obovate, serrated; calycine lobes villous, 3-nerved, rather longer than the legume. ♄. G. Native of Barbary, about Arzeau on mountains. Flowers rose-coloured.

Arborescent Rest-harrow. Fl. May, July. Clt. 1826. Shrub 10 feet.

40 O. ALTI′SSIMA (Lam. dict. 1. p. 506.) erect; branches unarmed, villous, rather viscid; leaves trifoliate; leaflets oblong-lanceolate, acute, serrated; flowers usually twin; calycine lobes villous, length of legume. ♃. H. Native of Europe, in cultivated fields and sandy places. O. hircìna, Jacq. hort. vind. t. 93. O. fœ′tens, All. ped. no. 1164. t. 41. f. 1. O. arvénsis, Retz, obs. 2. p. 21. O. spinòsa α, Lin. spec. 1006. Flowers red.

Tallest Rest-harrow. Fl. May, Aug. Clt. 1596. Pl. 3 to 6 ft.

41 O. PROCU′RRENS (Wallr. sched. crit. p. 381.) stems rooting at the base, creeping, diffuse; floriferous branches ascending, pubescent; leaves trifoliate; leaflets ovate-roundish, glandular on both surfaces, somewhat serrated; calycine lobes exceeding the legume. ♃. H. Native of Europe, in sandy fields frequent. O. arvénsis, Lam. dict. 1. p. 505. D. C. fl. fr. 4. p. 509. Flowers purple or white.

Running Rest-harrow. Fl. June, July. Clt. 1820. Pl. prostrate.

42 O. RE′PENS (Lin. spec. 1006.) stems prostrate, unarmed, hairy; lower leaves trifoliate, the upper ones simple, cuneate-elliptic, serrulated at the apex; flowers usually solitary. ♃. H. Native of Europe, in sandy places on the sea coast; plentiful in Britain.—Dill. hort. elth. t. 25. f. 28. O. inèrmis β, Huds. 313. O. spinòsas γ, rèpens, Smith, engl. fl. 3. p. 267. Flowers white r rose-coloured.

Var. β, *cadùca* (Vill. dauph. 3. p. 428.) branches clothed with clammy villi; leaflets oblong, pubescent. ♃. H. Native of Dauphiny, on mountains.

Creeping Rest-harrow. Fl. June, Aug. Brit. Pl. prostrate.

43 O. SPINÒSA (Wallr. sched. crit. p. 379. Lin. syst. veg. ed. 14. p. 651.) stems erect, and are, as well as the branches, spiny and hairy; lower leaves trifoliate, the rest simple; leaflets and leaves oblong, cuneated at the base, almost entire; flowers usually solitary; calycine lobes shorter than the legume. ♃. H. Native of Europe, by way sides and in fields; plentiful in Britain on the borders of fields, and in barren pastures. O. spinòsa β, Lin. spec. 1006. Mart. rust. 129. Fl. dan. 783.—Tab. hist. 913. icon. O. arvénsis, Smith, engl. bot. 682. and perhaps O. senéscens, Lapeyr. abr. p. 405. Flowers either white or red.

Var. β, *angustifòlia* (Wallr. l. c.) leaflets oblong; branches pubescent on one side. ♃. H. Native of Thuringia.

Var. γ, *glàbra* (D. C. prod. 2. p. 163.) leaflets oblong; branches smooth. ♃. H. Native of the south of France, in dry places.

Spiny Rest-harrow. Fl. June, Aug. Britain. Pl. 1 to 2 feet.

44 O. HI′SPIDA (Desf. fl. atl. 2. p. 146. t. 189.) stems erect, clothed with spreading hairs, unarmed; leaves trifoliate; leaflets obovate, serrated; flowers solitary; calyx hispid, about equal in length to the corolla, but twice the length of the legume. ♃. F. Native of Barbary, in corn fields.

Var. β, *spinéscens* (D. C. prod. 2. p. 163.) branches spinescent; leaflets oval-oblong. ♃. H. Native of Tauria. O. spinòsa hirsutíssima, Steven in litt.

Hispid Rest-harrow. Pl. 1 to 2 feet.

45 O. MITÍSSIMA (Lin. spec. 1007.) stems erect, rather pilose, white; leaves trifoliate; leaflets ovate, serrated; flowers disposed in an elongated spike, furnished with stipular, scarious, variegated bracteas. ⊙. H. Native of Portugal, Corsica, and the islands of the Archipelago.—Dill. hort. elth. t. 24. f. 27. Anònis scariòsa, Mœnch.

Very-mild Rest-harrow. Fl. June, July. Clt. 1732. Pl. 1 ft.

46 O. DIFFU′SA (Ten. prod. p. 41. append. 1815. p. 62. cat. 1819. p. 59.) stems diffuse, pubescent, white; leaves trifoliate; leaflets oblong-cuneated, glabrous, serrated; stipulas lanceolate, serrated; flowers disposed in a spike; calyx scarious, shorter than the corolla, and about equal in length to the legume. ⊙. H. Native of Naples and Barbary, in uncultivated places.

Diffuse Rest-harrow. Fl. Ju. July. Clt. 1820. Pl. ½ to 1 ft.

47 O. VILLOSÍSSIMA (Desf. fl. atl. 2. p. 147. t. 192.) stems diffuse, very villous, and clammy; leaves trifoliate; leaflets obovate, and are, as well as the stipulas, serrated; flowers disposed in spicate racemes; corolla and legume shorter than the calyx. ⊙.? H. Native of Algiers, in corn fields. Flowers small, rose-coloured.

Very-villous Rest-harrow. Pl. 1½ foot.

48 O. SERRA′TA (Forsk. descr. 130. Vahl. symb. 1. p. 52.) clothed with clammy pubescence, many-stemmed, decumbent; leaves trifoliate; leaflets obovate or oblong, serrated; stipulas a little toothed; flowers disposed in spicate racemes; calyx length of corolla and legume; calycine segments somewhat 3-nerved. ⊙. H. Native of Egypt, Islands of the Archipelago, Corsica, and Mogodor, in sandy places. Flowers white, but with the vexillum red.

Serrated-leaved Rest-harrow. Pl. ½ to 1 foot.

49 O. HI′RTA (Desf. hort. par. ex Poir. suppl. 1. p. 741.) plant hairy, much branched; leaves trifoliate; leaflets obovate, sharply denticulated; stipulas crenated; flowers disposed in spicate-racemes; calyx rather shorter than the corolla, but rather longer than the legume. ♃. H. Native of the Levant. Flowers blue. Floral leaves simple. Hairs on the stem soft, and spreading.

Hairy Rest-harrow. Fl. Ju. July. Clt. 1816. Pl. 1 foot.

50 O. ALOPECUROI′DES (Lin. spec. 1008.) stem solitary, erect, rather pilose, branched at the base; leaves simple, elliptic, obtuse, and are as well as the large stipulas a little serrated; flowers in dense spikes; calyx hispid, nearly twice the length of the corolla and legume. ⊙. H. Native of Sicily, Spain, and Barbary. Desf. fl. atl. 2. p. 146. Schkuhr, handb. t. 194. Corolla rose-coloured.

Fox-tail-like Rest-harrow. Fl. Jul. Aug. Clt. 1696. Pl. 1 ft.

51 O. MONOPHY′LLA (Desf. fl. atl. 2. p. 145. t. 188.) stem branched, erect, rather villous; leaves simple, elliptic, and are, as well as the large stipulas, sharply serrated; flowers in dense spikes;

calycine lobes villous, about equal in length to the corolla. ⊙. H. Native of Barbary and Mogodor. Very like the preceding species.

One-leaved Rest-harrow. Fl. July, Aug. Clt. 1800. Pl. 1 ft.

52 O. a'lba (Poir. voy. barb. 2. p. 210.) stem erect, villous; leaves simple, oblong, and are, as well as the stipulas, serrulated; flowers distant, almost sessile, disposed in spicate racemes; calyx covered with soft villi, rather longer than the corolla. ⊙. H. Native of Barbary and Naples. Vahl. symb. 2. p. 80. Desf. fl. atl. 2. p. 145. Flowers white.

White-flowered Rest-harrow. Fl. May, Sept. Clt. 1823. Pl. 1 to 2 feet.

53 O. oligophy'lla (Ten. prod. 69. cat. 1815. app. p. 62. fl. nap. 2. t. 67.) stem ascending; leaves glabrous, simple, orbicular, and are, as well as the stipulas, serrated; flowers pedicellate, racemose; calyx villous, shorter than the corolla. ⊙. H. Native of Naples and of Sicily, near Palermo, &c. There are varieties of this plant with the stems and leaves glabrous on the upper part, and pilose. Allied to *O. álba*, and hardly to be distinguished from it unless in the flowers being on longer pedicels.

Few-leaved Rest-harrow. Fl. May, Sept. Clt. 1823. Pl. 1 ft.

§ 4. *Bugranoìdes* (so called from the similarity of the species of this section to the last). *D. C. prod. 2. p. 164. Leaves simple or trifoliate. Flowers sessile or sub-sessile, yellow.*

54 O. Arragone'nsis (Asso, syn. arr. 96. t. 6. f. 2.) shrubby; leaves trifoliate, glabrous; leaflets roundish, serrated; flowers almost sessile, twin, disposed in a leafless raceme; calyx villous, one-half shorter than the corolla. ♄. H. Native of Spain, in the kingdom of Valentia, on mountains; also of Arragon, and in the Pyrenees on the confines of France, and about Vena. D. C. fl. fr. suppl. p. 552. O. dumòsa, Lapeyr. arb. 410.—Magn. hort. monsp. 17. t. 21.

Arragon Rest-harrow. Fl. May, July. Clt. 1816. Shrub 1 to 2 feet.

55 O. specio'sa (Lag. nov. spec. 22. p. 294.) shrubby, pubescent; leaves trifoliate; leaflets ovate, doubly serrated; raceme sub-spicate, terminal, elongated, hairy; lower pedicels solitary, upper ones twin, shorter than the bracteas. ♄. H. Native of Spain, in Granada.

Shewy Rest-harrow. Shrub 1 to 2 feet.

56 O. ju'ncea (Asso, syn. arr. 96. t. 5. f. 2.) shrubby, glabrous; leaves trifoliate; leaflets obovate, and are, as well as the stipulas, serrated; flowers almost sessile, disposed in a long spike; bracteas stipular, and are, as well as the calyxes, scarious; corolla length of calyx. ♄. H. Native of Spain, in Arragon. Very like *O. minutíssima*, but the flowers are pale-yellow, and the stems are shrubby at the base.

Rushy Rest-harrow. Shrub ½ to 1 foot.

57 O. capita'ta (Cav. icon. 2. p. 43. t. 154. f. 2.) glabrous; stems prostrate, branched, filiform; leaves trifoliate; leaflets ovate-oblong, toothed; flowers capitate; corolla a little longer than the calyx. ♃. H. Native of Spain, in the kingdom of Valentia.

Capitate-flowered Rest-harrow. Fl. June, Aug. Clt. 1820. Pl. ½ foot.

58 O. stria'ta (Gouan. ill. 47. D. C. fl. fr. 4. p. 511.) stems diffusely prostrate, branched; leaves trifoliate, rather scabrous; leaflets obovate-cuneated, striated, and are, as well as the stipulas, serrated; flowers capitate; corolla longer than the hairy clammy calyx. ♃. H. Native of mountain pastures from Arragon to Provence, near the limits of olives. O. aggregàta, Asso, syn. arr. 56. O. reclinàta, Lam. fl. fr. exclusive of the synonymes. There are varieties of this plant almost smooth, and beset with rough glandular hairs.

Striated Rest-harrow. Pl. ½ to 1 foot.

59 O. Colu'mnæ (All. ped. 1. no. 1166. t. 20. f. 3.) pubescent; stems tufted; leaves trifoliate; leaflets obovate-oblong, and are, as well as the stipulas, serrated, but the upper leaves are simple; flowers aggregate into a leafy spike; corolla shorter than the calyx. ♃. H. Native of Spain, France, Piedmont, Switzerland, Hungary, and Tauria, on hills. O. parviflòra, Lam. dict. 1. p. 510. but not of Thunb. O. subocculta, Vill. dauph. 3. p. 429. O. minutíssima, Jacq. austr. 240.

Columna's Rest-harrow. Fl. Ju. July. Clt. 1732. Pl. ¼ foot.

60 O. minutíssima (Lin. spec. 1007.) glabrous; stems rather tufted; leaves trifoliate; leaflets oblong-obovate, serrated; stipulas subulate, entire; flowers collected into a leafy spike; corolla shorter than the calyx. ♃. H. Native of Spain, in rugged places, and the south of France. O. saxátilis, Lam. dict. 1. p. 509. O. barbàta, Cav. icon. t. 153. Root sometimes shrubby. Lobes of calyx subulate, elongated.

Very-minute Rest-harrow. Fl. June, July. Clt. 1818. Pl. ¼ to ½ foot.

61 O. variega'ta (Lin. spec. 1008.) glabrous, diffuse; leaves simple, sessile, obovate, striated, serrated; stipulas large, rather sheathing, serrated; flowers almost sessile, axillary; corolla longer than the pubescent calyx. ⊙. H. Native of Spain, in the sand by the sea side. Desf. atl. t. 185.

Var. β, *erióclada* (D. C. prod. 2. p. 165.) branches and calyxes hairy. ⊙. H. Native about Gibraltar.

Variegated Rest-harrow. Fl. July, Aug. Clt. 1784. Pl. proc.

62 O. euphrasiæfòlia (Desf. fl. atl. 2. p. 141. t. 184.) erect, glabrous, simple; leaves simple, petiolate, lanceolate, and are, as well as the stipulas, serrated; flowers disposed in a somewhat leafy spike; corolla longer than the rather hairy calyx. ⊙. H. Native of Barbary, near Mascar, in sand.

Eye-bright-leaved Rest-harrow. Pl. ½ foot.

§ 5. *Pteronònis* (from πτερον, *pteron*, a wing, and *ononis*, so called in allusion to the pinnate leaves of the species). *D.C. prod. 2. p. 165. Lower leaves impari-pinnate, having many pairs of leaflets. The species contained in this section are not sufficiently known.*

63 O. rosæfòlia (D. C. leg. mem. vi. prod. 2. p. 165.) suffruticose, erect, hispid; leaflets 4 pairs, ovate, serrated, rather villous, the odd leaflet very remote from the upper pair; flowers in dense spikes. ♄. F. Native of Spain. Anònis Hispánica frutéscens folio rosæ sylvestris, Tourn. inst. 409. ex herb. Vaill. O. Arragonénsis β, Lam. dict. 1. p. 510. exclusive of the synonymes. Stipulas large, leafy, semi-ovate, serrated. Lower leaves with 4 pairs of leaflets, upper ones with one pair, some of them reduced to the odd leaflet. Flowers large, yellow. Calyx very villous.

Rose-leaved Rest-harrow. Shrub 1½ foot.

64 O. cicerifòlia (D. C. leg. mem. vi.) suffruticose, erect, hispid; leaves having 3 pairs of oblong-cuneated leaflets, which are acutely-serrated at the apex, and very villous; flowers spicate. ♄. F. Native perhaps of the Levant. Stipulas leafy, semi-ovate, acute, serrated at the apex. Lower leaves with 3 pairs of leaflets, upper ones with one pair. Calyx very villous, with linear awl-shaped lobes. Flowers yellow.

Cicer-leaved Rest-harrow. Shrub 1 foot.

65 O. inæquifòlia (D. C. prod. 2. p. 165.) somewhat herbaceous, erect, beset with clammy villi; leaves with 3 pairs of oval-oblong, serrated, villous leaflets, the odd one approximate to the superior pair; racemes terminal; flower pedicellate. ♃. H. Native of the Levant. Anònis orientàlis pentaphýlla et heptaphýlla viscòsa, Vaill. herb. Stipulas lanceolate, elongated. Lower leaves with 3 pairs of leaflets, upper ones with one pair; floral leaves simple, shorter than the pedicels. Vexillum striated.

Unequal-leaved Rest-harrow. Pl. 1 foot.

66 O. PINNA'TA (Brot. fl. lus. 2. p. 99.) herbaceous, and clothed with clammy villi; leaves with 3-4 pairs of cuneated, ciliated, somewhat serrated leaflets; spikes terminal. ⊙. H. Native of Portugal, in sand. Corolla large, white, but with the vexillum rose-coloured.

Pinnate-leaved Rest-harrow. Pl. 1 foot.

† *Species belonging to section Euonònis, but are not sufficiently known.*

67 O. MACRACA'NTHA (Clark. in Spreng. neue entd. 3. p. 16.) suffruticose, spiny; peduncles awnless, 1-flowered; upper leaves simple, obovate, glandular, toothed at the apex; calyx glandular, shorter than the corolla. ♄. F. Native of the Levant.

Long-spined Rest-harrow. Shrub.

68 O. PANICULA'TA (Cav. anal. scienc. nat. 1801. 4. p. 69.) villous; stem panicled; lower leaves trifoliate, middle leaflet larger; superior leaves simple; stipulas large, lanceolate, very acute. ♄. ? F. Native of the north of Africa.

Panicled-flowered Rest-harrow. Shrub.

69 O. PYRAMIDA'LIS (Cav. l. c. p. 71.) stem pilose, terete; branches alternate, pyramidal; leaves trifoliate; leaflets linear-lanceolate, serrated; flowers sessile, capitate; legume 2-seeded. ♄. ? F. Native of the north of Africa, near Sale.

Pyramidal-branched Rest-harrow. Shrub.

70 O. SUBCORDA'TA (Cav. l. c. p. 70.) erect, herbaceous; leaves all simple, and somewhat cordate, ovate-oblong, and are, as well as the stipulas, serrated; peduncles awned, 1-flowered, shorter than the leaves. ⊙. H. Native of the north of Africa, near Mogodor.

Subcordate-leaved Rest-harrow. Pl. 1 foot.

71 O. COMPRE'SSA (Lag. anal. scienc. nat. 1801. p. 261.) stem herbaceous, compressed; peduncles 1-flowered, each furnished with an awn; leaves simple, lower ones trifoliate; stipulas entire. ⊙.? H. Native of Spain.

Compressed-stemmed Rest-harrow. Pl. ½ to 1 foot.

72 O. PE'RSICA (Burm. ind. 157. t. 49. f. 1.) plant rather diffuse, small; peduncles without an awn, 2-flowered, racemose; leaves trifoliate, with linear, truncate, serrated leaflets; stipulas quite entire. ⊙. H. Native of Persia. Flowers yellow, with the habit almost of *Melilòtus*.

Persian Rest-harrow. Pl. diffuse.

73 O. RHINANTHOI'DES (Lapeyr. abr. 407.) erect, small, clothed with clammy villi; leaves trifoliate, with cuneated emarginate leaflets, which are awnedly-toothed; stipulas acutely-toothed; flowers almost sessile, solitary, terminal; legume ovate, villous, awned, shorter than the calyx. ⊙. H. Native of the Pyrenees. Flowers having a purplish vexillum.

Rhinanthus-like Rest-harrow. Pl. 1 foot.

74 O. SCA'BRA (Lapeyr. abr. 407.) erect; leaves distant, trifoliate, dotted from points; leaflets cuneated, truncate, dentate at the apex; stipulas ovate, acute, entire; calyx equalling the corolla in length. ⊙. H. Native of the Eastern Pyrenees. Corolla white, with a rose-coloured vexillum.

Scabrous Rest-harrow. Pl. 1 foot.

75 O. PA'LLIDA (Horn. hort. hafn. 2. p. 676.) peduncles 1-flowered; leaves trifoliate; leaflets roundish, cuneated at the base, toothed from the middle to the apex: calyxes and legumes villous, drooping. ⊙. H. Native of?

Pale-flowered Rest-harrow. Pl. 1 foot.

SECT. II. LOTONÒNIS (from *Lotus* and *Ononis;* the plants appear intermediate between the two genera). D. C. Leg. mem. VI. prod. 2. p. 166. Stipulas hardly or not adnate to the petiole, leafy as in *Lòtus*, but with the stamens monadelphous, as in the rest of *Onònis*. The species of this section are all from the Cape of Good Hope, but none of them are sufficiently known.

76 O. SPICA'TA (Thunb. prod. 129. fl. cap. 584.) leaves simple, stipulate, ovate, silky; stem shrubby, erect; flowers spicate. ♄. G. Leaves acute, sessile. Spikes a finger long.

Spicate-flowered Rest-harrow. Shrub.

77 O. HIRSU'TA (Thunb. l. c.) leaves simple, lanceolate, hairy; stem herbaceous, decumbent; racemes ovate, drooping. ♃. G. Plant very hairy. Leaves imbricately spreading.

Hairy Rest-harrow. Pl. decumbent.

78 O. STIPULA'TA (Thunb. l. c.) leaves trifoliate, villous; leaflets oblong, obtuse, convolute; stipulas ovate; flowers spicate; stem frutescent. ♄. G. Flowers yellow. Superior stipulas large, bract-formed.

Stipulate-leaved Rest-harrow. Shrub.

79 O. PARVIFLÒRA (Berg. cap. 214. Thunb. l. c. but not of Lam.) leaves trifoliate, villous; leaflets lanceolate, intermediate one largest; umbels lateral; stem herbaceous, villous. ⊙. G. Branches twiggy.

Small-flowered Rest-harrow. Fl. June, July. Clt. 1818. Pl. ½ to 1 foot.

80 O. MICROPHY'LLA (Lin. fil. suppl. 324. Thunb. l. c.) leaves trifoliate, scabrous; leaflets ovate, convolute; stipulas and bracteas ovate; flowers axillary; branches and branchlets spinescent. ♄. G. Petiole trigonal. Legume lanceolate, reflexed, scabrous.

Small-leaved Rest-harrow. Shrub.

81 O. CAPILLA'RIS (Thunb. l. c.) leaves trifoliate, glabrous; leaflets linear-lanceolate, mucronate; peduncles axillary, 1-flowered; stem erectish, suffrutescent. ♄. G. Leaves appearing in fascicles at first sight.

Hair-leaved Rest-harrow. Shrub.

82 O. VILLÒSA (Thunb. l. c.) leaves trifoliate, villous; leaflets lanceolate; stipulas length of petioles; peduncles lateral, 1-flowered, each furnished beneath the leaves with an acute, linear leaflet; stems hairy, decumbent. ♄. G. Legume villous, turgid. Perhaps a species of *Cýtisus* or a proper genus.

Villous Rest-harrow. Fl. June, July. Clt. 1820. Sh. dec.

83 O. HETEROPHY'LLA (Thunb. l. c.) leaves trifoliate, pilose beneath; lower leaflets ovate, superior ones lanceolate; flowers solitary, pedunculate, terminal; stem herbaceous. ♃. G.

Variable-leaved Rest-harrow. Shrub.

84 O. PROSTRA'TA (Lin. mant. 266. Thunb. l. c.) leaves trifoliate, pubescent; leaflets ovate, obtuse; stipulas much shorter than the petiole; peduncles 1-flowered, lateral; stem decumbent. ♃. G. Lòtus prostràtus, Lin. spec. 1090.

Prostrate Rest-harrow. Pl. prostrate.

85 O. DECU'MBENS (Thunb. l. c. but not of Miller) leaves trifoliate, pubescent beneath; leaflets obovate, acute; stipulas oblong; flowers solitary, lateral, on short pedicels; stem decumbent. ♃. G. Flowers yellow. Legume oblong, rather turgid.

Decumbent Rest-harrow. Pl. decumbent.

86 O. SERÍCEA (Thunb. l. c.) leaves trifoliate, clothed beneath with silky-villi; leaflets oblong, acute; stipulas ovate, pilose; flowers disposed in a secund, 3-flowered, terminal spike. ♃. G. Stems ascending.

Silky Rest-harrow. Pl. prostrate.

87 O. EXCÌSA (Thunb. l. c.) leaves trifoliate, pubescent beneath; leaflets obovate, emarginate; flowers twin, terminal; stem decumbent. ♃. G. Stem glabrous. Petiole longer than leaflets. Stipulas subulate (Willd.).

Cut-leaved Rest-harrow. Pl. decumbent.

88 O. GEMINA'TA (Ait. hort. kew. 3. p. 23.) leaves trifoliate; leaflets obovate; peduncles lateral, 2-flowered. ♃. G. Allied to *O. excìsa* according to Willd.

Twin-flowered Rest-harrow. Fl. July, Sept. Clt. 1788. Pl. decumbent.

89 O. RACEMÒSA (Thunb. l. c. but not of Brot.) leaves trifoliate, pubescent beneath; leaflets oblong, acute; flowers race-

mose; stem decumbent. ♃. G. Flowers 4, yellow, remote, drooping.

Racemose Rest-harrow. Pl. decumbent.

90 O. ELONGA'TA (Thunb. l. c.) leaves trifoliate, hairy; leaflets ovate, acute; peduncles lateral, 1-flowered; stem decumbent, hairy. ♃. G. Peduncles 2 inches long.

Elongated Rest-harrow. Pl. decumbent.

91 O. MICRA'NTHA (Thunb. l. c.) leaves trifoliate, finely pubescent beneath; leaflets oblong, obtuse; umbel of flowers terminal; stem glabrous, decumbent. ♃. G. Corolla yellow, very minute.

Small-flowered Rest-harrow. Pl. decumbent.

92 O. INVOLUCRA'TA (Lin. fil. suppl. 324.) leaves trifoliate, villous; leaflets oblong, obtuse; flowers umbellate, involucrated; stem hairy, decumbent. ♃. G. Anthýllis involucràta, Lin. mant. 265. Lòtus ononoìdes, Lam. dict. 3. p. 608. Flowers yellow.

Involucrated-flowered Rest-harrow. Pl. decumbent.

93 O. UMBELLA'TA (Lin. mant. 266. Thunb. l. c.) leaves trifoliate, villous; leaflets oblong, obtuse; flowers umbellate; stem decumbent, hairy. ♃. G. An allied genus according to Agardh.

Umbellate-flowered Rest-harrow. Pl. decumbent.

94 O. SECU'NDA (Thunb. l. c.) leaves trifoliate, glabrous; leaflets oblong, acute; umbels terminal; stem decumbent, pilose. ♃. G. Umbels involucrated, 6-flowered.

Secund-flowered Rest-harrow. Pl. decumbent.

95 O. STRIGÒSA (Thunb. l. c. but not of Burm.) leaves trifoliate, villous beneath; leaflets ovate, obtuse; umbels terminal; stem decumbent, frutescent. ♄. G. Leaflets longer than the petiole.

Strigose Rest-harrow. Shrub decumbent.

96 O. GLA'BRA (Thunb. l. c.) leaves trifoliate, glabrous; leaflets ovate, obtuse; flowers umbellate; stem decumbent, suffrutescent. ♄. G. Petiole twice the length of the leaflets. Umbels many-flowered. Corolla yellow.

Glabrous Rest-harrow. Pl. decumbent.

97 O. LA'GOPUS (Thunb. l. c.) leaves trifoliate, villous; leaflets lanceolate, setaceously mucronate; spike leafy, hairy; stem erect, frutescent. ♄. G. Leaves in fascicles.

Hare's-foot Rest-harrow. Shrub.

98 O. FASCICULA'TA (Thunb. l. c.) leaves in fascicles, lanceolate, crenated, glabrous; flowers spicate; stem erect, pubescent, shrubby. ♄. G. Bracteas cucullately-convolute. Vexillum flesh-coloured, pubescent on the back.

Fascicled-leaved Rest-harrow. Shrub.

99 O. QUINA'TA (Thunb. l. c.) leaves with 5 leaflets, somewhat pubescent; leaflets lanceolate, convolute; flowers lateral, usually twin; stem decumbent, glabrous, suffrutescent. ♄. G. Legume oblong, glabrous.

Quinate-leaved Rest-harrow. Shrub decumbent.

100 O. CAPE'NSIS (Lin. amœn. 6. afr. 41. Burm. cap. 21.) leaves trifoliate, with the leaflets orbicular, rather pilose and mucronate; racemes pedunculate, long. ⊙. H. Branches, peduncles, and petioles hairy. Teeth of calyx linear-subulate, rather villous. Flowers purplish.

Cape Rest-harrow. Fl. June, July. Clt. 1800. Pl. ½ foot.

101 O. CE'RNUA (Lin. spec. 1011.) leaves trifoliate, cuneiform, hardly emarginate; raceme erect, pilose; branches beset with white hairs. ♄. G. Comm. hort. amst. 2. t. 82. Lòtus cérnuus, Lam. dict. 3. p. 612. Onònis Æthiópica, Burm. cap. 21. Cýtisus Æthiópicus, Lin. spec. 1042. Stamens monadelphous. Calyx trifid. Lower segment tridentate. Legume linear, compressed, drooping, torulose. Flowers yellow.

Drooping Rest-harrow. Shrub 2 feet.

102 O. ASPALATHOÌDES (D. C. prod. 2. p. 167.) hairy; leaves trifoliate; leaflets linear-oblong, attenuated at the base; stipulas oblong-linear, acute, filiform, about equal in length to the petiole; heads subterminal, 4-5-flowered, pedunculate, furnished with a trifoliate bractea under the flowers. ⊙. G. Anthýllus aspalathoìdes, Burm. cap. 21. Lòtus ononoìdes, Desv. in Lam. dict. 3. p. 609. Habit of *Lòtus*. Calyx almost that of *Anthýllis*. Stem herbaceous. Stamens monadelphous. Ovary very villous.

Var. β, lineàris (D. C. prod. 2. p. 168.) leaflets linear. Lòtus Pérsicus, Desv. in Lam. dict. 3. p. 608. Burm. fl. ind. t. 49. f. 3. but both description and country remain doubtful.

Var. γ, angustíssima (D. C. prod. 2. p. 168.) leaflets linear-subulate. Cýtisus hírtus, Burm. cap. 22. and is to be found in his herbarium, under the name of *Anthýllis aspalathoìdes angustifòlia*. Flowers yellow.

Aspalathus-like Rest-harrow. Pl. ½ foot.

103 O. ANTHYLLOÌDES (D. C. prod. 2. p. 168.) leaves trifoliate; leaflets obovate, cuneated, retuse, glabrous; racemes opposite the leaves, subterminal, pedunculate; flowers pedicellate, at length drooping. ♄. G. Anthýllis ononoìdes, Burm. fl. cap. 21. Psoràlea herbàcea, Sieb. pl. exs. cap. no. 52. Stamens monadelphous. Flowers yellow.

Anthyllis-like Rest-harrow. Shrub.

104 O. VISCIFLÒRA (D. C. prod. 2. p. 168.) shrubby, prostrate; leaves digitately pinnate; leaflets linear; heads 5-6-flowered; calyxes hairy. ♄. G. Anthýllis visciflòra, Lin. fil. suppl. 335. Peduncles leafless. Corolla yellow.

Viscid-flowered Rest-harrow. Shrub prostrate.

† *Species not sufficiently known.*

105 O. A'NIL (Mill. dict. no. 14.) leaves trifoliate; leaflets ovate; petioles very long, pilose; spikes terminal; legumes very hairy. ⊙. H. Native of the American islands, where it is called *Indigo-dare*. Perhaps a species of *Indigófera*.

Anil Rest-harrow. Pl. 2 feet.

106 O. MILLE'RI (D. C. prod. 2. p. 168.) stem decumbent; leaves rather pilose, trifoliate; leaflets linear-lanceolate; flowers in lateral spikes, yellow. ♃. S. Native of Vera-Cruz. O. decúmbens, Mill. dict. no. 15. but not of Thunberg. Perhaps a species of *Indigófera*.

Miller's Rest-harrow. Pl. decumbent.

107 O. GLUTINÒSA (Mart. acad. mun. 6. p. 154.) shrubby, clothed with clammy pili; leaves simple, oblong, entire; stipulas subulate; flowers racemose. ♄. S. Native of the East Indies. The colour of the flowers is unknown.

Clammy Rest-harrow. Shrub.

Cult. The greater part of the species of *Onònis* are rather handsome when in flower. The hardy shrubby kinds are increased by seeds and layers; the hardy perennial kinds by dividing the plants of the roots in spring, or by seeds; these are well fitted for flower-borders. The seeds of the hardy annual kinds only require to be sown in open borders in April. The greenhouse and frame species thrive well in a mixture of loam, peat, and sand; these are usually increased by seeds, which ripen in abundance; they may also be propagated by young cuttings, planted in sand under a bell-glass.

LXIII. REQUIE'NIA (in honour of M. Requien of Avignon, a French botanist). D. C. leg. mem. VI. prod. 2. p. 168.

LIN. SYST. *Monadélphia, Decándria.* Calyx acutely and almost equally 5-cleft, permanent, but not inflated after flowering. Carina obtuse; petals free. Stamens monadelphous, with the tube cleft in front. Anthers 5. Style filiform, hardly incurved. Legume compressed, oval, 1-seeded, hooked by the base of the style.—African subshrubs, with bistipulate, simple, obcordate, mucronate, feather-nerved leaves, and with small flowers crowded in the axils of the leaves, almost sessile. This genus is very distinct from *Podalýria*, and is more nearly allied to *Hállia*, *Anthýllis*, and *Heylándia*.

1 R. obcorda'ta (D. C. l. c. t. 37.) stipulas about equal in length to the calyx; legume villous; seeds ovate-oblong. ♄. S. Native of Senegal. Podalýria obcordàta, Lam. ill. t. 327. f. 5. Poir. dict. 5. p. 445. Sophòra Senegalénsis, herb. Deless. Crotalària ramiflòra, Perr. in litt. 1825. Flowers sessile. Legume not attenuated at the base.

Obcordate-leaved Requienia. Fl. July. Clt. 1825. Sh. 1 ft.

2 R. sphærospe'rma (D. C. l. c. t. 38.) stipulas shorter than the calyx; legumes pubescent, attenuated at the base; seeds spherical. ♄. G. Native of the Cape of Good Hope. Flowers on short pedicels.

Spherical-seeded Requienia. Shrub 1 foot.

Cult. A mixture of loam, peat, and sand answers these shrubs, and young cuttings will strike root readily if planted in a pot of sand, with a bell-glass placed over them, the glass to be taken off and wiped occasionally.

LXIV. ANTHY'LLIS (from ανθος, *anthos*, a flower, and ιουλος, *ioulos*, down, in reference to the flowers being usually downy). Lin. gen. no. 864. Lam. ill. t. 615. D. C. prod. 2. p. 168.

Lin. syst. *Monadélphia, Decándria.* Calyx tubular, 5-toothed, permanent after flowering, more or less inflated. Wings about equal with the carina and vexillum. Stamens all connected. Legume ovate, 1-2-seeded, rarely oblong-linear, many-seeded, always hidden by the calyx. Herbs or subshrubs, variable in habit. Perhaps the genus ought to be divided into several genera.

Sect. I. Dorycnioìdes (from *Dorycnium*, and *idea*, like; plant resembling species of *Dorýcnium*). D. C. Leg. mem. VI. prod. 2. p. 168. Calyx hardly inflated. Legume 1-celled, 1-seeded. Perennial herbs, with suffrutescent roots and pedunculate leafless heads of flowers. Leaves impari-pinnate, with the leaflets about equal in size and form, the odd one sessile.

1 A. Gera'rdi (Lin. mant. 100.) herbaceous, diffuse; leaves pinnate, glabrous; leaflets 5-9, oblong-linear, mucronate; heads 15-20-flowered. ♃. H. Native of Provence and Corsica, on exposed rocks and in grassy woods. Ger. galloprov. 490. t. 18. Flowers rose-coloured.

Gerard's Kidney-vetch. Fl. June, Aug. Clt. 1806. Pl. 1 ft. prostrate.

2 A. onobrychioìdes (Cav. icon. 2. p. 40. t. 150.) herbaceous, erectish; leaves pinnate, smoothish; leaflets 7-11, linear; heads 10-12-flowered. ♃. H. Native of Spain at Valldigna. Very like the preceding species, but the flowers are said to be yellow.

Saintfoin-like Kidney-vetch. Fl. Ju. Jul. Clt. 1817. Pl. 1½ ft.

Sect. II. Aspalathoìdes (from *Aspalathus* and *idea*, form; plants like *Aspálathus*). D. C. leg. mem. VI. prod. 2. p. 169. Calyx hardly inflated. Legume 1-celled, 1-2-seeded. Flowers in interrupted spikes, or nearly sessile in the axils of the superior leaves, few or solitary.—Humble, much-branched shrubs, usually spinescent. Leaves trifoliate or simple.

3 A. cytisoìdes (Lin. spec. 1013.) shrubby, unarmed, much branched, twiggy; leaves simple or trifoliate; odd leaflet much larger than the lateral ones; branches hoary from adpressed velvety pubescence; flowers few, sessile in the axils of the upper leaves, forming an interrupted spike; calyxes hairy. ♄. F. Native of Spain and the south of France, on hills and among rocks.—Barr. icon. 1182. Calyx woolly. Flowers yellow. The upper leaves are simple. Perhaps the leaves are all simple, furnished with 2 leafy stipulas.

Cytisus-like Kidney-vetch. Fl. Apr. Ju. Clt. 1731. Sh. 2 ft.

4 A. geni'stæ (Dufour, in litt. D. C. prod. 2. p. 169.) shrubby, unarmed, much branched, twiggy; branches hoary; leaves simple, lanceolate, nearly sessile, glabrous; flowers few, almost sessile in the axils of the upper leaves, forming an interrupted spike; calyx pubescent. ♄. F. Native of Spain, in Valentia on arid mountains, and in Murcia. Genísta terniflòra, Lag. nov. spec. 22. no. 290. Flowers yellow.

Genista-like Kidney-vetch. Shrub 1 to 2 feet.

5 A. Herma'nniæ (Lin. spec. 1014.) shrubby, much branched; branches spinescent, smoothish; leaves almost sessile, simple, or trifoliate; leaflets oblong-cuneated, glabrous or clothed with adpressed pubescence; heads few-flowered, nearly sessile in the axils of the upper leaves. ♄. F. Native of Corsica, Crete, Palestine, and in the islands of the Archipelago. Sims, bot. mag. 2576. Spártium spinòsum, Alp. exot. t. 26. Aspálathus Crética, Lin. spec. 1002. Cýtisus Græ'cus, Lin. spec. 1043. ex Smith, prod. fl. græc. 2. p. 60. Aspálathus erinàcea, Lam. dict. 1. p. 291. Flowers small, yellow. Calyx shorter and less villous.

Hermann's Kidney-vetch. Fl. April, July. Clt. 1739. Sh. 2 to 4 feet.

6 A. aspa'lathi (D. C. prod. 2. p. 169.) shrubby, much branched; branches spinescent, glabrous; leaves almost sessile, oblong-cuneated, simple, smooth; flowers nearly sessile, solitary along the tops of the branches. ♄. F. Native of the Levant and Crete. Aspálathus Créticus, Lin. spec. 1002. Spártium Créticum, Desf. cat. 213. Aspálathus spiniflòra, Lher. herb. Very like the preceding species, but differs in the flowers being smaller and solitary, the branches more spinescent. The stamens are also monadelphous, as in the rest of *Anthýllis*, not having the vagina cleft in front, as in *Aspálathus*. Flowers yellow. Lodd. bot. cab. 1169.

Aspalathus-like Kidney-vetch. Fl. April, July. Clt. 1824. Shrub 2 to 4 feet.

Sect. III. Erina'cea (from *erinaceous*, a hedge-hog; in reference to the shrubs being prickly). Clus. hist. 1. p. 107. with a figure. D. C. prod. 2. p. 169. Calyx evidently inflated and bladdery after flowering. Legume 1-celled, 1-2-ovulate, compressed, lanceolate, longer than the calyx. A much-branched, spiny, almost leafless shrub. Heads few-flowered, on short peduncles, bracteate.

7 A. erina'cea (Lin. spec. 1014.) shrubby; branches spinescent; leaves very few, oval, or oblong; flowers somewhat capitate. ♄. F. Native of Spain and Barbary. Andr. bot. rep. 1. t. 15. Sims, bot. mag. 676. Flowers bluish-purple.

Hedge-hog Kidney-vetch. Fl. April, July. Clt. 1759. Sh. ½ to 1 foot.

Sect. IV. Vulnera'ria (from *vulnerárius*, for wounds; in reference to reputed vulnerary properties in *A. vulnerària*.) D. C. leg. mem. VI. prod. 2. p. 169. Calyx evidently inflated and bladdery after flowering. Legume 1-celled, 1-2-seeded, shorter than the calyx, or equal to it, ovate. Heads of flowers bracteate. Shrubs or perennial herbs with impari-pinnate leaves.

8 A. ba'rba-jòvis (Lin. spec. 1013.) shrubby; leaves pinnate, and are as well as the branches clothed with silky tomentum; leaflets 9-13, oblong-linear, equal in size and shape; bracteas about equal in length to the globose, many-flowered head. ♄. F. Native of Spain, Barbary, the Levant, and Italy, on rocks. Sims, bot. mag. 1927. Barr. icon. t. 378. Duh. arb. ed. nov. 2. t. 67. Vulnerària argéntea, Lam. fl. fr. Bárba-jòvis argyrophýlla, Mœnch. Flowers pale-yellow.

Jupiter's-beard or Silver-bush. Fl. Mar. May. Clt. 1640. Shrub 4 to 8 feet.

9 A. sple'ndens (Willd. spec. 3. p. 1018.) shrubby; leaves pinnate, and are, as well as the branches, clothed with silky tomentum; bractea longer than the few-flowered head. ♄. F. Native of Crete. Perhaps only a variety of the preceding. Flowers yellow.

Splendid Kidney-vetch. Shrub 2 to 4 feet.

10 A. I'ndica (Lour. coch. p. 429.) shrubby; leaves pinnate, smooth; leaflets ovate, nearly equal; racemes oblong. ♄. G. Native of Cochin-china, on mountains. Calyx red. Corolla white. Perhaps the head of flowers is bracteate. A large scandent shrub.

Indian Kidney-vetch. Shrub cl.

11 A. heterophy'lla (Lin. spec. 1013.) shrubby, procumbent; leaves pinnate, silky; leaflets 17, lanceolate, acute; floral ones palmately-trifoliate; heads pedunculate, few-flowered. ♄. F. Native of Portugal and Spain. Flowers small, variegated, according to Tournefort.

Variable-leaved Kidney-vetch. Fl. June, July. Clt. 1768. Shrub procumbent.

12 A. seri'cea (Lag. nov. gen. et spec. p. 22. no. 291. but not of Willd.) shrubby, erect; leaves pinnate, clothed with silky pubescence; leaflets linear-oblong, unequal; floral ones palmately 3-5-foliate; heads pedunculate, few-flowered. ♄. F. Native of Spain, in the kingdom of Murcia.

Silky Kidney-vetch. Shrub 1 foot.

13 A. polyce'phala (Desf. fl. atl. 2. p. 150. t. 195.) herbaceous, procumbent; leaves pinnate, and are, as well as the branches, villous; leaflets 23-35, oval-oblong, equal, heads numerous, sessile, distant, alternate. ♃. F. Native of Algiers, in the fissures of rocks near Tlemsen. Flowers yellow.

Many-headed Kidney-vetch. Pl. 1 foot.

14 A. monta'na (Lin. spec. 1012.) herbaceous, tufted; leaves pinnate, and are, as well as the branches, white from villi; leaflets 15-19, oval-oblong; heads solitary, on long peduncles. ♃. H. Native of the Alps of Europe. Jacq. fl. austr. t. 334. Lam. ill. t. 615. f. 5. Lodd. bot. cab. 578.—Barr. icon. 722. Flowers pink or purplish.

Var. β, albiflòra; flowers white.

Mountain Kidney-vetch. Fl. Ju. July. Clt. 1759. Pl. ¼ to ½ ft.

15 A. vulnera'ria (Lin. spec. 1012.) herbaceous, erectish; leaflets pinnate, with 5 or more unequal leaflets, the lower ones smallest, and the terminal one much the largest; heads of flowers twin. ♃. H. Native of Europe, in fields and pastures frequent, where the soil is dry and rather barren; plentiful in Britain. D. C. fl. fr. no. 3850. Smith, engl. bot. 104. Vulnerària rústica, Lam. fl. fr. 2. p. 649. Vuln. heterophýlla, Mœnch. meth. 146. *Anthýllis vulnerària* is recommended as an excellent pasturage for sheep. A Mr. Young informs us that it abounds greatly in the best meadows of the Pyrenees, at the same time he says that its produce is not large. With us the whole plant is dry, and looked upon as astringent; this is owing most probably to its affecting dry calcareous soils; cultivated in a rich soil it would doubtless become more succulent. Gesner, it seems, first raised the report of the vulnerary properties of this plant, which perhaps, like other soft and downy applications, may on an emergency staunch the blood of rustic wounds, and give nature and a good constitution time to perfect a cure.

Var. a, lùtea; flowers yellow; leaves and stems villous or smooth. Lam. ill. t. 615. f. 1.

Var. β, albiflòra; flowers white.—Tourn. inst. 291. A. rústica, Mill. dict. no. 3.

Var. γ, rubiflòra; flowers red; leaves and stems sparingly villous or smooth.—Dill. hort. elth. 320. f. 413. A. Dillénii, Schultes in herb. Balb. This plant is said to grow wild in Pembrokeshire.

Var. δ, hirsutíssima; flowers scarlet or red; plant very hairy.

Var. ε, Alliònii; flowers yellow; leaves, stems, and heads very hairy. Astrágalus vulnerarioìdes, All. ped. no. 1278. t. 19. f. 2. exclusive of the description of the fruit.

Common *Wound-wort*. Fl. May, Aug. Britain. Pl. 1 foot.

16 A. polyphy'lla (Kit. ex Bess. in litt.) herbaceous; leaves pinnate, villous; leaflets 11-15, lower ones oblong, upper ones linear, terminal one largest; stem erect; heads aggregate. ♃. H. Native of Hungary, Volhynia, and Lithuania. Flowers yellow. A. vulnerària var. ζ polyphýlla, D. C. prod. 2. p. 170.

Var. β, Schiweréckia; flowers yellow; leaflets 9-13, all oval. A. vulnerària, Schiw. ex herb. Besser. Very like A. polycéphala of Desf.

Many-leafletted Wound-wort. Fl. May, Aug. Clt. 1816. Pl. 1 foot.

17 A. inci'sa (Willd. spec. 3. p. 1017.) herbaceous, erectish; leaves pinnate, with 1-2-pairs of wedge-shaped, deeply toothed, leaflets, terminal one largest. ♃. H. Native of the islands of the Archipelago. Flowers purplish-violet. Stipulas ovate. Head of flowers small.

Cut-leafletted Kidney-vetch. Pl. ½ to 1 foot.

Sect. V. Cornici'na (from *cornu*, a horn; in reference to the shape of the pods). D. C. leg. mem. vi. prod. 2. p. 170. Calyxes inflated. Legume glabrous, 2 or many-celled, the seeds separated by small dissepiments.—Annual herbs, with pinnate leaves, and yellow, capitate, bracteate flowers. Perhaps a proper genus.

18 A. tetraphy'lla (Lin. spec. 1012.) herbaceous, procumbent; leaves pinnate, the terminal leaflets ovate and large, the other 3 small and acute; heads axillary, sessile, few-flowered; legume straight, 2-celled, 2-seeded, inclosed within the calyx. ⊙. H. Native of the south of Europe, in exposed places. Vulnerària vesicària, Lam. fl. fr. 2. p. 650. Curt. bot. mag. 108.—Cam. hort. t. 47. Barr. icon. t. 554. Perhaps the leaves are trifoliate, furnished with a small acute stipule. Flowers white.

Four-leaved Kidney-vetch. Fl. July, Aug. Clt. 1640. Pl. decumbent.

19 A. cornici'na (Lin. spec. 1012.) herbaceous, erectish; leaves pinnate; leaflets 6-8, alternate, terminal one oblong, large, the rest oblong-linear; heads axillary, pedunculate; legume arched, 2-3-seeded, 2-3-celled, inclosed within the calyx. ⊙. H. Native of Spain.—Cav. icon. 1. t. 39. f. 2. Flowers pale-yellow. Stems erect, but usually procumbent.

Horned Kidney-vetch. Fl. July, Aug. Clt. 1759. Pl. ¾ foot.

20 A. hamòsa (Desf. fl. atl. 2. p. 151.) herbaceous, procumbent; leaves pinnate; leaflets 7-11, lanceolate, superior one largest; heads pedunculate; legume hooked, 1-6-seeded, longer than the calyx. ⊙. H. Native of Barbary, in corn-fields near Calle. A. cornicìna, Poir. itin.

Hooked Kidney-vetch. Fl. July, Aug. Clt. 1821. Pl. proc.

21 A. lotoi'des (Lin. spec. 1012.) herbaceous, erectish; leaves pinnate; leaflets 5, oblong-linear, nearly equal; heads of flowers pedunculate; legume straight, 6-8-seeded, 6-8-celled, longer than the calyx. ⊙. H. Native of Spain, in fields. Cav. icon. 1. t. 40. Lower leaves hairy, the terminal leaflet largest.

Lotus-like Kidney-vetch. Fl. June, July. Clt. 1739. Pl. ½ foot.

22 A. Chile'nsis (D. C. prod. 2. p. 171.) herbaceous, decumbent, hairy; leaves pinnate, with 4 elliptic-lanceolate or oblong, nearly equal leaflets; flowers axillary, solitary; legume straight, hairy. ⊙. ? H. Native of Chili, at Talcahuana. Lòtus utriculàtus, Domb. et Lag. herb. Lòtus subpinnàtus, Lag. nov. gen. 23. Stamens monadelphous. Legume longer than the calyx. Root fibrous, furnished with globose scattered tubercles. Stems numerous from the root.

Chili Kidney-vetch. Pl. decumbent.

Cult. All the species of *Anthýllis* are very beautiful when in flower. The hardy, herbaceous, perennial kinds thrive best in dry light soil, and are very readily increased by seeds; they are well adapted for ornamenting rock-work. The seeds of the hardy annual kinds should be sown in a rather dry warm situation in the open ground. The green-house and frame kinds thrive best in a mixture of loam, sand, and peat, most of them produce perfect seed, by which they are readily increased. Young cuttings of them will also root if planted in a pot of sand with a bell-glass placed over them; the glasses to be taken off and wiped occasionally to prevent damp.

Subtribe II. TRIFOLIE'Æ (plants agreeing with *Trifòlium* in some important characters). Bronn. diss. l. c. D. C. prod. 2. p. 171. Legume 1-celled. Stamens diadelphous. Stems herbaceous, rarely frutescent. Leaves usually palmate, with 3-5 leaflets, rarely impari-pinnate. Primordial ones alternate.

LXV. MEDICA'GO (from *Medike*, a name given by Dioscorides to a Median grass). Lin. gen. no. 1214. Gært. fruct. 2. p. 348. t. 155. f. 7. D. C. prod. 2. p. 171.

Lin. syst. *Diadélphia, Decándria.* Calyx somewhat cylindrical, 5-cleft. Carina rather remote from the vexillum (f. 30. *b.*). Stamens diadelphous. Legume many-seeded, of various forms, reniform, falcate, cochleate, but usually twisted in a spiral manner (f. 30. *c.*).—Herbs or shrubs. Stipulas usually cut. Leaves stalked, trifoliate in all; leaflets usually toothed. Peduncles axillary, 1-2 or many-flowered. Flowers yellow.

Sect. I. Lupula'ria (from *lupulus*, hops. The *M. lupulìna* is called *Hop-Trefoil*, from the heads of flowers resembling hops). Ser. mss. in D. C. prod. 2. p. 172. Legume reniform, falcate, or somewhat cochleate, glabrous or pubescent, with entire margins.—Leaves trifoliate.

1 M. rupe'stris (Bieb. fl. taur. 2. p. 225. suppl. p. 517.) stems prostrate; leaves trifoliate; leaflets oblong, cuneiform, toothed at the apex, pubescent; peduncles usually 2-flowered; legume reniformly twisted, reticulated, hoary; seeds rather ovate, brown; radicle hardly prominent. ♃. H. Native of Tauria, among calcareous rocks. Allied to *M. prostràta*, but differs in the peduncles being few-flowered, in the flowers being smaller, and in the legumes being less twisted.

Rock Lucern. Fl. June, July. Clt. 1820. Pl. ascending.

2 M. brachyca'rpa (Fisch. in Bieb. fl. taur. suppl. p. 517.) pilose; stem ascending; leaves trifoliate; leaflets obovate, denticulated, with numerous nerves; stipulas lanceolate-linear; heads spherical; calycine segments 3 times longer than the tube, linear; legumes 1-seeded, with numerous transverse and parallel nerves; the seminiferous margin thick and straight; seeds ovate, cordate, compressed. ⊙. H. Native of Tauria, near Tiflis.

Short-fruited Medick. Fl. May, Jul. Clt. 1823. Pl. prostrate.

3 M. lupuli'na (Lin. spec. 1097.) stem procumbent; leaves trifoliate; leaflets obovate-cuneated, denticulated at the apex; stipulas lanceolate, acute, toothed; peduncles bearing ovate spikes of flowers; flowers sessile; legumes reniform, 1-seeded, arched, reticulated; seeds ovate, somewhat kidney-shaped. ⊙. H. Native of Europe, in meadows, pastures, and cultivated fields; plentiful in Britain. Smith, engl. bot. 971. Fl. dan. 992. Curt. fl. lond. fasc. 2. t. 57. Mart. fl. rust. t. 19.—Fuchs. hist. 819. icon. M. Willdenòvii, Mer. fl. par. 296. is a variety having the stem and leaves more or less pilose. This is one of the most valuable of artificial grasses, affording excellent fodder for sheep. For its culture and uses see *Trifòlium procúmbens.*

Var. β, polistàchya (Ser. mss. D. C. prod. 2. p. 272.) heads aggregate into a terminal raceme; leaflets large. ⊙. H. Native of Switzerland, about Bern.

Var. γ, corymbòsa (Ser. mss. D. C. prod. 2. p. 172.) flowers almost abortive and corymbose; pedicels filiform, elongated. ⊙. H. Native about Geneva.

Hop-Trefoil or Black Nonsuch. Fl. May, Aug. Brit. Pl. tr.

4 M. mnioca'rpa (Wallr. in litt.) stems procumbent; leaflets obovate-cuneated, denticulated at the apex; stipulas lanceolate, acute, almost entire; flowers apetalous, disposed in racemose spikes; legumes falcate, hardly nerved, stipulate, unguiculate. ⊙. H. Native of Switzerland about Longirod, and of Belgium.

Moss-fruited Medick. Fl. May, Aug. Clt. 1816. Pl. prostrate.

5 M. creta'cea (Bieb. fl. taur. 2. p. 223. suppl. 517.) glabrous; stems ascending, suffruticose; leaves trifoliate; leaflets nearly orbicular, coriaceous, almost entire, having numerous nerves; stipulas lanceolate, acute, nerved; peduncles many-flowered; legume falcately-reniform, quite entire, rayed with numerous nerves. ♃. H. Native of Tauria, in sterile cretaceous places. M. nummulària, Stev. in Bess. cat. hort. crem. 1816. p. 85. but not of D. C. Flowers the colour and form of those of *M. falcàta*, but a little smaller. A very distinct species.

Cretaceous Lucern. Fl. July. Clt. 1805. Pl. 2 to 3 feet long.

6 M. corymbífera (Schmidt in Schlecht. Linnæa. 4. p. 74.) stems ascending; leaflets obovate-cuneated, denticulated at the apex; stipulas toothed; corymbs compound, dense; peduncles and pedicels beset with glandular pili; legume reniform, rugose, pilose, 1-seeded. ⊙. H. Native on the shores of the Baltic sea.

Corymb-bearing Medick. Pl. ascending.

7 M. falca'ta (Lin. spec. 1096.) stems prostrate; leaflets oblong, toothed at the apex; stipulas quite entire; peduncles racemose; legumes falcate, smoothish or pubescent; seeds oblong; radicle hardly prominent. ⊙. H. Native of Europe, in dry, mountainous pastures. In Britain on dry gravelly banks and old walls; between Watford and Bushy-hill by the foot-way; in Cambridgeshire; common about Norwich in gravelly fields, and on many parts of the city walls, also about Bury St. Edmund. Smith, engl. bot. 1016. Flowers usually pale-yellow, but occasionally violet and green. This is said to be the kind of *lucern* cultivated in Switzerland. For its culture see *M. sativa.*

Var. β, annulàris (Ser. mss. D. C. prod. 2. p. 172.) leaflets narrower and smaller; legumes more arched. ⊙. H. M. annulàris, Besser. in litt.

Var. γ, túmida (Ser. mss. D. C. prod. 2. p. 173.) flowers tumid; carpels tumid. ⊙. H. About Geneva.

Falcate-podded Lucern. Fl. July. Britain. Pl. prostrate.

8 M. procu'mbens (Besser. prim. fl. galiz. 2. p. 127.) stems procumbent; leaflets oblong-linear, toothed at the apex; stipulas toothed at the base; peduncles racemose; legume falcate, almost naked, reticulated, 2-seeded; seeds irregularly cordate. ♃. H. Native of Cracovia, in dry fields and on hills. Perhaps only a variety of *M. falcàta*, but differs in the legumes being a little broader, short and long in the same specimen.

Procumbent Lucern. Fl. Ju. July. Clt. 1818. Pl. prostrate.

9 M. cancella'ta (Bieb. fl. taur. 226. but not of Ten.) stems prostrate; leaflets oblong-cuneiform, toothed at the apex, quite smooth; stipulas subulate, lower ones denticulated; peduncles many-flowered; legume cochleate, reticulately-veined, glabrous, with the veins radiating towards the margins. ♃. H. Native of Caucasus. Flowers fewer and smaller than in *M. falcàta*, always yellow.

Latticed-veined Lucern. Fl. June, July. Clt. 1818. Pl. prostrate.

10 M. suffruticòsa (Ram. in D. C. fl. fr. 4. p. 341.) stems prostrate, suffruticose; leaflets obovate-roundish, almost entire or obcordate; stipulas lanceolate, broad, toothed; peduncles racemose, twice the length of the petioles; legume pubescent, almost spiral, reticulated with arched veins; seeds irregularly

cordate, with a prominent radicle. ♃. H. Native of the Pyrenees. Flowers at first rather violaceous, but at length becoming yellow.

Suffruticose Lucern. Fl. June, July. Clt. 1820. Pl. prostrate.

11 M. ARBÒREA (Lin. spec. 1096.) villous, shrubby; leaflets obovate-cordate, nearly entire; stipulas linear, acute, entire; peduncles racemose; legumes stipitate, twisted, reticulated from transverse veins, 2-3-seeded; seeds somewhat kidney-shaped. ♄. F. Native of Italy.--Lob. icon. 2. p. 46.

Tree Medick. Fl. May, Nov. Clt. 1596. Shrub 6 to 8 feet.

12 M. SIBI'RICA (D. C. prod. 2. p. 173.) stems herbaceous, villous at the apex; leaflets obovate-roundish, ciliated, a little toothed; stipulas broad, semi-ovate, acuminated, toothed on the outside; spikes oblong, crowded; calycine segments setaceous, unequal; legume lenticular, rather villous. ⊙. H. Native of Siberia. Melilòtus Sibírica, Poir. suppl. 3. p. 647. Flowers small, yellow. Calyx at length cleft on the upper side.

Siberian Lucern. Fl. June, July. Clt. 1817. Pl. prostrate.

13 M. ME'DIA (Pers. ench. 2. p. 356.) stems ascending; leaflets linear-cuneated, retuse, toothed at the apex, pilose beneath; peduncles corymbose; flowers pale-blue, at length yellow. ♃. H. Native of Europe, in meadows, on hills, and in divisions of fields. M. falcàta, Lam. dict. 3. p. 639. Perhaps only a variety of *M. satìva.*

Intermediate Lucern. Fl. Ju. July. Clt. 1817. Pl. 1 to 2 ft.

14 M. SATI'VA (Lin. spec. 1096.) stems erect, glabrous; leaflets obovate-oblong, toothed, mucronate; stipulas lanceolate, somewhat toothed; peduncles racemose; legumes smooth, cochleately-twisted, finely reticulated; seeds flat, irregularly-ovate or irregularly cordate, brownish. ♃. H. Native of Spain, but now cultivated throughout Europe in fields. In Britain, but hardly a native. Smith, engl. bot. 1749. Mart. rust. 48.--Clus. hist. 2. p. 242. Flowers large, violet.

Lucern or *medick* is highly extolled by Roman writers; it is much grown in Persia and Lima, and mown in both countries all the year round; it is also of unknown antiquity in old Spain, Italy, and the south of France. It was introduced, according to Miller, from the latter country in 1657. It is now only cultivated in a few places, and chiefly in Kent. Columella estimated *lucern* as the choicest of all fodders, because it lasted many years, and bore being cut down 4 or 5 times every year. About three quarters of an acre of it is, he thinks, sufficient to feed three horses during the whole year. But though it was so much esteemed by the ancients, and has been long cultivated to advantage in France and Switzerland, it has yet found no great reception in this country. Where the climate and soil suit, a field of it perhaps may be advantageously sown to afford early cutting or food for young or sick animals, for which it is said to be well adapted; but though it will produce good crops for 8 or 10 successive years, yet from the time the farmer must wait till this crop attains its perfection, and from the care requisite to keep it from grass and weeds, it is not likely that the plant will ever come into general culture in this country. *Lucern* has been observed to thrive best in dry, sandy, chalky, marly or gravelly soils; in short, all soils that are good enough for wheat, and dry enough for turnips, to be fed on the land, do well for *lucern.* The latter end of March is the best time for sowing *lucern* seed, which will allow the plants to be fully established before the hot months. If the plants be intended to be transplanted out in the garden method, it will also be the best practice to sow the seed-bed as early in the spring as the frosts will admit, in order that they may be strong enough and fit to set out early in August. *Lucern* may be either sown broad-cast or in drills, and either with or without an accompanying crop of corn the first year. Broad-cast and a very thin crop of barley or other spring crop is generally preferred. Drilling, however, at nine inches apart, perhaps has many advantages over the broad-cast method, especially as far as regards keeping the crop clean and free from weeds. The quantity of seed required in the broad-cast method is said to be 15 to 20 pounds per acre, and from 8 to 12 if drilled. The same depth of covering as for clover will answer. Transplanting is sometimes resorted to, but it does not seem to us adviseable, unless for filling up blanks. The after culture of *lucern,* sown broad-cast, consists in harrowing to destroy weeds, rolling after the harrowing to smooth the soil for the scythe, and such occasional top-dressings of manure as the state of the plants may seem to require. Where *lucern* is drilled horse-hoeing may be substituted for harrowing, which is, as already observed, the only advantage of this mode of sowing. *Lucern* frequently attains a sufficient height for the scythe towards the end of April, and in soils that are favourable for its culture will be in a state of readiness for a second cutting in the course of six weeks longer, being capable of undergoing the same operation at nearly similar distances of time during the whole of the summer season. The application of *lucern* is nearly the same as clover, the principal practice in its application is that of soiling horses, neat cattle, and hogs; but as a dry fodder it is also capable of affording much assistance, and as an early food for ewes and lambs may be of great value in particular cases. All agree in extolling it as a food for cows, whether in a green or dried state. It is said to be much superior to clover, both in increasing milk and butter, and improving their flavour. Care must be taken not to give the animals too much of it in a green state, as they may be hoven or blown with it as with clover. The produce of *lucern* may be estimated as equal in bulk and value to a crop of red clover. The nutritive product of *lucern,* according to Sir H. Davy, is $2\frac{3}{10}$ per cent.; as to that of clover and saintfoin, as 23 to 39. The diseases of *lucern* are the same as those of clover, and the manner of saving seed the same.

Var. β, versícolor (Ser. mss. D. C. prod. 2. p. 173.) flowers yellow and blue on the same plant. M. falcàta versícolor, Wallr. sched. crit. p. 398. M. lùteo-cœrùlea, Hortul.

Cultivated Lucern. Fl. June, Aug. Britain. Pl. 2 feet.

15 M. PROSTRA'TA (Jacq. hort. vind. 1. p. 39. t. 89.) stems prostrate; leaflets linear, toothed at the apex; stipulas linear-subulate, toothed at the base, and having numerous parallel nerves; peduncles racemose; legumes smooth, cochleately-twisted, finely reticulated, 2-seeded; seeds exactly reniform, black. ♃. H. Native of Hungary, Willd. spec. 3. p. 1405. M. declinàta, Kit. in litt. Allied to *M. falcàta,* but the legume is more twisted and much smaller. Flowers yellow.

Prostrate Lucern. Fl. June, Jul. Clt. 1793. Pl. prostrate.

16 M. INTERME'DIA (Schult. obs. p. 160.) stem procumbent; leaflets linear, obcordate, rather serrulated at the apex; stipulas sagittate; peduncles bearing corymbose racemes; legumes falcate, rather pubescent. ♃. H. Native of Galicia.

Intermediate Lucern. Pl. procumbent.

17 M. GLOMERA'TA (Balb. elench. 93. D. C. fl. fr. 4. p. 540.) stems erectish; leaflets obovate-oblong, cuneiform, emarginate, and mucronate, hardly toothed; stipulas lanceolate, acute, hardly toothed at the base; peduncles racemose; legumes twisted, obscurely and reticulately veined, pubescent; seed oblong-reniform, brownish. ♃. H. Native of the mountains of Tenda, near Barra, and on hills about Turin.

Glomerate-flowered Lucern. Fl. Ju. Jul. Clt. 1817. Pl. 1 to 2 ft.

18 M. GLUTINÒSA (Bieb. casp. p. 191. append. no. 60. fl. taur. 2. p. 224. et suppl. 516.) clothed with clammy hairs; stems ascending; leaflets obovate-cuneiform, somewhat retuse, pilose, obsoletely toothed; stipulas lanceolate, toothed a little at the base; peduncles racemose; calycine segments broad at the base, length of tube; legume twisted, cochleate, reticulately

veined, pubescent. ♃. H. Native of Caucasus, in mountain meadows. Flowers violet and yellow. Calyx clammy.

Var. β, *Panzeriana* (Ser. mss. in D. C. prod. 2. p. 174.) stem pilose, but the rest of the plant is quite smooth; leaflets obcordate, cuneiform. M. glutinòsa, Panzer, in litt.

Clammy Lucern. Fl. June, July. Clt. 1817. Pl. 1 to 2 ft.

Sect. II. Spiroca'rpus (from σπειρα, *speira*, a spire, and καρπος, *karpos*, a fruit; in reference to the fruit of all the species being spirally twisted (f. 30. *c.*). Ser. mss. in D. C. prod. 2. p. 174. Legume twisted into an orbicular form (f. 30. *c.*), pilose, or glabrous, with the margins either entire, wrinkled, or spiny. Leaves trifoliate.

§ 1. *Legumes with thin, unarmed margins.*

19 M. obscu'ra (Retz, obs. fasc. 1. p. 24. t. 1.) stems decumbent; leaflets obovate-rhomboid, denticulated, having numerous prominent nerves; stipulas lanceolate, profoundly toothed; peduncles racemose, many-flowered; legume reniform, or twisted into an orb, quite entire, glabrous, radiately veined, 2-seeded. ⊙. H. Native of the south of France. M. lenticulàris, Desr. in Lam. dict. 3. p. 630. Seeds exactly reniform, brown.

Var. β, *triflòra* (Ser. in D. C. prod. 2. p. 174.) peduncles 3-flowered; leaflets very acutely toothed; legume somewhat coriaceous, twisted into a round form, having prominent nerves.

Obscure Medick. Fl. June, Aug. Clt. 1734. Pl. procumb.

20 M. interme'dia (D. C. herb.) the same as the last species, but differs in the legumes being furnished with warted nerves, and in the seeds being yellow. ⊙. H. Native about Naples. M. obscùra, var. γ, rugulòsa, Ser. mss. in D. C. prod. 2. p. 174.

Intermediate Medick. Fl. June, Aug. Clt. 1817. Pl. pr.

21 M. læ'vis (Desf. fl. atl. 2. p. 213.) procumbent; leaflets obovate, toothed; stipulas dentately-pinnatifid, the segments bristle-formed; peduncles many-flowered; legume unarmed, cochleate, orbicular, flat. ⊙. H. Native of the north of Africa, in fields. M. hèlix, Willd. spec. 3. p. 1409. Legume nearly like that of *M. obscùra*.

Smooth Medick. Fl. July, Aug. Clt. 1816. Pl. tr.

22 M. orbicula'ris (All. ped. no. 1150.) stems diffuse; leaflets obcordate, toothed at the apex; stipulas jagged, the segments very narrow and diverging; peduncles 1-2-flowered; legumes cochleate, compressed, glabrous, irregularly and reticulately veined, many-seeded; seeds subtriangular, rugged from dots. ⊙. H. Native of the south of Europe. M. orbiculàta, J. Bauh. hist. 2. p. 384. Gærtn. fruct. 2. p. 155.—Mor. hist. 2. t. 15. f. 2. M. polymórpha *a*, Lin. spec. 1097.

Var. β, *microcárpa* (Moricand, herb.) fruit smaller.

Orbicular-fruited Medick. Fl. Jul. Aug. Clt. 1688. Pl. diff.

23 M. margina'ta (Willd. enum. p. 802.) procumbent; leaflets obovate, dentate; stipulas divided into many setaceous segments; peduncles usually 2-flowered; legume unarmed, twisted into an orbicular, flat form, the circles loose. ⊙. H. Native of the south of Europe.—Moris. hist. sect. 2. t. 15. f. 2. This species is very like the preceding, but differs in the legumes being flat on both sides. It is perhaps only a variety of *M. orbiculàris*.

Margined Medick. Fl. June, Aug. Clt. 1816. Pl. trail.

24 M. applana'ta (Willd. suppl. p. 52. ex Horn. hort. hafn. suppl. p. 85.) procumbent; leaflets obovate, toothed; stipulas divided into many setaceous segments; peduncles usually 1-flowered; legumes unarmed, orbicular, flattish on both sides, and ciliated on the margins, the circles distant and large. ⊙. H. Native of? Perhaps only a variety of *M. orbiculàris*.

Flat-podded Medick. Fl. June, Aug. Clt. 1810. Pl. trail.

25 M. scutella'ta (All. ped. no. 1155.) pilose; stems diffuse; leaflets obovate, toothed around; stipulas lanceolate, toothed; peduncles 1-2-flowered; legume cochleate, many-seeded, hemispherically convex above, but flat below, beset with dense, oblique, reticulated veins; the veins thin at the margins, and anastomosing; seeds large, kidney-shaped, smooth, brown. ⊙. H. Native of the south of Europe. Gærtn. fruct. 2. t. 155. f. 7.—J. Bauh. hist. 2. p. 384. with a figure.—Moris. hist. sect. 2. t. 15. f. 3. M. polymórpha β, Lin. spec. 1097.

Dish-like-podded Medick. Fl. Ju. Aug. Clt. 1562. Pl. diff.

26 M. rugòsa (Lam. dict. 3. p. 632.) procumbent; leaflets obovate-rhomboid, denticulated towards the apex; stipulas lanceolate, toothed; peduncles 2-4-flowered; legume having 2-3 circles, obliquely and reticulately veined, the veins becoming thicker towards the margins, but the margin is smooth and thinner; seeds reniform, compressed, dark, truncate at the apex. ⊙. H. Native of the south of Europe. M. élegans, Willd. spec. 3. p. 1408.—Moris. hist. 2. sect. 2. t. 15. f. 4.

Wrinkled-fruited Medick. Fl. June, Aug. Clt. 1680. Pl. pr.

27 M. saxa'tilis (Bieb. fl. taur. 2. p. 225.) procumbent; leaflets oblong-cuneiform, toothed at the apex, rather pubescent; stipulas subulate, a little toothed; peduncles few-flowered; legume cochleate, veiny, with the margins beset with spiny denticulations, glabrous. ♃. H. Native of Tauria, on rocks. Legume about the size of that of *M. rupéstris*, but the form is different, the windings being only 3 or 4.

Rock Medick. Fl. June, Aug. Pl. procumbent.

§ 2. *Legumes with thickened, unarmed margins.*

28 M. torna'ta (Willd. spec. 3. p. 1409.) stems diffuse; leaflets obovate, denticulated; stipulas ciliately-toothed; peduncles many-flowered; legume twisted into a cylindrical form, truncate at both ends, glabrous, with thick, smooth, nerveless margins, having the circles almost concrete; seeds kidney-shaped, truncate at the apex, smooth, orange-coloured. ⊙. H. Native of the south of Europe. M. polymórpha γ, tornàta, Lin. spec. 1098.

Turned-podded Medick. Fl. June, Aug. Clt. 1658. Pl. diff.

29 M. turbina'ta (Willd. spec. 3. p. 1409.) stems diffuse; leaflets obovate-rhomboid, toothed; stipulas lanceolate, toothed; peduncles usually 2-flowered; legumes twisted into an ovate form, convex at both ends, with thick, lined, somewhat concrete margins; seeds kidney-shaped, truncate at the apex, pale-yellow. ⊙. H. Native of the south of Europe. M. polymórpha δ, turbinàta, Lin. spec. 1098.—Moris. hist. 2. p. 153. sect. 2. t. 15. f. 5.

Turbinate-podded Medick. Fl. Ju. Jul. Clt. 1680. Pl. diff.

30* M. tubercula'ta (Willd. spec. 3. p. 1410.) stems procumbent; leaflets obovate-rhomboid, toothed; stipulas lanceolate, toothed; peduncles 1-2-flowered; legume twisted into an ovate form, with thick, subconcrete margins, bearing a double row of tubercles, leprous in the summer; seeds reniform, truncate at the apex, yellow. ⊙. H. Native of the south of Europe. M. mágna turbinàta, J. Bauh. hist. 2. p. 385. f. 1.—Moris. hist. sect. 2. t. 15. f. 6.?

Tubercled Medick. Fl. June, Aug. Clt. 1658. Pl. pr.

31 M. olivæfórmis (Moris. elench. sard. 1827. fasc. 1.) pubescent; leaflets somewhat rhomboidal-obovate, denticulated; stipulas lanceolate, toothed; peduncles few-flowered; legumes cochleate, ovate, pubescent, having 6-7 turnings, with very thick, reticulated, warted, or tubercled margins. ⊙. H. Native of Sardinia.

Olive-formed-podded Medick. Pl. prostrate.

32 M. stria'ta (Bast. journ. bot. 1814. 3. p. 19.) stems procumbent; leaflets obovate, denticulated; stipulas lanceolate, toothed; peduncles 5-6-flowered; legumes with 3-5 circles, twisted into a cylindrical form, having thickened margins, beset

with mamillary dots above, and marked with lines beneath; seeds reniform, truncate at the apex, small, brownish. ⊙. H. Native of Scandinavia, in sand on the sea-shore. M. tricycla, D. C. cat. monsp. 125.

Striated-podded Medick. Fl. June, Aug. Clt. 1820. Pl. pr.

§ 3. *Legumes spiny.*

33 M. APICULA'TA (Willd. spec. 3. p. 1414.) stems prostrate; leaflets obovate, hardly denticulated at the apex; stipulas ciliately-toothed; peduncles 3-7-flowered; legumes cochleate, flat at both ends, of 3 circles, reticulate and somewhat lacunose, having muricated, smooth margins; spines straight, diverging; seeds oblong-kidney-shaped, yellow. ⊙. H. Native about Nice, in corn-fields. M. coronàta, Gærtn. fruct. 2. p. 155. f. 7. but not of Lam. M. muricàta γ, Lam. dict. 3. p. 635. M. polycárpa, Willd. enum. suppl. 52. M. polycéphala, Hortul.

Apiculated Medick. Fl. June, Aug. Clt. 1800. Pl. prost.

34 M. CATALO'NICA (Schrank, hort. mon. t. 28.) pubescent; stems elongated, diffuse; leaflets rhomboidal-ovate, denticulated; stipulas toothed; peduncles many-flowered; legume cochleate, compressed, having 4 muricated circles. ⊙. H. Native of Catalonia. Allied to *M. spinulòsa.*

Catalonian Medick. Fl. June, Aug. Clt. 1820. Pl. diff.

35 M. DENTICULA'TA (Willd. spec. 3. p. 1414.) stems prostrate; leaflets obovate or obcordate, denticulated; stipulas ciliately-toothed; legumes flat at both ends, having 2 circles, obliquely reticulated, with prickly smooth margins, the prickles diverging and hooked; seeds oblong-kidney-shaped, rather truncate at the apex. ⊙. H. Native of the south of France, and about Conception, in Chili. This species comes very near to *M. apiculàta*, but differs in the legumes being larger, and in the spines being longer and hooked.

Var. β, ciliàris (Ser. mss. in D. C. prod. 2. p. 176.) prickles elongated. *M. ciliàris*, Savi, cent. p. 148. but not of Willd.

Denticulated Medick. Fl. June, Aug. Clt. 1800. Pl. prost.

36 M. GLOBULÒSA (Desv. journ. bot. 1814. 1. p. 77.) stems procumbent, hairy; leaflets somewhat rhomboidal, crenated, rather pilose; peduncles usually 2-flowered; legume twisted into a globose form, glabrous, having 7 approximate circles, bearing remote incurved prickles on the back. ⊙. H. Native of Numidia.

Globulose-fruited Medick. Fl. June, Aug. Pl. procumbent.

37 M. FLEXUÒSA (Ten. cat. 1819. p. 54.) glabrous, procumbent; leaflets obovate, retuse, toothed; stipulas ciliately-toothed; peduncles many-flowered; legume cochleate, flexuous, glabrous, having only 2 circles, which are reticulated and prickly, the prickles arched and short. ⊙. H. Native of Naples, in fields.

Flexuous-podded Medick. Fl. June, Aug. Clt. 1819. Pl. tr.

38 M. GLOBULÍFERA (Poir. dict. suppl. 3. p. 526.) smoothish; stems erect; leaflets ovate, denticulated; stipulas pinnatifidly-jagged; peduncles 3-4-flowered; legume twisted into a globose form, usually with 3 circles, having short, hispid, straight prickles. ⊙. H. Native of?

Globe-bearing Medick. Pl. 1 foot.

39 M. SPINULÒSA (D. C. fl. fr. 5. p. 569.) pilose; stems prostrate; leaflets obovate or obcordate, sharply denticulated; stipulas lanceolate, toothed; peduncles 2-flowered; legume cochleate, egg-shaped, having 3-4 circles, prickly beneath the margins, the prickles straight, converging, and adpressed, concrete, hardly longer than the lacunose margins; seeds reniform, brown, rather truncate at the apex. ⊙. H. Native of the south of France, and of the islands of the Archipelago. M. apiculàta, Bast. ess. p. 280. but not of Willd. M. rugòsa, D'Urv. enum. p. 98. but not of Lam.

Spinulose Medick. Fl. June, Aug. Clt. 1820. Pl. prostr.

40 M. PUBE'SCENS (D. C. cat. monsp. p. 124. but not of Horn.) plant prostrate, clothed with soft pubescence or villi; stems elongated; leaflets broad, obovate, denticulated; stipulas lanceolate, acuminated, somewhat denticulated at the base; peduncles 5-8-flowered; legumes cochleate, having 2-3 circles, smooth, hardly arcuately reticulated under the margin; the prickles thick, converging, straight, adpressed, longer than the margin. ⊙. H. Native about Montpelier.—J. Bauh. hist. 2. p. 385. with a figure. Very like *M. spinulòsa*, but differs in the prickles being much longer than the margins.

Pubescent Medick. Fl. Ju. Aug. Clt. 1819. Pl. prostrate.

41 M. SARDÒA (Moris. elench. sard. p. 15.) smoothish; leaflets rhomboidal-obovate, denticulated, mucronate; stipulas jagged; peduncles many-flowered; legumes cochleate, cylindrical, having 4 turnings, reticulately nerved, prickly on the margins. ⊙. H. Native of Sardinia.

Sardoa Medick. Fl. June, Aug. Pl. prostrate.

42 M. TEREBE'LLUM (Willd. spec. 3. p. 1416.) stems prostrate; leaflets obovate, retuse, toothed; stipulas ciliately-toothed; peduncles many-flowered; legume twisted into a cylindrical form, flat at both ends, having 5 reticulated, smooth circles; the prickles very short, distinct, subulate, and spreading; seeds reniform and dark. ⊙. H. Native of the south of Europe. M. aculeàta, Gærtn. fruct. 2. p. 349. t. 155. f. 7.

Awl-spined Medic. Fl. June, Aug. Clt. 1798. Pl. prostr.

43 M. MARÌNA (Lin. spec. 1097.) plant densely clothed with tomentum, procumbent; leaflets cuneiform, quite entire; stipulas lanceolate, entire; peduncles many-flowered; legumes cochleate, obliquely nerved, rather spiny; seeds exactly kidney-shaped, yellow. ♃. H. Native of Europe, by the sea-side. Gærtn. fruct. 2. p. 155. f. 7. Cav. icon. 2. t. 130.

Sea-side Medick. Fl. June, Aug. Clt. 1596. Pl. prostrate.

44 M. CORONA'TA (Lam. dict. 3. p. 634.) villous; stems prostrate; leaflets obovate or obcordate-roundish, small, denticulated; stipulas lanceolate, entire; peduncles 4-7-flowered, much longer than the leaves; legume cochleate, of 1 or 2 circles, villous, reticulated, the form of a crown, having divaricate, marginal, parallel, straight prickles; seeds reniformly-lunulate, small, brown. ⊙. H. Native of the south of Europe, Egypt, &c.—Moris. hist. sect. 2. t. 15. f. 16. M. coronàta Cherlèri, J. Bauh. hist. 2. p. 386. with a figure. M. polymórpha coronàta, Lin. spec. 1098.

Crown-formed-podded Medick. Fl. June, Aug. Clt. 1668. Pl. prostrate.

45 M. TENTACULA'TA (Willd. spec. 3. p. 1413.) prostrate; leaflets obovate, toothed; stipulas subulate, toothed; peduncles usually 2-flowered; legume cochleate, cylindrical, flat at both ends; prickles smooth, lanceolate, distich, closely adpressed. ⊙. H. Native of the south of Europe. M. truncatulàta, Gærtn. fruct. 2. p. 350. t. 155. f. 7.

Tentaculated Medick. Fl. June, Aug. Clt. 1800. Pl. prost.

46 M. HORNEMANIA'NA (Ser. mss. D. C. prod. 2. p. 177.) stems hairy; leaflets rhomboid-obovate, toothed, pubescent; stipulas jagged; peduncles 2-3-flowered; legume twisted into a cylindrical form, rather pilose, small, with the circles approximate; prickles strong, subulate, reflexed, hooked. ⊙. H. Native of Morocco. M. pubéscens, Horn. hort. hafn. 2. p. 726. but not of D. C.

Horneman's Medick. Fl. June, Aug. Clt. 1818. Pl. trailing.

47 M. LITTORA'LIS (Rhode in Lois. not. 118. but not of Tenore,) villous; stems procumbent; leaflets obcordate or obovate-cuneiform, toothed at the apex; stipulas lanceolate, toothed; peduncles 2-4-flowered; legumes twisted, subcylindrical, glabrous, with 4 circles, obliquely and flexuously reticu-

lated, and with prickly margins; circles thick, coriaceous; prickles stiff, rather hooked; seeds reniform, bay-coloured. ⊙.? ♃.? H. Native of Europe, by the sea side.—J. Bauh. hist. 2. p. 385. with a figure.

Var. β, *brevisèta* (D. C. fl. fr. 5. p. 568.) prickles short, straight. M. polymórpha rigídula, Bert. pl. gen. 97. exclusive of the synonymes.

Shore Medick. Fl. June, Aug. Clt. 1822. Pl. prostrate.

48 M. LAPPA'CEA (Lam. dict. 3. p. 637.) smoothish; stems procumbent; leaflets obcordate, toothed; stipulas ciliately-toothed; peduncles 3-5-flowered; legumes twisted, smooth, obliquely and flexuously-nerved, having 3 circles, and with the margins prickly; prickles long, hooked; seeds kidney-shaped, rather truncate, yellow. ⊙. H. Native about Montpelier, and also about Naples. M. híspida, Gært. fruct. 2. p. 155. f. 7.? Allied to *M. littoràlis*, but the legume and seeds are larger.

Burdock Medick. Fl. June, Aug. Clt. 1810. Pl. trailing.

49 M. PENTACY'CLA (D. C. cat. monsp. p. 124.) rather pilose; stems prostrate; leaflets obovate, denticulated; stipulas ciliately-toothed; peduncles many-flowered; legume cochleate, glabrous, convex at both ends; circles 5, reticulated with lacunæ above; spines long, diverging, hooked at the apex; seeds ovate-reniform, compressed, bay-coloured. ⊙. H. Native about Narbonne.—Moris. hist. sect. 2. t. 15. f. 19.? Like the preceding, and perhaps not distinct.

Five-circled Medick. Fl. June, Aug. Clt. 1820. Pl. trailing.

50 M. HI'STRIX (Ten. prod. p. 45. cat. 1819. p. 58) glabrous, prostrate; leaflets obovate, retuse, denticulated; stipulas pectinately-multifid: peduncles usually 2-flowered, longer than the leaves; legumes cochleate, cylindrical, compressed at both ends; circles 5, rather distant; prickles subulate, diverging, hooked, rather pilose. ⊙. H. Native in fields about Naples. This plant differs from *M. ciliàris* in the legumes being glabrous, and from *M. lappàcea*, Lam.

Porcupine Medick. Fl. June, Aug. Clt. 1820. Pl. prostrate.

51 M. DIFFU'SA (Poir. suppl. 3. p. 524.) stems diffuse; leaflets obcordate, small; stipulas broad, ciliated; peduncles usually 3-flowered; legume cochleate, globose, having 5 circles; prickles straight, hooked at the apex. ⊙. H. Native of Teneriffe, on rocks. This plant differs from *M. lappàcea* in the leaflets and fruit being smaller.

Diffuse Medick. Fl. June, Aug. Pl. diffuse.

52 M. DISCIFÓRMIS (D. C. cat. monsp. p. 124.) plant pilose; stems procumbent; leaflets obcordate, dentate: stipulas lanceolate, toothed; peduncles 3-4-flowered; legume cochleate, glabrous, having 5 approximate circles, which are veiny beneath, and flat above, the 4 lower circles have their margins furnished with long setaceous spines, which are hooked at the apex, the fifth circle naked from abortion; the margins of the whole channelled between the spines. ⊙. H. Native about Montpelier, in sterile places. The herb is like *M. mínima*, but the form of the legume is very distinct from all the other species.

Disk-formed Medick. Fl. June, Aug. Clt. 1822. Pl. prostrate.

53 M. CARSTIE'NSIS (Jacq. icon. rar. 1. t. 156.) stem erect, branched; leaflets ovate, toothed; stipulas lanceolate, toothed; peduncles racemose; legume cochleate, compressed at both ends, obliquely-nerved, having about 3 or 4 circles, green, but at length black; the margins thin, nerveless, and spiny; spines long, straight, hardly diverging; seeds rather reniform, bay-coloured. ♃. H. Native of the Alps of Carinthia, about Carst. Sims, bot. mag. 909. M. Nóccæ, Balb. M. umbellàta, Hortul.

Carst Medick. Fl. June, July. Clt. 1789. Pl. 1 to 2 feet.

54 M. NÍGRA (Willd. spec. 3. p. 1418.) leaflets obovate, toothed; stipulas ciliately-toothed; peduncles usually 2-flowered; legume cochleate, cylindrical, the circles approximate; prickles subulate, straight, hooked. ⊙. H. Native of the south of France.—Moris. hist. 2. p. 154. sect. 2. t. 15. f. 19.

Black-fruited Medick. Fl. Ju. Aug. Clt. 1789. Pl. prostrate.

55 M. TRIBULOÌDES (Lam. dict. 3. p. 635.) pilose; stems prostrate; leaflets obovate, toothed; stipulas profoundly toothed; peduncles 2-flowered: legume cochleate, cylindrical, flat at both ends, having 5 circles, wrinkled from lacunæ; spines thick, diverging, rather hooked at the apex, lateral, not marginal, with the margins thick and elevated, not channelled; seeds kidney-shaped, bay-coloured, obliquely-truncate at the apex. ⊙. H. Native of Europe, particularly of France.

Var. β, *Narbonénsis* (D. C. prod. 2. p. 178.) spines adpressed, short, and are, as well as the circles, more turgid; legume with tumid warts. D. C. fl. fr. 5. p. 568.

Caltrop-like Medick. Fl. Ju. Aug. Clt. 1730. Pl. prostrate.

56 M. CRASSISPÌNA (Visiani, in bot. zeit. March, 1829. p. 20.) pubescent; stems prostrate, tetragonal; leaflets obovate, sharply toothed at the apex; stipulas lanceolate, acuminated, cut at the base; peduncles 3-flowered; legumes cochleate, ovate, depressed, and veiny; prickles stiff, conical, incurved, disposed in two rows. ⊙. H. Native of Dalmatia. This species is nearly allied to *M. tribuloìdes*.

Thick-spined Medick. Fl. June, Aug. Pl. prostrate.

57 M. CYLINDRA'CEA (D. C. cat. monsp. p. 123.) stems prostrate; leaflets obcordate, dentate; stipulas deeply-toothed; peduncles many-flowered; legume cochleate, cylindrical, truncate at both ends; circles very thick, 5-6, nearly concrete, with a denticulated, 1-lined, flattish margin; seeds regularly kidney-shaped, bay-coloured. ⊙. H. Native of? M. ternàta β, Lam. dict. 3. p. 633.

Cylindrical-fruited Medick. Fl. June, Aug. Clt. 1822. Pl. prostrate.

58 M. PRÆ'COX (D. C. cat. monsp. p. 123.) stems prostrate; leaflets obcordate, denticulated; stipulas ciliately-toothed; peduncles short, 1-2-flowered; legume cochleate, glabrous, flat at both ends: circles thin, rather wrinkled from lacunæ, with the margins thick, nerveless, and flat, bearing the spines laterally; spines rather diverging, hooked at the apex; seeds ovate-reniform, bay-coloured. ⊙. H. Native of Provence.

Early Medick. Fl. June, Aug. Clt. 1820. Pl. prostrate.

59 M. MOLLI'SSIMA (Roth, cat. bot. 3. p. 74.) very soft; stipulas broadest at the base, toothed at the apex; peduncles 2-flowered; legume cochleate, having 5 circles; spines long, hooked at the apex. ⊙. H. Native of Spain and France.

Very-soft Medick. Fl. June, Aug. Clt. 1818. Pl. prostrate.

60 M. GRÆ'CA (Hórn. hort. hafn. p. 24 and 728.) stems prostrate; leaflets obovate, toothed at the apex, villous on both surfaces; stipulas obsoletely-serrated: peduncles many-flowered: legume cochleate, rather pilose; prickles long, bent. ⊙. H. Native of Greece. Willd. enum. p. 805. Perhaps distinct from *M. mínima var. longisèta*.

Greek Medick. Fl. July, Aug. Clt. 1804. Pl. prostrate.

61 M. MI'NIMA (Lam. dict. 3. p. 636.) plant pilose; stems prostrate; leaflets hairy, obovate or obcordate, entire, tridentate at the apex; stipulas half-ovate, nearly entire; peduncles many-flowered, short; legume cochleate, rather globose, having 3-5 very narrow flattish circles; spines compressed, channelled at the base, hooked; seeds reniform, yellow. ⊙. H. Native of Europe, in sandy fields. In England at Narburgh, Norfolk, and near Newmarket. M. polymórpha mínima, Lin. spec. 1099. Fl. dan. 211. M. hirsùta, All. pedem. no. 1156. ex herb. Balb. M. echinàta hirsùta and M. mínima hirsùta, J. Bauh. hist. 2. p. 386. with a figure. Moris. hist. sect. 2. t. 15. f. 15. Trifòlium echinàtum arvénse; flore minore, C. Bauh. pin. p. 330. no. 7.

Var. β, *canéscens* (Ser. mss. D. C. prod. 2. p. 178.) plant canescent: spines longish. About Geneva, in arid places.

Var. γ, *longisèta* (D. C. herb.) spines very long; stems elongated; peduncles many-flowered, elongated. M. mollíssima, Roth, cat. bot. 3. p. 74.? Trifòlium echinàtum arvénse, C. Bauh. pin. p. 329. no. 6.

Least Medick. Fl. May, June. Britain. Pl. prostrate.

62 M. ARENA'RIA (Ten. cat. 1819. p. 59.) stems prostrate; leaflets obovate, denticulated; stipulas rather dentate or quite entire: peduncles usually 2-flowered, shorter than the leaves; legumes cochleate, somewhat cylindrical, flat at both ends; circles 4, approximate; prickles few, arched, diverging, hooked, glabrous. ⊙. H. Native of Naples, in sandy places. M. littoràlis, Ten. prod. 45. but not of Rhode.

Sand Medick. Fl. June, Aug. Clt. 1820. Pl. prostrate.

63 M. MURICOLE'PTIS (Tineo, pl. sic. rar. pug. 1. p. 18. Tenore, app. 4. fl. neap. p. 29.) stems branched, diffuse, angular; leaves obovate or obcordate, small, serrulated at the apex; stipulas ciliately-toothed; peduncles usually 1-flowered, about equal in length to the leaves; legume usually solitary, cochleate, compressed at both ends; circles 3-4, coarsely reticulated, prickly; prickles oblong, setaceous, arched, marginal in two rows, very broad at the base; margins flat and thickish. ⊙. H. Native near Palermo, Calabria, &c. The habit of the plant is that of *M. discifórmis*, but the legume in that species is much larger, reticulated, and the margins beset with long awns.

Slender-warted Medick. Fl. Ju. Aug. Clt. 1820. Pl. prostrate.

64 M. UNCINA'TA (Willd. spec. 3. p. 1417.) stems prostrate; leaflets obovate, toothed; stipulas toothed; peduncles many-flowered; legume cochleated, cylindrical, flat at both ends; circles distant; prickles distich, reflexed, subulate, hooked. ⊙. H. Native of the south of Europe. Allied to *M. rigídula* and *M. nìgra*. Perhaps not distinct from *M. pentacýcla*.

Hooked-spined Medick. Fl. June, July. Pl. prostrate.

65 M. DI'STANS (Poir. dict. suppl. 3. p. 326.) stems prostrate; leaflets somewhat cordate, denticulated at the apex; stipulas dentately-ciliated; peduncles 2-4-flowered; legume cochleated, ovate, having 3 distant circles, which are prickly; prickles straight, diverging, hooked at the apex. ⊙. H. Native of the south of Europe.—Moris. hist. sect. 2. t. 15. f. 21. Perhaps M. uncinàta of Willd.

Distant-circled Medick. Fl. June, Aug. Clt. 1810. Pl. prostrate.

66 M. RE'CTA (Desf. fl. atl. 2. p. 212.) stem erect; leaflets cuneiform, toothed, pubescent; stipulas entire; peduncles 1-flowered; legume twisted into a globose form, almost nerveless, prickly, and rather pilose; prickles long, straight, hooked; circles of legume 3-5, flattish; spines compressed, channelled, hooked. ⊙. H. Native of Barbary. Perhaps only a variety of *M. mínima*.

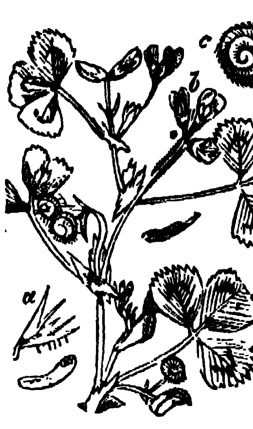
Straight-stemmed Medick. Fl. Ju. Aug. Clt. 1810. Pl. 1 ft.

67 M. ACULEA'TA (Willd. spec. 3. p. 1410.) prostrate; leaflets rhomboid-obovate, toothed; stipulas toothed; peduncles usually 2-flowered; legume cochleate, cylindrical, flattish at both ends, with the margins of the circles muricated. ⊙. H. Native of? Very like *M. tuberculàta*, but differs in the prickles of the legume being unequal, thick, very short and obtuse.

Prickly-podded Medick. Fl. June, Aug. Clt. 1802. Pl. prostrate.

68 M. MACULA'TA (Willd. spec. 3. p. 1412.) stems prostrate; leaflets obcordate or obovate, toothed, spotted; stipulas dilated, toothed; peduncles 2-3-5-flowered; legumes cochleate, compressed at both ends, white, having 3-5 circles, which are circularly and densely nerved, the margins fringed with 2 rows of long, spreading, slender, weak, partly hooked bristles; seeds kidney-shaped, yellow. ⊙. H. Native of Europe, in sand. In England, on gravelly soil in the southern parts.—Moris. hist. sect. 2. t. 15. f. 12. M. cordàta, Desrous. in Lam. dict. 3. p. 636. M. polymórpha, Smith, engl. bot. 1616. Curt. fl. lond. 3. t. 47. Mart. fl. rust. t. 76. (f. 30.)

FIG. 30.



Spotted-leaved Medick. Fl. May, Aug. Britain. Pl. prostrate.

69 M. GERA'RDI (Waldst. et Kit. ex Willd. spec. 3. p. 1415.) stems prostrate; leaflets obovate, denticulated; stipulas with setaceous teeth; peduncles usually 2-flowered; legume cochleate, villously-tomentose, flattish at both ends, having 5 nerveless, prickly, thick circles; spines hooked at the apex, hardly diverging; seeds reniform, bay-coloured. ⊙. H. Native of the south of Europe and Egypt. M. villòsa, D. C. fl. fr. 4. p. 545.—Moris. hist. 2. p. 153. sect. 2. t. 15. f. 18. M. rigídula, Thuill. ex herb. Reyn.

Var. β, *minor* (Ser. mss.) legume cylindrical, with short prickles. M. villòsa β, D. C. l. c.

Gerard's Medick. Fl. Ju. Aug. Clt. 1816. Pl. prostrate.

70 M. AGRE'STIS (Ten. prod. suppl. 2. et cat. 1819. p. 59.) pubescent; stems prostrate; leaflets cuneiform, toothed at the apex; stipulas with setaceous teeth; peduncles usually 2-flowered; legume twisted, muricated, flat at both ends, having 5 circles; prickles about equal in length to the breadth of the legume. ⊙. H. Native of Naples near Caserta, in fields.

Field Medick. Fl. June, Aug. Clt. 1820. Pl. prostrate.

71 M. RIGÍDULA (Lam. dict. 3. p. 634.) stems prostrate; leaflets obovate, denticulated at the apex; stipulas toothed at the base; peduncles 2-3-flowered; legume cylindrical, flat at both ends, beset with muricate-like spines on the back, which hardly diverge. ⊙. H. Native of the south of France. Allied to *M. tornàta* according to Lamarck.

Stiffish-podded Medick. Fl. June, Aug. Clt. 1730. Pl. prostrate.

72 M. MURICA'TA (All. pedem. no. 1158.) stems prostrate; leaflets rhomboid-obovate, toothed; stipulas ciliately-toothed; peduncles 1-3-flowered; legume twisted into an ovate form, glabrous, having 5 thick, somewhat nerved circles, the margin thick, marked by an evanescent narrow zone, not furrowed; spines disposed in a single row, stiff, conical, arched, tooth-formed; seeds irregularly kidney-shaped, of a bay colour. ⊙. H. Native of Europe, in fields. In England, at Orford, Suffolk, on the sea bank plentifully.—Vaill. bot. par. t. 33. f. 7. M. polymórpha muricàta, Lin. spec. 1098.

Muricated-podded Medick. Fl. May, July. England. Pl. prostrate.

73 M. SPHÆROCA'RPOS (Bert. ital. pl. dec. 3. p. 60.) glabrous, prostrate; leaflets rhomboidal-obovate, sharply-serrulated; stipulas jagged; peduncles many-flowered; legume twisted into a globose form, with the circles so closely adpressed as to be almost concrete, the margin thick, and bisulcate lengthwise; prickles short, thickish. ⊙. H. Native of Italy, on grassy hills about Sarzena. Seb. pl. rom. p. 15. t. 3.—Moris. hist. sect. 2. t. 11. f. 12? This species is distinguished from *M. terebéllum* of Willd. in the legumes being globose, not cylindrical.

Round-fruited Medick. Fl. Ju. Aug. Clt. 1818. Pl. prostrate.

74 M. MU'REX (Willd. spec. 3. p. 1410.) stems prostrate; leaflets obovate, toothed, lower ones obcordate; stipulas ciliately-toothed; peduncles usually 2-flowered; legume cochleate, cylindrical, rather convex at both ends, prickly, and transversely veined; prickles long, straight, and thick. ⊙. H. Native of? This species is very nearly allied to *M. muricàta*, but the lower

peduncles are longer, the circles of the fruit thinner and nerved, and the prickles longer.

Prickly Medick. Fl. June, Aug. Clt. 1802. Pl. procumbent.

75 M. LACINIA'TA (All. pedem. no. 1159.) stem erect; leaflets linear, deeply-toothed, truncate; stipulas ciliately-toothed; peduncles 1-2-flowered; legume twisted into a globose form, very spiny; prickles straight, subulate, hooked, compressed, channelled; margin thick, flattish, but neither sulcate nor zonate; seeds oblong-reniform, bay-coloured. ⊙. H. Native of the south of Europe, in corn-fields. M. polymórpha var. laciniàta, Lin. spec. 1099.—Breyn. cent. 81. t. 34. good.

Jagged-leaved Medick. Fl. July, Aug. Clt. 1683. Pl. 1 ft.

76 M. TENOREA'NA (Ser. mss. in D. C. prod. 2. p. 180.) pubescent; stems procumbent; peduncles usually 2-flowered, shorter than the leaves; legume twisted into the form of a cylinder, having 5, distant, densely and longitudinally veined circles, the margins rather cartilaginous and rather concave, but not zonate nor sulcate; prickles setaceous, arcuately divaricate, adpressed; seeds reniform, pale. ⊙. H. Native in fields about Naples. M. cancellàta, Ten. cat. 1819. p. 58. but not of Bieb.

Tenore's Medick. Fl. June, Aug. Clt. 1820. Pl. prost.

77 M. GRANATE'NSIS (Willd. enum. p. 803.) stems erect; leaflets obovate, toothed; stipulas pinnatifid; peduncles usually 2-flowered; legume twisted into a subglobose form, having 5 rather distant, reticulated circles, the margin rather cartilaginous, narrow, and convex; prickles conical, firm, and subulate, distich, and adpressed; seeds reniform, large, and black. ⊙. H. Native of Spain, near Malaga. M. polymórpha pinnatífida, Jacq. coll. suppl. 148. t. 15. f. 2. Allied to *M. intertéxta* and *M. Tenoreàna*, but very distinct from either.

Granada Medick. Fl. June, Aug. Clt. 1816. Pl. 1 foot.

78 M. INTERTE'XTA (Willd. spec. 3. p. 1411.) stem procumbent; leaflets obovate, toothed; stipulas ciliately-toothed; peduncles usually 2-flowered; legume pilose, cochleate, ovate, disk-formed? rather membranous, obliquely reticulated, having a thin margin; prickles straight, thick, rigid, rather channelled at the base, acute, and adpressed. ⊙. H. Native of the south of Europe. Gærtn. fruct. 2. p. 350. t. 155. f. 7.?—Moris. hist. 1. p. 153. sect. 2. f. 8. Perhaps distinct from *M. ciliàris*.

Interwoven Medick. Fl. June, Aug. Clt. 1629. Pl. proc.

79 M. CILIA'RIS (Willd. spec. 3. p. 1411.) stems prostrate; leaflets obovate, toothed; stipulas ciliately toothed; peduncles usually 2-flowered; legume cochleate, ovate-globose, pilose, membranous, much reticulated, having a thick, concave, somewhat cartilaginous margin; spines conical, firm, divaricate; seeds reniform, large, black. ⊙. H. Native of the south of Europe.—Moris. hist. 1. p. 153. sect. 2. t. 15. f. 7.

Ciliated-podded Medick. Fl. June, Aug. Clt. 1686. Pl. pr.

80 M. ECHÌNUS (D. C. fl. fr. 4. p. 546.) stems prostrate; leaflets obovate or obcordate, obsoletely-toothed; stipulas lanceolate, rather ciliately toothed; peduncles 5-6-flowered, longer than the petioles; legume twisted into an oval form, smooth, membranous, and much reticulated; spines compressed, channelled laterally, divaricate, adpressed, very long, and very acute, having 6-7 circles; seeds reniform, black. ⊙. H. Native of the south of France, about Nice. Moris. hist. sect. 2. t. 15. f. 9.

Hedge-hog Medick. Fl. June, Aug. Clt. 1818. Pl. prost.

81 M. ÆGAGRÓPHILA (Desv. journ. bot. 1814. 1. p. 76.) stem procumbent, glabrous; leaflets obovate, toothed, mucronate, somewhat emarginate; stipulas pinnatifidly-toothed; peduncles usually 2-flowered; legume cochleate, smooth, somewhat compressed, having 6 approximate circles, bearing thick prickles on the back. ⊙. H. Collected in gardens.

Wild-goat-loved Medick. Fl. June, Aug. Clt. 1820. Pl. pr.

Cult. The seeds of the annual species of this genus only require to be sown in the open border in spring. The perennial herbaceous species may be increased by dividing the plants at the root in spring. The shrubby species, as *M. arbòrea*, are easily raised from cuttings.

LXVI. HYMENOCA'RPOS (from ὑμην, *hymen*, a membrane, and καρπος, *karpos*, a fruit; in reference to the membranous legumes). Savi, fl. pis. 2. p. 205. Medicàgo, sect. 1. Hymenocárpos, Ser. mss. in D. C. prod. 2. p. 171.

LIN. SYST. *Diadélphia, Decándria.* Calyx subcylindrical, 5-cleft. Keel remote from the vexillum. Stamens diadelphous. Legume many-seeded, rather membranous, compressed, and arched, never twisted. Herbs with 3-5-foliate leaves, and yellow flowers.

1 H. CIRCINNA'TUS (Savi, l. c.) stem prostrate; leaves pinnately 5-foliate; leaflets entire, ovate, the terminal one large and oblong; peduncles 2-4-flowered, subcorymbose; legume membranous, kidney-shaped, pilose, with the margins toothed but not winged; seeds kidney-shaped, compressed. ⊙. H. Native of the Mediterranean, on the sea-shore, and of Corsica. Medicàgo circinnàta, Lin. spec. 1096.

Circinnate-legumed Hymenocarpus. Fl. July, Aug. Clt. 1640. Pl. prostrate.

2 H. NUMMULA'RIUS (Savi, l. c.) stem prostrate, lower leaves entire, upper ones pinnately 5-7-foliate; leaflets ovate, entire, the terminal one largest and oblong; pedicels 3-flowered, rather shorter than the leaves; legume broad, compressed, somewhat membranous, of a reniform, orbicular figure, with the margins entire, and furnished with a narrow, nerved wing. ⊙. H. Native of the south of France and Egypt. Medicàgo nummulària, D.C. cat. hort. monsp. p. 124. but not of Steven. Medicàgo circinnàta, Gærtn. fruct. 2. p. 348. t. 155. f. 6. Medicàgo circinnàta β, Willd. spec. 3. p. 1404.

Money-wort-legumed Hymenocarpos. Fl. June, Aug. Clt. 1640. Pl. prostrate.

3 H. RADIA'TUS (Willd. enum. p. 801.) stem erect; leaves trifoliate; leaflets obovate, sharply toothed; stipulas toothed; pedicels 1-flowered, longer than the leaves; legume membranous, broad, compressed, reniform, having broadly winged, toothed, reticulately veined margins. ⊙. H. Native of Italy and the Levant. Medicàgo radiàta, Lin. spec. 1096. Gært. fruct. 2. p. 348. t. 155. f. 7. M. lunàta, J. Bauh. hist. 2. p. 386.—Moris. hist. sect. 2. t. 15. f. 3.

Var. β, *dasycárpus* (Ser. mss.) legume pilose. Native of the Levant.

Ray-legumed Hymenocarpos. Fl. June, Aug. Clt. 1629. Pl. ½ foot.

Cult. The seeds of these plants only require to be sown in the open border in spring.

LXVII. TRIGONE'LLA (from τρεις, *treis*, three, and γωνια, *gonia*, an angle; the vexillum of the flower is flat, and the keel is very small and narrow, which gives the flower a triangular appearance). Lin. gen. no. 1213. Gærtn. fruct. 2. p. 332. t. 152. f. 3. D.C. prod. 2. p. 181.

LIN. SYST. *Diadélphia, Decándria.* Calyx campanulate, 5-cleft. Carina small, the wings and vexillum rather spreading, forming apparently a 3-petalled corolla. Legume oblong, compressed or cylindrical, acuminated, erectish, many-seeded.—Sweet-scented herbs, with trifoliate leaves, the middle leaflet stalked.

SECT. I. GRAMMOCA'RPUS (from γραμμα, *gramma*, writing, and καρπος, *karpos*, a fruit; in reference to the nerved legumes). Ser. mss. in D. C. prod. 2. p. 181. Flowers capitate or umbellate. Legume ovate, longitudinally nerved, ending in a long beak.

1 T. cœru'lea (Ser. mss. in D. C. prod. 2. p. 181.) stem upright; leaflets ovate, lower ones ovate-roundish, denticulated; stipulas lanceolate, toothed at the base; heads pedunculate, dense-flowered; calycine teeth linear, longer than the tube; petals white, lined with blue; legume ovate, beaked, nerved lengthwise, 2-3-seeded; beak long, straight; seeds globose, olive-coloured, wrinkled from dots; radicle rather prominent. ⊙. H. Native of Bohemia and Switzerland. Sturm, deutsch. fl. 1. fasc. 15. Trifòlium melilòtus cœrùlea, Lin. spec. 1077. Melilòtus cœrùlea, Lam. dict. 4. p. 62. Sims, bot. mag. 2283. Flowers blue.

Blue-flowered Trigonella. Fl. July, Aug. Clt. 1562. Pl. 1 to 2 feet.

2 T. Besseria'na (Ser. mss. in D. C. prod. 2. p. 181.) stem decumbent; stipulas membranous, lanceolate; racemes oblong, pedunculate; legume 2-seeded, short, pilose, veined, tapering into a mucrone at the apex, 3-times longer than the calyx. ⊙. H. Native of the south of Podolia, and Bessarabia. Melilòtus procúmbens, Besser. enum. volh. 30. no. 946. Very like *T. cœrùlea*, but differs in the decumbent habit, the narrower leaflets, the smaller flowers, the larger legumes, and the brown seeds.

Besser's Trigonella. Fl. June, Aug. Clt. 1810. Pl. proc.

3 T. marítima (Delil. in Poir. dict. suppl. 5. p. 361.) stem diffuse, glabrous; leaflets obversely cordate, glabrous, denticulated; peduncles axillary, shorter than the leaves; flowers disposed in capitate umbels, reflexed; legume short, acute, turgid at the base, striated, straight. ⊙. H. Native near Alexandria, on the sea-shore. Flowers yellow.

Sea-side Trigonella. Pl. diffuse.

4 T. uncina'ta (Ser. mss. in D. C. prod. 2. p. 181.) stems ascending; leaflets oblong-ovate, denticulated; stipulas linear-setaceous; flowers disposed in dense spikes; calyx nerved, bilabiate, upper lip entire, short, lower lip 4-cleft; legume ovate, pilose, beaked, hardly nerved, 1-seeded; beak long, curved; seeds ovate, compressed, wrinkled from dots, black; radicle hardly prominent. ⊙. H. Native of Iberia and of France, about Libourne. Trifòlium Melilòtus hamòsum, Bieb. fl. taur. 2. p. 207. and suppl. 705. Melilòtus uncinàta, Besser. cat. hort. crem. 1816. no. 155. M. hamòsa, Link. enum. 2. p. 266. but not of Lamarck. M. uncinàta, Poir. suppl. 3. p. 648. Flowers yellow.

Hooked-podded Trigonella. Fl. Ju. Aug. Clt. 1798. Pl. 1 ft.

5 T. littora'lis (Guss. cat. 1821. p. 83.) stem branched, rather diffuse; leaflets cuneiform, denticulated at the apex; legumes pedicellate, umbellate, declinate, rather falcate, compressed, tapering to both ends, obliquely and reticulately veined; peduncles spinose. ⊙. H. Native of Sicily, among stones by the sea-side. Corolla yellow. This species is allied to *T. marítima*, but it differs in the leaflets being cuneiform, not obcordate, and in the legumes being acute at both ends, not turgid at the base, somewhat falcate, not straight, as well as in being pilose, not glabrous.

Shore Trigonella. Fl. June, Aug. Clt. 1816. Pl. diffuse.

6 T. callíceras (Fisch. in Bieb. fl. taur. suppl. p. 515.) stems ascending; leaflets obovate-cuneated, sharply toothed at the apex; stipulas linear-subulate; teeth of calyx acute, length of tube; legume falcate, somewhat spirally striated, having a long beak; seeds 5-6, ovate, wrinkled from dots. ⊙. H. Native of Iberia. D. C. mem. soc. gen. 2. p. 135. hort. gen. fasc. 2. with a figure. Lòtus medicaginoìdes, Retz. obs. 2. p. 38. no. 74. T. oxyrhýncha, Fisch. in litt. Flowers yellow.

Pretty-horned Trigonella. Fl. Ju. Jul. Clt. 1816. Pl. ascend.

Sect. II. Fœ'num-Græ'cum (from *fœ'num*, hay, and *Græcus*, Greek; Greek hay; the *T. Fœ'num-Græcum* was formerly made into hay in Greece). Ser. mss. in D. C. prod. 2. p. 182. Fœ'num-Græcum, Tourn. inst. 1. p. 408. t. 230. Flowers sessile, solitary, and twin. Legume elongated, compressed, ending in a long beak, and reticulated lengthwise.

7 T. prostra'ta (D. C. fl. fr. 5. p. 571.) stems diffusely procumbent; leaflets obovate-oblong, cuneiform, sharply serrated; calyx pilose; teeth of calyx subulate, length of tube; legume falcate, longer than the beak, 6-seeded; seeds small, ovate, and somewhat kidney-shaped, wrinkled from dots; radicle hardly prominent. ⊙. H. Native of Provence and about Montpelier. T. Fœ'num-Græ'cum β, D. C. fl. fr. 4. p. 551.—J. Bauh. hist. 2. p. 365. f. 2. Flowers white.

Prostrate Fenugreek. Fl. June, Aug. Clt. 1818. Pl. prost.

8 T. gladia'ta (Stev. cat. hort. gor. 1808. p. 112. Bieb. fl. taur. 2. p. 222. and suppl. p. 516.) plant covered with rufous pili; stems spreading; leaflets triangularly-obovate, toothed at the apex; teeth of calyx linear, length of tube; legume falcate, about equal in length to the beak, tomentose, striated with veins. ⊙. H. Native of Tauria, in fields. Perhaps only a variety of *F. prostràta*. Flowers white.

Sword-podded Fenugreek. Fl. April, May. Clt. 1825. Pl. spreading.

9 T. Fœ'num-Græ'cum (Lin. spec. 1402.) stem erect, simple; leaflets obovate, obsoletely toothed; stipulas lanceolate, falcate, entire; calyx pilose; the teeth subulate, length of tube; legume falcate, twice the length of the beak, reticulated lengthwise, many-seeded; seeds large, ovate, wrinkled from dots; radicle rather prominent. ⊙. H. Native of the south of France. Gærtn. fruct. t. 152. f. 3. Schkuhr. handb. 2. t. 211. Woodv. med. bot. t. 158. T. gladiàta, Hortul. This plant was formerly cultivated by the Romans, and is still occasionally employed in the agriculture of the south of Europe. The seeds have a strong disagreeable smell, and an unctuous, farinaceous taste, accompanied with a slight bitterness. An ounce renders a pint of water thick and slimy. To rectified spirit they give out the whole of their distinguishing smell and taste, and afterwards to water a strong flavourless mucilage. These seeds are never given internally, their principal use being in cataplasms and fomentations, for softening, maturating, and dispersing tumours, and in emollient glysters. They were also an ingredient in the oleum e mucilaginibus; but this has no longer a place in the pharmacopœia. They are used by grooms and farriers for horses. *Fenugreek* has not been cultivated in any quantity for use in England, because it is an uncertain crop, occasioned by the inconstancy of our weather.

Common *Fenugreek*. Fl. June, Aug. Clt. 1597. Pl. 1 to 2 ft.

Sect. III. Bu'ceras (from *βους*, *bous*, an ox, and *κερας*, *keras*, a horn; in reference to the form of the pods). Ser. mss. in D. C. prod. 2. p. 182.—Bucerràtis, spec. Mœnch. meth. p. 143. Flowers disposed in pedunculate or sessile racemose umbels. Legume cylindrically-compressed, a little arched, reticulated and mucronate.

§ 1. *Racemes pedunculate.*

10 T. spinòsa (Lin. spec. 1094.) stems spreading; leaflets obovate-cuneated, denticulated at the apex; stipulas dissected; flowers in fascicles, sessile; middle peduncle spinose, sterile; legume arched, compressed, declinate, very long, transversely veined, glabrous, many-seeded; seeds irregularly oblong, wrinkled from dots; radicle rather prominent. ⊙. H. Native of Crete. Bùceras spinòsa, Mœnch. meth. p. 143.—Breyn. cent. 79. t. 33. f. 1. Flowers pale-yellow.

Spinose Trigonella. Fl. July, Aug. Clt. 1739. Pl. pr.

11 T. stria'ta (Lin. fil. suppl. p. 340.) stems spreading; leaflets obovate, denticulated at the apex, striped; stipulas linear, dilated at the base, and toothed; umbels pedunculate; legume arched, compressed, very long, glabrous, having trans-

verse, arched veins, many-seeded, assurgent; seeds oblong, somewhat truncate, having wrinkled lines. ⊙. H. Native of Abyssinia. Willd. spec. 3. p. 1399. Flowers yellow.

Striped-leaved Trigonella. Fl. June, Aug. Clt. 1800. Pl. $\frac{1}{2}$ to 1 foot long.

12 T. HAMÒSA (Lin. spec. 1094.) stems decumbent; leaflets ovate-cuneiform, denticulated at the apex; legumes disposed in racemes, declinate, hooked, terete; common peduncle spinose, longer than the leaves. ⊙. H. Native of Egypt.—J. Bauh. hist. 2. p. 357.—Alp. egypt. t. 124. Flowers yellow. The seeds of this plant are said to be used by the Egyptians in fomentations for all kinds of pains.

Hooked-podded Trigonella. Fl. Jul. Aug. Clt. 1640. Pl. dec.

13 T. TÓRTA (Smith, in Rees' cycl. vol. 36.) stem firm; leaflets obcordate, toothed, obscurely nerved; flowers umbellate; peduncles short; legume cylindrical, twisted, reticulated lengthwise, stiff, glabrous. ⊙. H. Native of Egypt. Flowers yellow. Plant quite smooth.

Twisted-podded Trigonella. Pl. $\frac{1}{2}$ foot.

14 T. FLEXUÒSA (Delil. ex Poir. suppl. 5. p. 362. but not of Fischer) stem firm; leaflets obcordate, toothed, obscurely nerved; legumes disposed in umbels, which are nearly sessile, compressed, reticulated, twisted. ⊙. H. Native of Egypt. This plant comes near to *T. tórta*, but differs in the umbels being nearly sessile, and in the teeth of the calyx being longer, the legume also is very different, ex Smith, in Rees' cycl. vol. 36. Perhaps a variety of *T. anguìna*, of Delil.

Flexuous-podded Trigonella. Fl. June, July. Clt. 1820. Pl. $\frac{1}{2}$ to $\frac{3}{4}$ foot.

15 T. FISCHERIA'NA (Ser. mss. in D. C. prod. 2. p. 183.) stems spreading; leaflets obovate-cuneated, striated, serrulated; stipulas straight, lanceolate-subulate; flowers disposed in racemes, each containing about 6; common peduncle awnless; floriferous peduncle exceeding the leaf; calycine segments subulate, length of tube; legume a little arched, erectish, flexuously-torulose, many-seeded; seeds oblong, somewhat truncate, wrinkled. ⊙. H. Native of Tauria, about Tiflis. T. flexuòsa, Fisch. in hort. gor. ex Bieb. fl. taur. suppl. p. 515. but not of Delil. Flowers yellow.

Fischer's Trigonella. Fl. July, Aug. Clt. 1818. Pl. $\frac{1}{4}$ to $\frac{3}{4}$ ft.

16 T. ANGUI'NA (Delil. fl. ægypt. p. 110. t. 110. f. 2.) stems branched, prostrate; leaflets ovate-cuneated, crenated; stipulas toothed; heads of flowers nearly sessile; legume linear, compressed, pilose, plicately flexuous. ⊙. H. Native near Cairo. Flowers yellow.

Snake-podded Trigonella. Pl. prostrate.

17 T. TE'NUIS (Fisch. in hort. gor. and Bieb. fl. taur. suppl. p. 514.) stems spreading; leaflets obovate-obcordate, striated, serrulated; stipulas lanceolate, toothed at the base, straight; flowers usually in fours; floriferous peduncle awnless, about equal in length to the leaf; calycine segments subulate, length of tube; legumes usually twin, a little arched, erect, compressed, transversely and flexuously reticulated; seeds ovate, compressed, somewhat truncate, wrinkled from dots; radicle hardly prominent. ⊙. H. Native of Tauria, on mountains about Tiflis. This species is allied to *T. cancellàta*. Flowers yellow.

Slender Trigonella. Fl. June, July. Clt. 1824. Pl. proc.

18 T. HAMÍGERA (Spreng. neue entd. 3. p. 158.) legumes pedicellate, linear, hooked, declinate, pubescent; fructiferous peduncles unarmed; leaflets cuneated, toothed, silky. ⊙. H. Native of? Perhaps *T. ténuis*, ex Spreng. l. c.

Hook-bearing Trigonella. Pl. $\frac{1}{2}$ foot.

19 T. CANCELLA'TA (Desf. cat. hort. par. 218. Poir. dict. suppl. 5. p. 361.) stems spreading, much branched; leaflets cuneated, serrated; stipulas subulate, small; fructiferous peduncle awnless, about equal in length to the leaf; legume arched, glabrous, compressed, reticulated with veins; seeds oblong, somewhat truncate, wrinkled from dots. ⊙. H. Native of? Flowers yellow.

Latticed Trigonella. Fl. June, July. Clt. 1823. Pl. dec.

§ 2. *Racemes sessile.*

20 T. MONSPELI'ACA (Lin. spec. 1095.) pilose; stems prostrate; leaflets obovate-cuneated, serrulated; teeth numerous; stipulas linear-subulate; umbels sessile; segments of calyx subulate, length of tube; legumes usually 7, sessile, crowded, arched, divaricate, short, obliquely veined; seeds oblong, somewhat truncate, olive-coloured, wrinkled with dots. ⊙. H. Native of the south of Europe. Waldst. et Kit. hung. 2. t. 142.—Breyn. cent. 80. t. 33. f. 2. Bùceras ellíptica, Mœnch. meth. p. 143. Flowers yellow.

Montpelier Trigonella. Fl. June, July. Clt. 1710. Pl. pr.

21 T. ELA'TIOR (Sibth. et Smith, fl. græc. t. 762. ex prod. 2. p. 108.) stem erect; stipulas lanceolate, toothed; legumes disposed in racemes, pendulous, rather falcate; peduncle elongated. ⊙. H. Native of Asia Minor and the Island of Cyprus. Flowers yellow.

Taller Trigonella. Pl. 1 to 2 feet.

22 T. PARVIFLÒRA (Smith, in Rees' cycl. vol. 36.) stems ascending; peduncle length of the leaflets, which are acuminated; stipulas ovate, acute, toothed; legumes disposed in racemose heads, ascending, linear-lanceolate, compressed, curved, usually containing 2 seeds. ⊙. H. Native of Switzerland.

Small-flowered Trigonella. Fl. June, Aug. Clt. 1817. Pl. ascending.

23 T. PINNATI'FIDA (Cav. icon. 1. p. 26. t. 38.) stem prostrate, tetragonal; leaflets cuneated, truncate at the apex, pinnatifidly-toothed; stipulas pinnatifid; umbels sessile; legumes usually 4 together, sessile, linear, arched, reticulately veined; seeds oblong, truncate, wrinkled from dots; radicle rather prominent. ⊙. H. Native of Spain. T. mèdia, Delil. ill. 722. Flowers yellow.

Pinnatifid-stipuled Trigonella. Fl. June, Aug. Clt. 1801. Pl. prostrate.

24 T. POLYCERA'TA (Lin. spec. 1093.) stems diffuse; leaflets cuneiform, dentate at the apex; stipulas lanceolate, rather toothed at the base; umbels sessile; legumes almost sessile, usually 4 together, erect or erectish, long, linear, reticulately-veined; seeds oblong, somewhat truncate, yellow, wrinkled from dots; radicle rather prominent. ⊙. H. Native of the south of France. Flowers yellow.

Many-horned Trigonella. Fl. July, Sept. Clt. 1759. Pl. diffuse, $1\frac{1}{2}$ foot long.

25 T. ÆGYPTI'ACA (Poir. dict. 8. p. 95.) stem prostrate; branches short, erect; leaflets ovate-cuneiform, denticulated; stipulas entire; umbels sessile; legumes somewhat compressed, erectish, reticulated with veins. ⊙. H. Native of Egypt. Flowers yellow.

Egyptian Trigonella. Fl. June, July. Clt. 1818. Pl. prost.

26 T. POLYA'NTHA (Desv. journ. bot. 1814. 1. p. 77.) stem diffuse; leaflets obovate-cordate, quite smooth, rather fleshy, obscurely toothed; legumes sessile, crowded, rather falcate, glabrous; common peduncle sessile, mucronate. ⊙. H. Native of the Levant. Flowers yellow.

Many-flowered Trigonella. Pl. $\frac{1}{2}$ to 1 foot.

27 T. ORNITHORHY'NCHOS (Fisch. ex Horn. hort. hafn. suppl. p. 85.) leaflets roundish, rather serrated, fleshy; peduncles spiny; legumes on very short peduncles, umbellate, reflexed, and recurved, beaked. ⊙. H. Native of the Russian empire. Flowers yellow.

Bird's-beak-podded Trigonella. Fl. June, Aug. Clt. 1818. Pl. $\frac{1}{2}$ to $\frac{3}{4}$ foot.

Sect. IV. Falca'tula (from *falcatus*, falcate; in reference to the shape of the pods). Ser. mss. in D. C. prod. 2. p. 183., Brot. phyt. 160.—Buceràtis, spec. Mœnch. Flowers disposed in pedunculate umbels. Legume compressed, falcate, reticulated, mucronate.

28 T. Ruthe'nica (Lin. spec. 1093.) stems prostrate; leaflets lanceolate, very blunt, sharply serrated; stipulas nearly entire; flowers disposed in racemose heads; legume oblong, straight, or a little arched; seeds unequally cordate; radicle very long. ♃. H. Native of Siberia.--Gmel. fl. sib. 4. p. 24. no. 33. t. 8. Legume obtuse, and terminated by a recurved mucrone, and the leaflets are oblong-obovate, according to the specimens received from Siberia. Flowers yellow. This plant would be an excellent substitute for *lucern*, see *Medicàgo sativa*.

Russian Trigonella. Fl. June, July. Clt. 1759. Pl. ascending, 1½ foot long.

29 T. lacinia'ta (Lin. spec. 1095.) stems spreading; leaflets obovate-cuneated, half pinnate-cut; stipulas dissected; flowers disposed in racemose umbels; peduncles length of leaves; teeth of calyx shorter than the tube; legume short, elliptical. ⊙. H. Native of Egypt. Flowers yellow.

Jagged-stipuled Trigonella. Pl. spreading.

30 T. platyca'rpos (Lin. spec. 1093.) stems erect or diffuse; leaflets obovate-roundish; stipulas a little toothletted; flowers racemose; legume flat, pendulous; seeds unequally cordate, obtuse: radicle very long. ⊙. H. Native of Siberia.—Gmel. sib. 4. p. 25. t. 9. Flowers yellow. Legumes white.

Broad-podded Trigonella. Fl. June, Sept. Clt. 1741. Pl. ½ foot.

31 T. hy'brida (Pourr. act. toul. 3. p. 33.) stems ascending; leaflets obovate-cuneated, entire, glabrous; stipulas unequally lanceolate, denticulated; flowers few, racemose; legumes pedicellate, glabrous; falcate, reticulated with veins; seeds irregularly cordate. ♃. H. Native of France.—D. C. icon. pl. rar. 1. p. 29. t. 29. Flowers yellow.

Hybrid Trigonella. Fl. June, Sept. Clt. 1806. Pl. ascending, 1 to 2 feet.

32 T. ornithopodioìdes (D. C. fl. fr. 4. p. 550.) stems prostrate; leaflets obcordate, denticulated; stipulas lanceolate, entire, rather membranous, very acute; flowers usually 2-4, disposed in a kind of umbel; legume somewhat falcate, compressed, twice the length of the calyx. ⊙. H. Native of France and other parts of Europe; in Britain on several heaths about London, and elsewhere. Trifòlium ornithopodioides, Lin. spec. 1078. Smith, engl. bot. 1047. Falcátula falsotrifòlium, Brot. phyt. 160. t. 68. Flowers red.

Ornithopus-like Trigonella. Fl. June, July. Brit. Pl. prost.

33 T. cornicula'ta (Lin. spec. 1094.) stem erect; leaflets bovate, dentate at the apex; stipulas lanceolate, entire; flowers acemose; legumes compressed, declinate, somewhat falcate, ransversely veined; seeds unequally cordate, wrinkled from ots; radicle rather prominent. ⊙. H. Native of the south f France. Bùceras grandiflòra, Mœnch. meth. p. 143.—J. auh. hist. 2. p. 372. f. 2.? Flowers yellow, sweet-scented.

Horned Trigonella. Fl. June, July. Clt. 1597. Pl. 1 foot.

34 T. escule'nta (Willd. enum. 709.) racemes pedunculate; mmon peduncle longer than the leaf; legumes linear, somehat falcate, crowded, pedicellate. ⊙. H. Native of the East dies. Medicàgo esculénta, Rottl. ex Willd. l. c. The lemes of this plant are esculent.

Esculent Trigonella. Fl. June, Aug. Clt. 1815. Pl. 1 ft.

35 T. occu'lta (Delil. ill. fl. ægyp. 727.) stem herbaceous, ffuse, angular at the apex; leaflets on short petioles, cuneated, rrated, rather villous; stipulas semi-orbicular, acutely and arsely serrated, girding the head of flowers; petals shorter n the calyx; legume ovate, rather compressed, hairy, reticulately nerved, hooked from the style. ⊙.? H. Native of sandy islands in the Nile. Flowers axillary, crowded, small, yellow.

Hidden-flowered Trigonella. Pl. diffuse.

† *Species not sufficiently known.*

36 T. petiola'ris (Viv. fl. lyb. p. 49. t. 18. f. 5.) flowers disposed in heads, pendulous; pedicels somewhat falcate; petiole double the length of the peduncle: leaflets obcordate-cuneated; stipulas oblique, ovate, acute, profoundly toothed; legume? ⊙.? H. Native of Cyreniaca, in pastures.

Petiolar Trigonella. Pl. 1 foot.

37 T. crassifòlia (Horn. hort. hafn. 2. p. 723.) leaflets roundish, fleshy; peduncles rather spinose; legumes pedunculate, crowded, reflexed, rather falcate. ⊙. H. Native of Egypt. Flowers yellow.

Thick-leaved Trigonella. Pl. ½ foot.

38 T. villòsa (Thunb. prod. p. 137.) leaflets obovate, glabrous; legumes racemose, villous. Native of the Cape of Good Hope.

Villous Trigonella. Pl. 1 foot.

39 T. spica'ta (Sibth. et Smith, fl. græc. t. 763. ex prod. 2. p. 108.) stipulas subulate, quite entire; legumes disposed in spikes, pendulous, short, pilose; peduncles elongated, rather spiny. ⊙. H. Native of the island of Seriphos.

Spicate Trigonella. Pl. ½ to 1 foot.

40 T. arma'ta (Thunb. prod. 137.) branches spinescent; leaflets ovate, glabrous; legumes lateral, spiny. ♄.? G. Native of the Cape of Good Hope.

Armed Trigonella. Shrub.

41 T. gla'bra (Thunb. prod. p. 137.) leaflets ovate, toothed, glabrous; legumes umbellate, reflexed, glabrous. ♄. G. Native of the Cape of Good Hope.

Glabrous Trigonella. Shrub?

42 T. hirsu'ta (Thunb. prod. p. 137.) leaflets oblong, obtuse, villous; legumes racemose, reflexed. ♄. G. Native of the Cape of Good Hope.

Hairy Trigonella. Shrub.

43 T. tomentòsa (Thunb. prod. 137.) leaflets and branches tomentose; legumes pedunculate, ternate. ♄. G. Native of the Cape of Good Hope.

Tomentose Trigonella. Shrub.

44 T. cylindra'cea (Desv. journ. bot. 1814. vol. 1. p. 77.) leaflets oblong, obtuse, toothed, rather pubescent, terete, acute, striated, somewhat incurved; common peduncle elongated, mucronate. ⊙.? H. Native of the Levant.

Cylindrical-leafletted Trigonella. Pl.

Cult. None of the species of this genus are worth cultivating unless in botanical gardens. The seeds of the hardy annual kinds only require to be sown in the open border in spring. The hardy perennial kinds are easily increased by dividing the plants at the root or by seeds. Those natives of the Cape are perhaps shrubby; if this be the case, they may be propagated by young cuttings planted in sand under a hand-glass. All the species grow best in a light sandy soil.

LXVIII. POCO'CKIA (in honour of Richard Pocock, a traveller in the Levant). Ser. mss. in D. C. prod. 2. p. 185.—Trifòlium, spec. Lin.

Lin. syst. *Diadélphia, Decándria.* Calyx campanulate, 5-toothed. Carina simple, and wings shorter than the vexillum. Legume longer than the calyx, membranous, compressed, winged, emulating a samara.—Flowers racemose. Leaves trifoliate, terminal or middle leaflet stalked.

1 P. Cre'tica (Ser. mss. in D. C. prod. 2. p. 185.) stem ascending; leaflets obovate-cuneated, obsoletely-toothed; stipulas lanceolate, profoundly-toothed; teeth of calyx acute, shorter than the tube; legume wrinkled transversely, 2-seeded; seeds

ovate-oblong, compressed, wrinkled from dots; radicle rather prominent. ⊙. H. Native of Candia and Barbary. Trifòlium Melilòtus Crética, Lin. spec. 1078. Melilòtus Crética, Desf. fl. atl. 2. p. 192.—Moris. hist. sect. 2. t. 14. f. 3. Flowers yellow.

Cretan Pocockia. Fl. June, Aug. Clt. 1713. Pl. 1 foot.

Cult. The seeds of this plant only require to be sown in the open border about the beginning of April.

LXIX. MELILO'TUS (from *mel*, honey, and *lotus;* honey Lotus. The plants are similar to the *Lotus*, and are the favourite resort of bees). Tourn. inst. 406. t. 229. Juss. gen. 356. Lam. ill. t. 613. D. C. prod. 2. p. 186.—Trifòlium spec. Lin.

Lin. syst. *Diadélphia, Decándria.* Calyx tubular, 5-toothed. Carina simple; wings shorter than the vexillum. Legume longer than the calyx, coriaceous, one or many-seeded, hardly dehiscent, of various forms.—Herbs. Stipulas adnate to the petiole. Leaves trifoliate; leaflets usually toothed. Flowers disposed in loose racemes, yellow, rarely white.

Sect. I. Cœloru'tis (from κοιλος, *koilos*, channelled, depressed, and *ρυτις, rutis*, a wrinkle; in reference to the surface of the legumes). Ser. mss. in D. C. prod. 2. p. 186. Legume wrinkled from lacunæ.

1 M. Kochia'na (Willd. enum. 790.) stem ascending; leaflets linear-oblong, denticulated; stipulas toothed; teeth of calyx equalling the tube in length; vexillum longer than the carina; legume 1-2-seeded, wrinkled somewhat transversely from lacunæ, ovate, acute, compressed, length of style; seeds egg-shaped, bay-coloured, and somewhat compressed. ♂. H. Native of Germany and France. D. C. fl. fr. 5. p. 564. Trifòlium Kochiànum, Hayne in Schrad. neue journ. 2. p. 336. M. diffùsa, Koch. diss. ined. Flowers yellow.

Koch's Melilot. Fl. June, Sept. Clt. 1816. Pl. 2 to 3 feet.

2 M. denta'ta (Willd. enum. 790.) stems erect, firm; leaflets oblong, denticulated; stipulas laciniated; teeth of calyx equalling the tube in length; vexillum longer than the keel; legumes dense, black when mature, 1-2-seeded, obovate, obtuse, compressed, irregularly and finely wrinkled from lacunæ, with the seminiferous margin gibbous; style short; seeds irregularly cordate, of a bay colour; radicle very prominent. ♂. H. Native of Hungary. Trifòlium dentàtum, Waldst. et Kit. pl. hung. 1. p. 41. t. 42. Sturm, deutschl. fl. 1. fasc. 15. M. procúmbens, Hort. prag. ex W. Gerhard in litt. 1824. but not of Besser. The plant has the fruit of *M. officinàlis*, and the flowers of *M. parviflòra.*

Var. β, angustifòlia (Wallr. sched. crit. 1. p. 394.) leaflets linear.

Toothed-leafletted Melilot. Fl. Ju. Aug. Clt. 1802. Pl. 3 to 4 ft.

3 M. linea'ris (Cav. ex Pers. ench. 2. p. 348.) stem erect, angular; leaflets linear-oblong, nearly entire; stipulas linear, hardly toothed at the base; teeth of calyx unequal, about equal in length to the tube; vexillum length of carina; legume 2-seeded, wrinkled reticulately, ovate-orbicular; style short; seeds unequally cordate, bay-coloured. ⊙. H. Native of Spain. Flowers yellow. This species comes near to *M. dentàta*, but differs in the leaflets being obovate-linear, and in the flowers being larger.

Linear-leafletted Melilot. Fl. July, Aug. Clt. 1820. Pl. 2 ft.

4 M. Ruthe'nica (Bieb. fl. taur. suppl. p. 506. in a note,) stem erect, angular; leaflets cuneiform, remotely-serrated; stipulas setaceous; legumes ovate, compressed, wrinkled reticulately, 1-seeded; racemes elongated, loose; young legumes densely reticulated; seeds testaceous. ♂. H. Native of Russia, about the colony of Sarepta. M. Wólgica, Poir. suppl. 3. p. 640. ex herb. Desf. Flowers white. Legume like that of *M. macrorhìza.*

Russian Melilot. Fl. July, Aug. Clt. 1820. Pl. 2 to 4 feet.

5 M. melanospe'rma (Besser in litt. 1824.) stem firm, unequally furrowed; racemes numerous, twiggy, very long, ascending; leaflets oblong, denticulated; legumes ovate, lacunose, black; seeds ovate, not cordate or compressed, black, rugged from dots. ♂. H. Native of Tauria. Flowers yellow like those of *M. officinàlis.*

Black-seeded Melilot. Fl. July, Aug. Clt. 1819. Pl. 3 to 4 ft.

6 M. officina'lis (Willd. enum. p. 790.) stem erect, branched; branches spreading much; leaflets obovate-oblong, obtuse, remotely-serrated; stipulas setaceous; teeth of calyx unequal, length of tube; vexillum striated with brown; wings equal in length to the keel; legume 2-seeded, obovate, acute, and transversely wrinkled, rather pilose, at length blackish, and rather gibbous; style filiform, length of legume; seeds unequally cordate. ♂. H. Native of Europe. In Britain in thickets and hedges, and the borders of fields. Trifòlium Melilòtus officinàlis, *α*, Lin. spec. 1078. Oed. fl. dan. 934. Sturm, deutsch. fl. 1. fasc. 15. var. *α*. Trifòlium officinàle, Smith, fl. brit. 781. engl. bot. 1346. Flowers yellow. Fruit nearly like that of *M. dentàta*, but the flowers are much larger. The flowers and seeds of this plant are the chief ingredients in flavouring the Gruyère cheese. This cheese no doubt owes its excellence to the mixture of herbs in the mountain pasturage, which surrounds the valley of Gruyère in Switzerland, but more particularly to the flowers and seeds of this plant, which are bruised and mixed with the curd before it is pressed. The whole plant has a peculiar scent, which becomes more fragrant in a dry state, then having some resemblance to that of *Anthoxánthum.* The flowers are sweet-scented; a water distilled from them possesses little odour in itself, but improves the flavour of other substances. In medicine it was esteemed emollient and digestive, and was used in fomentations and cataplasms, particularly in blister plaisters, but it is now laid aside as being rather acrid than emollient. Notwithstanding the strong smell of the plant, and its bitter acrid taste, it does not appear to be disagreeable to any kind of cattle; and horses are said to be extremely fond of it; hence the plant is called by some Italian writers *Trifòlium caballìnum.* Ray affirms that it was formerly sown in England for the food of kine and horses; but at present it is not cultivated with us.

Var. β, unguiculàta (Ser. mss. in D. C. prod. 2. p. 187.) legumes elongated, sterile ones claw-formed, pedicellate. ♂. H. Native about Bern and Geneva.

Officinal or Common Melilot. Fl. July, Sept. Britain. Pl. 3 to 6 feet.

7 M. palu'stris (Kit. in litt. 1815.) stems branched, erect; leaflets oblong-linear, obsoletely-toothed; stipulas linear-setaceous; teeth of calyx unequal, length of tube; vexillum longer than the wings and keel: legume 1-seeded, ovate, a little winged, rugged from lacunæ, of a brownish-black colour; seeds irregularly cordate, bay-coloured. ♂. H. Native of Hungary, growing among *Arúndo phragmìtis.* Trifòlium Melilòtus palústre, Waldst. et Kit. pl. rar. hung. 3. p. 295. t. 266. Very nearly allied to *M. officinàlis*, and perhaps distinct. Flowers yellow.

Marsh Melilot. Fl. July, Aug. Clt. 1820. Pl. 2 to 4 feet.

8 M. arbòrea (Castagne in litt. D. C. prod. 2. p. 187.) stems arboreous; leaflets ovate-oblong, sharply-toothed; stipulas setaceous, entire; flowers disposed in long racemes; teeth of calyx acute, length of tube; keel and wings shorter than the vexillum. ♄. G. Cultivated about Constantinople, where it grows 15 feet high, and with a trunk about 3 inches in diameter. Flowers white.

Trée Melilot. Fl. July, Sept. Clt. 1826. Shrub 15 feet.

9 M. alti'ssima (Thuill. fl. par. ed. 2. p. 378 and 83.) stem

erect; leaflets ovate-oblong; racemes very long; wings equal to the keel; legumes naked, ovate, acute at both ends, 1-seeded. ♂. H. Native of France. Trifòlium altíssimum, Lois. fl. gall. 2. p. 4. M. álba, Lam. dict. 4. p. 63. Perhaps M. arvénsis or M. álba, Thuill. Flowers white.

Tallest Melilot. Fl. July, Aug. Clt. 1816. Pl. 6 to 8 feet.

10 M. LEUCA'NTHA (Koch. ex D. C. fl. fr. 5. p. 564.) stem erect, branched; leaflets ovate-oblong, truncate at the apex and mucronulate, remotely serrated; stipulas setaceous; teeth of calyx unequal, length of tube; vexillum longer than the keel and wings; legume 1-seeded, ovate, wrinkled from lacunæ, green; seeds exactly ovate. ♂. H. Native of Europe, in fields. Trifòlium officinàle β, Lin. spec. 1078. Sturn. deutsch. fl. 1. fasc. 15. f. K. M. vulgàris, Willd. enum. p. 790. M. álba, Thuill. fl. par. ed. 2. p. 378. but not of Lam. Flowers white.

Var. β, *unguiculàta* (Ser. mss. in D. C. prod. 2. p. 187.) legumes elongated, sterile ones claw-formed, pedicellate.

White-flowered Melilot. Fl. July, Sept. Clt. Pl. 3 to 5 feet.

11 M. MACRORHIZA (Pers. ench. 2. p. 348.) stems and branches erect; leaflets linear-oblong, sharply and remotely toothed; stipulas setaceous, toothless at the base; teeth of calyx equal, length of tube; wings equal in length with the vexillum, but exceeding the carina; legume ovate, compressed, acutish, wrinkled from lacunæ, black, a little winged, 1-seeded; seeds unequally sub-cordate, bay-coloured. ♃. H. Native of Hungary. Trifòlium macrorhìzum, Waldst. et Kit. pl. rar. hung. 1. p. 24. t. 26. Flowers yellow.

Long-rooted Melilot. Fl. July, Sept. Clt. 1801. Pl. 2 to 3 ft.

12 M. PARVIFLÒRA (Desf. atl. 2. p. 192.) stem ascending; branches spreading; lower leaflets obovate-roundish, entire, upper ones oblong, obsoletely-toothed; stipulas linear-setaceous; flowers very minute, in dense spikes; teeth of calyx nearly equal, broad; wings about equal in length to the vexillum and carina; legume ovate, rugged from lacunæ, yellowish-green, 1-seeded; seeds ovoid, adhering to the legume, bay-coloured, rugged from dots. ⊙. H. Native of Barbary, Italy, and France. Trifòlium Melilòtus I'ndicum δ, Lin. spec. 1077. Flowers yellow. This plant has the habit of *M. sulcàta*, but the legumes are very different, and the spikes are rarely mucronate at the apex.

Small-flowered Melilot. Fl. Ju. Aug. Clt. 1798. Pl. 1 to 2 ft.

13 M. SEGETA'LIS (Ser. mss. D. C. prod. 2. p. 187.) stem sometimes erect, sometimes procumbent; leaflets obovate, serrulated even to the base; stipulas ciliately-toothed; legume nearly globose, naked, 1-seeded, wrinkled archwise. ⊙. H. Native of Portugal, in Estramadura, among corn. Trifòlium Melilòtus segetàle, Brot. fl. lus. 2. p. 484. Flowers yellow. Perhaps only a variety of *M. I'ndica*.

Corn-field Melilot. Fl. July, Aug. Clt. 1820. Pl. 1 to 2 ft.

14 M. POLÓNICA (Pers. ench. 2. p. 348.) stem erect, terete; leaflets cuneate-ovate, denticulated, rather truncate at the apex, and mucronulate; stipulas subulate; flowers very minute; spikes mucronate; teeth of calyx equal, broad; legume ovate, wrinkled from lacunæ, bay-coloured, 2-seeded; seeds ovoid, black, wrinkled from dots. ⊙. H. Native of Poland. Trifòlium Melilòtus Polónicum, Lin. spec. 1078. Flowers yellow. Allied to *M. parviflòra*, but very distinct.

Polish Melilot. Fl. July, Aug. Clt. 1778. Pl. 1 to 2 feet.

15 M. TAU'RICA (Ser. mss. in D. C. prod. 2. p. 188.) stem erect; leaflets rhomboidal-cuneate, lined, dentately-serrated in front; stipulas subulate-setaceous; racemes elongated; legumes roundish, compressed, wrinkled transversely, 1-seeded. ♂. H. Native of Tauria. Trifòlium Melilòtus Taùricum, Bieb. fl. taur. suppl. p. 506. Plant quite smooth, of a glaucous green-colour. Flowers white.

Taurian Melilot. Fl. July, Sept. Clt. 1818. Pl. 3 to 4 feet.

16 M. ITA'LICA (Lam. dict. 4. p. 65.) stem erect; branches ascending, thick; leaflets obovate-roundish, obsoletely-denticulated; stipulas lanceolate, acute, somewhat jagged at the base; teeth of calyx unequal, hardly the length of the tube; wings equal to the carina, but shorter than the vexillum; legume globose, somewhat suberose, rugged from lacunæ, yellowish-green, 1-2-seeded; seeds orbicular, compressed, rugged from dots, bay-coloured. ⊙. H. Native of Italy. Trifòlium Melilòtus Itálicum, Lin. spec. 1078. Melilòtus rotundifòlia, Ten. cat. 1819. p. 57. Flowers yellow. There is a variety of this plant with entire leaves.

Italian Melilot. Fl. July, Aug. Clt. 1596. Pl. 1 to 2 feet.

17 M. GRA'CILIS (D. C. fl. fr. 5. p. 565.) stem and branches ascending, slender; leaflets obovate, narrow, denticulated at the apex; stipulas somewhat setaceous; teeth of calyx nearly equal, hardly shorter than the tube; wings equal in length to the carina and vexillum; legume globose, hardly suberose, rugged from lacunæ, yellowish-green, 2-seeded; seeds orbicular, compressed, rugged from dots, bay-coloured. ⊙. H. Native of the south of France. M. Neapolitàna, Tenore ex herb. Moricand. Flowers yellow.

Slender Melilot. Fl. July, Sept. Pl. 1 to 2 feet.

18 M. PA'LLIDA (Besser. in litt. 1824.) stem rather terete, lined, much branched; leaflets obovate-linear, serrulated; legume nearly globose, obsoletely reticulated, mucronate by the style, 1-seeded, of a yellowish bay-colour; seeds globose, bay-coloured, smooth. ♂. H. Native of Volhynia. Flowers pale-yellow, like those of *M. officinàlis*.

Pale-flowered Melilot. Fl. July, Aug. Clt. 1816. Pl. 3 to 4 ft.

19 M. SUAVE'OLENS (Ledeb. ind. hort. dorp. suppl. 1824. p. 5.) legume 2-seeded, reticulated, glabrous; wings equalling the keel in length, but shorter than the vexillum; leaflets lanceolate-oblong, remotely serrated; stipulas entire. ♃. H. Native of Dahuria, near Nertschinsk. Flowers yellow.

Sweet-scented Melilot. Fl. July, Aug. Clt. 1824. Pl. 3 to 4 ft.

SECT. II. PLAGIORU'TIS (from πλαγιος, *plagios*, transverse, and ρυτις, *rutis*, a wrinkle; in reference to the transverse wrinkles on the surface of the legume). Ser. mss. in D. C. prod. 2. p. 188.) legumes wrinkled transversely and arcuately.

20 M. ARVE'NSIS (Wallr. sched. crit. p. 391.) stem much branched from the base, ascending; leaflets obovate, irregularly toothed; stipulas subulate; racemes very long; teeth of calyx nearly equal, length of tube; wings equal in length to the vexillum, but exceeding the carina; legume ovate, acute, wrinkled transversely from lacunæ, usually 2-seeded, yellowish-green; seeds ovate-oblong, olive-coloured, smooth; radicle hardly prominent. ⊙. H. Native of Germany, among corn. Flowers yellow.

Var. β, *albiflòra* (Wallr. sched. 392.) M. Petitpierreàna, Hayne in Schrad. neue journ. 2. part 2. p. 337. Willd. enum. 790. ex Wallr. Flowers white.

Corn-field Melilot. Fl. July, Aug. Clt. 1800. Pl. 1 to 2 ft.

21 M. E'LEGANS (Salzmann, in litt. D. C. prod. 2. p. 188.) teeth of calyx about equal, lanceolate, length of tube; legume ovate, adhering to the seeds, wrinkled irregularly and transversely, and somewhat lacunose, and bay-coloured, 1-seeded; seeds subglobose, hardly retuse, rugged from dots, bay-coloured. ⊙. H. Native of Corsica.

Elegant Melilot. Pl. 1 to 2 feet.

22 M. BESSERIA'NA (Ser. mss. in D. C. prod. 2. p. 188.) stem angular, firm, branched; branches assurgent; leaflets ovate, serrulated; legume ovate, hardly compressed, very rugged, greenish; wrinkles elevated, transverse, tumid, and lacunose; seeds irregularly heart-shaped, bay-coloured, rather veiny. ♂. H. Native of Tauria. M. imbricàta, Besser in litt. (1824.) M. plicàta, Stev.? Flowers yellow, like those of *M. officinàlis*.

Besser's Melilot. Fl. July, Aug. Clt. 1816. Pl. 4 to 6 ft.

Sect. III. Campyloru'tis (from καμπυλος, *campylos*, a curve, and ρυτις, *rutis*, a wrinkle; in reference to the curved or arched wrinkles on the surface of the legumes). Ser. mss. in D.C. prod. 2. p. 189. Legumes ovate or obovate, densely and arcuately veined.

23 M. Messane'nsis (Desf. fl. atl. 2. p. 192.) stem erect; leaflets obovate-cuneated, denticulated; stipulas broad at the base, toothed, linear at the apex; racemes few-flowered; teeth of calyx nearly equal, hardly shorter than the tube; legume lanceolate, acute, very much nerved, 1-seeded; seeds ovate, compressed, large, black, rugged from dots. ⊙. H. Native of Barbary, Sicily, and Piedmont, and the Straits of Messina. Trifòlium Messanénse, Lin. mant. 175. Flowers yellow.

Messina Melilot. Fl. July, Aug. Clt. 1670. Pl. 1 to 2 feet.

24 M. sulca'ta (Desf. fl. atl. 2. p. 193.) stem procumbent; leaflets obovate, obsoletely-toothed; stipulas linear-subulate, dilated at the base, entire or toothed; teeth of calyx broadish, shorter than the tube; legume obovate, somewhat globose, densely nerved, 2-seeded; seeds somewhat orbicular, rugged from dots. ⊙. H. Native of Algiers and Alexandria, in cultivated fields. Trifòlium Melilòtus I'ndicum γ, Lin. spec. 1077. M. Mauritánica, Willd. enum. p. 789. M. longifòlia, Tenore, prod. suppl. 1. p. 66. Flowers yellow.

Var. β, *Libanótica* (Ser. mss. in D. C. prod. 2. p. 189.) fruit larger, 1-seeded; seeds ovate, wrinkled from dots; teeth of calyx narrower. ⊙. H. On mount Libanon. Perhaps a proper species.

Furrowed-stemmed Melilot. Fl. Ju. Aug. Clt. 1798. Pl. pr.

† *Species not sufficiently known.*

25 M. Baume'tti (Horn. hort. hafn. suppl. p. 84.) slender; stem erect; leaflets oblong-obovate, truncate, sharply-serrated at the apex; legume racemose, naked, wrinkled, 1-seeded. ⊙. H. Native of? Flowers yellow.

Baumetti's Melilot. Fl. July, Aug. Clt. 1818. Pl. 1 to 2 ft.

26 M. mi'nima (Roth. nov. spec. p. 361.) stem decumbent; leaflets cuneated, deeply toothed; stipulas palmately awned, rather membranous; legumes axillary, sessile, crowded, roundish, muricated, rugged, 1-seeded. ⊙. ? H. Native of the East Indies. Flowers small, white.

Smallest Melilot. Pl. decumbent.

27 M. Neapolita'na (Tenore, prod. suppl. 1. p. 66. cat. 1819. p. 57.) stem erect; leaflets deltoid-obovate, toothed at the apex; stipulas setaceous, entire; flowers spreading; legumes 1-seeded, obovate, obtuse, naked, arcuately wrinkled. ⊙. H. Native on exposed hills near Naples.

Neapolitan Melilot. Fl. Ju. Aug. Clt. 1820. Pl. 2 feet.

Cult. None of the species are worth cultivating except in botanical gardens. They are all easily increased by seeds, which only require to be sown in the open border in spring. A dry light soil suits them best.

LXX. TRIFO'LIUM (from *tres*, three, and *folium*, a leaf; all the species of the genus have trifoliate leaves, or each leaf is composed of 3 leaflets; the Greeks call it τριφυλλον; the French *trèfle*; and the English *trefoil* or *clover*). Tourn. inst. 404. t. 228. Juss. gen. 355. Lam. ill. 613. D. C. prod. 2. p. 189.—Trifòlium, spec. Lin.

Lin. syst. *Diadélphia, Decándria.* Calyx tubular (f. 32. *a.*), permanent, glandless, 5-cleft (f. 32. *a.*); segments subulate. Carina shorter than the wings and vexillum. Stamens diadelphous (f. 32. *b.*). Legume small, hardly dehiscent, usually ovate, 1-2-seeded, shorter than the calyx, and covered by it, rarely oblong, and containing 3-4 seeds, in which case it exceeds the calyx a little.—Herbs. Stipulas adnate to the petioles. Leaves usually trifoliate, rarely with 5 leaflets. Flowers disposed in dense heads or spikes, bracteate, purple, white, or cream-coloured. Petals in the greater part of the species joined together at the base. This genus includes the most valuable herbage plants adopted in European agriculture, the white, red, and yellow *clover*. Notwithstanding all that has been said of the superiority of *lucern* to *clover*, and of the excellence of *saintfoin* and various other leguminous plants, yet the red *clover* for mowing, and the white species for pasturage, are, and probably ever will be, found to excel all plants in these respects. The yellow *clover*, and the cow or meadow *clover* are also in cultivation but are inferior to the white and red *clover*.

Sect. I. Lagòpus (from λαγως, *lagos*, a hare, and πους, *pous*, a foot; in reference to the soft villous heads of flowers, which have been compared to the softness of a hare's foot). Ser. mss. in D. C. prod. 2. p. 189. Flowers spicate; spikes oblong, bractless at the base. Calyx very villous, not inflated after flowering.

1 T. angustifòlium (Lin. spec. 1083.) stem erect; leaflets linear-lanceolate, very acute, ciliated; stipulas very long, narrow, subulate at the apex; spike solitary, terminal, between conical and oblong in shape; calyx ribbed, glandular, and pilose; segments setaceous, spinescent at the apex, hardly exceeding the monopetalous corolla, lower segment longest; seeds egg-shaped, smooth, bay-coloured. ⊙. H. Native of the south of Europe and the extra-tropical parts of the south of Africa, ex Burch. cat. geogr. no. 286. Sturm, deutsch. fl. 1. fasc. 16. Savi, obs. p. 58.—Barrel. icon. 698. Flowers pale rose-coloured.

Narrow-leaved Trefoil. Fl. June, Aug. Clt. 1640 or 1739. Pl. 1½ foot.

2 T. interme'dium (Gussone, cat. 1821. p. 82. in a note, p. 14. but not of Lapeyr.) plant pilose; stem diffuse; leaflets lanceolate, oblong; spikes villous, between conical and oblong in shape; segments of the calyx setaceous, and nearly equal, but not spinescent at the apex; corolla hardly exceeding the calyx. ⊙. H. Native of Italy, on sandy hills. Corolla white. Calyx striated, the segments terminated by fascicles of hairs. The rest of the plant appears as if it were a hybrid between *T. angustifòlium* and *T. arvénse*.

Intermediate Hare's-foot Trefoil. Fl. June, July. Clt. 1820. Pl. ½ to 1 foot.

3 T. purpu'reum (Lois. fl. gall. 484. t. 14.) stem erect; leaflets linear-lanceolate, acute, quite entire, ciliated; stipulas narrow, somewhat setaceous at the apex; spikes ovate-oblong, terminal, solitary; calyx ribbed, glandular, and pilose; the segments setaceous, much shorter than the corolla, which is perhaps monopetalous, the lower segment longest. ⊙. H. Native about Montpelier, Florence, and of the Levant. Savi, obs. p. 60. Flowers purple.

Purple-flowered Hare's-foot Trefoil. Fl. June, July. Clt. 1816. Pl. 1 foot.

4 T. ru'bens (Lin. spec. 1081.) stem erect, straight; leaflets oblong, very blunt, and quite smooth, denticulated; stipulas very long and very broad, lanceolate at the apex; spikes terminal, usually twin; calyx very much striated, glandless, with the segments setaceous and very short, the lower segment longest, but hardly equal in length to the monopetalous corolla; seeds egg-shaped, smooth; radicle rather prominent. ♃. H. Native of Europe, on mountains, in meadows, and on the margins of woods. Sturm, deutsch. fl. 1. fasc. 15. Savi, obs. p. 55. Mart. fl. rust. t. 9. Jacq. aust. 4. p. 385. Flowers dark red. An elegant plant.

Var. β, *furcàtum* (Ser. mss. in D. C. prod. 2. p. 190.) stems forked at the top, bearing 2 spikes of flowers.

Var. γ, *ramosíssimum* (Ser. mss. in D. C. l. c.) stem much branched, bearing many spikes. On Mount Saleva.

Red Trefoil. Fl. June, Sept. Clt. 1633. Pl. 1 to 1½ foot.

5 T. CŒRULE´SCENS (Bieb. fl. taur. suppl. 509.) stem erect? leaflets roundish-rhomboidal, villous, as well as the half-ovate, subulate, dentate stipulas; teeth of calyx nearly equal in length to the wings. ⊙. H. Native of the desert Anketer, between the rivers Terek and Kuma. The plant is known from *T. incarnàtum* in the leaflets being lined, in the stipulas being membranous, and in the heads of flowers being shorter. Flowers bluish-purple.

Bluish-flowered Trefoil. Fl. July. Clt. 1827. Pl. 1 foot.

6 T. INCARNAˋTUM (Lin. spec. 1083.) stem erect; leaflets roundish, obcordate, crenated, villous; stipulas broad, very short, obtuse, and spacelate at the apex: spikes terminal, solitary, on long peduncles; calyx ribbed, very pilose; the segments lanceolate-setaceous, equal, somewhat stellately disposed, equal in length with the monopetalous corolla; seeds egg-shaped, radicle rather prominent. ⊙. H. Native of the south of Europe, in subhumid meadows. Sims, bot. mag. 328. Sturm, deutsch. fl. 1. heft. 16. Mill. fig. t. 267. f. 1. Flowers crimson, red, flesh-coloured, or even white. This is an elegant plant when in flower. Mr. Miller says it will make good food for cattle, but being an annual plant will not suit with the common practice of farmers.

Var. β, Molinèrii (D. C. fl. fr. 5. p. 556.) flowers pale flesh-coloured; stipulas hardly spacelate; leaflets more or less denticulated. ⊙. H. T. Molinèrii, Balb. ex Horn. hort. hafn. p. 715.

Flesh-coloured-flowered Trefoil. Clt. 1640. Pl. 1 foot.

7 T. LAGOˋPUS (Pour. ex Willd. spec. 3. p. 1365.) plant very hairy; stem much branched; leaflets obovate-cuneated, denticulated; stipulas lanceolate, very broad, short, nerved; spike terminal, oblong, solitary, sessile; calyx ribbed, very pilose; the segments setaceous and equal, but shorter than the corolla. ⊙. H. Native of Spain.– Poir. dict. 8. p. 10. Flowers red.

Hare's-foot Trefoil. Fl. July, Aug. Clt. 1827. Pl. pr.

8 T. SPICAˋTUM (Sibth. and Smith, fl. græc. t. 743. ex prod. 2. p. 93.) stem erect; legume 1-seeded, disposed in spikes, erect, naked, wrinkled, acute; stipulas subulate, quite entire. ⊙. H. Native of the Island of Cyprus. Flowers yellow.

Spike-flowered Trefoil. Pl. 1 foot.

9 T. ARVE´NSE (Lin. spec. 1083.) stem erect, branched, or simple; leaflets spatulate, linear, somewhat tridentate at the apex; stipulas narrow, membranous, nerved, bristle-pointed, pilose; spikes oblong, very villous, soft; calyx very pilose, the segments bristle-shaped, longer than the polypetalous corolla, and equal in length with each other; seeds egg-shaped, bay-coloured; radicle not prominent. ⊙. H. Native of Europe; common in fields; plentiful in Britain, in sandy barren fields. Smith, engl. bot. 944. Sturm, deutsch. fl. 1. heft. 16. Curt. fl. lond. 6. t. 50. Fl. dan. 724. Flowers pale-reddish.

Var. β, crassicaûle (Ser. mss. in D. C. prod. 2. p. 191.) heads ovate-globose, much smaller; stem very thick and very much branched; branches divaricate. ⊙. H. Native of Caucasus, in fields.

Var. γ, perpusíllum (Ser. l. c.) spikes somewhat globose; stems very short, procumbent. ⊙. H. Ray, syn. p. 330. no. 15. t. 14. f. 2. Lobel first found this plant near South-sea Castle; Dillenius near Brackelsham, in Sussex, and Mr. Woodward, on Yarmouth Danes, at Lowestoft, &c.

Var. δ, gràcile (D. C. fl. fr. 4. p. 530.) stem and leaves smoothish; segments of the calyx villous at the apex, and coloured. ⊙. H. Native of France. T. gràcile, Thuil. fl. par. ed. 2. p. 283 —Barrel. icon. 901.

Var. ε, capitàtum (Ser. l. c.) heads of flowers globose, sessile. T. arvénse β,.Savi, obs. trif. p. 19.—Barrel. icon. t. 902.

Field Hare's-foot Trefoil. Fl. July, Aug. Brit. Pl. ½ to 1 ft.

10 T. LIGU´STICUM (Balb. in act. acad. ital. 1. p. 192. f. 2. ex Savi, obs. trif. p. 38.) stem branched, diffuse; leaflets obovate or obcordate, broad, somewhat denticulated at the apex; stipulas broadish, lanceolate, nerved, small, ending in an acumen, which is equal in length to the limb; spikes oblong, twin, divaricate, pedunculate, pilose; teeth of calyx subulate, equal, twice the length of the tube, but exceeding the corolla; seeds egg-shaped, yellow; radicle rather prominent. ⊙. H. Native of Italy, about Pisa, also in Spain and Corsica. T. arrectisètum, Brot. phyt. p. 152. t. 63. f. 1. T. aristàtum, Horn. hort. hafn. p. 712. Link. enum. 2. p. 262. Flowers pale-red.

Var. β, párvulum (Ser. mss. in D. C. prod. 2. p. 191.) stem much branched, slender; spikes small, somewhat globose. ⊙. H. Native of the Stæchades Islands, and about Pisa.

Lovage Trefoil. Fl. June, July. Clt. 1816. Pl. ½ foot.

11 T. DIVARICAˋTUM (Horn. hort. hafn. 2. p. 715.) stem erect, divaricate, much branched; leaflets obovate, emarginate, pilose; stipulas lanceolate; spikes elongated, ovate-cylindrical; teeth of calyx subulate; corolla monopetalous. ⊙. H. Native of? Perhaps only a variety of *T. geméllum*, ex Horn. l. c. Flowers white and pale-red.

Divaricate Trefoil. Fl. June, July. Clt. 1816. Pl. spread.

12 T. GEME´LLUM (Pourr. in Willd. spec. 3. p. 1376.) stem straight, simple; leaflets obovate, narrow, retuse, hardly denticulated at the apex; stipulas narrow, with a long acumen, hardly nerved; spikes oblong, terminal, pedunculate and approximate, pilose; segments of the calyx dilated at the base, unequal, divaricate, length of tube, but longer than the corolla; seeds irregularly egg-shaped, small, yellowish-green; radicle rather prominent. ⊙. H. Native of Spain. Flowers pale-red or white.

Twin-spiked Trifolium. Fl. June, July. Clt. 1816. Pl. ½ ft.

13 T. PHLEOIˋDES (Pourr. in Willd. spec. 3. p. 1377.) stem branched a little, slender; leaflets oblong, obcordate, denticulated; stipulas rather membranous, nerved, very narrow, awl-shaped; spike pedunculate, solitary or twin, between conical and oblong, villous, bractless; flowers very dense; segments of calyx equal, diverging, subulate, dilated at the base, length of tube, but shorter than the corolla; seeds exactly egg-shaped, small, bay-coloured; radicle hardly prominent. ⊙. H. Native of Spain and Italy. Flowers pale-purple or white. Heads like those of a species of *Phlèum.*

Phleum-headed Trefoil. Fl. May, Jul. Clt. 1818. Pl. ½ ft.

14 T. LAPPAˋCEUM (Lin. spec. 1082.) stem branched, diffuse; leaflets obovate, or obcordate, denticulated; stipulas rather membranous, nerved, narrow, long, and subulate; spike subglobose, hispid, terminal, usually solitary; segments of the calyx equal, subulate, twice or thrice longer than the tube, but equal in length to the corolla; seed egg-shaped, brown; radicle hardly prominent. ⊙. H. Native of Europe. Flowers pale-red.

Burdock-like Trefoil. Fl. June, Aug. Clt. 1821. Pl. divaricate, ¼ to ½ foot.

15? T. ECHINAˋTUM (Bieb. fl. taur. 2. p. 216.) stem declinate, branched; leaflets obovate-oblong, quite entire; stipulas subulate, pilose; heads ovate, terminal, and axillary, pedunculate, leafless; segments of calyx subulate, unequal, pilose, shorter than the monopetalous corolla, when in fruit spreading much. ⊙. H. Native of Caucasus. Flowers pale. Vexillum lanceolate, elongated.

Echinated-headed Trefoil. Fl. Ju. Jul. Clt. 1821. Pl. dec.

16 T. ERINAˋCEUM (Bieb. fl. taur. suppl. 510.) stem erect, branched; leaflets cuneated, emarginate, almost entire, villous; stipulas lanceolate, cuspidate; segments of the calyx nearly equal, a little longer than the tube, but exceeding the corolla. ⊙. H. Native of Iberia. Allied to *T. divaricàtum.* Flowers pale-red.

Prickly-headed Trefoil. Fl. June, July. Clt. 1818. Pl. ½ ft.

17 T. MALACA´NTHUM (Link. enum. 2. p. 261.) stem flexucus,

hairy; leaflets obcordate, hairy: stipulas ovate, acuminated; heads terminal and lateral; calyx campanulate, lined; the segments subulate and spreading, hairy. ⊙. H. Native of? Corolla small and pale-purple.

Soft-flowered Trefoil. Fl. July, Aug. Clt. 1824. Pl. ½ ft.

18 T. SYLVA'TICUM (Gerard, in Lois. not. p. 111.) stem a little branched, erect, pubescent; leaflets ovate. obtuse: stipulas dilated, upper ones inclosing the spike of flowers; spike oblong, villous; calycine segments setaceous, ciliated, shorter than the corolla, one of which is longer than the rest and spreading. ⊙. ? H. Native of the south of France. Plant clothed with silky wool. Corolla purple. Spike about an inch long, constantly composed of about 40 flowers.

Wood Trefoil. Fl. June, July. Clt? Pl. ½ foot.

19 T. NI'GRO-PUNCTA'TUM (Wahl. in isis. 1828. vol. 21. p. 971.) spikes of flowers oblong, pedunculated; lower tooth of calyx shorter than the wings of the corolla, which is gamopetalous; stipulas linear, lined with black; leaflets lanceolate-elliptic; stem branched. ⊙. H. Native about Constantinople.

Black-dotted-stipuled Trefoil. Pl. 1 foot.

SECT. II. PHLEA'STRUM (from *phleum*, the cat-tail grass, and *astrum*, an affixed signification, like; the heads of most of the species resemble those of the cat's-tail grass). Ser. mss. in D. C. prod. 2. p. 192. Flowers disposed in ovate-conical heads. Calyx not inflated after flowering.

20 T. BOCCÒNI (Savi, obs. trif. p. 37. no. 14.) stem erect, branched; leaflets oblong-obovate, denticulated at the apex; stipulas very long and very narrow, subulate; heads ovate, dense-flowered, twin, sessile, terminal, bracteate at the base; segments of the calyx nearly equal, narrow, coarsely nerved in the middle, length of tube, and about equal in length to the corolla; seeds small, yellow, egg-shaped; radicle prominent. ⊙. H. Native of Italy, Corsica, Portugal, and Andegavany. T. collìnum, Bast. fl. main. et loir. and Poir. suppl. p. 5. T. semiglàbrum, Brot. phyt. p. 155. t. 63. f. 2. Flowers pale-red.

Bocconi's Trefoil. Fl. June, July. Clt. 1820. Pl. ½ foot.

21 T. STRIA'TUM (Lin. spec. 1085.) stem procumbent, branched; leaflets obovate-oblong, denticulated at the apex, downy; stipulas membranous, broad, nerved, apiculated; heads ovate-conical, dense, terminal and lateral, solitary, sessile, bracteate at the base; tube of calyx much nerved, ventricose, the teeth small and unequal, divaricated, bristle-shaped, shorter than the corolla; seeds turgid, bay-coloured, egg-shaped; radicle not prominent. ⊙. H. Native of Europe, in dry sandy places; plentiful in some parts of Britain, in dry barren sandy fields and pastures. Smith, engl. bot. 1843. Flowers pale-red.

Striated-calyxed Trefoil. Fl. June, July. Brit. Pl. proc.

22 T. TENUIFLÒRUM (Tenore, prod. p. 44. et cat. 1819. p. 58.) stems erect, branched, villous; leaflets obovate-cuneated, serrulated, villous; lower stipulas lanceolate, acute, upper ones ovate, mucronate, nerved; heads cylindrical, villous; flowers length of calyx; calyx clothed with rufous, silky pubescence; the teeth spinose. ⊙. H. Native about Naples. Flowers pale-red.

Fine-flowered Trefoil. Fl. June, July. Clt. 1823. Pl. 1 ft.

23 T. TENUIFÒLIUM (Ten. fl. nap. pr. p. 44.) stem and branches erect; lower leaflets obcordately-cuneated, superior ones linear, denticulated towards the apex, mucronate; calycine teeth unequal, setaceous, shorter than the corolla; heads of flowers oblong, solitary, or twin, sessile. ⊙. H. Native of Lucania, in sandy fields. Flowers straw-coloured. Stems numerous from the root. "Corolla gamopetalous. The plant has the habit of *T. Bocconi*?"

Fine-leaved Trefoil. Fl. May, July. Pl. 1 foot.

24 T. SCA'BRUM (Lin. amœn. 4. p. 287. spec. 1084.) stem procumbent; leaflets obovate, denticulated; stipulas ovate, small, nerved, somewhat membranous, pointed; heads of flowers ovate, sessile, terminal, and lateral; calycine segments linear-lanceolate, stiff, 3-nerved, unequal, hardly equal in length to the polypetalous corolla; finally recurved; seeds ovate, yellow; radicle not prominent. ⊙. H. Native of Europe, in sterile barren places; plentiful in some parts of Britain, in chalky and dry barren fields. Smith, engl. bot. 903. Flowers white.

Scabrous Trefoil. Fl. May, July. Britain. Pl. procumb.

25 T. DALMA'TICUM (Visiani ex bot. zeit. march. 1829. p. 21.) pubescent; stems prostrate, inflexed at the apex; stipulas ovate, membranous, nerved; leaflets stalked, nerved, obovate, finely denticulated, floral ones almost sessile, involucrated by dilated stipulas; heads of flowers ovate-conical, axillary, and terminal, sessile and leafy at the base; calyx pubescent, having linear, straight teeth, which are at length recurved, not half the length of the gamopetalous corolla. ⊙. H. Native of Dalmatia. Flowers white or red. Allied to *T. scàbrum*.

Dalmatian Trefoil. Pl. prostrate.

SECT. III. EUTRIPHY'LLUM (from *ευ*, *eu*, well or good, and *τριφυλλον*, *triphyllon*, trefoil; genuine species). Ser. mss. in D. C. prod. 2. p. 192. Flowers disposed in ovate, pedunculate, or sessile, usually bracteate heads. Calyx villous, not inflated.

26 T. MARI'TIMUM (Huds. angl. ed. 1. p. 284.) stem spreading, often recumbent; heads of flowers somewhat ovate-globose; leaflets oblong-obovate, obtuse, or emarginate, somewhat denticulated; stipulas narrow, pointed; spikes ovate-globose, nearly sessile; calycine segments shorter than the tube and polypetalous corolla, stiff, unequal, at length much dilated and spreading, 3-nerved; seeds ovoid, bay-coloured, hardly gibbous at the base. ⊙. H. Native of Europe, by the sea-side in salt marshes and meadows; plentiful in some parts of Britain, on the east and south coasts of England, from Norfolk to Somersetshire in various places. Smith, engl. bot. 220. Hook. fl. lond. t. 57. T. irregulàre, Pour. act. toul. 3. p. 331. T. rígidum, Savi, fl. pis. 2. p. 159. t. 1. f. 1. obs. trif. p. 42. Flowers pale-red. Plant hairy.

Var. β, *Bastardiànum* (Ser. mss. in D. C. prod. 2. p. 192.) spikes pedunculate; calycine segments larger and finely nerved.

Sea-side Trefoil. Fl. June, July. Brit. Pl. decumbent, or ½ foot high when growing in a tuft.

27 T. SUPÌNUM (Savi, obs. trif. p. 46. f. 2.) stems spreading, branched; leaflets obovate, broad, ciliated; stipulas narrow, nerved, small, subulate; heads somewhat obovate, pedunculate, egg-shaped after flowering; calycine segments unequal, linear, stiff, spreading, shorter than the corolla; seeds unequally subcordate, bay-coloured; radicle prominent. ⊙. H. Native of the south of Europe. Flowers pale-red.

Supine Trefoil. Fl. June, July. Clt. 1816, Pl. trailing.

28 T. CONSTANTINOPOLITA'NUM (Ser. mss. in D. C. prod. 2. p. 193.) stems spreading, branched; leaflets lanceolate-linear, somewhat denticulated; stipulas narrow, nerved, subulate; heads of flowers somewhat globose, terminal, and lateral, pedunculate when mature, of a conical shape; flowers crowded, at length rather loose, and apparently somewhat verticillate; calycine segments unequal, subulate, stiff, much shorter than the corolla. ⊙. H. Frequent about Constantinople. Flowers yellow.

Constantinople Trefoil. Fl. June, July. Clt. 1820. Pl. spread.

29 T. XATA'RDI (D. C. fl. fr. 5. p. 558.) stem erect, villous, branched; leaflets obovate-elongated, a little ciliated; stipulas narrow, nerved; heads of flowers ovate, pedunculate; calyx striated, glandular, and pilose; the segments hardly unequal and smaller than the corolla. ⊙. H. Native of the eastern Pyrenees. Flowers pale-purple?

Var. β, *Bœ'ticum* (Ser. mss. in D. C. prod. 2. p. 193.) plant smoothish; stipulas very long; calycine segments ciliated. Native of Spain. T. Bœ'ticum, Lag. ex Balb. in litt.

Xatard's Trefoil. Pl. 1 foot.

30 T. cínctum (D C. cat. hort. monsp. p. 152.) stems erect, pilose, a little branched; leaflets oval-oblong, villous; stipulas broad, nerved, the two upper ones somewhat palmate; heads ovate, pedunculate; calyx striated; the segments unequal, the lower one large, but shorter than the corolla. ⊙. H. Native about Montpelier. Flowers cream-coloured. Vexillum elongated, linear, rather acute. Allied to *T. maritimum* and *T. ochroleùcum.*

Girded Trefoil. Fl. June, July. Clt. 1820. Pl. ½ to 1 foot.

31 T. Alexandri'num (Lin. amœn. 4. p. 286.) plant smoothish; stems ascending, thick, flexuous; leaves numerous; leaflets ovate-elliptic, somewhat denticulated; stipulas narrow, nerved, about equal in length to the petiole; heads of flowers terminal, ovate; calyx hardly ribbed, pilose; the segments setaceous and nearly equal, the two superior ones joined at the base, much shorter than the monopetalous corolla; seeds ovate, compressed, yellow (ex Savi). ⊙. H. Native of Egypt, about Alexandria. —Forsk. fl. ægypt. descr. p. 139. Savi, obs. trif. p. 47. Flowers pale-yellow. Forskal says that this *trefoil* is universally cultivated in Egypt, being the best and indeed the principal fodder for cattle in that country. It is sown only in the recess of the Nile, and where the fields are too high to be inundated by that river they are watered by means of hydraulic engines; the seeds being committed to the earth while it is wet. The produce is three separate crops, the plants growing each time about half an ell in height. After the last crop the plants die. When this *trefoil* is wanted for seed, it is sown along with the wheat. Both are gathered at once by the hand, not reaped or mown, and are threshed out together, the *trefoil-seed* being afterwards separated by a sieve. This species of clover, being so important in its own country, might be worth the notice of British agriculturists.

Var. β, *ramòsum* (Ser. mss. in D. C. prod. 2. p. 193.) stem branched; lower segment of the calyx bi-trifurcate.

Alexandrian Trefoil. Fl. June, July. Clt. 1798. Pl. 1 ft.

32 T. ochroleu'cum (Lin. syst. nat. 3. p. 233.) pilose; stems ascending, slender; leaves distant; leaflets ovate-elliptic, obtuse, or retuse, finely hairy, upper ones narrowest; stipulas narrow, nerved, much shorter than the petioles, pointed; heads terminal, ovate-oblong, on long stalks; calyx ribbed, smoothish; the segments linear and setaceous, unequal, stiffish, half-spreading, much shorter than the corolla, lowest segment very long. ♃. H. Native of Europe, in dry fields. Curt. fl. lond. 6. t. 49. Mart. fl. rust. 35. Jacq. austr. t. 40. Sturm, deutsch. fl. 1. heft. 16. t. 40. Smith, engl. bot. 1224. T. ròseum, Presl. ex Gussone, in litt. Flowers cream-coloured. Mr. Curtis recommends this species of *trefoil* to the notice of the experimental agriculturist, and thinks it may be a good substitute for the *T. rèpens* or *T. praténse* in certain soils and situations, but we think it in no respect worthy of attention, as an object of culture.

Var. β, *dichótomum* (Ser. mss.) stem forked at the top; spikes twin, approximate.

Var. γ, *hùmile* (Ser. mss.) plant less villous; leaflets broad, lower ones emarginate. T. ochrolèucum β. D. C. fl. fr. 4. p. 528.

Var. δ, *ramòsum* (Ser. mss.) stem much branched.

Cream-coloured-flowered Trefoil. Fl. May, July. Britain. Pl. 1 foot.

33 T. trichoce'phalum (Bieb. fl. taur. 3. p. 212. and suppl. p. 508.) stem ascending, simple, few-leaved; leaflets entire, ovate, or oblong: stipulas broadish, long, much shorter than the petiole; heads hairy, elliptic, leafy at the base, sessile; calyx ribbed, glandular, pilose; the segments setaceous and unequal, much shorter than the corolla. ♃. H. Native of Caucasus, on the Alps. An intermediate plant between *T. ochroleùcum* and *T. Pannónicum.* Flowers cream-coloured.

Hair-headed Trefoil. Pl. ½ foot.

34 T. cane'scens (Willd. spec. 3. p. 1369.) stems ascending, covered with adpressed hairs; leaflets obovate, emarginate, villous; stipulas lanceolate-subulate; heads terminal, large, oblong, nearly sessile; calyx smooth; the segments lanceolate and pilose, dilated at the base, lowest one a little longer; corolla monopetalous, much longer than the segments. ♃. H. Native of Cappadocia. Sims, bot. mag. 1168. Perhaps a variety of *T. Pannónicum* only. Flowers cream-coloured.

Canescent Trefoil. Fl. May, June. Clt. 1803. Pl. ½ to 1 foot, ascending.

35 T. Panno'nicum (Lin. mant. p. 276.) plant very pilose; stem simple, straight; leaflets lanceolate, oblong, acutish, obtuse or retuse at the apex, nearly entire, ciliated; stipulas narrow, linear, and very long at the apex, length of petiole; heads terminal, pedunculate, ovate-oblong, thick; calyx ribbed, glandular, pilose, the segments setaceous and unequal, much shorter than the corolla. ♃. H. Native of the alps of Piedmont. Jacq. obs. 2. p. 21. t. 42. and of Lower Hungary. Flowers white, but when dry yellowish.

Var. β, *barbàtum* (Ser. mss. in D. C. prod. 2. p. 194.) stem forked; leaflets lanceolate, acute. T. barbàtum, D. C. cat. hort. monsp. 150. Native about Montpelier.

Pannonian Trefoil. Fl. June, July. Clt. 1752. Pl. 1 foot.

36 T. Oly'mpicum (Horn. mss. Hook. bot. mag. t. 2790.) stem erect, hairy; leaflets hairy, lanceolate-elliptic, entire; stipulas subulate, sheathing; spikes of flowers oblong, solitary; calyx hairy, with the lower tooth equal in length to the tube of the corolla; vexillum very long. ♃. H. Native of Mount Olympus. Flowers yellowish.

Olympic Trefoil. Fl. July. Clt. 1817. Pl. 1 foot.

37 T. Arme'nium (Willd. enum. p. 793.) stems simple, ascending; leaflets linear-lanceolate, emarginate; stipulas subulate; spike dense, oblong-elliptic, solitary; lower tooth of calyx about equal in length to the tube of the monopetalous corolla. ♃. H. Native of Armenia. Perhaps only a variety of *T. Pannónicum.* Flowers cream-coloured.

Armenian Trefoil. Fl. June, Jul. Clt. 1820. Pl. 1 ft. ascend.

38 T. squarròsum (Lin. spec. 1082.) stem branched; upper leaves opposite or alternate, rather pilose; leaflets lanceolate or oval, rather retuse; stipulas narrow, smoothish, nerved, rather membranous, ending in a long acumen each; heads ovate; calyx ribbed; the segments unequal, 3-nerved, and ciliated, the lowest segment length of corolla and deflexed; seeds oval, yellow. ⊙. H. Native of Spain, and of France about Paris. D. C. fl. fr. 4. p. 531. T. dipsàceum, Thuill. fl. par. ed. 2. p. 382.— Moris. hist. 2. sect. 2. t. 13. f. 1. Flowers white or cream-coloured.

Var. β, *flàvicans* (Ser. mss. in D. C. prod. 2. p. 194.) flowers pale-yellow. T. squarròsum, Savi, obs. p. 65. t. 3.

Squarrose-headed Trefoil. Fl. June, Jul. Clt. 1640. Pl. ½ ft.

39 T. a'lbidum (Rets. obs. fasc. 4. p. 30.) stem diffuse; leaflets ovate-lanceolate, ending each in a short awn, and with the margins and keel ciliated; heads nearly globose, but when in fruit ovate; calycine segments subulate, unequal, adpressed, lower one 3-nerved, and about equal in length to the corolla. ⊙. H. Native of? Flowers cream-coloured. Perhaps only a variety of *T. ochroleùcum.*

Whitish-flowered Trefoil. Fl. June, July. Clt. 1796. Pl. 1 foot.

40 T. cónicum (Pers. in Savi, obs. trif. p. 41. 1810.) leaflets obovate, denticulated at the apex, mucronulate; stipulas somewhat ventricose, short, obtuse, and triangular at the apex; heads

ovate-conical, pedunculate; calyxes very much nerved; segments half spreading, about equal in length to the corolla. ⊙. H. Native of Europe. Flowers cream-coloured.

Conical-headed Trefoil. Fl. Jul. Aug. Clt. 1816. Pl. ½ to 1 ft.

41 T. Kitaibelia'num (Ser. mss. in D. C. prod. 2. p. 194.) stems ascending, hairy; leaflets obovate-elliptic, quite entire, pilose; heads conical, terminal, sessile. ⊙. H. Native of Hungary. T. cónicum, Kit. in Horn. hort. hafn. 2. p. 717 (1813) but not of Pers. nor Lag. Flowers cream-coloured.

Kitaibel's Trefoil. Fl. June, Aug. Clt. 1818. Sh. ½ foot.

42 T. elonga'tum (Willd. spec. 3. p. 1368.) stem ascending, branched; leaflets lanceolate, emarginate, mucronate, villous; stipulas lanceolate; heads loose, elliptic, solitary; lower segment of the calyx length of wings; corolla monopetalous; vexillum very long. ♃. H. Native of Galatia. The whole plant is villous. It differs from *T. alpéstre* in the leaves being smaller, in the vexillum being longer, in the stem being branched and ascending, and in the villi. Flowers red.

Elongated-headed Trefoil. Pl. 1 foot.

43 T. alpe'stre (Lin. spec. 1082.) stem erect, simple; leaflets lanceolate, coriaceous, ciliately-serrulated; stipulas narrow, nerved, nearly sessile, long, and linear at the apex; heads globose; calyx striated; the segments unequal, beset with spinulous warts, the lower segment shorter than the monopetalous corolla, the rest very short and tooth-formed; seeds somewhat reniform, compressed, and yellowish. ♃. H. Native of Europe, on the Alps. Savi, obs. trif. p. 54. Jacq. obs. 3. p. 14. t. 64. fl. aust. 433. Sims, bot. mag. 2779. Root creeping. Flowers purple. The pl [illegible] the leaves of *T. rùbens* and the flowers of *T. pratér* [illegible]

Va[illegible] *ìyum* (Ser. mss. in D. C. prod. 2. p. 194.) heads of flowers twin, approximate. Sturm, deutschl. fl. 1. heft. 15.

Var. γ, lanígerum (Ser. mss. D. C. prod. 2. p. 194.) stems and petioles covered with numerous, white, soft, spreading pili. Native on Mount Pennino.

Var. δ, rubéllum (Besser, in litt.) flowers rose-coloured. Native of Lithuania.

Alp Trefoil. Fl. June, July. Clt. 1789. Pl. ½ to 1 foot.

44 T. me'dium (Lin. faun. suec. ed. 2. p. 558.) smoothish; stem erectish, flexuous, branched; leaflets oblong, coriaceous, ciliated, many-nerved, glaucous beneath; stipulas tapering, converging; heads subglobose, pedunculate, rather loose; calycine segments unequal, rather pilose, the uppermost ones rather the shortest, all shorter than the monopetalous corolla; seeds irregularly cordate; radicle very prominent. ♃. H. Native of Europe, in elevated pastures; plentiful in some parts of Britain. Sturm, deutschl. fl. 1. fasc. 15. Smith, engl. bot. 190. T. flexuòsum, Jacq. fl. austr. t. 386. Mart. fl. rust. 13. T. affìne, Lejeune, ex herb. D. C. T. alpéstre, Crantz. aust. 407. Fl. dan. 662. Root creeping. Flowers purple. It differs from *T. praténse* in the looser heads of flowers, flexuous stems, and creeping woody roots. This species goes under the names of *Cow-grass, Meadow-clover*, and *Marl-grass*. It is sometimes cultivated as an agricultural plant in England and some other parts of Europe. The best properties of the present kind of clover seem to be its power of resisting drought, and its thriving on cold tenacious soils. Yet Mr. Sinclair reports it to be preferable to *T. praténse* or *red clover* for permanent pasture on light soils. Its produce of nutritious matter, however, is said to be but half as much as that of *T. praténse*.

Meadow Trefoil. Fl. June, July. Britain. Pl. 1 foot.

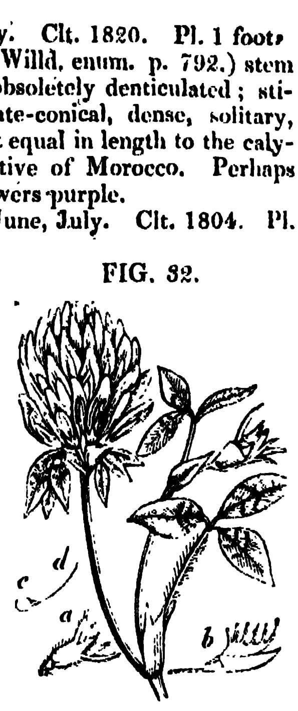
45 T. expa'nsum (Kit. in litt. D. C. prod. 2. p. 195.) pilose; stem erect; leaflets lanceolate; stipulas narrow, nerved, elongated, and ascending at the apex; heads ovate, obtuse, sessile; calycine segments pilose, flexible, unequal, tetragonal, shorter than the corolla. ♃. H. Native of? Perhaps it is a variety of *T. praténse*, but the stipulas are longer, and the leaflets are narrower. Flowers purple.

Expanded Trefoil. Fl. June, July. Clt. 1820. Pl. 1 foot.

46 T. bractea'tum (Schousb. in Willd. enum. p. 792.) stem branched; leaflets ovate, obtuse, obsoletely denticulated; stipulas awned; heads of flowers ovate-conical, dense, solitary, sessile; corolla monopetalous, about equal in length to the calycine segments. ♂.? ⊙.? H. Native of Morocco. Perhaps only a variety of *T. praténse*. Flowers purple.

Bracteate-flowered Trefoil. Fl. June, July. Clt. 1804. Pl. 1 to 1½ foot.

FIG. 32.



47 T. prate'nse (Lin. spec. 1082.) stems ascending; leaflets elliptic, more or less acute, entire; stipulas broad, nerved, glabrous, each ending in a short bristle point, inflexed; heads ovate, dense, obtuse, nearly sessile; calycine segments pilose, flexible, unequal, the lowest one longest, the rest equal; corolla gamopetalous; seeds reniform, compressed, yellowish. ♃. H. Native of Europe, frequent on the Alps and in meadows; plentiful in some parts of Britain. Sturm, deutschl. fl. 1. heft. 5. Savi, obs. trif. p. 48. Smith, engl. bot. 1770. Mart. fl. rust. t. 3. Leaflets dark-green, usually with a white subsagittate mark in the centre. Flowers purple, rarely white.

The red or broad *clover* is the kind most generally cultivated on land that carries white and green crops alternately, as it yields the largest crop of all the other sorts.

The soil best adapted for *clover* is deep sandy loam, which is favourable to its long tap roots, but it will grow in any soil, provided it be dry. Marl, lime, or chalk, is very congenial to *clover*.

The climate most congenial to *clover* is one neither very hot nor very dry and cold. *Clover* will be found to produce most seed in a dry soil and warm temperature, but as the production of seed is only in some situations an object of the farmer's attention, a season rather moist, provided it be warm, is always attended by the most bulky crop of *clover* herbage.

The culture which *clover* receives is ordinary farm culture, and that destined also for another crop.

The time of sowing clover-seed is generally in spring, during the corn seed time, or from February to May; but it may also be sown from August to October, and when it is sown by itself, unaccompanied by any other crop, this will be found the best season, as the young plants are less liable to be dried up, and impeded in their progress by the sun, than when sown alone in spring and remaining unshaded during the dry and hot weather of summer; but clover-seed is usually mixed with a certain portion of rye-grass seed, and sown along with or among other crops, especially with spring-sown wheat, barley, and the early varieties of oats. Unless, however, the soils on which these crops are sown are well pulverized, and have been some years under tillage, *clover* will not succeed in them; it being ascertained that newly broken-up pasture grounds cannot be sown down to *clover* and grasses till the soil is thoroughly pulverized, and the roots of the former grasses and herbage plants completely destroyed.

Some prepare clover-seed for sowing by steeping it in water or in oil, as in Switzerland, and then mixing it with powdered gypsum, as a preventive to the attacks of insects.

The manner of sowing clover is always broad-cast. When sown with spring corn, clover and grass seeds are usually put in after the land has been pulverized by harrowing in the corn-seeds, and are themselves covered by one course more of the harrows, or if the corn is drilled, the small seeds are sown immediately before or after hand-hoeing, and the land is then finished by a course of the harrow. When the land is under an autumn-sown crop of wheat or other grain, though the clovers and rye-grass are still sown in spring, the proper period must depend both upon the state of the land and the progress of the crops; and it may be often adviseable to break the crust formed on the surface of tenacious soils, by using the harrow before the clover-seed is sown, as well as afterwards to cover it. Sometimes the roller only is employed at this time, and there are instances of clover and rye-grass succeeding when sown without either harrow or rolling, if the weather is moist at the time of sowing. Half an inch may be considered a proper depth to cover clover-seed in clay soils, and an inch in dry light soil, but it will grow when barely covered.

The quantity of seed sown on an acre is exceedingly various; not only as more or less white and yellow clover is sown along with grass-seeds and red clover, or when pasturage is intended, but even when they are the only kinds sown, the quantity is varied by the quality of the soils, and the different purposes of hay, soiling, or one year's pasture, to which the crop is to be applied. When pasturage is the object more seed is necessary than when the crop is to be cut green for soiling; and for hay less is necessary than to either of the former. Timely pulverized soils do not require so much seed as clays, on which clovers and rye-glass are very frequently sown among autumn or winter-sown wheat, when there is more danger of a part of it perishing from being imperfectly covered. In general 8 or 10 pounds may be taken as a minimum quantity, and from that to 14 pounds as the maximum. Rye-grass, commonly at the rate of a bushel per acre, but in many cases only half or two-thirds of a bushel, is mixed with this weight of clover, and both are sown at the same time.

When it is intended to retain the land in pasture for several years the quantity of red clover is diminished, and several kinds of more permanent herbage are added, the most common of which are white and yellow clover, and rib-wort and rye-grass. No general rule can be laid down as to the proper quantity of each to be sown; the red clover and rye-grass, however, should predominate.

In the selection of clover and rye-grass seeds particular attention should be paid to their quality and cleanness; the purple colour of cloverseed denotes that it has been ripe and well saved, and the seeds of weeds may be detected in it by narrow inspection, if there be any; but various noxious weeds are frequently mixed up with seeds of rye-grass, which it is difficult either to discover or to separate from them. Red clover from Holland or France has been found to die out in the season it has been cut or pastured, while the English seed produces plants which stand over the second, and many of them the third year (General Report of Scotland, vol. 1. p. 537.); thus remaining, in the latter case, four years in the ground from the time of sowing.

The after culture of clover and rye-grass is chiefly keeping the ground clear of weeds and stones. After this the surface should be rolled once to smooth it for the scythe. This operation is best performed in the first dry weather of March. Some give a top dressing of soot, gypsum, common lime, peat or wood ashes at this time or earlier; but where the soil is in good heart, and contains calcareous matter, top-dressing cannot be considered as necessary.

The taking of the clover or clover and rye-grass crop is either for cutting green for soiling, or cutting green for feeding, or fattening live stock, by making it into hay, or by pasturing. It has been pretty uniformly found, after repeated trials upon soils of almost every description, that oats taken after clover that has been cut, either for soiling or hay, is superior to the crop taken after clover pasture by sheep. On all farms a part of this crop is cut green for the working horses, and for milch-cows, and in some instances both for growing and fattening cattle.

In feeding cattle with green clover attention must be paid to prevent swelling or hoving, which is very apt to take place when they are first put on this food, especially if it be wet with rain or dew, and the more luxuriant the clover the greater is the danger. After being accustomed to this rich food for a few days, during which it should be given rather sparingly, the danger is much diminished; but it is never safe to allow milch cows in particular to eat large quantities of wet clover.

The mode of making clover hay is to cut it close to the ground, and in as perfect and uniform a manner as it is possible to accomplish. The surface in the preceding spring having been freed from stones and well rolled, the stubble after the mower ought to be as short and smooth as possible, by which means the after growth will be more vigorous and weighty. It is turned with a fork or by hand every day until it is quite dry; it is then put up in field rick[illegible] [illegible]erwards stacked.

The after gr[illegible] [illegible] crop of clover is vigorous or weak according to the pro[illegible] [illegible] plants to rye-grass, to the time when the [illegible] [illegible] the moisture and warmth of the season [illegible] soil. Fl. June, July. [illegible] cuttings may be made into hay, and [illegible] the second, but in general both are consumed by soiling or pasturing, unless in some dry warm districts, as Norfolk, and parts of Suffolk and Kent, when the second growth is left to ripen its seed. In the northern counties, should it be cut for hay, which it seldom is, the best method of saving it is to mix it up with straw, which will absorb a part of its juices. It is often cut green as a part of the soiling system, or where a sheep stock is kept, pastured by the old ewes or other sorts, that are to be fattened the ensuing winter on turnips.

When clover is used as a pasturage crop the live stock are either pent in by hurdles, and the hurdles shifted as the clover is eaten, or they may be tethered in the field, and the tethers removed in order to have the clover eaten regularly, as in some parts of Scotland, or the stock is introduced into the field, but in this case always earlier than in tethering and hurdling, in order to avoid the loss that would be sustained by cattle or sheep treading on tall herbage; but red clover is not generally pastured till the third year; but when white or yellow clovers are sown the herbage is sometimes not mown at all, but only pastured for three or more years, but if a little red clover is sown with them a crop of hay may be taken the second year.

The produce of clover hay without any admixture of rye-grass, on the best soils is from 2 to 3 tons per acre, and in this state in the London market it generally sells 20 per cent higher than meadow hay or clover and rye-grass mixed. The weight of hay from clover and rye-grass mixed varies according to the soil and the season from one to three tons per English acre, as it is taken from the damp ricks; but after being stacked and kept till spring the weight is found to be diminished 25 or 30 per cent. The value of clover and rye-grass hay in comparison with the straw of beans or peas, may be in the proportion of 3 to 2, and with the finest straw or corn crops in the proportion of 2 to 1. One acre of red clover will go as far in feeding horses or black cattle as 3 or 4 of natural grass. And when it is cut occasionally, and given to them fresh, it will probably go still farther, as no part of it is lost by being trodden down. With the exception of lucern, *Medicago sativa*, and the herbage of rich marshes, there is no crop by which so much stock can be supported as by clover. It may be profitably employed in fattening sheep in spring, and with this food they will soon be ready for the butcher. Afterwards a crop of hay may be got, and in two or three weeks after the hay has been taken off, sheep intended to be fattened on turnips may be turned in, and kept there until the turnips are ready for them.

The nutritive products of red clover, according to Sir Humphrey Davy (the quantity analysed 1000 parts) are as follows: the whole quantity of soluble or nutritive matter 39; mucilage or starch 31; saccharine matter or sugar 3; gluten 2; extract, or matter rendered insoluble during evaporation, 3.

The saving of clover-seed is attended with considerable labour and difficulty. Clover will not ripen its seeds if saved for that purpose early in the year; therefore it is necessary to take off the first crop either by feeding or with the scythe, and to depend for the seed upon those heads that are produced in the autumn. Seed clover turns out to good account in those years when the crops are not injured by the blight, which is often fatal to them, or by the rains in the autumn, which sometimes prove their destruction; for the time of harvesting this seed falling out late, when rainy weather may be expected, renders it on that account very tedious. The produce in seed may generally be from 3 to 4 or 5 bushels per acre, when perfectly clean weighing from 2 to 3 cwt. But there is great uncertainty in the produce of clover-seed from the lateness of the season at which it becomes ripe; and the fertility of the soil is considerably impaired by such a crop. Yet the high value of the seed is a great inducement to the saving of it in favourable situations (Dickson's Practical Agriculture, vol. 2. p. 863). The growth of clover reserved for seed should be the second crop, and it should be suffered to remain until the husks become perfectly brown, when it should be cut and harvested in the usual manner, leaving it on the field till it is very dry and crisp, that the seeds may become more fully hardened; it may then be laid up dry, to be threshed out at the farmer's convenience. Much labour and expense are necessary in separating the seeds from the husk, especially when it is effected by thrashing, which seldom costs less than from 5 to 6 or 7 shillings per bushel. By the use of mills the work may be done much cheaper.

The diseases of clover are the blight or mildew, and suffocation or consumption from insects, slugs, and worms. It often happens that clover after being repeated at short intervals on the same soil either fails or does no good, whether this is owing to a disease, or a defect in some peculiar substance which enters into the food of the plant, does not appear to be clearly ascertained. A top dressing with ashes or lime is said to be unfavourable to slugs; but where vermin of this sort are very numerous the most certain remedy is a naked fallow well worked in the hottest months.

Var. α, *sativum* (Ser. mss. in D. C. prod. 2. p. 195.) tall; leaflets ovate or lanceolate; heads large, globose.

Var. β, *graciléscens* (Ser. l. c.) smoothish; stems filiform; heads small, few-flowered. T. praténse γ, Ser. trif. exsic. no. 19.

Var. γ, *pedunculàtum* (Ser. l. c.) heads on long peduncles. T. praténse sativum, Sturm, deutschl. fl. 1. fasc. 15.

Var. ε, *multifidum* (Ser. l. c.) calycine segments 6-7, hispid from pili. Native of Corsica.

Field Trefoil or Red Clover. Fl. May, Sept. Britain. Pl. 1 to 2 feet.

48 T. VAGINA'TUM (Schleich. cat. p. 51.) plant villous; stems prostrate; leaflets ovate, obtuse or retuse; stipulas broad, nerved; heads ovate, obtuse, nearly sessile; segments of calyx nearly equal; corolla gamopetalous; seed reniform. ♃. H. Native of Switzerland, on mount Grimsel, and of Vallais. Flowers yellowish.

Sheathed Trefoil. Fl. May, July. Clt. 1819. Pl. prostrate.

49 T. MICRÓPHYLLUM (Desv. journ. bot. 3. p. 316.) smoothish; stems ascending; leaflets ovate, obtuse or retuse, denticulated, superior ones mucronulate; stipulas broadish, ovate, furnished at the apex with a broad, short, inflexed point; heads ovate, obtuse, sessile; calycine segments pilose, flexile, unequal, shorter than the gamopetalous corolla. ♃. H. Native of Scandinavia, and about Paris, in dry groves. D. C. fl. fr. 5. p. 356. Flowers purple. Perhaps only a variety of *T. praténse*.

Small-leaved Trefoil. Fl. May, July. Clt. 1819. Pl. 1 foot, ascending.

50 T. NÓRICUM (Wulf. in Rœm. arch. 3. p. 387.) villous; stem declinate, simple; leaflets oval-oblong; stipulas smoothish, rather narrow, somewhat lanceolate; heads of flowers subglobose, pedunculate and sessile; calycine segments filiform, flexile, about equal in length, the lower one much shorter than the carina. ♃. H. Native of Carinthia. Savi, obs. trif. p. 61. Sturm, deutsch. fl. 1. fasc. 16. Allied to *T. praténse*, but the calyxes are twice the length, and thicker; and the flowers are cream-coloured.

Noric Trefoil or Clover. Fl. July, Aug. Clt. 1821. Pl. pr.

51 T. SUCCÍNCTUM (Visiani. ex bot. zeit. March, 1829. p. 21.) plant hairy; stems ascending; leaflets oval, obtuse, obsoletely-denticulated at the apex, upper leaves opposite; stipulas ovate, membranous, nerved; heads of flowers ovate, terminal, girded by a 10-toothed 1-leaved involucrum; calyx compressed, nerved at the base, having lanceolate acuminated pilose teeth, the lower tooth twice the length of the others. ⊙. H. Native of Dalmatia. Flowers white. This plant is distinguished from all others of the genus in the form of the involucrum.

Girt Trefoil. Fl. May, June. Pl. ascending.

52 T. PENNSYLVA'NICUM (Willd. enum. p. 793.) stem much branched, flexuous; leaflets ovate-elliptic, obtuse, quite entire; stipulas awned; heads ovate, cylindrical, solitary, dense; lower segment of calyx shorter than the monopetalous corolla. ♃. H. Native of North America. Very like *T. mèdium* or *T. praténse*. Flowers red.

Pennsylvanian Trefoil or Clover. Fl. May, Sept. Clt. 1811. Pl. 1 foot.

53 T. FIMBRIA'TUM (Lindl. bot. reg. 1070.) stems prostrate, glabrous; leaflets oval, smooth, toothed, the teeth setaceous; heads of flowers on long peduncles; involucrum shorter than the flowers, and are, as well as the stipulas, multifid; the segments awned; calyx turbinate, with the segments pungent, about the length of the tube of the corolla; seeds round, black. ♃. H. Native of North America, in the neighbourhood of the Colombia river. Flowers purple.

Fringed-stipuled Trefoil. Fl. Sept. Oct. Clt. 1825. Pl. prostrate.

54 T. WORMSKIÓLDI (Lehm. cat. sem. hort. hamb. 1825.) heads of flowers hemispherical, solitary, terminal, girded by an orbicular, jagged, awned involucrum; wings divaricate, a little shorter than the vexillum; leaflets obovate-oblong, pectinately-denticulated, mucronate; stipulas broad, fringed. ⊙. H. Native of Greenland.

Wormskiold's Trefoil. Pl. reclining.

55 T. TRIDENTA'TUM (Lindl. bot. reg. no. 1070.) stems ascending, nearly simple, glabrous; leaflets linear, acute, toothed the teeth setaceous; heads of flowers on long peduncles; involucrum fringed, awned, shorter than the flowers; upper stipulas pectinated; calyx tubular, the limb dilated and coloured with the segments tridentate and awned, shorter than the corolla ♃. H. Native of North America, in the neighbourhood of the Colombia river. Flowers purple.

Tridentate-sepalled Trefoil. Pl. ascending.

56 T. CYATHÍFERUM (Lindl. l. c.) stems prostrate, glabrous leaflets obovate, denticulated, obtuse; heads of flowers on lon

peduncles; involucre cup-shaped, truncate, veiny, and toothed, length of flowers; stipulas ovate, short; calyxes membranous, the segments setaceous, 3-5-parted, length of corolla. ♃. H. Native with the two preceding species. Flowers purplish.

Cup-bearing Trefoil. Pl. prostrate.

57 T. INVOLUCRA'TUM (Willd. spec. 3. p. 1372.) plant quite smooth; stems straight, erect; petioles long; upper leaflets oblong-linear, sharply-toothed; stipulas membranous, narrow, linear, very acute; heads pedunculate, hemispherical, girded by an orbicular, toothed involucrum; bracteas bifurcate, but multifid according to Kunth; segments of the calyx setaceous, longer than the tube, and much shorter than the corolla; ovary stipitate, 5-6-ovulate. ⊙. H. Native of Mexico, near Valladolid, at the height of 6000 feet. H. B. et Kunth, nov. gen. amer. 6. p. 302. Kunth, pl. legum. 186. t. 52. Flowers purplish. Stigma small, oblique, rather linear, obtusely papillose.

Involucrated Trefoil. Pl. 1 foot.

58 T. MUCRONA'TUM (Willd. herb. ex Spreng. syst. 3. p. 208.) stem ascending, 1-leaved; leaflets linear, mucronate, serrulated; stipulas broad, lanceolate, cuspidate; calyxes bracteate, the teeth awned and equal, shorter than the corolla; heads of flowers roundish. ♃. H. Native of New Spain.

Mucronate-leafletted Trefoil. Pl. ascending.

59 T. MICROCE'PHALUM (Pursh, fl. amer. sept. 2. p. 478.) stem ascending, pubescent; leaflets obovate, emarginate, denticulated; stipulas ovate, acuminated; heads of flowers small, few-flowered, on long peduncles; flowers sessile in the heads; leaflets of involucrum ovate, awned; calycine segments awned, length of corolla. ♃. H. Native of North America, on the banks of Clark's river, and of California. Flowers pale-purple.

Small-headed Trefoil. Pl. 1 foot.

60 T. PA'LLIDUM (Waldst. et Kit. pl. rar. 1. p. 35. t. 36.) stems diffuse; leaflets ovate-roundish, denticulated; stipulas pilose, broad, setaceous at the apex; heads of flowers globose, rather hispid, hardly pedunculate; calycine segments setaceous, pilose, unequal, shorter than the monopetalous corolla; seeds ovate, compressed, yellow, globose. ⊙. H. Native of Hungary, in meadows and corn-fields. This plant is nearly allied to *T. praténse*, but the heads are smaller, the flowers are white, and the vexillum is emarginate.

Pale-flowered Trefoil. Fl. Ju. Jul. Clt. 1803. Pl. diffuse.

61 T. DIFFU'SUM (Ehrh. beitr. 7. p. 165.) plant soft, villous, and glaucous; stems diffuse; leaflets ovate-lanceolate, obtuse or retuse; stipulas narrow, ending in a linear-lanceolate acumen; heads of flowers ovate, rather hispid; calycine segments setaceous, very villous, straight, equal, shorter than the monopetalous corölla; legume circumcised, 2-seeded; seeds bay-coloured, irregularly obcordate. ⊙. H. Native of Hungary, in sandy places, and about Paris. Waldst. et Kit. hung. 1. p. 40. t. 50. T. ciliòsum, Thuill. fl. par. ed. 2. p. 380. Flowers purple. Perhaps a variety of *T. hirtum*.

Diffuse Trefoil. Fl. July, Aug. Clt. 1801. Pl. ½ foot.

62 T. HETEROPHY'LLUM (Tratt. arch. 1. p. 26. with a figure,) stems procumbent, diffuse, very straight, lower leaflets obcordate, upper ones ovate or lanceolate; stipulas ovate, awned; heads of flowers globose, solitary, dense; calycine segments nearly equal, about equal in length to the tube of the monopetalous corolla. ♃. H. Native of the top of mount Ætscher. Flowers red.

Variable-leaved Trefoil. Pl. procumbent.

63 T. HI'RTUM (All. auct. p. 20.) stem erect; leaflets obovate, cuneated, nearly entire; lower stipulas narrow, each ending in a long acumen, upper ones short, and very broad; heads of flowers nearly globose, hispid; calycine segments very long, about equal in length to the corolla, hardly unequal; seeds large, regularly ovate, very blunt. ⊙. H. Native of the south of Europe. T. híspidum, Desf. atl. 2. p. 200. t. 209. f. 1. Flowers rose-coloured. Plant hairy.

Var. β, pictum (Ser. mss. in D. C. prod. 2. p. 196.) leaflets denticulated, spotted with red. T. píctum, Roth, cat. 2. p. 201. Savi, obs. trif. p. 27.

Var. γ, pygmæ'um (Ser. l. c.) stems almost simple; head solitary, terminal. Native of the Pyrenees, about Prades.

Hairy Trefoil. Fl. July, Aug. Clt. 1817. Pl. ½ to 1 foot.

64 T. POLYCE'PHALUM (Ser. mss. in D. C. prod. 2. p. 196.) plant hairy, prostrate; leaflets cuneate-obovate, entire; stipulas lanceolate, the cauline ones free; heads of flowers very numerous, ovate; calyx very hairy, the segments nearly equal and flexile, shorter than the corolla; vexillum length of corolla; legume villous, 2-seeded; seeds cordate-reniform. ♃. G. Native of the Cape of Good Hope. Perhaps T. lanàtum of Thunb. prod. 136.

Many-headed Trefoil. Pl. prostrate.

65 T. PAUCIFLÒRUM (d'Urv. enum. pl. arch. p. 94.) stems trailing, villous, much branched at the base; petioles very long; leaflets cuneated, very much dilated at the apex, usually emarginate, entire; stipulas scarious, ciliated, subulate at the apex; spikes solitary or twin, few-flowered, on short peduncles; calyxes villous, the segments setaceous, and shorter than the corolla. ♂. H. Native of Turkey, near Constantinople. Flowers purple.

Few-flowered Trefoil. Pl. trailing.

66 T. HUMBO'LDTII (Spreng. syst. 3. p. 213.) heads somewhat umbellate, 8-flowered; calyxes hairy, at length deflexed, the teeth lanceolate, shorter than the corolla; stipulas oblong-lanceolate, nerved; leaflets obovate-roundish, denticulated, nerved. ⊙. H. Native of Quito. T. pauciflòrum, Willd. herb.

Humboldt's Trefoil. Pl. prostrate.

67 T. CHERLE'RI (Lin. amœn. 4. p. 286.) stem procumbent; leaflets obcordate, nearly entire; stipulas broad, ending each in a linear incurved point; heads globose, hispid, sessile: stipulas roundish; calycine segments hispid, longer than the corolla; seeds ovoid, compressed. ⊙. H. Native of the south of Europe. Savi, obs. trif. p. 23.—Barrel. icon. 859. Desf. atl. 2. p. 197. Flowers white.

Cherler's Trefoil. Fl. May, June. Clt. 1750. Pl. procumbent.

68 T. SPHÆROCE'PHALON (Desf. fl. atl. 2. p. 201. t. 209. exclusive of the synonyme of Barrelier,) stems diffuse; leaflets obcordate or obovate; stipulas lanceolate, acute; heads of flowers globose, hispid, sessile, involucrated; calycine segments setaceous, longer than the corolla. ⊙. H. Native of the north of Africa, near Mascar. Flowers white. Plant villous.

Round-headed Trefoil. Fl. June, July. Clt. 1820. Pl. ½ foot.

69 T. ROTUNDIFÒLIUM (Smith, fl. græc. t. 747.) stems simple, diffuse; leaflets nearly orbicular, toothed, hairy; calyx very hairy, longer than its teeth, which are short, lanceolate, and upright: heads of flowers globose, terminal, with lanceolate bracteas. ⊙. H. Native of the Morea. Corolla twice the length of the calyx, elegantly variegated with pale purple and white; its petals distinct; germ hairy. The whole plant clothed with white hairs.

Round-leaved Trefoil. Fl. May, July. Pl. ½ foot.

70 T. GLOBÒSUM (Lin. spec. 1081.) plant very villous; stems diffuse, slender, branched; leaflets obovate-cuneiform, somewhat denticulated; stipulas lanceolate, nerved; heads of flowers globose, villous, stalked; the superior calyxes destitute of a corolla, the lower ones about equal in length to the corolla; seeds egg-shaped, compressed, large, black. ⊙. H. Native of Syria, Arabia, and Italy. Savi, obs. trif. p. 16. Flowers white.

Globose-headed Trefoil. Fl. June, Aug. Clt. 1713. Pl. diffuse, ½ foot.

71 T. RADIÒSUM (Wahl. in isis. 1828. vol. 21. p. 971.) stems ascending, and are, as well as the leaves, villous; leaflets obovate; the interior of the head of flower abortive; teeth of calyx curved, setaceous, plumose, shorter than the corolla. ⊙? H. Native of the Levant. Like *T. globòsum*, but double the size.

Ray-headed Trefoil. Pl. ascending.

72 T. OLIVERIA'NUM (Ser. mss. in D. C. prod. 2. p. 197.) villous; stems diffuse; leaflets obovate-cuneated, short, broad, entire; stipulas lanceolate, each ending in a long narrow acumen; heads subglobose, few-flowered; calycine segments bent, filiform, pilose, ascending, equal, much shorter than the corolla. ⊙. H. Native about Constantinople. Flowers red.

Oliver's Trefoil. Pl. diffuse.

73 T. CLYPEA'TUM (Lin. spec. 1084.) pubescent; stems diffuse; leaflets obovate, denticulated; stipulas broad, nerved, ciliated; heads of flowers subglobose; calycine segments leafy, lanceolate, nerved, unequal, spreading, much shorter than the corolla; legume 1-seeded; seeds sub-cordate? ⊙. H. Native of the Levant.—Savi, obs. trif. p. 61. Gærtn. fruct. t. 153.—Alp. exot. t. 306. Flowers pale-red. The plant is named *T. clypeàtum* in reference to the calyx when in fruit being spread like a buckler.

Clypeate-calyxed Trefoil. Fl. June, Aug. Clt. 1711. Pl. ½ ft.

74 T. STELLA'TUM (Lin. spec. 1083.) plant villous, diffuse; leaflets obcordate, somewhat triangular, with the upper margin denticulated; stipulas obovate, very broad, serrulated; heads of flowers ovate-globose; calycine segments foliaceous, linear-lanceolate, spreading, equal, length of the corolla; legume 1-seeded; seeds ovate, orbicular, bay-coloured. ⊙. H. Native of the south of Europe. Sturm, deutsch. fl. 1. fasc. 16. Savi, obs. trif. p. 30. Desf. atl. 2. p. 199. Smith, engl. bot. 1546.—Barrel. icon. p. 860. Flowers pale rose-coloured.

Stellate-calyxed Trefoil. Fl. Ju. July. Britain. Pl. ½ to 1 ft.

75 T. LEUCA'NTHUM (Bieb. fl. taur. 2. p. 214.) stems ascending, villous; leaflets obovate-oblong, somewhat serrated at the apex; stipulas lanceolate, subulate; heads of flowers subglobose, pedunculate, villous; calycine segments spreading, nearly equal, shorter than the corolla; legume 1-seeded; seeds ovoid; radicle hardly prominent. ⊙. H. Native of Tauria, on dry hills, and of Corsica. T. stellàtum, Pall. ined. taur. T. variábile, Gussone in litt. 1824. T. obscùrum, Guss. cat ex litt. 1824. This plant differs from *T. stellàtum* in the stipulas being lanceolate-subulate and entire, not ovate and denticulated, as well as in the leaflets being more oblong, and the flowers being smaller and almost white, not pale-red.

White-flowered Trefoil. Fl. June, July. Clt. 1820. Pl. ½ foot, declinate.

76 T. LONGIPEDUNCULA'TUM (Lois. fl. gall. ex bull. sc. Aug. 1828. p. 425.) stem ascending, smooth; leaflets oblong-elliptic, quite entire, rather pilose; stipulas narrow, linear-awl-shaped beyond the middle; heads of flowers ovate, terminal, on long peduncles; teeth of calyx unequal, rather pilose, the lower tooth largest, about equal in length to the monopetalous corolla. ⊙. H. Native of Corsica, near Bonifacio. Flowers white.

Long-peduncled Trefoil. Fl. May, June. Pl. ascending.

77 T. REFLE'XUM (Walst. et Kit. pl. hung. 3. p. 299. t. 269.) stems decumbent, diffuse, numerous, pilose; leaflets oblong, somewhat denticulated; stipulas subulate; heads of flowers subglobose, pedunculate; calycine segments spreading, unequal, shorter than the corolla; vexillum elongated; legume obovate, fleshy, glabrous, brown, 1-seeded; seed brown, roundish; radicle hardly prominent. ⊙. H. Native of Hungary, in grassy places. Perhaps distinct from *T. leucánthum*.

Reflexed Trefoil. Pl. decumbent.

78 T. OBLONGIFÒLIUM (Ser. mss. in D. C. prod. 2. p. 197.) villous; stems erect; leaflets oblong, ciliated; stipulas lanceolate, nerved, ending each in a long acumen; heads of flowers globose; calycine segments somewhat setaceous, equal, longer than the corolla. ⊙. H. Native of Spain and Barbary. T. squarròsum, Lam. in herb. Vahl. Flowers purple.

Oblong-leaved Trefoil. Pl. 1 foot.

79 T. OBSCU'RUM (Savi, obs. trif. p. 31. f. 1.) stems spreading; leaflets obovate or obcordate, entire; stipulas membranous, nerved, acute at the apex, ciliated; heads of flowers sub-globose; calycine segments lanceolate, acuminated, nerved, pungent, length of tube, and longer than the corolla; legume 1-seeded. ⊙. H. Native of Italy. Perhaps only a variety of *T. leucánthum*. Flowers white.

Obscure Trefoil. Fl. June, July. Clt. 1820. Pl. spreading.

80 T. SAXA'TILE (All. fl. ped. no. 1108. t. 59. f. 3.) stems rather erect; leaves villous; leaflets cuneated, small, and entire, but emarginate at the apex; stipulas ovate, mucronulate, nerved; heads of flowers globose, depressed, sessile, bracteate; calyxes tomentose; the segments small and ascending, equal, length of corolla; seeds small, black, irregularly subcordate. ⊙. ♂. H. Native of Switzerland, Piedmont, and Dauphiny, on the higher alps. Savi, obs. trif. p. 28. T. thymiflòrum, Vill. dauph. 3. p. 487. T. glaciàle, Reyn. mem. 1. p. 166. Flowers white.

Rock Trefoil. Fl. May, July. Clt. 1816. Pl. ½ foot.

SECT. IV. TRIFOLIA'STRUM (from *trifòlium*, and *astrum*, an affixed signification, like). Ser. mss. in D. C. prod. 2. p. 198. Flowers capitate; heads globose, sessile, or pedunculate; flowers usually deflexed at length. Calyx not inflated.

81 T. SUFFOCA'TUM (Lin. mant. 276.) glabrous; stems very short, procumbent; petioles long; leaflets obcordate-cuneiform, denticulated; stipulas scarious, a little nerved, each ending in a short acumen; heads of flowers axillary, sessile, nearly globose, glabrous, approximate; flowers dense, sessile; calyx membranous, smooth; the segments lanceolate, acute, flat, and nearly equal, recurved, much longer than the corolla; legume concealed, 2-seeded; seeds nearly globose, yellowish; radicle prominent. ⊙. H. Native of the south of Europe. In England on the sandy sea-coast at Yarmouth and Lowestoft, and at Landguard Fort. Jacq. hort. vind. t. 60. Savi, obs. trif. p. 96. Brot. phyt. p. 158. t. 64. Smith, engl. bot. 1040. Flowers pale pink.

Suffocated Trefoil. Fl. June, July. Brit. Pl. procumbent.

82 T. CONGE'STUM (Guss. cat. 1821. p. 80. pl. rar. p. 311.) stems branched, smooth, trailing; leaves on long petioles; leaflets obcordate, entire, pubescent; heads of flowers lateral and terminal, roundish, sessile, approximate; calyx pilose; the teeth erect, equal in length to the corolla; legume 1-seeded. ⊙. H. Native of Calabria in arid fields by the sea-side.

Crowded-flowered Trefoil. Fl. May. Clt. 1820. Pl. trailing.

83 T. GLOMERA'TUM (Lin. spec. 1084.) glabrous; stems spreading; leaflets obovate, sharply toothed; stipulas scarious, nerved, each ending in a long acumen; heads of flowers axillary, sessile, distant, globose; flowers dense, sessile; calycine segments heart-shaped, short, nerved, acuminated, reflexed, shorter than the polypetalous corolla; legume 1-seeded; seed irregularly cordate, bay-coloured. ⊙. H. Native of the south of Europe. In England, in gravelly fields and pastures about London, Isle of Shepey, on Kew-green and Hanwell-heath, Middlesex, on the Bath hills, near Bungay, Suffolk, at Yarmouth, &c. Smith, engl. bot. 1063. Curt. lond. 4. t. 51. Flowers rose-coloured.

Glomerated Trefoil. Fl. June, July. Britain. Pl. decumb.

84 T. PARVIFLÒRUM (Ehrh. beitr. 7. p. 165.) stems diffuse; leaflets obovate, nerved, sharply serrated; stipulas scarious, ending each in a sharp acumen; heads of flowers axillary, pedunculate, and sessile, globose; flowers dense, sessile; calycine

segments nerved, lanceolate, acute, unequal, the two superior ones longer than the corolla; legume 2-seeded; seeds somewhat cordate, bay-coloured. ⊙. H. Native of Hungary and Siberia. T. strictum, Sturm, deutsch. fl. 1. fasc. 15. but not of Lin.

Small-flowered Trefoil. Fl. June, July. Clt. 1820. Pl. pr.

85 T. STRI'CTUM (Lin. spec. 1079.) glabrous; stems branched at the base; lower leaflets obovate, superior ones oblong-elliptic, serrulated; stipulas somewhat scarious, very broad, and bluntish; heads of flowers axillary, on long peduncles, globose; bracteas membranous, almost lanceolate; flowers dense, sessile; calycine segments subulate, unequal, spreading a little, shorter than the corolla; legume a little exserted, 2-seeded; seeds ovate; radicle hardly prominent. ⊙. H. Native of the south of Europe, in Hungary, &c. Waldst. et Kit. pl. hung. 1. p. 37. t. 37. Mich. gen. 27. t. 25. f. 7. Flowers white.

Var. β, elàtum (Ser. mss. in D. C. prod. 2. p. 198.) stems and leaflets elongated. T. lævigàtum, Poir. itin. 2. p. 219. Desf. fl. atl. 2. p. 195. t. 208. Native of Barbary.

Straight Trefoil. Fl. June, July. Clt. 1805. Pl. ½ to 1 ft.

86 T. OBCORDA'TUM (Desv. journ. bot. 1814. 3. p. 76.) stems creeping; leaflets obcordate, quite entire; peduncles ascending, at length reflexed; calyxes and peduncles villous. ♃. F. Native about Buenos Ayres. This plant has the habit of *T. rèpens*. Flowers of a fine purple colour. Perhaps two species are confused under this name, one of which has the leaflets, peduncles, and calyxes glabrous, and the other having the leaflets, peduncles, and calyxes villous.

Obcordate-leafletted Trefoil. Pl. creeping.

87 T. GRANDIFLÒRUM (Hook, in Beech, bot. p. 16.) stems creeping; leaflets obcordate, striated, denticulated, and are as well as the petioles pilose; stipulas oval, ending in a long awn; peduncles hardly pilose, ascending, 3-times longer than the petioles; calyx campanulate, pilose; the segments unequal, lanceolate, exceeding the tube; corolla 5-6-times longer than the calyx, scarious, permanent. ♃. F. Native about Conception, Chili. Like *T. obcordàtum*, but probably belonging to section *Lupinâster*.

Great-flowered Trefoil. Pl. creeping.

88 T. RE'PENS (Lin. spec. 1080.) stems creeping, rooting, diffuse, branched at the base; leaflets obovate-roundish, rather retuse, denticulated: stipulas scarious, narrow, lanceolate, each ending in a long mucrone; heads of flowers globose, axillary, on very long peduncles; flowers pedicellate, deflexed after flowering; calycine segments unequal, tooth-formed, shorter than the corolla; legume 2-4-seeded; seeds irregularly ovoid, bay-coloured. ♃. H. Native of Europe, in meadows and pastures; plentiful in Britain, and now cultivated in Jamaica. Sturm, deutsch. fl. 1. fasc. 15. Savi, obs. trif. p. 16. Smith, engl. bot. 1769. Curt. lond. 3. t. 46. Oed. fl. dan. 990. Mart. fl. rust. 34. Corolla white, tinged with purple. *White clover* is common in pastures through the greater part of Europe, flowering from May to September. There are many varieties of it, depending upon the richness or poverty of the soil. In a fertile moist soil it has a more upright branching stem. On all our good lands it seems to rise spontaneously; but however this may be, the growth of it is much encouraged by spreading of ashes or other manure. It does not come early, neither is it of a tall growth, but it forms an excellent bottom in pastures, and affords a great abundance of succulent stalks and leaves, affording late feed in dry summers, when grasses are mostly burnt up. Mr. Curtis affirms that a single seedling covered more than a yard square of ground in one summer. It does not seem to be ascertained when this *white clover* or *trefoil* came first into cultivation in this country, but it seems to be of late date, for it is not mentioned by Gerarde, Parkinson, or Ray, as an agricultural plant in this country, nor by any of the agricultural writers of the 17th century. Gerarde, however, says that there is a *trefoil* of this kind which is sown in fields in the low countries of Italy, & that cometh up ranker and higher than that which groweth in meadows, and is an excellent food for cattle, both to fatten them and cause them to give great store of milk. Gerarde, herball. p. 1018. edit. 1579. *White clover* is generally sown in pastures to be fed on the land. The time and mode of sowing is the same as that for *red clover*; see *Trifolium praténse*. The nutritive products of *white clover*, according to Sir Humphrey Davy (the quantity analyzed 1000 parts) whole quantity of soluble or nutritive matter 32; mucilage or starch 29; saccharine matter or sugar 1; extract or matter rendered insoluble during evaporation 5; gluten or albumen 3. *White trefoil* is generally called shamrock, but *Oxàlis acetosélla* is supposed to be the true Irish shamrock.

Var. β, rubéscens (Ser. mss. in D. C. prod. 2. p. 199.) flowers purplish; stems numerous. About Geneva.

Var. γ, luxùrians (D. C. herb.) leaflets 4-6, very large.—J. Bauh. hist. 4. p. 380. f. 1.

Var. δ, phyllánthum (Ser. l. c.) segments of the calyx changed into leaflets; peduncles longish. About Bern and Geneva.

Var. ε, unguiculàtum (Ser. l. c.) peduncles elongated; legumes rather foliaceous, pedicellate, much longer than the calyx.

Var. ζ, pentaphýllum; leaflets 5.

Var. η, nigricans; leaflets 4-5, blackish.

Var. θ, foliàceum; head of flowers having a bunch of leaves rising from its apex.

White or Sheep's Clover, *Creeping* Trefoil. Fl. May, Oct. Britain. Pl. creeping, ½ foot.

89 VAILLA'NTII (Poir. dict. suppl. vol. 8. p. 4.) stems branched, decumbent, solid; leaflets elliptic-obovate, finely serrated; heads of flowers globose; flowers pedicellate. ♃. H. Native in pastures about Florence and Paris, in the meadows of Switzerland, and in the Morea.—Mich. gen. 27. t. 25. f. 6.—Vaill. par. t. 22. f. 1. Flowers white.

Vaillant's Trefoil. Fl. May, Aug. Clt.? Pl. decumbent.

90 T. AMA'BILE (H. B. et Kunth, nov. gen. amer. 6. p. 503. t. 593.) plant tufted, diffuse; leaflets roundish-ovate, denticulated, glabrous; petioles and peduncles pilose; umbels axillary, 8-10-flowered; peduncles hardly longer than the leaves; calycine segments ending each in a subulate acumen, shorter than the corolla; legume rather wrinkled, 1-2-seeded. ♃. G. Native of Mexico, near Tolucca, at the height of 4140 feet. Very like *T. rèpens*. Flowers reddish.

Lovely Trefoil. Pl. ½ foot, spreading.

91 T. ANÓMALUM (Schrank, pl. rar. t. 47.) stems creeping; leaves on long petioles; leaflets obovate or obcordate, black, sharply serrulated; lower stipulas lanceolate, entire, upper ones broad, crenated; heads of flowers axillary, on long peduncles; flowers pedicellate; calycine segments short, unequal, much smaller than the corolla; legume terete, 4-seeded. ♃. H. Native of? Perhaps only a dark-leaved variety of *T. rèpens*. Flowers white.

Anomalous Trefoil. Fl. May, Oct. Pl. creeping.

92 T. UMBELLA'TUM (Ser. mss. in D. C. prod. 2. p. 199.) stems prostrate, pubescent; leaves petiolate; leaflets obcordate, cuneated; stipulas lanceolate, cuspidate, foliaceous, nerved; peduncles filiform, very long; heads umbellate, few-flowered; pedicels pilose, arched; flowers ascending; calyxes pilose, striated; the segments lanceolate and 3-nerved, hardly the length of the corolla; vexillum denticulated. ⊙. H. Native of Carolina. Flowers white?

Umbellate-flowered Trefoil. Pl. prostrate.

93 T. CE'RNUUM (Brot. phyt. p. 150. t. 62.) stem procumbent; peduncles 3-times shorter than the leaves; leaflets obovate or oval-cuneated, mucronate at the apex; stipulas membranous,

ovate, acuminated, entire; heads of flowers umbellate, almost globose; flowers numerous, drooping a little, and reflexed after flowering; calyxes glabrous, having nearly equal segments, [illegible] th of corolla; legumes 2-3-seeded; seeds almost reniform, bay-coloured. ⊙. H. Native of Portugal. Flowers pale-purple.

Drooping-flowered Trefoil. Fl. Ju. Jul. Clt. 1820. Pl. pr.

94 T. PALLE'SCENS (Schreber in Sturm, deutschl. fl. 1. fasc. 15.) stems creeping; leaflets obovate-roundish, denticulated; stipulas scarious, lanceolate, nerved, ending each in a long acumen; heads axillary, on long peduncles; flowers pedicellate, the pedicels deflexed when in fruit; calycine segments unequal, longer than the tube but shorter than the corolla. ⊙. H. Native of Salzburg, on the alps. Flowers cream-coloured. Perhaps a yellowish-flowered variety of *T. rèpens.*

Pale-flowered Trefoil. Fl. Sept. Clt. 1804. Pl. creep. ½ ft.

95 T. NIGRE'SCENS (Viv. frag. fl. ital. p. 12. t. 13.) stems tufted, decumbent; leaflets roundish, cuneated, denticulated; stipulas membranous, broad, marked with black, ending in a narrow acumen; heads of flowers naked; peduncles longer than the leaves; calycine segments unequal, much shorter than the corolla; legume 3-4-seeded. ⊙. H. Native about Rome, on the banks of the Tiber. Flowers yellowish.

Blackish-leaved Trefoil. Fl. June, Aug. Pl. decumbent.

96 T. CÆSPITÒSUM (Reyne, mem. 1. p. 162.) plant quite smooth; stems tufted, very short; leaflets obovate, rather retuse, denticulated; stipulas scarious, narrow, lanceolate, very acute, 1-nerved; heads axillary, on long peduncles; flowers almost sessile, the pedicels spreading when in fruit; calycine segments nearly equal, lanceolate, spinose at the apex, shorter than the corolla; legume 3-4-seeded; seeds cordate, bay-coloured. ♃. H. Native of Dauphiny, Switzerland, and Piedmont, in alpine meadows. T. Thàlii, Vill. dauph. 3. p. 478. t. 41. The calyxes are longer than in *T. rèpens.* Flowers white?

Var. β, glareòsum (Ser. mss. in D. C. prod. 2. p. 200.) heads small, few-flowered; calyxes much shorter. T. glareòsum, Schleich. ex herb. Reyn.

Tufted Trefoil. Fl. June, Aug. Clt. 1815. Pl. tufted.

97 T. BURCHELLIA'NUM (Ser. mss. in D. C. prod. 2. p. 200.) plant smoothish; stems short; leaflets obcordate, sharply toothed; stipulas long, narrow, lanceolate, foliaceous, bluntish, having numerous flexuous nerves; heads of flowers axillary, on long peduncles; flowers almost sessile; calycine segments linear, 1-nerved, foliaceous, hardly awned at the apex, longer than the tube, but shorter than the corolla; vexillum longer than the wings. ♃. G. Native of the Cape of Good Hope.—Burchell, cat. no. 316.

Burchell's Trefoil. Pl. ¼ foot.

98 T. AFRICA'NUM (Ser. mss. in D.C. prod. 2. p. 200.) plant pilose; stems short; leaflets obovate or obcordate, somewhat serrulated; stipulas long and narrow, lanceolate, foliaceous, acute, having numerous, straight, parallel nerves; heads of flowers axillary, on long peduncles; flowers sessile; calycine segments tetragonal, about equal in length to the tube, but shorter than the corolla; vexillum length of wings. ♃.? G. Native of the Cape of Good-Hope. Burch. cat. pl. afr. extratrop. no. 2817.

African Trefoil. Pl. ¼ foot.

99 T. ROTUNDA'TUM (Ser. in D. C. prod. 2. p. 200.) plant pilose; stems short, tufted; leaflets roundish, somewhat obcordate, almost entire, much nerved; stipulas broad, each ending in a long mucrone, having numerous flexuous nerves; heads of flowers terminal, somewhat globose, villous, fulvous, pedunculate; flowers sessile; calycine segments tetragonal, nearly equal, length of tube, but much shorter than the corolla; vexillum longer than the wings. ♃. H. Native of?

Roundish-leaved [illegible] near *T. spumòsum* in the want of the uni-

plant almost smooth; stems decumbent, angular [illegible] vate or obcordate, sharply serrated; stipulas scario[illegible] ending in a long acute acumen; heads of flowers ax[illegible] dunculate; flowers pedicellate, at length deflexed; [illegible] umbent, segments narrow, acute, ascending, shorter than the co[illegible] and legume exserted, 4-seeded, somewhat articulated; seeds [illegible] wice gular, dense, somewhat ovate, black. ⊙. H. Native of Hungary, in places impregnated with salt, and about Montpelier. Savi, obs. trif. p. 91. Flowers red.

Angular-stemmed Trefoil. Fl. Ju. Aug. Clt. 1803. Pl. dec.

102 T. SERRULA'TUM (Lagasc. nov. gen. p. 23.) leaflets oblong-obovate, serrulated; heads of flowers umbellate, globose; the pedicels reflexed when in fruit; calycine segments unequal, about equal in length to the corolla; legume 2-seeded. ♃. H. Native of sandy places about Madrid.

Serrulated-leaved Trefoil. Pl. prostrate.

103 T. SUAVE'OLENS (Willd. enum. suppl. p. 52. hort. berl. t. 108.) stems weak, striated; leaflets obovate, somewhat acuminated, sharply serrated; stipulas very narrow, ending each in a long acumen; heads of flowers somewhat hemispherical, axillary, on long peduncles; flowers sessile; calycine segments unequal, 1-nerved; seeds oblong-reniform. ⊙. H. Native of Persia and of Italy. T. formòsum, Curt. ex herb. Coult. 1822. Flowers purplish. Very like *T. resupinàtum*, but the calyxes are not bladdery.

Sweet-scented Trefoil. Fl. June, Sept. Clt. 1820. Pl. ½ ft.

104 T. HY'BRIDUM (Savi, fl. pis. 2. p. 90. obs. trif. 90.) glabrous; stems ascending, solid; leaflets obcordate, cuneiform, denticulated; stipulas broad, rather membranous, very narrow, acute; heads somewhat umbellate, axillary, few-flowered; flowers pedicellate, the pedicels deflexed when in fruit; calycine segments unequal, broadish, shorter than the tube, and much shorter than the corolla; legume exserted, 4-seeded; seeds irregularly cordate, bay-coloured. ♃. H. Native of the south of Europe.—Mich. gen. t. 25. f. 6. T. hybridum, Lin. spec. 1076. in Desf. atl. 2. p. 195. Sturm, deutschl. fl. 1, fasc. 15. T. polyánthemum, Tenore, ex herb. Balb. Flowers white, tinged with red. Desfontaine's plant has pale-red flowers. Linnæus thinks his plant is a hybrid between *T. pratẽnse* and *T. rèpens.*

Hybrid Trefoil. Fl. June, Aug. Clt. 1777. Pl. ½ to 1 ft.

105 T. MICHELIA'NUM (Savi, fl. pis. 2. p. 139. obs. trif. 93.) stem ascending, fistular; leaflets obovate and obcordate, serrulated; stipulas foliaceous, lanceolate, acute; heads of flowers somewhat umbellate, axillary; flowers on long pedicels, the pedicels deflexed when in fruit; calycine segments setaceous, rather spreading, nearly equal, twice or thrice longer than the tube but shorter than the corolla; legume exserted, 2-seeded; seeds ovate, compressed, black. ⊙. H. Native of the south of Europe. T. Vaillántii, Lois. journ. bot. 2. p. 365.—Mich. gen. t. 25. f. 25. Flowers of a greenish-white colour.

Micheli's Trefoil. Fl. June, Aug. Clt. 1815. Pl. pr.

106 T. E'LEGANS (Savi, fl. pis. 2. p. 161. t. 1. f. 2. obs. trif. 92.) stem ascending, solid; leaflets obovate, denticulated; sti-

pulas leafy, ending each in a long, narrow acumen; heads of flowers subglobose, axillary; flowers on short pedicels, the pedicels deflexed when in fruit; calycine segments about equal, triquetrous, longer than the tube, ascending, shorter than the corolla; legume 2-seeded: seeds minute, ovate, compressed, black. ♃. H. Native of Europe. T. Vaillántii, Poir. dict. 8. p. 4. exclusive of the synonyme of Micheli.—Vaill. bot. par. t. 22. f. 1. Flowers pale red or white. Plant creeping.

Elegant Trefoil. Fl. Ju. Sept. Clt. 1823. Pl. ½ to ¾ ft. spr.

107 T. ISTHMOCA′RPON (Brot. phyt. p. 148. t. 61.) stems prostrate and ascending; petioles much shorter than the peduncles; leaflets obovate, obtuse, serrulated, villous; stipulas broad, nerved, subulate; heads of flowers ovate; flowers sessile; calycine segments equal, erect, small, shorter than the corolla, which is somewhat falcate; legume 2-3-seeded; seeds somewhat reniform, of a yellowish-grey colour. ⊙. ♂. ? H. Native of Po[illegible] Legume membranous, coarctate in the middle from [illegible]gy substance. Flowers pale-purple.

[illegible]-*fruited* Trefoil. Pl. ascending, ½ foot.

108 T. REFLE′XUM (Lin. spec. 1079.) plant pilose; stems ascending; leaflets obovate, serrulated; stipulas foliaceous, obliquely-cordate, acuminated; heads of flowers globose, axillary; flowers on long pedicels, at length deflexed; calycine segments nearly equal, very narrow, 1-nerved, nearly twice the length of the tube, but shorter than the corolla. ♃. ? H. Native of Virginia. Flowers purple. Heads of flowers nearly twice the size of those of *T. élegans*. Legumes usually 3-seeded.

Reflexed-flowered Trefoil. Fl. Ju. Aug. Clt. 1794. Pl. pr.

109 T. CAROLINIA′NUM (Mich. fl. bor. amer. 2. p. 58.) plant small; leaflets roundish, obcordate, ciliated; heads pedunculate, reflexed, few-flowered; calycine segments straight, linear, shorter than the tube; corolla white, hardly exserted beyond the calyx; legume usually 3-seeded. ♃. ? H. Native of Carolina.

Carolinian Trefoil. Pl. ¼ foot.

110 T. MONTA′NUM (Lin. spec. 1087.) plant pubescent; stem erect, nearly simple; leaflets lanceolate-oblong, obtuse, denticulated, thickly beset with nerves; stipulas lanceolate, very acute; heads of flowers nearly globose, axillary, pedunculate, but at length oblong; flowers almost sessile, crowded, spreading, at length reflexed; calycine segments unequal, narrow, length of tube, but shorter than the carina; legume 1-seeded; seed ovate-roundish. ♃. H. Native of Europe, in mountain meadows. Savi, obs. trif. 100. Sturm, deutschl. fl. 1. fasc. 15. Fl. dan. 1172. Flowers white.

Var. β, pedunculòsum (Ser. mss. in D. C. prod. 2. p. 201.) heads of flowers globose, solitary, on long peduncles, thicker; calyxes larger.

Var. γ, incànum (Ser. l. c.) stem, peduncles, and lower surface of leaves clothed with hoary pili. Native of Bessarabia.

Mountain Trefoil. Fl. June, Aug. Clt. 1786. Pl. ½ to 1 ft.

111 T. BALBISIA′NUM (Ser. mss. in D. C. prod. 2. p. 201.) plant villous; stems tufted, simple; leaflets elliptic, obtuse, denticulated, much nerved; stipulas lanceolate, acute; heads of flowers hemispherical, terminal, solitary; peduncles much longer than the stamens; flowers ascending, purple; calycine segments equal, spreading, narrow, much longer than the cylindrical tube, and shorter than the carina. ♃. H. Native of Provence, on Mount Lachen.

Balbis's Trefoil. Pl. ½ to 1 foot.

112 T. RUPE′STRE (Tenore, ex Gussone, in herb. Dunant. D. C. prod. 2. p. 201.) stems erect, simple; leaves nearly all radical; leaflets oval, denticulated, much nerved; stipulas membranous, acuminated; peduncle striated, pilose, terminal, length of stem; flowers capitate, depressed, at length deflexed; calyx rather coriaceous, having smooth, blackish-green angles; the teeth or segments narrow, parallel, equal, longer than the tube. ♃. H. Native of Calabria, on Mount Corno. Flowers white. Allied to *T. montànum*.

Rock Trefoil. Fl. June, July. Clt. 1820. Pl. 1 foot.

113 T. PRÆTUTIA′NUM (Guss. pl. rar. 308.) clothed with soft and dense pili; stems tufted and ascending; leaflets oval, entire, or denticulated, finely veined towards the margins; stipulas narrow, ending in a long, bristle-like acumen; heads of flowers globose, solitary, bracteated by a stipule; tube of calyx lined with pili; the segments awl-shaped and parallel, unequal, having the throat filled with white pili. ♃. H. Native of the higher mountains of Aprutia, on Mounts Corno and Cortone. Stems 3 inches high. Flowers reddish.

Prutean Trefoil. Pl. ½ foot.

114 T. LATÌNUM (Seb. pl. rom. fasc. 1. pt. 7. t. 1. f. 2.) stem erectish, dichotomous; leaflets lanceolate, acuminated, nearly entire; stipulas narrow, nerved, pilose, linear, acute; heads of flowers on long peduncles, oval; calycine segments between triangular and subulate, ciliated, lowest one very long, but shorter than the tube of the corolla; legume membranous; seeds somewhat turbinate. ♃. H. Native near Rome. The whole plant is very soft and beset with small short pili. Flowers red or white.

Latin Trefoil. Fl. June, July. Clt. 1825. Pl. ½ foot.

Sect. V. Vesica′strum (from *vesica*, a bladder, and *astrum*, an affixed signification, like; in reference to the calyxes in all the species of this section being inflated after flowering). Ser. mss. in D. C. prod. 2. p. 202. Flowers disposed in dense heads; under lip of calyx remaining unchanged, but the upper one, after flowering, becomes increased and inflated, and covers the legume in a kind of arched manner. Nerves in the leaves numerous.

115 T. SUBTERRA′NEUM (Lin. spec. 1080.) villous; stems procumbent; leaflets obcordate, entire; stipulas lanceolate, broad, acute; heads few-flowered, usually 3-4, piercing the ground when in a seeding state; the lower flowers fertile having the calyx inflated; upper flowers sterile, empty, elongated, deflexed; legume 1-seeded; seed ovate, black. ⊙. H. Native of Europe; plentiful in Britain, in dry gravelly pastures, and on barren heaths and exposed places, as on Black-heath, Greenwich-park, Hyde-park, &c. Savi, obs. trif. 12. Smith, engl. bot. 1048. Curt. lond. 1. t. 54. Flowers white or very pale red. Involucrum central, reflexed, stiff, starry, embracing the fruit.

Subterraneous Trefoil. Fl. May, Aug. Brit. Pl. pr.

116 T. VESICULÒSUM (Savi, fl. pis. 2. p. 165. obs. trif. 84.) stems erect, firm, striated; leaflets lanceolate, acute, sharply serrulated; stipulas narrow, rather membranous, ending each in a long acumen; heads of flowers ovate, thick, on long peduncles; calyxes scarious, inflated; the segments subulate and very acute, equal, much shorter than the corolla; legumes 2-seeded; seeds ovate, compressed, yellow. ⊙. H. Native of the south of Europe. T. recúrvum, Walds. et Kit. pl. rar. hung. 2. p. 179. t. 165. and T. túrgidum, Bieb. l. c. and suppl. Flowers reddish.

Bladdery-calyxed Trefoil. Fl. Ju. Jul. Clt. 1805. Pl. ¾ ft.

117 T. AMBÍGUUM (Bieb. fl. taur. 2. p. 208.) stems creeping; leaflets ovate, bluntish, serrulated; heads dense, double the size of those of *T. rèpens*; calyx striated; the teeth nearly equal, subulate, and divaricate; vexillum lanceolate; legume 1-2-seeded. ♃. H. Native of Tauria and Caucasus in meadows, and on the lower Volga. The barren stems creeping and tufted, the floriferous ones erect. Flowers pale-red.

Var. β, cœrulèscens (Bieb. fl. taur. suppl. 507.) corollas bluish. Native of the south of Tauria.

Ambiguous Trefoil. Fl. June, July. Clt. 1815. Pl. ½ foot.

118 T. SPUMÒSUM (Lin. spec. 1085.) stem spreading, branched; leaflets obovate or obcordate, nearly entire; stipulas broad, very acute; heads of flowers ovate, thick, nearly sessile; calyxes scarious, inflated, striated, transversely veined; the segments setaceous and diverging, about equal in length to the corolla; bracteas lanceolate, shorter than the calyx; legume 4-seeded; seeds ovate-globose. ⊙. H. Native of the south of Europe. Gærtn. fruct. t. 153. Savi, obs. trif. 82.—Cup. panph. t. 69. f. 1. Flowers pale-red.

Frothy Trefoil. Fl. June, July. Clt. 1771. Pl. prostrate.

119 T. RESUPINA'TUM (Lin. spec. 1086.) stems prostrate; leaflets obovate, sharply serrulated, spotted at the base; stipulas short, linear-lanceolate, acute; heads hemispherical, at length glóbose; peduncles longer than the petioles; flowers nearly sessile; calyxes scarious, inflated after flowering, longitudinally and transversely veined; the segments lanceolate, reticulated, and very acute, shorter than the corolla; legumes usually 2-seeded; seeds irregularly subcordate, bay-coloured. ⊙. H. Native of the south of Europe. Sturm, deutschl. fl. 1. fasc. 16. with a figure. Savi, obs. trif. 79. T. bicórne, Forsk. fl. ægypt. 139.—Clus. hist. 2. p. 247.—Barrel. icon. 872. Nearly allied to *T. suavèolens*, but differs in the peduncles being shorter and in the calyxes being inflated. The corolla of this species is turned upside down, hence the specific name. Flowers pale-red.

Resupinate-flowered Trefoil. Fl. Ju. Jul. Clt. 1713. Pl. pr.

120 T. FRAGI'FERUM (Lin. spec. 1086.) stem prostrate, creeping; leaflets obcordate, denticulated; stipulas ovate, elongated at the apex; heads of flowers ovate-globose, on long peduncles; flowers sessile; calyxes inflated after flowering, membranous, reticulated, pilose; the segments unequal, shorter than the corolla and reticulated; bracteas small, lanceolate; legume 2-seeded. ♃. H. Native of Europe, in meadows. In England in moist meadows and pastures in black boggy soil. Savi, obs. trif. 76. Sturm, deutschl. fl. 1. fasc. 16. icon. Smith, engl. bot. 1050. Fl. dan. 1042. Curt. fl. lond. 2. t. 55. Stems prostrate, rooting, extending a considerable length. Flowers rose-coloured. The heads when in seed resemble strawberries; hence the specific name.

Var. β, proliferum (Bernard in litt.) flowers 6-8 in a whorl, beneath the head of flowers.

Strawberry-bearing Trefoil. Fl. June, Aug. England. Pl. prostrate.

121 T. TOMENTÒSUM (Lin. spec. 1086.) stems prostrate; leaflets obcordate, cuneiform, sharply-serrulated; stipulas lanceolate, acute, scarious; heads of flowers globose, on very short peduncles; bracteas small, lanceolate; flowers sessile; calyxes inflated after flowering, membranous, reticulated, tomentose, the segments shorter than the corolla; legume 1-seeded; seeds irregularly cordate, green, shining. ♃.? ⊙.? Native of the south of Europe. Savi, obs. 73.—Barrel. icon. 864.—Magn. monsp. 265. t. 264. Flowers purplish.

Tomentose Trefoil. Fl. June, July. Clt. 1640. Pl. prostrate.

122 T. PHYSÒDES (Stev. in Bieb. fl. taur. 2. p. 217.) stems procumbent, slender; leaflets ovate, obtuse, serrulated, mucronate; stipulas narrow, acuminated; heads of flowers roundish, on long peduncles, about equal in length to the leaves; calyx inflated when in fruit, membranous, pubescent; the segments setaceous, and about equal the length of the tube. ♃. H. Native of Iberia. Flowers reddish.

Bladdery-calyxed Trefoil. Fl. June, Aug. Clt. 1818. Pl. procumbent.

123 T. TU'RGIDUM (Bieb. fl. taur. 2. p. 210.) stems erectish; leaflets obovate, obcordate, almost entire; stipulas acute; heads of flowers ovate, chaffy; calyx glóbose, smooth, the teeth setaceous and recurved; petals mucronate. ⊙. H. Native of Caucasus between the rivers Kuba and Jegorlik. Flowers white. This plant comes very near *T. spumòsum* in the want of the universal involucrum to the head of the flowers.

Turgid-calyxed Trefoil. Fl. Ju. July. Clt. 1818. Pl. $\frac{1}{2}$ ft.

124 T. TU'MENS (Stev. in Bieb. fl. taur. 2. p. 217.) stems procumbent, quite smooth; leaflets obovate, somewhat emarginate; heads of flowers roundish; peduncles longer than the leaves; calyx when in fruit inflated, membranous, pubescent; the segments setaceous, and nearly equal, shorter than the tube. ⊙.? H. Native of Iberia. This species differs from *T. physòdes* in being more slender, in the leaflets being more acute at the base, in the flowers being fewer, heads smaller, peduncles longer, and especially in the teeth of the calyx being smaller. Flowers reddish.

Swelling-calyxed Trefoil. Pl. procumbent.

125 T. ALA'TUM (Biv. stirp. rar. 4. p. 14.) stems decumbent, glabrous, striated; leaflets obovate, obtuse or emarginate and serrulated; heads of flowers globose, terminal; peduncles twice the length of the superior leaves; stipulas very long, subulate at the apex; calyx much inflated after flowering, reticulated, rather pilose, the segments setaceous, and nearly equal, shorter than the corolla. ♃. H. Native of Sicily, about Palermo. T. Cupàni, Tineo, pl. rar. sic. pug. 1. p. 16.—Cup. panph. t. 97. f. 1. Schrank, in fl. 1819. p. 387. Flowers reddish.

Winged Trefoil. Fl. June, Aug. Clt. 1820. Pl. decumbent.

126 T. BONA'NNI (Presl. ex Spreng. syst. 3. p. 218.) stems creeping; leaflets obovate, retuse; calyx tomentose, the lower teeth setaceous, straight, and conniving; heads of flowers roundish. ♃. H. Native of Sicily.

Bonanni's Trefoil. Pl. creeping.

127 T. DEPAUPERA'TUM (Desv. journ. bot. 1814. vol. 4. p. 69.) plant many-stemmed, decumbent; stems simple; leaflets linear, somewhat cuneiform, glabrous, toothed at the apex; heads pedunculate, terminal, few-flowered; involucre 1-leaved, entire, truncate; calyx glabrous; vexillum when in fruit inflated. ⊙.? F. Native of Peru (Dombey). This species has the habit almost of *T. filifórme* of Poir. dict. suppl. 5. p. 385.

Depauperated Trefoil. Pl. decumbent.

SECT. VI. LUPINA'STER (from *lupinus*, a lupine, and *aster*, an affixed signification, like. Some of the species contained in this section have the habit of *Lupines*). Ser. mss. in D. C. prod. 2. p. 203. Lupinàster, Mœnch. meth. suppl. p. 30. Flowers large; the petals coriaceous and permanent, red, white or yellow. Calycine segments subulate, erect. Leaves having 3 coriaceous leaflets, rarely 5-7, reticulated with numerous nerves.

128 T. CHILE'NSE (Hook. in Beech. voy. p. 18.) stem diffuse, glabrous; leaflets narrow, oblong-obovate, sharply-denticulated, quite smooth, equal in length to the petiole; stipulas oval, membranous, nerved, pectinately-fringed; heads of flowers on long peduncles; involucrum shorter than the flowers, multifid, awned; calyx campanulate, the segments tridentate and awned, the middle tooth longer than the rest, about equal in length to the corolla. ♃. H. Native of Chili, about Conception. Nearly allied to T. fimbràtum of Lindl. in bot. reg. 1070.

Chili Trefoil. Pl. diffuse.

129 T. UNIFLÒRUM (Lin. amœn. 4. p. 285. spec. 1085.) plant tufted, creeping; stems very short; leaflets 3, ovate, acuminated, toothed, nerved; stipulas sheathing, ending each in a long acumen; flowers axillary, solitary, on short peduncles; calyx cylindrical, striated; the segments short, subulate, and nearly equal; corolla very long, much longer than the calyx; legume 2-seeded; seeds ovoid, apiculated. ♃. H. Native of Syria, Provence, and Italy.—Buxb. cent. 3. p. 17. t. 31. f. 1. T. Buxbaùmi, Sternb. in flora. 1820. p. 600. Flowers having the vexillum blue, and the keel and wings purple.

Var. β, Sternbergiànum (Ser. mss. in D. C. prod. 2. p. 203.)

leaflets obovate-roundish; flowers white. T. uniflòrum, Sternb. in flora. 1820. p. 599.—Buxb. cent. 3. p. 18. t. 31. f. 2.

One-flowered Trefoil. Fl. May, Sept. Clt. 1800. Pl. creeping.

130 T. exi'mium (Steph. ex Fisch. and Stev. in litt. D. C. prod. 2. p. 203.) plant glabrous; stems ascending, firm; leaflets obovate, nerved, somewhat denticulated; petioles very short; stipulas leafy, veiny, obtuse; heads few-flowered; peduncles and pedicels short, tomentose; calyxes campanulate; the segments lanceolate and very acute, equal, longer than the tube, but shorter than the corolla; legume 4-5-seeded. ♃. H. Native of Dahuria. T. grandiflòrum, Fisch. Led. Vexillum large. Style elongated. Corolla purple.

Var. β, albiflòrum (Fisch. in litt.) flowers white. ♃. H. Native of the Altaian mountains.

Choice Trefoil. Fl. June, July. Clt. 1820. Pl. ¼ to ½ foot.

131 T. alpi'num (Lin. spec. 1080.) plant quite smooth; stems short, thick, under ground; petioles very long; leaflets 3, lanceolate-linear, bluntish, denticulated; stipulas very long, and very narrow, linear, and acute; heads of flowers umbellate, on long peduncles; pedicels small, disposed in something like a whorl; calyx campanulate, the segments equal, very long, and setaceous, but much shorter than the corolla; legume 2-seeded. ♃. H. Native of Europe, on the higher Alps and mountains. Sturm, deutschl. fl. 1. fasc. 15. with a good figure. Savi, obs. trif. 99.—Park. theatr. 1104. f. 4. Flowers large, purple, the vexillum flesh-coloured and streaked with purple. The roots have the taste of liquorice.

Alpine Trefoil. Fl. June, Aug. Clt. 1775. Pl. ¼ to ½ foot.

132 T. lupina'ster (Lin. spec. 1079.) plant quite smooth; stems straight, branched; petioles wanting; leaflets 5, linear-lanceolate, sharply-toothed, mucronate; stipulas broad, membranous, acuminated; heads of flowers pedunculate, bractless; flowers umbellate; calyx campanulate, hardly nerved; the segments acute, longer than the tube, but shorter than the corolla; legume 6-seeded. ♃. H. Native of Siberia. Lupináster pentaphýllus, Mœnch. meth. suppl. p. 50. Pentaphýllon lupináster, Pers. ench. 2. p. 352. Pentaphýllum Ammàni, Ledeb. hort. dorp. suppl. 1822. p. 5. Mart. fl. rust. t. 16. Curt. bot. mag. 876.—Gmel. sib. 4. p. 19. t. 6. f. 1. Flowers large, purple; the wings and keel paler than the vexillum.

Var. β, albiflòrum (Ser. mss. in D. C. prod. 2. p. 204.) flowers white; leaflets very narrow. T. àlbens, Fisch.

Lupine-like Trefoil or Bastard Lupine. Fl. June, Aug. Clt. 1741. Pl. 1 to 1½ foot.

133 T. purpura'scens (Fisch. in litt.) the character of this species agrees with the last in almost every particular, except in the leaflets being very broad and bluntish. ♃. H. Native of Siberia, about Barnaoul. T. lupináster var. γ, oblongifòlium, Ser. mss. in D. C. prod. 2. p. 204. Flowers purplish, large.

Purplish-flowered Trefoil or Bastard Lupine. Fl. June, Aug. Clt. 1816. Pl. 1 to 1½ foot.

134 T. megace'phalum (Nutt. gen. amer. 2. p. 105.) stems simple, angular; leaflets 7, cuneate-lanceolate; petioles very long; stipulas cuneated, deeply 3-toothed; segments of the calyx setaceous and feathery; legume 2-4-seeded. ♃. H. Native of North America, at the head waters of the river Missouri. Lupináster macrocéphalus, Pursh. fl. amer. sept. 2. p. 479. t. 23. Flowers yellowish-white with a pale-purple carina.

Large-headed Trefoil or Bastard Lupine. Fl. July, Aug. Clt. 1826? Pl. 1 foot.

135 T. Gussòni (Tineo, pl. rar. sic. pug. 1. p. 17.) plant smoothish; stem branched; leaflets 3, oblong, obcordate, sharply-denticulated, terminal one on a long petiole, lateral ones sessile; stipulas lanceolate, bluntish, toothed, ciliated; heads of flowers rather egg-shaped; peduncles pilose; flowers on short pedicels; calycine segments unequal, narrow, the two lower ones longest, the uppermost ones very short; vexillum obovate, dilated, serrulated. ♃. H. Native of Sicily, on the Nebrodes. Schrank, in flora. 1819. p. 387. Flowers bluish-red, but they fade to a reddish-yellow colour. Bonan. t. 248.

Gussone's Trefoil. Fl. June, Aug. Clt. 18[illegible]. Pl. 1 foot.

136 T. plumòsum (Douglas, mss.) stem simple, erect, villous, forked at the apex; petioles about the length of the leaflets; leaflets 3, lanceolate, acuminated, ciliated, clothed with silky villi on the under surface as well as the stipulas, but pubescent above; heads of flowers ovate-oblong, villous; calycine segments subulate, unequal, lowest one longer than the corolla. ♃. H. Native of North America. Flowers apparently purple.

Plumose-headed Trefoil. Pl. 1½ foot.

137 T. altíssimum (Doug. mss.) stem erect, forked at the apex, glabrous; leaflets 3, lanceolate, glabrous, ciliated; petioles length of the combined part of the stipulas; heads of flowers globose, glabrous; calycine segments subulate, much shorter than the monopetalous corolla. ♃. H. Native of North America. Flowers purple

Tallest Trefoil. Pl. 2 feet.

Sect. VII. Chronose'mium (from χρονος, *chronos*, time, and σημα, *sema*, a standard; in reference to the permanent nature of the standard or vexillum.) Ser. mss. in D. C. prod. 2. p. 204. Flowers disposed in an ovate pedunculate head. Petals scarious, yellow, fading to a bay-colour; vexillum deflexed, and permanent.

138 T. ba'dium (Schreb. in Sturm, deutschl. fl. 1. fasc. 16. with a good figure,) stems ascending; leaves petiolate; leaflets sessile, obcordate, denticulated; stipulas lanceolate, acute, rather membranous; heads of flowers globose, pedunculate, rather loose; vexillum obovate; calyx very short, campanulate, the segments unequal, the uppermost one very small; legume subglobose, 1-seeded; seeds ovoid; radicle hardly prominent. ♃. H. Native of Europe, in mountain meadows. Savi, obs. trif. 113. T. spadíceum, Vill. dauph. 3. p. 491. but not of Lin. Flowers yellow.

Bay-coloured-flowered Trefoil. Fl. June, Aug. Pl. ascending.

139 T. Bru'tium (Ten. prod. fl. nep. 1826. ex Schlecht. Linnæa. 3. p. 103.) stems ascending, branched; leaves stalked; leaflets obcordate, cuneated, denticulated, the terminal one hardly petiolate; heads of flowers axillary, spherical; peduncles longer than the leaves; segments of calyx unequal, the 2 upper ones short, the rest piliferous at the apex; vexillum large, golden, furrowed; keel copper-coloured; seeds elliptical, yellow. ⊙. H. Native of Naples. Allied to *T. procúmbens* and *T. agràrium.*

Brutium Trefoil. Fl. May, Aug. Pl. ascending.

140 T. agra'rium (Lin. spec. 1087.) stem ascending, branched, firm; leaves almost sessile; leaflets oblong-ovate, sessile, denticulated; stipulas leafy, lanceolate, acute, longer than the petiole; heads of flowers on long peduncles, egg-shaped; vexillum obcordate; calyx campanulate, short, the segments unequal, glabrous, and elongated, the superior one smallest; legume 1-seeded, ovoid, compressed; seeds bay-coloured, irregularly cordate; radicle prominent. ⊙. H. Native of Europe, in dry pastures and woods. Sturm, deutschl. fl. 1. fasc. 16, with a good figure. Fl. dan. 554. T. strèpens, Crantz. austr. 411. no. 8. Flowers yellow.

Field Trefoil. Fl. June, Aug. Clt. 1815. Pl. prostrate.

141 T. spadi'ceum (Lin. spec. 1087.) stem erect, almost simple, slender; leaves stalked; leaflets oblong, ovate, sessile, denticulated; stipulas leafy, narrow, acuminated; heads of flowers ovoid, on peduncles; vexillum obcordate; calycine segments unequal; the lower ones long and pilose, the two upper ones small and glabrous; legume ovoid, compressed, 1-seeded; seeds irregularly egg-shaped, bay-coloured; radicle prominent. ♃. H. Native of Europe, in mountain meadows. Sturm, deutschl. fl.

1. fasc. 16. with a good figure. Savi, obs. trif. p. 112. Sims, bot. mag. 557. Flowers yellow; the vexillum tending to a ferruginous colour.

Var. β, ramosissimum (Ser. mss. in D. C. prod. 2. p. 205.) stem much branched; heads of flowers numerous.

Chesnut-brown-coloured-flowered Trefoil. Fl. June, Aug. Clt. 1778. Pl. ½ foot.

142 T. CILIA'TUM (Clark. itin. 3. ex Spreng. neue entd. 3. p. 159.) leaflets obcordate, denticulated; stipulas ciliated, rather large; heads ovate-hemispherical, few-flowered; teeth of calyx subulate, ciliated, unequal; corolla scarious, rather large; petals denticulated. ⊙. H. Native of Abercromby Island, formerly called Lagusa. Flowers yellow.

Ciliated-calyxed Trefoil. Pl. procumbent.

143 T. DECI'PIENS (Horn. hort. hafn. 2. p. 719.) stem erect; leaflets oval, sessile, mucronate; heads of flowers oval; vexillum somewhat deflexed, permanent; calyx 3-toothed; teeth awl-shaped, pilose. ⊙. H. Native of? Very like T. spadíceum, Horn. Flowers bay-coloured.

Deceiving Trefoil. Fl. Ju. Aug. Clt. 1820. Pl. ½ foot.

144 T. SPECIÒSUM (Willd. spec. 3. p. 1382.) plant rather villous; stems prostrate; leaves hardly stalked; leaflets obovate, denticulated, on very short stalks; stipulas lanceolate, ciliated, large; heads of flowers oblong-cylindrical, bay-coloured, on long peduncles; vexillum obovate, very broad, somewhat denticulated; calyxes glabrous, the segments unequal, the 2 superior ones smallest; legume somewhat globose, on a long stipe, 1-seeded; seed oblong, shining; radicle hardly prominent. ⊙. H. Native of the islands of Candia, Cyprus, and Zant. Flowers bay-coloured. In Zant this is the only plant made into hay. It might perhaps be tried in the south of England in dry open parts.

Shewy Trefoil. Fl. June, July. Clt. 1752. Pl. procumbent.

145 T. BILLARDIE'RII (Spreng. syst. 3. p. 211.) stem erect, pilose; heads of flowers oblong; leaflets obovate-oblong, ciliated; stipulas denticulated; upper calyxes sterile; the teeth subulate, ciliated, and unequal; vexillum orbicular, nerved, permanent, deflexed. ⊙. H. Native of Syria. T. comòsum, Labill. syr. dec. 5. p. 15. t. 10. Flowers yellow.

La Billardier's Trefoil. Pl. 1 foot.

146 T. PROCU'MBENS (Lin. spec. 1088.) stems procumbent; leaves on short stalks; leaflets obovate or obcordate, denticulated, terminal one on a short stalk; stipulas half ovate, ciliated, shorter than the petiole; heads of flowers axillary, oval, dense; peduncles longer than the leaves, or equal with them; calycine segments unequal, two superior ones very short; vexillum finally deflexed; legume 1-seeded; seed kidney-shaped, yellow; radicle hardly prominent. ⊙. H. Native of Europe, in gravelly fields and pastures; plentiful in Britain. Smith, eng. bot. 945. T. campéstre, Schreb. in Sturm, deutschl. 1. fasc. 15. T. pseudo-procúmbens, Gmel. fl. bad. 3. p. 240. T. agràrium, Huds. ang. 328. Curt. lond. 3. t. 45. Mart. fl. rust. 121. Mill. dict. no. 3. Flowers yellow. This plant is called *Yellow* or *Hop Trefoil;* the latter name is bestowed on it with much propriety, the heads being larger, and more resembling the hop than any of the rest of the species. It is common on borders of fields in dry gravelly soils. In some meadows it forms a considerable part of the crop, and makes excellent fodder; and it is now very generally used for pasture with or without the *white clover.* The manner of sowing the seeds and after culture of *yellow clover* are the same as that for *red clover.* See *Trifòlium praténse.*

Procumbent Trefoil, Yellow Clover, or Hop Trefoil. Fl. June, Aug. Britain. Pl. procumbent.

147 T. PARISIE'NSE (D. C. fl. fr. 5. p. 562.) stems procumbent; leaflets obovate or obcordate, denticulated, the terminal usually petiolulate; peduncles filiform, very long; heads of [illegible]ers somewhat umbellate, few-flowered; calycine segments unequal, the two superior ones very short, longer than the tube; legume pedicellate, 1-seeded; seeds elliptic; radicle prominent. ⊙. H. Native of Europe, in fields, particularly in France. T. pàtens, Schreb. in Sturm, deutschl. fl. 1. fasc. 16. Flowers yellow.

Var. β, pygmæ'um (Ser. mss.) stems branched, short.

Paris Trefoil. Fl. June, Aug. Pl. procumbent.

148 T. SEBASTIA'NI (Savi, in diar. med. Flajani, 1815.) stems diffuse; leaflets obovate, sessile, denticulated; stipulas narrow, longer than the petiole; peduncles short, firm; flowers somewhat umbellate, pedicellate; tube of calyx very short; the segments long, setaceous, and equal; legume stipitate, 1-seeded; seed ovoid-elliptic. ⊙. H. Native of Italy, about Rome. Sebast. pl. rom. fasc. 2. p. 14. t. 4. Flowers pale-yellow.

Sebastiani's Trefoil. Fl. June, Aug. Clt. 1800. Pl. diffuse.

149 T. FLAVE'SCENS (Tineo, pug. 1. p. 15.) stems rather erect, branched, dichotomous, glabrous; the two superior leaves opposite, approximating the head of the flowers; leaflets obovate, denticulated; stipulas membranous, nerved, pilose, subulate; heads of flowers roundish; calyx nerved, pilose; the segments ciliated and unequal, longer than the tube. ⊙.? H. Native of Sicily, on the Nebrodes. Schrank, in flora. 1819. p. 386. Flowers yellow.

Yellowish-flowered Trefoil. Pl. ½ foot.

150 T. FILIFÓRME (Lin. spec. 1088.) stems prostrate; leaflets obovate or obcordate, somewhat denticulated, nearly sessile; stipulas small, ovate, length of petiole, a little fringed; peduncles filiform, long; flowers somewhat racemose, leaning all one way, on short pedicels; calycine segments unequal, 2 superior ones shorter than the tube; vexillum even; legume 1-2-seeded, on a short stipe; seeds oblong-ovate, bay-coloured. ⊙. H. Native of Europe, in dry or moist grassy meadows, pastures, borders of fields, and on dry gravelly soils common; plentiful in Britain. Flowers yellow. Sturm, deutschl. fl. 1. fasc. 16. Smith, engl. bot. 1257. Cattle and sheep are so fond of this trefoil that a specimen of it can scarcely be had in any pasture to which they have access.

Filiform Hop Trefoil. Fl. Ju. Aug. Britain. Pl. procumbent.

151 T. MI'NUS (Relh. 290. Smith, engl. bot. 1256.) stems procumbent; leaflets obcordate, toothed, lateral ones almost sessile, middle one stalked; stipulas half ovate, acute; peduncles straight, rigid; heads of flowers hemispherical; vexillum nearly even; calycine teeth unequal, hairy towards the points; legume 1, rarely 2-seeded. ⊙. H. Native of Europe, in gravelly fields and pastures; plentiful in Britain. T. filifórme, Ehrh. beit. 49. T. procúmbens, Huds. ang. 328. Curt. lond. fasc. 5. t. 53. T. dùbium, Sibth. 231. Flowers yellow.

Var. β, microphýllum (Ser. mss. in D. C. prod. 2. p. 206.) plant small; leaves very minute; heads few-flowered. T. contravérsum, Jan. pl. exsic. ital. sup. cent. 10. Heads generally 3-flowered.

Lesser Yellow Trefoil. Fl. June, Aug. Britain. Pl. proc.

152 T. MICRA'NTHUM (Viv. fl. libyc. p. 45. t. 19. f. 3.) stems diffuse; racemes few-flowered, disposed in loose pedunculate heads; legume 1-seeded, shining, spherical; leaflets cuneate-obovate; stipulas ovate, ciliated. ⊙. H. Native of Cyrenaica, on mountains. Plant very like *T. minus β, microphýllum.* Flowers yellow.

Small-flowered Trefoil. Fl. June, Aug. Clt. 1816. Pl. proc.

153 T. VOLU'BILE (Lour. coch. p. 445.) stem elongated, slender, twining; leaflets roundish, quite entire, tomentose; heads many-flowered, axillary; legume 2-seeded, glabrous. ⊙.? H. Native on the eastern coast of Africa. Flowers yellow.

Twining Trefoil. Pl. procumbent.

† *Species not so sufficiently known as to be placed in either of the above sections.*

154 T. MI'NIMUM (Bart. fl. phil. 2. p. 74.) stems somewhat

procumbent, smooth; leaflets cuneated, emarginate, denticulated, glabrous; stipulas ovate, acuminated; peduncles filiform; capsule roundish; vexillum deflexed. ⊙. H. Native of New Jersey. Flowers yellow?

Least Trefoil. Pl. procumbent.

155 T. COMÒSUM (Lin. spec. 1080.) heads of flowers umbellate, globose, imbricated; vexillum deflexed, permanent. ♃. H. Native of North America. Flowers white.

Tufted Trefoil. Fl. Ju. July. Clt. 1798. Pl. ½ foot.

156 T. STIPULA'CEUM (Thunb. prod. p. 136.) stems herbaceous, decumbent at the base; leaflets cut, villous.—Native of the Cape of Good Hope.

Stipulaceous Trefoil. Pl. decumbent.

157 T. HIRSU'TUM (Thunb. prod. p. 136.) stems herbaceous, diffuse; leaflets oblong, hairy.—Native of the Cape of Good Hope.

Hairy Trefoil. Pl. diffuse.

158 T. LANA'TUM (Thunb. prod. p. 136.) stems herbaceous, decumbent; leaflets obovate, obtuse, pilose; heads of flowers globose, woolly, bractless.—Native of the Cape of Good Hope.

Woolly Trefoil. Pl. decumbent.

159 T. CAPE'NSE (Willd. spec. 3. p. 1364.) stem herbaceous, decumbent; leaflets obovate, obtuse, pilose; heads of flowers globose, woolly, involucrated.—Native of the Cape of Good Hope. T. diffùsum, Thunb. prod. 136. but not of Ehrh.

Cape Trefoil. Pl. decumbent.

160 T. RUPE'STRE (Tenore, prod. p. 43. cat. 1819. p. 58.) stems almost simple, suffruticose at the base; leaflets rhomboidal-ovate, scabrous; spiny-serrated, veiny; spike terminal, globose, villous, pedunculate; calycine segments setaceous, spreading, equal in length to the corolla.—Native of Naples, on the rocks of Magella.

Rock Trefoil. Pl. ½ foot.

161 T. CLANDESTI'NUM (Lag. nov. gen. p. 23.) stems prostrate; leaflets obovate-cuneated, pubescent, almost entire; heads of flowers ovate, terminal, and axillary, pedunculate; calycine segments stiff, unequal; corolla hidden. ⊙. H. Native of Spain, among rubbish about Madrid.

Clandestine-flowered Trefoil. Fl. June, Aug. Clt. 1816. Pl. prostrate.

162 T. CUSPIDA'TUM (Lour. coch. p. 445.) stem suffruticose, 4 feet high; leaflets linear, quite entire, cuspidate; flowers capitate, numerous; calyx pilose; vexillum of corolla ovate, distinct, with a purple spot; legume naked, 1-seeded. ♄. G. Native of Cochin-china. Flowers white.

Cuspidate-leafletted Trefoil. Shrub 4 feet.

163 T. ASCE'NDENS (Horn. hort. hafn. 2. p. 716.) stems ascending; leaflets oval, pubescent; heads roundish, terminal, pedicellate, exstipulate; calyx compressed; the segments nearly equal, 3 times shorter than the monopetalous corolla. ♃. H. Native of Georgia.

Ascending-stemmed Trefoil. Pl. ascending.

164 T. FORMÒSUM (D'Urv. enum. pl. archip. p. 94. no. 691.) stem erect, villous, branched above; leaflets ovate-oblong, mucronate; stipulas large, straight, ending each in a long subulate point; heads ovate, dense, many-flowered; calyx clothed with hoary villi; the segments nearly equal, and very long, at length spreading, a little longer than the corolla. ⊙. H. Native of the island of Melos. Leaves an inch and more long, and 4 lines broad. Flowers pale flesh-coloured.

Beautiful Trefoil. Pl. ½ to 1 foot.

165 T. LASIOCE'PHALUM (Link, enum. 2. p. 262.) stem erect, hairy; leaflets linear; stipulas ventricose; heads of flowers ovate; calyxes hairy; the segments lanceolate-subulate, spreading much. ⊙. H. Native of the Cape of Good Hope.

Woolly-headed Trefoil. Pl. ½ foot.

166 T. ORNA'TUM (Clark, itin. 3. ex Spreng. neue entd. 2. p. 165.) leaflets obovate, sharply-serrulated, mucronate, glabrous; heads of flowers terminal, roundish, truncate at the base, sterile at the apex; teeth of calyx subulate, equal. ⊙. H. Native of?

Ornamented Trefoil. Pl.

N. B. *Trifòlium Magellánicum* is *O'xalis eriocárpa*, D. C. in annal. sc. nat. 4. p. 23.

Cult. Many of the species of *Trefoil* are very shewy, and very fit for ornamenting flower borders. All the species will grow in any common garden soil. The perennial kinds are easily increased by dividing the plants at the root in spring, or by seeds, which always ripen in abundance. The seeds of the annual kinds only require to be sown in the open border. Those species marked frame and greenhouse only require to be protected in winter.

LXXI. ACROPO'DIUM (ακρος, *akros*, the summit, and πους ποδος, *pous podos*, a foot; in allusion to the legumes being stalked within the calyx). Desv. obs. legum. ex Schlecht. Linnæa. 2. p. 510.

LIN. SYST. *Diadélphia, Decándria.* Calyx deeply 5-cleft. Vexillum short, hispid. Wings opposite, bidentate. Stamens diadelphous. Ovary stalked. Legume oval-oblong, smooth, usually 2-seeded, standing on a capillary footstalk.—A subshrub, with fascicled leaves and 3-flowered axillary racemes, which are rather longer than the leaves.

1 A. SUFFRUTICÒSUM (Desv. l. c.). ♄. G. Native of the Cape of Good Hope. Lòtus suffruticòsus, Burm. cat.

Suffruticose Acropodium. Shrub.

Cult. This plant will grow in any light soil, and young cuttings will root in sand, under a hand-glass.

LXXII. DORY'CNIUM (from δορυ, *dory*, a spear; the ancient plant was used to poison spears. The present genus has, however, nothing to do with the plant of the ancients). Tourn. inst 391. t. 211. f. 3. D. C. prod. 2. p. 208.—Lòtus, species of Lin. and others.

LIN. SYST. *Diadélphia, Decándria.* Calyx somewhat campanulate, bilabiate, somewhat gibbous at the base. Wings shorter than the vexillum. Keel nearly awnless. Style straight, crowned by a capitate stigma.—Herbs or subshrubs, with trifoliate leaves, and with the stipulas the form of the leaflets. Flowers usually numerous, capitate, white or pale-red.

1 D. RE'CTUM (Ser. mss. in D. C. prod. 2. p. 208.) villous; stems erect, suffruticose; leaves petiolate; leaflets obovate, mucronate; stipulas ovate, cordate; peduncles bractless, many-flowered, hardly twice the length of the leaves; pedicels woolly, as well as the calyxes; segments of the calyx about the same length, very narrow, longer than the tube, but shorter than the corolla; legume terete, smooth, twice the length of the calyx, black; seeds reniform. ♄. H. Native of the south of Europe. Lòtus réctus, Lin. spec. 1092.—Barrel. icon. t. 544. Flowers small, rose-coloured. Pedicels length of the calyx.

Straight Dorycnium. Fl. Ju. Aug. Clt. 1640. Pl. 2 feet.

2 D. LATIFÒLIUM (Willd. spec. 3. p. 1397.) plant pilose; stems erect, suffruticose; leaves sessile; leaflets and stipulas obovate and mucronulate; peduncles many-flowered, bracteate towards the apex, 3 times longer than the leaves; bracteas solitary or tern; pedicels woolly, shorter than the calyx; the segments lanceolate, and longer than the tube, but shorter than the corolla; legume oblong, terete, black, twice the length of the calyx; seeds somewhat reniform. ♄. H. Native of Iberia, on dry hills. D. Ibéricum, Willd. enum. suppl. 52. Onònis quinàta, Forsk. descr. 130. but not of Vahl. Flowers white.

Broad-leaved Dorycnium. Fl. June, Aug. Clt. 1818. Pl. 1 to 2 feet.

3 D. GRÆ'CUM (Ser. mss. in D. C. prod. 2. p. 208.) stems

erect, spreading; leaves sessile; leaflets and stipulas oblong, glaucous, and silky; heads of flowers roundish; pedicels short; legume oblong, 2-seeded, rusty; seeds globose, black, with a white hilum, separated from each other by spongy substance. ♃. H. Native of the Levant. Lòtus Græ'cus, Lin. mant. 104. L. Belgrádica, Forsk. descr. fl. ægypt. p. 215. Flowers white, larger than those of *D. hirsùtum*, but smaller than those of *D. réctum.*

Grecian Dorycnium. Pl. 1 to 2 feet.

4 D. HIRSU'TUM (Ser. mss. in D. C. prod. 2. p. 208.) plant clothed with hoary tomentum; stem erect, suffruticose; leaves sessile; leaflets ovate, lanceolate or obovate; stipulas lanceolate; peduncles when bearing the fruit twice the length of the leaves; bracteas lanceolate, equal in length to the calyx; heads many-flowered: pedicels much shorter than the calyx; the segments subulate, and much longer than the tube, but shorter than the corolla; legume turgid, oblong, hardly longer than the calyx; seeds somewhat reniform. ♄. H. Native of the south of Europe. Lòtus hirsùtus, Lin. spec. 1091.—J. Bauh. hist. 2. p. 360. Flowers large, pale-red.

Hairy Dorycnium. Fl. Ju. Aug. Clt. 1683. Pl. 1 to 2 feet.

5 D. TOMENTÒSUM (G. Don, in Loud. hort. brit. p. 300.) plant shrubby, clothed with silky hoary down; heads of flowers more dense, and on shorter peduncles than in the *D. hirsùtum.* ♄. H. Native of Italy, in exposed places. Lòtus tomentòsus, Rhode in Schrad. neue journ. 1809. p. 42. in a note. L. hirsùtus incànus, Lois. not. p. 116. L. sericeus, D. C. cat. hort. monsp. p. 122. and fl. fr. 5. p. 573. L. affinis, Bess. cat. hort. crem. p. 81. D. hirsùtum var. *β*, incànum, Ser. mss. in D. C. prod. 2. p. 208. Flowers large, pale rose-coloured.

Tomentose Dorycnium. Fl. Ju. Aug. Clt. 1817. Sh. 2 to 3 ft.

6 D. ARGE'NTEUM (Delil. fl. ægypt. 113. t. 40.) plant silky; stems suffruticose, prostrate; leaflets, stipulas, and bracteas linear-lanceolate; heads 4-6-flowered; peduncles longer than the leaves; calycine segments lanceolate, hardly equalling the corolla in length; legumes thick, ovate, hardly longer than the calyx; seeds globose, few. ♄. H. Native of Egypt. D. argénteum Alexandrìnum, Lippi, mss. in herb. Juss. Flowers yellow, painted with bay-coloured lines.

Silvery Dorycnium. Pl. prostrate.

7 D. PARVIFLÒRUM (Ser. mss. in D. C. prod. 2. p. 208.) plant clothed with soft hairs; stems rather prostrate; leaflets obovate; stipulas ovate; heads 4-5-flowered; bracteas simple, lanceolate; peduncles longer than the leaves; calycine segments very long, about equal in length to the corolla, which is small; legume oblong, green, rather pellucid, veined transversely, hardly longer than the calyx; seeds roundish, yellowish-green. ⊙. H. Native of Corsica and the Stæchades Islands. Lòtus parviflòrus, Desf. atl. 2. p. 206. t. 211. D. C. icon. rar. 1. p. 9. t. 30. Lòtus híspidus, D. C. fl. fr. no. 3937. exclusive of the synonymes. Flowers yellowish-green. Carina narrow, and very long.

Small-flowered Dorycnium. Fl. July, Aug. Clt. 1810. Pl. ascending ½ foot.

8 D. MICROCA'RPUS (Ser. mss. in D. C. prod. 2. p. 209.) plant clothed with pili; stems ascending; leaflets obovate; stipulas ovate or somewhat cordate; flowers capitate, on short peduncles; calyx deeply 5-parted, hardly equal in length to the corolla; legumes 3-4 in a head, rather turgid, glabrous, hardly longer than the calyx, drooping; seeds 9-11? roundish, reniform. ⊙. H. Native of Spain. Lòtus microcárpus, Brot. fl. lus. 2. p. 119. Flowers yellow.

Small-fruited Dorycnium. Pl. ascending.

9 D. SUBIFLÒRUM (Ser. mss. in D. C. prod. 2. p. 209.) plant hairy; stem branched, diffuse; peduncles 2-3-flowered; legumes erect, terete, and are, as well as the corollas, longer than the calyx. ⊙. H. Native of Spain. Lòtus subiflòrus, Lag. in Pers. ench. 2. p. 354. gen. et spec. p. 23. Perhaps distinct from *D. microcárpus.* Flowers yellow.

Two-flowered Dorycnium. Pl. diffuse.

10 D. DISPE'RMUM (Ser. mss. in D. C. prod. 2. p. 209.) leaflets and stipulas oblong, acute, tomentose, very white; flowers capitate; legumes 2-seeded, inclosed in the calyx. ⊙.? H. Native of the south of Europe. Lòtus dispérmus, Desv. journ. bot. 1814. vol. 1. p. 77.

Two-seeded Dorycnium. Pl.

11 D. HERBA'CEUM (Vill. dauph. 3. p. 417. t. 41.) stems herbaceous, erect; leaflets and stipulas obovate, obtuse; calyx pilose; teeth of calyx much shorter than the tube; heads of flowers on long peduncles; bracteas simple, distinct from the head of flowers; legume ovate, 3 or 4 times longer than the calyx, many-seeded. ♃. H? Native of the south of Europe. Lòtus Dorýcnium, Crantz, fl. austr. 402. Flowers white.

Herbaceous Dorycnium. Fl. Ju. Sept. Clt. 1802. Pl. 1½ ft.

12 D. SUFFRUTICÒSUM (Vill. dauph. 3. p. 416.) stems suffruticose; leaflets and stipulas oblong-lanceolate, acute; calyx pilose, the teeth much shorter than the tube; heads of flowers on long peduncles; bracteas simple or 3-leaved; legume globose, 1-seeded, twice the length of the calyx; seeds globose, shining, variegated. ♄. H. Native of the south of Europe. Lòtus Dorýcnium, Lin. spec. 1093. D. monspeliénse, Willd.—Lob. icon. 2. p. 51. f. 1 and 2. Flowers white, but with the keel reddish. Plant hoary.

Suffruticose Dorycnium. Fl. June, May. Clt. 1640. Shrub 2 to 3 feet.

Cult. Elegant plants of easy culture, growing best in dry soil. They are all easily increased by seeds.

LXXIII. LO'TUS (from λωτος of Theophrastus, and Dioscorides, but the true λωτος is *Zizyphus Lòtos.* Lotos was a nymph turned into a tree to avoid the pursuit of Priapus. Ovid. metam. 97, &c. But the name is perhaps of Egyptian origin). Ser. mss. in D. C. prod. 2. p. 209.—Lòtus, species of Lin.

LIN. SYST. *Diadélphia, Decándria.* Calyx tubular, 5-cleft. Wings equal in length to the vexillum. Carina beaked. Legume cylindrical or compressed, wingless. Style straight, crowned by a subulate stigma.—Herbs, with trifoliate leaves, and leafy stipulas. Peduncles axillary, 1-6-flowered, furnished with a floral simple or trifoliate leaf at the apex. Flowers yellow, rarely white or rose-coloured.

SECT. I. KROKE'RIA (in honour of A. J. Kroker, author of Flora Silesiaca). Ser. mss. in D. C. prod. 2. p. 209.—Krokèria, Mœnch. meth. 143. Legume turgid, curved. Flowers 1-2.

1 L. EDU'LIS (Lin. spec. 1090.) plant pilose; stems erect; leaflets ovate, ciliated; flowers 1-3; bracteas ovate, about equal in length to the calyx; legume turgid, arched, glabrous; seeds globose, compressed, wrinkled from dots. ⊙. H. Native of the south of Europe. Cav. icon. t. 157. Krokèria oligoceràtos, Mœnch. meth. 143.—Moris. hist. 2. p. 176. sect. 2. t. 18. f. 5. Flowers yellow. The pods of this plant are eaten in Candia when young by the poorer inhabitants, as we do French beans.

Edible-podded Lotus. Fl. July, Aug. Clt. 1759. Pl. trailing.

SECT. II. LO'TEA (see genus for derivation). D. C. fl. fr. 4. p. 554. prod. 2. p. 209.—Lòtea, Medic. phil. bot. fasc. 1. p. 204. Mœnch. meth. 151. Legume compressed, long. Flowers umbellate.

2 L. ORNITHOPODIOÌDES (Lin. spec. 1091.) plant rather villous stems diffuse; leaflets obovate-rhomboid, entire; stipulas ovate flowers 3-5 in an umbel; bracteas much longer than the calyx legume compressed, somewhat lomentaceous, glabrous, a little curved and deflexed, of a bay-colour; seeds globose, compressed, olive-coloured, smooth. ⊙. H. Native of the south of

Europe. Cav. icon. 2. p. 48. t. 163. Lòtea ornithopodioìdes, Mœnch. meth. p. 151. Flowers yellow. Seeds about the size of those of *L. siliquòsus*.

Bird's-foot-like-podded Lotus. Fl. July, Aug. Clt. 1683. Pl. 2 feet long, diffuse.

3 L. PEREGRI'NUS (Lin. spec. 1090.) plant pubescent; stems diffuse; leaflets obovate, entire; stipulas ovate; flowers 2-3 in an umbel; bracteas longer than the calyx; lateral leaflets smallest and sessile, terminal one larger and stalked; legume compressed, somewhat lomentaceous, glabrous, straight, horizontal; seeds globose, compressed, dark, smooth. ⊙. H. Native of the south of Europe. L. oligoceràtos, Lam. dict. 3. p. 605.

Foreign Bird's-foot Lotus. Fl. July, Aug. Clt. 1713. Pl. diffuse, 2 feet long.

4 L. I'NDICUS (Lam. dict. 3. p. 606.) plant pubescent; stems diffuse; leaflets obovate-linear, entire; stipulas lanceolate; flowers usually twin, opposite the leaves, on very short peduncles, bractless; legume compressed, pilose, erect, hardly arched. ⊙. H. Native of the East Indies. Trigonélla I'ndica, Lin. spec. 1095. Burm. fl. ind. 173.—Pluk. phyt. t. 200. f. 7. Flowers yellow. Perhaps a species of *Hosáckia*.

Indian Bird's-foot Lotus. Fl. July, Aug. Clt. 1793. Pl. diffuse.

5 L. TETRAPHY'LLUS (Lin. fil. suppl. p. 340.) plant rather hispid; stems prostrate; leaves with one stipula only; leaflets obcordate, cuneated, entire; flowers axillary, on long peduncles; bracteas obovate, much shorter than the calyx. ⊙. H. Native of the Balearic Islands and of Cyrenaica, on the mountains. Lam. dict. 3. p. 605. Flowers yellow, but with the vexillum dark-purple on the outside. Leaves having two leaflets on one side, and one on the other, as well as a terminal one.

Four-leaved Bird's-foot Lotus. Pl. prostrate.

6 L. SUBPINNA'TUS (Hook. in Beech. voy. p. 17. t. 8.) plant pilose; stems erect; leaves pinnate, exstipulate; leaflets 5-6, 2 or 3 of these terminal, and other 2 on one side of the petiole, all elliptic; peduncles very short, axillary, solitary, 1-flowered; legume straight, compressed, margins hairy. ⊙. H. Native of Chili, at Conception. Flowers yellow. Stigma obtuse, not subulate, as in the rest of the genus. It comes nearest to *L. tetraphýllus*, that species being furnished with one additional leaflet at the side of the petiole, and this is furnished with 2 unilateral leaflets. Stamens diadelphous. Lòtus utriculàtus, Dombey. et Lag. herb. Anthýllis Chilénsis, D. C. prod. 2. p. 171.

Somewhat-pinnate-leaved Bird's-foot Lotus. Pl. $\frac{1}{2}$ foot.

7 L. FLEXUO'SUS (Lam. dict. 3. p. 606.) plant pilose; stems prostrate, branched, flexuous; leaflets and stipulas lanceolate, ciliated, small; flowers solitary; peduncle longer than the leaf; bracteas shorter than the calyx; calycine segments acute, length of tube, but shorter than the corolla. ⊙. ? H. Native of Europe. Flowers yellow.

Flexuous-stemmed Bird's-foot Lotus. Fl. June, Aug. Clt. 1816. Pl. prostrate.

SECT. III. EULO'TUS (from ευ, eu, well or good, and λωτος, *lotos*, the lotus; in reference to its containing the genuine species). Ser. mss. in D. C. prod. 2. p. 210. Legume cylindrical, long. Flowers disposed in corymbose umbels.

§ 1. *Style furnished with one tooth.*

8 L. GLAU'CUS (Ait. hort. kew. ed. 1. vol. 3. p. 92. ed. 2. vol. 4. p. 392.) plant glaucous, and pilose; stems prostrate; leaflets and stipulas thickish, obovate, small; flowers 3-4 in a corymb; bracteas form of the leaflets, shorter than the calyx; pedicels very short; legume somewhat lomentaceous, smoothish, shining; seeds rather globose, black, smooth. ♃. F. Native of Madeira. Flowers yellow.

Glaucous Bird's-foot Lotus. Fl. June, Aug. Clt. 1777. Pl. prostrate.

9 L. SESSILIFO'LIUS (D. C. cat. hort. monsp. p. 122.) plant glaucescent; stem suffruticose; leaflets rather fleshy, linear, sessile, canescent; stipulas linear; peduncles very long, axillary; flowers corymbose, on short pedicels; legumes cylindrical, glabrous, divaricate; seeds almost globose, small, dark, smooth. ♃. G. Native of Teneriffe. L. dorycnoìdes, Poir. suppl. 3. p. 507. Flowers yellow.

Sessile-leaved Bird's-foot Lotus. Fl. June, Aug. Clt. 1820. Pl. $\frac{1}{2}$ to 1 foot.

10 L. ANTHYLLOÌDES (Vent. malm. p. 92. t. 92.) shrubby; leaflets and stipulas spatulate and pilose; bracteas shorter than the calyx; peduncles long; flowers on very short pedicels, disposed in a corymb. ♄. G. Native of the Cape of Good Hope. Perhaps only a variety of *L. Jacobæ'us*, with yellow flowers.

Anthyllis-like Bird's-foot Lotus. Fl. June, Aug. Clt. 1812. Shrub 1 to 2 feet.

11 L. ATROPURPU'REUS (D. C. cat. hort. monsp. p. 121.) plant glaucescent; stem shrubby; leaflets and stipulas obovate, smoothish; bracteas either of 1 or 3 leaflets, obovate; peduncles longer than the leaves; flowers corymbose, on very short pedicels; legumes terete, glabrous; seeds nearly globose, of a greenish-black colour. ♄. G. Native of? Perhaps a variety of *L. Jacobæ'us*. Perhaps a hybrid between *L. anthylloìdes* and *L. Jacobæ'us*. Flowers very dark purple.

Dark-purple-flowered Bird's-foot Trefoil. Fl. April, Dec. Shrub 1 to 3 feet.

12 L. JACOBÆ'US (Lin. spec. 1091.) plant rather glaucous; stems shrubby; leaflets and stipulas linear or linear-spatulate, rather pilose and canescent, mucronate; bracteas of 1 or 3 linear leaflets; peduncles longer than the leaves; flowers corymbose, on very short pedicels; legume terete, glabrous. ♄. G. Native of the Island of St. James. We have also seen this plant in the Island of Teneriffe, and in several of the Cape de Verd islands, particularly in St. Jago. Curt. bot. mag. 79. Mill. fig. 168. Comm. hort. 2. p. 165. t. 83. Mœnch. meth. suppl. p. 52. Corolla dark-purple, almost black, with the vexillum yellowish.

Var. β, lùteus; flowers yellow. Reared in the gardens.

St. Jago Island Bird's-foot Trefoil. Fl. all the year. Clt. 1714. Shrub 1 to 3 feet.

13 L. ARENA'RIUS (Brot. fl. lus. 2. p. 120.) stems procumbent, branched, pubescent; branches and peduncles erectish; leaflets rather acute, cuneated; stipulas ovate; heads 5-10-flowered; bracteas nearly lanceolate, smaller than the calyx; calyx somewhat bilabiate, the two superior teeth longest; legume terete, glabrous. ⊙. H. Native of Portugal, in the sea-sand at Costa da Trafaria, beyond the Tagus. Flowers yellow.

Sand Bird's-foot Trefoil. Fl. June, July. Pl. procumbent.

§ 2. *Styles without a tooth.*

14 L. BROUSSONE'TII (Choisy, fl. teneriff. mss. D. C. prod. 2. p. 211.) stems shrubby; leaflets broad, obovate, smoothish; petioles and branches tomentose; stipulas ovate, obtuse, solitary, or twin, about the size of the leaflets; corymbs of flowers terminal, bractless, on short peduncles; pedicels and calyxes tomentose; the segments length of the tube. ♄. G. Native of Teneriffe or Mogodor. Flowers yellow?

Broussonet's Bird's-foot Trefoil. Shrub 1 to 2 feet.

15 L. SPECTA'BILIS (Choisy, fl. teneriff. mss. D. C. prod. 2. p. 211.) plant quite glabrous; stem suffruticose; leaflets obovate, rather retuse; stipulas ovate-roundish, much smaller than the leaflets; corymbs many-flowered, axillary, bractless; peduncles longer than the leaves; pedicels about the length of the calyxes; calycine segments shorter than the tube; legume

long, many-seeded. ♄. G. Native of Teneriffe or Mogodor. Flowers yellow. The habit of this plant is very like that of *Coronilla E'merus.*

Shewy Bird's-foot Trefoil. Shrub 1 to 3 feet.

16 L. pusíllus (Viv. fl. libyc. p. 47. t. 17. f. 3.) plant diffuse and hairy; stems diverging, filiform, rather stiffish; leaflets, stipulas, and bracteas ovate-elliptic; peduncles 1-flowered, 3-times longer than the leaves; legume unknown. ⊙. H. Native of Cyrenaica, on the mountains. Like *L. cytisoìdes* and *L. secundiflòrus.* Flowers yellow.

Least Bird's-foot Trefoil. Fl. June, Aug. Clt. 1816. Pl. diff.

17 L. Michauxia'nus (Ser. mss. in D. C. prod. 2. p. 211.) plant clothed with hoary tomentum; stems prostrate; leaflets obovate, somewhat truncate; stipulas ovate-roundish; leaflets smaller than the stipulas; peduncles axillary, twice the length of the leaves; heads few-flowered; bracteas obovate, hardly longer than the calyx; calycine segments length of tube, but much shorter than the corolla. ♃. H. Native of Persia. Flowers yellow.

Michaux's Bird's-foot Trefoil. Pl. prostrate.

18 L. Cre'ticus (Lin. spec. 1091.) plant silky; stems suffruticose, ascending; leaflets obovate; stipulas ovate, 3-times shorter than the fructiferous peduncles; bracteas lanceolate, linear, smaller than the calyx; heads usually containing 4 flowers; calycine segments lanceolate, length of tube, but much shorter than corolla; style exserted; legume terete, smoothish, erect, somewhat torulose. ♄. F. Native of Syria, Candia, and Spain. Cav. icon. 2. p. 44. t. 156.—Pluk. phyt. t. 43. f. 1. Flowers yellow. A slender shrub, requiring support.

Var. β, vàrians (D. C. prod. 2. p. 211.) taller; stem suffruticose. L. vàrians, Desv. journ. bot. 1814. p. 77.

Cretan Bird's-foot Trefoil. Fl. June, Sept. Clt. 1680. Sh. 1½ foot.

19 L. cytisoìdes (Lin. spec. 1092.) stems prostrate at the base, a little branched; pedicels and calyxes hoary; leaflets obovate, rather fleshy, covered with adpressed pili; calycine segments shorter than the tube; legume somewhat torulose, glabrous; seeds ovoid, bay-coloured, shining. ⊙. H. Native of Europe, in sterile places by the sea-side. All. pedem. no. 1136. t. 20. f. 1. D. C. fl. fr. 4. p. 555. L. diffùsus, Schrank, pl. rar. t. 40.? but not of Solander.—Barrel. icon. t. 1031. Flowers yellow.

Cytisus-like Bird's-foot Trefoil. Fl. Jul. Aug. Clt. 1752. Pl. pr.

20 L. prostra'tus (Desf. atl. 2. p. 206.) stems procumbent, much branched; leaves glabrous; peduncles many-flowered; legume compressed, torulose, spreading. ♃. H. Native of the north of Africa. L. Alliòni, Desv. journ. bot. and perhaps of Poir. L. cytisoìdes β, prostràtus, Ser. mss. in D. C. prod. 2. p. 211. Flowers yellow. Like *L. corniculàta.*

Var. β, uniflòrus (Ser. mss. in D. C. l. c.) flowers solitary; leaflets smaller. ⊙. H. Native of the Island of Melos, in the sand by the sea-side.

Prostrate Bird's-foot Trefoil. Fl. June, Aug. Pl. prostrate.

21 L. secundiflòrus (Viv. fl. libyc. 46. t. 21. f. 3.) plant suffruticose, silky and silvery; stem furrowed; leaflets obovate-cuneated; stipulas ovate, oblique; peduncles bearing a head of secund reflexed flowers; leaflets of the bracteas obovate; calyx somewhat bilabiate, shorter than the corolla; legume glabrous, but unknown in a mature state. ⊙.? H. Native of Cyrenaica, on dry hills. Allied to *L. cytisoìdes.* Flowers yellow.

Secund-flowered Bird's-foot Trefoil. Pl. ½ foot.

22 L. polyphy'llus (Clark, itin. vol. 3. ex Spreng. neue entd. 2. p. 164.) stem suffruticose; leaflets linear-parabolic, silky; flowers usually tern; legume turgid, glabrous. ♄. F. Native on Mount Gargaro.

Many-leaved Bird's-foot Trefoil. Shrub 1 foot.

23 L. obtusa'tus (Ser. mss. in D. C. prod. 2. p. 212.) plant canescent; stems decumbent; leaflets and bracteas obovate, clothed with hoary tomentum, mucronulate, rather thickish; stipulas ovate, much shorter than the peduncles; heads few-flowered; calycine segments obtuse, much shorter than the tube and corolla; style inclosed in the calyx; legume rather terete, bay-coloured, but ending in a yellow mucrone. ♃. H. Native of Egypt. Flowers yellow.

Obtuse-calyxed Bird's-foot Trefoil. Pl. decumbent.

24 L. Garcìni (D. C. prod. 2. p. 212.) stems pubescent, branched; leaflets nearly sessile, and are as well as the stipulas obovate-oblong and pubescent; flowers axillary, usually solitary, almost sessile; segments of the calyx oblong, villous; legume glabrous, straight, a little longer than the calyx. ⊙.? H. Native of Persia. Aspálathus Pérsicus, Burm. fl. ind. 155. exclusive of the synonymes. Legumes black when dry. Corolla hardly longer than the calyx. Stamens diadelphous.

Garcin's Bird's-foot Trefoil. Pl. prostrate.

25 L. Dioscòridis (All. pedem. no. 1131. t. 59. f. 1.) stems erect, branched; leaflets obovate, thickish, emarginate, glaucous; stipulas ovate, shorter than the petiole; peduncles axillary, much longer than the leaves, usually 2-flowered; calycine segments lanceolate, longer than the tube, but shorter than the corolla; legumes usually twin, long, torulose. ⊙. H. Native of Piedmont, and about Nice. Flowers small, yellow.

Dioscorides's Bird's-foot Trefoil. Fl. June, July. Clt. 1658. Pl. 1 foot.

26 L. Gebe'lia (Vent. hort. cels. t. 57.) plant glabrous; stems decumbent, rather woody; leaflets and stipulas ovate, rather glaucescent; bracteas about equal in length to the calyx; heads of long peduncles usually 3-flowered; calycine segments length of tube, but much shorter than the corolla; legume cylindrical, torulose, thick; seeds globose, bay-coloured. ♃. H. Native about Aleppo, on Mount Gebel-cher. Flowers large, at first red, but at length becoming pale rose-coloured. The pods or legumes are eaten by the inhabitants of its native country, as French beans are with us.

Gebel-cher Bird's-foot Trefoil. Fl. June, July. Clt. 1816. Pl. decumbent.

27 L. Ara'bicus (Lin. mant. 104.) stems prostrate; leaflets and stipulas obovate-cuneated, equal, hoary beneath; heads few-flowered; bracteas longer than the calyx; peduncles length of bracteas; calycine segments very narrow, longer than the tube; legume terete, very smooth, somewhat torulose; seeds somewhat kidney-shaped, variegated. ♃. F. Native of Arabia. Jacq. hort. vind. t. 155. Flowers red.

Arabian Bird's-foot Trefoil. Fl. Jul. Sep. Clt. 1773. Pl. 1½ ft.

28 L. decu'mbens (Poir. suppl. 3. p. 508.) plant pilose; stems slender, decumbent, branched; leaflets and stipulas lanceolate; heads on long peduncles, containing about 4 flowers each; bracteas lanceolate, about equal in length to the calyx; calycine segments acute, hardly longer than the tube; legume rather terete, glabrous, bay-coloured. ⊙. H. Native of the south of France. Flowers yellow, greenish at the apex.

Decumbent Bird's-foot Trefoil. Fl. June, Aug. Clt. 1816. Pl. decumbent.

29 L. pilosíssimus (Poir. suppl. 3. p. 504.) plant very pilose; stems branched, rather prostrate; leaflets ovate-lanceolate; stipulas ovate, acutish; heads on long peduncles, few-flowered; bracteas narrow-lanceolate; calycine segments narrow, acute, longer than the tube; legume nearly terete, glabrous, brown. ⊙. H. Native of the south of France. L. híspidus, Pers. ench. 2. p. 354. but not of D. C. Corolla yellow, but becoming green when dried. Perhaps only a variety of *L. híspidus.*

Var. β, filifórmis (Poir. l. c.) stem and branches filiform and very long; leaflets smaller.

Very pilose Bird's-foot Trefoil. Fl. June, July. Clt. 1818. Pl. decumbent.

30 L. HÍSPIDUS (Desf. cat. hort. par. 190.) stems numerous, prostrate; leaflets hispid, oblong-lanceolate; stipulas ovate; heads few-flowered, much longer than the leaves; bracteas lanceolate, length of calyx; calycine segments longer than the tube, but shorter than the corolla; legume compressed, dotted; seeds orbicularly reniform, black. ⊙. H. Native of France, about Bayonne, and of Corsica. Lois. fl. gall. 490. t. 16. D. C. fl. fr. 5. p. 572. Flowers yellow.

Hispid Bird's-foot Trefoil. Fl. June, Jul. Clt. 1817. Pl. pr.

31 L. UNIBRACTEA'TUS (Viv. fl. libyc. p. 48. t. 18. f. 4.) plant diffuse, clothed with rufescent hairs; leaflets and stipulas obovate; flowers axillary, solitary; calycine segments lanceolate-linear, setaceous at the apex, much shorter than the corolla; wings length of carina, which terminates in a long beak; bracteas solitary; legume unknown. ⊙. H. Native of Cyrenaica, on the mountains. Corolla with the vexillum and carina deep-purple, as well as the tops of the wings, the rest yellow.

One-bracted Bird's-foot Trefoil. Pl. diffuse.

32 L. SUAVE'OLENS (Pers. ench. 2. p. 354.) stem diffuse, pilose, tomentose; leaflets ovate, rather oblique; bracteas usually solitary; flowers generally 3 on the top of each peduncle; calyx hairy; legumes terete. ♃. H. Native of the south of France. Flowers 3-5 in an umbel, at first pale-yellow, but at length becoming bay-coloured, smelling like those of *Lupinus lùteus*. The plant is like *L. híspidus*, but larger.

Sweet-scented-flowered Bird's-foot Trefoil. Fl. June, Aug. Clt. 1816. Pl. ascending.

33 L. ANGUSTI'SSIMUS (Lin. spec. 1090.) stems branched, prostrate, tubular, and are as well as the leaves hispid; leaflets and stipulas ovate or oblong-linear, rather pilose, and glaucous; heads 1-3-flowered; peduncles hardly twice the length of the leaves; bracteas unequal or solitary; calyx loosely hairy; calycine segments fringed, longer than the tube but shorter than the corolla; legume compressed, 2-edged, very slender, and usually solitary; seeds globose, pale-green. ⊙. H. Native of the south of Europe. In Britain in meadows towards the sea, on the south and western coasts of England; on the rocky beach at Hastings, Sussex; in Devonshire; in a meadow near St. Vincent's Rocks, Bristol. L. angustifòlius, Gouan. hort. 394. —J. Bauh. hist. 2. p. 356. f. 2.—Moris. hist. vol. 2. p. 175. sect. 2. t. 18. f. 1. Lòtus diffùsus, Sol. in Smith, fl. brit. 2. p. 794. engl. bot. t. 925. Flowers yellow.

Very-narrow-leaved Bird's-foot Trefoil. Fl. May, June, Britain. Pl. procumbent.

34 L. CILIA'TUS (Ten. prod. p. 44. cat. 1819. p. 58.) stems prostrate; leaflets glabrous, with the margins and calyxes ciliated; legumes solitary, cylindrical, glabrous, sessile. ⊙. H. Native of Sicily, in humid fields. Flowers yellow. Perhaps only a variety of *L. diffùsus*.

Ciliated Bird's-foot Trefoil. Fl. June, July. Clt. 1812. Pl. pr.

35 L. GRA'CILIS (Waldst. et Kit. hung. p. 254. t. 229.) stems erect, and are as well as the leaves pilose; leaflets and stipulas lanceolate; peduncles twice the length of the leaves, usually bearing about 2 flowers; bracteas equal in length to the calyx; calycine segments narrow, pilose, longer than the tube, but shorter than the corolla; legumes linear; very slender, almost terete, glabrous, 6-times longer than the calyx; seeds nearly globose. ⊙. H. Native of Hungary. Flowers yellow. Perhaps only a variety of *L. angustíssimus*.

Slender Bird's-foot Trefoil. Fl. Ju. Aug. Clt. 1812. Pl. ½ ft.

36 L. LANUGINÒSUS (Vent. malm. p. 22. in a note) stems prostrate, branched, and are as well as the leaves woolly; leaflets obcordate; stipulas ovate-roundish; peduncles axillary, elongated, drooping, 1-flowered. ⊙. H. Native of the Levant. Flowers rose-coloured. Bracteas ovate, hardly equal in length to the calyx; calycine segments lanceolate, hardly longer than the tube, but much shorter than the corolla.

Woolly Bird's-foot Trefoil. Pl. prostrate.

37 L. COIMBRICE'NSIS (Brot. fl. lus. 2. p. 118. phyt. p. 127. t. 53.) plant rather glabrous; leaves glaucescent; intermediate leaflet obovate, lateral ones lanceolate; stipulas ovate; peduncles very short, 1-flowered; calycine segments narrow, length of tube, but shorter than the corolla; the tops of the leaflets and stipulas ciliated and awned; legume cylindrical, very long, arched, glabrous; seeds very numerous, ovate, green. ⊙. H. Native of the south of Europe, particularly in Portugal, about Coimbra. L. aristàtus, D. C. hort. monsp. p. 122. Flowers small, white, with the keel purple.

Coimbra Bird's-foot Trefoil. Fl. May, June. Clt. 1800. Pl. 2 to 3 inches.

38 L. GLABE'RRIMUS (D. C. cat. hort. monsp. p. 122.) plant quite smooth, diffuse; leaflets obovate; stipulas ovate; flowers axillary, solitary, on very short pedicels; legumes linear, rather compressed, a little arched. ⊙. H. Native of? Flowers small, white, but with the carina purple.

Quite smooth Bird's-foot Trefoil. Fl. May, June. Clt. 1816. Pl. 2 to 3 inches.

39 L. TRICHOCA'RPUS (Lag. nov. gen. 23.) stems decumbent; leaflets cuneated, pilose; stipulas cordate, twice the length of the common petiole; bracteas length of calyx; legumes very long, nearly terete, falcate, tomentose. ⊙. H. Native country unknown. Flowers white, but the keel is dark purple at the apex. Perhaps a hairy-fruited variety of *L. Coimbricénsis*.

Hairy-fruited Bird's-foot Trefoil. Fl. May, July. Clt.? Pl. 2 to 3 inches.

40 L. ODORA'TUS (Sims, bot. mag. 1233.) plant hairy; stems diffuse; leaflets lanceolate; stipulas ovate; bracteas usually 1-leaved, lanceolate; peduncles long, usually bearing about 5 flowers at the apex; legumes straight, somewhat torulose. ⊙. H. Native of Barbary. Flowers yellow. Perhaps only a variety of *L. corniculàtus*.

Sweet-scented Bird's-foot Trefoil. Fl. June, Aug. Clt. 1804. Pl. diffuse.

41 L. CORNICULA'TUS (Lin. spec. 1092.) stems recumbent, pithy; leaflets obovate, acute, entire, glabrous, or a little hairy; stipulas ovate; leaflets of bractea lanceolate or linear; peduncles very long, each bearing 3-4-5 or 10 flowers at the apex, in a kind of flat umbel; calyx campanulate; the segments length of tube but much shorter than the corolla; legumes spreading, nearly cylindrical; seeds reniform, blackish-green; filaments all dilated; claw of the vexillum obovate. ♃. H. Native of Europe, in open grassy pastures, heaths, and commons; plentiful in Britain. Smith, engl. bot. 2090. Curt. fl. lond. 2. t. 56. Mart. rust. t. 53. Fl. dan. t. 991. Stems like the leaves glaucous; underside of the leaves clothed with close-pressed hairs; but sometimes they are quite smooth; when this is the case it is *L. arvénsis* of Schkuhr. handb. 2. t. 211. Flowers bright yellow, fading to an orange-colour, but becoming dark-green in drying. The vexillum is striped with red at the base in front. This plant has been recommended for cultivation under the erroneous names of *Milk-vetch* and *Astrágalus glycyphýllus* by the late Dr. Anderson, in his Agricultural Essays, as very excellent for fodder as well as for hay; it has been tried as a substitute for *clover* on moist lands, and seems to succeed very well, but to have no particular advantage over the *clover*.

Var. β, alpìnus (Schleich. cent. exsicc. no. 75.) stems and leaves small; flowers usually reddish on the outside. ♃. H. Native of the alps of Switzerland.

Horned or Common Bird's-foot Trefoil. Fl. June, Sept. Brit. Pl. recumbent.

42 L. MA'JOR (Scop. carn. 2. p. 86.) stem erect, tubular, more or less pilose, rarely smooth; leaflets obovate, fringed, or hairy; peduncles long, bearing from 6-12 flowers in an umbel; calycine teeth stellate; claw of vexillum linear; shorter filaments not dilated; legumes drooping, terete. ♃. H. Native of Europe, in wet bushy places, osierholts, and in hedges and ditches. Smith, engl. bot. 2091. Lòtus corniculàtus γ, Smith, fl. brit. 794. L. corniculàtus β, Hook. scot. 220. L. corniculàtus β, màjor, Ser. mss. in D. C. prod. 2. p. 514. L. uliginòsus, Schkuhr. handb. 2. t. 211. Flowers larger and of a duller orange-colour than those of *L. corniculàtus*. Whether there may be any difference in the agricultural qualities of these two plants, and whether the present might be capable of cultivation in wet meadows, no one has hitherto inquired.

Var. β, villòsus; stems and leaves villous; erect. L. villòsus, Thuill. fl. par. ed. 2. p. 387.

Greater Bird's-foot Trefoil. Fl. Jul. Aug. Brit. Pl. 1 to 3 ft.

43 L. CRASSIFÒLIUS (Pers. ench. 2. p. 354.) plant glaucous and pilose; stems recumbent; leaflets ovate, fleshy; root thick, fibrous. ♃. H. Native of the south of Europe, in sterile places by the sea-side. Flowers yellow. L. corniculàta δ, crassifòlius, Pers. l. c.

Thick-leaved Bird's-foot Trefoil. Fl. July, Sept. Clt. 1812. Pl. recumbent.

44 L. TE'NUIS (Kit. in Willd. enum. 797.) plant glabrous; stems decumbent, branched; leaflets and stipulas linear-lanceolate, glabrous; legumes usually 4 in an umbel, terete, awned. ♃. H. Native of Europe, in waste places, particularly in Hungary and France. L. depréssus and L. humifùsus, Willd. enum. suppl. p. 52. ex Link. enum. 2. p. 265. L. tenuifòlius, Poll. pal. 2. p. 711. L. corniculàtus ζ, tenuifòlius, D. C. prod. 2. p. 214. Flowers yellow.

Slender Bird's-foot Trefoil. Fl. Jul. Aug. Clt. 1816. Pl. pr.

45 L. FORSTE'RI (Sweet, hort. brit. p. 206.) stems recumbent, nearly solid, angular, smooth, and glaucous; leaves glaucous, smooth above, but occasionally clothed beneath with short, close-pressed, bristly hairs; leaflets and stipulas similar, lanceolate, pointed, oblique, except the terminal one, which is obovate-lanceolate; peduncles 4 or 5-times the length of the leaves, each bearing an umbel of 3-6-flowers, accompanied by a terminal leaf; calyx having its teeth shorter than the tube; legumes spreading, cylindrical, 2-edged. ♃. H. Native of Britain in fields and meadows; at Hastings, Sussex; near Bulverhithe; also in meadows near Tonbridge; in Scotland, in moors near Forfar, particularly in the Forest-moor, and at Balincho on the road to Kerrymuir. The plant is said also to be a native of Switzerland and the Levant, as well as on the sandy shores of Sicily. L. decúmbens, Forst. tonb. 86. Smith, eng. fl. 3. p. 314. but not of Poir. Flowers bright-yellow. This plant approaches nearest to *L. pedunculàtus* of Cav. icon. t. 164. but its stem is said to be erect; about 3 feet high, and every part of the plant is perfectly smooth.

Forster's Bird's-foot Trefoil. Fl. July. Brit. Pl. recumb.

46 L. PEDUNCULA'TUS (Cav. icon. 2. p. 52. t. 164.) plant smooth; stems erect; leaflets lanceolate, acute, terminal one stalked; stipulas ovate, somewhat cordate; peduncles very long, bearing each a capitate umbel of flowers; bracteas lanceolate, acute, longer than the calyx, which is rather campanulate; calycine segments nearly equal, acute, length of tube, but much shorter than the corolla. ♃.? H. Native of Spain. Flowers yellow.

Long-peduncled Bird's-foot Trefoil. Fl. July, Aug. Clt. 1814. Pl. 1 to 3 feet.

47 L. PALU'STRIS (Willd. spec. 3. p. 1394.) stems branched, erect, and are as well as the leaves hairy; leaflets obovate, acute; stipulas ovate, rather cordate, size of the leaflets; heads usually 4-flowered; legume terete, glabrous. ♃. H. Native of Candia. Flowers yellow. Habit of *L. corniculàtus.*

Marsh Bird's-foot Trefoil. Fl. July. Clt. 1821. Pl. 1 ft.

48 L. AMBI'GUUS (Besser. ex Spreng. syst. 3. p. 282.) plant herbaceous, decumbent; leaflets obovate-oblong, acute, and are pilose as well as the ovate stipulas; umbels of flowers on long peduncles, somewhat bracteate; legumes torulose, obtuse, awned, spreading. ⊙. H. Native of Volhynia. Flowers yellow.

Ambiguous Bird's-foot Trefoil. Pl. decumbent.

† *Species not sufficiently known.*

49 L. INTERME'DIUS (Pers. ench. 2. p. 354.) stems erect, villous, herbaceous; leaflets obovate-lanceolate, acuminated; heads roundish, containing 6-8-flowers, axillary, on long peduncles. ⊙. H. Native of? Flowers purplish.

Intermediate Bird's-foot Trefoil. Fl. June, July. Pl. ½ foot.

50 L. TRIFOLIA'STRUM (Desrous. in Lam. dict. 3. p. 612.) plant hairy; stems prostrate; leaflets ovate, obtuse; stipulas ovate, acute, small; flowers capitate; calyx bilabiate; upper lip 2-lobed; lobes acute; lower lip tridentate; bracteas setaceous; corolla length of calyx; legume turgid, villous. ♃. H. Native of the Levant. Perhaps a species of *Dorýcnium.*

Trefoil-like Bird's-foot Trefoil. Pl. prostrate.

51 L. CA'NDIDUS (Mill. dict. no. 7.) stems erect, branched, hairy; leaflets tomentose; heads of flowers nearly globose, hairy. ♃. H. Perhaps *Dorýcnium tomentòsum.* Flowers pale-red or white.

White Bird's-foot Trefoil. Fl. June, Aug. Pl. 2 to 3 feet.

Cult. The hardy species of *Lòtus* are well adapted for ornamenting rock-work or dry banks. The seeds of the annual kinds only require to be sown in the open border or on rock-work in spring. The greenhouse and frame kinds grow well in any light soil, and young cuttings of them will root if planted in a pot of sand, with a hand-glass placed over them; however, all the species are most easily increased by seeds.

LXXIV. TETRAGONO'LOBUS (from τετρας, *tetras*, four, γωνια, *gonia*, an angle, and λοβος, a pod; in reference to the legumes, which are furnished with 4 wings or angles). Scop. carn. 2 p. 87. Mœnch. meth. p. 164. D. C. prod. 2. p. 215. —Scandalìda, Neck. elem. no. 1306.

LIN. SYST. *Diadélphia, Decándria.* Calyx tubular, 5-cleft. Wings shorter than the vexillum. Carina beaked. Style flexuous. Stigma funnel-shaped, at length obliquely beaked. Legume cylindrical, furnished with 4 foliaceous wings, so as to give it a tetragonal appearance.—Herbs, with broad leafy stipulas, trifoliate leaves, winged petioles, alternate leaflets, axillary, 1-2-flowered peduncles, each furnished with a bractea or floral leaf at the apex.

1 T. PURPU'REUS (Mœnch. meth. p. 164.) plant pilose; stems rather decumbent; leaflets obovate, entire; stipulas ovate: flowers solitary or twin; bracteas longer than the calyx; legume glabrous, with broad wings; seeds globose. ⊙. H. Native of the south of Europe. Lòtus tetragonólobus, Lin. spec. 1089. D. C. fl. fr. 4. p. 553. Curt. bot. mag. 151.—J. Bauh. hist. 2. p. 258. f. 2. Flowers dark-purple.

Var. β, minor (Moricand, herb.) stem, leaves, and legumes much smaller.

Purple Winged-pea. Fl. June, Aug. Clt. 1769. Pl. 1 foot.

2 T. BIFLÒRUS (Ser. in D. C. prod. 2. p. 215.) plant pilose, rather decumbent; leaflets obovate, somewhat mucronulate, entire; stipulas orbicularly-oblong, acuminated; flowers twin or tern; bracteas ovate, shorter than the calyx; legumes pilose, with narrow wings; seeds almost globose. ⊙. H. Native of Barbary, and in fields about Palermo. Lòtus biflòrus, Desrous.

in Lam. dict. p. 604. Desf. fl. atl. p. 202. t. 210. L. conjugàtus, Poir. voy. barb. 220. but not of Lin. Flowers yellow. Seeds smaller than those of the preceding species.

Two-flowered Winged-pea. Fl. Ju. Aug. Clt. 1818. Pl. dec.

3 T. siliquòsus (Roth. fl. germ. 1. p. 323.) plant pilose; stems rather decumbent; leaflets obovate, entire; stipulas ovate, bluntish; flowers solitary, on long peduncles; bracteas obovate-linear, shorter than the calyx; legume smooth, with very narrow wings. ♃. H. Native of Europe, in humid meadows. Lòtus siliquòsus, Lin. spec. 1089. Lam. ill. t. 611. f. 2. Jacq. fl. aust. 4. t. 361. Flowers yellow.

Siliquose-podded Winged-pea. Fl. May, Aug. Clt. 1683. Pl. decumbent.

4 T. mari'timus (Roth. fl. germ. 1. p. 323.) plant glaucous, smoothish; stems decumbent; leaflets obovate, fleshy, sessile, the edge towards the top having a few scattered hairs, as well as the stem; stipulas ovate, acute, the same size as the leaflets; peduncles long, 1, seldom 2-flowered; bractea trifoliate, the middle leaflet longest, shorter than the calyx, which is hairy at the edge; legume smooth, with narrow wings. ♃. H. Native of Europe, by the sea-side, as Sweden, Denmark, the south of France, &c. Lòtus marítimus, Lin. spec. 1089. Oed. fl. dan. t. 800. Flowers yellow.

Sea-side Winged-pea. Fl. May, Oct. Clt. 1683. Pl. dec.

5 T. conjuga'tus (Ser. mss. D. C. prod. 2. p. 215.) plant pilose; stems rather decumbent; leaflets obovate, entire; stipulas ovate, small, acuminated; flowers in pairs; bracteas obovate, longer than the calyx; legume glabrous, nearly terete, with very narrow wings, which are hardly curled; seeds ovate, compressed, black. ⊙. H. Native about Montpelier. Lòtus conjugàtus, Lin. spec. 1089. Flowers purple.

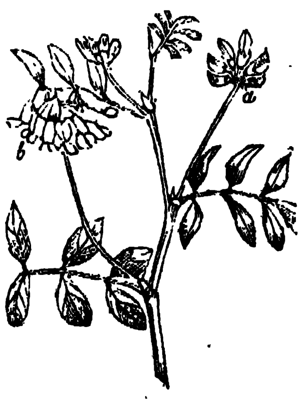
Twin-flowered Winged-pea. Fl. Jul. Aug. Clt. 1759. Pl. dec.

Cult. The perennial species of *Tetragonòbolus* are well adapted for ornamenting rock-work, and the annual kinds for flower-borders. The best way of propagating them is by seeds.

LXXV. HOSA'CKIA (in honour of David Hosack, M. D. F. R. S. Professor of Botany, in the university of New York, a gentleman to whom the scientific men of North America owe the same gratitude as those of England do to Sir Joseph Banks). Douglas, mss. Bentham, in bot. reg. 1257.

Lin. syst. *Diadélphia, Decándria.* Calyx campanulate, 5-cleft. Wings about equal in length to the vexillum. Keel beaked. Style filiform, crowned by a capitate stigma. Legume cylindrical or a little compressed, straight, smooth.– Herbs with impari-pinnate leaves, and with the leaflets usually alternate. Stipulas membranous, minute, or obsolete. Peduncles axillary, long. Flowers umbellate, usually yellow.

FIG. 32.



1 H. bícolor (Douglas, mss. ex. bot. reg. 1257.) plant glabrous; flowers umbellate, bractless; leaves with 7-9 leaflets. ♃. H. Native of North America, in overflowed meadows, between Fort Vancouver and the grand rapids of the Columbia river. Lòtus pinnàtus, Hook, bot. mag. 2913. Root creeping. Stems ascending. Flowers 6-10 in each umbel. Vexillum and carina yellow, but with the wings white.

Two-coloured-flowered Hosackia. Fl. July, Aug. Clt. 1823. Pl. ascending, 1½ long.

2 H. decu'mbens (Bentham, in bot. reg. no. 1257.) plant pubescent; flowers umbellate; bractea of 1 or 3 leaflets; leaves having 4 or 5 alternate leaflets. ♃. H. Native of North America. Stipulas very minute or wanting. Calycine segments linear, equal, villous. Form of petals like those of the preceding species. Filaments all antheriferous.

Decumbent Hosackia. Pl. decumbent.

3 H. Purshia'na (Bentham, l. c.) plant pubescent; peduncles 1-flowered, bearing a 1-leaved bractea just under the flower; calyx villous; leaves having 3-4 or 5 leaflets. ♃. H. Native of North America, on the banks of the Missouri. Lòtus sericeus, Pursh, fl. amer. sept. 2. p. 489. Trigonélla Americàna, Nutt. gen. 2. p. 120. Ser. in D. C. prod. 2. p. 185. Leaflets usually alternate. Stipulas very minute or wanting. Calycine segments about equal in length to the corolla. Flowers yellow.

Pursh's Hosackia. Fl. July, Aug. Clt. 1824. Pl. ½ foot.

4 H. parviflòra (Bentham, l. c.) plant quite smooth and glaucous; peduncles 1-flowered, furnished with a bractea under each flower, which is usually trifoliate; calyx almost glabrous; leaves having 4-6 leaflets. ♃. H. Native of North America. Root furnished with pea-formed tubercles. Leaflets alternate, obtuse. Stipulas very minute or wanting. Calyx almost glabrous, its segments short, and sparingly pilose. Corolla as in *H. Purshiàna*, but smaller.

Small-flowered Hosackia. Pl. decumbent.

5 H. angustifòlia; plant procumbent, silky; leaflets 5-7, obovate or linear-lanceolate, mucronate; flowers solitary or in pairs; calyx hairy, with awl-shaped teeth. ♃. F. Native of Mexico. Lòtus angustifòlius, Moc. et Sesse, in herb. Lamb. Resembles *Lòtus corniculàtus.* Flowers large, purple? Pod linear, compressed, nearly 2 inches long. Stigma large, capitate.

Narrow-leafletted Hosackia. Pl. procumbent.

6 H. re'pens; plant almost smooth; stems creeping, rooting; leaflets 5 pairs, obovate, slightly mucronulate; heads containing about 5 flowers; calyx strigately hairy, with lanceolate teeth. ♃. F. Native of Mexico. Lòtus rèpens, Moc. et Sesse, in herb. Lamb. Resembles *H. bicolor.* Flowers yellow. Pods linear, compressed. Stigma capitate.

Creeping Hosackia. Pl. creeping.

Cult. The species of *Hosáckia* are rather shewy, and well adapted for ornamenting flower-borders and rock-work. They will grow in any common garden soil, and are easily increased by seeds, or by dividing the plants at the root.

LXXVI. CARMICHÆ'LIA (in honour of the late Captain Dugald Carmichael, F.L.S. an acute Scotch botanist, author of a Flora of the island of Tristan da Acunha, inserted in the 12th volume of the Linnæan Society's Transactions). R. Br. in bot. reg. t. 950.

Lin. syst. *Diadélphia, Decándria.* Calyx cup-shaped, 5-toothed. Vexillum broad. Ovary many-seeded. Style simple. Legume few-seeded, with the valves separating from both margins, which are left on the plant even when the seeds have fallen.—A shrub, with flat branches and bluish flowers; the leaves when present ternate or pinnate.

1 C. austra'lis (R. Br. in bot. reg. 912.) ♄. G. Native of New Holland and New Zealand. Legumes quinate; leaves with 3-7 obcordate leaflets. Stem arboreous; branches compressed. Racemes simple, rising from the denticulations of the branches. Flowers lilac. Frame of legume permanent. Lòtus arbòreus, Forst. prod. 278. Lòtus austràlis, Hort. but not of Andrews.

Southern Carmichælia. Fl. May, Sep. Clt. 1823. Sh. 2 to 4 ft.

Cult. This shrub is a great ornament to greenhouses in spring and almost all the year, being profusely clothed with beautiful blue flowers. A mixture of loam, peat, and sand suits it best, and young cuttings will root if planted in a pot of sand, with a bell-glass placed over them.

LXXVII. CYAMO'PSIS (from *κυαμος, kyamos*, a bean, and οψις, *opsis*, resemblance; the plant resembles the bean). D. C. leg. mem. vi. prod. 2. p. 215.

Lin. syst. *Monadélphia, Decándria.* Calyx turbinately-tubular, 5-cleft; the lobes lanceolate-subulate and acute, the two superior ones rather remote. Petals about equal, at length separating elastically. Vexillum roundish. Wings oblong. Keel composed of 2 petals, straight and acute. Stamens 10, monadelphous. Ovary linear, terete. Style ascending. Stigma capitate. Legume compressed, 2-valved, oblong-linear, beaked, by the acuminated style, having 2 nerves near the superior suture, and furnished with cellular substance between the seeds. Seeds 7-8, obovate or truncate, compressed. Endopleura tumid, appearing like albumen. Cotyledons elliptic, flat, thickish, and foliaceous. Primordial leaves simple and ovate.—An erect herb, with subulate stipulas, pinnately trifoliate leaves, ovate, exstipellate, glaucous, denticulated leaflets, and axillary, short, racemes of small, erect, blue flowers. The hairs on the plant are fixed by their centre, as in *Indigófera.* The genus appears to be allied to *Dólichos* or *Canavàlia* on the one hand and to *Lupìnus, Psoràlea* or *Indigófera* on the other.

1 C. psoraleoìdes (D. C. prod. 2. p. 216.). ⊙. S. Native of the East Indies, from whence it has probably been sent into Arabia and the West India Islands. Psoràlea tetragonólobus, Lin. mant. 104. Dólichos fabæfórmis, Lher. stirp. t. 78. Dólichos psoraleoìdes, Lam. dict. 2. p. 300. Lupìnus trifoliàtus, Cav. icon, 1. t. 59.

Psoralea-like Cyamopsis. Fl. Jul. Aug. Clt. 1813. Pl. 1 ft.

Cult. This plant is not worth cultivating, except in botanical gardens. The seeds of it should be sown in a pot filled with loam and sand, and placed in a hot-bed, and when the plants have grown 2 or 3 inches high, they should be planted singly into separate pots, and replaced again in the hot-bed, where they will ripen their seed. Some of the plants may be planted out in the open border, in a sheltered situation.

Subtribe III. Clito'riæ (plants agreeing with *Clitòria* in some characters). D. C. leg. mem. vi. prod. 2. p. 216. Legume 1-celled (f. 34. *c.*). Stamens usually diadelphous (f. 34. *d.*). Stems herbaceous or suffrutescent, usually twining. Perhaps some of the genera should have been placed in Tribe *Phaseòleæ.*

LXXVIII. PSORA'LEA (from ψωραλεος, *psoraleos*, scurfy; in reference to the scurfy appearance of the calyx, and most parts of the plants, from tubercles). Lin. gen. no. 894. Lam. ill. t. 614. D. C. prod. 2. p. 216.—Dorycnium and Rutèria, Mœnch.

Lin. syst. *Diadélphia, Decándria.* Sepals 5, joined together to the middle into a 5-cleft, permanent calyx, with the tube usually beset with glands; the lobes acuminated, having the lower one a little more lengthened out than the others. Stamens 10, usually diadelphous, the tenth one is sometimes connected with the others at the base. Legume length of calyx, valveless, 1-seeded, sometimes ending in a beak.—Shrubs or herbs, usually warted from glandular tubercles. Leaves variable. Stipulas adnate to the base of the petiole. Disposition of flowers variable, blue, white, or purple.

* *Flowers axillary, especially sessile, or on simple pedicels in the axils of the leaves, but never disposed in a spike or head.*

1 P. odorati'ssima (Jacq. hort. schœnbr. 2. p. 229.) leaves impari-pinnate; leaflets usually 7-pairs, linear-lanceolate; pedicels axillary, 1-flowered, shorter than the leaves. ♄. G. Native of the Cape of Good Hope. Flowers blue and white. Lobes of calyx 3 acute and 2 obtuse, upper one reflexed at the apex, lower one straight. Bracteoles 2, rather distant from the calyx.

Sweet-scented Psoralea. Fl. May, Jul. Clt. 1725. Sh. 4 to 6 ft.

2 P. arbòrea (Sims, bot. mag. t. 2090.) leaves impari-pinnate; leaflets 5-pairs, linear-lanceolate; pedicels axillary, 1-flowered, longer than the leaves. ♄. G. Native of the Cape of Good Hope. Flowers bluish. Bracteoles 2, concrete, approximating the calyx, which is hairy. Stipulas callous, recurved.

Tree Psoralea. Fl. May. Clt. 1814. Shrub 6 to 8 feet.

3 P. pinna'ta (Lin. spec. 1074.) leaves impari-pinnate; leaflets 2-3-pairs, linear, and are as well as the branchlets rather puberulous; pedicels axillary, 1-flowered, much shorter than the leaves. ♄. G. Native of the Cape of Good Hope. Andr. bot. rep. 474. Rutèria pinnàta, Mœnch.—Herm. lugd. 273.—Burm. cap. 22. Flowers blue, striped.

Pinnate-leaved Psoralea. Fl. May, July. Clt. 1690. Sh. 3 to 6 feet.

4 P. lævigа'ta (Lin. fil. suppl. 339.) leaves impari-pinnate, with about 3 pairs of lanceolate leaflets, which are smooth as well as the branchlets; stipulas reduced to acute tubercles. ♄. G. Native of the Cape of Good Hope. Flowers purple, but not striped.

Smooth Psoralea. Shrub 2 to 3 feet.

5 P. verrucòsa (Willd. spec. 3. p. 1343.) leaves impari-pinnate, with 1 or 2 pairs of lanceolate, glabrous, glaucous leaflets; branches warted; pedicels 1-flowered, usually 3 together, axillary. ♄. G. Native of the Cape of Good Hope. P. angustifòlia, Jacq. hort. schœnbr. 2. p. 226. P. triflòra, Thunb.? Flowers blue and white. Peduncles sometimes 3-flowered.

Var. β, intermèdia (D. C. prod. 2. p. 216.) leaflets linear-lanceolate. ♄. G. P. intermèdia, Bess. cat. hort. crem. no. 111. Jacq. l. c. the right hand figure. P. axillàris, Poir. dict. 5. p. 687. ex herb. Desf. and perhaps of Linnæus.

Warted-stemmed Psoralea. Fl. May, Aug. Clt. 1774. Sh. 4 to 8 feet.

6 P. triflòra (Poir. dict. 5. p. 683.) leaves almost sessile, trifoliate; leaflets linear-spatulate, ending in a somewhat recurved mucrone; branches and calyxes pubescent; pedicels in threes, axillary, 1-flowered, and forming something like a spike at the tops of the branches. ♄. G. Native of the Cape of Good Hope. P. triflòra, Thunb. p. 135. Flowers blue.

Three-flowered Psoralea. Shrub 2 to 3 feet.

7 P. filifórmis (Poir. dict. 5. p. 682.) leaves trifoliate; leaflets filiform, upper ones simple, and are as well as the branches pubescent; pedicels axillary, 1-flowered, solitary. ♄. G. Native of the Cape of Good Hope. P. decídua, Berg. pl. cap. 220. Sieb. pl. exsic. cap. 37. Branches glandular, but pubescent at the apex. Very like *P. tenuifòlia.*

Filiform-leaved Psoralea. Shrub 2 to 4 feet.

8 P. axilla'ris (Lin. fil. suppl. 338.) leaves trifoliate; leaflets lanceolate; pedicels filiform, axillary, 1-flowered. ♄. G. Native of the Cape of Good Hope. P. lineàris, Thunb. prod. 135. This species is hardly known. The plant preserved in the Banksian herbarium under this name has the leaflets obovate, emarginate, and the flowers almost sessile. Lher. mss.

Axillary-flowered Psoralea. Fl. June, July. Clt. 1820. Shrub 2 to 3 feet.

9 P. tenuifòlia (Lin. spec. 1074.) upper leaves simple, the rest trifoliate; leaflets linear-lanceolate, mucronate; pedicels axillary, 1-flowered, solitary. ♄. G. Native of the Cape of Good Hope. Jacq. hort. schœnbr. 2. p. 225. Rutèria tenuifòlia, Mœnch. Very like *P. verrucòsa*, but the branches are smooth. Flowers blue and white, mixed.

Fine-leaved Psoralea. Fl. Mar. Jul. Clt. 1793. Sh. 3 to 4 ft.

10 P. fascicula'ris (D. C. prod. 2. p. 217.) leaves trifoliate, but some of them are simple; leaflets linear, very much acuminated; pedicels axillary, 1-flowered, 6 or 8 in a fascicle, a little longer than the flowers. ♄. G. Native of the

Cape of Good Hope. Lòtus tenuifòlius, Burm. cap. prod. 22. Flowers blue.

Fascicled-flowered Psoralea. Shrub 3 to 4 feet.

11 P. MULTICAU'LIS (Jacq. hort. schœnbr. 2. p. 55. t. 230.) leaves trifoliate, but the upper ones are simple; leaflets linear-lanceolate, mucronate; pedicels axillary, very short, aggregate, and somewhat capitate. ♃. G. Native of the Cape of Good Hope. Flowers with the vexillum white and the wings and keel violet.

Many-stemmed Psoralea. Fl. Aug. Oct. Clt. 1793. Pl. 1 to 2 ft.

12 P. APHY'LLA (Lin. mant. 450.) lower leaves trifoliate or simple; leaflets linear-lanceolate, upper ones abortive, scale-formed; pedicels axillary, short, solitary, 1-flowered. ♄. G. Native of the Cape of Good Hope. Jacq. hort. schœnbr. 223. Sims, bot. mag. 1727. Flowers blue, but with the keel and wings white. Breyn. cent. 25.

Leafless Psoralea. Fl. May, Aug Clt. 1790. Sh. 4 to 7 ft.

13 P. LATHYRIFÒLIA (Balb. st. hort. taur. descr. p. 25. with a figure) leaves simple, ovate, or oval-oblong, ciliated; stipulas joined in one, clasping the stem, bifid at the apex; stems decumbent, diffuse; flowers axillary, 1-2, almost sessile. ♃. G. Native of the Cape of Good Hope. Flowers blue.

Lathyrus-leaved Psoralea. Fl. Ju. Aug. Clt. 1816. Pl. dec.

14 P. DECU'MBENS (Ait. hort. kew. 3. p. 80.) leaves trifoliate; leaflets obovate-cuneated, somewhat obcordate, mucronate, longer than the petiole; branches as well as the calyxes rather villous; flowers axillary, 1-2, sessile. ♃. G. Native of the Cape of Good Hope. Burch. cat. no. 485. Lodd. bot. cab. 282. P. mucronàta, Thunb. prod. 135. P. ononoìdes, Poir. dict. 5. p. 688. Onònis virgàta, Burm. cap. 21. Onònis decúmbens, Sieb. pl. exsic. cap. no. 58. Branches weak and slender. Leaves covered with pellucid as well as black dots. Flowers blue.

Decumbent Psoralea. Fl. April, May. Clt. 1774. Pl. dec.

15 P. RE'PENS (Lin. mant. 263.) leaves trifoliate; leaflets obovate, obtuse, shorter than the petiole; pedicels 1-flowered, disposed in something like umbels in the axils of the leaves, each furnished with 2 bracteas in the middle. ♃. G. Native of the Cape of Good Hope. Calyx pubescent. Flowers blue. Stems trailing and rooting.

Creeping Psoralea. Fl. May, Aug. Clt. 1774. Pl. prost.

16 P. HÍRTA (Lin. amœn. 6. afr. 35.) leaves trifoliate; leaflets obovate, ending in a recurved point, dotted, and pubescent beneath; branches clothed with adpressed hoary villi; flowers axillary, sessile, numerous, upper ones disposed in a spicate manner. ♄. G. Native of the Cape of Good Hope. Poir. dict. 5. p. 688. Onònis strigòsa, Burm. cap. 21. but not of Thunb. Flowers blue.

Hairy Psoralea. Fl. May, Aug. Clt. 1713. Sh. 2 to 3 ft.

17 P. JACQUINIA'NA; leaves trifoliate, on short petioles; leaflets obovate, emarginate, hairy, as well as the rest of the plant; stipulas subulate; peduncles axillary and terminal, each bearing a bracteate head of flowers, those at the tops of the branches disposed in interrupted spikes. ♄. G. Native of the Cape of Good Hope. P. hírta, Jacq. hort. schœnbr. 2. t. 228. P. hírta, var. *β*, Jacquiniàna, D. C. prod. 2. p. 217. Flowers white, but with the vexillum pale violet.

Jacquin's Psoralea. Fl. May, Jul. Clt. 1713. Sh. 3 to 4 ft.

18 P. ACULEA'TA (Lin. spec. 1074.) leaves trifoliate; leaflets cuneiform, ending in a recurved mucrone, glabrous; stipulas prickle-formed; flowers axillary, solitary, sessile, approximate. ♄. G. Native of the Cape of Good Hope. Andr. bot. rep. 146. Sims, bot. mag. 2158. Flowers blue and white mixed.

Var. β, capitàta; flowers capitate. Thunb. prod. 136. Lam. ill. t. 614. f. 2.?

Prickly-stipuled Psoralea. Fl. Ju. Jul. Clt. 1774. Sh. 2 to 3 ft.

* * *Flowers nearly sessile, and approximate in the axils of the leaves, but capitate or spicate at the tops of the branches.*

19 P. BRACTEA'TA (Lin. mant. 264.) leaves trifoliate; leaflets cuneiform, ending in a recurved mucrone, full of pellucid dots, longer than the petiole; heads of flowers terminal, bracteate. ♄. G. Native of the Cape of Good Hope. Jacq. hort. schœnb. 2. t. 224. Curt. bot. mag. 446. P. cuneifòlia, Brot. Onònis trifoliàta, Lin. syst. nat. Trifòlium frúticans, Lin. spec. 1085. Stipulas membranous, rather fleshy. Flowers violaceous, but with the keel white. Comm. hort. 2. p. 211. t. 106.

Bracteate-headed Psoralea. Fl. June, July. Clt. 1731. Sh. 3 to 4 feet.

20 P. INVOLUCRA'TA (Thunb. fl. cap. 607.) leaves trifoliate; leaflets obovate, acute, stiff, glabrous; flowers umbellate, terminal, involucrated. ♄. G. Native of the Cape of Good Hope. Peduncles hairy. Umbels usually 5-flowered. Calyxes striated. Corolla bluish.

Involucrated Psoralea. Fl. Ju. Jul. Clt. 1818. Sh. 2 to 3 ft.

21 P. SPICA'TA (Lin. mant. 264.) leaves trifoliate; leaflets obovate-oblong, terminating in a recurved mucrone, beset with black dots beneath; spikes of flowers terminal, oblong. ♄. G. Native of the Cape of Good Hope. Willd. spec. 3. p. 1345. Andr. bot. rep. 411. Flowers blue, mixed with white? This species comes very near *P. bracteàta*, but the leaves are without the pellucid dots which are so conspicuous in that plant.

Spicate-flowered Psoralea. Fl. June, July. Clt. 1774. Sh. 2 to 4 feet.

22 P. STA'CHYDIS (Lin. fil. suppl.) leaves trifoliate; leaflets oblong, mucronate, villous on both surfaces as well as the stems and calyxes; spike of flowers terminal, interrupted. ♄. G. Native of the Cape of Good Hope. P. stàchyos, Thunb. fl. cap. 608. Leaves dotted above. Petioles 4-times shorter than the leaflets. Deflorated spike not unlike a head of lavender. Corolla ferruginous.

Lavender-*spiked* Psoralea. Fl. April, May. Clt. 1793. Shrub 2 to 4 feet.

23 P. STRIA'TA (Thunb. l. c.) leaves trifoliate; leaflets oblong, mucronate, pubescent beneath; racemes terminal, interrupted. ♄. G. Native of the Cape of Good Hope. Flowers blue.

Striated Psoralea. Fl. May, Ju. Clt. 1816. Sh. 2 to 3 ft.

24 P. RACEMO'SA (Thunb. l. c.) leaves trifoliate; leaflets oblong, mucronate; racemes terminal, elongated. ♄. G. Native of the Cape of Good Hope. Flowers blue.

Racemose-flowered Psoralea. Shrub 2 to 4 feet.

25 P. ARGE'NTEA (Thunb. l. c.) leaves trifoliate; leaflets ovate, cut, mucronate, silvery; racemes of flowers interrupted. ♄. G. Native of the Cape of Good Hope. Flowers blue.

Silvery Psoralea. Fl. May, July. Clt. 1816. Sh. 2 to 4 ft.

26 P. TOMENTÒSA (Thunb. fl. cap. 606. but not of Cav.) leaves trifoliate; leaflets oblong, tomentose beneath; heads of flowers terminal. ♄. G. Native of the Cape of Good Hope. Flowers blue.

Tomentose Psoralea. Fl. May, July. Clt. 1820. Sh. 2 to 4 ft.

27 P. ASTRAGALIFO'LIA (Poir. dict. suppl. 4. p. 587.) leaves trifoliate, glabrous; lower leaflets elliptic-ovate, smaller, superior ones narrow, lanceolate, and longer; spike of flowers terminal, somewhat capitate. ♃. ? G. Native of the Cape of Good Hope. Perhaps the same as *P. capitàta*.

Milk-vetch-leaved Psoralea. Shrub 1 to 2 feet.

28 P. CAPITA'TA (Lin. fil. suppl. 339. Thunb. l. c.) leaves trifoliate and simple, linear or elliptic-linear; heads of flowers spicate, terminal. ♄. G. Native of the Cape of Good Hope. Vexillum scattered over with dots, similar to those on the leaves. Flowers purple.

Capitate-flowered Psoralea. Fl. June, Aug. Clt. 1815. Shrub 2 to 3 feet.

29 P. ROTUNDIFO′LIA (Lin. fil. suppl. 338. Thunb. l. c.) leaves simple, ovate, entire, glabrous; heads of flowers terminal, and are, as well as the bracteas, villous. ♄. G. Native of the Cape of Good Hope. This species belongs probably to the following division.

Round-leaved Psoralea. Shrub.

* * * *Peduncles axillary, bearing capitate spikes of flowers at their tops.*

30 P. CORYLIFO′LIA (Lin. spec. 1075.) leaves simple, ovate, cordate, a little toothed; heads of flowers axillary, ovate, on long peduncles. ⊙. G. Native of the East Indies and Arabia. Curt. bot. mag. 665. Trifòlium unifòlium, Forsk. descr. 140. Flowers violaceous or pale flesh-coloured.

Hazel-leaved Psoralea. Fl. Ju. July. Clt. 1739. Pl. 2 feet.

31 P. VIRGA′TA (Nutt. gen. amer. 2. p. 104.) leaves simple, very remote, almost glabrous, linear-lanceolate, radical ones oblong-ovate; spikes of flowers ovate-oblong, on peduncles, which are shorter than the leaves; bracteas long, subulate, deciduous. ♃. H. Native of the west of Florida, between St. Mary's and Satilla river. Stem striated, twiggy, a little pubescent, as well as the leaves. Flowers blue; the vexillum finely striated.

Twiggy Psoralea. Pl. 2 feet.

32 P. ACAU′LIS (Stev. in Bieb. fl. taur. 2. p. 206.) radical leaves trifoliate, on long petioles; leaflets ovate, obtuse, sharply toothed, the middle leaflet sessile; peduncles radical, very long. ♃. H. Native of Western Iberia. Spike of flowers oval-oblong. Flowers purplish. Petioles pubescent. Leaves hairy, as well as the peduncles. Calyx beset with black hairs.

Stemless Psoralea. Pl. 1 foot.

33 P. ARENA′RIA (Nutt. gen. amer. 2. p. 103.) leaves trifoliate, rather pubescent; leaflets linear-lanceolate, obtuse, mucronulate; peduncles axillary, longer than the leaves; spikes of flowers capitate; bracteas deciduous; teeth of calyx obtuse, nearly equal in length, glandular. ♃. F. Native of North America, on the banks of the river Missouri. Psoràlea lanceolàta and P. ellíptica, Pursh, fl. sept. amer. 2. p. 475 and 741. Root creeping. Stems dichotomous, erect. Flowers purplish-blue. The leaves are aromatic when bruised.

Sand Psoralea. Fl. July, Aug. Clt. 1823. Pl. 1 foot.

34 P. SIBI′RICA (Poir. suppl. 4. p. 587.) leaves pinnately-trifoliate; leaflets elliptic, obtuse, glabrous, whitish beneath, somewhat emarginate and mucronulate at the apex; racemes very short, axillary, glandless; segments of the calyx linear, elongated, acuminated, and rather villous. ♃. F. Native of Siberia. Flowers pale-blue.

Siberian Psoralea. Pl. 1 to 2 feet.

35 P. PALÆSTI′NA (Gouan. ill. 51.) leaves pinnately-trifoliate; lower leaflets ovate, superior ones lanceolate; petioles pubescent, sulcated; peduncles axillary, 2-3-times longer than the leaves; spikes of flowers capitate; calyxes pubescent, at length a little inflated. ♃. F. Native of Palestine, south of Tauria, and about Constantinople, and now in the south of France. Jacq. hort. vind. 2. t. 184. D. C. fl. fr. suppl. p. 554. P. bituminòsa, Pall. ined. Flowers blue. Very like the following species, but the plant is nearly scentless.

Palestine Psoralea. Fl. July, Aug. Clt. 1771. Pl. 2 feet.

36 P. BITUMINÒSA (Lin. spec. 1075.) leaves pinnately-trifoliate; leaflets ovate-lanceolate; petioles pubescent; peduncles axillary, 3-4-times longer than the leaves; spikes of flowers capitate; calyxes pubescent. ♄. F. Native of the south of Europe, in exposed places. Lam. ill. 614. f. 1. There is a variety with narrower leaflets. Besl. eyst. æst. t. 11. f. 2. Dorýcnium angustifòlium, Mœnch. Perhaps this last variety is sufficiently distinct from P. frutéscens of Poir. dict. 5. p. 684. There is a plant described in Berg. cap. 221. which differs from this in the spikes of flowers being terminal. Flowers with the vexillum and keel purple, and the wings almost white, smelling like black currants. The leaves when handled emit a strong scent of bitumen.

Bitumen-scented Psoralea. Fl. April, Sept. Clt. 1570. Shrub 2 to 3 feet.

37 P. SERI′CEA (Poir. dict. 5. p. 687.) leaves pinnately-trifoliate; leaflets ovate-lanceolate, silky beneath; peduncles axillary, 2 or 3 times longer than the leaves; heads of flowers depressed, involucrated; leaflets of the involucrum about equal in length to the calyx. ♄. G. Native of the Cape of Good Hope. P. pedunculàta, Ker, bot. reg. t. 223. Stipulas narrow, acuminated. Corolla bluish-violet.

Silky Psoralea. Fl. Aug. Oct. Clt. 1815. Sh. 2 to 3 feet.

38 P. MUTI′SII (H. B. et Kunth, nov. gen. amer. 6. p. 487. pl. legum. 191. t. 54.) leaves trifoliate; leaflets lanceolate-oblong, quite entire, glabrous, having the middle nerve, petioles, and branches pilose; spikes axillary, pedunculate, oblong-cylindrical, dense-flowered; calyx clothed with adpressed pili. ♄. ? S. Native of South America, near Santa Fe de Bogota, and about Quito. Indigófera Mexicàna, Lin. fil. suppl. 335. Flowers white.

Mutis's Psoralea. Shrub 2 to 3 feet.

* * * * *Peduncles axillary, bearing the flowers in loose spikes or racemes at their tops. Poikadeniæ, Ell.*

39 P. PENTAPHY′LLA (Lin. spec. 1076.) leaves with 5 leaflets, palmately disposed; leaflets unequal, oval, acute at both ends, pubescent, and glandular, and with the margins ciliated; stem and petioles villous. ♄. ? ♃. ? G. Native of Mexico. B. Juss. act. par. 1744. p. 381. t. 17. The roots are thick, and are supposed to be the *contrayerva* of the shops.

Five-leaved Psoralea. Shrub.

40 P. ESCULE′NTA (Pursh. fl. sept. amer. 2. p. 475. t. 22.) plant hairy; leaves with 5 leaflets, which are disposed palmately; leaflets ovate-elliptic, glabrous above; spikes of flowers somewhat capitate, pedunculate, axillary; bracteas ovate, acuminated, each enclosing 3 flowers; corolla hardly longer than the calyx. ♃. F. Native of North America, on the elevated plains of the river Missouri. Flowers blue. Root simple, somewhat fusiform, bulbous above the middle; it is rather insipid in taste, but not disagreeable either raw or boiled, the latter is the common mode of preparation among the savages; its texture is lamellated, always tenacious, solid, and never farinaceous; it is also somewhat medicinal, and operates as a diuretic. It is known to the Canadian boatmen by the name of *Pomme de prairie.*

Esculent-rooted Psoralea. Fl. Ju. Jul. Clt. 1811. Pl. 1 ft.

41 P. CUSPIDA′TA (Pursh. fl. sept. amer. 2. p. 741.) plant villous; leaves with 5 leaflets, which are disposed in a palmate manner; leaflets obovate, mucronate; spikes axillary, dense-flowered; calycine segments as well as the bracteas ovate, cuspidate, conspicuously dotted. ♃. F. Native of Upper Louisiana, on the high plains of the river Missouri. P. macrorhìza, Fras. cat. 1813. Root large, tuberous, branched. Flowers blue.

Cuspida e-bractead Psoralea. Fl. Jul. Aug. Clt. 1811. Pl. 1 ft.

42 P. INCA′NA (Nutt. in Fras. cat. 1813. gen. amer. 2. p. 102.) plant silky and canescent; leaves having 3 or 5 leaflets, disposed in a palmate manner; leaflets elliptic-lanceolate; spikes few-flowered, interrupted; bracteas acuminated, 3-flowered. ♃. F. Native of North America, on the plains of the Missouri. P. argophýlla, Pursh. fl. sept. amer. 2. p. 475. Root flagellately-fusiform. Flowers small, azure-blue. Like *P. esculénta*, but differs in being clothed with soft, white, and silky villi, but not tomentum.

Hoary Psoralea. Fl. July, Aug. Clt. 1824. Pl. 1 foot.

43 P. LUPINÉLLA (Michx. fl. bor. amer. 2. p. 58.) plant smooth; leaves on long petioles, having 5 or 7 leaflets, which are disposed palmately; leaflets narrow, linear; racemes axillary, longer than the leaves; bracteas 1-flowered; lower segment of the calyx longer than the rest. ♃. F. Native of North America, from South Carolina to Florida. Nutt. gen. amer. 2. p. 103. Calyx and leaves glandular. All the lower leaves have 7 leaflets, and all the upper ones 5. Flowers purplish, not remarkably small. A very singular plant, the leaflets are so narrow as scarcely to be distinguished from the petiole, 2 or 3 inches long.

Small-lupine Psoralea. Fl. July, Aug. Clt. 1812. Pl. 1 ft.

44 P. MULTÍJUGA (Ell. sketch. 2. p. 198.) stem branched, smoothish; leaves pinnate, with 9 or 10 pairs of leaflets; leaflets oblong-lanceolate, obtuse, pubescent; spikes oblong; bracteas small, membranous, glandless. ♃. F. Native of Carolina, about Abbeville. Corolla violaceous. Ovary perhaps 1 ovulate.

Many-paired-leafletted Psoralea. Pl. 1 to 2 feet.

45 P. TENUIFLÒRA (Pursh, fl. sept. amer. 2. p. 475.) plant nearly smooth, much branched; leaves trifoliate; leaflets elliptic, obtuse, rugged from dots on both surfaces, pubescent beneath; peduncles axillary, few-flowered, longer than the leaves; calycine segments nearly equal. ♃. F. Native of North America, on the plains of the Missouri, near the Arikaree village. Habit and mode of vegetation similar to *Baptísia tinctòria*. Bracteas 3-flowered, shorter than the pedicels. Root flagellately fusiform. Racemes slender, 2 or 3 inches long, interrupted, 9-12-flowered. Flowers very small, pale-purple.

Fine-flowered Psoralea. Fl. July, Aug. Pl. 2 feet.

46 P. LONGIFÒLIA (Pursh, fl. sept. amer. 2. p. 741.) plant clothed with silky villi; leaves trifoliate; leaflets linear, elongated; spikes pedunculated, loose-flowered, shorter than the leaves; teeth of calyx as well as bracteas subulate. ♃. F. Native of Upper Louisiana. Leaves glandless. Flowers apparently white.

Long-leaved Psoralea. Pl. 1 to 2 feet.

47 P. JAMÈSII (Torrey, in. ann. lyc. new york. vol. 2. p. 165.) leaves trifoliate; leaflets obovate, very obtuse, cuneated at the base, quite entire, silky on both surfaces; petioles pubescent; spikes of flowers capitate; bracteas oblong, acuminated; calyx very hairy; the teeth subulate, and nearly equal. ♃. F. Native of Canada, in the plains. Flowers blue. Stamens constantly monadelphous.

James's Psoralea. Pl. ½ foot.

48 P. LATIFÒLIA (Torrey, l. c.) leaves trifoliate; leaflets broad-ovate, acuminated, smooth, but ciliated on the margins, terminal leaflet on a long petiole; spikes loose-flowered, elongated, axillary; bracteas deciduous; calyx glabrous, with acutish teeth. ♃. F. Native of the plains of Missouri, near St. Louis.

Broad-leaved Psoralea. Pl. 2 to 3 feet.

49 P. EGLANDULÒSA (Ell. sketch. 2. p. 198.) plant pubescent and glandless; leaves pinnately trifoliate; leaflets oblong-lanceolate, entire; racemes of flowers oblong; bracteas broad-lanceolate, ending each in a long acumen, and are pubescent as well as the calyx. ♃. ? F. Native of Carolina and Florida, and common in the open forests of Ohio, Kentucky, and Tenessee. Melilòtus psoraleoìdes, Nutt. gen. amer. 2. p. 104. ex Ell. Stem minutely strigose, grooved; spike or raceme of flowers 3-4 inches long, on a peduncle, which is from 4 to 6 inches long. Flowers pale-violet, pedicellate. Legume gibbous and transversely wrinkled. The plant appears to be a connecting link between *Psoràlea* and *Melilòtus*.

Glandless Psoralea. Fl. July. Pl. 1 to 1½ foot.

50 P. MELILOTOÌDES (Michx. fl. bor. amer. 2. p. 58.) plant pubescent; leaves pinnately trifoliate; leaflets lanceolate, glandular beneath; peduncles racemose, length of leaves; racemes or spikes linear; bracteas acuminated, longer than the calyx. ♃. F. Native of Carolina, Florida, Ohio, Kentucky, and Tenessee in open forests. Sims, bot. mag. 2063. Ker. bot. reg. 454. Bart. fl. t. 51. f. 1. P. melilòtus, Pers. Flowers pale-purple. Legume length of calyx, gibbous, wrinkled, terminated by the style.

Melilot-like Psoralea. Fl. Aug. Clt. 1814. Pl. 1 to 2 ft.

51 P. ONOBRÝCHIS (Nutt. gen. amer. 2. p. 104.) plant nearly glabrous; leaves pinnately trifoliate; leaflets ovate-lanceolate, rather pubescent; racemes axillary, on long peduncles; flowers secund; legume obovate, muricated, glabrous. ♃. F. Native of North America, on the banks of the river Merimek, a few miles from St. Louis. Ker. bot. reg. 433. Root flagellate. Stems brownish. Flowers small, purplish. Perhaps *P. hedysaroìdes*, Muhl. Perhaps a trifoliate species of *Onobrychis*.

Saintfoin-like Psoralea. Fl. Aug. Clt. 1818. Pl. 3 to 5 ft.

52 P. GLANDULÒSA (Lin. spec. 1075.) plant glabrous; leaves pinnately trifoliate; leaflets ovate-lanceolate, acuminated; petioles scabrous from glands; racemes axillary, pedunculate, longer than the leaves. ♃. G. Native of Chili, where it is called *Culen*. Sims, bot. mag. 990. Feuill. per. 7. t. 3. Ard. spec. 1. p. 24. t. 11. P. lùtea, Mol. chil. 135. P. Cùlen, Poir. dict. 5. p. 685. Flowers bluish-purple, the wings and keel white. The plant has the smell of *rue*, and is considered vulnerary and purgative; the leaves are applied in the forming of a cataplasm to heal wounds, and an infusion of the roots is purgative.

Glandular Psoralea. Fl. May, Aug. Clt. 1770. Sh. 2 to 4 ft.

53 P. PUBÉSCENS (Balb. in Pers. ench. 2. p. 347.) leaves pinnately trifoliate; leaflets ovate-oblong, pubescent, dotted on both surfaces; branches, petioles, and peduncles hairy; bracteas and calyxes villous and glandular; spike interrupted, rather shorter than the leaves. ♄. G. Native of Peru. P. pubéscens, Willd. enum. 788. Lindl. bot. reg. 968. Poir. dict. 5. p. 686. P. frutéscens, Poir. dict. Flowers bright blue.

Pubescent Psoralea. Fl. Aug. Clt. 1825. Sh. 2 to 3 feet.

54 P. MACROSTÀCHYA (D. C. prod. 2. p. 220.) leaves pinnately trifoliate, pubescent; leaflets ovate, mucronate; petioles scabrous from glands; peduncles axillary, 4-times longer than the leaves; spikes cylindrical, and are as well as the rachis, bracteas, and calyxes very hairy. ♃. F. Native of Nootka Sound, on the north-west coast of America. Bracteas acuminated, length of calyx. Spike a little branched.

Long-spiked Psoralea. Pl. 2 feet.

55 P. CANÉSCENS (Michx. bor. amer. 2. p. 57.) leaves trifoliate, on very short petioles, pubescent; leaflets ovate, on longish petioles; peduncles axillary, 2 or 3-times the length of the leaves; spikes or racemes interrupted; calyx rather gibbous, villous; bracteas ovate, mucronate. ♃. F. Native of Carolina and Georgia. Root rather fusiform, bulbous at the neck. Leaves and calyxes full of pellucid dots. Flowers blue.

Canescent Psoralea. Fl. Jul. Aug. Clt. 1821. Pl. 1 to 2 ft.

56 P. DIVARICÀTA (H. B. in Willd. enum. 788.) leaves trifoliate, glabrous; leaflets lanceolate; spikes interrupted, pedunculate, axillary, longer than the leaves; stem branched, divaricate. ♄. S. Native of Peru, near Guancabamba. Allied to *P. pubéscens*. Calyx tomentose, according to Link. in enum. 2. p. 258. Stipulas ovate, adnate to the base of the petiole. Stamens monadelphous, ex Bonpland, mss. in Kunth, nov. gen. amer. 6. p. 486. Flowers yellow.

Divaricate Psoralea. Fl. Jul. Aug. Clt. 1820. Sh. 2 to 3 ft.

57 P. DENTÀTA (D. C. prod. 2. p. 221.) leaves pinnately trifoliate, glandular, and almost glabrous; leaflets ovate, repandly-toothed, cuneated at the base, and entire; racemes spicate, interrupted, pedunculated, longer than the leaves; bracteas subulate, hardly exceeding the pedicels. ♄. G. Native

of Madeira, not of America. P. Americàna, Lin. spec. 1075. Jacq. hort. schoenb. 227.—Lob. icon. 2. t. [illegible]. Flowers white, but the keel is dark purple at the apex. Calyx glandular and smoothish.

Var. β, *villòsa*; calyx glandular and villous. P. polystàchya, Poir. suppl. 4. p. 587. if the synonyms be rightly attached. Native of Mauritania, near Alcassar.

Toothed-leaved Psoralea. Fl. Jul. Aug. Clt. 1640. Sh. 1 ft.

58 P. plica'ta (Delil. fl. ægypt. p. 109. t. 37. f. 3.) branches warted from glands; leaves pinnately trifoliate; leaflets oblong-lanceolate, plicate, repand-toothed; spikes axillary, longer than the leaves; rachis permanent after the flowers have fallen, and becoming hard and spinose. ♄. G. Native of Upper Egypt, at the foot of the mountains between Qournah and Medynet-abou.

Plaited-leafletted Psoralea. Shrub 1 to 2 feet.

59 P. obtusifòlia (D. C. prod. 2. p. 221.) branches and leaves clothed with adpressed canescent pubescence; leaves trifoliate; leaflets obovate, plicate, denticulated, the middle one petiolulate. ♄. G. Native of the Cape of Good Hope. Burch. cat. 1214. This plant is very much like the preceding species.

Obtuse-leaved Psoralea. Shrub.

† *Species not sufficiently known.*

60 P.? rube'scens (Lour. coch. p. 444.) arboreous; leaves pinnate; leaflets oblong-ovate; peduncles lateral, many-flowered; calyx rather truncate, biglandular at the base. ♄. G. Native of Cochin-china, in woods. Flowers reddish-white.

Reddish-flowered Psoralea. Tree 10 feet.

61 P.? scutella'ta (Lour. coch. p. 443.) arboreous; leaves impari-pinnate; leaflets ovate, acuminated, glabrous; spikes crowded, nearly terminal; calyx scutate, glandular. ♄. G. Native of Cochin-china in woods. Flowers violaceous. Legume 1-2-seeded.

Saucer-calyxed Psoralea. Tree 20 feet.

62 P.? hu'milis (Mill. dict. no. 7.) leaves impari-pinnate, with 3 or 4 pairs of roundish, villous leaflets; heads of flowers axillary and terminal. ♄. S. Native of Vera Cruz. Flowers yellow, mixed with red.

Humble Psoralea. Shrub 5 to 6 feet.

63 P.? sca'ndens (Mill. dict. no. 4.) leaves pinnate, with 3 pairs of oval obtuse leaflets; racemes sessile, axillary; stem branched, climbing. ♄. ◡. S. Native of Campeachy. Flowers blue. Perhaps a species of *Gàlega*.

Climbing Psoralea. Shrub cl.

64 P.? prostra'ta (Lin. amœn. 6. p. 93.) leaves glabrous, supra-decompound, digitate; lobes and lobules linear, middle one trifid; racemes axillary, pedunculate, roundish; stem decumbent. ♄. G. Native of the Cape of Good Hope. Flowers yellow. The plant has the habit of a species of *Hermánnia*. The stipulas are ovate and the stamens diadelphous. The legume is unknown, therefore the genus is doubtful.

Prostrate Psoralea. Shrub prostrate.

Cult. All the species of this genus are rather elegant when in bloom. The stove and greenhouse kinds grow best in a mixture of loam and peat, and young cuttings root freely, if planted in a pot of sand, with a bell-glass placed over them; those of the stove species in heat. The frame kinds, or those natives of North America, grow best in peat and sand, and are increased by seeds, or cuttings will strike root.

LXXIX. INDIGO'FERA

(*indigo*, a blue dye, stuff, which is a corruption of *Indicum*, Indian, and *fero*, to bear; the greater part of this species of the genus produce indigo). Lin. gen. 889. Lam. ill. 626. D. C. leg. mem. vi. prod. 2. p. 221.

Lin. syst. *Diadélphia, Decándria.* Calyx 5-cleft; lobes acute. Vexillum roundish, emarginate (f. 33. *a.*). Keel furnished with a subulate spur on both sides, at length usually bending back elastically. Stamens diadelphous. Style filiform, glabrous. Legume nearly terete (f. 34. c.), or flat or tetragonal, 2-valved, many-seeded, rarely few-seeded or ovate, 1-seeded at the base or subglobose. Seeds ovate, truncate at both ends, and usually separated from each other by cellular substance. Herbs or subshrubs. Stipulas small, distinct from the petiole. Peduncles axillary. Flowers disposed in racemes, purple, blue, or white. Leaves impari-pinnate, digitate, or simple. Leaflets usually stipellate at the base. The hairs on the plants usually adpressed and fixed by their centre.

§ 1. *Simplicifòlia* (from *simplex*, simple, and *folium*, a leaf; in reference to the leaves of all the species contained in this division being simple). *Leaves simple, sessile, or standing on a very short petiole.*

1 I. linifòlia (Retz, obs. 4. p. 29. and 6. p. 33. t. 2.) leaves obovate, obtuse, mucronate, hoary; racemes axillary; flowers hardly pedicellate; legume ovate, globose, 1-seeded. ⊙. S. Native of the East Indies. Roxb. cor. 2. t. 195. Hedýsarum linifòlium, Lin. fil. suppl. 331. I. polygonoìdes, Wendl. Sphæridiòphorum, Desv. journ. 3. p. 125. t. 6. f. 35. Flowers red.

Flax-leaved Indigo. Fl. July, Aug. Clt. 1792. Pl. proc.

2 I. tetraspe'rma (Vahl. ined. in herb. Juss. ex Pers. ench. no. 6.) leaves simple, linear, acuminated, hoary; flowers axillary, usually solitary; legume nearly terete, 4-seeded. ⊙. S. Native of Guinea. J. scopària, Vahl. ined. ex herb. Puer. Stem erect, branched, herbaceous. Flowers red.

Four-seeded Indigo. Pl. 1 foot.

3 I. panicula'ta (Pers. ench. 2. p. 7.) leaves oblong-linear, nearly naked; peduncles shorter than the leaves, the alternate ones terminal and panicled, elongated; legume terete, deflexed, 4-seeded, glabrous. ♄. S. Native of Guinea. Stem much branched; branches twiggy. Flowers red.

Panicled Indigo. Shrub 1 to 2 feet.

4 I. simplicifòlia (Lam. dict. 3. p. 251.) leaves oblong-linear, almost naked; peduncles shorter than the leaves, each bearing 3 or 4 remote flowers; legume terete, tetragonal, mucronate, erect, 12-16-seeded, glabrous. ♄. S. Native of Sierra Leone. Stem erect, much branched; branches twiggy. Leaves an inch long.

Simple-leaved Indigo. Shrub 1 to 2 feet.

5 I. filifòlia (Thunb. prod. 132. fl. cap. 595. but not of Ker.) leaves and branches filiform; the strigæ on the leaves, branches, and calyxes are few and adpressed; racemes pedunculate, few-flowered; legume deflexed, filiform. ♄. G. Native of the Cape of Good Hope. Flowers red or purple.

Thread-leaved Indigo. Fl. July, Oct. Clt. 1812. Sh. 1 ft.

6 I. oblongifòlia (Forsk. descr. 137. Vahl. symb. 1. p. 55.) leaves simple, oblong, silky; racemes axillary, 3-times longer than the leaves; calyx and vexillum villous. ♄. G. Native of Arabia Felix at Lohajam. A decoction of the herb is used in Egypt against the colic.

Oblong-leaved Indigo. Shrub.

7 I.? depre'ssa (Thunb. prod. 132. fl. cap. 596.) leaves ovate, silky; branches stiff, pubescent; spikes terminal, leafy, silky. ♄. G. Native of the Cape of Good Hope. Willd. spec. 3. p. 1222. Flowers red.

Depressed Indigo. Shrub prostrate.

8 I. ova'ta (Thunb. prod. 132. fl. cap. 596.) leaves simple, ovate, villous; stem erect, glabrous; racemes terminal, ovate. ♄. G. Native of the Cape of Good Hope. Flowers red.

Ovate-leaved Indigo. Shrub.

9 I. Mysore'nsis (Rottl. in herb. Balb.) leaves elliptic, mucronate, beset with adpressed strigæ on both surfaces; stems, branches, and legumes clothed with simple villi; flowers axillary, solitary, almost sessile, disposed in a leafy raceme; legume

nearly terete, hardly 3-times longer than the calyx. ♄. ? S. Native of the East Indies.

Mysore Indigo. Shrub.

10 I. ECHINA'TA (Willd. spec. 3. p. 1222.) leaves obovate, glabrous; stem prostrate, compressed at the apex; racemes axillary, about equal in length to the leaves; legumes falcate, echinated. ⊙. S. Native of Tranquebar. I. prostràta, Roxb. but not of Willd. Flowers purple.

Echinated-legumed Indigo. Pl. prostrate.

11 I. CORDIFÒLIA (Roth, nov. spec. 357.) hoary and pilose; leaves simple, cordate, roundish, mucronate, almost sessile; flowers axillary, sessile. ⊙. S. Native of the East Indies. Flowers small, purple.

Cordate-leaved Indigo. Pl. prostrate.

§ 2. *Oligophýlla* (from ολιγος, *oligos*, few, and φυλλον, *phyllon*, a leaf; in reference to the species contained in this section having the leaves composed of very few leaflets). *D. C. prod. 2. p. 222. Petiole elongated. Leaflets* 1 *or* 3, *terminal one stalked, the rest lateral, usually only one pair.*

12 I. MONOPHY'LLA (D. C. prod. 2. p. 222.) leaves and branches hoary from adpressed down; petiole furnished with 2 little stipulas at the base; leaflet one, obovate, mucronate, feather-nerved; racemes much longer than the leaves; corolla clothed with rufous villi; legume spreading, straight, somewhat compressed, clothed with rufescent down. ♄. G. Native of New Holland, on the eastern coast. A very distinct species: the leaves appear impari-pinnate, but are reduced to the terminal leaflet.

One-leaved Indigo. Shrub 2 feet.

13 I. DIPHY'LLA (Vent. choix. t. 30.) plant decumbent and pubescent; leaves petiolate, bifoliate; leaflets ovate, one of which is terminal the other lateral and smaller; racemes length of leaves; legumes arched, compressed, 2-4-seeded. ⊙. S. Native of Africa. Flowers small, rose-coloured.

Var. β, *lanuginòsa* (D. C. prod. 2. p. 223.) plant clothed with lanuginous strigæ; stem and legumes very hispid. ⊙. S. Native of Senegal. I. glaúca, Perr. in litt. but not of Lam.

Two-leaved Indigofera. Fl. July, Aug. Clt. 1815. Pl. dec.

14 I. SUBULA'TA (Vahl. in Poir. suppl. 3. p. 150.) erect, glabrous; leaves petiolate, trifoliate; leaflets ovate-elliptic, the lateral leaflets seldom absent; racemes slender, shorter than the leaves; legume reflexed, slender, terete, acuminated, many-seeded. ⊙. S. Native of Guinea (Thonning), Jamaica (Bertero). I. mucronàta, Spreng. in herb. Balb. Stipulas subulate. Flowers pale-red.

Subulate-stipuled Indigo. Pl. 1 foot.

15 I. CLITORIOÌDES; plant hairy, herbaceous, branched; leaves ternate; leaflets lanceolate, obtuse; racemes elongated, axillary; legume hairy, straight. ⊙. S. Native of Sierra Leone, in arid places. Flowers flesh-coloured.

Clitoria-like Indigo. Pl. 1 foot.

16 I. ELONGA'TA; herbaceous, erect; stem simple; leaves ternate; leaflets elliptic, acute, hairy; racemes elongated, axillary; legume short, compressed, hairy. ⊙. S. Native of Sierra Leone, in arid places.

Elongated-racemed Indigo. Pl. 1 foot.

17 I. PILÒSA (Poir. suppl. 3. p. 151.) branches slender, pilose; leaves of 1 or 3 elliptic leaflets, on short petioles; pedicels axillary, 1-flowered; calyxes hairy. ⊙. S. Native of Guinea. Flowers red.

Pilose Indigo. Pl. 1 foot.

18 I. LESCHENAU'LTII (D. C. prod. 2. p. 223.) branches angular, finely pubescent; leaves on long petioles, trifoliate; leaflets oval, obtuse, terminal one largest; racemes shorter than the leaves, many-flowered, sessile, only bearing fruit at the base; legumes straight, spreadingly deflexed, tetragonal, acute, 8-10-seeded. ⊙. S. Native of Bengal. Flowers purple.

Leschenault's Indigo. Fl. July, Aug. Clt. 1820. Pl. 1 ft.

19 I. TRIFOLIA'TA (Lin. amœn. 4. p. 327.) plant ascending, rather pubescent, exstipulate; leaflets 3, oval-oblong, pilose, mucronulate; flowers axillary, almost sessile, glomerate; legume obsoletely tetragonal, pendulous, scabrous, 3-6-seeded. ⊙. ? S. Native of the East Indies. Lateral leaflets opposite. Flowers red.

Trifoliate Indigo. Fl. July, Aug. Clt. 1816. Pl. ascending.

20 I. ARISTA'TA (Spreng. syst. 3. p. 273.) leaflets 3, spatulate, mucronately-awned, hoary from hairs on both surfaces; pedicels axillary, 1-flowered; calycine segments capillary and plumose. ⊙. G. Native of the Cape of Good Hope.

Awned-leaved Indigo. Pl. decumbent.

21 I. MULTICAU'LIS (D. C. prod. 2. p. 223.) stems numerous, slender, diffuse; stipulas subulate, small; leaflets 3, oblong-cuneated, obtuse, mucronulate; flowers axillary, sessile, glomerate; legumes pendulous, compressed, acute, 5-6-seeded, scabrous from adpressed pili, which are fixed by their centre, as well as the stems and leaves. ⊙. G. Native of Nipaul. I. trifoliàta, D. Don, prod. fl. nep. 245. The terminal leaflet on a short petiole. Legume obsoletely tetragonal. D. Don. Flowers small, red.

Many-stemmed Indigo. Fl. July. Pl. diffuse.

22 I. GRA'CILIS (Spreng. syst. append. p. 285.) stem diffuse, branched, smoothish; leaflets 3, elliptic, mucronate, glabrous above, but rather strigose beneath; stipulas subulate; racemes few-flowered; legumes hairy, reflexed, few-seeded. ♄. S. Native of the Cape of Good Hope. Flowers red or purple.

Slender Indigo. Shrub diffuse.

23 I. TIMORIE'NSIS (D. C. prod. 2. p. 223.) erectish, hoary in every part from adpressed pubescence, which is fixed by the centre; leaflets 3, obovate-oblong, glandless; racemes axillary, length of petioles; legumes spreading, tetragonal, straight, 6-8-seeded. ⊙. S. Native of the East Indies.

Timor Indigo. Pl. 1 foot.

24 I. GLANDULO'SA (Willd. spec. 3. p. 1227.) erect; branches angular, rather pilose; leaflets 3, oblong-obovate, pilose beneath, and covered with glandular dots; racemes shorter than the petioles; legume muricated. ⊙. S. Native of the East Indies. Flowers purple.

Glandular Indigo. Fl. July, Aug. Clt. 1820. Pl. 1 foot.

25 I. DIVERSIFÒLIA (D. C. prod. 2. p. 223.) plant diffuse, rather hoary from adpressed pubescence, which is fixed by the centre; leaflets 1 or 3, oblong, the terminal one longest, the rest solitary, alternate or opposite; peduncles 1-3-flowered, rather longer than the petioles; legumes straight, spreadingly deflexed, rather downy. ⊙. ? S. Native of Bourbon. Stem slender, a finger high, suffruticose at the base.

Diverse-leaved Indigo. Pl. diffuse.

26 I. BRACTEOLA'TA (D. C. prod. 2. p. 223.) stem herbaceous, erect, much branched; branches terete, rather hairy, at length glabrous; cauline leaves few, impari-pinnate, having 3 or 5 leaflets, those on the branches bractea-formed, oval, sessile, simple, all covered with adpressed bristles; legume oval-oblong, acute, compressed, 1-2-seeded. ⊙. S. Native of Senegal. Crotalària bracteolàta, Perr. in litt. Perhaps the axillary branches are elongated peduncles, furnished with leaf-like bracteas, and bearing solitary flowers in the axils of these bracteas.

Bracteolate Indigo. Pl. 1 foot.

27 I. BIFLÒRA (Roth. nov. spec. 358.) shrubby, erect, clothed with rufescent down; leaflets 1-3, elliptic, acuminated, 3-nerved, scabrous; peduncles axillary, 2-flowered, equal in length to the petioles; legume ovate, 2-seeded, mucronate, glabrous. ♄. S. Native of the East Indies. Flowers dark-purple.

Two-flowered Indigo. Shrub 1 to 2 feet.

28 I. PEREGRÌNA (D. C. prod. 2. p. 224.) stem terete, filiform, glabrous, suffruticose; leaflets 3, about equal in size and shape, oblong-linear, acute, pubescent above, dotted and strigose beneath; flowers 2, axillary, nearly sessile; legume reflexed, tetragonal, straight, 6-8-seeded. ☉.? S. Native of the East Indies. Lòtus peregrìnus, Burm. fl. ind. 173. but not of Lin. Trifòlium I'ndicum, flòre rùbro, Kleinh. in herb. Burm. Flowers red.

Foreign Indigo. Pl. procumbent.

29 I. DENUDA'TA (Jacq. hort. schœnbr. 2. t. 233.) suffruticose, erect, glabrous; leaflets 3, obcordate or obovate; racemes pedunculate, few-flowered, hardly twice the length of the leaves; legume terete, acute, pendulous. ♄. G. Native of the Cape of Good Hope. Lodd. bot. cab. 500. Flowers red, streaked with more intense lines. Thunb. fl. cap. 597.

Striped Indigo. Fl. May, July. Clt. 1790. Shrub 2 feet.

30 I. AMŒ'NA (Ait. hort. kew. 3. p. 68.) plant suffruticose, erect; leaflets 3, oval, rather pilose, mucronate, pale beneath; spike pedunculate, many-flowered, 4-times the length of the leaves; calyx loose; legume terete, acute, pendulous. ♄. G. Native of the Cape of Good Hope. Jacq. hort. schœnbr. 2. t. 234. Ker. bot. reg. 300. I. heterophýlla, Thunb. fl. cap. 597. Flowers deep red.

Pleasing Indigo. Fl. Mar. June. Clt. 1774. Sh. 2 to 3 ft.

31 I. RI'GIDA (Willd. enum. 780.) plant shrubby, erect; branches angular, pendulous; leaflets 3, obovately orbicular, retuse, covered beneath with strigose pili. ♄. S. Native of the East Indies. Flowers and fruit unknown.

Stiff Indigo. Fl. July, Aug. Clt. 1816. Shrub 1 to 2 feet.

32 I. MUTÌSII (Spreng. syst. 3. p. 274.) branches clothed with rufous pubescence; leaflets 3, and are as well as the stipulas ovate and glabrous; spikes of flowers panicled. ♄. G. Native of New Granada. I. Mexicàna, Lin. fil.

Mutis's Indigo. Shrub.

33 I. VIRGA'TA (D. C. prod. 2. p. 224.) plant suffruticose, erect, slender; branches terete; leaflets 3, obcordate, mucronate by an awn, somewhat coriaceous, glabrous above and pubescent beneath; racemes somewhat spicate, shorter than the leaves; calyxes villous. ♄. S. Native of the East Indies. Flowers purplish.

Var. β, parvifòlia (D. C. prod. 2. p. 224.) leaflets obovate, smaller. ♄. G. Native of China.

Twiggy Indigo. Fl. July, Aug. Clt. 1820. Sh. 1 to 2 ft.

34 I. COMPLANA'TA (Reichb. ex Spreng. syst. append. p. 284.) branches flat, 2-edged; leaflets 3, lanceolate-linear, acute, silvery beneath, from very short, adpressed strigæ; racemes many-flowered, terminal; calyx white. ♄. G. Native of the Cape of Good Hope. Flowers red.

Flat-stemmed Indigo. Shrub 1 foot.

35 I. CANE'SCENS (Lam. dict. 3. p. 251.) the whole plant clothed with adpressed canescent down; branches angular; leaflets 3, ovate, obtuse, terminal one largest; racemes axillary, sessile, shorter than the leaves; legume straight, linear, tetragonal, white, spreadingly reflexed. ♄.? S. Native of the East Indies. Flowers red.

Canescent Indigo. Shrub 1 foot.

36 I. NI'VEA (Willd. herb. ex Spreng. syst. 3. p. 273.) erect, and clothed with silky white down; leaflets 3, obovate, obtuse; racemes shorter than the leaves. ♄. G. Native of the Cape of Good Hope. Flowers red.

White-leaved Indigo. Shrub 1 to 2 feet.

37 I. PAUCIFÒLIA (Delil. fl. ægypt. 107. t. 37. f. 22.) plant shrubby, erect, clothed with white adpressed down; branches terete; leaflets 1 to 4, oblong, mucronulate, lower ones smallest, usually alternate; racemes somewhat spicate, longer than the leaves; legumes somewhat filiform, torulose. ♄. G. Native of Egypt, in Elephant Island, and of the East Indies. Flowers probably red. Very like the following species.

Few-leaved Indigo. Shrub 1 to 2 feet.

§ 3. *Multijugæ* (from *multus*, many, and *jugum*, a yoke or pair; in reference to the leaves being composed of many yokes or pairs of leaflets). *Leaves impari-pinnate, having usually many pairs of leaflets, rarely 2 pairs only.*

* *Petioles elongated. Stems shrubby.*

38 I. ARGE'NTEA (Lin. mant. 27. but not of Burm.) shrubby; branches terete, white from silky adpressed down; leaves with 1-2 pairs of obovate leaflets, which are clothed with silky pubescence; racemes shorter than the leaves; legumes pendulous, somewhat compressed, torulose, canescent, 2-4-seeded. ♄. G. Native of Egypt, Arabia, and the East Indies. Lher. stirp. t. 29. I. articulàta, Gouan. ill. 49. I. glaúca, Lam. dict. 3. p. 246. I. tinctòria, Forsk. descr. 138. This plant is gathered in Barbary and Egypt for indigo. According to Desfontaines it is cultivated extensively in the kingdom of Tunis for dyeing; but he says it is not indigenous there. The Arabs call it *Habnil*. Flowers with the vexillum and keel yellow and wings red.

Silvery or Arabian Indigo. Fl. July, Aug. Clt. 1776. Sh. 2 to 3 feet.

39 I. TINCTÒRIA (Lin. spec. 1061.) stem suffruticose, erect; leaves pinnate, with 4-7 pairs of obovate leaflets, which are pubescent beneath; racemes axillary, shorter than the leaves; legumes terete, torulose, arched, 8-10-seeded. ♄. S. Native of both Indies and tropical Africa, where it is cultivated to a great extent.—Sloan. jam. 2. t. 179. f. 2.—Rheed. mal. 1. t. 54. Rumph. amb. 5. t. 8. I. Sumatràna, Gærtn. fruct. 2. p. 317. t. 148. Lam. ill. t. 626. f. 1. Perhaps I. cærùlea of Roxb. hort. beng. p. 55. is sufficiently distinct from this plant. I. I'ndica, Lam. dict. 3. p. 245. Flowers with a pale vexillum and red keel and wings. *Indigo* is one of the most profitable articles of culture in Hindostan, because an immense extent of land is required to produce but a moderate bulk of the dye; because labour and land there is cheaper than any where else, and because the raising of the plant and its manufacture may be carried on even without the aid of a house. The first step in the culture of the plant is to render the ground, which should be friable and rich, perfectly free from weeds, and dry if naturally moist. The seeds are then sown in shallow drills about a foot apart. The rainy season must be chosen for sowing, otherwise if the seed is deposited in a dry soil or in the dry season, it heats, corrupts, and is lost. The crop, being kept clear of weeds, is fit for cutting in 2 or 3 months, and it may be repeated in the rainy season every six weeks. The plants must not be allowed to come into flower, as the leaves at that time become dry and hard, and the *indigo* produced is of less value, nor must they be cut in dry weather, as they would not spring again. A crop generally lasts two years. Being cut, the herb is first steeped in a vat till it has become macerated, and parted with its colouring matter, then the liquor is let off into another vat, in which it undergoes the peculiar process of beating, to cause the fecula to separate from the water. This fecula is then let off into a third vat, where it remains some time, and is then strained through cloth bags, and evaporated in shallow wooden boxes placed in the shade. Before it is perfectly dry it is cut into small pieces of an inch square; it is then packed in barrels or stowed in sacks for sale. *Indigo* was not extensively cultivated in India before the British settlements were formed there; its profits were at first so considerable, that, as in similar cases, its culture was carried too far, and the market glutted with the commodity. The *indigo* is one of the most precarious of oriental crops, being liable to be destroyed by hail-storms,

which do comparatively little injury to the sugar-cane and other plants.

Indigo has long been cultivated in Spain, but has been long on the decline in that country, owing to the more favorable circumstances of the East and West Indies. It was tried in the south of France and Italy during the time of Bonaparte, but found not worth following for the same reason.

The *indigo* commonly cultivated in the West Indies is the *I. A'nil*, and sometimes *I. tinctòria* and *I. Guatimàla*, though there are various species and varieties which afford a similar dye. *Indigo* thrives best in free rich soil and a warm situation, frequently refreshed with moisture. Having first chosen a piece of ground and cleared it, hoe it into little trenches, not above two inches or two inches and a half in depth, and not more than 14 or 15 inches asunder. In the bottom of these at any season of the year, strew the seeds pretty thick, and immediately cover them. As the plants shoot they should be frequently weeded, and kept constantly clean, until they spread sufficiently to cover the ground. Those who cultivate *indigo* in great quantities, only strew the seed pretty thick in little shallow pits, hoed up irregularly, but generally within 4-5 or 6 inches of each other, and covered as before. Plants raised in this manner are observed to answer as well or rather better than the others, but they require more care in the weeding. The plants grow to full perfection in 2 or 3 months, and are observed to answer when cut in full blossom. They are cut with reaping hooks, a few inches above the root, tied in loads, carried to the works, and laid by strata in the steeper. Seventeen negros are sufficient to manage twenty acres of *indigo;* and one acre of rich land, well planted, will, with good seasons and proper management, yield 500 pounds of *indigo* in twelve months, for the plant after being cut sends out stolons or new growths, and gives 4 or 5 crops a-year, but must be replanted or resown afterwards. (P. Browne.)

According to Loureiro *indigo* is spontaneous in China and Cochin-china, and is cultivated all over those vast empires. The ancients were acquainted with the dye which we call *indigo* under the name of *indicum.* Pliny knew that it was a preparation of vegetable substance, though he was not acquainted with the plant nor the process of making the dye. Even at the close of the sixteenth century it was not known in England what plant produced *indigo.* For in the Remembrancer for Master T. by Richard Harkluyt in 1582, he was instructed "to know if *Anil*, that coloureth blew, be a natural commodity of those parts (Turkey) and if it be compounded of an herbe, to send the seed or root, with the order of sowing, &c. that it may become a natural commodity in the realme as woad is, that the high price of foreign woad might be brought down."

Dyer's Indigo. Fl. July, Aug. Clt. 1731. Shrub 2 to 3 ft.

40 I. GUATIMA'LA (Lun. hort. jam. 1. p. 420.) plant shrubby, erect; leaves pinnate, with 4 or 5 pairs of lanceolate leaflets, which are hoary beneath; racemes axillary, shorter than the leaves; legumes recurved, declining, gibbous at the sutures, many-seeded. ♄. S. Native of South America, at Guatimala. I. tinctòria β, brachycárpa, D. C. prod. 2. p. 224. Flowers red. Dr. Patrick Browne says this plant seldom exceeds 3 or 4 feet high, throwing out many suberect branches as it rises. It is said to be much hardier than *I. tinctòria* or *I. Anil*, and affords a finer pulp, but it does not yield so great a quantity, and is only cultivated where the seasons are not so certain, or in mixed fields. The former yielding more of the dye than either of the others is generally preferred, though liable to many more mischances.

Guatimala Indigo. Fl. July, Aug. Clt. 1731. Sh. 3 to 4 ft.

41 I. A'NIL (Lin. mant. 272.) stems shrubby, erect; leaves pinnate, having 3-7 pairs of oval or oblong leaflets, hardly pubescent beneath; racemes axillary, shorter than the leaves; legumes compressed, not torulose, deflexed, arched, with the sutures on both sides rather prominent. ♄. S. Native of South America, spontaneous, but cultivated for indigo in both Indies. See *I. tinctòria* for culture and uses. Mr. Miller says this plant grows to the height of 5 or 6 feet (if this be his *I. suffruticòsa*), and that being a much larger plant than *I. tinctòria*, it will afford a greater quantity of *indigo* from the same compass of ground, than any of the other species, especially if cut before the stems grow woody; it will also grow on poorer land. It is very common in Jamaica, growing wild in all the savannahs, where doubtless it had been cultivated in former times. It is hardier than any of the other sorts, and grows very luxuriantly, even in the dryest lands; but it does not yield so much pulp, according to P. Browne; the dye, however, that is extracted from it is generally the best, of a fine copperish cast, and of a fine grain. The plant is called *Hab-nil* or *Nilè* by the Arabs, and *Nil* by the Bengalese.

Var. α, *oligophýlla* (D. C. prod. 2. p. 225.) leaves having 3-4 pairs of leaflets; legumes arched. ♄. S. Sloan. jam. t. 176. f. 3. Lam. ill. t. 629. f. 2. Native of South America, and the West Indies.

Var. β, *polyphýlla* (D. C. l. c.) leaves having 5-7 pairs of leaflets; legumes arched. ♄. S. I. Cornezuèlo, Moc. et Sesse, fl. mex. icon. ined. Native of South America, and the West Indies.

Var. γ, *orthocárpa* (D. C. l. c.) leaves having 5-7 pairs of leaflets; legume deflexed, straight. ♄. S.—Rumph. amb. 5. t. 80. ? East Indies and Madagascar. Perhaps a proper species.

Anil or West Indian Indigo. Fl. July, Aug. Clt. 1731. Shrub 2 to 4 feet.

42 I. THIBAUDIA'NA (D. C. prod. 2. p. 225.) stem suffruticose, erect; leaves pinnate, having 10 or 11 pairs of elliptic, retuse, mucronate leaflets, which are pubescent on both surfaces; racemes length of leaves; legume pendulous, straight, linear, compressed, tapering into an acumen at the apex, 8-10-seeded. ♄. S. Native of Mexico. Legumes disposed in a raceme, which is 30 or 40 inches long. Flowers dark purple.

Thibaud's Indigo. Shrub 5 to 6 feet.

43 I. LEPTOSTA'CHYA (D. C. prod. 2. p. 225.) stem suffruticose, erect; leaves pinnate, with 5-10 pairs of leaflets; leaflets elliptic-obovate, retuse, mucronulate, rather pubescent on both surfaces; racemes axillary, slender, length of leaves; flowers distant, erect; legumes reflexed, straight. ♄. S. Native of the East Indies. Flowers red, about 20 in a spike.

Slender-spiked Indigo. Fl. Ju. Jul. Clt. 1818. Sh. 2 to 3 ft.

44 I. UNCINA'TA; shrubby, erectish, branched, stiff; leaves pinnate, with 5 pairs of lanceolate, mucronate pubescent leaflets; racemes short, spicate, axillary, sessile; legumes arched, crowded. ♄. S. Native of Sierra Leone, in waste places.

Hooked-podded Indigo. Shrub 2 feet.

45 I. ATROPURPU'REA (Hamilt. in Horn. hort. hafn. add. 152.) shrubby, erect; leaves pinnate, with 5-7 or 10 pairs of oval, retuse, mucronulate leaflets, having their margins rather undulated, younger ones covered with adpressed pubescence, adult ones nearly glabrous; racemes axillary, slender, lower ones length of leaves; calyx silky; legume straight, compressed, mucronate, pendulous, 8-10-seeded. ♄. G. Native of Nipaul, at Narain-hetty. D. Don, prod. fl. nep. 244. Flowers shewy, dark-purple. Stipulas obsolete.

Dark-purple-flowered Indigo. Fl. June, Aug. Clt. 1810. Shrub 5 to 6 feet.

46 I. DÒSUA (D. Don, prod. fl. nep. 244.) shrubby; leaves pinnate, having 10-16 pairs of oval, retuse, mucronulate leaflets, which are clothed with rufescent pili on both surfaces, as well as the branches; spikes axillary, shorter than the leaves; bracteas and stipulas linear and hispid; teeth of calyx ovate,

acute. ♄. G. Native of Upper Nipaul, at Suembu, where it is called *Dosi-swa* by the Nawaris. Flowers purple.

Dosi-swa Indigo. Shrub 2 to 4 feet.

47 I. galegoìdes (D. C. prod. 2. p. 225.) stem erect; leaves pinnate, having 8 or 9 pairs of elliptic, mucronate leaflets, which are beset with minute pubescence on both surfaces; racemes axillary, one half shorter than the leaves; legumes erect, straight, linear, acuminated, compressed, rather callous at the sutures on both sides. 10-12-seeded. ♄. S. Native of Ceylon. Legume 2 inches long and hardly a line broad.

Galega-like Indigo. Shrub 3 to 4 feet.

48 I. cassioìdes (Rottl. ex herb. Balb. D. C. prod. 2. p. 225.) stem suffruticose, erect; leaves pinnate, having 4 or 5 pairs of elliptic-obovate, retuse, mucronulate leaflets, which are rather pubescent on both surfaces; racemes length of leaves; legumes spreading, rather compressed, glabrous, 10-seeded, with the suture thick and prominent on both sides. ♄. S. Native of India, on the Nelligery mountains, where it is called *Maniligueda.* The leaves are nearly like those of a species of *Colùtea.* Legume stiff, an inch long.

Cassia-like Indigo. Shrub 3 to 4 feet.

49 I. cylíndrica (D. C. prod. 2. p. 225.) stem suffruticose; leaves pinnate, having 4 or 5 pairs of obovate, obtuse, or emarginate, glabrous leaflets; racemes longer than the leaves; legumes spreading, straight, cylindrical, 8-10-seeded, glabrous, with the sutures not prominent. ♄. G. Native of the Cape of Good Hope. Leaves very like those of *Colùtea.* The legume almost like that of *Calophàca,* about an inch long, and about 2 or 3 lines in diameter.

Cylindrical-podded Indigo. Shrub 1 to 2 feet.

50 I. ju'ncea (Delaum. herb. amat. t. 227.) stem shrubby, erect, and is as well as the leaves smooth; petioles elongated, filiform, in the young plants the leaves are furnished with 3 or 4 pairs of obovate-oblong leaflets, but at length almost all nearly leafless; racemes erect, shorter than the petioles; legumes reflexed. ♄. G. Native of the Cape of Good Hope. I. aphýlla, Link. enum. 2. p. 251. I. filifòlia, Ker. bot. reg. 104. Lebéckia contaminàta, Ait. hort. kew. ed. 2. vol. 4. p. 261. but not of Thunb. Spártium contaminàtum, Ait. hort. kew. ed. 1. vol. 3. p. 10. but not of Lin. Flowers purple.

Rushy Indigo. Fl. June, July. Clt. ? Shrub 1 to 2 feet.

51 I. austra'lis (Willd. spec. 3. p. 1235.) shrubby; branches terete, rather pubescent; leaves pinnate, having 5-7 pairs of elliptic-obtuse, glabrous leaflets; racemes rather shorter than the leaves; legumes spreading, terete. straight, glabrous, 8-10-seeded. ♄. G. Native of New Holland. Lodd. bot. cab. 149. Ker. bot. reg. 365. Flowers rose-coloured.

Southern Indigo. Fl. Mar. June. Clt. 1790. Sh. 3 to 4 ft.

52 I. sylva'tica (Sieb. pl. exsic. nov. holl. no. 379.) erect, shrubby; stem and branches acutely angled; leaves with 4-7 pairs of leaflets; leaflets nearly equal, elliptic, quite smooth, for the most part emarginate; racemes shorter than the leaves, or about the same length. ♄. G. Native of New Holland. Hook, in bot. mag. 3000. I. angulàta, Lindl. bot. reg. 2578. I. speciòsa, Fraser, mss. Flowers rose-coloured, inclining to purple. A very showy plant.

Wood Indigo. Fl. Mar. June. Clt. 1824. Sh. 3 to 8 feet.

53 I. nu'da (G. Don, in Loud. hort. brit. p. 301.) plant almost leafless; branches terete, mucronate; racemes axillary; corolla, calyx, and pedicels purple. ♄. G. Native of the Cape of Good Hope. Racemes long, in the axils of the branches. Lebéckia nùda, Sims, bot. mag. t. 2214. Flowers purple.

Naked Indigo. Fl. June, July. Clt. 1816. Shrub 2 to 3 ft.

54 I. macrosta'chya (Vent. malm. t. 44.) shrubby; branches terete, clothed with adpressed pubescence; leaves pinnate, having 8 or 10 pairs of oval-oblong, obtuse, mucronate, pubescent leaflets; racemes many-flowered, longer than the leaves. ♄. G. Native of China. Flowers rose-coloured, those on the lower part of the raceme soon falling off in the gardens.

Long-spiked Indigo. Fl. June, July. Clt. ? Sh. 2 to 3 ft.

55 I. polyca'rpa (Willd. herb. ex Spreng. syst. 3. p. 276.) shrubby, erect; leaves with 5 pairs of obovate-oblong leaflets, which are rather strigose on both surfaces; racemes many-flowered, about equal in length to the leaves; legumes reflexed, tetragonal. ♄. S. Native of South America.

Many-fruited Indigo. Shrub 1 to 3 feet.

56 I. frute'scens (Lin. fil. sùppl. 334.) stem shrubby, terete, beset with short hairs at the apex, which are fixed by their centre, as well as the under side of the leaves; leaves pinnate, with 2 or 4 pairs of obovate-oblong leaflets; racemes a little longer than the leaves. ♄. G. Native of the Cape of Good Hope. Thunb. fl. cap. 598. Flowers red.

Shrubby Indigo. Fl. May, Aug. Clt. 1822. Sh. 2 to 3 ft.

57 I. emargina'ta; shrubby, branched, spreading; leaves with 3 pairs of obovate-oblong, emarginate leaflets; flowers in axillary and terminal panicles. ♄. S. Native of Sierra Leone, at the edges of woods. Flowers dark purple.

Emarginate-leafletted Indigo. Shrub 2 to 3 feet.

58 I. divarica'ta (Jacq. hort. schœnbr. t. 365.) shrubby; branches spreading much, puberulous, sulcated; leaves pinnate, with 4 or 5 pairs of elliptic-oblong, mucronate leaflets, which are clothed with adpressed pubescence beneath; racemes shorter than the leaves; legume spreading, arched upwards, rather tetragonal, and somewhat nodulose, 6-8-seeded. ♄. G. Native of? Flowers red. Lower leaves having 2 or 3 pairs of leaflets, the upper with 6 or 7 pairs.

Divaricate-branched Indigo. Fl. July, Aug. Clt. ? Shrub 2 to 3 feet.

59 I. compre'ssa (Lam. dict. 3. p. 248.) shrubby; branches glabrous, compressed, flat; leaves pinnate, having 1 or 2 pairs of leaflets; leaflets ovate-lanceolate, rather silky, minute; racemes slender, longer than the leaves, 5-6-flowered; legume nearly terete, straight, smoothish. ♄. S. Native of Madagascar. Flowers red.

Compressed-stemmed Indigo. Shrub 1 to 2 feet.

60 I. cinera'scens (D. C. prod. 2. p. 226.) shrubby; branches terete, slender, velvety at the apex from cinereous, rufescent, very short down; leaves pinnate, with 2 or 4 pairs of obovate, obtuse leaflets, which are clothed with cinereous pubescence beneath; racemes much shorter than the leaves, floriferous at the base. ♄. S. Native of the Mauritius.

Greyish Indigo. Shrub 1 to 2 feet.

61 I. hu'milis (H. B. et Kunth, nov. gen. amer. 6. p. 451.) shrubby, procumbent, silvery from silky strigæ; leaves pinnate, having 2 or 4 pairs of oblong, acutish, stiff leaflets; racemes few-flowered, much exceeding the leaves; legumes reflexed, rather terete, straight, usually 2-seeded. ♄. S. Native of Peru, [illegible] the mountains near Caxamarca. Flowers red.

Hu[illegible]o. Shrub procumbent.

6[illegible]es (H. B. et Kunth, l. c. p. 455. t. 580.) shrubby, [illegible]ulate, lo[illegible]mbing, when young clothed with adpressed, strigose villi; [illegible]s pinnate, with 6 to 9 pairs of leaflets; leaflets oblong, mucronately awned, clothed beneath with silky and silvery strigæ; racemes on very long peduncles; legumes reflexed, pendulous, tetragonal, straight. ♄. S. Native of Quito, near Cuenca. Flowers red. Ova 10 or 12, but the seeds are only 5 or 6, from abortion.

Tephrosia-like Indigo. Shrub 2 to 3 feet.

63 I. Truxille'nsis (H. B. et Kunth, l. c.) shrubby, much branched; branches clothed with ferruginous strigæ; leaves pinnate; leaflets 5 or 6 pairs, oblong, obtuse, mucronate, cuneated at the base, strigose on both surfaces, but especially on

the under; racemes many-flowered, nearly sessile, shorter than the leaves; legumes reflexed, nearly terete, rather falcate, 4-6-seeded. ♄. S. Native on the shores of Peru, near Truxillo. Flowers rose-coloured.

Truxillo Indigo. Shrub 6 feet.

64 I. LESPEDEZIOÏDES (H. B. et Kunth, l. c.) shrubby; leaves pinnate; leaflets 3 pairs, cuneate-lanceolate, rounded at the apex and mucronate, acute at the base, beset with strigæ on both surfaces as well as the branches, glaucescent beneath; racemes many-flowered, on short peduncles, exceeding the leaves; legumes reflexed, rather compressed, straight, usually 8-seeded. ♄. G. Native of Mexico, on Mount Jorullo. Flowers red.

Lespedeza-like Indigo. Shrub 1 to 3 feet.

65 I. ARBORE'SCENS (Zucc. obs. 1. no. 84.) stems shrubby; rough from papulæ; branches terete, scabrous from adpressed bristles; leaves pinnate, with 4 to 8 pairs of oblong, mucronate leaflets, which are also beset with adpressed bristles beneath; racemes almost terminal, twice the length of the leaves; legumes spreading, terete, linear, glabrous. ♄. S. Native of?

Arborescent Indigo. Shrub.

66 I. SECUNDIFLÒRA (Poir. suppl. 3. p. 148.) shrubby; branches terete, and are as well as the leaves beset with clammy pili; leaves pinnate, with 2 or 3 pairs of almost lanceolate leaflets; racemes shorter than the leaves; flowers secund; calyx very pilose; legume almost cylindrical, mucronate, hairy. ♄. S. Native of Guinea. I. glutinòsa, Vahl. in herb. Desf. Flowers red.

Secund-flowered Indigo. Shrub 1 to 3 feet.

67 I. BERTERIA'NA (Spreng. syst. 3. p. 277.) shrubby, decumbent; leaves with usually 4 pairs of oblong-spatulate leaflets, which are clothed with white silky pubescence beneath; peduncles axillary, usually 1-flowered; legumes linear, straight. ♄. S. Native of Guadaloupe. Flowers red.

Bertero's Indigo. Shrub decumbent.

68 I. MUCRONA'TA (Spreng. in herb. Balb. D. C. prod. 2. p. 227.) stem terete, suffrutescent at the base; petioles and leaves clothed with adpressed strigæ on both surfaces; leaves pinnate, with 2 pairs of mucronate, ovate leaflets, which are pale beneath; racemes pedunculate, longer than the leaves; legumes [illegible] straight, a little tetragonal, mucronate, clothed with reflexed, [illegible]gence, many-seeded. ♄. S. Native of Jamaica. strigose pubesc[illegible] Shrub 2 to 3 feet.

Mucronate-leafletted In[illegible]

§ 2, [illegible]ed. *Stem herbaceous.*

* * *Petioles elong*[illegible]

69 I. INQUI'NANS (Willd. spec. 3. p. 1236.) stem herbaceous, [illegible] ranche[illegible]pid from clammy erect, and is as well as the terete [illegible] with adpressed pili; leaflets 4-5 pairs, elliptic-oblong [illegible] the leaves; legumes white pili beneath; racemes shorter th[illegible]-10-seeded. ⊙. S. spreading, straight, terete, rather pilose, 8[illegible] plant is cultivated Native of St. Domingo. Flowers red. This for Indigo in St. Domingo.

Dyeing Indigo. Pl. 1 foot.

70 I. LATERI'TIA (Willd. spec. 3. p. 1233.) [illegible]rica, at Guinea[illegible] herbaceous, erect, pilose, clammy; leaves with 1 or 2 pairs [illegible]24. Flowers villous leaflets; racemes usually about equal in length [illegible]seed[illegible] the leaves; legumes tetragonal, hairy, straight, 8-10-seeded. ⊙. S. Native of Guinea, particularly in the island of St. Thomas. I. hirsùta, Jacq. icon. rar. t. 359. coll. 2. p. 359. but not of Lin. Flowers red.

Brick-coloured-haired Indigo. Fl. Ju. Jul. Clt. 1806. Pl 1 ft.

71 I. VISCÒSA (Lam. dict. 3. p. 247.) stem herbaceous, erect, and is as well as the terete branches, rather hispid from clammy pili; leaves with 6 pairs of oblong-elliptic leaflets, which are clothed with adpressed bristles beneath; racemes shorter than the leaves; legumes spreading, straight, somewhat compressed, rather pilose, 8-10-seeded. ⊙. S. Nativ[illegible] stems herbaceous, I. graveòlens, Wendl. sert. han. t. 12. Flowe[illegible]duncles 2- species is very like *I. lateritia.* [illegible]ecies.

Var. β; stem rather diffuse. ⊙. S. Native of the is[illegible] of Timor.

Clammy Indigo. Fl. July, Aug. Clt. 1806. Pl. 1 foot.

72 I. GLUTINÒSA (Perr. in litt. but not of Vahl. D. C. prod. 2. p. 227.) stem almost herbaceous, much branched; branches terete, beset with glutinous hairs; leaves with 3 pairs of elliptic-obovate leaflets, which are clothed with adpressed bristles beneath; racemes a little longer than the leaves; flowers distant; legumes straight, nearly terete, erect, clothed with clammy hairs, 8-10-seeded. ⊙. S. Native of Guinea, particularly in Senegal. Flowers red.

Glutinous-haired Indigo. Pl. 1 foot.

73 I. DENDROÏDES (Jacq. icon. rar. 3. t. 571. coll. 2. p. 357.) stem herbaceous, erect, and is as well as the terete branches smoothish; leaves with 6-15 pairs of oblong leaflets, which are clothed on both surfaces with very minute adpressed pubescence; racemes slender, a little longer than the leaves; legume erect, terete, straight, mucronate, smoothish, 8-12-seeded. ⊙. S. Native of Guinea. Flowers rose-coloured.

Tree-like Indigo. Pl. 1 foot.

74 I. POLYPHY'LLA (D. C. prod. 2. p. 227.) stem herbaceous, erect, scabrous from strigæ; leaves with 12-16 pairs of elliptic leaflets, which are scabrous on the upper surface, and clothed with white tomentum on the under; racemes length of leaves; legumes pendulous, straight. ⊙. G. Native of Nipaul. Habit almost of a species of *Dàlea.* Racemes and branches clothed with rufous villi. Stamens diadelphous. Ovary linear, compressed, almost tetragonal, acuminated by the style.

Many-leafletted Indigo. Pl. 1 foot.

75 I. HETERO'TRICHA (D. C. prod. 2. p. 227.) stem almost herbaceous, terete; branches and peduncles hispid from long, stiff, bristly hairs, which are hooked at their apexes; leaves with 4-6 pairs of elliptic or obovate, mucronate leaflets, which are beset with adpressed strigæ beneath; racemes much longer than the leaves, pedunculate; legumes reflexed, terete, mucronate, bearing adpressed strigæ and bristly hairs. ♄. ? G. Native of the Cape of Good Hope. Burch, cat. geogr. no. 2635. Flowers red? A very distinct species.

Variable-haired Indigo. Pl. 1 to 2 feet.

76 I. DOMINGE'NSIS (Spreng. in herb. Balb. D. C. prod. l. c.) stems somewhat herbaceous; branches rather villous, and rather compressed at the apex; leaves with 4 pairs of obovate leaflets, which are dotted beneath and covered with adpressed pubescence on both surfaces; racemes longer than the leaves, crowded with flowers; legumes pendulous, terete, rather torulose, and rather villous, 3-4-seeded. ⊙. ? S. Native of St. Domingo. Allied to the following and *I. enneaphýlla.* Flowers rose-coloured.

St. Domingo Indigo. Pl. 1 foot.

77 I. OLIGOSPE'RMA (D. C. prod. 2. p. 228.) stem herbaceous, erect; branches angular at the apex and pubescent; leaves with 4-5 pairs of elliptic-oblong, mucronate leaflets, which are covered with adpressed bristly hairs on both surfaces; racemes length of leaves; legumes terete, villous, and bristly, 2-3-seeded, spreadingly-reflexed. ⊙. S. Native of Senegal. It differs from *I. dispérma* in the leaves not being glabrous, in the legumes being more slender and not torulose, and in being much more villous. Flowers red.

Few-seeded Indigo. Pl. 1 foot.

78 I. DISPE'RMA (Lin. syst. nat. 3. p. 232.) stem herbaceous? branches terete; leaves with 4-6 pairs of elliptic-oblong, glabrous leaflets; racemes slender, longer than the leaves; legumes terete, rather torulose, mucronate, 2-seeded, scabrous

Native of the C[illegible] (ex icon.). ⊙.? S. Native of the Indies. p. 249. Fl. et. t. 55. Flowers rose-coloured.

Ca[illegible]seeded Indigo. Pl. 1 foot.

79 I. FU'SCA; stem erect, beset with long brown hairs; leaves with 2 or 3 pairs of cuneated, mucronate, pilose leaflets; stipulas filiform, also pilose; spikes or racemes of flowers axillary or lateral; calyx and legume clothed with fuscous hairs. ⊙. S. Native of Guinea, among grass. Flowers small, flesh-coloured.

Fuscous-haired Indigo. Fl. July, Aug. Clt. 1823. Pl. 1 ft.

80 I. HIRSU'TA (Lin. spec. 1062. but not of Jacq.) stem suffruticose, erect; branches terete, and are as well as the petioles and peduncles hairy; leaves with 3-5 pairs of obovate-oblong, obtuse leaflets, which are villous on both surfaces; racemes longer than the leaves; legumes tetragonal, 6-seeded, pendulous, hairy. ♄. S. Native of the East Indies and Guinea. Lam. ill. t. 626. f. 3. I. I'ndica, Mill. dict. no. 4. but not of Lam.—Burm. zeyl. 37. t. 14. Rheed. mal. 1. t. 55. Flowers purple or red.

Hairy Indigo. Fl. July, Aug. Clt. 1823. Pl. 1 foot.

81 I. ASTRAGALÌNA (D. C. prod. 2. p. 228.) stem herbaceous, erect, rough from simple hairs; leaves having 4 pairs of obovate, very obtuse leaflets, which are villous on both surfaces and white beneath; racemes shorter than the leaves; legume tetragonal, pendulous, very hairy, 2-seeded. ⊙. S. Native of Senegal. Astrágalus, Perr. in litt. 1825. This species is very nearly allied to the preceding, but the hairs on the upper surface of the leaves are adpressed and scarcely or not bifurcate. Flowers red.

Milk-vetch-like Indigo. Pl. 1 foot.

82 I. SENEGALE'NSIS (Lam. dict. 3. p. 248.) stem herbaceous, decumbent; branches slender, angular; leaves with from 1-3 pairs of leaflets; leaflets oblong, beset with adpressed bristly hairs on both surfaces; racemes longer than the leaves; legumes pendulous, much compressed, puberulous, oblong, mucronate, 3-4-seeded. ⊙. S. Native of Senegal. I. tetraspérma, Vahl. ex herb. Juss. Habit of a species of *E'rvum.* This is a very distinct species. Flowers red.

Senegal Indigo. Pl. procumbent.

83 I. PA'RVULA (Gailliaud, voy. mer. part. bot. t. 3. f. 1.) branches diffuse; leaves pinnate, with 2 or 3 pairs of obovate, grey leaflets; stipulas awl-shaped; spike of flowers about equal in length to the leaves. ⊙. F. Native of Nubia. Flowers red.

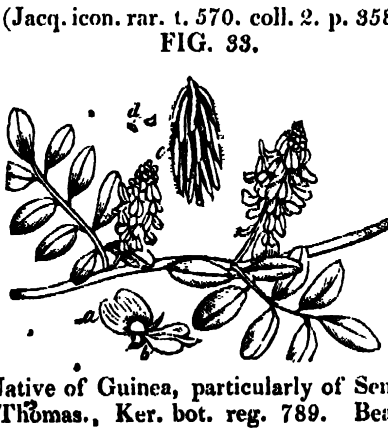
Least Indigo. Pl. diffuse.

84 I. LINEA'RIS (D. C. prod. 2. p. 228.) stems herbaceous, rather diffuse; branches slender, angular; leaves having 1 or 2 pairs of linear leaflets, which are beset with adpressed bristly hairs on both surfaces; racemes rather longer than the leaves; legumes pendulous, linear, mucronate, straight, much compressed, scabrous, and puberulous, 10-12-seeded. ⊙. S. Native of Senegal. Flowers red.

Linear-leafletted Indigo. Pl. diffuse.

85 I. HENDECAPHY'LLA (Jacq. icon. rar. t. 570. coll. 2. p. 358.) stem herbaceous, prostrate; branches terete and are as well as the leaves slightly covered with cinereous pubescence on both surfaces; leaves with 4-5 pairs of obovate, oblong, cuneated, obtuse leaflets; racemes shorter than the leaves; legumes reflexed, terete, but slightly tetragonal, straight, villous, 8-10-seeded. ♃. S. Native of Guinea, particularly of Senegal and the island of St. Thomas., Ker. bot. reg. 789. Beau. fl. d'ow. 2. t. 84. Flowers rose-coloured. The plants of this species which are cultivated in the gardens are almost smooth, except the under surface of the leaves.

FIG. 33.



Eleven-leafletted Indigo. Fl. July, Aug. Clt. 1824. Pl. pr.

86 I. PERROTTE'TII (D. C. prod. 2. p. 228.) stems herbaceous, prostrate, young ones compressed, and clothed with villous pubescence; leaves with 3 or 4 pairs of oblong-obovate leaflets, clothed on both surfaces with canescent pubescence, besides being dotted beneath; racemes crowded with flowers, shorter than the leaves; legumes oblong, terete, straight, pubescent, 3-1-seeded. ⊙.? S. Native of Senegal. I. prostràta, Perr. in litt. but not of Willd. Very like *I. enneaphýlla*, but the petioles are longer, the stipulas linear-subulate, and the legume 3-4-seeded. Flowers red.

Perrottet's Indigo. Pl. prostrate.

87 I. SESSILIFLÒRA (D. C. prod. 2. p. 228.) stem herbaceous, erect, much branched; branches terete, and are as well as the leaves clothed with adpressed silky pubescence; leaflets 3 or 4 pairs, obovate; spikes crowded with flowers, sessile in the axils of the leaves, and shorter than them; legume terete, pubescent, straight, 4-6-seeded. ⊙. S. Native of Senegal. Root simple, cylindrical, rather fusiform. Flowers red.

Sessile-flowered Indigo. Pl. 1 foot.

88 I. A'NCEPS (Vahl. in Poir. suppl. 3. p. 147.) stems herbaceous, compressed, 2-edged, glabrous; leaflets 9 or 11, alternate, obovate-oblong, obtuse, smoothish; racemes longer than the leaves; legumes pendulous, linear, compressed, acute, puberulous, 8-10-seeded. ⊙. S. Native of Guinea. Flowers rose-coloured.

Two-edged-stemmed Indigo. Pl. prostrate.

89 I. ALTE'RNANS (D. C. prod. 2. p. 229.) branches filiform, and are as well as the leaves clothed with adpressed, bristly hairs; leaflets 7-11, alternate, obovate, or oblong, a little mucronulate; racemes longer than the leaves; calycine lobes ending each in a setaceous acumen, about equal in length to the corolla; legumes reflexed. ♄.? G. Native of the Cape of Good Hope. Burch. cat. no. 2079. Flowers reddish. Perhaps the same as *I. punctàta*, Thunb. prod. 133. fl. cap. 599. but there are nothing like dots on the present plant to be seen.

Alternating-leafletted Indigo. Pl. 1 foot.

90 I. CAROLINIA'NA (Walt. car. 187.) stem herbaceous, erect; branches terete; leaves with 6 or 7 pairs of oval-oblong leaflets, which are slightly covered with adpressed pubescence; racemes slender, longer than the leaves; legumes pendulous, usually 2-seeded, reticulately veined. ♃. G. Native of North America, from Carolina to Florida. Mich. fl. bor. amer. 2. p. 68. Flowers blue.

Carolinian Indigo. Pl. 1 foot.

91 I. LAGASCA'NA (D. C. prod. 2. p. 229.) stems herbaceous, erect; branches terete, beset with adpressed bristly hairs, canescent at the apex; stipulas linear, acuminated, rufous, and scarious; leaves with 5 pairs of obovate or oblong, mucronate leaflets, young ones clothed on both surfaces with adpressed bristly hairs, the adult ones only on the under surface; racemes pedunculate, longer than the leaves; legumes reflexed. Native of Peru, at Cheuchim. Flowers red?

Lagasca's Indigo. Pl. 1 foot.

92 I. PLUMÒSA (Spreng. syst. 3. p. 278.) plant decumbent and villous; leaflets usually about 8 pairs, spatulate, emarginate; racemes few-flowered, on long peduncles; calycine segments at length elongated, very villous and plumose. ⊙.? S. Native of?

Feathery-calyxed Indigo. Pl. decumbent.

93 I. A'SPERA (Perr. in litt. D. C. prod. 2. p. 229.) stem herbaceous, erect, branched; branches terete; leaves and peduncles covered with adpressed strigæ; leaves with 1 or 2 pairs of linear, acute leaflets; racemes slender, longer than the leaves; legumes

reflexed. ⊙. S. Native of Senegal, on plains near Richard-Tole. Flowers red. Habit nearly like that of *I. psoraleoìdes*, but differs in the leaves being pinnate.

Rough Indigo. Pl. 1 foot.

94 I. JAMAICE'NSIS (Spreng. syst. 3. p. 277.) herbaceous; leaves with 3 pairs of oblong, mucronate leaflets, and are as well as the erect angular branches beset with adpressed bristly hairs; racemes straight, exceeding the leaves; legumes reflexed, almost terete. ⊙. S. Native of Jamaica. Flowers red.

Jamaica Indigo. Pl. 1 foot.

95 I. SPICA'TA (Forsk. descr. 13. Vahl. symb. 1. p. 56.) stem herbaceous, decumbent, villous; leaves with 4 pairs of obovate villous leaflets, outer ones largest; stipulas lanceolate-subulate, dry; spikes longer than the leaves; legume terete, torulose, pendulous.—Native of Arabia Felix. Flowers red. Allied to *I. hirsùta*.

Spicate-flowered Indigo. Pl. decumbent.

96 I. SCA'BRA (Roth, nov. spec. 359.) the whole plant is scabrous from adpressed strigæ: stem erect, tetragonal; leaves with 4 pairs of oval, mucronate leaflets; racemes elongated, loose, exceeding the leaves; legume pendulous, a little arched, strigose, and somewhat tetragonal. ⊙. ? S. Native of the East Indies.

Scabrous Indigo. Pl. 1 foot.

97 I. MICROCA'RPA (Desv. journ. bot. 1814. 1. p. 79.) stem?; leaves with 4 pairs of leaflets, covered with white hairs; racemes shorter than the leaves; legume very short, white, 2-seeded. Native of Brazil.

Small-fruited Indigo. Pl. ?

§ 4. *Brachýpodæ* (from βραχυς, *brachys*, short, and πους ποδος, *pous podos*, a foot; in reference to the petioles being very short). *D. C. prod. 2. p. 229. Leaves impari-pinnate; leaflets approximate. Petioles very short.*

98 I. FRA'GRANS (Retz, obs. 4. p. 29.) stems terete, rather pilose; leaves with 1 or 2 pairs of leaflets; leaflets ovate, terminal one obovate and larger; racemes longer than the leaves, 3-5-flowered; legume linear, tetragonal. ♄. S. Native of the East Indies.—Pluk. phyt. t. 166. f. 1. Flowers red.

Fragrant Indigo. Fl. June, July. Clt. 1816. Pl. 1 foot.

99 I. PUSI'LLA (Lam. dict. 2. p. 248.) stems terete, beset with a few adpressed strigæ; leaflets 3 or 4, alternate, oval, clothed beneath with white hairs, terminal one oblong and longer; racemes a little longer than the leaves, few-flowered; legume deflexed, linear, rather terete, 4-6-seeded, hardly puberulous. ⊙. ? S. Native of Madagascar and the Island of Bourbon. I. tenélla, Vahl. mss. Flowers red.

Small Indigo. Pl. prostrate?

100 I. GLA'BRA (Lin. spec. 1062.) stem herbaceous, smoothish; leaves with 1 or 2 pairs of obovate leaflets, which are smooth above and pubescent beneath; racemes few-flowered, length of leaves; legumes horizontal, glabrous, terete, acute. ⊙. H. Native of the East Indies.—Pluk. alm. t. 166. f. 1. Branches with a few long hairs. Stipulas setaceous. Flowers red.

Glabrous Indigo. Fl. July, Aug. Clt. 1820. Pl. 1 ft.? or pr.

101 I. ENNEAPHY'LLA (Lin. mant. 272.) stem herbaceous, procumbent, pubescent; branches compressed; leaves with 3-5 pairs of obovate-oblong, approximate leaflets; racemes sessile, length of leaves; legume straight, somewhat tetragonal, 2-seeded. ⊙. S. Native of the East Indies. Hedýsarum prostràtum, Burm. ind. t. 55. f. 1.—Pluk. alm. t. 166. f. 2. Stipulas membranous, dilated at the base, acuminated at the apex. Corolla dark purple.

Nine-leafletted Indigo. Fl. July, Aug. Clt. 1776. Pl. pr.

102 I. PENTAPHY'LLA (Lin. syst. veg. 564.) stems herbaceous, depressed; leaves with 2 pairs of oval leaflets: peduncles 2-flowered. ⊙. S. Native of? Very like the preceding species. Flowers red.

Five-leafletted Indigo. Pl. prostrate.

103 I. SEMITRI'JUGA (Forsk. descr. 137. Vahl. symb. 1. p. 56.) stem suffruticose, prostrate; branches terete, clothed with hoary villi; leaves with 2 pairs of obcordate, mucronate leaflets; racemes longer than the leaves; legumes pendulous, oblong, torulose, 2-seeded. ♄. S. Native of Arabia and eastern Asia. Mart. acad. mon. 6. p. 189. The whole plant is very villous. Flowers red. Perhaps only a variety of *I. enneaphýlla*.

Var. β; legumes 4-seeded. ♄. G. Native of Persia. I. argéntea, Burm. fl. ind. 171. but not of Lin. Coronílla Pérsica argéntea, Garcin. in herb. Burm.

Half-three-paired-leafletted Indigo. Shrub prostrate.

104 I. PU'LCHRA (Willd. spec. 3. p. 1239.) stems fruticose; branches terete, hairy; leaves with 1 to 3 pairs of oblong, acute, villous leaflets, those on the branches are sometimes simple; racemes ovate, villous, with rufous hairs, length of leaves, terminal, somewhat capitate; legume oblong, hairy, 2-3-seeded. ♄. S. Native of Guinea. I. ferrugínea, Thonn. in herb. Puer. I. rufèscens, Poir. suppl. 3. p. 148. Flowers red.

Fair Indigo. Shrub 1 foot.

105 I. MINIA'TA (Ort. dec. 98.) stems herbaceous, procumbent, and are as well as the leaves clothed with adpressed silky pubescence; leaves with 2-3 pairs of oblong-linear leaflets; racemes pedunculate, longer than the leaves; legumes linear, tetragonal, 4-seeded. ⊙. S. Native of Cuba. Flowers vermilion-coloured.

Vermilion-flowered Indigo. Pl. procumbent.

106 I. CYTISOI'DES (Thunb. prod. 133.) stem shrubby, erect; branches angular, and are as well as the leaves clothed with fine adpressed pubescence; leaves with 2 or 3 pairs of oblong, mucronate leaflets; racemes twice the length of the leaves; legumes somewhat cylindrical, and somewhat torulose. ♄. G. Native of the Cape of Good Hope. Jacq. hort. schœnbr. t. 235. Curt. bot. mag. 742. I. mucronàta, Lam. dict. 3. p. 247. Psoràlea cytisoìdes, Lin. spec. 1076.—Pluk. phyt. t. 185. f. 5. Racemes sometimes terminal from the abortive branches. Bracteas ovate, mucronate, large, deciduous. Flowers rose-coloured. Calyx hoary.

Cytisus-like Indigo. Fl. July, Aug. Clt. 1774. Sh. 3 to 5 ft.

107 I. LOTOI'DES (Lam. dict. 3. p. 247.) stem shrubby, erect; branches terete, clothed with hoary pubescence; leaves with 2 pairs of lanceolate, velvety leaflets; racemes longer than the leaves; calyx short; legume linear, a little arched, velvety, rather torulose. ♄. G. Native of the Cape of Good Hope. Comm. hort. 2. t. 84. Flowers red. Very like the preceding species.

Lotus-like Indigo. Fl. July, Aug. Clt. 1800. Sh. 2 to 3 ft.

108 I. NÍGRICANS (Vahl. in herb. Juss. Pers. ench. no. 46.) stem much branched, twiggy; leaves with 2 pairs of linear-cuneated leaflets; flowers panicled; legume short, strigose. ⊙. ? S. Native of Guinea. Allied to *I. pùlchra*, but differs in the pedicels rising from the axils of the superior leaves, solitary, 1-flowered, and therefore constituting a racemose panicle. Stems, pedicels, petioles, and under surface of leaves beset with white strigæ. Legume oval, 2-3-seeded, clothed with brown villi. Flowers purple.

Blackish Indigo. Pl. 1 foot.

109 I. CAPILLA'RIS (Thunb. prod. 133. fl. cap. 599.) stem suffruticose; branches slender, terete, glabrous; leaves with 2 or 3 pairs of filiform, acute, glabrous, approximate leaflets; racemes pedunculate, much longer than the leaves. ♄. G.

Native of the Cape of Good Hope. J. tenuifòlia, Lam. dict. 3. p. 249. Flowers red.

Capillary-leaved Indigo. Shrub ½ foot.

110 I. Perrinia'na (Spreng. neue. entd. 2. p. 161.) branches terete, beset with adpressed pili; leaves with usually 4 pairs of linear, obtuse, mucronate leaflets, which are lined above, and silky beneath; racemes few-flowered; legumes linear, clothed with rusty villi. ⊙. ? S. Native of South America.

Perrin's Indigo. Pl. 1 foot ?

111 I. angustifòlia (Lin. mant. 272.) stem shrubby; branches terete, hoary; leaves with 2-3-4 or 5 pairs of approximate, linear, obtuse leaflets, which are canescent on the under surface, and somewhat revolute at the margins; racemes 3 times longer than the leaves; calyxes canescent. ♄. G. Native of the Cape of Good Hope. Thunb. fl. cap. 599. Sims, bot. mag. 465. Polýgala pinnàta, Burm. cap. 20. Corolla purplish.

Narrow-leaved Indigo. Fl. Ju. Oct. Clt. 1774. Sh. 1 to 2 ft.

112 I. Humboldtia'na (Spreng. syst. 3. p. 276.) shrubby, erect, smoothish; leaves with 3 pairs of spatulate, mucronate leaflets, which are rather silky beneath; racemes exceeding the leaves; legumes pendulous, nearly terete. ♄. G. Native of Mexico. I. mucronàta, Willd. herb. Flowers red.

Humboldt's Indigo. Shrub 2 to 3 feet.

113 I. ornithopodioi'des (Schlecht. and Cham. in Linnæa. 5. p. 577.) leaves with 2 pairs of leaflets; pili strigose, cinereous; stems diffuse, prostrate; racemes on long peduncles, few-flowered, exceeding the leaves; calycine segments subulately-acuminated, equal in length to the corolla; legume deflexed, 8-seeded, straight. ⊙. S. Native of Mexico. Habit of *I. enneaphýlla.* Stipulas subulate. Flowers red.

Ornithopus-like Indigo. Pl. prostrate.

§ 5. *Digitàtæ* (from *digitàtus*, fingered, in reference to the leaflets all rising from a common centre, as the fingers of the hand). *Leaflets 3 or 5, rising from the same dot or centre, either from the top of petioles, or directly from the branches.*

114 I. sulca'ta (D. C. prod. 2. p. 231.) branches angular and furrowed, rather canescent; petioles wanting; leaflets 3-5, linear, mucronate, stiff, with somewhat revolute margins, clothed with hoary villi beneath; flowers axillary, on short pedicels, in fascicles. ♄. G. Native of the Cape of Good Hope. Flowers red.

Furrowed-stemmed Indigo. Sh. 1 to 2 feet.

115 I. aspalathoìdes (Vahl. in herb. Juss. D. C. prod. 2. p. 231.) branches terete, hoary from adpressed down, which is fixed by the centre; petioles wanting; leaflets 3-5, linear, very slender, somewhat complicated, beset with adpressed hairs; pedicels axillary, solitary, 1-flowered; legumes straight, terete, 4-6-seeded, rather puberulous. ♄. S. Native of Ceylon and Malabar. Aspálathus I'ndica, Lin. spec. 1001.—Burm. fl. ind. 155.—Pluk. phyt. t. 201. f. 1.—Rheed. mal 9. t. 3. Flowers red? Habit of *Aspálathus*, but the stamens are diadelphous, and the down and the legumes are that of *Indigófera.*

Aspalathus-like Indigo. Fl. Ju. Jul. Clt. 1817. Sh. 1 to 2 ft.

116 I. filifórmis (Thunb. fl. cap. 598.) branches terete, young ones rather hairy; petioles almost wanting; leaflets 5, oblong, cuneated, mucronate, strigose above, but white beneath, with the margins revolute; racemes pedunculate, much longer than the leaves; legumes straight, terete, spreading, glabrous, 8-10-seeded. ♄. G. Native of the Cape of Good Hope. I. cándicans, Sieb. pl. exsic. cap. no. 55. Very like the following species, but differs in the flowers being loosely racemose, not capitate. Thunberg says his plant has terminal racemes of flowers; in ours they are axillary.

Filiform Indigo. Fl. Ju. Aug. Clt. 1822. Shrub 1 to 2 ft.

117 I. alopecuroi'des (D. C. prod. 2. p. 231.) branches terete, young ones hairy; petioles very short; leaflets 5, elliptic-oblong, mucronate, clothed with adpressed strigæ on both surfaces; peduncles axillary, slender, 3 times longer than the leaves, bearing at the top an ovate head of flowers. ♄. ? G. Native of the Cape of Good Hope. Lòtus alopecuroìdes, Burm. cap. p. 23. Flowers red.

Fox-tail-like Indigo. Shrub.

118 I. coria'cea (Ait. hort. kew. 3. p. 68.) branches terete, hairy; petioles very short; leaflets 5, obovate, cuneated, somewhat emarginate and mucronate, beset with adpressed strigæ above, but hoary beneath; peduncles 3 times longer than the leaves; flowers disposed in dense heads; legumes straight, terete, glabrous. ♄. G. Native of the Cape of Good Hope. Lòtus Mauritánicus, Lin.. spec. 1091. I. Mauritánica, Thunb. fl. cap. 598. Lòtus fruticòsus, Berg. cap. 226. Lòtus racemòsus, Poir. suppl. 3. p. 508. Indigófera, Sieb. pl. exsic. cap. no. 54. This plant has very much the habit of *Dorýcnium.* Flowers red or purple.

Coriaceous Indigo. Fl. July, Aug. Clt. 1774. Sh. 2 to 3 ft.

119 I. sarmentòsa (Lin. fil. suppl. 334. Thunb. fl. cap. 596.) stem very short, much branched; branches filiform; leaves and calyxes clothed with adpressed strigose pubescence; petiole very short; leaflets ovate, small, mucronate; peduncles axillary, usually 2-flowered, much longer than the leaves; legumes cylindrical, glabrous. ♄. G. Native of the Cape of Good Hope. Onònis filifórmis, Lin. mant. 266. Lòtus exstipulàtus, Berg. cap. 227. Flowers red.

Var. β, microphýlla (Lam. dict. 3. p. 250.) leaves with 3-5 leaflets.

Sarmentose Indigo. Fl. June, July. Clt. 1786. Pl. straggling.

120 I. digita'ta (Thunb. fl. cap. 598.) branches slender, angular at the apex, and are, as well as the leaves and calyxes, somewhat canescent from adpressed strigæ; leaves stalked, palmately 5-6-foliate; leaflets lanceolate-linear, acute, complicated; peduncles much longer than the leaves, bearing at the top of each a dense ovate-oblong spike of flowers. ♄. G. Native of the Cape of Good Hope. Flowers red.

Digitate-leaved Indigo. Shrub 1 to 2 feet.

121 I. Burche'llii (D. C. prod. 2. p. 231.) branches slender, angular at the apex, and are, as well as the petioles and leaves, hoary from adpressed strigæ; leaves stalked, 4-5-foliate; leaflets obcordate, mucronate, hoary beneath, and rather strigose above. ♄. G. Native of the Cape of Good Hope. Burch. cat. no. 2918. Flowers red.

Burchell's Indigo. Shrub 1 to 2 feet.

122 I. sessilifòlia (D. C. prod. 2. p. 231.) branches terete, young ones canescent, at length becoming spinose; petioles wanting; leaflets 3, obovate-cuneated, retuse, somewhat emarginate, pubescent beneath; spikes pedunculate, longer than the leaves; legumes compressed, rather arched, glabrous, 4-seeded. ♄. G. Native of the Cape of Good Hope. This species is nearly allied to *I. spinòsa*, but differs in the leaves being all sessile, and in the legume being compressed, not terete. Flowers red.

Sessile-leaved Indigo. Shrub 1 to 2 feet.

123 I. spinòsa (Forsk. descr. 137. Vahl. symb. 1. p. 55.) branches grey; leaves on short petioles, trifoliate; leaflets obovate, hoary; stipulas acerose; peduncles spinose, 2-3-flowered, twice the length of the leaves; legume terete, but somewhat tetragonal, scabrous. ♄. G. Native of Arabia Felix, and the East Indies. This plant has the habit of a species of *Alhàgi.* Flowers red.

Spiny Indigo. Fl. May, July. Clt. 1820. Shrub 1 to 2 ft.

124 I. ca'ndicans (Ait. hort. kew. 3. p. 67.) branches slender, angular, clothed with adpressed silky canescent down; leaves stalked, trifoliate; leaflets lanceolate-linear, silky beneath; stipulas small; spikes pedunculate, few-flowered, much longer than

the leaves; legumes cylindrical, straight. ♄. G. Native of the Cape of Good Hope. Flowers red. Curt. bot. mag. 198.

White-leaved Indigo. Fl. May, June. Clt. 1774. Sh. 1 to 2 ft.

125 I. PSORALEOI'DES (Lin. syst. nat. 469.) branches angular, hardly pubescent; leaves petiolate, trifoliate; leaflets lanceolate, clothed with adpressed pubescence beneath; stipulas linear-subulate, elongated; racemes pedunculate, much longer than the leaves; legumes pendulous. ♄. G. Native of the Cape of Good Hope. Lam. ill. t. 626. f. 4. Sims, bot. mag. 476. Cýtisus psoraleoìdes, Lin. spec. 1043. Burm. cap. prod. p. 22. I. racemòsa, Lin. spec. 1062.— Pluk. phyt. t. 320. f. 3. ? but the racemes in the figure are shorter than the leaves. Flowers red.

Psoralea-like Indigo. Fl. Ju. Sept. Clt. 1758. Shrub 2 feet.

126 I. CINE'REA (Willd. spec. 3. p. 1225.) branches rather angular, clothed with greyish silky pubescence; leaves petiolate, trifoliate; leaflets oblong-lanceolate, silky; racemes length of leaves; legumes spreading, linear, mucronate, silky. ♄. S. Native of the East Indies. Flowers small, red.

Grey Indigo. Shrub 2 feet.

127 I. MOLUCCA'NA (D.C. prod. 2. p. 232.) branches slender, terete, puberulous; leaves petiolate, trifoliate; leaflets oblong-lanceolate, pubescent beneath; flowers axillary, sessile; legumes spreadingly deflexed, puberulous, rather tetragonal, 4-6-seeded. ♄. ? S. Native of the Moluccas. The middle leaflet is on a short petiole. The flowers are probably red.

Molucca Indigo. Shrub.

128 I. STIPULA'RIS (Link. enum. 2. p. 250.) stem beset with short strigæ; leaves trifoliate; leaflets oval, with a few adpressed hairs; stipulas oval, acute; racemes longer than the leaves. ♄. G. Native of the Cape of Good Hope. Perhaps belonging to a different section. Flowers red.

Stipular Indigo. Fl. May, July. Clt. 1824. Sh. 1 to 2 feet.

129 I. INCA'NA (Thunb. prod. 132. fl. cap. 596.) stems decumbent, very much branched, suffrutescent at the base; branches clothed with silky pubescence; leaves petiolate, trifoliate; leaflets ovate, acute, silky; legume reflexed, silky. ♄. G. Native of the Cape of Good Hope. Flowers red.

Hoary Indigo. Fl. May, July. Clt. 1812. Shrub decumbent.

130 I. ARCUA'TA (Willd. spec. 3. p. 1228.) branches angular, clothed with hoary pubescence; leaves petiolate, trifoliate; leaflets elliptic, obtuse, mucronate, canescent beneath; racemes about equal in length to the petioles; legume arched, reflexed, tetragonal, canescent. ⊙.? S. Native of the East Indies. Flowers red.

Arched-podded Indigo. Pl.

131 I. TRI'TA (Lin. fil. suppl. 335.) stem erect; branched at the base; leaves petiolate, trifoliate; leaflets ovate-lanceolate, acute; racemes shorter than the leaves. ⊙. ? ♂. ? S. Native of the East Indies. Flowers red.

Worn Indigo. Fl. June, July. Clt. 1802. Pl. 1 foot.

132 I. HEDYSAROI'DES (Lam. dict. 3. p. 250.) stem erect, branched at the base; leaves petiolate, trifoliate; leaflets ovate, obtuse; legume arched. ♄. G. Native of the East Indies, ex Rheed. mal. 9. t. 36. and perhaps of China if I. coccinea, Lour. coch. p. 457. be the same. Flowers deep red.

Hedysarum-like Indigo. Fl. June, Aug. Clt. 1822. Pl. 1 ft.

133 I. ERE'CTA (Thunb. prod. 133. fl. cap. 597.) stem herbaceous, nearly erect; leaves petiolate, trifoliate; leaflets obovate, acute, glabrous above, and clothed with fine pubescence beneath; legume cylindrical, acute, reflexed, pubescent.—Native of the Cape of Good Hope. Flowers red.

Erect Indigo. Pl. 1 foot.

134 I. PROCU'MBENS (Lin. mant. 271.) stems flexuous, decumbent, compressed, smoothish; leaves petiolate, trifoliate; leaflets obovate, smooth above, but clothed with adpressed pubescence beneath; racemes much longer than the leaves. ♃. G. Native of the Cape of Good Hope. Thunb. fl. cap. 597. Flowers blood-coloured, large for the size of the plant.

Procumbent Indigo. Fl. May, July. Clt. 1818. Pl. procumbent.

135 I. PROSTRA'TA (Willd. spec. 3. p. 1226.) stems filiform, prostrate, rather angular, and rather pubescent; leaves petiolate, trifoliate; leaflets obovate, whitish beneath; racemes shorter than the leaves; legumes pendulous, filiform. Native of the East Indies. Plant tufted. Flowers red.

Prostrate Indigo. Pl. prostrate.

† *Species not sufficiently known.*

136 I. ROTUNDIFÒLIA (Lour. coch. p. 458.) stem twining, herbaceous, pilose; leaves trifoliate; leaflets roundish, tomentose on both surfaces; racemes axillary, short; legumes oblong, flat, acuminated, glabrous, 2-seeded. ⊙. ◠. G. Native of China, near Canton. Flowers yellow.

Round-leafletted Indigo. Pl. twining.

137 I. BUFALI'NA (Lour. coch. p. 458.) stems suffruticose, climbing, glabrous; leaves trifoliate; leaflets ovate, glabrous; racemes axillary and terminal, on long peduncles; legumes straight, rather compressed, villous. ♄. ◡. G. Native of Cochin-china, among bushes. Flowers between white and purple.

Ox Indigo. Shrub cl.

138 I. STRIGÒSA (Spreng. neue entd. 3. p. 54.) shrubby; stems filiform; leaves abruptly-pinnate? leaflets 5-7, linear, acute, strigose; stipulas cuspidate; racemes terminal? flaccid. ♄. G. Native of the Cape of Good Hope. Allied to *I. filifórmis*.

Strigose Indigo. Shrub 1 foot.

139 I. OXYCA'RPA (Desv. journ. bot. 1814. vol. 1. p. 79.) stem angular, pentagonal, pilose; leaflets oblong-ovate, mucronate, pilose; spikes of flowers on long peduncles; legumes terete, a little incurved, acute. ♄. ? S. Native of the Antilles. Perhaps the leaves are pinnate or digitate.

Sharp-fruited Indigo. Shrub.

140 I. DIFFU'SA (Desv. l. c.) branches diffuse; leaflets obovate, somewhat emarginate, pilose; spikes of flowers very short; legumes divaricate, rather pilose. ♄. ? S. Native of the African islands.

Diffuse Indigo. Shrub.

Cult. The whole of the species of this genus are rather elegant delicate plants, and all the green-house shrubby kinds are worthy of general cultivation; these grow best in a mixture of sandy loam and peat, and they are easily propagated by young cuttings planted in sand with a bell-glass placed over them. The stove kinds require to be grown in the same kind of soil as the green-house kinds, and to be propagated in the same manner. The seeds of the annual species require to be sown in a hot-bed in spring, and when the plants have grown a sufficient height they may be planted singly in separate pots, and placed again in the hot-bed, and some may be planted out in the open ground in a sheltered situation.

LXXX. OU'STROPIS (from ους, *ous*, an ear, and τροπις, *tropis*, a keel; in reference to the keel of the flower being furnished with an auricle on each side).

LIN. SYST. *Diadélphia, Decándria.* Calyx hairy, tubular, 5-cleft; the segments subulate and acute, upper ones shortest. Vexillum broad, not emarginate, about equal in length to the wings, but longer than the keel. Keel furnished with an auricle on each side. Stamens diadelphous. Ovary pubescent, linear. Style glabrous. Stigma capitate and glandular. Legume short, cylindrical, and rather compressed, ending in the straight acute style, 3-seeded, the seeds lodged in as many cells.—A graceful small plant, with decumbent slender stems, which are slightly hairy; and small, trifoliate, rather hairy leaves, small subulate

stipulas; umbels of small rose-coloured flowers, on long axillary peduncles.

1 O. microphy'llus. ♃. G. Native of the Cape of Good Hope. Lòtus microphýllus, Hook, bot. mag. 2808.

Small-leaved Oustropis. Fl. July. Clt. 1827. Pl. decumbent.

Cult. The seeds of this plant should be sown thinly in a pot of light mould, and placed in the green-house, where the plants will rise, flower and seed, the same season.

LXXXI. CLITO'RIA (from *clitoris*, an anatomical term, a resemblance to the subject of which has been fancied to exist in the flower). Lin. gen. no. 869. Lam. ill. 609. Gærtn. fruct. 2. p. 149. D.C. legum. mem. vi. prod. 2. p. 233.—Ternàtea, Tourn. act. acad. par. 1706. t. 1.—Clitòrius, Pet. in Rai. hist. 3. p. p.p.

Lin. syst. *Diadélphia, Decándria.* Calyx furnished with 2 large bracteas at the base, 5-cleft (f. 34. *a*.). Vexillum large (f. 34. *b*.). Stamens diadelphous (f. 34. *d*.), inserted along with the petals above the base of the calyx. Style rather dilated at the apex. Legume linear, compressed (f. 34. *c*.), straight, 2-valved, acuminated by the base of the style, 1-celled, many-seeded. Seeds usually separated by cellular substance.—Climbing herbs, with impari-pinnate leaves, having 2 to 4 pairs of leaflets, but usually the leaves are pinnately-trifoliate; the leaflets usually stipellate. Flowers axillary, pedicellate, large, white, blue or purple, usually resupinate.

Sect. I. Terna'tea (in allusion to *C. Ternàtea* being a native of the island of Ternate). Kunth. nov. gen. amer. 6. p. 415. D. C. prod. 2. p. 233. Calyx tubular. Vexillum spurless. Leaves impari-pinnate, having 2 to 4 pairs of leaflets.

1 C. heterophy'lla (Lam. dict. 2. p. 51.) stems twining, slender, glabrous; leaves with 2 to 4 pairs of roundish, ovate, or linear leaflets; stipels none; pedicels solitary, 1-flowered; bracteoles small, acute. ♃. ⌒. S. Native of the Mauritius. Vent. choix. t. 26. Sims, bot. mag. 2111. Flowers blue.

Variable-leaved Clitoria. Fl. July, Aug. Clt. 1812. Pl. tw.

2 C. Terna'tea (Lin. spec. 1026.) stems twining, and rather pubescent; leaves with 2 to 4 pairs of oval or ovate leaflets; stipels subulate; pedicels solitary, one-flowered; bracteoles large, roundish; legumes smoothish. ♃. ⌒. S. Native of the East Indies, Mauritius, Arabia, Cuba, and usually cultivated in gardens in almost all parts of the world. Sims, bot. mag. 1542.—Rumph. amb. 5. t. 31.—Rheed. mal. 8. t. 38. C. spectábilis, Sal. prod. 336. Láthyrus spectábilis, Forsk. descr. 135. Ternàtea vulgàris, H. B. et Kunth, nov. gen. amer. 6. p. 415. Plumule inconspicuous according to Gærtn. There are varieties of this plant with blue and white flowers, and also variegated with those colours.

FIG. 34.

Var. β, bracteàta (Poir. suppl. 2. p. 301.) leaflets rather scabrous; legumes pubescent. ♄. S. Native of? Flowers whitish-purple.

Ternatea Clitoria. Fl. July, Aug. Clt. 1739. Pl. tw.

Sect. II. Euclitòria (from *eu*, well or good, and *clitoria*; in reference to this section containing the true species of the genus). D. C. legum. mem. vi. prod. 2. p. 234. Calyx tubular. Vexillum spurless. Leaves pinnately trifoliate, that is, with only one pair of leaflets and an odd one.

3 C. Maria'na (Lin. spec. 1026.) stems twining, glabrous; leaflets ovate-lanceolate; pedicels solitary, 1-3-flowered; bracteoles lanceolate, and are, as well as the calyxes, smooth; teeth of calyx nearly equal. ♃. ⌒. F. Native of North America, from Virginia to Carolina, in hedges by the sides of rivulets. Michx. fl. bor. amer. 2. p. 62. Flowers pale-blue, and flesh-coloured. Legume torulose. Seeds glutinous according to Michx.

Maryland Clitoria. Fl. Aug. Clt. 1759. Pl. tw.

4 C. Mexica'na (Link. enum. 2. p. 235.) stems twining; leaflets mucronate, glaucescent and pilose beneath; pedicels twin, 1-flowered; calyx cylindrical, much longer than the linear bracteoles; legume straight, hairy. ♃. ⌒. S. Native of Mexico. Flowers of an obscure purple colour. The plant is said to be nearly allied to the preceding species.

Mexican Clitoria. Fl. Sept. Nov. Clt. 1823. Pl. tw.

5 C. angustifòlia (H. B. et Kunth, nov. gen. amer. 6. p. 417.) stems twining, glabrous; leaflets linear-lanceolate, obtuse, and rather mucronate, rather scabrous above and glabrous beneath; pedicels usually solitary, 1-flowered; calyx smoothish, having the 4 superior teeth very short. ♃. ⌒. S. Native of South America, near Angustura. Flowers rose-coloured.

Narrow-leaved Clitoria. Pl. tw.

6 C. formòsa (H. B. et Kunth, nov. gen. amer. 6. p. 417.) stems twining, smoothish; leaflets oblong, obtuse, ending in a short mucrone each, glabrous; pedicels 1-4 together, 1-flowered; calyx urceolate, glabrous, having the 4 superior teeth very short. ♃. ⌒. S. Native on the banks of the river Orinoco. Flowers violaceous. Legume compressed, sessile, glabrous.

Beautiful Clitoria. Fl. July, Aug. Clt. 1823. Pl. tw.

7 C. racemòsa; stems twining, pilose; leaves pinnately trifoliate; leaflets ovate, entire, pilose; racemes axillary, spike-formed; legume curved. ♃. ⌒. S. Native of the island of St. Thomas, in the Gulf of Guinea. Flowers large, blue. Vexillum spurless?

Racemose-flowered Clitoria. Pl. tw.

8 C.? a'lba; plant glabrous, twining; leaves pinnately trifoliate; leaflets oblique, entire, glabrous; peduncles 2-3-flowered. ♃. ⌒. S. Native of the island of St. Thomas, in the Gulph of Guinea. Flowers white. Vexillum spurless?

White-flowered Clitoria. Pl. tw.

9 C. Poitæ'i (D. C. prod. 2. p. 234.) stems erect, rather velvety; leaflets elliptic, glabrous above, but clothed with silky velvety pubescence beneath, as well as the peduncles and calyxes; racemes longer than the leaves, rather panicled, spicate, many-flowered; calycine lobes acuminated, nearly equal. ♃. S. Native of French Guiana. Flowers large, red, and beautiful, disposed along the peduncles, sessile, and furnished with a bractea and 2 bracteoles each, appearing at first sight to be furnished with 3 bracteoles each; legume compressed, linear, glabrous, each standing on a stipe, which is equal in length to the calyx, 4 or 5 inches long, and 6 lines broad.

Poiteau's Clitoria. Pl. 2 feet?

Sect. III. Centrose'ma (from κεντρον, *centron*, a spur, and σημα, *sema*, a standard or vexillum; in reference to the vexillum being furnished with a spur behind). D.C. legum. mem. vi. prod. 2. p. 234. Calyx campanulate, cleft into 5 beyond the middle. Vexillum furnished with a spur behind. Bracteoles striated lengthwise. Leaves pinnately trifoliate, having one pair of leaflets, and an odd one.

10 C. Virginia'na (Lin. spec. ed. 1. p. 753.) stems climbing, and are, as well as the leaves, glabrous or puberulous; peduncles 1-4-flowered; bracteoles lanceolate, about the length of the calyx; legumes linear, compressed. ♃. ◡. F. Native of Virginia, Carolina, Jamaica, St. Domingo, and Porto-Rico, growing in hedges. Flowers very large, purplish or blue. Lindl. bot.

reg. 1047. C. calcarígera, Sal. par. t. 51. Perhaps there are numerous species confounded under this name.

Var. α, angustifòlia (D. C. prod. 2. p. 234.) leaflets linear.

Var. β, ellíptica (D. C. l. c.) leaflets ovate-oblong or elliptic. —Dill. hort. elth. t. 76.

Var. γ, ovàta (D. C. l. c.) leaflets ovate.—Pluk. alm. t. 90. f. 1.

Virginian Clitoria. Fl. July, Aug. Clt. 1732. Pl. cl.

11 C. Brasilia'na (Lin. spec. 1026.) stems climbing, rather glabrous; leaflets ovate-oblong, glabrous; pedicels twin, 1-flowered; bracteas ovate, longer than the calyx, and hiding it; legume linear, compressed. ♃. ◡. S. Native of Brazil and Cayenne, and of Maranham. C. amœ'na, Roth. cat. 2. p. 92. t. 3. ex Pers.—Breyn. cent. 78. t. 32. Flowers large, blue or white (ex Meyer.)

Brazilian Clitoria. Fl. July, Aug. Clt. 1759. Pl. cl.

12 C. Plumie'ri (Turp. in Pers. ench. 2. p. 303.) stems climbing; leaflets ovate-oblong, acuminated or ovate, glabrous; pedicels 1-3, somewhat racemose; bracteoles ovate, longer than the calyx; legumes linear, somewhat tetragonal. ♃. ◡. S. Native of Mexico, St. Domingo, and perhaps of Peru. Ker. bot. reg. 268. C. racemòsa, Moc. et Sesse, fl. mex. icon. ined. C. calcaràta, Lher. in herb. Domb.—Plum. amer. 1. t. 108. Flowers large, white, but with the middle of the vexillum and wings of a rose-purple colour, tomentose.

Plumier's Clitoria. Fl. Sept. Nov. Pl. cl.

13 C. specio'sa (Cav. curs. 182. ex Lag. et Rod. in anal. sc. nat. 1802. vol. 5. p. 72.) stems climbing; leaflets 3; calyx shorter than the bracteoles, and furnished with a cucullate scale; stipulas spotted with purple. ♃. ◡. S. Native of New Spain. Very like *C. Plumièri.*

Showy Clitoria. Pl. tw.

14 C. arbore'scens (Ait. hort. kew. ed. 2. vol. 4. p. 302.) stem arborescent; leaflets 3; peduncles many-flowered; ovary tomentose; style villous. ♄. S. Native of Trinidad. Flowers pink.

Arborescent Clitoria. Fl. Aug. Sept. Clt [illegible]

Sect. IV. Glycinópsis (from *glycine* and οψις, *opsis*, resemblance; the plants contained in the section resemble species of *Glycine*). D. C. legum. mem. vi. prod. 2. p. 235. Calyx campanulate, 5-toothed. Corolla and stamens inserted almost at the base of the calyx. Style dilated at the apex. Bracteoles striated lengthwise. Leaves pinnately trifoliate, that is, with one pair of leaflets, and an odd one.

15 C. Berteria'na (D. C. legum. mem. vi. prod. 2. p. 234.) stems twining, and are, as well as the leaves, pubescent; leaflets ovate, acuminated; peduncles longer than the leaves, bearing a kind of raceme at the apex, containing 5 or 6 flowers; legumes linear, compressed, apiculated, straight; bracteoles longer than the calyx. ♃. ⌒. S. Native of St. Domingo. Flowers yellowish, with the vexillum pubescent on the outside.

Bertero's Clitoria. Pl. tw.

16 C. cocci'nea (Schrad. gœtt. anz. 1821. p. 717.) stem twining; leaflets 3, elliptic-ovate or oblong, pubescent above, clothed with rusty villi beneath on the nerves, as well as on the petioles; peduncles elongated, usually 3-flowered; upper segment of the calyx truncate. ♄. ⌒. S. Native of Brazil. C. falcàta, Nees in flora. 1821. p. 329. but not of Lamarck. Flowers large, scarlet.

Scarlet-flowered Clitoria. Fl. July, Aug. Clt. 1820. Pl. tw.

† *Species not sufficiently known.*

17 C. vicioi'des (Nees et Mart. nov. act. bonn. 12. p. 28.) branches angular; leaves pinnate, having 10 or 11 pairs of oblong-elliptic pubescent leaflets; racemes axillary, pedunculate; calyx 4-toothed; flowers resupinate. ♃. ◡. S. Native of Brazil, on the road to Felisbert. Galáctia viciæfórmis, Spreng. syst. 3. p. 257. Corolla white. Vexillum broad and roundish.

Vetch-like Clitoria. Pl. tw.

Cult. The species of this genus are beautiful climbers and twiners, with large elegant pea-flowers, which are produced in abundance in hot seasons. The soil best adapted to them is a mixture of peat, loam, and sand. Cuttings will root under a bell-glass in heat; but the best method of increasing them is by seeds, which sometimes ripen in this country, and are generally received yearly from the places of their natural growth.

LXXXII. NEUROCA'RPUM (from νευρον, *neuron*, a nerve, and καρπος, *carpos*, a fruit; in reference to the valves of the pod being furnished with a strong longitudinal nerve each). Desv. journ. bot. 1814. 1. p. 75. H. B. et Kunth, nov. gen. amer. 6. p. 406. D. C. prod. 2. p. 235.—Rhombifòlium, Rich. herb.

Lin. syst. *Diadélphia, Decándria.* Calyx tubular, permanent, having 5 nearly equal acuminated teeth, furnished at the base with 2 lanceolate bracteas. Vexillum large, roundish. Keel obtuse. Wings 2. Stamens diadelphous. Legume stipitate, compressed, rather triquetrous, mucronate by the base of the style, the valves marked with a prominent nerve along the middle lengthwise. Stipe of legume girded by a sheath, which rises from the torus. Seeds 4 to 8, when young, generally separated by cellular substance.—Usually twining shrubs, with pinnately trifoliate leaves, and stipellate leaflets. Peduncles axillary, 1-2-flowered. Flowers large, white or purplish. Legume glabrous.

1 N. simplicifo'lium (Kunth, mim. 213. t. 59. nov. gen. 6. p. 407.) shrubby, erect; leaves simple, ovate-elliptic, rounded at both ends, emarginate, glabrous, rather glaucous beneath, puberulous on the nerves and veins; peduncles 2-flowered. ♄. S. Native of South America, on the banks of the river Orinoco. Flowers large, white.

Simple-leaved Neurocarpum. Clt. 1824. Shrub 2 feet?

2 N. angustifo'lium (Kunth, mim. p. 218. t. 60. nov. gen. amer. 6. p. 408.) shrubby, erect; leaves trifoliate; leaflets linear-lanceolate, obtuse, mucronate, [illegible] glabrous, glaucous beneath, and pilose on the nerves; peduncles solitary, 1-flowered. ♄. S. Native of South America, in sandy places near Maypures, on the Orinoco, and of New Andalusia, near Quetepe. Flowers large, white.

Narrow-leaved Neurocarpum. Shrub 2 feet.

3 N. glycinoi'des (Desv. obs. leg. in Schlecht. Linnæa. vol. 2. p. 510.) stems climbing, hairy; leaflets ovate-elliptic, mucronate, glabrous above, but pale and puberulous beneath along the nerves; racemes pedunculate, longer than the petioles, few-flowered; calyx clothed with adpressed villi, 5-cleft; the lobes acuminated, lowest one longest. ♃. ◡. S. Native of Cayenne. Legume 6-8-seeded. Flowers red in a dried state. Clitòria glycinoìdes, D. C. prod. 2. p. 234.

Glycine-like Neurocarpum. Pl. cl.

4 N. Guiane'nse (Desv. journ. bot. 1814. 1. p. 75.) stem erect, shrubby; leaves sessile, trifoliate; leaflets oblong, obtuse, and somewhat mucronate, and are, as well as the branches, pubescent; flowers 2-3, on very short peduncles. ♃. S. Native of Guiana, in meadows. Crotalària Guianénsis, Aubl. guian. 2. p. 761. t. 305. Crotalària longifòlia, Lam. dict. 2. p. 201. Rhombifòlium canéscens, Rich. herb. Stamens diadelphous. Flowers purplish.

Guiana Neurocarpum. Fl. June, July. Clt. 1824. Pl. 1 foot.

5 N. laurifo'lia (Desv. obs. legum. ex Schlecht. Linnæa. 2. p. 510.) erect; leaves on short petioles; leaflets 3, oblong-lanceolate, reticulated, obtuse; flowers axillary, usually twin. ♄. S. Native of Porto-Rico, in pastures. Corolla yellowish. Clitòria laurifòlia, Poir. suppl. 2. p. 301.

Laurel-leaved Neurocarpum. Shrub erect.

6 N. elli'pticum (Desv. l. c.) stems twining, rather herbaceous, pilose; leaves on longish petioles, trifoliate; leaflets elliptic, membranous, rather puberulous above, but glaucous beneath, and puberulous on the nerves; peduncles few-flowered, axillary, solitary; legume mucronate, resinous inside. ♄. ⌒. S. Native of St. Domingo. Crotalària ellíptica, Poir. Clitòria tetragòna, Poir. Clitòria rubiginòsa, Pers. ench. no. 9.

Elliptic-leafletted Neurocarpum. Pl. tw.

7 N. falca'tum (D. C. prod. 2. p. 236.) twining; branches hairy; leaves trifoliate; leaflets ovate, glabrous above, and hairy beneath; peduncles longer than the leaves, usually bearing about 3 flowers; legumes usually falcate. ♄. ⌒. S. Native of St. Domingo and Porto-Rico. Clitòria falcàta, Lam. dict. 2. p. 51. ex herb. Juss. Phaseolus amplíssimus magno-flore, &c. Plum. spec. 8. mss. 2. t. 85. ex Lam. Flowers purplish.

Falcate-podded Neurocarpum. Pl. tw.

8 N.? Javite'nse (H. B. et Kunth, nov. gen. amer. 6. p. 409.) creeping, suffruticose; leaves trifoliate; leaflets elliptic-oblong, acuminated, rounded at the base, coriaceous, glabrous above, and rather pilose beneath. ♄. S. Native of South America, on the banks of the river Tuamini near Javita, at the missions of the Rio-Negro. Flowers purplish?

Javita Neurocarpum. Shrub creeping.

9 N.? macrophy'llum (H. B. et Kunth, l. c.) arboreous; leaves trifoliate; leaflets roundish-elliptic, acuminated, rather cuneated at the base, membranous, hairy above, and clothed with fine pubescence beneath; peduncles bifid, racemose. ♄. S. Native of New Granada, near Turbaco. Flowers red. Legume hairy. Perhaps this shrub ought to be removed from the genus.

Large-leaved Neurocarpum. Shrub 10 feet.

Clt. The climbing and twining species of this genus should be treated in the same manner as the species of *Clitòria*, see p. 216. The upright kinds like other common stove shrubs.

LXXXIII. MARTIU'SIA

(in honour of C. F. P. Von Martius, M.D. professor of botany at Munich, in Bavaria, and companion of Spix in his travels in Brazil; author of a splendid work on Brazilian palms, &c.) Schultes, mant. 1. p. 69. D. C. prod. 2. p. 236.—Mártia, Leander, sacr. akad. munch. 7. p. 233. t. 12.

Lin. syst. *Tetrándria, Monogýnia.* Calyx tubular, permanent, somewhat bilabiate, having 5 acute teeth, the lower tooth longest. Corolla wanting. Stamens 4, 2 bearing anthers, and 2 sterile; filaments all distinct, one-half shorter than the ovary. Anthers somewhat ciliated. Legume stipitate, girded at the base by the calyx, with the stipe also sheathed, compressed, somewhat tetraquetrous; the valves furnished with a longitudinal nerve in the centre of each. Calyx, and especially the fruit, very like that of *Neurocárpum.* The want of petals, and the few distinct stamens, are the characters by which this genus can be known.

1 M. physaloìdes (Schultes, l. c.) ♄. ⌒. S. Native near Rio Janeiro, in fields, where it is called *cow poison* and *timbo.* Mártia physaloìdes, Leand. l. c. Stems frutescent, twining, villous. Leaves pinnately trifoliate; leaflets ovate-oblong, mucronate, glabrous above, but pubescent beneath. Peduncles 2-flowered. This plant is supposed to be deleterious to cattle and sheep in Brazil.

Physalis-like Martiusia. Shrub tw.

Cult. See *Clitòria* for culture and propagation, p. 216.

LXXXIV. COLOGA'NIA

(named by Kunth in honour of a family of the name of Cologan, residing at Port Orotavo, in Teneriffe, from whom men of science visiting that island experience the greatest hospitality). Kunth, mim. p. 205. H. B. et Kunth, nov. gen. amer. 6. p. 41?. D. C. prod. 2. p. 236.

Lin. syst. *Diadélphia, Decándria.* Calyx tubular, bibracteolate at the base, somewhat bilabiate; upper lip entire or bifid, lower one 3-parted. Vexillum roundish. Stamens diadelphous, inserted with the petals in the base of the calyx. Ovary stipitate, linear, very hispid, girded at the base by an orbicular disk. Style glabrous, obtuse.—Stems procumbent or twining, beset with retrograde hairs. Leaves pinnately trifoliate, rarely unifoliate. Flowers axillary, twin, pedunculate, violaceous or purple. Perhaps sufficiently distinct from *Clitòria* and *Galáctia.*

* *Leaves simple.*

1 C. procu'mbens (Kunth, mim. 205. t. 57.) procumbent; leaflet oblong or oblong-lanceolate, obtuse, smooth above, but strigose beneath, as well as the calyxes. ♃. S. Native of South America, near Popayan.

Procumbent Cologania. Pl. procumbent.

** *Leaves trifoliate.*

2 C. ovalifo'lia (H. B. et Kunth, nov. gen. amer. 6. p. 412.) twining; leaflets ovate-elliptic, obtuse, mucronate, rounded at the base, strigulose on both surfaces, rather glaucescent beneath; calyxes pilose. ♃. ⌒. S. Native of South America, on the banks of the river Amazon near Tomependa, in the province of Bracamora.

Oval-leafletted Cologania. Pl. tw.

3 C. pulche'lla (H. B. et Kunth, nov. gen. amer. 6. p. 413.) twining; leaflets elliptic-oblong, obtuse, rounded at the base, and somewhat cordate, rather strigose on both surfaces, glaucescent beneath; calyx pilose. ♃. ⌒. S. Native of New Spain, near Pazcuaro.

Neat Cologania. Pl. tw.

4 C. interme'dia (H. B. et Kunth, nov. gen. amer. 6. p. 414.) twining; leaflets oblong or linear-oblong, glabrous above, paler beneath, and strigose, as well as the calyxes. ♃. ⌒. S. Native of Mexico, in shady woods near Real del Monte.

Intermediate Cologania. Pl. tw.

5 C. angustifòlia (Kunth, mim. p. 209. t. 58.) twining; leaflets linear, obtuse, rather strigose on both surfaces; calyx covered with hispid pili. ♃. ⌒. S. Native of Mexico, in temperate parts of hills and mountains.

Narrow-leaved Cologania. Clt. 1827. Pl. tw.

6 C. Broussone'tii (D. C. prod. 2. p. 237.) twining; leaflets ovate-oblong, mucronate, rather strigose on both surfaces, paler beneath; flowers twin, on short pedicels; calyx villous, rather 5-cleft, the 2 superior lobes hardly connected, lower one longest. ♃. ⌒. S. Native of? Clitòria Broussonètii, Balb. cat. taur. 1813. p. 26. Allied to *C. ovalifòlia*, but is perhaps specifically distinct from all in the 2 superior lobes of the calyx being hardly connected.

Broussonet's Cologania. Clt. 1827. Pl. tw.

Cult. For culture and propagation see *Clitòria*, p. 216.

LXXXV. GALA'CTIA

(from γαλα, *gala*, milk; the *G. péndula* yields a milky juice when cut or broke). P. Browne, jam. 298. Michx. fl. bor. amer. 2. p. 61. D. C. prod. 2. p. 237.

Lin. syst. *Diadélphia, Decándria.* Calyx bibracteate, 4-cleft; the segments acute, and nearly equal. Corolla papilionaceous, having 5 oblong distinct petals; the vexillum broader than the rest, and incumbent. Stamens diadelphous. Style glabrous, crowned by an obtuse stigma. Legume terete or compressed, many-seeded, 2-valved, 1-celled, elongated.—Climbing subshrubs or herbs, with impari-pinnate or pinnately trifoliate leaves, with the leaflets stipellate. Racemes of flowers axillary.

1 G.? pe'ndula (Pers. ench. 2. p. 302. Ker. bot. reg. t. 269.) twining, pubescent; leaflets ovate-oblong, villous beneath, as well as the petioles; racemes longer than the leaves; flowers twin, pendulous; petals 4 times longer than the leaves. ♄. ⌒.

S. Native of Jamaica and Cayenne.—Sloane, jam. 1. t. 114. f. 4.—P. Browne, jam. 298. t. 32. f. 2. Clitòria Galáctia, Lin. spec. 1026. Flowers red. Shrub yielding a milky juice, and the legume is terete according to Sloane.

Pendulous-flowered Galactia. Fl. Jul. Aug. Clt. 1794. Sh. tw.

2 G. SERI'CEA (Pers. ench. 2. p. 302.) stem twining, pubescent: leaflets ovate, rather retuse, hoary and silky on both surfaces; racemes sub-spicate, axillary, shorter than the leaves; corolla a little longer than the calyx. ♄. ⌒. S. Native of the Island of Bourbon. Clitòria Phrýne, Comm. Juss. Legume glabrous, compressed, 4-5-seeded.

Var. β, phrynoìdes (D. C. prod. 2. p. 237.) leaves silky and rather hairy; pedicels axillary, and usually 1-flowered. ♄. ⌒. S. Native of the Mauritius. Superior lobes of calyx a little broader than the rest. Perhaps a proper species.

Silky Galactia. Clt. 1824. Shrub tw.

3 G. CUBE'NSIS (H. B. et Kunth, nov. gen. amer. 6. p. 429.) stem twining, beset with retrograde pubescence; leaflets elliptic, rounded at both ends, membranous, puberulous above, but clothed with soft canescent pubescence beneath; calyxes and legumes silky. ♃. ⌒. S. Native of Cuba, near the Havannah. Flowers purple.

Cuba Galactia. Pl. tw.

4 G. PILÒSA (Nutt. gen. amer. 2. p. 116.) stem twining, clothed with dense and soft pili; leaflets oval, obtuse, and pilose, paler beneath; racemes pedunculate, longer than the leaves; flowers nearly sessile; legume villous. ♃. ⌒. F. Native of Carolina and Georgia. Flowers reddish.

Pilose Galactia. Pl. tw.

5 G. MÓLLIS (Michx. fl. bor. amer. 2. p. 61.) stem twining, clothed with soft villi; leaflets ovate-oblong, obtuse, glaucous beneath, and nearly glabrous, smooth above; racemes pedunculate, a little longer than the leaves; flowers pedicellate; calyxes acuminated; legumes compressed, pubescent. ♃. ⌒. F. Native of Carolina and Georgia. Pursh. fl. sept. amer. 2. p. 486. Hedýsarum volùbile, Lin. spec. 1057.—Dill. hort. elth. 1. f. 170. Flowers purple, and variegated with yellow and white.

Soft Galactia. Fl. July, Aug. Clt. 1827. Pl. tw.

6 G. GLABE'LLA (Michx. fl. bor. amer. 2. p. 62.) stem prostrate and naked, twining, smoothish; leaflets elliptic-oblong, obtuse, emarginate at both ends, glabrous; racemes axillary, simple, short, few-flowered; flowers pedicellate; calyxes and legumes glabrous. ♃. ⌒. F. Native of North America, from New Jersey to Carolina, in pine barrens and sandy places. E'rvum volùbile, Walt. car. 187. Dólichos regulàris, Lin. spec. 1022. Flowers purple, red and white mixed.

Smooth Galactia. Fl. July, Aug. Pl. tw.

7 G. PU'RSHII (Desv. obs. leg. in Schlecht. Linnæa. 2. p. 510.) stem prostrate and somewhat twining, smoothish; leaflets elliptic-oblong, obtuse, emarginate at both ends, glabrous; racemes axillary, simple, short, few-flowered; calyx glabrous; legumes villous. ♃. ⌒. F. Native of North America, from New Jersey to Carolina. G. glabélla, Pursh. fl. sept. amer. 2. p. 487. but not of Michx. Flowers purple, red, and white mixed. Roots fusiform.

Pursh's Galactia. Fl. July, Aug. Pl. tw.

8 G. RADICA'TA (D. C. prod. 2. p. 238.) stem weak, twining, smoothish; leaflets oblong-linear, obtuse, glabrous; flowers axillary, pedicellate, twin; legume pubescent. ♃. ⌒. S. Native of Mexico. Clitòria Mariàna, Moc. et Sesse, fl. mex. icon. ined. but not of Lin. Flowers of a violet-purplish colour. Root woody, thick. Teeth of calyx 4, acute.

Thick-*rooted* Galactia. Pl. tw.

9 G. TUBERO'SA (D. C. prod. 2. p. 238.) stem twining, villous; leaflets ovate; flowers axillary, twin, almost sessile, and with the upper abortive leaves mixed among the flowers so as to give them the appearance of an interrupted spike of flowers; root tuberous, oblong. ♃. ⌒. S. Native of Mexico. Very like the preceding species. Flowers purple.

Tuberous-rooted Galactia. Pl. tw.

10 G. DU'BIA (D. C. prod. 2. p. 238.) stem twining, terete, beset with strigose pili, as well as the under side of the leaves and petioles; leaflets elliptic, obtuse, somewhat emarginate, glabrous above; racemes axillary, about equal in length to the leaves; legumes linear, rather falcate, acute, clothed with adpressed hairs. ♄. ⌒. S. Native of Guadaloupe. Galèga dùbia, Balb. herb. Calyx when young strigose, but at length becoming smooth, having the lobes acuminated. Corolla copper-coloured in a dried state.

Doubtful Galactia. Shrub tw.

11 G. JUSSIÆA'NA (Kunth. mim. 196. t. 55. nov. gen. amer. 6. p. 427.) stem creeping, suffruticose, clothed with silky tomentum; leaflets elliptic, rounded at both ends, rather coriaceous, silky-canescent above, but clothed with silky white tomentum beneath as well as the legumes; calyx clothed with silvery silky pubescence. ♄. S. Native of South America, on the banks of the river Orinoco, near Atures. Flowers rose-coloured.

Jussieu's Galactia. Shrub creeping.

12 G. BERTERIA'NA (D. C. prod. 2. p. 238.) stem twining, clothed with retrograde pili; petioles and leaves clothed with villous pubescence beneath; leaflets ovate, acutish, glabrous above; racemes spicate, longer than the leaves; calyxes glabrous, cleft into 4 beyond the middle: legume compressed, hooked at end, in consequence of the bent style, hairy in the middle of the valves, but glabrous on the margins. ♄. ⌒. S. Native of Porto-Rico. Flowers purple.

Bertero's Galactia. Shrub twining.

13 G. ANGUSTIFÒLIA (Kunth, mim. t. 56. nov. gen. amer. 6. p. 428.) stem erect, clothed with silky tomentum; leaflets linear-oblong, rounded at both ends, with the margins undulately-repand, coriaceous, clothed above with silky pubescence, and beneath with silky silvery tomentum; calyxes silky. ♃. S. Native of New Andalusia, on the declivities of Mount Tumiriquiri. Flowers purple?

Narrow-leafletted Galactia. Pl. 1 to 2 feet.

14 G. GLAUCE'SCENS (H. B. et Kunth, l. c.) stem erect? smoothish; leaflets elliptic-oblong, obtuse at both ends, coriaceous, glabrous, shining above, but glaucescent beneath; calyxes and legumes clothed with silky pubescence. ♄. S. Native of South America, in the province of Quito, at the river Cuella. Flowers violaceous.

Glaucescent Galactia. Shrub.

15 G. CORIA'CEA (Nees et Mart. nov. act. bonn. 12. p. 30.) shrubby, glabrous; leaflets ovate, cuspidate, glabrous, and reticulately veined beneath; racemes erect; pedicels tern; flowers pendulous. ♄. S. Native of Brazil. Calyx cylindrical, 4-cleft. Flowers of a beautiful red colour.

Coriaceous-leaved Galactia. Shrub 2 feet.

16 G. MA'RTII (D. C. prod. 2. p. 238.) stem prostrate, but twining at the apex; leaflets cordate-lanceolate, clothed beneath with yellowish silky pubescence, at length glabrous; racemes axillary; calyxes clothed with rufous villi. ♄. ⌒. S. Native of Brazil, in fields. Clitòria? angustifòlia, Nees. et Mart. nov. act. bonn. 12. p. 29. Calyx 4-cleft, in which particular it agrees with the rest of the species of this genus. Flowers bluish-purple.

Martius's Galactia. Pl. tw.

17 G.? NEE'SII (D. C. prod. 2. p. 238.) stems twining, tomentose; leaflets oblong, obtuse, tomentose beneath; flowers somewhat capitate; bracteas lanceolate; segments of calyx acuminated, villous. ♃. ⌒. S. Native of Brazil, in fields. Clitòria rubiginòsa, Nees et Mart. l. c. p. 29. but not of Pers. Corolla pale-blue. Calyx 4-cleft.

Nees's Galactia. Pl. tw.

18 G.? ELLIÓTTII (Nutt. gen. amer. 2. p. 117.) stems twining; leaves pinnate, with 3 pairs of oblong-elliptic, coriaceous, mucronulate, glabrous, shining leaflets, which are emarginate at both ends; racemes pedunculate, few-flowered, shorter than the leaves. ♃. ⌒. F. Native of South Carolina. Flowers pale-red. Lower segments of the calyx elongated. Ell. sketch. 2. p. 240. Flowers pale-red.

Elliott's Galactia. Pl. tw.

Cult. These plants should be cultivated and propagated in the same manner as that recommended for *Clitòria*, p. 216. but those species natives of North America do not require any heat.

LXXXVI. ODO'NIA (from *οδους οδοντος*, *odous odontos*, a tooth; in reference to the wings being furnished with one tooth each on the upper side). Bertol. lucub. 1822. p. 35. D. C. prod. 2. p. 239.

LIN. SYST. *Diadélphia, Decándria.* Calyx bractless, 4-parted, shorter than the corolla, the segments undivided and nearly equal. Vexillum erectly spreading. Wings having each a single tooth on the upper side. Carina bipartite below, deflexed, remote from the vexillum. Stamens diadelphous. Style hooked at length. Legume compressed, 1-celled, usually 8-seeded.—A twining, sarmentose herb, with pinnately trifoliate leaves and axillary racemes of flowers, which are shorter than the leaves. This genus comes very near *Galáctia.*

1 O. TOMENTÒSA (Bertol. l. c.). ♃. ⌒. S. Native of St. Domingo. Glycine velutina, Bertero, in herb. Balb. Young legumes clothed with velvety tomentum, adult ones almost glabrous.

Tomentose Odonia. Pl. tw.

Cult. See *Clitòria*, p. 216. for culture and propagation.

LXXXVII. STEGANO'TROPIS (from *στεγανος*, *steganos*, covered, and *τροπις*, *tropis*, a keel; in allusion to the keel being covered by the vexillum). Lehm. hort. sem. hamb. and nov. act. bonn. vol. 14. p. 820.

LIN. SYST. *Diadélphia, Decándria.* Calyx 5-toothed, bibracteate, permanent. Vexillum cucullate, bicallous at the base, and spurred behind, inclosing the wings and keel, which are membranous. Style membranous, dilated, and bearded at the apex. Legume linear, many-seeded.—A twining herb, with pinnately ternate leaves and 2-flowered peduncles.

1 S. CONJUGA'TUS (Lehm. in sem. hort. hamb. nov. act. bonn. xiv. p. 821.) stems villous; leaflets sessile, lanceolate, pubescent. ⊙. ⌒. S. Native of South America. Flowers greenish-yellow.

Conjugate-flowered Steganotropis. Fl. Ju. Jul. Clt. 1827. Pl. cl.

Cult. For culture and propagation see *Clitòria*, p. 216.

LXXXVIII. VILMORI'NIA (in honour of M. Vilmorin, Member of the Agricultural Society of Paris). D. C. prod. 2. p. 239.

LIN. SYST. *Diadélphia, Decándria.* Calyx bractless, cylindrical, obtusely 4-toothed, somewhat bilabiate. Corolla papilionaceous; petals oblong, with the wings shorter than the carina. Stamens diadelphous. Style glabrous, subulate, acute. Legume pedicellate, lanceolate, attenuated at the base, compressed, ending in a filiform point. Seeds 12-16.—An upright shrub, with impari-pinnate leaves. Stipulas broadish at the base, ending in a long subulate point. Racemes axillary. Flowers dark-red.

1 V. MULTIFLÒRA (D. C. prod. 2. p. 239.) stem erect, glabrous; leaves pinnate, with 5 or 6 pairs of ovate leaflets, which are pubescent on the under surface; racemes shorter than the leaves. ♄. S. Native of the West Indies, particularly in St. Domingo. Clitòria multiflòra, Swartz, fl. ind. occid. 3. p. 1253.

Many-flowered Vilmorinia. Clt. 1820. Shrub 6 feet.

Cult. For culture and propagation see *Clitòria*, p. 216.

LXXXIX. DIPLO'NYX (from *διπλοος*, *diploos*, double, and *ονυξ*, *onyx*, a claw; in reference to the wings, which are furnished with two claws each). Rafin. ex Spreng. syst. 3. p. 154.

LIN. SYST. *Diadélphia, Decándria.* Calyx urceolate, bilabiate, upper lip bifid, lower one trifid. Vexillum bent, with the claw glandular. Wings biunguiculate. Legume terete, 1-celled, many-seeded.—A twining shrub, with impari-pinnate leaves, having 6 pairs of leaflets; leaflets hastate, tomentose beneath. Flowers violaceous, disposed in racemes.

1 D. E'LEGANS (Rafin. ex Spreng. syst. 3. p. 277.). ♄. ⌒. G. Native of Louisiana.

Elegant Diplonyx. Shrub tw.

Cult. See *Clitòria* for culture and propagation, p. 216.

XC. BARBIE'RIA (in honour of J. B. G. Barbier, M. D. a French physician and naturalist, author of Principes Generaux de Pharmacologie ou de Matière Medicale, 1 vol. 8vo. Paris, 1806). D. C. leg. mem. vi. prod. 2. p. 239.

LIN. SYST. *Diadélphia, Decándria.* Calyx tubular, 5-cleft, bibracteate at the base; segments acuminated, equal. Corolla elongated; petals 5, on long stipes; wings shorter than the carina, and the carina shorter than the vexillum. Stamens diadelphous. Style filiform, bearded lengthwise at the apex. Stigma obtuse. Legume, judging from the ovary, linear, villous, 1-celled, many-seeded.—A shrub, with impari-pinnate leaves, having many pairs of stipellate leaflets. Racemes axillary, few-flowered, shorter than the leaves. Flowers of a scarlet-purplish colour. Stipulas and bracteas acuminated.

1 B. POLYPHY'LLA (D. C. l. c. t. 39.). ♄. S. Native of Porto-Rico. Clitòria polyphýlla, Poir. suppl. 2. p. 300. Galáctia pinnàta, Pers. ench. 2. p. 302. Flowers 2 inches long. Leaves having 9 to 11 pairs of elliptic-oblong, mucronate leaflets; the young ones canescent beneath, the adult ones pubescent.

Many-leafletted Barbieria. Clt. 1818. Shrub.

Cult. See *Clitòria*, p. 216. for culture and propagation.

XCI. KIESE'RIA (in honour of Kieser, some botanist known to Reinwardt). Reinw. ex Spreng. syst. 3. p. 153.

LIN. SYST. *Diadélphia, Decándria.* Calyx campanulate, 5-toothed, gibbous at the base, the lowest tooth longest and carinated. Vexillum orbicular. Stamens diadelphous. Style villous in front. Legume linear, compressed, hooked at the apex, 1-celled, many-seeded.—A tomentose shrub, with impari-pinnate leaves, and terminal racemes of white flowers.

1 K. SERI'CEA (Reinw. ex Spreng. syst. 3. p. 245.). ♄. S. Native of Java.

Silky Kieseria. Shrub.

Cult. For culture and propagation see *Clitòria*, p. 216.

XCII. GRO'NA (from *γρωνη*, *grone*, a cavern; in reference to the keel, which is hollowed beneath). Lour. coch. p. 459. D. C. prod. 2. p. 239.

LIN. SYST. *Diadélphia, Decándria.* Calyx permanent, 4-cleft; the lobes nearly equal, superior one emarginate. Corolla papilionaceous. Vexillum obcordate. Wings obtuse. Keel bent, concave below, joined with the wings as far as the middle. Stamens diadelphous, 9 joined together, and 1 free. Style filiform, crowned by a simple stigma. Legume straight, linear, compressed, many-seeded. Seeds kidney-shaped.—A suffruticose, creeping, prostrate plant, with simple, ovate, entire leaves, and subulate stipulas. Flowers purple, disposed in spikes, each bractea containing 2 flowers. Nearly allied to *Galáctia.*

1 G. RE'PENS (Lour. l. c.). ♄. G. Native of Cochin-china, on hills.

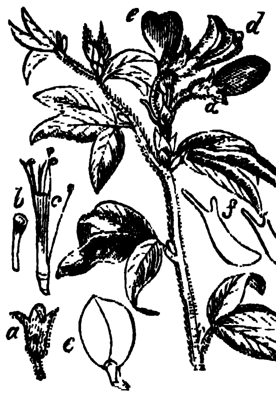
Creeping Grona. Pl. creeping.

Cult. A mixture of loam and sand will suit this genus, and cuttings will root freely in sand, under a hand-glass.

XCIII. COLLÆ'A (in honour of Aloysio Colla, of Turin, an acute botanist, author of Hortus Ripulénsis). D. C. ann. sc. nat. 1825. jan. p. 96. Leg. mem. vi. prod. 2. p. 240.

Lin. syst. *Diadélphia, Decándria.* Calyx 4-cleft (*f.* 35. *a.*), rather coloured on the inside; lobes oval-lanceolate, equal in length, upper one rather the broadest. Petals on long claws (f. 35. *f.*); the vexillum having 2 auricles, and the rest of the petals having only 1 auricle (f. 35. *f.*), those of the keel free at the base, obtuse, and straight. Stamens monadelphous, with the tube cleft in front, one of the stamens almost free (f. 35. *c.*). Ovary linear-oblong, very villous. Style linear, glabrous. Stigma capitate (*f.* 35. *b.*). Legume compressed, oval-oblong (f. 35. *e.*), tomentose, 4-6-seeded.—Shrubs, with terete, woody branches, ovate free deciduous stipulas, palmately trifoliate leaves, on short stalks, large purple flowers on long pedicels, 3 or 4 of which stand on the top of each peduncle, which is axillary and very short. Branches, peduncles, and lower surface of leaves tomentose, as well as the outside of the calyxes.

FIG. 35.



1 C. speciòsa (D. C. l. c. t. 40. prod. 2. p. 210.) leaflets oblong, acutish, quite smooth above, but clothed with hoary tomentum beneath. ♄. S. Native of Peru, about Huasa-Huasi. Cýtisus speciòsus, Lois. in Duham. arb. ed. nov. 5. p. 160. Odònia speciòsa, Spreng. syst. append. p. 279. Stamens 8, 5 of which bear anthers.

Shewy Collæa. Shrub.

2 C. trine'rvia (D. C. l. c. t. 41.) leaflets elliptic, cuneated at the base, 3-nerved, obtuse, mucronulate, clothed with velvety pubescence, reticulated, and somewhat tomentose beneath. ♄. S. Native of the East Indies, on the Nelligery mountains. Odònia trinérvia, Spreng. l. c. Stamens 10, diadelphous. Legume mucronated by the style, which is hooked at the base.

Three-nerved-leafletted Collæa. Shrub.

Cult. These shrubs will grow well in a mixture of loam and peat, and young cuttings will root freely in sand, under a bell-glass. They are both elegant shrubs when in flower.

XCIV. OTO'PTERA (from ους ωτος, *ous otos*, an ear, and πτερον, *pteron*, a wing; in allusion to the wings being furnished with an auricle on the unguis). D. C. legum. mem. vi. prod. 2. p. 240.

Lin. syst. *Monadélphia, Decándria.* Calyx 5-cleft, with the tube attenuated at the base; lobes acuminated, somewhat unequal, 2 superior ones approximate. Corolla papilionaceous. Vexillum large, roundish. Wings oblong, furnished each with an incurved, acute auricle on the stipe. Carina 2-edged. Stamens joined into an entire tube. Ovary linear, straight, compressed, many-ovulate. Style incurved, thickened at the apex. Legume unknown.—A smooth Cape subshrub, with pinnately trifoliate leaves; leaflets lanceolate-linear, ending each in a long mucrone, the lateral ones furnished each with one little stipule, the terminal one with two. Peduncles axillary, longer than the leaves, 2-flowered. Perhaps allied to *Psoràlea* or *Clitòria*.

1 O. Burche'llii (D. C. leg. mem. vi. t. 42.). ♄. ⌒. G. Native of the Cape of Good Hope. Branches terete, and perhaps twining. Lebéckia Burchéllii, Spreng. syst. app. 273.

Burchell's Otoptera. Shrub tw.?

Cult. For culture and propagation see *Clitòria*, p. 216.

XCV. PUERA'RIA (in honour of M. M. N. Puerari, a professor at Copenhagen). D. C. ann. sc. nat. 1825. jan. p. 29. Leg. mem. vi. prod. 2. p. 240.

Lin. syst. *Monadélphia, Decándria.* Calyx campanulate, bluntly bilabiate, upper lip entire or hardly bidentate, lower one trifid. Corolla papilionaceous. Keel straight, obtuse. Vexillum obovate. Stamens monadelphous. Legume compressed, attenuated into a stipe at the base, and apiculated by the style, 2-valved, continuous, many-seeded.—Climbing Indian shrubs, with deciduous stipulas, distinct from the petiole. Leaves trifoliate; leaflets large, ovate, acute, reticulately nerved, stipellate at the base. Racemes compound, branched. Flowers pedicellate, twin, or tern, yellowish. Fruit not sufficiently known. A very distinct genus from *Hedýsarum*.

1 P. tuberòsa (D. C. l. c.) leaves pubescent on the upper surface, but clothed with silky villi on the under as well as the calyxes and pedicels. ♄. ◡. S. Native of the East Indies. Racemes of flowers nearly 2 feet long. Hedýsarum tuberòsum, Roxb. in Willd. spec. 3. p. 1197.

Tuberous-rooted Pueraria. Shrub cl.

2 P. Walli'chii (D. C. leg. mem. vi. t. 43.) leaves glabrous on the upper surface, but pubescent on the under as well as the calyxes and pedicels. ♄. ◡. G. Native of Nipaul. Racemes 3 or 4 inches long.

Wallich's Pueraria. Shrub cl.

Cult. For culture and propagation see *Clitòria*, p. 216.

XCVI. DUMA'SIA (in honour of M. Dumas, one of the editors of Annales des Sciences Naturelles). D. C. ann. sc. nat. jan. 1825. p. 96. leg. mem. vi. prod. 2. p. 241.

Lin. syst. *Diadélphia, Decándria.* Calyx cylindrical, obliquely truncate, toothless, bibracteolate at the base. Corolla papilionaceous, the claws of the petals about equal in length to the calyx. Carina obtuse. Stamens diadelphous, permanent. Style dilated in the middle. Stigma terminal. Legume attenuated at the base, 2-valved, compressed, few-seeded, torulose.—Climbing herbs, which are perhaps suffruticose at the base. Leaves pinnately trifoliate; leaflets ovate. Racemes axillary, usually shorter than the leaves. Legumes velvety, from crowded short down. Bracteoles 2, small, subulate, under the calyx.

1 D. villòsa (D. C. l. c. t. 44. prod. 2. p. 241.) branches, petioles, peduncles, and young leaves, hairy; leaflets ovate-lanceolate, adult ones almost glabrous; legume 3-times longer than the calyx. ♃. ◡. G. Native of Nipaul. Flowers pale in a dried state, 5 lines long.

Villous Dumasia. Fl. Aug. Dec. Clt. 1824. Pl. tw.

2 D. pube'scens (D. C. l. c. t. 45. prod. 2. p. 241.) branches, petioles, peduncles, and leaves pubescent; leaflets ovate; legume 4-times longer than the calyx. ♄. ⌒. G. Native of Nipaul. Flowers yellow. Lindl. bot. reg. 962.

Pubescent Dumasia. Fl. Aug. Dec. Clt. 1824. Pl. tw.

Cult. For culture and propagation see *Clitòria*, p. 216.

XCVII. GLY'CINE (from γλυκυς, *glycys*, sweet; the leaves and roots of one or two of the species are sweet). D. C. leg. mem. vi. prod. 2. p. 241. Glycine species of authors.

Lin. syst. *Diadélphia, Decándria.* Calyx 5-cleft, somewhat bilabiate; upper lip bifid, lower one trifid. Corolla papilionaceous; vexillum not bicallous at the base. Keel not spirally twisted. Stamens diadelphous. Style filiform, acute. Legume linear, compressed, straight, many-seeded, 2-valved, 1-celled, ending in a thickish, hooked mucrone from the style.—Climbing herbs, with pinnately trifoliate leaves, and with the flowers rising in fascicles from the axils of the leaves or in racemes. Many genera are established from *Glycìne*, as it formerly stood, as *Rhynchòsia, Kennèdia, A'pios Voandzèia, Ròthia, Amphicárpa, Wistària*, and *Chætocàlyx.*

1 G. HEDYSAROÌDES (Willd. spec. 3. p. 1062.) stem erect, tomentose; branches twining a little; leaflets ovate, obtuse, mucronate, pilose beneath; flowers axillary, usually 5 together; legume broadest at the apex, ending in a short, erect, obtuse mucrone. ♄. ⌒. S. Native of Guinea. Flowers purple.

Hedysarum-like Glycine. Fl. Ju. Jul. Clt. 1823. Pl. 2 ft. tw.

2 G. CLANDESTÌNA (Wendl. obs. Willd. spec. 3. p. 1054.) stem twining, filiform, villous; leaflets lanceolate, pubescent beneath; flowers axillary, tern; calyx closed, larger than the 3-petalled corolla; legume hardly pubescent. ♄. ⌒. G. Native of New Holland. Flowers small, pale-yellow. Valves of legumes rather convex.

Clandestine-flowered Glycine. Fl. July, Aug. Clt. 1824. Shrub tw.

3 G. EMARGINA'TA (Desv. herb. ex Hamilt. prod. fl. ind. occ. p. 50.) stem woody; leaflets 3, elliptic-oblong, emarginate, about 2 inches long, quite glabrous, reticulated; flowers in spikes; calycine segments subulate, elongated. ♄. S. Native of St. Domingo.

Emarginate-leafletted Glycine. Shrub.

4 G. DE'BILIS (Ait. hort. kew. ed. 1. vol. 3. p. 54.) stem twining, filiform, beset with retrograde hairs; leaflets oval, pubescent beneath; flowers axillary, crowded; calyx silky, a little shorter than the corolla; legume glabrous, ending in a hooked style. ♂. ⌒. S. Native of the East Indies. G. labiàlis, Lin. fil. suppl. 3. p. 325. Flowers small, copper-coloured.

Weak Glycine. Fl. June, July. Clt. 1778. Pl. tw.

5 G. MI'NIMA (Willd. enum. 756.) stem twining, beset with retrograde pili; leaflets elliptic, acutish at both ends; flowers axillary, almost sessile, twin; legume glabrous, hooked at the apex. ♃. ⌒. G. Native of New Holland. Flowers purple.

Least Glycine. Fl. July, Aug. Clt. 1818. Pl. tw.

6 G.? LAGASCA'NA (D. C. prod. 2. p. 241.) stems twining; leaves and legumes clothed with villous tomentum; leaflets oval; racemes sessile, axillary, very short, few-flowered; legume ending in a short, straight mucrone. ♄. ⌒. S. Native of? Legume an inch and a half long, 2-4 lines broad, 4-6-seeded; seeds intercepted by cellular substance.

Lagasca's Glycine. Shrub tw.

7 G. STRIA'TA (Lin. fil. suppl. 326. Jacq. hort. vind. t. 76.) stem twining; leaflets oblong, clothed with hoary, soft, pubescence; racemes axillary, length of leaves; legumes very hairy. ♄. ⌒. S. Native of South America. Flowers striped, purple.

Striated-flowered Glycine. Fl. Jul. Aug. Clt. 1818. Sh. tw.

8 G. TENUIFLÒRA (Klein, in Willd. spec. 3. p. 1059.) stem twining; leaflets oblong, mucronate, shining, pilose beneath; racemes axillary, filiform; legume linear, acute, rather falcate, and rather pilose. ♄. ⌒. S. Native of the East Indies, on hills about Pondicherry. Flowers small, twin, remote, purplish?

Fine-flowered Glycine. Shrub tw.

9 G. PARVIFLÒRA (Lam. dict. 2. p. 738.) stems twining, rather angular; branches clothed with retrograde villi; leaflets ovate, pubescent beneath; racemes axillary, shorter than the leaves; legume linear, smoothish, ending in a thick hooked mucrone. ♂.? ⌒. S. Native of the East Indies. Flowers small, red.

Small-flowered Glycine. Fl. Jul. Aug. Clt. 1812. Pl. tw.

10 G. SENEGALE'NSIS (D. C. prod. 2. p. 242.) stem twining, terete; branches clothed with retrograde villi; leaflets ovate, pubescent above, but at length smooth, villous beneath; racemes axillary, longer than the leaves; legume linear, glabrous, ending in a thick hooked mucrone. ♄. ⌒. S. Native of Senegal. Flowers small, purplish?

Senegal Glycine. Shrub tw.

11 G. SERÍCEA (Willd. spec. 3. p. 1059.) stems twining; leaflets ovate, retuse, silky beneath; racemes longer than the leaves; legumes, when not mature, linear, acuminated, clothed with white silky pubescence. ♄. ⌒. S. Native of Guinea. Flowers of *Clitòria*, reddish, but the vexillum is narrow, oblong-obovate, and reflexed.

Silky Glycine. Shrub tw.

12 G. GUINEE'NSIS; plant twining and villous; leaves pinnately trifoliate; leaflets ovate-lanceolate, clothed with silky villi beneath; peduncles 3-4-flowered; legume compressed. ♃. ⌒. S. Native of the Island of St. Thomas, in the Gulf of Guinea. Flowers small.

Guinea Glycine. Pl. tw.

13 G. BÍLOBA (Lindl. bot. reg. 1418.) stem twining, pilose; leaflets oval, mucronulate, pubescent; racemes axillary, many-flowered, erect, shorter than the leaves; vexillum 2-lobed ♃. ⌒. S. Native of Mexico. Flowers violaceous.

Two-lobed Glycine. Fl. Nov. Clt. 1827. Pl. tw.

† *Species not sufficiently known.*

14 G. ANGULA'TA (Desv. journ. bot. 1814. vol. 1. p. 78.) stem angular; the angles hairy; leaflets ovate-oblong, obtuse, silky beneath; legumes linear, compressed, hairy. Native of North America.

Angular-stemmed Glycine. Pl. ?

15 G. EMARGINA'TA (Desv. l. c.) stems twining, woody; branches pubescent; leaflets quite smooth, emarginate at the apex; flowers racemose. ♄. ⌒. S. Native of the Antilles.

Emarginate-leafletted Glycine. Shrub tw.

16 G. LEUCOSPE'RMA (Desv. l. c.) stem twining, herbaceous, pubescent; leaflets elliptic, coriaceous, quite smooth; legume pilose. ♄. ⌒. S. Native of St. Domingo.

White-seeded Glycine. Shrub tw.

17 G. LANCIFÒLIA (Lag. nov. gen. et spec. p. 24.) stem twining; leaflets narrow, lanceolate, glabrous, lateral ones oblique; peduncles axillary, solitary, racemosely 4-flowered. ♄. ⌒. G. Native of the Canary Islands.

Lance-leafletted Glycine. Shrub tw.

18 G. ERE'CTA (Thunb. l. c.) stem erect, hairy; leaflets oblong, villous, having rather revolute margins; flowers usually 4 in an umbel. ♄. G. Native of the Cape of Good Hope. Flowers rufescent.

Erect Glycine. Shrub 2 to 3 feet.

19 G. HETEROPHY'LLA (Thunb. l. c.) stems decumbent and twining a little, glabrous; leaflets oblong and linear, glabrous; with somewhat revolute margins; flowers umbellate. ♃. ⌒. G. Native of the Cape of Good Hope. Flowers yellow.

Variable-leaved Glycine. Fl. July, Aug. Clt. 1816. Pl. tw.

20 G. ARGE'NTEA (Thunb. l. c.) stems twining, clothed with silky tomentum; leaflets ovate, somewhat mucronate, clothed with white tomentum beneath; peduncles axillary, 4-5-flowered; flowers umbellate. ♃. ⌒. G. Native of the Cape of Good Hope. Flowers yellowish.

Silvery Glycine. Pl. tw.

21 G. MONNIE'RA (D. C. prod. 2. p. 242.) stems diffuse, terete, glabrous; branches twining a little, clothed with adpressed pubescence; leaflets obovate or oval, rather acute, glabrous above, but clothed with adpressed pubescence beneath; peduncles longer than the leaves; flowers racemose, at length reflexed. ♄.? ⌒. G. Native of the Cape of Good Hope. Monnièra trifòlia, Burm. cap. prod. p. 20. exclusive of the synonymes.

Monnier's Glycine. Shrub cl.

22 G. SECU′NDA (Thunb. prod. 131. fl. cap. 591.) stems decumbent, filiform, angular, pubescent; leaflets roundish, glabrous above; racemes pedunculate, axillary, many-flowered; flowers secund; legumes hairy. ♃. G. Native of the Cape of Good Hope, in grassy places. Flowers yellow.

Secund-flowered Glycine. Fl. Jul. Aug. Clt. 1825. Pl. dec.

23 G. JAVA′NICA (Lin. spec. 1024.) stem twining, beset with retrograde villi as well as the petioles; peduncles length of leaves; flowers disposed in dense spikes, nodding; bracteas lanceolate, minute. Native of the East Indies and Japan. Thunb. in Lin. trans. vol. 2. p. 340. Flowers violaceous. The plant under this name in the herbarium of Retzius has 3-lobed repand leaflets, the middle lobe acute, the lateral ones short and very blunt; the peduncles are also longer than the leaves, and the flowers are disposed in rather loose spikes, also the calyx is acutely 5-toothed. It is, however, only the same species.

Java Glycine. Pl. tw.

24 G. VILLÒSA (Thunb. fl. jap. 283.) stems twining, tomentose; leaflets 3-lobed, acute, tomentose; racemes pedunculate, axillary, 2-5-flowered; legume tomentose. ♃. ? ⌒. G. Native of Japan. Flowers purplish ?

Villous Glycine. Pl. tw.

Cult. See *Clitòria* for culture and propagation, p. 216.

XCVIII. CHÆTO′CALYX (from χαιτη, *chaite*, a bristle, and καλυξ, *calyx*; in reference to the calyx being covered with spiny bristles). D. C. Leg. mem. vi. prod. 2. p. 243.

LIN. SYST. *Diadélphia, Decándria.* Calyx beset with glands and spiny bristles, bilabiate; segments subulate, those of the superior lip recurved, of the lower lip adpressed. Vexillum roundish, emarginate; keel conforming to the wings. Stamens diadelphous; filaments connected at the base. Ovary linear, many-seeded. Style compressed, filiform, villous. Legume unknown.—Frutescent twining plants, with impari-pinnate leaves, having 2 pairs of oval, mucronate, exstipellate leaflets. Stipulas lanceolate-linear, spreadingly deflexed. Pedicels filiform, 1-flowered, rising in numbers from the axils of the leaves. Flowers yellow. This genus has the habit of *Tephròsia*, but is perhaps more nearly allied to *Glýcine.*

1 C. VINCENTÌNA (D. C. prod. 2. p. 243.) leaflets obovate, glabrous on both surfaces, but pale beneath. ♄. ⌒. S. Native of the Island of St. Vincent. Glýcine Vincentìna, Lindl. bot. reg. 799.

St. Vincent Chætocalyx. Fl. May, Aug. Clt. 1823. Sh. tw.

2 C. PUBE′SCENS (D. C. prod. 2. p. 243.) leaflets oval, mucronate, clothed with velvety pubescence on both surfaces, as well as branches. ♄. ⌒. S. Native of St. Domingo. Glýcine pubéscens, Bertero, in herb. Balb. The stamens which were examined in one young flower were seen to be almost distinct.

Pubescent Chætocalyx. Shrub tw.

Cult. See *Clitòria* for culture and propagation, p. 216.

SUBTRIBE IV. GALE′GEÆ (plants agreeing in some important characters with *Gálega*). Bronn. l. c. exclusive of some genera, D. C. prod. 2. p. 243. Legume 1-celled (f. 36. *c.* f. 37. *c.*). Stamens diadelphous, rarely monadelphous. Stems herbaceous, shrubby, or arboreous. Leaves alternate or opposite, lower ones simple, the rest impari-pinnate.

XCIX. PETALOSTE′MUM (from πεταλον, *petalon*, a petal, and στημων, *stemon*, a stamen; in reference to the stamens being joined to the petals at the base). Michx. fl. bor. amer. 2. p. 48. D. C. prod. 2. p. 243.

LIN. SYST. *Monadélphia, Pentándria.* Calyx 5-cleft or 5-toothed. Petals 5, unguiculate, like each other in shape. Stamens 5, joined together into a tube. Vexillum conduplicate, free. Legume covered by the calyx, 1-seeded, indehiscent.—Perennial North American herbs, beset with glandular dots, with impari-pinnate leaves, and with the flowers disposed in dense, pedunculate spikes, which are either opposite the leaves, or terminal from the upper branches becoming abortive.

SECT. I. PETALOSTE′MON (see genus for derivation). D. C. prod. 2. p. 243.—Dàlea, with pentandrous flowers, Vent. Calyx 5-toothed; teeth short, not plumose. Petals on long claws, with roundish limbs. Spikes of flowers cylindrical; bracteas subulate.

1 P. CA′NDIDUM (Michx. fl. bor. amer. 2. p. 48. t. 37. f. 1.) spike cylindrical, on a long peduncle; bracteas longer than the flowers; leaves glabrous, with 3 pairs of lanceolate leaflets. ♃. F. Native of Tenessee, in the Illinois region, and on the banks of the Missouri. Dàlea cándida, Willd. spec. 3. p. 1337. Psoràlea cándida, Poir. suppl. Flowers white.

White-flowered Petalostemum. Fl. July, Aug. Clt. 1811. Pl. 1 foot.

2 P. CA′RNEUM (Michx. l. c.) spikes cylindrical, pedunculate; bracteas subulate, length of calyx; bracteoles setaceous, permanent; calyxes glabrous; leaflets lanceolate. ♃. F. Native of Georgia and Florida, in pine forests. Flowers pale flesh-coloured.

Flesh-coloured-flowered Petalostemum. Fl. July, Aug. Clt. 1811. Pl. 1½ foot.

3 P. VIOLA′CEUM (Michx. l. c. t. 37. f. 2.) spike cylindrical, on a short peduncle; bracteas about equal in length to the calyx; bracteoles spatulate, deciduous; calyxes silky; leaves having 2 pairs of linear leaflets. ♃. F. Native of Tenessee, in the Illinois country, and in the prairies of the Missouri. Dàlea violàcea, Willd. spec. 3. p. 1337. Dàlea purpùrea, Vent. hort. cels. t. 40. Psoràlea violàcea, Poir. suppl. Sims, bot. mag. 1707. Flowers pale-purple.

Violaceous-flowered Petalostemum. Fl. July, Sept. Clt. 1811. Pl. 1 foot.

4 P. MACROSTA′CHYUM (Torrey, in ann. lyc. 2. p. 176.) spike cylindrical, compact, very long; bracteas lanceolate; calyxes clothed with silky villi; leaves generally with 3 pairs of lanceolate-oblong glabrous leaflets. ♃. H. Native of North America, about the forks of the Platte. Flowers small, white.

Long-spiked Petalostemum. Pl. 2 feet.

5 P. RÒSEUM (Nutt. in Sillim. amer. journ. 5. p. 1822. p. 298.) plant glabrous; leaflets linear; bracteas subulate, very short, permanent; calyx striated, glabrous. ♃. F. Native of Eastern Florida. Very like *P. violàceum*, but differs in the calyxes being perfectly glabrous, and in the petals being rose-coloured.

Rose-coloured-flowered Petalostemum. Pl. 1 foot.

6 P. VILLO′SUM (Nutt. gen. amer. 2. p. 85.) plant villous, decumbent; spike cylindrical, nearly sessile; bracteas shorter than the woolly calyx; leaves having 7 pairs of linear-oblong leaflets. ♃. F. Native in sandy places near the river Missouri about Fort Mandan, at the Knife river. Root fusiform. Petals pale-red.

Villous Petalostemum. Pl. decumbent.

SECT. II. KUHNISTE′RA (in honour of Adam Kuhn, a pupil of Linnæus. There is, however, a genus *Kúhnia*, named by Linneus in compliment to him; the different termination of the word is to distinguish it from that genus). Lam. dict. 3. p. 370. Vent. mem. soc. hist. nat. par. p. 113. D. C. prod. 2. p. 244.—Cylipògon, Rafin. in journ. phys. aug. 1819. p. 97. Calyx almost 5-parted; segments plumose. Petals linear, attenuated at the base. Flowers capitate. Bracteas scarious, roundish, forming as it were an involucrum to the head of the flowers. Perhaps a proper genus.

7 P. CORYMBÒSUM (Michx. ex Poir. in herb. Juss. D. C. prod. 2. p. 244.) flowers disposed in panicled corymbs; leaves having 2-3 pairs of linear, awnless, glabrous leaflets; segments of the calyx very villous. ♃. F. Native of Carolina and Georgia, in pine barrens. Kúhnia affi'nis, Walt. car. 103. Kuhnistèra Carolinénsis, Lam. dict. l. c. Dàlea Kuhnistèra, Willd. spec. 3. p. 1337. Cylipògon virgàtum, Rafin. l. c. Petals white.

Corymbose-flowered Petalostemum. Fl. July, Sept. Clt. 1811. Pl. 1½ foot.

8 P.? CAPITA'TUM (D. C. prod. 2. p. 244.) stem striated, silky; leaflets 5, oblong-cuneiform, obtuse, entire, silky; spike oblong, capitate, clothed with rufous villi; bracteas imbricated; stamens inclosed. ♃. F. Native of the plains of Missouri. Cylipògon capitàtum, Rafin. l. c. Flowers yellow. Stamens 8, connected together at the base in this, as well as the following species, according to Rafin. l. c.

Capitate-flowered Petalostemum. Pl. 1 foot.

Cult. The species of this genus are very difficult to preserve in gardens. They should be grown in pots in a mixture of loam, leaf mould, and sand; and they are increased by seeds, or by dividing the plants at the roots.

C. DA'LEA (in honour of Thomas Dale, an English botanist of the last century). Lin. hort. cliff. 363. Michx. fl. bor. amer. 2. p. 56. D. C. prod. 244.—Parosélla, Cav. elench. hort. madr. —Dàlea, with decandrous flowers, Vent. Willd.

LIN. SYST. *Monadélphia, Decándria.* Calyx 5-cleft (f. 36. *a.*) or 5-toothed, sometimes beset with glands. Wings and carina adhering to the tube of the stamens. Vexillum short, free (f. 36. *b.*). Stamens 10, monadelphous. Legume ovate, 1-seeded (f. 36. *c.*), shorter than the calyx.—American herbs, which are sometimes suffruticose at the base, beset with glandular dots in every part. Stipulas adhering to the petioles at the base. Leaves impari-pinnate, having the terminal leaflet sessile. Flowers disposed in pedunculate spikes, which are opposite the leaves.

1 D. LAXIFLO'RA (Pursh, fl. sept. amer. 2. p. 741.) plant quite glabrous; stem tall, branched; leaves with usually 4 pairs of linear-oblong leaflets; racemes few-flowered; flowers distinct, having 9 stamens; bracteas glabrous, acute; calycine segments acuminated, silky, and plumose. ♃. F. Native of Upper Louisiana, Nutt. gen. amer. 2. p. 101. D. enneándra, Fras. Psoràlea laxiflòra, Poir. suppl. Flowers white. Leaves small, strong-scented. Calyx almost like that of *Petalostèmum*, Sect. vi. *Kuhnistèra.* Root reddish, and rather fusiform.

Loose-flowered Dalea. Fl. Jul. Aug. Clt. 1811. Pl. 3 to 4 ft.

2 D. AU'REA (Nutt. in Fras. cat. 1813. gen. amer. 2. p. 101.) plant clothed with silky villi; stem erect; leaves having 4 pairs of obovate leaflets, which are pilose beneath; spikes of flowers dense, cylindrical; bracteas rhomboid-ovate, about equal in length to the calyx; calyx densely clothed with wool; the teeth subulate. ♃. F. Native of Upper Louisiana, near White-river, on the Missouri. Pursh, fl. sept. amer. 2. p. 741. Psoràlea aúrea, Poir. suppl. Flowers golden-yellow.

Golden-flowered Dalea. Fl. July, Aug. Clt. 1811. Pl. 2 ft.

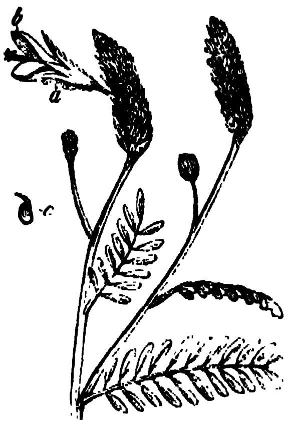
3 D. ALOPECUROI'DES (Nutt. gen. amer. 2. p. 101.) plant glabrous and erect; leaves having 10-15 pairs of linear-elliptic retuse leaflets; spikes of flowers ovate or cylindrical, pedunculate, beset with silky villi; bracteas length of calyx. ⊙. H. Native of Georgia, Florida, and Louisiana. Lin. hort. cliff. t. 22. Psoràlea Dàlea, Lin. D. Linnæ'i, Michx. fl. bor. amer. 2. p. 57. t. 38. D. alopecuroìdes and D. Cliffortiàna, Willd. spec. 3. p. 1336. Petalostèmum alopecuroìdeum, Pursh, fl. sept. amer. 2. p. 461. Psoràlea alopecuroìdes, Poir. Flowers having a white vexillum, and pale-violet wings and keel.

Fox-tail-like-spiked Dalea. Fl. Jul. Aug. Clt. 1812. Pl. 1 ft.

4 D. PEDUNCULA'TA (Pursh, fl. sept. amer. 2. p. 474.) plant smoothish; leaves with usually 6 pairs of linear, acute, mucronate leaflets; spikes of flowers oblong, axillary, rather crowded, and short; peduncles 3 times shorter than the leaves; bracteas minute, length of pedicels; teeth of calyx subulate. ⊙. H. Native on the banks of the river Mississippi. Flowers rose-coloured. Perhaps the same as *D. alopecuroìdes*, ex Nuttall.

Pedunculate-spiked Dalea. Pl. 1 foot.

FIG. 36.



5 D. LAGÒPUS (Willd. spec. 3. p. p. 1340.) plant glabrous, erect; leaves with 9-15 pairs of obovate-oblong obtuse leaflets; spikes of flowers pedunculate, cylindrical, beset with silky villi; bracteas ovate, acuminated, shorter than the calyx. ⊙. H. Native of Mexico. Psoràlea lagòpus, Cav. icon. 1. t. 86. P. leporìna, Ait. hort. kew. ed. 1. vol. 3. p. 81. Spike about an inch long. Flowers violaceous.

Hare's-foot Dalea. Fl. Oct. Nov. Clt. 1780. Pl. 2 to 4 feet.

6 D. ANGUSTIFÒLIA; plant herbaceous, smooth; leaflets 3 or 5 pairs, linear, pointless, glandular beneath; spike cylindrical; calyx downy, fulvous, with awl-shaped feathery teeth. ⊙. H. Native of Mexico. Stipels obsolete. Spike of flowers 2 inches long. Bracteas ovate, acuminated, blackish. Flowers small, purple. (v. s. herb. Lamb.)

Narrow-leafletted Dalea. Pl. 1 foot.

7 D. ALOPECU'RUS (Sesse and Moc. mss.) plant herbaceous, simple, hairy; leaves with 5 pairs of lanceolate, acute leaflets; spikes ovate-cylindrical, on long peduncles; calyx very hairy, with awl-shaped, feathery teeth; stipulas long and narrow. ⊙. H. Native of Mexico. Flowers large, purple. (v. s. herb. Lamb.)

Fox-tail-spiked Dalea. Pl. 1 foot.

8 D. SERI'CEA (Lag. nov. gen. et spec. p. 23.) plant ascending, clothed with adpressed silky villi; leaves with 4 or 5 pairs of oval-lanceolate acute leaflets; spikes of flowers ovate, on very long peduncles, silky-villous; bracteas oblong, acuminated, shorter than the calyx. ♃. S. Native of Mexico, near Guanaxuato. D. lóngipes, Moc. et Sesse, fl. mex. icon. ined. D. gràcilis, Kunth, mim. 166. t. 48. H. B. et Kunth, nov. gen. amer. 6. p. 481. Flowers of a dark-violaceous colour. Peduncles 8 or 9 inches long.

Silky Dalea. Fl. July, Aug. Clt. 1824. Pl. 1½ foot.

9 D. ACUTIFÒLIA (Moc. et Sesse, fl. mex. ined. D. C. prod. 2. p. 245.) plant glabrous, erect; leaves with 3 or 4 pairs of oblong-linear acute leaflets, the odd one longest; spike of flowers oblong, almost terminal, pedunculate; bracteas longer than the calyx. ⊙. G. Native of Mexico, on the mountains of Chilapan, in humid places. Flowers mixed with white and purple.

Acute-leaved Dalea. Pl. 1 foot.

10 D. HYPOGLOTTI'DEA (D. C. prod. 2. p. 245.) plant spreading, smoothish; leaves with 11-13 pairs of ovate leaflets; spikes of flowers ovate, on long peduncles, which are lateral and pubescent; bracteas length of calyx. ♃. S. Native of Mexico. Flowers purple. D. astragalina, Moc. et Sesse, fl. mex. ined.

Under-tongued Dalea. Pl. spreading.

11 D. ASTRAGALI'NA (H. B. et Kunth, nov. gen. amer. 6. p. 484.) plant shrubby, much branched; leaves with 8-11 pairs of lanceolate-oblong, mucronate leaflets, which are hardly scabrous above, but pubescent beneath, as well as the branches, and

somewhat glandular; spikes of flowers opposite the leaves, cylindrical, pedunculate; calyx glandular at the base, and with a hairy limb. ♄. S. Native of South America, near Quito, and on the mountains about Popayan. Flowers rose-coloured.

Astragalus-like Dalea. Shrub 4 to 6 feet.

12 D. PECTINA'TA (Kunth, mim. 169. t. 49. nov. gen. amer. 6. p. 483.) plant erect or procumbent, many-stemmed; leaves with 20-30 pairs of linear, acutish, canaliculately-concave, glabrous, glaucescent leaflets; spikes of flowers ovate-oblong, on long peduncles; bracteas subulate; calyx glandular and hairy. ♃. G. Native of Mexico, near Villalpando. Flowers violaceous, but yellow at the claws.

Pectinated-leaved Dalea. Pl. procumbent.

13 D. LANA'TA (Sesse et Moc. mss.) herbaceous, smooth; leaflets in many pairs, elliptic-oblong, blunt, glandular beneath; stipels obsolete; spike capitate; teeth of calyx awl-shaped, feathery. ⊙. S. Native of Mexico. D. lutéscens, Cerv. mss. Flowers large, white, tinged with purple. (v. s. herb. Lamb.)

Woolly Dalea. Pl. ½ foot.

14 D. PULCHE'LLA; herbaceous, smooth, with glandular, slightly warted branches; leaves with many pairs of obcordate leaflets, glandular on both surfaces, lower pair the largest and recurved; stipulas minute; spikes capitate; calyx very hairy, with bristle-shaped, feathered teeth. ⊙. S. Native of Mexico. Leaflets very small. Flowers large, purple. A slender plant. (v. s. herb. Lamb.)

Neat Dalea. Pl. ½ to 1 foot.

15 D. TUBERCULA'TA (Lag. nov. gen. et spec. p. 23.) plant erect, suffruticose, glabrous; stem and branches beset with tubercles; leaves with 4 pairs of cuneate-oblong retuse leaflets, which are beset with dot-like tubercles beneath; spikes of flowers oblong-cylindrical, villous; bracteas ovate, shorter than the calyx. ♄. G. Native of Mexico. Parosélla tuberculàta, Cav. elench. hort. madr. 1805. D. pendulìna, Moc. et Sesse, fl. mex. icon. ined.? Flowers purple.

Tubercled Dalea. Fl. July, Aug. Clt. 1824. Shrub 1 to 2 ft.

16 D. FORMÒSA (Torrey, in ann. lyc. 2. p. 177.) suffruticose, much branched, glabrous; leaves with 5 pairs of cuneate-oblong, retuse leaflets, which are beset with black dots beneath; spikes loose, few-flowered, on short peduncles; bracteas ovate, shorter than the calyx; calyx feathery, villous. ♄. G. Native of North America, on the Platte. Flowers large and shewy bright-purple. Allied to D. tuberculàta, Lag. but differs in its smooth stem and branches, and loose spikes of flowers.

Shewy Dalea. Shrub 1 to 2 feet.

17 D. CITRIODÒRA (Willd. spec. 3. p. 1339.) plant erect, glabrous, branched; stems beset with a few tubercles; leaves with 9-11 pairs of elliptic-oblong, glandless leaflets; spikes of flowers ovate, pedunculate; calyx villous, 10 nerved: bracteas ovate, mucronate by a bristle, rather longer than the calyx, deciduous. ⊙. H. Native of Mexico. Psoràlea citriodòra, Cav. icon. 3. t. 271. Psoràlea foliolòsa, Ait. hort. kew. ed. 1. vol. 3. p. 32. Dàlea latéripes, Moc. et Sesse, fl. mex. icon. ined. Flowers mixed with white and purple. Plant when bruised smelling of lemon.

Citron-scented Dalea. Fl. Oct. Nov. Clt. 1780. Pl. 1 foot.

18 D. LU'TEA (Willd. spec. 3. p. 1341.) plant decumbent, tomentose; leaves with 6 or 8 pairs of obovate, slightly emarginated leaflets, but the terminal one is longest; spikes of flowers ovate at first, but at length becoming cylindrical, pedunculate, villous; bracteas ovate, acute, shorter than the calyx. ♃. G. Native of Mexico. D. ovalifòlia, Ort. dec. p. 30. t. 3. Psoràlea lùtea, Cav. icon. 4. t. 325. D. flàva, Moc. et Sesse, fl. mex. icon. ined. Flowers yellow. Teeth of calyx awl-shaped, feathery.

Yellow-flowered Dalea. Pl. decumbent.

19 D. MUTA'BILIS (Willd. spec. 3. p. 1339.) erect, branched, glabrous; leaves with 5-10 pairs of obovate or obcordate leaflets; spikes of flowers cylindrical, at length much elongated, pedunculate; peduncles hispid just under the spike; calyx glabrous, striated with 10 black nerves; bracteas ovate, terminated by a bristle, shorter than the calyx. ♃. S. Native of Mexico and of the island of Cuba. Sims, bot. mag. 2486. D. bícolor, Willd. hort. berl. t. 89. ex Sims. D. obovatifòlia, Ort. dec. p. 31. Psoràlea mutábilis, Cav. icon. 4. t. 394. D. unguiculàta, Moc. et Sesse, fl. mex. icon. ined. Corolla at first white, but at length becoming of a violet colour.

Changeable-flowered Dalea. Fl. Oct. Nov. Clt. 1818. Pl. 1½ ft.

20 D. UNCÍFERA (Schlecht. et Cham. in Linnæa. 5. p. 580.) stem herbaceous, branched, beset with glandular hairs; leaves with 4 pairs of obovate, obtuse, mucronulate, stalked leaflets, which are dotted beneath and ciliated on the margins; stipulas filiform; spike terminal, ovate-cylindrical; bracteas navicular, longer than the calyx, ending each in a hooked acumen; calyx glandless. ⊙.? H. Native of Mexico. Corolla violaceous.

Hook-bearing Dalea. Pl. ½ foot.

21 D. THYMOÌDES (Schlecht. et Cham. in Linnæa. 5. p. 580.) shrubby, clothed with cinereous pubescence, decumbent; branches erect, beset with black dots; leaves petiolate, with 4 pairs of elliptic-lanceolate, obtuse, petiolulate leaflets, beset with black dots beneath; stipulas setaceous; spikes terminal, conical, but becoming at length cylindrical and loose-flowered; bracteas lanceolate, acuminated, hardly exceeding the calyx, which is glandless; calycine segments subulate, nearly equal. ♄. S. Native of Mexico. Corolla purple, but with the vexillum pale and perhaps yellow.

Thyme-like Dalea. Shrub procumbent.

22 D. VERBENA'CEA (Schlecht. et Cham. in Linnæa. 5. p. 579.) leaves with 2-pairs of obovate-cuneated, mucronate leaflets, tomentose on both surfaces, and beset with black dots beneath; stipulas subulately-acuminated; spike terminal, ovate; bracteas exceeding the calyx. ♄. S. Native of Mexico. Flowers purple.

Var. β, sericea (Schlecht. et Cham. l. c.) leaves with 4-pairs of leaflets, densely clothed with silky tomentum. ♄. S. Flowers paler than in the species.

Vervain-like Dalea. Shrub 1 to 2 feet.

23 D. LÆVIGA'TA (Sesse et Moc. mss.) plant herbaceous, smooth; leaves with 8 pairs of oblong, slightly mucronulate glandular leaflets; spike elongated, loose; calyx hairy, with prominent ribs and lanceolate pointed teeth. ⊙. H. Native of Mexico. Flowers large, purple. Stipulas and stipels minute. (v. s. herb. Lamb.)

Smooth Dalea. Pl. 1 foot.

24 D. DORYCNIOI'DES (D. C. prod. 2. p. 245.) plant erect, rather suffruticose and velvety; leaves with 2, rarely with only one pair of obovate-cuneated retuse leaflets, beset with dots on both surfaces; spikes of flowers capitate, pedunculate; peduncles and branches tubercular; bracteas ovate, acute, length of calyx. ♄. S. Native of South America. The heads of flowers are smaller than in any other species.

Dorycnium-like Dalea. Shrub 1 to 2 feet.

25 D. TRIPHY'LLA (Sesse et Moc. mss.) plant suffruticose, hairy; leaflets 3-lanceolate, acuminated; spike oblong; teeth of calyx and stipulas setaceous, feathery. ♄. S. Native of Mexico. Flowers large, yellow. (v. s. herb. Lamb.)

Three-leafletted Dalea. Shrub trailing.

26 D. HU'MILIS; herbaceous, hairy; leaflets 5 or 7, lanceolate, acuminate; spikes ovate; teeth of the calyx awl-shaped, feathery. ⊙. H. Native of Mexico. D. herbàcea, Sesse et Moc. mss. Plant spreading. Flowers small, yellow.

Humble Dalea. Pl. ½ foot.

27 D. LEPTOSTA'CHYA (D. C. prod. 2. p. 246.) plant erect,

suffruticose, glabrous; leaves with 3 pairs of oval leaflets, which are acuminated at both ends; racemes cylindrical, slender, pedunculate; bracteas ovate, acuminated, glabrous, deciduous, rather shorter than the calyx, which is villously tomentose and 10-ribbed. ♄. S. Native of South America. Leaflets 8 lines long, and 3 lines broad, with the petioles covered with dot-like tubercles. Flowers spreading, rather distant, apparently somewhat distich.

Slender-spiked Dalea. Shrub 1 to 2 feet.

28 D. VIRGA'TA (Lag. nov. gen. et spec. p. 23.) shrubby; leaves with many pairs of elliptic retuse leaflets; spikes of flowers ovate, rather aggregate, terminal; calycine teeth hairy. ♄. S. Native of Mexico.

Twiggy Dalea. Shrub 1 to 2 feet.

29 D. NU'TANS (Willd. spec. 3. p. 1339.) plant erect, branched, quite smooth; leaves with 10-15 pairs of elliptic, glandularly-crenated leaflets, with the petiole rather dilated between the pairs of leaflets; racemes cylindrical; flowers rather loose, nodding; calyx 10-ribbed, and ornamented with rows of glands; calycine teeth 5, lower one longest. ⊙. G. Native of Mexico. Flowers crimson. Leaflets stipellate; stipels minute, subulate, permanent. D. melilotoìdes, Moc. et Sesse, fl. mex. icon. ined. Calyx turbinate, with broad membranous teeth.

Nodding-flowered Dalea. Fl. July, Aug. Clt. 1824. Pl. 3 ft.

30 D. PULCHE'RRIMA (Sesse et Moc. mss.) herbaceous, smooth; branches glandular; leaflets many-pairs, linear-oblong, mucronulate, with the margins slightly crenate, together with the under surface glandular; stipels prominent; spike elongated, loose; calyx smooth, with prominent ribs, the teeth broad and membranous. ⊙. S. Native of Mexico. Flowers large, crimson. D. violàcea, Cervantes, mss. (v. s. herb. Lamb.)

Very-fair Dalea. Pl. 1 foot.

31 D. BI'COLOR (Willd. hort. berl. 2. t. 89.) spikes terminal, elongated; leaves usually with 3-5 pairs of obovate leaflets; stem shrubby; stipulas subulate. ♄. G. Native of Mexico. Hook. exot. fl. t. 43. Flowers yellowish white, having the keel tipped with blue. Plant smooth.

Two-coloured-flowered Dalea. Fl. Oct. Nov. Clt. 1817. Sh. straggling.

32 D. FLA'VO-RO'SEA (Moc. et Sesse, fl. mex. icon. ined. D. C. prod. 2. p. 246.) plant erect, suffruticose, clothed with velvety pubescence; leaves with 5 pairs of oval obtuse leaflets; spikes ovate, pedunculate; bracteas length of calyx. ♄. S. Native of Mexico. Corolla with a yellow vexillum, but with the rest of the petals rose-coloured.

Yellow-and-Red-flowered Dalea. Shrub 1 to 2 feet.

33 D. RECLINA'TA (Willd. spec. 3. p. 1340.) plant procumbent or ascending, clothed with silky villi; leaves with 6 pairs of lanceolate mucronate leaflets; spikes of flowers dense, cylindrical, villous; bracteas linear-subulate, length of calyx; calycine segments linear-subulate, feathery, length of vexillum. ♃. S. Native of Mexico. Psoràlea reclinàta, Cav. icon. 1. t. 87. Corolla of a pale violet colour.

Reclinate Dalea. Fl. July, Aug. Clt. 1820. Pl. proc.

34 D. TOMENTÒSA (Willd. spec. 3. p. 1341.) plant erect, villously-tomentose; leaves with 3 or 4 pairs of obovate mucronate leaflets; spikes of flowers ovate-cylindrical, almost terminal; bracteas filiform, longer than the calyx. ♃. S. Native of Mexico. Corolla pink Perhaps D. onobrychioìdes, Moc. et Sesse, fl. mex. icon. ined. ex D. C. Stipels obsolete.

Tomentose Dalea. Pl. 1 to 3 feet.

35 D. ARGE'NTEA; shrubby, upright, densely silky; leaflets 3 or 5, obovate-oblong, mucronate, glandular beneath; spikes ovate; calyx downy, with lanceolate, pointed teeth. ♄. S. Native of Mexico, near Jalapa. An upright branched shrub, clothed with silky down. Flowers small, pink. (v. s. herb. Lamb.)

Silvery Dalea. Shrub 2 feet.

36 D. VERRUCÒSA; shrubby, pubescent, with warty upright branches; leaflets 5 or 9, obovate, retuse, glandular beneath; spikes of flowers elongated, loose; calyx downy, with lanceolate pointed teeth. ♄. S. Native of Mexico. Spikes loose, 3 inches long. Flowers pale-purple. (v. s. herb. Lamb.)

Warted-branched Dalea. Shrub 1 foot.

37 D. PROSTRA'TA (Ort. dec. t. 69.) stems prostrate, clothed with canescent hairs, thickest towards the apex; leaves with 1 or 2 pairs of lanceolate leaflets, glabrous above, and pubescent beneath; spikes of flowers ovate, on short peduncles, recurved; bracteas lanceolate, length of the calyx, which is very villous. ⊙. ? G. Native of Mexico. Flowers yellow.

Prostrate Dalea. Pl. prostrate.

38 D. PROCU'MBENS (Moc. et Sesse, fl. mex. icon. ined. D. C. prod. 2. p. 246.) stems prostrate, pubescent, thickest at the base; leaves with 8 or 9 pairs of oval obtuse leaflets; spikes of flowers cylindrical, ascending, pedunculate; flowers drooping a little; vexillum very short. ⊙. G. Native of Mexico, at Chilapa. Flowers white, but with the keel rather violaceous.

Procumbent Dalea. Pl. procumbent.

39 D. MUCRONA'TA (D. C. prod. 2. p. 246.) plant erect, branched; axillary branches bearing a spike of flowers, and one leaf in the middle of each; leaves with 5 or 6 pairs of elliptic-oblong mucronate leaflets, which are acute at both ends; spikes of flowers dense, ovate; calyx quite smooth, with short teeth; bracteas subulate, rather longer than the calyx. ♃. S. Native of Mexico. Flowers small, white.

Mucronate-leafletted Dalea. Pl. 1 foot.

40 D. THOUI'NI (Schrank, hort. mon. t. 9.) plant erectish, glabrous; leaves with 3-5 pairs of obovate emarginate leaflets; spikes of flowers ovate, on short peduncles; bracteas ovate, acuminated, rather pilose, shorter than the calyx, which is rather hairy. ⊙. S. Native of South America. The spikes of flowers according to the figure are sessile, but according to the description pedunculate. Perhaps the same as *Petalostèmum séssile*, Moc. et Sesse, fl. mex. icon. ined. Perhaps a variety of *D. alopecuroìdes* only.

Thouin's Dalea. Fl. July, Aug. Clt. 1816. Pl. 1 foot.

41 D. PHYMATO'DES (Willd. spec. 3. p. 1338.) plant erect, shrubby, smooth; leaves with 7 or 8 pairs of obovate, somewhat mucronulate leaflets, which are dotted beneath; spikes of flowers capitate, on short peduncles; bracteas lanceolate-subulate, ciliated, shorter than the calyx; calycine lobes subulate, long, and very villous. ♄. S. Native of Caraccas. Psoràlea phymatòdes, Jacq. icon. rar. 3. p. 563. Psoràlea emphysòdes, Jacq. coll. 4. p. 144. Flowers at first white, but at length becoming violaceous.

Impostume-like Dalea. Fl. July, Aug. Shrub 2 to 3 feet.

42 D. DOMINGE'NSIS (D. C. prod. 2. p. 246.) erect, clothed with velvety pubescence; leaves with 6 or 7 pairs of obovate, obtuse, or emarginate leaflets, which are dotted beneath; spikes of flowers capitate, on short peduncles; bracteas ovate, acute, shorter than the calyx, which is villous; calycine lobes subulate. ♄. S. Native of St. Domingo. D. enneaphy̆lla, Bert. in herb. Balb. This species comes very near *D. phymatòdes*, but differs in the whole plant being clothed with velvety pubescence, not glabrous.

St. Domingo Dalea. Shrub 1 to 2 feet.

43 D. AYAVACE'NSIS (H. B. et Kunth, nov. gen. amer. 6. p. 486.) plant shrubby; branches villously-tomentose, and glandular; leaves with 7 or 8 pairs of oblong, somewhat mucronate leaflets, which are glabrous above, and pubescent beneath; spikes of flowers terminal, and opposite the leaves, oblong-cylindrical, pedunculate; calyx ornamented with rows of glands, with a hairy limb. ♄. S. Native of Peru, near Ayavaca. Flowers violaceous.

Ayavaca Dalea. Shrub 3 to 6 feet.

44 D. ENNEAPHY'LLA (Willd. spec. 3. p. 1338.) plant erect, shrubby, glabrous; leaves with 4 pairs of oblong obtuse leaflets, which are dotted beneath; spikes of flowers dense, on short peduncles, which are about equal in length to the leaves; lobes of calyx setaceous. ♄. S. Native of Carthagena, in bushy places. Psoràlea enneaphýlla, Lin. spec. 1076. P. Carthagenénsis, Jacq. amer. 206. exclusive of the synonyme of Pluk. P. enneaphýlla and P. Carthagenénsis, Poir. dict. 5. p. 560. Perhaps Jacquin's plant and that of Linnæus are distinct species. Flowers small, reddish.

Nine-leafletted Dalea. Fl. June, Aug. Clt. 1772. Shrub 2 to 4 feet.

45 D. ONOBRY'CHIS (D. C. prod. 2. p. 247.) plant erect, glabrous; leaves with 4-6 pairs of elliptic, somewhat mucronate leaflets, which are covered with dots beneath; peduncles opposite the leaves, and 4-times longer than them; spikes of flowers ovate-cylindrical, dense, villous; bracteas ovate, concave, ending in a bristle-like mucrone, rather longer than the calyx, which is villous. ♃.? S. Native of Peru. Flowers violaceous. Branches villous. Stipulas setaceous. Peduncles rather scabrous from a few tubercles.

Saintfoin-like Dalea. Pl. 1 to 2 feet.

46 D. MUTI'SII (Kunth, mim. 161. t. 47. nov. gen. amer. 6. p. 485.) plant erect, pubescent; leaves with 4-6 pairs of elliptic leaflets, which are beset with glandular dots and villi beneath, as well as the branchlets; spikes of flowers cylindrical, pedunculate, dense; bracteas ovate, ending in a long bristle point, longer than the flowers. ♄. S. Native of South America, at Santa Fe de Bogota. Galèga cærùlea, Lin. fil. suppl. 335. Tephròsia cærùlea, Pers. ench. 2. p. 329. Flowers blue.

Mutis's Dalea. Shrub 2 to 3 feet.

47 D. CYLI'NDRICA (Hook, bot. misc. 1. p. 213.) plant procumbent, smoothish; leaves with 6 pairs of obovate, somewhat mucronate leaflets, which are dotted beneath; peduncles opposite the leaves, and 3 times longer than them; spikes cylindrical, dense; bracteas ovate, concave, mucronate; calyx full of black dots, smooth, longer than the bractea; segments broad-awl-shaped, ciliated. ♄. S. Native of Peru, in the valley of Canta. Flowers blue.

Cylindrical-spiked Dalea. Shrub.

48 D. EXI'LIS (D. C. prod. 2. p. 247.) plant erect, glabrous; leaves with 5-7 pairs of oblong acute leaflets, small, beset by dots beneath; spikes of flowers pedunculate, nearly globose, dense; bracteas ovate, glabrous, obtuse, mucronate, or acuminated, length of the calyx, which is villous. ♃.? ♄.? S. Native of Peru. Flowers violaceous. Bracteas differing in shape even in the same head of flowers. Leaflets a line and a half long.

Lean Dalea. Pl. 1 to 2 feet.

49 D. MICROPHY'LLA (H. B. et Kunth, nov. gen. amer. 6. p. 482.) plant shrubby, procumbent; leaves with 9 or 10 pairs of glabrous, oblong, obtuse, thickish leaflets, beset with glandular dots beneath; spikes of flowers oblong-cylindrical; bracteas ending in a subulate acumen, beset with dots above, but silky beneath, length of calyx, which is clothed with glands and silky hairs. ♄. S. Native of Peru, on the mountains. Flowers yellow and red on the same plant according to Bonpland.

Small-leaved Dalea. Shrub procumbent.

50 D. OVALIFÒLIA; herbaceous, spreading, smooth; leaflets 5, elliptic, glandular beneath; stipulas minute; spike long and slender, few flowered; calyx hairy, ribbed, with long-pointed recurved teeth. ⊙. S. Native of Mexico. Plant much branched, spreading. Leaflets nearly an inch long. Spikes often a span long. Flowers white, stained with purple. (v. s. herb. Lamb.)

Oval-leafletted Dalea. Pl. 2 feet.

51 D. CORONÍLLA; herbaceous, upright, slightly villous; leaflets 7-9, obovate, mucronulate, glandular beneath; stipulas long, setaceous; spikes of flowers oblong; calyx truncate, fringed with obsolete teeth. ⊙. S. Native of Mexico. Flowers pale-purple. (v. s. herb. Lamb.)

Coronilla-like Dalea. Pl. 1 foot.

52 D. FRUTICO'SA; shrubby, minutely pubescent; leaves with many-pairs of oblong leaflets, which are rounded at both ends, minutely mucronulate, coriaceous and veiny; stipels prominent; spikes of flowers loose, with short blunt teeth. ♄. S. Native of Mexico. Spikes about 2 inches long, thinly flowered, somewhat corymbose. Flowers small, yellow? (v. s. herb. Lamb.)

Shrubby Dalea. Shrub.

Cult. All the species of this genus grow best in a mixture of loam and peat, and the shrubby and perennial kinds are easily increased by young cuttings planted in sand, with a hand-glass placed over them; those of the stove species in heat. The seeds of annual kinds should be sown in pots, which should be placed in a hot-bed, and the plants separated and planted into other pots singly when they have grown a sufficient size for that purpose, and some of them may be planted out into the open border in a warm sheltered situation, where they will probably ripen their seeds. None of the species are worth cultivating except in botanical gardens.

CI. GLYCYRHIZA (from γλυκυς, *glycys*, sweet, and ῥιζα, *rhiza*, a root; the sweetness of the root of liquorice is well known). Tourn. inst. 210. Lin. gen. 882. D. C. prod. 2. p. 247.—Glycyrhìza and Liquirítia, Mœnch. meth. 132 and 152. Pers. ench. 2. p. 313.

LIN. SYST. *Diadélphia, Decándria.* Calyx naked, tubular, 5-cleft, bilabiate; lobes, especially the 2 superior ones, joined together much farther than the others. Vexillum ovate-lanceolate, straight. Keel 2-edged or of 2 petals, straight, acute. Stamens diadelphous. Style filiform. Legume ovate or oblong, compressed, 1-celled, 1-4-seeded.—Perennial herbs, with long, perpendicular, sweet roots, impari-pinnate leaves, axillary racemes of blue, violaceous, or white flowers. This is the genus to which the various kinds of *liquorice* belong.

1 G. GLA'BRA (Lin. spec. 1046.) leaflets ovate, rather retuse, and somewhat clammy beneath, as well as the branches; stipulas wanting; spikes or racemes of flowers pedunculate, shorter than the leaves; flowers distant; legumes glabrous, 3-4-seeded. ♃. H. Native of the south of Europe, from Spain to Tauria, also of China, and cultivated in France, Italy, Germany, and England for the sake of its roots. Lam. ill. t. 625. f. 2. Wood. med. bot. 458. t. 167. G. læ'vis, Pall. itin. ed. gall. append. no. 364. Liquirítia officinàlis, Mœnch. l. c. Roots long, perpendicular. Stem only terete at the apex. Leaves usually with 5 pairs of leaflets. Flowers pale-blue. The name *liquorice*, according to Du Theis, is said to be a corruption of the French word *Reglisse*, which is itself a corruption of *Glycyrhìza*. It is more probable that the name *liquorice* has been given on account of the quantity of liquor the roots contain. *Liquorice* is much cultivated in Spain, and since Elizabeth's time has been grown in different parts of England. The soil most congenial to the growth of *liquorice* is a deep sandy loam, trenched by the spade or plough, or with the aid of both, to 2½ or 3 feet in depth, and manured if necessary. The plants are procured from old plantations, and consist of the side shoots which have eyes or buds. These may be taken off either in autumn, when a crop of *liquorice* is taken up for use, and laid in earth till spring, or taken from a growing plantation as wanted for planting. The planting season may be either October, or February, or March. In general the latter is preferred. The plants are dibbled in the rows 3 feet apart, and from 18 inches to 2 feet in the row, according to the richness or poverty of the soil. The after culture

consists of horse-hoeing, and deep-stirring in weeding, and in cutting down and carrying away the haulm every autumn, after it is completely withered. As the plants do not rise above a foot the first season after planting, a crop of onions is sometimes taken in the intervals. The plants must be three summers' growth, at the end of which the roots may be taken up by trenching over the ground. The roots are then either sold immediately to the brewers' druggists or to common druggists, or preserved like carrots or potatoes in sand, till wanted for use.

The roots of *liquorice* are externally brown, and internally yellow. Their taste is very sweet, combined with a slight degree of bitter when long kept in the mouth. The powder of *liquorice* usually sold is often mingled with flour, and perhaps also with substances not so wholesome. The best sort is of a brownish-yellow colour, the fine pale-yellow being generally sophisticated, and it is of a very rich sweet taste, much more agreeable than that of the fresh root.

Robiquet obtained from *liquorice-root*, 1. Amylaceous fecula. 2. A saccharine substance, having little resemblance to sugar. 3. A new crystalline substance. 4. A resinous oil, which is the cause of its acrimony in the decoctions. 5. Phosphate and malate of lime and magnesia. 6. Woody fibre.

The sweetness of *liquorice-root* depends upon a peculiar principle discovered by Robiquet, and called by him *glycyrhizin* and *glycion*. He prepared it by subjecting a strong cold infusion of the root to ebullition, which separated a coagulable matter. It was then filtered, and acetate acid added, which gradually threw down an abundant, transparent, gelatinous magma, which being washed with a little cold water to separate any adhering acid, he considered as pure *glycion*. Its taste is peculiar, and intensely sweet, and its smell is not perceptible unless thrown upon hot coal, when it is resinous.

The predominant constituents of *liquorice* being saccharine and mucilaginous matter, its only action is that of a mild demulcent, and as such it is frequently used in catarrh, and in some stomach complaints, which seem to arise from a deficiency of the natural mucus, which should defend the stomach against the acrimony of the food and the fluids secreted into it. On account of its bulk it is rarely exhibited in substance, but more frequently in infusion or decoction.

The extract of *liquorice* is never prepared by the apothecary, but is commonly imported from other countries. It is imported in cylindrical rolls, covered with bay leaves. It should be perfectly black, brittle when cold, and break with a smooth and glassy fracture, have a sweet taste without empyreume, and be almost entirely soluble in water. It is prepared from the fresh roots by expression, decoction, and inspissation. The best foreign extract of *liquorice* is prepared in Catalonia. The refined *liquorice* sold in the shops in small cylindrical pieces not thicker than a goose quill, is a composition with mucilage of glue. The extract possesses the same properties with the root, and is used for the formation of several kinds of troches.

Common or *Smooth* Liquorice. Fl. June, Sept. Clt. 1562. Pl. 3 to 4 feet.

2 G. GLANDULI'FERA (Waldst. et Kit. hung. 1. p. 20. t. 21.) leaflets oblong-lanceolate, clothed beneath with clammy pubescence, acute or emarginate; stipulas marcescent; spike of flowers pedunculate, shorter than the leaves; flowers distant; legumes 3-4-seeded, usually echinated with glands. ♃. H. Native of Hungary and of Caucasus, on the banks of the river Don. Stems angular at the apex. G. hirsùta, Pall. itin. append. no. 363. ex Bieb. fl. taur. suppl. 1431. Flowers blue.

Var. β; legumes smoothish. ♃. H. Native of Russia, on the banks of the Don. G. glàbra, Pall. itin.

Gland-bearing Liquorice. Fl. June, Aug. Clt. 1805. Pl. 2 to 4 feet.

3 G. LEPIDÒTA (Nutt. gen. amer. 2. p. 106.) leaflets oblong-lanceolate, acute, squamulose, under surface covered with glandular dots; stipulas linear-subulate; spikes of flowers pedunculate, shorter than the leaves, dense; legumes oblong, echinated by hooked bristles. ♃. H. Native of North America, abundant around St. Louis, and on the alluvial banks of the Missouri to the mountains, and is in all probability the *liquorice* mentioned by Sir A. Mackenzie as indigenous to the coasts of the North Pacific Ocean. Sims, bot. mag. 2150. Liquirìtia lepidòta, Nutt. in Fras. cat. 1813. Root flagelliform, creeping, possessing the taste of the common liquorice in a considerable degree.

Lepidoted Liquorice. Fl. July, Aug. Clt. 1811. Pl. 3 to 5 ft.

4 G. FŒ'TIDA (Desf. atl. 2. p. 170. t. 199.) leaflets oblong, mucronate, rather lepidoted, the odd one on a short petiole; stipulas subulate; spikes of flowers dense, pedunculate, about equal in length to the leaves; legumes oval, mucronate, 2-seeded, echinated by bristles. ♃. H. Native of Algiers and of Barbary, near Mayane. Leaflets 9-11. Root creeping. Flowers pale-yellow. The whole plant has a fetid scent when bruised.

Fetid Liquorice. Fl. July, Aug. Clt. 1817. Pl. 2 to 3 ft.

5 G. ASPE'RRIMA (Lin. fil. suppl. 330.) stems diffuse; leaflets obovate, retuse, or emarginate, usually mucronate, rather scabrous beneath, as well as the petioles and stems; stipulas lanceolate; legumes rather terete, torulose, 3-8-seeded, glabrous. ♃. H. Native of Siberia, on hills between the rivers Volga and Jaick, in the desert of Tartary, at the river Karaman, on the Ural mountains, and at Lake Inderskoi. G. áspera and G. hispida, Pall. itin. ed. gall. no. 365 and 366. t. 80 and t. 81. f. 1 and 2. Racemes axillary. Flowers pale-violet.

Very-rough Liquorice. Fl. July, Aug. Clt. 1795. Pl. 2 feet.

6 G. URALE'NSIS (Fisch. in litt. D. C. prod. 2. p. 248.) stem erect, covered with velvety pubescence; leaflets obovate, obtuse, almost glabrous; stipulas lanceolate; calyxes villous. ♃. H. Native of Siberia, on the Ural mountains. Fruit unknown. Very nearly allied to *G. aspérrima*. Flowers pale-violet.

Ural Liquorice. Fl. July, Aug. Pl. 2 feet.

7 G. ECHINA'TA (Lin. spec. 1046.) leaflets oval-lanceolate, mucronate, glabrous; stipulas oblong-lanceolate; spikes of flowers capitate, on very short peduncles; legumes oval, mucronate, 2-seeded, echinated by bristles. ♃. H. Native of Apulia, on mount Gardano, and in the northern provinces of China, and of Tartary. Jacq. hort. vind. t. 95. Sims, bot. mag. 252. Schkuhr, handb. 225. Racemes not half so long as the leaves. Flowers purple. The whole plant is glutinous to the touch. Roots horizontal, in taste like the common liquorice.

Echinated-podded Liquorice. Fl. Ju. July. Clt. 1596. Pl. 3 ft.

8 G. HIRSU'TA (Lin. spec. 1046.) leaflets oblong-lanceolate; legumes hairy. ♃. H. Native of the Levant. Tourn. cor. 26. Flowers purple.

Hairy-podded Liquorice. Fl. Ju. Sept. Clt. 1739. Pl. 2 to 3 ft.

9 G. UNDULA'TA (Ruiz et Pav. mss. in herb. Lamb.) leaves large, with 6 pairs of elliptic-oblong, undulated, acuminated, glabrous leaflets; panicles large, shorter than the leaves, spreading, composed of numerous racemes; rachis of flowers and calyxes pubescent; bracteas tomentose, 1-flowered. ♄. S. Native of Peru. Flowers purple.

Waved-leaved Liquorice. Shrub.

Cult. A deep light soil suits all the species of *Liquorice*, and they are easily increased by taking slips from the roots with eyes, and planting them in spring.

CII. GALE'GA (from γαλα, *gala*, milk; supposed to increase the milk in animals eating of the herb). Tourn. inst. t. 222. Lam. ill. t. 625. Pers. ench. 2. p. 328.—Galèga species of Lin. and others.

LIN. SYST. *Monadél[illegible]ia, Decándria*. Calyx with 5 subulate, equal teeth. Vexillum obovate-oblong. Keel obtuse. Stamens monadelphous, having the tenth one concrete, with the others one-half of its length. Style filiform, glabrous, crowned by a terminal dot-formed stigma. Legume rather terete, torulose, obliquely-striated. Seeds cylindrical.—Smooth, erect, perennial herbs, with impari-pinnate leaves, ovate or lanceolate, somewhat sagittate stipulas, and axillary, simple, many-flowered racemes. Flowers blue and white.

1 G. OFFICINA'LIS (Lin. spec. 1063.) leaflets lanceolate, mucronate, glabrous; stipulas broad-lanceolate; racemes longer than the leaves. ♃. H. Native of the south of Europe, in gravelly soils; also of Tauria and Barbary. Mill. fig. t. 137. G. vulgàris, Blackw. icon. t. 92.—Moris, hist. 2. p. 91. sect. 2. t. 7. f. 9. Flowers blue. *Goat's-rue* was formerly accounted cordial and sudorific; but is now out of repute. Mr. Boyle celebrated its virtues in pestilential and malignant fevers.

Var. β, albiflòra; flowers white.

Var. γ, Africàna (Mill. dict. no. 2.) leaflets broader and blunter; racemes longer.

Officinal Goat's-rue. Fl. Ju. Sept. Clt. 1568. Pl. 3 to 4 ft.

2 G. PE'RSICA (Pers. ench. 2. p. 328.) leaves usually with 5 pairs of ovate-oblong, rather retuse, mucronate, glaucescent leaflets; stem angular, flexuous; stipulas narrow-lanceolate, sagittate; bracteas linear-subulate, longer than the pedicels. ♃. H. Native of Persia. Sweet, fl. gard. 244. Flowers white.

Persian Goat's-rue. Fl. Ju. Sept. Clt. 1823. Pl. 2 to 3 ft.

3 G. BI'LOBA (Sweet, fl. gard. t. 159.) stem angularly striated, rather flexuous; leaves usually with 5-8 pairs of oblong, silky, pubescent leaflets, which are mucronate and 2-lobed at the apex; stipulas ovate-lanceolate, acute, acutely-serrated, sagittate; flowers crowded; bracteas subulate; twice the length of the pedicels. ♃. H. Native country unknown. Flowers bluish lilac.

Two-lobed-leaved Goat's-rue. Fl. June, Sept. Clt. 1823. Pl. 3 to 4 feet.

4 G. ORIENTA'LIS (Lam. dict. 2. p. 596.) leaflets ovate, acuminated, smooth; stipulas broad-ovate; racemes longer than the leaves; legumes pendulous; roots creeping. ♃. H. Native of Caucasus, and on all the oriental mountains. Sims, bot. mag. 2192. Ker. bot. reg. 326. G. montàna, Schultes, obs. 154. Flowers blue. The creeping roots and simple flexuous stems are sufficient to distinguish this species from all the others.

Oriental Goat's-rue. Fl. June, Aug. Clt. 1801. Pl. 2 to 4 ft.

Cult. All the species of this genus are very elegant, and well adapted for ornamenting flower borders. They are all easily increased by dividing the plants at the root in spring, or by seeds.

CIII. CALLO'TROPIS (from καλλος, *kallos*, beauty, and τροπη, *trope*, a keel; in reference to the keel being beautifully variegated). Galèga species, Hooker.

LIN. SYST. *Diadélphia, Decándria.* Calyx with 5 equal filiform teeth. Vexillum erect, ovate. Wings shorter than the keel. Keel incurved. Style incurved, tipped by a hairy stigma. Stamens diadelphous, joined ones incurved, the free one straight. Legume stipitate, compressed, rather terete, tapering to both ends, many-seeded.—A herb, clothed with pubescent pili, with impari-pinnate leaves, having 6-7 pairs of oblong-cuneated, pubescent, retuse, mucronulate leaflets, axillary racemes of drooping flowers, and lanceolate-subulate semisagittate stipulas.

1 C. TRI'COLOR. ♃. G. Native of New Holland, on the north coast. Galèga trícolor, Hook. exot. fl. t. 185. Flowers pale blue, with the base of the wings and vexillum white, the latter tipped with yellow.

Three-coloured-flowered Callotropis. Fl. June, Sept. Clt. 1823. Pl. 2 to 3 feet.

Cult. An elegant plant when in flower. For its culture and propagation see *Galèga*. It requires to be protected in winter.

CIV. TEPHRO'SIA (from τεφρος, *tephros*, ash-coloured; in allusion to the colour of the foliage of some of the species, as those of *T. cinèrea*, &c.) Pers. ench. 2. p. 328. Kunth, nov. gen. amer. 6. p. 458.—Crácca, Lin. fl. zeyl. 139. amœn. 3. p. 18.—Needhàmia, Scop. but not of R. Brown, nor Cass.

LIN. SYST. *Monadélphia* or *Diadélphia, Decándria.* Calyx bractless, nearly equal, 5-toothed (f. 37. *a.*). Vexillum large (f. 37. *b.*), roundish, silky or pubescent on the outside, spreadingly reflexed. Wings adhering to the keel, which is obtuse. Stamens variously connected, monadelphous or diadelphous. Style filiform. Stigma terminal. Legume usually sessile, compressed, linear (f. 37. *c.*), many-seeded, with the valves flat. Seeds compressed.—Shrubs or herbs, with usually impari-pinnate leaves, lanceolate or subulate stipulas, which are distinct from the petiole, not sagittate. In the true *Tephròsias* the leaves are impari-pinnate; in the spurious ones trifoliate or palmate. Racemes axillary, rarely opposite the leaves. Flowers white or purplish. This genus will hereafter probably be divided into several genera, when the characters are better known.

SECT. I. MUNDU'LIA (from *mundulus*, delicate, handsome; appearance of plants). D. C. leg. mem. vi. prod. 2. p. 249.—Robínia, Roxb. hort. beng. 56. but not of Lin. Leaves impari-pinnate. Racemes axillary, erect, usually panicled. Calyx truncate, or with 5 short teeth. Stamens monadelphous. Style glabrous, or as in *T. cándidum*, bearded.

1 T. SUBERO'SA (D. C. prod. 2. p. 249.) leaves with 7-10 pairs of elliptic-oblong mucronulate leaflets, which are glabrous above, and clothed with adpressed pubescence beneath; carina straightish; style glabrous; legume canescent, irregularly coarctate between the seeds. ♄. S. Native of Bengal. Robínia suberòsa, Roxb. l. c. Flowers rose-coloured. Vexillum hardly pubescent.

Corky-barked Tephrosia. Fl. Ju. Aug. Clt. 1818. Sh. 2 to 4 ft.

2 T. CHINE'NSIS (Lindl. hort. trans. 7. p. 38.) shrubby; leaves with 9-10 pairs of oblong, obtuse, pubescent leaflets; racemes axillary, horizontal, compressed, many-flowered; calyx bibracteolate; corolla pubescent; style glabrous; stigma capitate. ♄. G. Native of China. Stamens diadelphous. Flowers bright rose-coloured. Like *T. suberòsa.*

China Tephrosia. Fl. June. Clt. 1822. Shrub 2 to 3 feet.

3 T. FRUTICÒSA (D. C. prod. 2. p. 249.) leaves with 4 or 5 pairs of ovate-oblong, acute, glabrous leaflets, but are rather villous on the nerves beneath; petals and style glabrous; legume broadly oblong, compressed, velvety, drawn out downwards into a short acumen. ♄. ⌒. S. Native of the East Indies. Robínia fruticòsa, Roxb. l. c. Racemes panicled, short. Flowers small, red. Legume rusty.

Shrubby Tephrosia. Fl. June, Aug. Clt. 1816. Shrub cl.

4 T. SOPHOROI'DES (D. C in ann. sci. nat. 4. p. 99.) leaves with 3-5 pairs of elliptic-oblong, glabrous, acuminated leaflets; petals and style glabrous. ♄. G. Native of Nipaul. Flowers apparently white in a dry state, small.

Sophora-like Tephrosia. Shrub 2 to 4 feet.

5 T. BRACHYSTA'CHYA (D. C. l. c.) leaves with 7-8 pairs of elliptic, obtuse leaflets, the young ones clothed with adpressed silky pubescence on both surfaces, adult ones glabrous on the upper surface, but pubescent beneath; racemes panicled, shorter than the leafless part of the petiole; petals and style glabrous. ♄. G. Native of Nipaul. Flowers probably red.

Short-spiked Tephrosia. Shrub.

6 T. SERI'CEA (D. C. prod. 2. p. 249.) leaves with 6 pairs of oblong-lanceolate obtuse leaflets, which are glabrous above, but clothed with silky tomentum beneath; racemes nearly terminal. ♄. S. Native of Tranquebar. Cýtisus seríceus, Willd. nov.

act. nat. cur. berl. 4. 1803. p. 204. spec. 3. p. 1121. Flowers red. Legume 2 inches long, compressed, silky.

Silky Tephrosia. Fl. July, Aug. Clt. 1800. Shrub 2 to 4 ft.

7 T. CA'NDIDA (D. C. prod. 2. p. 249.) leaves with 8-11 pairs of elliptic-oblong mucronate leaflets, which are glabrous above, and pale and covered with silky pubescence beneath; legume linear, much compressed, clothed with adpressed pubescence, apiculated by the long style. ♄. S. Native of Bengal. Robinia cándida, Roxb. hort. beng. p. 56. Style curved into an angle, and the keel as if it were truncate. Vexillum silky on the outside. Flowers pale rose-coloured in a dried state.

White-leaved Tephrosia. Clt. 1816. Shrub 2 to 4 feet.

SECT. II. BRISSO'NIA (in honour of M. Brisson, a French ornithologist). Neck. elem. no. 1348. D. C. prod. 2. p. 249.—Erebínthus, Mich. gen. 210. Leaves impari-pinnate. Lobes of calyx broadest at the base, but ending in an elongated acumen. Stamens monadelphous. Style bearded laterally. Legumes more or less velvety, or hispid.

* *Flowers in fascicles, disposed in terminal racemes or panicles. Peduncles axillary.*

8 T. TOXICA'RIA (Pers. ench. 2. p. 328.) plant suffruticose, erect; leaves with 18 or 20 pairs of oblong-lanceolate, obtuse, somewhat mucronate leaflets, which are pubescent on the upper surface, but clothed with silvery-silky pubescence beneath; the down adpressed on both surfaces; legumes linear, rather terete, clothed with velvety villi, ending each in a short mucrone. ♄. S. Native of the West Indies and Cayenne, and said by Tussac to have been first imported from Africa.—Plum. icon. t. 135. Galèga toxicària, Swartz, fl. ind. occid. 1278. Tuss. ant. t. 20. Lam. dict. 2. p. 596. Galèga sinàpon, Buchoz, nat. hist. 10. dec. 10. t. 4. Flowers pale-red. The stamens, according to Swartz, are diadelphous, and the legume stipitate within the calyx, but in Plumier's specimen examined by De Candolle, the stamens are monadelphous, and the legume sessile; therefore, perhaps 2 distinct plants are here confused. The leaves and branches of this shrub well pounded, and thrown into a river or pond, very soon affects the water, and intoxicates the fish, so as to make them float on the surface as if dead; most of the large ones recover after a short time, but the greater part of the small fry perish on those occasions. It has been introduced to Jamaica and cultivated there on account of its intoxicating qualities.

Poison Tephrosia. Clt. 1791. Shrub 2 to 3 feet.

9 T. VIRGINIA'NA (Pers. ench. 2. p. 329.) plant herbaceous and erect; leaves with 8-11 pairs of oval-oblong acute leaflets, clothed beneath with white villi; calyxes woolly. ♃. F. Native from Canada to Florida, in dry sandy woods. Galèga Virginiàna, Lin. spec. 1062. but not of hort. Cliff.—Pluk. t. 23. f. 2. Flowers reddish, handsome. Plant covered with hoary villi. This species is considered in America as a powerful vermifuge.

Virginian Tephrosia. Fl. Ju. Aug. Clt. 1765. Pl. 1 to 3 ft.

* * *Peduncles opposite the leaves.*

10 T. HISPI'DULA (Pursh, fl. amer. sept. 2. p. 489.) plant herbaceous, trailing, slender, and pubescent; leaves having 6 or 7 pairs of oblong-oval, obtuse, mucronate leaflets; peduncles elongated. 3-5-flowered; legume oblong, falcate, rather hispid. ♃. F. Native from Virginia to Georgia, in pine woods, and on slate hills. Galèga hispídula, Michx. fl. bor. amer. 2. p. 68. G. spicàta, Walt. Flowers pale red, and yellowish white.

Hispid Tephrosia. Pl. trailing.

11 T. GRA'CILIS (Nutt. gen. amer. 2. p. 119.) plant herbaceous, erect, slender, smoothish, dichotomous; leaves with 6-7 pairs of oblong-elliptic, acute, mucronated leaflets, the lower pair approximating the stem; peduncles length of leaves, usually 3-flowered; legume linear, hairy, rather incurved. ♃. F. Native of Carolina and Georgia. Flowers pale red.

Slender Tephrosia. Pl. 1 foot.

12 T. PAUCIFO'LIA (Nutt. gen. amer. l. c.) plant herbaceous and erect, simple, velvety, and pilose; leaves with 6-9 pairs of remote, cuneate-oval, very obtuse leaflets, which are villous on both surfaces; peduncles length of leaves, usually 3-flowered. ♃. F. Native of Georgia and Florida. Flowers purple. The leaves are far apart upon the stem.

Few-leaved Tephrosia. Pl. 2 feet.

13 T. PROSTRA'TA (Nutt. l. c.) plant herbaceous, prostrate, pubescent; leaves with only 1 or 2 pairs of cuneate-obovate, coriaceous leaflets, which are glabrous above, but clothed with silky villi beneath, the lower ones approximating the stem; peduncles 3-flowered, longer than the leaves; legume linear, almost straight. ♃. F. Native of Georgia. Common about Savannah, in dry and sandy woods. Galèga villòsa, Michx. fl. bor. amer. 2. p. 67. T. chrysophýlla, Pursh, fl. amer. sept. 2. p. 489. Flowers purple.

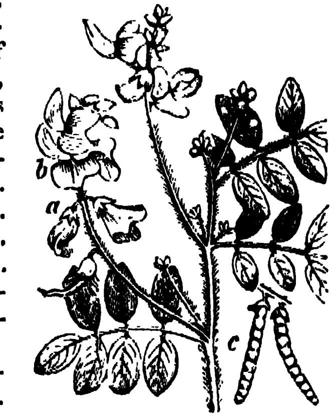
Prostrate Tephrosia. Pl. prostrate.

14 T. HI'SPIDA (D. C. prod. 2. p. 250.) plant herbaceous, erect, dichotomous; stem and petioles beset with stiff ferruginous hairs; leaves with 5 pairs of cuneate-obovate leaflets, which are villous on both surfaces; peduncles 7-10-flowered, much longer than the leaves; flowers spicate, lower ones distant; legume linear, straight, rather hispid. ♃. F. Native of Carolina. Flowers purplish?

Hispid Tephrosia. Pl. 1 to 2 feet.

SECT. III. CRACCOI'DES (*Cracca* and *idea*, similar; plants having the aspect of *Vicia crácca*). D. C. leg. mem. vi. prod. 2. p. 250. Leaves impari-pinnate. Lobes of calyx broadest at the base, ending in an elongated acumen. Stamens diadelphous. Style bearded. Disk in flower not manifest.

FIG. 37.



15 T. OCHROLEU'CA (Pers. ench. 2. p. 329.) plant suffruticose, erect, pubescently-villous; stipulas subulate; leaves with 2-3 pairs of ovate leaflets; peduncles axillary, longer than the leaves; flowers racemose; legume straight, quite smooth, and very narrow, containing from 14 to 18 seeds. ♄. S. Native of the Caribbee islands. Galèga ochroleùca, Jacq. icon. rar. t. 150. Galèga pubéscens, Lam. dict. 2. p. 597. Flowers cream-coloured, changing to reddish before fading. Legumes torulose.

Cream-coloured-flowered Tephrosia. Clt. 1799. Shrub 2 to 3 ft.

16 T. MÓLLIS (H. B. et Kunth, nov. gen. amer. 6. p. 462.) herbaceous, clothed with soft pubescence; leaves with 4-6 pairs of stipellate elliptic-oblong leaflets, which are rounded at the apex, and mucronate, clothed with adpressed pubescence above, and silky-silvery down beneath; racemes axillary. ♄. S. Native of New Andalusia. Flowers rose-coloured.

Soft Tephrosia. Shrub 2 to 3 feet.

17 T. ASTRAGALI'NA (H. B. et Kunth, l. c.) stem shrubby, tomentose; leaves with 8-9 pairs of stipellate, oblong, somewhat mucronate leaflets, which are rounded at both ends, and covered with adpressed pubescence above, but with canescent tomentum beneath, as well as the legumes; racemes axillary; flowers scattered. ♄. S. Native about Quito. Flowers white.

Milk-Vetch-like Tephrosia. Shrub 2 feet.

18 T.? OROBOI'DES (H. B. et Kunth, nov. gen. amer. 6. p. 462. t. 578.) plant erect, shrubby, branched; leaves with 4-6-

pairs of lanceolate-linear, acute, pilosely-pubescent leaflets; pedicels axillary, elongated, 1-2-flowered, 1-leaved at the apex; legume terete, puberulous. ♄. G. Native of Mexico, near Guanaxuato. Habit nearly of *T. stricta*.

Var. β, leiocárpa (D. C. prod. 2. p. 255.) young legumes glabrous; leaves with 4 pairs of lanceolate short leaflets.

Orobus-like Tephrosia. Shrub 2 to 3 feet.

Sect. IV. Reine'ria (in honour of Joseph Reiner Von Hohenwarth, author of Botanische reisa, 1 vol. 8vo. 1796). Mœnch. suppl. p. 44. D. C. prod. 2. p. 251. Leaves imparipinnate. Teeth of calyx linear-subulate. Stamens sometimes somewhat monadelphous, and sometimes diadelphous. The species contained in this section are disposed in an artificial manner, some with many pairs of leaflets and some with few.

19 T. Caribæ'a (D. C. prod. 2. p. 251.) shrubby, branched, smooth; leaves with 10-12 pairs of oval, awnedly-mucronate leaflets; peduncles axillary, rather longer than the leaves, few-flowered; legume linear, deflexed, glabrous, furrowed between the seeds. ♄. S. Native of the Caribbee Islands. Galèga Caribæ'a, Jacq. amer. 212. t. 125. Flowers scentless, variegated with white and red. Stamens diadelphous.

Caribbean Tephrosia. Fl. June, July. Clt. 1786. Sh. 3 ft.

20 T. emargina'ta (H. B. et Kunth, nov. gen. amer. 6. p. 461.) arborescent; branches tomentose; leaves with 14 pairs of linear-oblong leaflets, which are deeply emarginate at the apex, clothed with adpressed pubescence above, and silvery silky down beneath; racemes terminal; flowers in fascicles; legumes straightish, clothed with silky tomentum as well as the calyxes. ♄. S. Native of South America, in the missions of Orinoco. Stamens diadelphous. The root of this species is used to intoxicate fish, as *T. toxicària*, which see, no. 8.

Emarginate-leafletted Tephrosia. Shrub 2 to 4 feet.

21 T. grandiflòra (Pers. ench. 2. p. 329.) shrubby, erect, glabrous; leaves with 7-9 pairs of oblong, mucronate leaflets, which are pubescent beneath; stipulas ovate, acuminated; racemes opposite the leaves, and somewhat terminal, straight, bearing 4 flowers at the apex; bracteas ovate, concave, large, deciduous. ♄. G. Native of the Cape of Good Hope. Galèga grandiflòra, Vahl. symb. 2. p. 84. Ker. bot. reg. 769. Lher. stirp. 2. t. 44. Galèga ròsea, Lam. dict. 2. p. 599. Flowers rose-coloured, larger than those of any other species in the genus.

Great-flowered Tephrosia. Fl. May, Sept. Clt. 1774. Sh. 2 to 3 feet.

22 T. coccínea (Wall. pl. asiat. rar. vol. 1. t. 60.) suffruticose, erect; branches terete, flexuous, and are as well as under surface of the leaves clothed with white and adpressed wool; leaves sessile, with 3-4 pairs of cuneiform-obovate, retuse leaflets; racemes axillary, on long peduncles; teeth of calyx lanceolate, acuminated; stamens diadelphous; style villous beneath; legume linear, pendulous. ♄. S. Native of the East Indies, on the left bank of the Irawaddi, near Yenangheum. Flowers scarlet.

Scarlet-flowered Tephrosia. Shrub 2 to 3 feet.

23 T. villòsa (Pers. ench. 2. p. 329.) plant herbaceous, branched, pubescent; leaves with 7-9 pairs of obovate-cuneated, retuse leaflets, which are silky-villous beneath and pilose above; stipulas setaceous; racemes opposite the leaves, nearly terminal, many-flowered; legumes linear, mucronate, densely villous, 4-5-seeded. ♃. S. Native of the East Indies. Galèga villòsa, Lin. spec. 1063.—Pluk. alm. t. 59. f. 6.—Burm. zeyl. t. 33. Flowers white?

Villous Tephrosia. Fl. June, July. Clt. 1779. Pl. proc.

24 T. serícea (Hamilt. in Lin. trans. 13. p. 545.) leaves with 8-10 pairs of cuneated leaflets, silky beneath; racemes opposite the leaves, sessile; stipulas subulate; legumes pubescent, arched, recurved. ♄. S. Native of the south of India. Flowers red. Stamens diadelphous. Calyx 5-toothed.

Silky Tephrosia. Shrub 2 feet.

25 T. purpu'rea (Pers. ench. l. c.) plant herbaceous, branched; leaves with 7-9 pairs of oblong-cuneated, somewhat mucronate leaflets, hardly pubescent beneath; stipulas subulate; racemes opposite the leaves or terminal; legume linear, much compressed, 5-8-seeded, finely pubescent. ♃. S. Native of the East Indies, and Ceylon. Galèga purpùrea, Lin. amœn. 3. p. 19. Roxb. hort. beng. 57. Sieb. fl. maur. exsic. no. 156. Burm. zeyl. t. 32. but this differs from the plant of Linnæus in the legumes, which are said to be terete. Flowers purple. Stamens monadelphous. This plant is prescribed by Indian doctors in cases of dyspepsia, lienterig, and tympanitis.

Purple-flowered Tephrosia. Fl. Jul. Aug. Clt. 1768. Pl. 2 ft.

26 T. hi'rta (Hamilt. in Lin. trans. 13. p. 546.) suffruticose, erect, tomentose; branches somewhat tetragonal; leaves with 4-8 pairs of cuneate, emarginate leaflets, which are glabrous above, but beset with long, adpressed hairs beneath; stipulas broad from the base; racemes opposite the leaves, leafy, pedunculate; legume falcate, pendulous, hairy, 6-seeded. ♄. S. Native of the East Indies. Flowers bluish, but with the keel white. Stigma bearded.

Hairy Tephrosia. Shrub 1½ foot.

27 T. lanceæfòlia (Link, enum. 2. p. 252.) plant suffruticose; leaflets obversely lanceolate, emarginate, mucronate, clothed with close-pressed hairs beneath; stipulas subulate; racemes terminal; legumes terminal, straight, spreading. ♄. S. Native country unknown. This species is said to be very like *T. purpùrea*, but the flowers are cream-coloured, not purple. De Candolle has a specimen which was sent from the Calcutta Botanic Garden, under the name of *T. lanceæfòlia*, which is scarcely distinct from *T. purpùrea*.

Lance-leaved Tephrosia. Fl. July, Aug. Clt. 1820. Shrub 2 to 3 feet.

28 T. procu'mbens (Hamilt. in Lin. trans. 13. p. 547.) plant suffruticose, procumbent, filiform, pilose; leaves with 4-5 pairs of stalked, cuneiform, hairy, mucronate leaflets; stipulas setaceous; racemes opposite the leaves, leafy; legume straight, pilose, compressed, 9-seeded. ♄. S. Native of the East Indies. Calyx 5-cleft, with setaceous segments, length of corolla.

Procumbent Tephrosia. Pl. procumbent.

29 T. Domingе'nsis (Pers. ench. 5. p. 330.) plant herbaceous, branched, glabrous; leaves with 7-9 pairs of linear-cuneated, obtuse, mucronate leaflets, which are clothed with adpressed pubescence beneath; stipulas lanceolate-subulate; racemes axillary; legumes pendulous, minutely pubescent. ⊙. S. Native of St. Domingo, in sterile places. Galèga Domingénsis, Willd. spec. 3. p. 1249. Flowers small, pale red.

St. Domingo Tephrosia. Pl. 1 foot.

30 T. Perrinia'na (D. C. prod. 2. p. 251.) plant branched, hairy; leaflets linear-oblong, mucronate, ciliated, rather hairy; panicle hairy, terminal, cymose. Native of South America. Galèga Perriniàna, Spreng. neue. entd. 2. p. 161. Said to be like *T. Domingénsis*.

Perrin's Tephrosia. Pl. 1 foot.

31 T. mucrona'ta (D. C. prod. 2. p. 251.) shrubby, erectish, branched, pubescent; leaves with 8 pairs of ovate, mucronate, villous leaflets; peduncles axillary, longer than the leaves, 1-2-flowered; legume pubescent. ♄. G. Native of the Cape of Good Hope. Galèga mucronàta, Thunb. fl. cap. 609. Flowers probably red.

Mucronate-leafletted Tephrosia. Shrub.

32 T. leptosta'chya (D. C. prod. 2. p. 251.) plant herbaceous, erect, branched, hardly pubescent; leaves with 7 pairs

of oblong, rather cuneated, retuse, mucronate leaflets, the young ones silky beneath; stipulas subulate; racemes elongated, slender, opposite the leaves, or terminal; flowers distant, and are as well as the legumes erectish. ⊙. S. Native of Senegal. Flowers purple. Stamens monadelphous.

Slender-spiked Tephrosia. Pl. 1 foot.

33 T. MA'XIMA (Pers. ench. 2. p. 329.) glabrous; leaflets oval-lanceolate, obtuse, mucronate, striated beneath; stipulas lanceolate; racemes terminal, very long; pedicels tern, rising from the axils of the bracteas, which are ovate and acuminated; calyxes and legumes glabrous. ♄. S. Native of Ceylon. Galèga máxima, Lin. spec. 1063. exclusive of the synonyme of Burman, which is said to have short, 2-flowered pedicels and abruptly pinnate leaves.

Largest Tephrosia. Shrub 1 to 2 feet.

34 T. ARGE'NTEA (Pers. ench. 2. p. 329.) suffruticose, clothed with silvery tomentum; leaves with 7-8 pairs of oblong, obtuse leaflets, which are silky beneath; stipulas ovate, but subulate at the apex, nerved; racemes almost terminal; pedicels twin; calyxes villous. ♄. S. Native of the East Indies. Galèga argéntea, Lam. dict. 2. p. 599. Galèga bárba-jòvis, Burm. ind. 172.—Pluk. alm. t. 52. f. 1. Flowers purple.

Var. β, glabrúscula (D. C. prod. 2. p. 252.) branches and leaves sparingly pubescent. ♄. S. Native of the East Indies. Stipulas 3-nerved.

Silvery Tephrosia. Shrub 2 feet.

35 T. COLU'TEA (Pers. ench. 2. p. 329.) shrubby, branched, hoary-tomentose; leaflets 5-7 pairs, oblong-obovate, retuse; stipulas lanceolate, tomentose; peduncles axillary and terminal; legume straight, erect. ♄. S. Native of the East Indies. Galèga Colùtea, Burm. ind. 172.—Pluk. alm. t. 166. f. 3. Flowers purple. Stamens diadelphous.

Colutea-like Tephrosia. Shrub 2 feet.

36 T. VENU'STULA (H. B. et Kunth, nov. gen. amer. 6. p. 459.) shrubby; leaves with 5-7 pairs of lanceolate, obtuse, mucronate leaflets, and are as well as the calyxes clothed with adpressed canescent pubescence; stipulas ovate, acuminated; racemes opposite the leaves, furnished with one leaf at the base; flowers in fascicles; legume somewhat cultriform, pubescent. ♄. S. Native of Cumana, about Borbones. Flowers red.

Pretty Tephrosia. Shrub 1 to 2 feet.

37 T. PISCATO'RIA (Pers. ench. 2. p. 329.) shrubby; leaves with 5-6 pairs of oblong, obtuse leaflets, which are rather pilose beneath; stipulas subulate; peduncles 2-edged; legume straight, ascending, rather villous. ♄. S. Native of the East Indies, and in the islands of the Pacific ocean. Galèga littoràlis, Forst. prod. no. 277. G. piscatòria, Ait. hort. kew. 3. p. 71. Flowers purple. This species is used to intoxicate fish in the East Indies, as the *T. toxicària* is in the West Indies.

Fisher's Tephrosia. Fl. June, July. Clt. 1778. Pl. 2 feet.

38 T. REFLE'XA (D. C. prod. 2. p. 252.) shrubby, pubescent; branches rather triquetrous; leaves with 5 pairs of oblong leaflets, each ending in a reflexed mucrone; peduncles axillary, generally 1-flowered, longer than the leaves; legumes rather hairy. ♄. S. Native country unknown. Flowers red. Stamens monadelphous. Reinèria refléxa, Mœnch. suppl. 45.

Reflexed-pointed-leaved Tephrosia. Shrub 1 to 2 feet.

39 T. LEUCA'NTHA (H. B. et Kunth, nov. gen. amer. 6. p. 460. t. 577.) shrubby; leaves with 3-8 pairs of oblong-lanceolate, obtuse, mucronate leaflets, which are clothed with adpressed pubescence on both surfaces, but canescent beneath; racemes terminal, usually twin; flowers in fascicles; calyxes covered with silky strigæ; legume tomentose. ♄. S. Native of Mexico, near Guanaxuato. Said to be allied to *T. Virginiàna*. Flowers white.

White-flowered Tephrosia. Shrub 2 feet.

40 T. CORONILLÆFÒLIA (D. C. prod. 2. p. 252.) shrubby; clothed with cinereous pubescence; branches angular; leaves with 5 pairs of obòvate-cuneated, obtuse, mucronate leaflets; racemes axillary; legumes rather villous. ♄. S. Native of Bourbon. Galèga coronillæfòlia. Desf. cat. hort. par. 194. Poir. suppl. 2. p. 699. Brissònia coronillæfòlia, Desv. journ. 1814. vol. 1. p. 78. Perhaps distinct from *T. refléxa*.

Coronilla-leaved Tephrosia. Shrub 1 to 2 feet.

41 T. COLONI'LA (Hamilt. Lin. trans. 13. p. 545.) legumes glabrous, arcuately-recurved; leaves with 8-10 pairs of smooth leaflets; racemes opposite the leaves, sessile; stipulas subulate. ♄. S. Native of the East Indies. Stamens diadelphous. Calyx pilose, 5-toothed. Indigo is obtained from this plant in India, and it is cultivated for that purpose.

Colonil Tephrosia. Fl. June, July. Clt. 1818. Shrub 2 feet.

42 T. TINCTÒRIA (Pers. ench. 2. p. 329.) shrubby, glabrous; leaves with 5 pairs of oblong, obtuse, emarginate leaflets, silky and villous beneath; peduncles axillary, spicate, length of leaves; legumes straight, pendulous. ♄. S. Native of Ceylon, where it is called *Anil*. Crácca, no. 302. Lin. fl. zeyl. Galèga tinctòria, Lin. spec. 1063. Flowers purple or flesh-coloured. It is from this plant that the inhabitants of Ceylon prepare their indigo, which yields a die of a pale blue colour.

Dyers' Tephrosia or Ceylon Indigo. Shrub 1 to 3 feet.

43 T. CAPE'NSIS (Pers. ench. 2. p. 330.) plant suffruticose, decumbent, glabrous; leaves with 4-5 pairs of oblong, mucronate leaflets; stipulas lanceolate-subulate; peduncles opposite the leaves, very much elongated; flowers racemose, distant; legumes erect, pubescent. ♄. G. Native of the Cape of Good Hope. Galèga Capénsis, Thunb. fl. cap. 602. Jacq. icon. rar. t. 574. Flowers purple. Stamens monadelphous.

Cape Tephrosia. Fl. July, Aug. Clt. 1825. Sh. decumbent.

44 T. TOMENTÒSA (Pers. ench. 2. p. 329.) plant clothed with villous tomentum; leaves with 4-6 pairs of linear, obtuse, somewhat mucronate leaflets, which are glabrous above; stipulas subulate; racemes opposite the leaves; pedicels in threes; legume straight, ascending. ♄. G. Native of Arabia Felix. Galèga tomentòsa, Vahl. symb. 2. p. 84. Láthyrus tomentòsa, Forsk. descr. 135. but not of Cav. Flowers blue, with a white keel.

Tomentose Tephrosia. Shrub 1 to 2 feet.

45 T. CINE'REA (Pers. ench. 2. p. 328.) plant herbaceous, decumbent, clothed with cinereous, silky down; leaves with 4-6 pairs of linear, obtuse, mucronate leaflets, which are covered with silky villi beneath; stipulas lanceolate; racemes opposite the leaves; pedicels solitary; legumes straight, spreading. ⊙. S. Native of Jamaica and St. Domingo. Galèga cinèrea, Lin. amœn. 5. p. 403. Jacq. icon. rar. t. 575. Flowers violaceous.

Cinereous Tephrosia. Fl. June, July. Pl. decumbent.

46 T. LITTORA'LIS (Pers. ench. 2. p. 329.) plant herbaceous, decumbent, clothed with cinereous canescent down; leaves with 5 pairs of oblong-cuneated, emarginate or obtuse leaflets; stipulas subulate; racemes opposite the leaves, terminal, and 3 times longer than them; pedicels aggregate; legume straight, spreading, rather pubescent. ♃. S. Native of Carthagena and the Caribbee Islands. Galèga littoràlis, Lin. syst. 565. Vìcia littoràlis, Jacq. amer. t. 124. Flowers purple. Stamens monadelphous.

Shore Tephrosia. Fl. July, Aug. Clt. 1824. Pl. decumb.

47 T. BRACHYSTA'CHIA (D. C. prod. 2. p. 253.) plant suffruticose, erect, pubescent; leaves with 5 pairs of oblong-cuneated, emarginate leaflets, which are silky beneath, lower pairs approximating the stem; racemes axillary, shorter than the leaves; legume straight, spreadingly-pendulous, [illegible] 10-seeded. ♄. S. Native of the East Indies. Flowers purple. Stamens monadelphous. Legumes hardly pubescent even when young.

Short-spiked Tephrosia. Pl. 1 to 2 feet.

48 T. HYPARGY'REA (D. C. in ann. scienc. nat. 4. p. 99.) plant suffruticose, erect; stem angular, rather velvety; leaves with 2-4 pairs of leaflets, which are glabrous above but clothed beneath with silky-silvery down; the lower leaflets roundish and approximating the stem, superior ones oval-oblong, terminal one very large; peduncles axillary; legumes straight, secund, rather deflexed, 10-seeded, pubescent. ♄. S. Native of the East Indies. T. heterophýlla, Fisch. cat. hort. gor. This is a very beautiful and distinct species. The flowers are small and purple, and the stamens are monadelphous. Peduncles sometimes shorter, sometimes longer than the leaves.

Silvery-leaved Tephrosia. Fl. June, July. Clt. 1825. Shrub 1 to 2 feet.

49 T. MARIA'NA (D. C. prod. 2. p. 253.) plant suffruticose, erect; stem terete, villous; leaves with 4 pairs of oblong leaflets, which are glabrous above, and silky-silvery beneath, the lower ones approximating the stem; stipulas lanceolate, elongated, villous; flowers axillary, crowded, almost sessile, and disposed in a somewhat terminal raceme, legume straight, erect, velvety-villous, 10-12-seeded. ♄. S. Native of the Marianne Islands. Leaflets nearly 2 inches long.

Marianne Island Tephrosia. Shrub.

50 T. LAGASCA'NA (D. C. prod. 2. p. 253.) plant clothed with cinereous tomentum; branches terete; leaves with 4 pairs of obovate-oblong, obtuse, rather mucronate leaflets; lower pair approximating the stem; stipulas subulate; peduncles opposite the leaves, almost terminal, and longer than them; legume ascending, straight, velvety, 10-12-seeded. ♄. S. Native country unknown.

Lagasca's Tephrosia. Shrub 2 feet.

51 T. STRI'CTA (Pers. ench. 2. p. 329.) plant suffruticose, clothed with cinereous tomentum; branches terete; leaves with 4 pairs of oblong or cuneated leaflets, each ending in a recurved mucrone, lower leaflets approximating the stem; stipulas subulate; flowers few, almost sessile, axillary: legumes spreading, velvety, 6-8-seeded. ♃. G. Native of the Cape of Good Hope. Galèga stricta, Ait. hort. kew. 3. p. 70. Galèga mucronàta, Thunb. fl. cap. 601. G. pulchélla, Scop. insub. 1. t. 3. Indigófera stricta, Lin. fil. suppl. 334. ex Jacq. hort. schœnbr. t. 263. Flowers small, purplish. Stamens diadelphous.

Straight Tephrosia. Fl. May, June. Clt. 1774. Sh. 2 to 3 ft.

52 T. SE'NNA (H. B. et Kunth, nov. gen. amer. 6. p. 458.) branches rather angular, glabrous; leaves with 4 pairs of somewhat obovate-oblong, emarginate, mucronate, puberulous, rather glaucous leaflets; racemes opposite the leaves, furnished at the base with one leaf; flowers in fascicles; legumes erectish, and are as well as the calyxes covered with strigose pubescence. ♄. S. Native of Popayan, on the banks of the river Cauca, near Buga, where the leaves are used in place of senna by the inhabitants.

Buga *Senna*. Shrub.

53 T. LINEA'RIS (Pers. ench. 2. p. 330.) branches pubescent; leaves with 4-5 pairs of linear, narrow leaflets, which are silky beneath; stipulas filiform; racemes axillary, much elongated; flowers distant; bracteas conforming to the leaves; legume narrow, and is as well as the vexillum pubescent. ♄. S. Native of Guinea, among grass. Galèga lineàris, Willd. spec. 3. p. 1248. Indigófera angustifòlia, Perr. in litt. Stem flexuous. Flowers red.

Linear-leafletted Tephrosia. Fl. July, Aug. Clt. 1823. Shrub 1¼ foot.

54 T. FLEXUÒSA; stem suffruticose, erect, flexuous, branched, pubescent; leaves with 5 pairs of linear, emarginate, mucronate, soft, pilose leaflets; stipulas subulate; flowers somewhat spicate, terminal; legume compressed, clothed with soft pili. ♄. S. Native of the island of St. Thomas, in the Gulf of Guinea, among grass. Flowers flesh-coloured.

Flexuous-stemmed Tephrosia. Shrub 1 foot.

55 T. PA'LLENS (Pers. ench. 2. p. 329.) shrubby, pubescent; leaves with 4-5 pairs of oblong, acute leaflets, which are pubescent beneath; stipulas subulate; legume straight, spreading, ciliated. ♄. G. Native of the Cape of Good Hope. Galèga pállens, Ait. hort. kew. 3. p. 71. G. hùmilis, Thunb. fl. cap. 601. but the legume is said to be recurved. Flowers pink.

Pale-flowered Tephrosia. Fl. July, Aug. Clt. 1787. Sh. 2 to 3 feet.

56 T. SENTICÒSA (Pers. l. c. 330.) shrubby; leaves with 4 pairs of emarginate leaflets, clothed with fine silky down beneath; legumes twin, lateral, glabrous. ♄. S. Native of Ceylon. Galèga senticòsa, Lin. amœn. 3. p. 19. Crácca, no. 303. Lin. fl. zeyl. p. 141.

Brambly Tephrosia. Shrub.

57 T. PU'MILA (Pers. ench. 2. p. 330.) plant herbaceous, diffuse, rather pilose; leaves with 3-4 pairs of cuneiform, emarginate leaflets, villous beneath, and ending each in a recurved mucrone; stipulas subulate, villous; peduncles axillary, very short, 1-2-flowered; legume erect, villous. ⊙.? S. Native of Madagascar, at Fort Dauphin. Galèga pùmila, Lam. dict. 2. p. 599. Flowers purple.

Dwarf Tephrosia. Pl. diffuse.

58 T. APOLLÍNEA (D. C. prod. 2. p. 254.) suffruticose, diffuse, clothed with adpressed pubescence; leaves with 2-3 pairs of obovate-oblong, emarginate leaflets, which are silky beneath; racemes opposite the leaves, length of leaflets; legume erectly-spreading, 6-7-seeded, rather pubescent. ♄. G. Native of Egypt, in corn fields. G. Apollínea, Delil. fl. æg. p. 144. t. 53. f. 5. Flowers blue. Stamens diadelphous according to the figure.

Apollinean Tephrosia. Fl. Jul. Aug. Clt. 1816. Sh. 1 to 2 ft.

59 T. SPINÒSA (Pers. ench. 2. p. 330.) shrubby; branches canescent; stipulas spinose; leaves with 3 or 4 pairs of cuneated, emarginate, smoothish leaflets; flowers few, axillary, nearly sessile; legume falcate, 5-6-seeded, beset with adpressed very minute pubescence. ♄. S. Native of Coromandel, Timor, and Java, on the margins of fields. Galèga spinòsa, Lin. fil. suppl. 335. Stamens monadelphous.

Spiny Tephrosia. Shrub.

60 T. TIMORIE'NSIS (D.C. prod. 2. p. 254.) plant herbaceous, diffuse, clothed with canescent hairs; leaves with 3-4 pairs of obovate-oblong, obtuse leaflets, clothed with silky villi beneath, and each terminated in a straight mucrone; stipulas linear-subulate: peduncles 2-3, axillary, very short, 1-flowered; legume erect, straight, velvety, 8-10-seeded. ⊙. S. Native of the Island of Timor. Perhaps sufficiently distinct from *T. pùmila*.

Timor Tephrosia. Pl. diffuse.

61 T. PINNA'TA (Pers. ench. 2. p. 330.) plant herbaceous, decumbent, glabrous; leaves with 4 pairs of oblong, acute leaflets, which are dotted beneath; stipulas ovate; peduncles axillary; flowers umbellate; legumes ensiform, pubescent. ♄. G. Native of the Cape of Good Hope. Galèga pinnàta, Thunb fl. cab. 602. Flowers purple.

Pinnate-leaved Tephrosia. Shrub decumbent.

62 T. BIFLÒRA (D. C. prod. 2. p. 254.) plant shrubby, hardly pubescent; leaves with 2 or 3 pairs of oval-lanceolate, obtuse leaflets, which are silky beneath, lower ones smallest, terminal one very large; stipulas subulate, villous; flowers twin, almost sessile, axillary; legume pubescent; rather incurved at the apex. ♄. S. Native country unknown. Galèga biflòra, Poir. suppl. 2. p. 699. Flowers purple. Calyx very villous. Very like *T. hypargýrea*, and especially *T. nervosa*.

Two-flowered Tephrosia. Fl. Jul. Aug. Clt. 1816. Sh. 1 to 2 ft.

63 T. NERVÒSA (Pers. ench. 2. p. 328.) branches angular, pubescent; leaves with 1-2 pairs of elliptic-obtuse leaflets, which are narrowest at the base, quite glabrous above, and pinnately veined, but clothed with white tomentum beneath, the terminal leaflet largest; peduncles axillary, length of leaves, furnished with one leaf under the head of flowers; legumes linear, smoothish. ♄. S. Native of Madagascar.

Nerved-leaved Tephrosia. Shrub 2 to 3 feet.

† *Species not sufficiently known.*

* *Leaves impari-pinnate.*

64 T. STIPULA'RIS (D. C. prod. 2. p. 254.) shrubby, quite smooth: leaflets oblong-linear, acute; stipulas large, almost opposite, connate, acute, nerved; legume linear-lanceolate. ♄. S. Native of South America. Brissònia stipulàris, Desv. journ. bot. 1814. 1. p. 74.

Stipular Tephrosia. Shrub.

65 T. TRAPEZICA'RPA (D. C. prod. 2. p. 255.) stems elongated, decumbent, quite smooth; leaflets oblong, pilose beneath; pili stiff and few; legume compressed, pilose, trapeziform. ♄. ? S. Native of the East Indies. Brissònia trapezifórmis, Desv. l. c.

Trapezium-fruited Tephrosia. Shrub decumbent.

66 T. UNIFLÒRA (Pers. ench. 2. p. 329.) leaflets oblong, rather retuse, mucronate; calyx villous; legumes compressed, villous, a little arched, solitary, axillary. Native of Senegal.

One-flowered Tephrosia. Pl. 1 foot.

67 T. CAPITULA'TA (Link. enum. 2. p. 329.) leaflets obversely lanceolate, obtuse, emarginate, silky beneath; racemes terminal, short, furnished with a leaf; legumes hairy. ♃. S. Native of the Island of Owhyhee.

Headed Tephrosia. Pl. 1 foot.

68 T. STRIA'TA (Pers. ench. 2. p. 328.) herbaceous, erect, glabrous below, villous above; leaflets alternate, oblong, obtuse, mucronate, finely pubescent; racemes terminal, drooping. ⊙. ? G. Native of the Cape of Good Hope. Galèga striàta, Thunb. fl. cap. 602.

Striated Tephrosia. Pl. 1 to 2 feet.

69 T. MYRTIFÒLIA (D. C. prod. 2. p. 255.) plant herbaceous, flexuous, glabrous; leaves with 3 pairs of elliptic-oblong, obtuse, somewhat mucronate, striated leaflets; stipulas subulate; racemes opposite the leaves; legumes linear, glabrous, spreading. ⊙. G. Native of the Cape of Good Hope. Coronílla myrtifòlia, Burm. cap. 22.

Myrtle-leaved Tephrosia. Pl. 1 foot.

70 T. RHE'EDII (D. C. prod. 2. p. 255.) suffruticose, branched, diffuse; leaves with 4-5-pairs of oblong, somewhat obovate, obtuse, mucronate leaflets; peduncles longer than the leaves, few-flowered. ♄. S. Native of Malabar, in sandy places. Man-Todda-vaddi, Rheed, mal. 9. t. 22. Rochèa, Scop. introd. 296. no. 1340. Flowers apparently with only 3 petals, in consequence of the carina being very short, pale yellow.

Rheede's Tephrosia. Sh. 1 foot.

* * *Thermoìdeæ* (from θερμος, *thermos*, a lupine, and ιδεα, *idea*, like; plants resembling the lupine in having palmate leaves). *Leaves palmately 5-foliate, having 2 little stipulas at the top of the petiole. Stipulas and stipels becoming hard and spinescent. Leaflets complicate, margined with a nerve. Flowers unknown. Perhaps a proper genus.*

71 T. LUPINIFÒLIA (D. C. prod. 2. p. 255.) plant shrubby, pubescent; stipulas lanceolate, spreading; leaflets 5, oblong, cuneated, obtuse, clothed beneath with adpressed silky down. ♄. G. Native of the Cape of Good Hope. Galèga lupinifòlia, Burch. cat. afr. austr. no. 2488.

Lupine-leaved Tephrosia. Shrub 1 to 2 feet.

72 T. DIGITA'TA (D. C. prod. 2. p. 255.) plant suffruticose with hispid slender branches; stipulas lanceolate, spreading; leaflets 5, oblong-linear, acuminated at both ends, sparingly pubescent beneath: racemes axillary, and are as well as the petioles very long. ♄. S. Native of Senegal. Petioles 5 inches long. Flowers distant, usually twin. Calyx permanent, with acuminated segments. Corolla and stamens unknown. Legume linear, compressed, pubescent, 5-6-seeded.

Digitate-leaved Tephrosia. Shrub 1 foot.

* * * *Glycinoìdeæ* (from *glycine* and *idea*, similar; the plants contained in this division agree with *Glycìne* in having trifoliate leaves). *Leaves either pinnately or palmately trifoliate.*

73 T. TÓTTA (Pers. ench. 2. p. 328.) plant herbaceous, clothed with hairs like tomentum, ascending; leaflets oblong, mucronate, longer than the petiole; stipulas ovate, opposite the leaves; flowers terminal, tern, somewhat umbellate. ⊙. G. Native of the Cape of Good Hope. Galèga Tótta, Thunb. fl. cap. 601.

Hottentot Tephrosia. Pl. ascending.

74 T. SERÍCEA (Pers. ench. 2. p. 328.) stem suffruticose, very short; branches tomentose, as well as the leaflets, which are ovate; flowers axillary, solitary; legumes lanceolate, villous. ♄. G. Native of the Cape of Good Hope. Galèga serícea, Thunb. fl. cap. 603. but not of Lam.

Silky Tephrosia. Shrub ½ foot.

75 T. FALCA'TA (Pers. ench. 2. p. 328.) plant herbaceous, erect, hairy; branches filiform; leaflets sessile, oblong, acute; flowers terminal, solitary; legumes falcate, erect, silky. ⊙.? G. Native of the Cape of Good Hope. Galèga falcàta, Thunb. fl. cap. 602.

Falcate-podded Tephrosia. Pl. 1 foot.

76 T. PUSÍLLA (Pers. l. c.) plant herbaceous, erect, pubescent; leaflets sessile, ovate, mucronate, silky beneath, longer than the petiole; flowers lateral, pedunculate, solitary; legume elliptic. ⊙. ? G. Native of the Cape of Good Hope. Galèga pusílla, Thunb. fl. cap. 602.

Small Tephrosia. Pl. ½ foot?

77 T. TRIFOLIA'TA (D. C. prod. 2. p. 256.) plant frutescent, erectish, pubescent; leaflets sessile, ovate, silky, convolute; calyx, corolla, and legume tomentose; flowers terminal, on very short peduncles. ♄. G. Native of the Cape of Good Hope. Sophòra trifoliàta, Thunb. prod. p. 79. Galèga trifoliàta, Thunb. fl. cap. 600. Stamens diadelphous.

Trifoliate Tephrosia. Shrub.

78 T. TERNA'TA (D. C. prod. 2. p. 256.) shrubby, erect; branches villous; leaflets sessile, lanceolate, silky; flowers axillary, sessile; calyxes and corollas tomentose. ♄. G. Native of the Cape of Good Hope. Sophòra ternàta, Thunb. prod. 79. Galèga ternàta, Thunb. fl. cap. 601. Stamens monadelphous.

Ternate-leaved Tephrosia. Shrub 1 to 3 feet.

79 T. FILIFÒLIA (Pers. ench. 2. p. 328.) plant herbaceous, erectish, glabrous below; leaflets filiform, glabrous; flowers 2-3 in an umbel, terminal; calyx hairy. ♃. ? G. Native of the Cape of Good Hope. Galèga filifòlia, Thunb. fl. cap. 602.

Thread-leaved Tephrosia. Pl. 1 foot.

80 T. ULIGINÒSA (Spreng. syst. 3. p. 232.) shrubby, climbing; leaflets oblong, acuminated, glabrous; flowers racemose; peduncles 3-flowered. ♄. ◡. S. Native of the East Indies. Robinea uliginòsa, Roxb. and Willd.

Bog Tephrosia. Shrub cl.

81 T. VELUTÌNA (Spreng. syst. 3. p. 232.) shrubby, twining; leaflets oblong, obtuse, villous on both surfaces; racemes few-flowered; legumes lanceolate, pubescent. ♄. ⌒. S. Native of St. Domingo.

Velvety Tephrosia. Shrub tw.

82 T. LONGIFÒLIA (Pers. ench. 2. p. 328.) plant shrubby, twining; leaflets lanceolate, obtuse; racemes few-flowered;

legumes villous. ♄ . ⌒. S. Native of South America. Galèga longifòlia, Jacq. icon. rar. 3. t. 572. Flowers purple. Legume linear. Racemes few-flowered.

Long-leaved Tephrosia. Clt.? Shrub tw.

* * * * *Mimosoideæ* (from *Mimosa* and *idea*, like; the plants resemble some species of *Mimòsa* in having abruptly-pinnate leaves). *Leaves abruptly pinnate.*

83? T. MIMOSOÌDES (Pers. ench. 2. p. 330.) plant suffruticose, scandent; leaves with 12 pairs of linear, obtuse, mucronate leaflets, beset with adpressed pili on both surfaces; racemes axillary, pedunculate; legumes pendulous, compressed. ♄ . ◡. S. Native of the East Indies. Galèga mimosoìdes, Willd. spec. 3. p. 1249. Flowers probably red.

Mimosa-like Tephrosia. Shrub ck.

* * * * * *Simplicifòliæ* (from *simplex*, simple, and *folium*, a leaf; the leaves are simple). *Leaves simple.*

84 T. FRUTE'SCENS (D. C. prod. 2. p. 256.) stem shrubby; leaves ovate-roundish; flowers lateral, panicled. ♄ . S. Native of Campeachy. Galèga frutéscens, Mill. dict. no. 3. Flowers scarlet.

Frutescent Tephrosia. Shrub.

Cult. All the species of this genus grow best in a mixture of loam and peat, and are easily propagated by seeds, or by young cuttings planted in sand, with a bell-glass placed over them; those of the stove species in heat.

CV. AMO'RPHA (from *α*, priv. and *μορφη*, *morphe*, form; in reference to the deformity of the corolla, from the want of the vexillum and keel). Lin. gen. 369. Lam. ill. t. 621. D. C. prod. 2. p. 256.—Bonafídia, Neck. elem. no. 1364.

LIN. SYST. *Monadélphia, Decándria.* Calyx 5-toothed, obconically campanulate. Vexillum ovate, concave. Wings and keel wanting. Style filiform, straight, glabrous. Stamens exserted, monadelphous at the very base. Legume compressed, ovate, or lunulate, 1-celled, 1-2-seeded.—North American shrubs, with impari-pinnate leaves, many pairs of leaflets, which are full of pellucid dots, and usually furnished with stipels at the base. Stipulas of the stem deciduous. Racemes spicate, elongated, usually in fascicles at the tops of the branches. Flowers blue or violet, or bluish-violet.

1 A. FRUTICÒSA (Lin. spec. 1003.) shrub glabrous, or a little villous; leaflets elliptic-oblong, lower ones distant from the stem; calyx rather villous, with 4 of the teeth obtuse, and 1 acuminated; vexillum glandless; legume few-seeded. ♄ . H. Native of North America, in Carolina and Florida, on the banks of rivers. Schkuhr, handb. t. 197. Mill. icon. t. 27. Ker. bot. reg. 427. There are varieties of this plant with mucronate, emarginate or narrower leaflets. This species was once used in Carolina as an indigo plant, but is now neglected.

Shrubby Bastard Indigo. Fl. Ju. Jul. Clt. 1724. Sh. 6 ft.

2 A. GLA'BRA (Desf. cat. hort. par. 192.) shrub glabrous; leaflets elliptic-oblong, lower ones distant from the stem; calyx glabrous, with 4 of the teeth obtuse, and 1 acuminated; vexillum glandular on the outside; legume few-seeded. ♄ . H. Native of North America.

Glabrous Bastard Indigo. Fl. July, Aug. Clt. 1810. Sh. 3 to 6 feet.

3 A. NA'NA (Nutt. in Fras. cat. 1813. nov. gen. amer. 2. p. 91.) a smoothish dwarf shrub; leaflets elliptic, mucronate; calyx glabrous, with all the teeth setaceously acuminated; legume 1-seeded. ♄ . H. Native on grassy hills, near the river Missouri. A. microphýlla, Pursh, fl. bor. amer. 2. p. 466.

Dwarf Bastard Indigo. Fl. Jul. Aug. Clt. 1811. Sh. ½ to 1 ft.

4 A. HERBA'CEA (Walt. car. 179. Nutt. gen. amer. 2. p. 91.) plant dwarf, herbaceous, pubescent; leaflets elliptic, mucronate, lower ones approximating the stem; calyx pubescent, with all the teeth acute and short; legume 1-seeded. ♃ . F. Native of Carolina, Georgia, and Florida, in dry sandy pine woods. A. pùmila, Michx. fl. bor. amer. 2. p. 64. A. pubéscens, Willd. spec. 3. p. 970. Lodd. bot. cab. 689. Spike a foot long.

Herbaceous Bastard Indigo. Fl. June, July. Clt. 1803. Pl. 2 to 3 feet.

5 A. FRA'GRANS (Sweet, fl. gard. 241.) shrubby, pubescent; leaves with 6-8 pairs of elliptic-oblong, mucronate leaflets, obtuse at both ends, young ones pubescent; calyx pubescent, pedicellate, superior teeth obtuse, lower one acute; style hairy. ♄ . F. Native of North America. A. nàna, Sims, bot. mag. 2112. but not of others. Flowers dark purple.

Fragrant Bastard Indigo. Fl. June, July. Clt. 1800. Sh. 7 to 8 feet.

6 A. CRÒCEO-LANA'TA (Wats. dend. brit. t. 139.) plant clothed with tawny pubescence; racemes branched; leaves with 6-8 pairs of oblong-elliptic, mucronulate, downy leaflets; the 3 upper teeth of calyx ovate, acute, the 2 lower ones very short and rounded. ♄ . H. Native of North America. Flowers bluish-purple.

Copper-woolled Bastard Indigo. Fl. July, Aug. Clt. 1820. Shrub 3 to 5 feet.

7 A. CANE'SCENS (Nutt. in Fras. cat. 1813. gen. amer. 2. p. 92.) plant suffruticose, humble, every part clothed with hoary villi; leaflets ovate-elliptic, mucronate, lower ones approximating the stem; calyx tomentose, with the teeth ovate, acute, and equal; ovary containing 2-ovula; legume 1-seeded. ♄ . H. Native on the banks of the Missouri and Mississippi.

Canescent Bastard Indigo. Fl. Jul. Aug. Clt. 1812. Sh. 3 ft.

Cult. *Amórpha* is a genus of elegant flowering shrubs, and are well adapted for small shrubberies, or the front of large ones. They thrive well in common garden soil. They may be increased by layers, or cuttings taken off at a joint, and planted in a sheltered situation early in autumn will strike root. Some of the species are rather tender, and require protection in severe weather.

CVI. EYSENHA'RDTIA (in honour of Charles William Eysenhardt, M.D. a professor in the University of Konigsberg, in Prussia). H. B. et Kunth, nov. gen. amer. 6. p. 489. t. 592. D. C. prod. 2. p. 257.

LIN. SYST. *Diadélphia, Decándria.* Calyx obconically-campanulate, 5-toothed, upper teeth rather remote, lower one longest. Petals 5, disposed in a papilionaceous manner. Vexillum oblong, and the two keel petals distinct. Stamens diadelphous. Ovary biovulate. Style filiform, hooked at the apex. Legume unknown.—An unarmed tree, with impari-pinnate leaves, composed of many pairs of stipellate leaflets, and are, as well as the calyxes beset with glands. Racemes terminal, cylindrical. Flowers white. This genus comes very near *Amórpha*.

1 E. AMORPHOÌDES (H. B. et Kunth, l. c.). ♄ . G. Native of Mexico, near St. Augustin de las Guevas and Guanaxuato. Dalbérgia amorphoìdes, Spreng. syst. app. 268.

Amorpha-like Eysenhardtia. Tree 12 to 20 feet.

Cult. A mixture of loam and peat will suit this shrub, and young cuttings will strike root in sand, under a bell-glass, in heat.

CVII. NISSO'LIA (in honour of William Nissole, an industrious French botanist. He was a member of the Academy of Montpelier, and author of some papers in its Transactions: he was born in 1647 and died in 1735.). Jacq. amer. 198. Lin. gen. no. 853. Lam. ill. t. 600. D. C. prod. 2. p. 257. but not of Tourn.

LIN. SYST. *Monadélphia, Decándria.* Calyx campanulate, 5-toothed. Corolla papilionaceous. Stamens 10, monadelphous, with a dorsal fissure or diadelphous. Legume stipitate, 1 or few-seeded, 1-celled, or transversely few-celled, ending in a leafy, membranous wing, which is either ligulate or cultriform.—Usually climbing shrubs, with impari-pinnate leaves. Perhaps this genus is more nearly allied to *Hedysàreæ* or *Dalbérgieæ*.

SECT. I. NISSOLIA'RIA (an alteration from the generic name). D. C. prod. 2. p. 257. Nissòlia, Gærtn. fruct. 2. p. 309. t. 145. Pers. ench. 2. p. 276. Calyx 5-toothed, naked on the outside, the teeth acute. Petals of keel connected. Stamens monadelphous, with a dorsal fissure. Legume, according to Gærtner, terete below the wing, separating transversely into 2 or 3 1-seeded cells, but according to Jacquin the legume is 1-celled and 1-seeded. Pedicels 1-flowered, in fascicles.

1 N. FRUTICÒSA (Jacq. amer. 198. t. 145. f. 44. hort. vind. 167.) stems twining, and are smoothish as well as the petioles; leaflets oval, mucronate, smoothish; pedicels 3-4, aggregate, axillary; teeth of calyx setaceous. ♄. ⌒. S. Native of Carthagena in woods, and in the plains of Mexico, near Queretaro. ex H. B. et Kunth, nov. gen. amer. 6. p. 504. Flowers yellow.

Shrubby Nissolia. Fl. July, Nov. Clt. 1766. Sh. cl.

2 N. HIRSU'TA (D. C. prod. 2. p. 257.) stems twining, and are as well as the petioles hairy; leaflets oval, mucronate, rather hairy beneath and on the margins; pedicels 15-20, aggregate, axillary; teeth of calyx setaceous, very short. ♄. ⌒. S. Native of Mexico, near Guanaxuato.

Hairy Nissolia. Shrub tw.

3 N. RACEMÒSA (D. C. prod. 2. p. 257.) stems twining, and are as well as the leaves smoothish; leaflets oval-oblong, acute, tapering to the base; pedicels numerous, in fascicles; fascicles disposed in elongated racemes; teeth of calyx almost wanting; ♄. ⌒. S. Native of St. Martha. Racemes numerous, axillary, and terminal. Nissòlia polyspérma, Bert. ined. Flowers white.

Racemose-flowered Nissolia. Fl. Ju. Aug. Clt. 1800. Sh. tw.

SECT. II. GOME'ZIUM (in honour of Juan Gomez, a Portuguese botanist). Calyx naked on the outside, with 5 rounded lobes. Petals of keel connected at the apex only. Stamens diadelphous. Legume indehiscent, 1-seeded. Perhaps a proper genus.

4 N. ARBÒREA (Jacq. amer. 199. t. 174. f. 48.) stem arboreous, erect, leaflets 1-2 pairs with the odd one oblong and acuminated, rather pubescent beneath; flowers sessile. ♄. S. Native of Carthagena and Martinico in woods. Segments of the calyx roundish. Flowers white?

Arboreous Nissolia. Shrub 12 feet.

5 N. GLABRA'TA (Link. enum. 2. p. 221.) stem erect; leaflets 1-2 pairs, with an odd one, oval, acuminated, quite smooth; flowers pedicellate, racemose. ♄. S. Native country unknown. Flowers white. Nearly allied to *N. arbòrea*.

Smoothish Nissolia. Clt. 1823. Shrub 6 to 12 feet.

SECT. III. MACHÆ'RIUM (an alteration from the Guiana name of *N. ferrugìnea*.) Pers. ench. 2. p. 276. D. C. prod. 2. p. 258. Calyx with 5 rounded lobes, girded by 2 concave, roundish bracteoles at the base. Petals of keel connected a little at the apex. Stamens monadelphous with a fissure on the upper side, or diadelphous. Legume indehiscent, 1-seeded. Perhaps a proper genus.

6 N. DIADE'LPHA (D. C. prod. 2. p. 258.) leaflets 5-7, somewhat alternate, oval-oblong, mucronate, clothed beneath with rusty velvety down; flowers panicled, diadelphous; legume somewhat incurved, rather velvety. ♄. ⌒. S. Native of Cayenne. Legume 3-4 inches long and 5 lines broad, standing on a stipe 3 or 4 lines long.

Diadelphous Nissolia. Shrub tw.

7 N. FERRUGÌNEA (Willd. spec. 3. p. 900.) leaflets 7-11, alternate, oblong, mucronate, clothed with rusty velvety down beneath; flowers panicled; monadelphous; legume straightish, rather velvety. ♄. ⌒. S. Native of Guiana, on the banks of rivers. N. quinàta, Aubl. guian. 2. p. 743. t. 297. Lam. ill. t. 600. f. 4. Flowers violaceous.

Rusty Nissolia. Shrub tw.

8 N. ACUMINA'TA (D. C. prod. 2. p. 258.) leaflets 5, alternate, oblong, ending each in a very long acumen, membranous, glabrous; legume rather cultriform, falcate below. ♄. ⌒. S. Native of the province of Caraccas, near Hacienda del Tuy, between San Pedro and La Vittoria. Machæ'rium acuminàtum, H. B. et Kunth, nov. gen. amer. 6. p. 391.

Acuminated Nissolia. Shrub tw.

9 N. LEIOPHY'LLA (D. C. prod. 2. p. 258.) leaflets 7, nearly opposite, oval-lanceolate, acuminated, glabrous on both surfaces; petioles, panicles, and calyxes clothed with rusty velvety down; flowers monadelphous; legumes quite smooth, straightish. ♄. S. Native of Guiana. A very distinct species.

Smooth-leaved Nissolia. Shrub.

10 N. ROBINIÆFÒLIA (D. C. prod. 2. p. 258.) leaflets 19-21, oblong, obtuse, glabrous; flowers panicled; legume pubescent, incurved at the base. ♄. S. Native of the Island of St. Vincent. Flowers unknown.

Robinia-leaved Nissolia. Clt. 1824. Shrub.

11 N. POLYPHY'LLA (Poir. suppl. 4. p. 98.) leaflets 23-25, elliptic-oval, obtuse, tomentose beneath, lower ones smallest; flowers panicled; legumes pubescent at the base and at the sutures, rather cut at the base of the wing. ♄. S. Native of French Guiana. Bracteas velvety. Calyx glabrous. Seeds elongated. Flowers probably white.

Many-leaved Nissolia. Shrub.

12 N. MICRÓPTERA (Poir. suppl. 4. p. 98.) leaflets usually 5, ovate, obtuse, clothed beneath with cinereous pubescence, almost sessile; legume glabrous, bicarinated on the back, ending in a short wing. ♄. G. Cultivated in the gardens of Teneriffe. Flowers white?

Small-winged-podded Nissolia. Clt. 1820. Sh.

† *Species not sufficiently known.*

13 N. STIPITA'TA (D. C. in ann. sc. nat. 4. p. 99.) leaves unknown; legumes oblong, incurved, obtuse, quite smooth, standing on a stipe, which is as large and as broad as the pod. ♄. S. Native of Brazil at Rio Janeiro, where it is called *Arasseiro*, not in Madagascar. Nissòlia punctàta, Lam. ill. t. 600. f. 1. Poir. dict. 4. p. 492. Machæ'rium punctàtum, Pers. ench. 2. p. 276. Flowers probably white.

Stipitate-fruited Nissolia. Shrub sarmentose.

14 N. RETICULA'TA (Lam. ill. t. 600. f. 2. dict. 4. p. 492.) leaflets obtuse; legumes on short stipes, rather cut at the base of the wing. ♄. ⌒. S. Native of Madagascar. Machæ'rium reticulàtum, Pers. ench. 2. p. 276. Flowers unknown.

Reticulated Nissolia. Shrub tw.

15 N. ACULEA'TA (D. C. prod. 2. p. 258.) petioles furnished with 2 rather hooked prickles at the base of each; leaflets 31-33, alternate; flowers racemose; legumes hairy. ♄. ⌒. S. Native of Brazil, on hills by the sea-side, at Rio Janeiro. Machæ'rium aculeàtum, Raddi, pl. bras. add. p. 19.

Prickly Nissolia. Clt. 1824. Shrub tw.

16 N. DU'BIA (Poir. suppl. 4. p. 99.) leaflets 5, almost glabrous, lanceolate, acute at both ends; flowers racemose; pedicels in fascicles, pubescent; legume hardly stipitate. ♄. S. Native of Cayenne.

Doubtful Nissolia. Shrub.

17 N. RETU'SA (Willd. enum. 742.) leaflets glabrous on both surfaces, ovate-oblong, emarginate, lower ones roundish. ♄. ⌒. S. Native of South America.

Retuse-leafletted Nissolia. Clt. 1819. Shrub tw.

18 N. SCA'NDENS (König. ex Spreng. syst. 3. p. 191.) shrubby, scandent; leaves with 2 pairs of ovate-oblong, acute, rather coriaceous, smooth leaflets; flowers panicled. ♄. ◡. S. Native of the East Indies.

Climbing Nissolia. Shrub cl.

Cult. For culture and propagation see *Eysenhárdtia*, p. 234.

CVIII. MULLE'RA (in honour of Otto Frederick Muller, a Danish botanist, and one of the editors of Flora Danica). Lin. fil. suppl. 53. D. C. prod. 2. p. 259.

LIN. SYST. *Monadélphia, Decándria.* Calyx campanulate, 5-toothed, apparently cut round about at the base after the teeth have fallen. Petals 5, papilionaceous, caducous. Stamens 8-10, monadelphous, having the tube compressed, falling off along with the calyx. Ovary sessile. Style filiform. Legume moniliform, having 1-5 1-celled 1-seeded, indehiscent, distinct joints. Seeds compressed, reniform. Flowers almost like those of a species of *Robinia*, but the stamens are monadelphous, the fruit almost like that of *Sophòra*, and the habit of *Pterocárpus.*

1 M. MONILIFÓRMIS (Lin. fil. l. c.) leaves impari-pinnate; joints of legume smooth. ♄. S. Native of Surinam and of French Guiana. Goublándia frutéscens, Aubl. guian. 4. p. 937. t. 356. Leaves with 2 pairs of ovate, acute, glabrous, petiolulate leaflets. Racemes axillary, simple. Bracteas subulate, small, caducous. Flowers pale-yellow.

Necklace-formed-podded Mullera. Clt. 1782. Sh. 6 to 7 ft.

Cult. See *Eysenhárdtia*, p. 234. for culture and propagation.

CIX. LONCHOCA'RPUS (from λογχη, *lonche*, a lance, and καρπος, *karpos*, a fruit; in reference to the lance shape of the pods). H. B. et Kunth, nov. gen. amer. 6. p. 383. D. C. prod. 2. p. 259.

LIN. SYST. *Mona-Diadélphia, Decándria.* Calyx campanulately-urceolate, obsoletely 5-toothed. Corolla papilionaceous. Vexillum somewhat orbicular, spreadingly-reflexed. Wings, vexillum, and keel about equal in length. Stamens diadelphous and monadelphous. Legume on a short stipe, oblong-lanceolate, straight, flat, membranous, 2-4-8-seeded. Seeds compressed, reniform. Radicle uncinately inflexed.—Unarmed trees, from the West Indies and South America, with impari-pinnate leaves, opposite, exstipellate, stalked leaflets, and purplish flowers. This genus is not sufficiently defined. Perhaps the diadelphous species should be separated from the monadelphous ones, but the habit of both are very similar.

1 L. PUNCTA'TUS (H. B. et Kunth, nov. gen. amer. 6. p. 383.) leaves with 5-7 oblong, obtuse, glabrous leaflets, full of pellucid dots, shining above, having the middle nerve rather prominent below; calyx glabrous; lower peduncles of raceme 2-flowered. ♄. S. Native of South America, near Cumana. Dalbérgia punctàta, Spreng. syst. app. 3. p. 268. Legumes unknown.

Dotted-leaved Lonchocarpus. Tree 20 feet.

2 L. MACROPHY'LLUS (H. B. et Kunth, l. c.) leaves with 9 elliptic-oblong, acuminated, dotless, glabrous leaflets, shining above, having the middle nerve and primary veins rather prominent; calyx clothed with brownish tomentum. ♄. S. Native of South America, near Angostura de Carara, on the banks of the river Magdalena. Dalbérgia macrophýlla, Spreng. syst. app. 268. This species is nearly allied to *L. Domingénsis.*

Long-leaved Lonchocarpus. Clt. 1818. Tree 40 feet.

3 L. DOMINGE'NSIS (D. C. prod. 2. p. 259.) leaves with 11 oval, acuminated, glabrous, petiolate leaflets; racemes axillary, shorter than the leaves; calyx somewhat truncate, bibracteate at the base, and are as well as the legumes pubescent. ♄. S. Native of St. Domingo. Dalbérgia Domingénsis, Pers. ench. 2. p. 276. L. Turpìnii, Kunth, l. c. Stamens monadelphous. Legume 1-2-seeded. Flowers red.

St. Domingo Lonchocarpus. Clt. 1820. Tree 20 feet.

4 L. VIOLA'CEUS (H. B. et Kunth, l. c. in a note) leaves with from 7-11 ovate, obtuse, rather emarginate, glabrous leaflets, full of pellucid dots, membranous, with the middle nerve rather prominent; calyxes glabrous; peduncles of racemes 2-flowered. ♄. S. Native of Carthagena and Guadaloupe, in bushy places. Robínia violàcea, Jacq. amer. 210. t. 177. f. 49. pict. 103. t. 262. f. 61. Flowers diadelphous, violaceous, large, having the scent of violets. Stamens somewhat monadelphous, the tenth one only free at the base.

Violaceous-flowered Lonchocarpus. Clt. 1799. Tr. 12 ft.

5 L. PENTAPHY'LLUS (H. B. et Kunth, l. c. in a note) leaves with 5-7 nerved, bluntly acuminated, quite glabrous leaflets; racemes shorter than the leaves; legumes lanceolate, glabrous, 1-3-seeded. ♄. S. Native of Porto-Rico. Dalbérgia pentaphýlla, Poir. suppl. 2. p. 445. Flowers unknown.

Five-leafletted Lonchocarpus. Tree 20 feet.

6 L. HEPTAPHY'LLUS (D. C. prod. 2. p. 259.) leaves with 7 lanceolate, obtusely mucronate, glabrous leaflets, pale beneath, and with the nerve and lateral veins rather prominent; racemes a little longer than the leaves; calyx 5-toothed; legumes oblong, narrow at the base, slender, glabrous, 2-3-seeded. ♄. S. Native of St. Domingo. Dalbérgia heptaphýlla, Poir. l. c. suppl. 2. p. 446. Perhaps sufficiently distinct from *L. pentaphýllus* and *L. violàceus.* Flowers purple.

Seven-leafletted Lonchocarpus. Tree 20 feet.

7 L. LEONE'NSIS; an erect, branched tree; leaflets oblong, mucronate, undulated, entire; racemes axillary and terminal; flowers on short pedicels. ♄. S. Native of Sierra Leone. Corolla violaceous.

Sierra Leone Lonchocarpus. Tree 20 feet.

8 L. ALBIFLÒRUS; leaflets 7, ovate, acuminated, glabrous, entire; flowers on long peduncles or racemose, axillary; legume flat, pubescent. ♄. S. Native of the Island of St. Thomas, in the Gulf of Guinea. Flowers white.

White-flowered Lonchocarpus. Fl. Oct. Tree 50 feet.

9 L. FORMOSIA'NUS (D. C. prod. 2. p. 260.) leaflets 7, coriaceous, glabrous, oval, obtusely acuminated, having the nerve and lateral veins rather prominent; racemes panicled; pedicels usually 2-flowered; calyx truncate, and is as well as the petals and legumes clothed with silky pubescence. ♄. S. Native of Africa, on the banks of the river Formosa. Robínia violàcea, Beauv. fl. d'ow. 2. p. 28. t. 76. Dalbérgia Guineénsis, Spreng. syst. app. 3. p. 266. Stamens monadelphous. Flowers violet.

Formosa Lonchocarpus. Tree 20 feet.

10 L. SERÍCEUS (H. B. et Kunth, l. c.) leaflets 7-11, oval, acuminated, coriaceous, glabrous above, but clothed with rufous, silky pubescence beneath, as well as the calyxes, pedicels, and branches; racemes erect, length of leaves; pedicels very short, usually twin or 2-flowered; petals clothed with silky-silvery pubescence on the outside. ♄. S. Native of the Islands of Montserrat, St. Christopher, and Trinidad. Robínea serícea, Poir. dict. 6. p. 226. R. móllis, Vahl. in herb. Puer. Calyx truncate. Legume unknown. Stamens monadelphous.

Silky Lonchocarpus. Clt. 1826. Tree 20 feet.

11 L. PYXIDA'RIUS (D. C. prod. 2. p. 260.) leaflets 7, ovate, acuminated, glabrous above, but clothed with adpressed villous-pubescence beneath; petioles, peduncles, and calyxes clothed with short velvety down; racemes erect, shorter than the leaves; vexillum clothed with adpressed silky down on the outside. ♄. S. Native of Cuba, where it is called *Palo de Caja* or box-wood. Stamens monadelphous. This species comes very near to *L. sericeus.*

Box Lonchocarpus. Clt. 1820. Tree 20 feet.

12 L. LATIFÒLIUS (H. B. et Kunth, l. c.) leaflets 7, ovate, short-acuminated, glabrous, pale beneath, having the nerve, and lateral veins rather prominent; racemes axillary, much longer

than the leaves, and are, as well as the pedicels and calyxes, pubescent; corolla glabrous. ♄. S. Native of Porto-Rico. Amerímnum latifòlium, Willd. spec. 4. p. 611. exclusive of the synonyme, and therefore the same as Pterocárpus latifòlius of Poir. dict. 4. p. 611. Calyx 5-toothed. Flowers of a purplish-violet colour. Stamens monadelphous. Ovary pubescent, linear, tapering to both ends.

Broad-leaved Lonchocarpus. Clt. 1808. Tree 12 to 20 ft.

13 L. PUBE'SCENS (D. C. prod. 2. p. 260.) leaflets 11-13, ovate-lanceolate, acuminated, glabrous, pubescent beneath; racemes axillary, filiform, length of leaves. ♄. S. Native of Caraccas. Amerímnum pubéscens, Willd. spec. 3. p. 909. Pterocárpus pubéscens, Poir. dict. 5. p. 740. The legume is said to be 2-valved and many-seeded, and the stamens monadelphous. Flowers small, violet.

Pubescent Lonchocarpus. Clt. 1824. Tree 20 to 30 feet.

14 L. RÒSEUS (D. C. prod. 2. p. 260.) leaflets 13-15, lanceolate, acuminated, glabrous, shining above, but rather pale beneath; racemes erect; pedicels 1-flowered; calyx truncate; young legumes clothed with rufous-velvety down. ♄. S. Native of South America. Pseudo-acàcia latifòlia, Plum. spec. 19. Robínia ròsea, Mill. dict. no. 4. but not of Ell. Robínia latifòlia, Poir. dict. 6. p. 224. but not of Mill. Flowers large, showy, rose-coloured, ex Plum. Legume oblong, acute, 1-4-seeded, tapering to the base.

Rose-coloured-flowered Lonchocarpus. Clt. 1700. Tree 20 to 30 feet.

15 L.? PTEROCA'RPUS (D. C. prod. 2. p. 260.) leaflets 5, oval-oblong, acuminated, quite smooth, shining above, but glaucescent beneath; racemes axillary, length of leaves; legume oblong, acuminated at both ends, winged on the upper suture. ♄. S. Native of French Guiana. Flowers unknown. Legume 2 or 3 inches long, and 1-2-seeded from abortion.

Wing-fruited Lonchocarpus. Tree 20 to 30 feet.

16 L. SE'PIUM (D. C. prod. 2. p. 260.) leaflets 11-15, ovate, bluntly acuminated, membranous, rather puberulous above, but glabrous and pale beneath; racemes shorter than the leaves; pedicels 1-flowered: calyx truncate; legumes glabrous, oblong-obtuse, compressed, callous at the sutures. ♄. S. Native of St. Martha, and at Carthagena, where it is used for hedges to gardens. Robínia sèpium, Jacq. amer. 211. t. 129. f. 101. Flowers rose-coloured. Stamens diadelphous. Legume about 4 inches long, 4-seeded.

Hedge Lonchocarpus. Clt. 1821. Tree 30 feet.

17 L. MACULA'TUS (D. C. prod. 2. p. 260.) leaflets 17, oblong, obtuse, beset with adpressed pili above, but glaucescent and spotted with black beneath; calyx campanulately urceolate, nearly entire, puberulous; legume linear, compressed, with thickened margins. ♄. S. Native about Campeachy. Robínia maculàta, H. B. et Kunth, nov. gen. amer. 6. p. 394. This plant, along with the preceding species, may form a distinct genus, which may be called *Glyciridia.*

Spotted-leaved Lonchocarpus. Tree 30 feet.

18 L. SWA'RTZII (D. C. prod. 2. p. 261.) leaflets 5-7, oval, bluntly acuminated, glabrous, pale beneath; racemes shorter than the leaves; pedicels 2-flowered; calyx truncate; legumes glabrous, elliptic-oblong, compressed, few-seeded, rather callous at the sutures. ♄. S. Native of St. Domingo. Robínia sèpium, Swartz, prod. 106. Flowers rose-coloured. This species differs from *L. sèpium* in the flowers being smaller and monadelphous, not diadelphous.

Swartz's Lonchocarpus. Tree 20 feet.

19 L. NICO'U (D. C. prod. 2. p. 261.) leaflets 7, ovate, acuminated, glabrous; branches sarmentose, rather climbing; racemes spike-formed; pedicels 1-flowered; calyx 5-toothed; legume elongated, glabrous, 4-seeded, rather callous at the sutures. ♄. ◡. S. Native of French Guiana, in bushy places. Robínia Nicóu, Aubl. guian. 2. p. 771. t. 308. R. scándens, Willd. spec. 3. p. 1134. Flowers purple, diadelphous. There is a plant native of Cayenne which differs from the plant of Aublet in the leaflets being silky-pubescent beneath, and in the spikes being longer than the leaves. The twigs are cut and thrown into ponds and rivers for the purpose of intoxicating fish, in order to take them, as those of *Tephròsia toxicària,* see p. 229. *Nicou* is the Caribbee name of the tree.

Nicou Lonchocarpus. Shrub cl.

20 L. OXYCA'RPUS (D. C. prod. 2. p. 261.) leaflets 7, oval, abruptly, acutely, and mucronately acuminated, glabrous, palish beneath; racemes shorter than the leaves; pedicels 2-3-flowered; calyx usually 5-toothed; legume oblong, acuminated at both ends, compressed, few-seeded, not tumid at the sutures. ♄. S. Native of Guadaloupe. Flowers purple, monadelphous.

Sharp-fruited Lonchocarpus. Tree 12 to 20 feet.

21 L.? AMERI'MNUM (D. C. prod. 2. p. 261.) leaflets 7, ovate, acuminated on long petioles, glabrous; racemes simple, loose, shorter than the leaves; calyx 5-toothed. ♄. S. Native about Carthagena, in woods. Amerímnum pinnàtum, Jacq. amer. 200. t. 177. f. 50. Flowers yellow, monadelphous.

Amerimnum-like Lonchocarpus. Tree 14 feet.

Cult. For culture and propagation see *Eysenhárdtia,* p. 231.

CX. ROBI'NIA (in honour of Jean Robin, a French botanist, once herbalist to Henry IV. of France, author of Histoire des Plantes, 12mo. Paris, 1620. printed also with the second edition of Lonicier's History of Plants. His son Vespasian was subdemonstrator at the Jardin du Roi, and was the first person who cultivated the *Pseudacàcia* in Europe). D. C. mem. leg. vi. prod. 2. p. 261.—Pseudacàcia, Tourn. inst. t. 417. Mœnch. meth. 145.—Robínia species of Lin. and others.

LIN. SYST. *Diadélphia, Decándria.* Teeth of calyx 5, lanceolate, 2 upper ones shorter and approximate. Corolla papilionaceous. Vexillum large. Keel obtuse. Stamens diadelphous, deciduous. Ovary 16-20-ovulate. Style bearded in front. Legume compressed, almost sessile, many-seeded, with the valves thin and flat, margined at the seminiferous suture.—North American trees, usually furnished with stipular spines. Leaves impari-pinnate; leaflets petiolulate, and furnished with stipels at the base. Flowers white or rose-coloured, disposed in axillary, usually nodding racemes.

1 R. PSEUDACA'CIA (Lin. spec. 1043.) spines stipular; branches twiggy; racemes loose, pendulous, and are, as well as the legumes smooth; leaflets ovate. ♄. H. Native of North America, from Canada to Carolina. Lam. ill. t. 666. f. 1. Duham. arbr. ed. nov. 2. t. 16. Æschynómene pseudacàcia, Roxb. Pseudacàcia odoràta, Mœnch. l. c. Flowers white, sweet-scented. Roots creeping, the fibres sometimes bearing tubercles. The *Common, False,* or *Bastard Acacia,* called *Locust-tree* in America, grows very fast whilst young, so that in a few years from seed the plants rise to 8 or 10 feet high, and it is not uncommon to see shoots of this tree 6 or 8 feet long in one summer. The branches are armed with stipular hooked prickles. The leaves have 8 or 10 pairs of bright green leaflets. The flowers come out from the sides of the branches in pretty long bunches, hanging down like those of Laburnum, white, and smelling very sweet; they appear in June, and when the trees are full of flowers they make a very fine appearance, and perfume the air round them, but they seldom continue more than one week. The wood is valued in North America for its durability. Most of the houses which were built at Boston in New England on the first settling of the English, were constructed of this timber. The tree being very liable to be broken by high winds, and the leaves not appearing till late in the summer, and

falling off early in the autumn, makes it less valuable for ornamental plantations. The wood when green is of a soft texture, but becomes very hard when dry, of a close grain, and finely veined, and is more valued in America by cabinet-makers than any other native timber whatever. It is as durable as the best white oak, and is esteemed preferable for axletrees of carriages, treenails for ships, and many other mechanical purposes. It has been employed with success in Virginia for ship-building, and found to be far superior to American oak, elm, ash, &c. for that purpose. Posts for rail-fencing made of this tree stand wet and dry in the ground better than any other in common use, almost as well as posts of the swamp-cedar. It makes excellent fuel, and its shade is less injurious to grass than that of most other trees. The leaves afford wholesome food for cattle. A gentleman in New England sowed several acres of it for that purpose. Being very apt to throw out suckers from the running roots, and as it stolls freely, it seems peculiarly calculated for coppice woods. A *locust-tree* in New England 40 years old was in 1782 60 feet high and 4 feet 10 inches in girth at 3 feet from the ground. A cubic foot of *Acàcia* in a dry state weighs from 48 to 53 pounds avoirdupoise. If we compare its toughness in an unseasoned condition with that of oak, it will not be more than 8-100 less. Its stiffness is equal to 99-100 of oak, and its strength nearly 96-100, but were it properly seasoned, it might possibly be found much superior to oak in strength, toughness, and stiffness. A piece of unseasoned *acàcia* 2 feet 6 inches long, and an inch square in the vertical section, broke when loaded with a weight of 247 pounds avoirdupoise. Its medium cohesive force is about 11,500 pounds. (Dict. of Archi.)

Var. β, *inérmis* (D. C. prod. 2. p. 261.) spines wanting or nearly obsolete; leaflets flat. D. C. cat. hort. monsp. 136. R. spectábilis, Dum. Cours. bot. cult. 6. p. 140.

Var. γ, *crispa* (D. C. l. c.) spines wanting; leaflets all or for the most part undulately curled.

Var. δ, *umbraculífera* (D. C. cat. hort. monsp. 157.) spines wanting; branches much crowded, smooth; leaflets ovate. This plant is common in gardens, but has not yet flowered. Robínia inérmis, Dum. Cours. 6. p. 140. Commonly called *Parasol Acacia.* This variety is said to have been raised from the seed of *R. pseudacàcia*, but it is more of a shrub than a tree.

Var. ε, *tortuòsa* (D. C. prod. 2. p. 261.) branches much crowded, and twisted. ♄. H. R. pseudacàcia tortuòsa, D. C. cat. hort. monsp. 136. Racemes similar to those of *R. pseudacàcia*, but are smaller and fewer flowered.

Bastard Acacia, *False Acacia*, or American Locust-tree. Fl. May, June. Clt. 1640. Tree 30 to 60 feet.

2 R. du'bia (Fouc. in Desv. journ. bot. 4. p. 204. but not of Poir.) spines very short; branches, petioles, peduncles, and calyxes furnished with a few glands, rarely clammy; leaflets ovate; racemes loose, pendulous; bracteas concave, caducous, ending each in a long bristle. ♄. H. Said to be a hybrid between *R. pseudacàcia* and *R. viscòsa*. R. hýbrida, Audib. R. ambígua, Poir. suppl. 4. p. 690. and perhaps R. echinàta, Mill. dict. no. 2. Flowers sweet-scented, pale rose-coloured. The pods, according to Miller, are thickly beset with short prickles.

Doubtful, Bastard, or False Acacia. Fl. May, Ju. Tree 60 ft.

3 R. viscòsa (Vent. hort. cels. t. 4.) spines very short; leaflets ovate; branches and legumes glandular and clammy; racemes crowded, erect; bracteas concave, deciduous, each ending in a long bristle; the 3 lower teeth of calyx acuminated. ♄. H. Native of North America, on the mountains of Georgia and Carolina, near rivers. Duh. arbr. ed. nov. 2. t. 17. R. glutinòsa, Curt. bot. mag. 560. Flowers pale red mixed with white, scentless. Roots creeping.

Clammy False Acacia. Fl. June, Aug. Clt. 1797. Tree 30 to 40 feet.

4 R. hi'spida (Lin mant. 101.) spines wanting; leaflets obovate; branches hispid; racemes loose, hispid; the 3 lower teeth of calyx acuminated; legumes hispid. ♄. H. Native of Virginia and Carolina, on high mountains. Mill. fig. t. 244. Curt. bot. mag. 311. R. ròsea, Duh. l. c. t. 18. R. montàna, Bartr. voy. 2. p. 128. Æschynómene híspida, Roxb. Flowers large, rose-coloured, shewy, scentless. Perhaps many species are confused under the name of *R. hispida.* This is one of the most elegant of the species when in flower, it is usually grafted on the common sort, and flowers even when it is about 2 or 3 feet high, which renders it a very valuable plant for ornamental shrubberies, but it requires to be grown in a sheltered situation, otherwise the branches are very liable to be shattered or blown off by high winds. In young trees grafted above ground, the fracture commonly takes place at the graft, so that a good preventive is to graft on a root, a little below the surface. Grafts in this manner are also much more certain of success.

Var. β, *nàna* (D. C. prod. 2. p. 262.) plant hardly a foot high. Native of Carolina, in pine woods.

Hispid Bastard or Rose Acacia. Fl. May, Sept. Clt. 1743. Shrub 3 to 6 feet.

5 R. ròsea (Ell. sketch. 2. p. 213.) spines wanting; leaflets obovate, alternate; branches and racemes smoothish. ♄. H. Native of Georgia, in pine woods. R. híspida var. β ròsea, Pursh. fl. sept. amer. 2. p. 488. Flowers large, rose-coloured, scentless. The 3 lower teeth of calyx acuminated.

Upright *Rose* or Bastard Acacia. Fl. May, Sept. Sh. 6 feet.

6 R. macrophy'lla (Schrad. in litt.) spines wanting; leaflets ovate-roundish; branches and peduncles glabrous, the 3 lower teeth of calyx acuminated. ♄. H. Native of North America. Flowers large, rose-coloured, scentless. R. híspida var. γ macrophýlla, D. C. prod. 2. p. 262.

Long-leaved Rose or Bastard Acacia. Fl. May, June. Shrub 6 to 10 feet.

† *Trees and shrubs referred to Robinia by authors, which appear not to belong to the genus, and ought to be referred to some other genera; but they are not so sufficiently known as to enable us to refer them to their proper genera.*

7 R. ama'ra (Lour. coch. p. 455.) unarmed; leaves impari-pinnate, usually with 5 pairs of ovate-oblong leaflets, which are white beneath; racemes long, erect; pedicels tern; legume almost terete, acuminated, glabrous. ♄. G. Native of Cochinchina and China. Flowers violaceous. Root very bitter, of a yellowish brown-colour.

Bitter-rooted Robinia. Shrub 4 feet.

8 R. glycyphy'lla (Poir. dict. 6. p. 227.) unarmed; leaves impari-pinnate, with 6-9 pairs of glabrous, ovate, obtuse, discoloured leaflets; stipulas subulate, stiff; racemes elongated; calyx tubular; legume linear, compressed, obtuse, stipitate. ♄. S. Native of Martinique. Flowers small, white. Perhaps a species of *Lonchocárpus.*

Sweet-leaved Robinia. Tree 20 feet?

9 R. Guinee'nsis (Willd. ex Steud. D. C. prod. 2. p. 262.) unarmed; leaves impari-pinnate, with 5-6 pairs of elliptic, mucronate, glabrous leaflets; stipulas linear-subulate; racemes 5-6-flowered; branchlets and calyxes hispid. ♄. S. Native of Guinea. Cýtisus híspidus, Willd. spec. 3. p. 1121.

Guinea Robinia. Clt. 1822. Tree 40 feet.

10 R. latifòlia (Mill. dict. no. 9. but not of Poir.) unarmed; leaves impari-pinnate, with 6-7 pairs of oblong acuminated leaflets, which are shining above, and pale beneath; racemes elongated; legumes 1-2-seeded, oblong-ovate. ♄. S. Native of Campeachy. Flowers rose-coloured. Perhaps a species of *Lonchocárpus.*

Broad-leaved Robinia. Tree 20 to 30 feet.

11 R. GLA'BRA (Mill. dict. no. 5.) unarmed; leaves impari-pinnate; leaflets oblong-obovate, obtuse, glabrous; peduncles racemose, crowded. ♄. S. Native of Campeachy. Flowers small, yellowish-red. Perhaps a species of *Lonchocárpus*.

Glabrous Robinia. Tree.

12 R. PE'NDULA (Ort. dec. p. 26.) unarmed; leaves impari-pinnate, with 6-8 pairs of oval mucronulate leaflets; stipulas subulate; racemes twice the length of the leaves; pedicels twin, 1-flowered. ♄. S. Native of Peru, at the town called Huariaca. Flowers pale violet-coloured.

Pendulous-flowered Robinia. Tree.

13 R. PURPU'REA (Link. enum. 2. p. 242,) petioles somewhat spinescent; leaves impari-pinnate; leaflets lanceolate, mucronate, pubescent; pedicels 1-flowered. ♄. S. Native country unknown. Flowers purple.

Purple-flowered Robinia. Fl. July, Aug. Clt. 1810. Tree.

14 R. RUBIGINÒSA (Mart. et Nees, nov. act. bonn. 12. p. 31. exclusive of the synonyme of Poir.) shrub unarmed, diffuse; leaves impari-pinnate; leaflets 19-21, elliptic, obtuse, somewhat emarginate, pubescent beneath; racemes axillary, compound, and are, as well as the branches, clothed with rusty villi. ♄. S. Native of Brazil, about Tamburil and Valos. Flowers small, violaceous. Ovary crenulated.

Rusty Robinia. Shrub 10 to 12 feet.

15 R. CUBE'NSIS (H. B. et Kunth, nov. gen. amer. 6. p. 392.) arboreous; leaflets 9, ovate-oblong, obliquely falcate, glabrous; racemes in fascicles, pendulous; calyx urceolate, 5-toothed, pubescent. ♄. S. Native of Cuba, near Batabana. Flowers pale rose-coloured. Fruit unknown.

Cuba Robinia. Tree 40 feet.

16 R. FERRUGI'NEA (H. B. et Kunth, nov. gen. amer. 6. p. 395.) arboreous; branches glabrous, unarmed; racemes rising before the leaves; calyx urceolate, 5-lobed, somewhat bilabiate, clothed with rusty tomentum. ♄. S. Native of Caraccas. Flowers rose-coloured or white.

Ferruginous Robinia. Tree 20 feet.

17 R. FLA'VA (Lour. coch. 456.) unarmed; leaves abruptly pinnate, usually with 8 pairs of oblong acutish leaflets; peduncles 3 together, each bearing 3 flowers. ♄. G. Native of the north of China. Root yellow, bitter. Flowers white. Perhaps a species of *Caragàna*. The roots in decoction are febrifugal.

Yellow-rooted Robinia. Shrub 1 to 2 feet.

18 R. PYRAMIDA'TA (Mill. dict. no. 7.) unarmed; leaves bipinnate; leaflets ovate, sessile, shining above, but pale beneath: panicles spicately pyramidal, erect. ♄. S. Native of Campeachy. Flowers red. Perhaps a species of *Cæsalpinia*.

Pyramidal-flowered Robinia. Tree.

Cult. All the true species of *Robínia* are very handsome when in flower, and are very proper plants for ornamental shrubberies; the taller species to be placed at the back, and the shorter ones in front; they are either propagated by layers or by grafting the rarer on the commoner sorts, most commonly on the *R. pseudacàcia*. Most of the species may be raised from seeds, which in some kinds ripen in plenty. The stove and greenhouse kinds, which are certainly very doubtful species of the genus, should be treated in the same manner as the genus *Sabínea*.

CXI. POITÆ'A (in honour of — Poiteau, a French botanist and traveller in South America, author of Flore Parisienne, in conjunction with Turpin, and author of many botanical memoirs in the Annales du Museum). D. C. prod. 2. p. 263.—Poitèa, Vent. choix. t. 36.

LIN. SYST. *Diadélphia, Decándria.* Calyx obliquely truncate, 5-toothed; teeth very short, especially the 2 upper ones. Petals 5, disposed in a papilionaceous manner, conniving, oblong; vexillum retuse, shorter than the wings. Keel longer than the wings. Stamens somewhat exserted, diadelphous. Style filiform, glabrous. Stigma terminal. Legume stipitate, linear, compressed, many-seeded, mucronulate; valves flat. Seeds lenticular.—Shrubs, natives of St. Domingo, with the habit of *Galèga* and *Robínia*. Stipulas setaceous. Leaves impari-pinnate; leaflets exstipellate. Flowers white or rose-coloured, disposed in axillary racemes. Legumes glabrous.

1 P. GALEGOI'DES (Vent. choix. t. 36.) petioles wingless; leaflets 12-15 pairs, oblong, mucronate, and are, as well as the branches, clothed with adpressed pubescence; flowers and legumes nodding. ♄. S. Native of St. Domingo. Galèga Bertèrii, Spreng. in herb. Balb. P. galegifórmis, Spreng. syst. 3. p. 272. Leaflets 3 lines long, and a line and a half broad. Flowers of a rose-purple colour.

Goat's-rue-like Poitæa. Shrub

2 P. VICIÆFÒLIA (D. C. in ann. sc. nat. 4. p. 99.) petiole with a very narrow wing; leaves with 16-18 pairs of oblong mucronate leaflets, which are clothed with hairy pubescence, as well as the branchlets; flowers and legumes erect. ♄. S. Native of St. Domingo. Robínia viciæfòlia, Bert. in herb. Balb. Flowers of a rose-purple colour. Leaflets an inch long, and about 3 or 4 lines broad.

Vetch-leaved Poitæa. Shrub.

3 P. CAMPANI'LLA (D. C. prod. 2. p. 263.) petiole terete, filiform; leaves with 4 pairs of distant, ovate-oblong, rather mucronulate leaflets, which are glaucous beneath, but smooth on both surfaces, as well as the branches and petioles. ♄. S. Native of St. Domingo, where it is called *Campanilla*. Robínia latifòlia, Bertero in herb. Balb. Flowers white or pale rose-coloured. Leaflets an inch long, and half an inch broad, on long petiolules.

Campanilla Poitæa. Shrub.

Cult. See *Sabínea* for culture and propagation.

CXII. SABI'NEA (named by De Candolle, in honour of Joseph Sabine, F.R.S. F.L.S. &c. who was a long time Secretary of the Horticultural Society of London). D. C. in ann. sc. nat. 4. jan. 1825. p. 92. prod. 2. p. 263.

LIN. SYST. *Diadélphia, Decándria.* Calyx cup-shaped, campanulate, with a truncate, nearly entire border. Corolla papilionaceous. Keel obtuse, rather shorter than the vexillum. Stamens diadelphous, the free one and 4 others shorter than the rest. Style filiform, glabrous, circinnately incurved, as well as the stamens. Legume stipitate, compressed, linear, elongated, many-seeded, mucronate by the style.—Unarmed Caribbean shrubs, with abruptly-pinnate leaves, glabrous mucronate leaflets, axillary fascicles of 1-flowered pedicels, and purplish flowers.

1 S. FLO'RIDA (D. C. l. c.) leaflets 8-9 pairs, elliptic-oblong; flowers rising before the leaves. ♄. S. Native of the American Islands, in St. John, Krabben Island, and St. Thomas. Robínia flórida, Vahl. symb. 3. p. 89. t. 70.

Flowery Sabinea. Shrub 2 to 4 feet.

2 S. DU'BIA (D. C. l. c.) leaflets 10-12 pairs, elliptic-oblong; flowers rising after the leaves. ♄. S. Native of Martinique and Porto-Rico. Robínia dùbia, Lam. ill. t. 606. f. 2. Poir. dict. 6. p. 227. but not of Fouc. Robínia Martinicénsis, Pers. ench. 2. p. 312. Perhaps sufficiently distinct from the preceding.

Doubtful Sabinea. Shrub 2 feet.

Cult. A mixture of loam, peat, and sand will answer the species of *Sabínea*, and young cuttings will root if planted in a pot of sand with a hand-glass placed over them in heat.

CXIII. COURSE'TIA (in honour of Dumont de Courset, author of the Botaniste Cultivateur, 5 vols. in 8vo. Paris, 1802. and one of the editors of the Bon Jardinier). D. C, in ann. sc. nat. 4. jan. 1825. p. 92. prod. 2. p. 264.

LIN. SYST. *Diadélphia, Decándria.* Calyx 5-cleft, with nearly equal acute segments, 2 superior ones rather the shortest, and joined together a little higher up than the rest. Vexillum obcordate, shorter than broad. Keel obtuse, shorter than the wings. Stamens diadelphous. Style incurved, thick at the base and glabrous, but filiform at the apex and bearded with villi on all sides. Stigma capitate, terminal, smoothish. Legume compressed, 1-celled, 5-8-seeded, tapering to the apex, and mucronate by the style.—Tomentose shrubs, with subulate stipulas, abruptly-pinnate leaves, with many pairs of ovate small leaflets, the common petiole sometimes terminating in a bristle, but rarely in an odd leaflet. Flowers yellow. This genus is allied to *Robínia* and *Caragàna*, not to *Láthyrus* or *Æschynómene.*

1 C. TOMENTO'SA (D. C. l. c.) the whole plant clothed with velvety tomentum; leaves with from 30-35-pairs of leaflets; racemes 2-3-flowered, shorter than the leaves; calyx 5-cleft. ♄. S. Native of Peru. Láthyrus fruticòsus, Cav. icon. t. 84. O'robus tomentòsus, Desf. cat. hort. par. ed. 1. p. 195. Vicia fruticòsa, Willd. spec. 3. p. 1102. O'robus fruticòsus, Pers. Flowers yellow.

Tomentose Coursetia. Shrub 2 feet.

2 C.? DU'BIA (D. C. prod. 2. p. 264.) branches clothed with white villi; leaflets elliptic, acutish, usually about 30 pairs, puberulous above, and villously tomentose beneath, and canescent; racemes 15-20-flowered, length of leaves; calyx 5-toothed. ♄. S. Native on the Andes about Pasto, near the river Guaritaria. Sesbània dùbia, H. B. et Kunth, nov. gen. amer. 7. p. 268. t. 660. Hymenóspron Pastoénsis, Spreng. Flowers rose-coloured.

Doubtful Coursetia. Shrub 3 to 6 feet.

3 C. VIRGA'TA (D. C. l. c.) plant smoothish; leaflets 10-15 pairs; racemes 8-10-flowered; calyx 5-toothed. ♄. S. Native of New Spain. Æschynómene virgàta, Cav. icon. t. 293. Agàti virgàta, Desv. journ. bot. 3. p. 120. Legume glabrous, compressed, somewhat torulose, not articulated, apiculated by the thick style. Calyx not bipartite. Stamens not equally diadelphous. Perhaps a proper species of *Coursètia.* Corolla yellow.

Twiggy Coursetia. Shrub 2 feet.

Cult. See *Subínca* for culture and propagation, p. 239.

CXIV. SESBA'NIA (*Sesban* is the Arabic name of the first species). Pers. ench. 2. p. 316. Desv. journ. bot. 3. p. 120. t. 4. f. 5.—Sésban, Poir. dict. 7. p. 127.—Sesbàna, R. Br. in hort. kew. 4. p. 330.—Æschynómene species of Lin. and others.—Coronílla species of Willd.

LIN. SYST. *Diadélphia, Decándria.* Calyx 5-cleft or 5-toothed (f. 38. *a.*) with the lobes nearly equal. Vexillum roundish, complicated, larger than the keel (f. 38. *b.*). Keel obtuse, 2-edged at the base. Stamens diadelphous, having the tube or sheath rather auricled at the base. Legume elongated, slender (f. 38. *c.*), compressed, or somewhat cylindrical; the sutures thickened, not truly articulated, but rather torulose.—Shrubs or herbs, having the cauline stipulas lanceolate. Leaves abruptly pinnate, with many pairs of leaflets, having the petioles drawn out into a bristle at the apex instead of an odd leaflet. Peduncles axillary. Flowers racemose, usually yellow. Perhaps this genus, with the three following, ought to have been referred to Tribe *Hedysàreæ.*

1 S. ÆGYPTI'ACA (Pers. ench. 2. p. 316.) shrubby, glabrous; leaflets 10 pairs, oblong-linear, obtuse, and rather mucronate; racemes many-flowered; legumes compressed, and rather terete, torulose, twice the length of the petiole. ♄. S. Native of Senegal, Egypt, and the East Indies. Sésban, P. Alp. 82. with a figure. Æschynómene Sésban, Lin. spec. 1061. Coronílla Sésban, Willd. spec. 3. p. 1147. Æ. Sésban and Æ. I'ndica, Burm. fl. ind. 169 and 170. Vexillum roundish and dotless. Flowers yellow.

Ægyptian Sesban. Fl. July, Aug. Clt. 1680. Shrub 5 feet.

2 S. OCCIDENTA'LIS (Pers. ench. 2. p. 316.) shrubby, glabrous; leaves with 12-15 pairs of elliptic leaflets; racemes few-flowered; legumes terete, straight, 3-times longer than the petioles. ♄. S. Native of South America or the Caribbee Islands. Coronílla occidentàlis, Willd. spec. 3. p. 1147.—Plum. ed Burm. t. 125. f. 1. Corolla hairy according to Plumier, yellow.

Occidental Sesban. Fl. July, Aug. Clt. 1816. Shrub 4 feet.

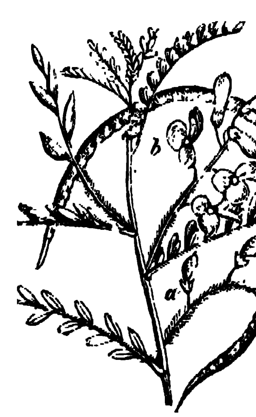
3 S. CASSIOI'DES; shrubby, smooth; leaves with from 20-35 pairs of lanceolate, obtuse, mucronate leaflets; stipulas subulate; peduncles axillary, 2-3-4-flowered; legumes long-linear, terete, longer than the leaves. ♄. S. Native of Guaiaquil. Æchynómene cassioìdes, Ruiz et Pav. in herb. Lamb.

Cassia-like Sesban. Shrub 2 to 3 feet.

4 S. EXASPERA'TA (H. B. et Kunth, nov. gen. amer. 6. p. 534.) shrubby; branches angular, and are, as well as the rachis, prickly; leaves with about 30 pairs of linear, mucronate, rather falcate, glabrous leaflets, but with the nerves and margins beset with adpressed down; peduncles usually 3-flowered, one-half shorter than the leaves. ♄. S. Native of South America, in sand at the river Apures, and near La Laguna de Valencia. Corolla glabrous, yellow. Legume very long and cylindrical.

Rough Sesban. Shrub 3 to 4 feet.

FIG. 38.



5 S. ACULEA'TA (Pers. ench. 2. p. 316.) plant herbaceous and glabrous; rachis of leaves rather prickly; leaves having about 25 pairs of linear, obtuse, rather mucronulate leaflets; racemes few-flowered; legumes filiform, one-half shorter than the petioles. ⊙. S. Native of Malabar. Æschynómene Sesban, Jacq. coll. 2. p. 283. Æ. bispinòsa, Jacq. icon. rar. t. 564. Coronílla aculeàta, Willd. l. c.—Rheed. mal. 9. t. 27. Burm. zeyl. t. 41. There is a variety of this plant having only 12-15 pairs of leaflets. Flowers orange.

Prickly Sesban. Fl. July, Aug. Clt. 1690. Pl. 5 to 6 feet.

6 S. PERUVIA'NA; shrubby, smooth; leaves with 4-6 pairs of obovate, obtuse, mucronate leaflets, which are glaucous beneath; racemes short, few-flowered; stipulas ovate, subulate at the apex; petioles prickly; legumes longer than the leaves, elongated, terete. ♄. S. Native of Peru. Æschynómene spec. nov. Ruiz et Pav. in herb. Lamb.

Peruvian Sesban. Shrub 3 to 4 feet.

7 S. CANNA'BINA (Pers. l. c.) plant herbaceous, glabrous; rachis of leaves smooth; peduncles 1-flowered, twin; legume filiform, compressed. ⊙. S. Native of Malabar. Æschynómene cannábina, Retz. obs. 5. p. 26. Coronílla cannábina, Willd. spec. 3. p. 1148. Flowers small, yellow. This plant, if treated as hemp, may be used for the same purposes.

Hemp Sesban. Fl. July, Aug. Clt. 1800. Pl. 2 to 4 feet.

8 S. AFFI'NIS (Schrad. sem. hort. goett. 1819.) plant herbaceous, smoothish; leaflets 12-18 pairs, oblong-linear, very blunt, mucronulate; rachis of leaves smooth; racemes few-flowered; legumes compressed, pendulous, length of rachis. ⊙. S. Native of the East Indies. Æschynómene cannábina, Hortul. Flowers yellow.

Allied Sesban. Fl. July, Aug. Clt. 1800. Pl. 2 to 4 feet.

9 S. PUNCTA'TA (D. C. prod. 2. p. 264.) plant herbaceous,

glabrous; leaves having 10-30 pairs of oblong-linear, very blunt, mucronate leaflets; petioles pubescent above; racemes many-flowered; corolla 6-times longer than the calyx; legumes compressed, somewhat torulose, 3 or 4 times the length of the petiole. ⊙. ? S. Native of Senegal. Flowers yellow, 8-9 lines long, having the vexillum spotted with purple on the outside.

Spotted-flowered Sesban. Fl. July, Aug. Clt. 1825. Pl. 2 to 3 feet.

10 S. PACHYCA′RPA (D. C. prod. 2. p. 265.) plant herbaceous, glabrous; leaflets oblong-linear, very blunt, and rather mucronate; petioles smooth; racemes 4-6-flowered, somewhat corymbose; corolla 3-times longer than the calyx; legumes rather terete, thick, 3-times the length of the rachis. ⊙. ? S. Native of Senegal. Flowers yellow, but with the vexillum variegated with purple spots. Legume acuminated, 6-8 inches long.

Thick-fruited Sesban. Pl. 2 to 3 feet.

11 S. PI′CTA (Pers. ench. 2. p. 316.) plant herbaceous, glabrous; leaves with 12-16 pairs of oblong-linear obtuse leaflets; racemes many-flowered, nodding; corolla 3-times the length of the calyx; legumes filiform, when young terete, but at length becoming compressed, torulose, twice the length of the petioles. ♂. S. Native of New Spain. Æschynómene pícta, Cav. icon. 4. p. 7. t. 314. Coronílla pícta, Willd. l. c. Corolla yellow, having the vexillum variegated with black dotted lines. There is a variety of this plant with 1-flowered peduncles, but this is very rare.

Painted-flowered Sesban. Fl. July, Aug. Clt. 1823. Pl. 4 to 6 feet.

12 S. MACROCA′RPA (Muhl. ex Ell. sketch. 2. p. 221.) plant herbaceous, glabrous; leaflets elliptic, glaucescent beneath, many-pairs; racemes axillary, few-flowered; legumes rather terete, elongated. ⊙. H. Native of Louisiana, and in the island of Paris. Flowers yellowish. Racemes shorter than the leaves.

Long-fruited Sesban. Fl. July, Aug. Clt. 1820. Pl. 3 ft.

13 S. PUBE′SCENS (D. C. prod. 2. p. 265.) plant herbaceous, clothed with adpressed villous pubescence; leaflets oblong-linear, obtuse, mucronate, about 20 pairs; racemes 7-8-flowered; legumes filiform, shorter than the petiole. ⊙. S. Native of Guinea. Æschynómene pubéscens, Vahl. ined. Flowers yellow.

Pubescent Sesban. Pl. 2 to 3 feet?

14 S. PALUDÒSA (Jacq. hort. vind. ex sem. miss. D. C. pl. rar. jard. gen. prod. 2. p. 265.) plant herbaceous, glabrous; leaflets elliptic-linear, obtuse, mucronate, 10-20 pairs; racemes usually 2-flowered; legume terete, rather compressed, and somewhat torulose, length of rachis. ⊙. S. Native of the East Indies. Corolla yellow, but with the vexillum rather brownish, and the top of the keel purplish. Perhaps the same as Æschynómene paludòsa of Roxb.

Marsh Sesban. Fl. July, Aug. Clt. 1816. Pl. 2 to 4 feet.

15 S. GRA′CILIS (Schrad. cat. sem. gœtt. 1819. D. C. prod. 2. p. 265.) plant glabrous; leaves with 12-15 pairs of oblong-linear, obtuse, mucronulate leaflets; rachis of leaves smooth; racemes few-flowered; legumes compressed, rather torulose, erect, twice the length of the rachis, apiculated by the style, which is twice the length of the ultimate joint. ⊙. S. Native country unknown. Very nearly allied to the following species.

Slender Sesban. Fl. July, Aug. Clt. 1820. Pl. 2 to 3 feet.

16 S. LEPTOCA′RPA (D. C. prod. 2. p. 265.) plant herbaceous, glabrous; leaves with about 20 pairs of linear, obtuse, mucronate leaflets; racemes few-flowered, erect; legumes filiform, terete, torulose, twice the length of the rachis; style shorter than the ultimate joint of the pod. ⊙. ? S. Native of Senegal. Flowers yellow, but with the vexillum dotted with black, as in *S. picta*.

Slender-fruited Sesban. Pl. 2 to 3 feet.

17 S. LONGIFÒLIA (D. C. prod. 2. p. 265.) plant shrubby, glabrous; leaves with from 7-18 pairs of ovate-lanceolate, mucronulate, glaucous leaflets; racemes many-flowered; legumes linear, torulose, acute. ♄. S. Native of New Spain. Æschynómene longifòlia, Ort. dec. 9. p. 70. Flowers yellow. Stems and fruit purplish.

Long-leaved Sesban. Shrub 4 to 6 feet.

18 S. SERI′CEA (D. C. prod. 2. p. 266.) plant herbaceous; leaflets lanceolate, acute, mucronate, narrowest at the base, silky beneath. ⊙. S. Native country unknown. Coronílla serícea, Willd. enum. 773. Said to be nearly allied to *S. cannábina*.

Silky Sesban. Fl. July, Aug. Clt. 1818. Pl. 2 to 3 feet.

19 S. COCHIN-CHINE′NSIS (D. C. prod. 2. p. 266.) stem suffruticose; leaves with 15 pairs of oblong, obtuse, mucronulate leaflets; peduncles 3-flowered; legumes filiform, torulose, erect. ♄. S. Native of Cochin-china. Coronílla Cochin-chinénsis, Lour. coch. p. 452. Flowers yellow.

Cochin-China Sesban. Shrub 4 feet.

Cult. All the species of this genus require a heat of 70 degrees of Fahrenheit, or they will not thrive. The shrubby kinds are increased by cuttings, and the annual species by seeds, which sometimes ripen in this country.

CXV. AGA′TI (*Touri* or *Agati* is the name of *A. grandiflòra* in the Sanscrit language). Rheed. hort. mal. t. 51. Adans. fam. 2. p. 326. Desf. journ. bot. 3. p. 120. t. 4. f. 6.

LIN. SYST. *Diadélphia, Decándria.* Calyx campanulate, truncate, obtusely 5-toothed, repand. Vexillum oval-oblong, shorter than the wings. Wings oblong. Keel large, straightish, with its petals free at the base and apex. Stamens diadelphous, somewhat exserted, with the sheath furnished with large auricles above the base. Style filiform, straightish. Legume tapering into a stipe, compressed, linear, 2-valved, transversely many-celled inside, but with the upper suture prominent and truncate, not truly articulated. Seeds ovate, solitary in the cells.—Indian trees, with lanceolate stipulas, abruptly-pinnate leaves, having many pairs of leaflets; large flowers; few-flowered racemes, and with legumes a foot and a half long.

1 A. GRANDIFLO′RA (Desv. l. c.) leaflets glabrous; legumes evidently compressed. ♄. S. Native of the East Indies, where it is called *Tauri* or *Agati*.—Rheed. mal. 1. p. 95. t. 51. Rumph. amb. 1. t. 76. Æschynómene grandiflòra, Lin. spec. 1050. Coronílla grandiflòra, Willd. spec. 3. p. 1145. Sesbània grandiflòra, Poir. dict. 7. p. 127. Dólichos arbòreus, Forsk. descr. 134. Flowers of a rusty-yellow colour according to Forsk, but according to Roxb. they are white or rose-red. The seeds are agreeable to domestic birds. The bark is bitter and tonic.

Great-flowered Agati. Fl. July, Aug. Clt. 1768. Tree 14 to 26 feet.

2 A. COCCI′NEA (Desv. l. c.) leaflets powdery; legumes rather terete. ♄. S. Native of the East Indies and the Society Islands. Æschynómene coccínea, Lin. fil. suppl. 330. Coronílla coccínea, Willd. l. c. Sesbània coccínea, Poir. l. c.—Rumph. amb. 1. t. 77. Flowers red, rather smaller than those of the other species, but similar.

Scarlet-flowered Agati. Fl. July, Aug. Clt. 1768. Tree 20 to 30 feet.

Cult. See *Sabinea* for culture and propagation, p. 239.

CXVI. GLOTTI′DIUM (from γλωσσα or γλωττα, *glotta*, a tongue; in reference to the valves of the legume separating into two membranes each, which has been compared to the superior opening of the larynx). Desv. journ. bot. 3. p. 119. t. 1. D. C. prod. 2. p. 266.

LIN. SYST. *Diadélphia, Decándria.* Calyx 5-toothed, somewhat bilabiate, lower teeth rather the longest. Vexillum reniform, very short, and broad. Stamens diadelphous. Legumes on long stipes, compressed, flat, 2-valved, 2-seeded, 1-celled; the valves separating into 2 membranes when mature, outer membrane coriaceous, inner one membranous and covering the seeds. Seeds compressed, transversely oblong.—Annual smooth herbs, having the primordial leaves ovate and simple, and the rest abruptly-pinnate, of many-pairs of leaflets. Racemes axillary, pedunculate. Flowers few, loose, yellow.

1 G. FLORIDA'NUM (D. C. prod. 2. p. 266.) ⊙. F. Native of Florida and Carolina. Robínia vesicària, Jacq. icon. rar. 1. t. 148. Phàca Floridàna, Willd. spec. 3. p. 1252. Sesbània platycárpa, Michx. Sesbània dispérma, Pursh. fl. amer. sept. 2. p. 485. Dalbérgia polyphýlla, Poir. suppl. 2. p. 446. Peduncles 4-5-flowered.

Florida Glottidium. Fl. July, Aug. Clt. 1816. Pl. 5 to 7 ft.

Cult. The seeds of this plant require to be sown in a pot filled with peat and sand, and placed in a hot-bed, and when the plants have grown 2 or 3 inches high, they should be planted into separate pots in the same kind of soil, and shifted into larger pots as they grow.

CXVII. PISCI'DIA (from *piscis*, a fish, and *cædo*, to kill or destroy; the leaves, bark, and twigs bruised are thrown into ponds or rivulets for the purpose of intoxicating fish, by which means they are easily taken). Lin. gen. 856. D. C. prod. 2. p. 267.—Piscípula, Lœfl. itin. 275.—Ichthyomèthia, P. Browne, jam. 276.

LIN. SYST. *Monadélphia, Decándria.* Calyx campanulate, 5-cleft. Corolla papilionaceous. Keel obtuse. Stamens monadelphous, the tenth one free from the rest at the base. Style filiform, glabrous. Legume pedicellate, linear, furnished with 4 membranous wings; the seeds separated by spongy substance. Seeds ovate, compressed, having a lateral hylum. Embryo curved, with elliptic-oblong thickish cotyledons, and a hooked radicle.—West Indian trees, with broad impari-pinnate leaves, and terminal panicles of white and blood-coloured flowers mixed.

1 P. ERYTHRI'NA (Lin. spec. 993. Jacq. amer. 206.) leaflets ovate; legume standing on a stipe, which is thrice the length of the calyx; wings interrupted. ♄. S. Native of New Spain and Jamaica on the mountains, where it is called *Dog-wood* by the English. Swartz, obs. 277. Lunan. hort. jam. 1. p. 269. Kunth. nov. gen. amer. 6. p. 382. Erythrìna piscípula, Lin. spec. ed. 1. p. 107. Sloane, jam. 2. t. 176. f. 4 and 5. Lam. ill. t. 605. f. A. Leaves rather coriaceous, adult ones smooth. Flowers rising before the leaves, of a dirty-white colour. The bark of the root (leaves and twigs, Jacq.) is used with the same effects as the leaves and branches of Surinam poison. It is pounded and mixed with the water in some deep and convenient part of a river or creek, whence it may spread itself; in a few minutes the fish that lie hidden under the rocks or banks rise to the surface, where they float as if they were dead; most of the larger ones recover after a time, but the smaller fry are destroyed. Jacquin observes that this quality of intoxicating fish is found in many other South American plants. The tree is considered in Jamaica as a good timber tree; the wood is hard and resinous, and lasts almost equally in or out of water. It is of a light-brown colour, coarse, cross-grained, and heavy. It makes excellent piles for wharfs. The stakes soon form a good living fence. The bark of the trunk is very restringent; a decoction of it is said to stop the immoderate discharge of ulcers, especially when it is combined with the mangrove bark; it is said to cure the mange in dogs, and it would probably answer well for tanning leather.

Red Piscidia or Jamaica Dog-wood. Fl. May, June. Clt. 1690. Tree 30 feet.

2 P. CARTHAGENE'NSIS (Jacq. amer. 210. Lin. spec. 993.) leaflets obovate; stipe of legume hardly longer than the calyx; wings continuous. ♄. S. Native of Jamaica, Guadaloupe, and Carthagena, on the mountains. Piscídia erythrìna of Ait. hort. kew, according to a specimen in the herbarium of L. Heritier, which has the underside of the leaves villous, and the young leaves very villous, and the lower leaflets ovate, but the terminal one is obovate.—Plum. ed. Burm. t. 133. f. 2. Lam. ill. t. 605. f. B and C. Flowers dirty-white, rising after the leaves. Lunan, hort. jam. 1. p. 270.

Carthagena Piscidia. Fl. May, June. Clt. 1690. Tree 30 ft.

Cult. Sandy loam suits these trees best, and cuttings may be rooted in sand under a hand-glass in heat.

CXVIII. DAUBENTO'NIA (in honour of M. Daubenton, a celebrated naturalist). D. C. legum. mem. vi. prod. 2. p. 267. —Piscídia species, Willd.

LIN. SYST. *Diadélphia, Decándria.* Calyx campanulate, rather truncate, with 5 small teeth. Corolla papilionaceous. Keel very blunt. Vexillum roundish, stipitate. Stamens diadelphous, having the free filament, as well as the staminiferous sheath, as if they were jointed at the base. Style filiform, glabrous. Legume on a long pedicel, oblong, compressed, coriaceous, ornamented with 4 wings rising near the margins of the sutures, and furnished with spongy substance between the seeds. Seeds ovate. —Mexican shrubs, with oblong stipulas, abruptly-pinnate leaves, and simple racemes of flowers. This genus is nearly allied to *Piscídia*, but the stamens are diadelphous, and the leaves are abruptly, not impari-pinnate. Perhaps this genus is allied to *Coursètia.*

1 D. PUNI'CEA (D. C. prod. 2. p. 267.) leaves with 8-10 pairs of oblong obtuse leaflets; racemes almost 3-times shorter than the leaves. ♄. S. Native of New Spain. Flowers scarlet. Piscídia punícea, Cav. icon. 4. t. 316. Æschynómene miniàta, Ort. dec. p. 28.

Scarlet-flowered Daubentonia. Fl. July, Aug. Clt. 1820. Shrub 2 to 3 feet.

2 D. LONGIFÒLIA (D. C. prod. 2. p. 267.) leaves having 11-12 pairs of lanceolate acute leaflets; racemes a little shorter than the leaves. ♄. S. Native of New Spain. Flowers yellow. Æschynómene longifòlia, Cav. icon. 4. t. 315. Piscídia longifòlia, Willd. spec. 3. p. 920.

Long-leaved Daubentonia. Fl. June, Aug. Clt. 1820. Sh. 6 ft.

Cult. To be propagated and cultivated in the same manner as that recommended for *Piscídia.*

CXIX. CORYNE'LLA (a diminutive of κορυνη, *koryne*, a club; in reference to the club-shaped style). D. C. in ann. sc. nat. 4. jan. 1825. p. 93. prod. 2. p. 267.

LIN. SYST. *Diadélphia, Decándria.* Calyx bilabiate, 5-toothed; teeth spreading, linear, subulate, 2 superior ones hardly shorter than the rest. Corolla papilionaceous; all the petals on very short claws. Keel obtuse. Stamens diadelphous, about equal in length to each other. Style glabrous, club-formed. Legume lanceolate, compressed, marginate, many-seeded.—St. Domingo shrubs, with abruptly-pinnate leaves, having the petioles and stipulas ending in spiny mucrones, and the leaflets exstipellate. Young branches pubescent. Pedicels 1-flowered, in fascicles. Flowers purplish.

1 C. POLYA'NTHA (D. C. l. c.) leaves with 5-7 pairs of oblong leaflets, which are glabrous above, and clothed with hoary hairs beneath. ♄. S. Native of St. Domingo among bushes, on the mountains. Robínia polyántha, Swartz, fl. ind. occid. 2. p. 1260. Corynìtis polyántha, Spreng. syst. append. 280.

Many-flowered Corynella. Shrub 5 to 6 feet.

2 C. paucifòlia (D. C. l. c.) leaves with 2-3 pairs of elliptic leaflets, which are glabrous above, but puberulous on the nerves beneath. ♄. S. Native of St. Domingo. Robínia Domingénsis, Spreng. in herb. Balb. Corynìtis Domingénsis, Spreng. syst. append. 280. Perhaps sufficiently distinct from the preceding.

Few-leaved Corynella. Shrub 5 to 6 feet.

Cult. See *Sabinea* for the culture and propagation, p. 239.

CXX. CARAGA'NA

(*Caragan* is the name of *R. arborèscens* among the Monguls). Lam. dict. 1. p. 611. ill. t. 607. f. 1-2. D. C. prod. 2. p. 268.

Lin. syst. *Diadélphia, Decándria.* Calyx short, tubular, 5-toothed. Corolla obtuse, straight; the wings and vexillum about equal in length. Stamens diadelphous. Style glabrous. Stigma terminal, truncate. Legume sessile, young ones compressed, at length somewhat cylindrical and many-seeded, mucronate by the style. Seeds somewhat globose.—Trees or shrubs, natives of Siberia and the East, with abruptly-pinnate leaves, mucronate leaflets, having the common petiole ending in a bristle or a spine, and axillary 1-flowered pedicels, which are usually in fascicles. Flowers usually yellow, perhaps in all except *C. jubàta*, which are white and reddish. The stipulas usually spinescent.

1 C. Altaga'na (Poir. suppl. 2. p. 89.) leaves having 6 or 8 pairs of glabrous, obovate-roundish, retuse leaflets; petiole unarmed; stipulas spinescent; pedicels solitary; legumes rather compressed. ♄. H. Native of Dahuria, in sandy places. Robínia Altagàna, Pall. fl. ross. t. 42. exclusive of the variety. Lher. stirp. t. 76. Caragàna microphýlla, Lam. dict. 1. p. 615. Flowers yellow. *Altagana* is the vernacular name of the shrub. Root with somewhat of the smell and taste of liquorice.

Altagana Caragana. Fl. April, July. Clt. 1789. Shrub 2 to 3 feet.

2 C. microphy'lla (D. C. prod. 2. p. 268.) leaves with 6-7 pairs of hoary retuse leaflets; petioles and stipulas rather spinescent at the apex; root creeping. ♄. H. Native of Siberia, in the desert of Baraba, and in the tract of the river Selenga. Robínia microphýlla, Pall. fl. ross. t. 42. f. 1-2. Caragàna Altagàna var. Poir. suppl. 2. p. 89. Flowers yellow.

Small-leaved Caragana. Fl. April, June. Clt. 1819. Shrub 2 to 3 feet.

3 C. arbore'scens (Lam. dict. 1. p. 615.) leaves with 4-6 pairs of oval-oblong villous leaflets; petiole unarmed; stipulas spinescent; pedicels in fascicles. ♄. H. Native of Siberia. Robínia Caragàna, Lin. spec. 1044. Duham. arb. ed. nov. 2. t. 19. Pall. ross. 1. t. 42. middle figure. Flowers yellow. The wood of this tree is hard and compact, very tough, yellow on the outside, but waved and striped with bay and red within. The leaves are said to be good food for cattle, and it is suggested that they contain a blue colouring matter like indigo. The seeds are good for poultry. The bark is tough, and fit for tyeing; the twigs may also be used as withes.

Arborescent Caragana. Fl. April, May. Clt. 1752. Tree 15 to 20 feet.

4 C. Chamla'gu (Lam. dict. 1. p. 616.) leaves with 2 pairs of distant, oval, or obovate, glabrous leaflets; stipulas spreading, and are as well as the petioles spinose; pedicels solitary; flowers pendulous. ♄. H. Native of China. Robínia Chamlàgu, Lher. stirp. t. 77. Duham. arb. ed. nov. 2. t. 21. Flowers large, yellow, at length becoming reddish. Root smelling like liquorice. *Chamlagu* is the Chinese name of the shrub.

Chamlagu or Chinese Caragana. Fl. May, June. Clt. 1773. Shrub 2 to 4 feet.

5 C. frute'scens (D. C. prod. 2. p. 268.) leaves having 2 pairs of leaflets, approximating the top of the petiole, they are obovate-cuneated; stipulas membranous; petiole furnished with a short spine at the apex; pedicels solitary, twice the length of the calyx. ♄. H. Native of Siberia, on the banks of the Volga, as well as of Tartary, and Tauria. Sweet, fl. gard. t. 227. Robínia frutéscens, Lin. spec. 1044. Pall. fl. ross. t. 43. C. digitàta, Lam. dict. 1. p. 616. Flowers yellow, resupinate. Leaves with a yellow hue.

Var. α, latifòlia (D. C. prod. 2. p. 268.) leaflets glabrous, broadly obovate. Frequent in gardens. There is a variety of this with 2-flowered peduncles.

Var. β, angustifòlia (D. C. prod. 2. p. 268.) leaflets oblong-cuneated, glabrous. Native about Odessa.

Shrubby Caragana. Fl. April, May. Clt. 1752. Sh. 2 to 3 ft.

6 C. móllis (Bess. enum. pl. volh. p. 29.) leaves with 2 pairs of oblong-cuneated leaflets, approximating the top of the petiole, clothed with soft villi; petiole ending in a short spine; pedicels solitary. ♄. H. Native of Tauria and Podolia. Robínia móllis, Bieb. fl. taur. suppl. 477. Robínia tomentòsa, Fisch. hort. gor. 1812. Flowers yellow.

Soft Caragana. Fl. April, May. Clt. 1818. Sh. 2 to 3 ft.

7 C. grandiflòra (D. C. prod. 2. p. 268.) leaves with 2 pairs of oblong-cuneated leaflets, approximating near to the top of the petiole, which is very short; stipulas and petioles spinose; pedicels solitary, almost the length of the calyx, which is gibbous at the base. ♄. H. Native of the south of Iberia, near Tiflis. Robínia grandiflòra, Bieb. fl. taur. 1. p. 168. Young leaves pubescent, adult ones hoary, ex. Bieb., but according to a specimen sent by Steven to De Candolle, the adult leaves are pale and glabrous. Legume terete, acute, brown, glabrous. Flowers an inch long, yellow.

Great-flowered Caragana. Fl. June, July. Clt. 1823. Sh.

8 C. pygmæ'a (D. C. prod. 2. p. 268.) leaves with 2 pairs of linear, glabrous leaflets, approximating at the top of the petiole, which is very short; stipulas and petioles spinescent; pedicels solitary, nearly the length of the calyx; calyx nearly equal at the base. ♄. H. Native of Siberia, on the Altaian mountains, and of Dahuria. Robínia pygmæ'a, Lin. spec. 1044. Pall. ross. 1. t. 45. Amm. ruth. t. 35. Leaflets acute, crowded, usually in the axils of trifid spines. Flowers yellow.

Var. β, arenària (Fisch. in litt.) leaflets linear-cuneate; pedicels rather longer than the calyx. ♄. H. Native of Siberia, on the banks of the river Tschuia.

Pygmy Caragana. Fl. April, May. Clt. 1751. Sh. 1 to 2 ft.

9 C. arena'ria (Donn, hort. cant. Sims, bot. mag. 1886.) leaves with usually 4 pairs of obcordate leaflets; pedicels usually twin, shorter than the flowers; stipulas subulate. ♄. H. Native of Siberia. Flowers yellow.

Sand Caragana. Fl. April, May. Clt. 1802. Sh. 1 to 2 ft.

10 C. Redówski (D. C. legum. t. 11. f. 45.) leaves with 2 pairs of ovate, acute, smooth leaflets; stipulas spinose. ♄. H. Native of Siberia. Flowers yellow. This plant has not been seen by us unless in a seedling state.

Redowski's Caragana. Fl. April, May. Clt. 1827. Shrub.

11 C. spinòsa (D. C. prod. 2. p. 269.) leaves with 2-4 pairs of cuneate-linear, glabrous leaflets; stipulas small, spinose; adult petioles permanent, strong, and spinose, twice the length of the leaflets; flowers solitary, almost sessile. ♄. H. Native of Siberia, near the Selenga and Kiacha in dry sandy places on mountains. Lindl. bot. reg. 1021. Robínia spinòsa, Lin. mant. 269. Robínia fèrox, Pall. ross. 1. t. 44. itin. t. E. e. f. 2. and 3. Robínia spinosíssima, Laxm. nov. act. pet. 15. t. 30. f. 4. C. fèrox, Lam. dict. 1. p. 315. Flowers yellow. Legume rather compressed. This shrub is well adapted to make impenetrable hedges, on account of its long branches and strong thorns. It is

said also to be a native of China, about Pekin, where they stick the bushes in clay on the tops of their walls, to prevent persons from getting or looking over them.

Spinose Caragana. Fl. April, May. Clt. 1775. Sh. 4 to 6 ft.

12 C. TRAGACANTHOÌDES (Poir. suppl. 2. p. 90.) leaves with 2-4 pairs of oblong-lanceolate, silky leaflets, each ending in a little spine; stipulas spiny; adult petioles permanent, strong, and spinose, twice the length of the leaflets; pedicels solitary, short, legume hoary-villous. ♄. H. Native of Siberia, among granite rocks beyond the Baikal. Robínia tragacanthoides, Pall. nov. act. petr. 10. t. 7. astr. 115. t. 86. Robínia macracántha, Lodd. cat. Flowers yellow, drooping.

Goats'-thorn-like Caragana. Fl. April, May. Clt. 1816. Sh.

13 C. JUBA'TA (Poir. suppl. 2. p. 89.) leaves with 4 or 5 pairs of oblong-lanceolate, lanuginously-ciliated leaflets; stipulas setaceous; petioles somewhat spinose, adult ones deflexed, filiform, permanent; pedicels solitary, very short; legume glabrous. ♄. H. Native of Siberia, at Lake Baikal. Robínia jubàta, Pall. in act. petr. 10. t. 6. astr. p. 113. t. 85. Lodd. bot. cab. 522. Flowers white, few, suffused with red.

Maned-leafletted Caragana. Fl. April, May. Clt. 1796. Shrub 1 to 2 feet.

† *A species not sufficiently known.*

14 C. FRUTICÒSA (Bess. cat. hort. crem. p. 116.) said to be allied to *C. arboréscens*, but differs in the flowers being larger and solitary, and in the young legumes being red. ♄. S. Native of the Russian empire. Perhaps Robínia Mongólica of Fisch. and R. speciòsa of Swartz ex Besser.

Shrubby Caragana. Shrub 2 to 3 feet.

Cult. All the species of this genus are well adapted for shrubberies. They are usually propagated by layers ana by seeds. The species are all deciduous.

CXXI. HALIMODE'NDRON (ἁλιμος, *halimos*, maritime, and δενδρον, *dendron*, a tree; in reference to the shrub, which grows in dry naked salt fields by the river Irtis, in Siberia). Fisch. in litt. D. C. legum. mem. vi. prod. 2. p. 269. Halodéndron, D. C. mem. ined. in soc. phys. gen. march, 1824. but not of Petit Thouars.

Lin. syst. *Diadélphia, Decándria.* Calyx urceolately-campanulate, with 5 short teeth. Keel obtuse, straightish. Wings very acute and auricled. Stamens diadelphous, about equal in length. Style filiform, glabrous. Stigma terminal. Legume stipitate, inflated, bladdery, hard, ovate, and few-seeded, depressed at the seminiferous suture. Seeds oval, somewhat compressed, small, and smooth.—Siberian shrubs, with the habit of *Caragàna*. Leaves abruptly pinnate, with 2 pairs of leaflets. Petioles and stipulas spinose. Peduncles 2-3-flowered. Flowers purplish. The shrubs are deciduous.

1 H. ARGE'NTEUM (D. C. prod. 2. p. 269.) leaves hoary; peduncles 2-flowered. ♄. H. Native of Siberia, in dry salt fields at the river Irtis, and of Iberia. Robínia halodéndron, Lin. fil. suppl. 330. Pall. fl. ross. t. 36. itin. 2. t. W. ed gall. append. no. 360. t. 83. f. 1. Caragàna argéntea, Lam. in Pall. ed gall. l. c. This is an elegant silky shrub, it thrives well in the gardens, but seldom or never flowers, probably from the want of the saline principle in which it naturally grows.

Var. α, vulgàre (D. C. prod. 2. p. 269.) leaves between hoary and silvery; vexillum length of keel. Sims, bot. mag. 1016.

Var. β, brachysèma (D. C. l. c.) leaves hoary and silvery; vexillum one half shorter than the wings and keel; style short. Perhaps only a monster raised in gardens.

Silvery Salt-tree. Fl. May, Jul. Clt. 1779. Sh. 4 to 6 ft.

2 H. SUBVIRE'SCENS; leaves greenish; vexillum length of carina; pedicels 3-flowered. ♄. H. Native of Siberia, in salt fields. Robínia triflòra, Lher. stirp. nov. 162. H. argénteum β, subvirèscens, D. C. prod. 2. p. 169.

Greenish Salt-tree. Fl. May, Ju. Clt. 1779. Sh. 4 to 6 ft.

Cult. See last genus for culture and propagation. They are elegant deciduous shrubs, and deserve to be cultivated in gardens.

CXXII. DIPHY'SA (from δις, *dis*, twice, and φυσα, *physa*, a bladder; in reference to the legume, which is furnished with a large membranous bladder on each side of the legume, rising from the sutures). Jacq. amer. 208. Schreb. gen. no. 1104. Lam. ill. t. 605. D. C. prod. 2. p. 269.

Lin. syst. *Diadélphia, Decándria.* Calyx 5-cleft, 2 superior lobes roundish, 3 lower ones acute. Vexillum obovate-oblong, reflexed; wings flat. Keel sickle-shaped. Stamens diadelphous. Legume linear, compressed, furnished on both sides with a large membranous bladder, which rises from the sutures, and are therefore opposite each other, 1-celled, 5-6-seeded.—A small unarmed tree, with impari-pinnate leaves, composed of 5 pairs of leaflets and an odd one, axillary 2-3-flowered peduncles, and yellow flowers. The place which this genus should occupy in the order is very doubtful, in consequence of the structure of the legume being imperfectly known.

1 D. CARTHAGENE'NSIS (Jacq. amer. 208. t. 180. f. 51.) ♄. S. Native of Carthagena, in bushy places, where it is called *Vivasca*.

Carthagena Diphysa. Clt. 1827. Shrub 6 to 10 feet.

Cult. For the culture and propagation of this shrub see *Sabínea*, p. 239.

CXXIII. CALO'PHACA (from καλος, *kalos*, beautiful, and φακη, *phake*, a lentil; in allusion to the beauty of the plant). Fisch. ined. D. C. prod. 2. p. 270.

Lin. syst. *Diadélphia, Decándria.* Calyx 5-cleft, the lobes acuminated. Keel obtuse. Stamens diadelphous. Style villous and straight at the base, but glabrous incurved at the apex. Stigma terminal. Legume sessile, oblong, somewhat cylindrical, mucronate, 1-celled; valves concave, beset with soft hairs, as well as with stiff, glandular bristles, mixed.—A deciduous shrub, with lanceolate stipulas, impari-pinnate leaves, and axillary pedunculate racemes of yellow flowers. This genus differs from *Cýtisus* in the stamens being diadelphous, and in the pinnate leaves.

1 C. WOLGA'RICA (Fisch. in litt.). ♄. H. Native of Siberia, on dry hills, and in arid places about the Volga. Cýtisus nígricans, Pall. itin. 3. p. 764. t. G. g. f. 3. ed gall. append. no. 358. t. 101. f. 1. Cýtisus pinnàtus, Pall. fl. ross. 1. t. 47. Cýtisus Wolgáricus, Lin. fil. suppl. 327. Duham. arb. ed. nov. t. 48. Colùtea Wolgárica, Lam. Adenocárpus Wolgénsis, Spreng. syst. 3. p. 226. Leaflets 6 or 7 pairs, orbicular, velvety beneath as well as the calyxes.

Volga Calophaca. Fl. May, June. Clt. 1786. Sh. 2 to 3 ft.

Cult. This shrub is well adapted for the front of shrubberies, and is increased by layers or by seeds. Being rather tender it should be protected by a mat in winter.

CXXIV. COLU'TEA (said to be from κολουω, *koluo*, to amputate; the shrubs are said to die if the branches are lopped off. Κολουτεα is also the name of a plant in Theophrastus). R. Br. in hort. kew. ed. 2. vol. 4. p. 325. Colùtea species of Lin. and others.

Lin. syst. *Diadélphia, Decándria.* Calyx 5-toothed. Vexillum flat, bicallous, larger than the keel, which is obtuse. Stamens diadelphous. Stigma lateral, hooked under the top of the style. Style bearded longitudinally behind. Legume stipitate, ovate, boat-formed, inflated, scarious.—Deciduous shrubs, with small stipulas, impari-pinnate leaves, and axillary few-flowered racemes, which are a little shorter than the leaves.

1 C. ARBORE′SCENS (Lin. spec. 1045.) leaflets elliptic, retuse; peduncles usually bearing about 6 flowers; gibbosities on the vexillum short; legume closed. ♄. H. Native of middle and south Europe, in hedges and bushy places, on Mount Vesuvius, even in the ascent to the crater, where hardly any other vegetable is to be found. D. C. astr. no. 1. Duham. arbr. ed. nov. 1. t. 22. Curt. bot. mag. t. 81. C. hirsùta, Roth. fl. germ. 1. p. 305. Flowers yellow. The *C. arboréscens* of Burm. fl. cap. 22. is probably a species of *Tephròsia*. The leaves are recommended as answering all the purposes of senna, and Allioni gives particular directions for the preparation of them. A larger dose seems to be required to produce the same effect. The seeds to the quantity of a drachm or two excite vomiting.

Arborescent Bladder-Senna. Fl. June, Aug. Clt. 1568. Shrub 6 to 10 feet.

2 C. CRUE′NTA (Ait. hort. kew. 3. p. 55.) leaflets obovate, emarginate, glaucous; peduncles 4 or 5-flowered; vexillum with small, obtuse gibbosities; legume gaping at the apex. ♄. H. Native of the islands in the Archipelago, Iberia, and the Levant. D. C. astr. no. 3. Lher. stirp. nov. 2. t. 41. C. orientàlis, Lam. dict. 1. p. 353. ill. 624. f. 3. Duham. ed. nov. 1. t. 23. C. sanguínea, Pall. C. áptera, Schmidt, arb. t. 119. C. hùmilis, Scop. Flowers of a reddish-copper colour, but with the vexillum having a yellow spot at the base. This species differs from the foregoing in the smaller different coloured flowers, in the wings being shorter than the keel, and in the pod being open at the apex.

Bloody-flowered or Oriental Bladder-Senna. Fl. June, July. Clt. 1731. Shrub 4 to 8 feet.

3 C. HALE′PPICA (Lam. dict. 1. p. 353. ill. t. 624. f. 2.) leaflets roundish-elliptic, very obtuse, mucronate; peduncles 3-flowered; gibbosities of vexillum elongated and ascending; legumes closed. ♄. H. Native of fields about Aleppo. D.C. astr. no. 2. C. Pocóckii, Ait. hort. kew. 3. p. 55. Schmidt, arb. t. 129. C. I′stria, Mill. dict. no. 2. t. 100. C. procúmbens, Lher. stirp. nov. 2. t. 42. Flowers yellow. A smaller shrub than *C. arboréscens*.

Aleppo Bladder-Senna. Fl. Ma. Oct. Clt. 1752. Sh. 3 to 6 ft.

4 C. ME′DIA (Willd. enum. 771.) leaflets obcordate, glaucescent; peduncles usually 6-flowered; legumes closed at the apex. ♄. H. Native of Europe. Wats. dend. brit. 110. Flowers orange-coloured.

Intermediate Bladder-Senna. Fl. June, Aug. Sh. 6 to 8 feet.

5 C. NIPAULE′NSIS (Hook, bot. mag. 2622.) leaflets roundish-elliptic, retuse; racemes drooping, few-flowered; callosities of vexillum papillæform; legumes rather coriaceous, pubescent. ♄. H. Native of Nipaul. Flowers yellow.

Nipaul Bladder-Senna. Fl. Aug. Sept. Clt. 1822. Shrub 5 to 10 feet.

† *Species not sufficiently known.*

6 C.? ÆSCHINOMENOÌDES (Scop. insub. 3. p. 22. t. 12.) plant herbaceous; leaflets lanceolate, obtuse, glabrous, acuminated by the nerve. ♃.? G. Native of the Bahama Islands. Perhaps a species of *Pictètia*.

Æschinomene-like Bladder-Senna. Pl. 2 feet.

7 C. AMERICA′NA (Mill. dict. no. 5.) shrubby; leaves with 3 pairs of oval leaflets; peduncles 2-3-flowered; legumes compressed. ♄. S. Native of Vera Cruz. Perhaps a species of *Cæsalpinia*. Flowers yellow.—Pluk. alm. 111. t. 165. f. 3.

American Bladder-Senna. Shrub 6 to 8 feet.

Cult. The species of *Bladder-Senna* are proper for shrubberies, as they flower in great profusion, and continue in flower the most of the season. They thrive in any common soil, and are increased by seeds, which ripen in abundance, or by cuttings, planted in the autumn. The two last species require to be sheltered in a greenhouse.

CXXV. SPHÆROPHY′SA (from *σφαιρα*, *sphaira*, a sphere, and *φυσα*, *physa*, a bladder; in reference to the shape of the legumes, which are spherical and bladdery). D. C. legum. mem. vi. prod. 2. p. 270.—Phàca species of Pallas.

LIN. SYST. *Diadélphia, Decándria.* Calyx 5-toothed. Vexillum flat. Carina obtuse. Stamens diadelphous. Style bearded lengthwise. Legume stipitate, inflated, spherical, hardish, 1-celled, mucronated by the style.—Oriental perennial herbs, with impari-pinnate leaves, small stipulas, and axillary, elongated racemes of red flowers.

1 S. SA′LSULA (D. C. prod. 2. p. 271.) stem erect, rather hoary; leaves with 6 or 7 pairs of oblong, ovate leaflets, which are glabrous above, but rather hoary beneath from adpressed bristly hairs. ♃. H. Native of Dahuria, in salt fields, about Lake Tarei. Phàca sálsula, Pall. itin. 4. t. 9. f. 1 and 2. ed. gall. append. no. 387. t. 88. f. 1 and 2. Lin. fil. suppl. 336. Colùtea Dahùrica, Spreng. syst. 3. p. 242. Flowers very red, almost like those of a species of *Láthyrus*.

Salt Sphærophysa. Pl. $\frac{1}{2}$ to 1 foot.

2 S. CA′SPICA (D. C. prod. 2. p. 271.) stems erect, and are as well as the leaves clothed with adpressed pubescence; leaves with 8 pairs of oval, obtuse, mucronate leaflets. ♃. H. Native of the plains between Caucasus and the Caspian Sea. Colùtea Cáspica, Bieb. fl. taur. suppl. 1429. Phàca sálsula, Bieb. casp. 210. Flowers of a dirty pale-purple colour, and marked with more obscure veins. Perhaps only a variety of the first, according to Steven in litt.

Caspian Sphærophysa. Fl. Jul. Aug. Clt. 1818. Pl. $1\frac{1}{2}$ ft.

Cult. The species of this genus succeed in common garden soil, or in pots in a mixture of loam and peat; they are very difficult to preserve in gardens on account of the want of that saline principle in which they grow in the places of their natural growth; and in order to preserve them in the gardens, they require to be watered with salted water occasionally. They are increased by seeds, which occasionally ripen in this country.

CXXVI. SWAINSO′NIA (in honour of Isaac Swainson, F.R.S. F.L.S. who was a great cultivator of plants about the end of the last century. His garden was at Twickenham in Middlesex. The present superintendant of the Cambridge Botanical Garden, Mr. Biggs, was gardener to Mr. Swainson for many years). Salisb. par. no. 28. R. Br. in hort. kew. ed. 2. vol. 4. p. 326. D. C. prod. 2. p. 271. Loxídium, Vent.

LIN. SYST. *Diadélphia, Decándria.* Calyx bicallous at the base, 5-toothed. Vexillum flat, large. Stamens diadelphous, Carina obtuse, rather longer than the wings. Stigma terminal. Style bearded longitudinally behind but beardless in front. Legume turgid.—Suffruticose plants, natives of New Holland, having the habit of *Lessértia*, with impari-pinnate leaves, and elongated, axillary racemes of purple or scarlet flowers.

1 S. GALEGIFÒLIA (R. Br. in hort. kew. ed. 2. vol. 4. p. 326.) suffruticose, erect; leaves with 9 pairs of oval, somewhat emarginate leaflets; pedicel of legume evidently longer than the permanent filaments. ♄. G. Native of New South Wales. Vìcia galegifòlia, Andr. bot. rep. t. 319. Colùtea galegifòlia, Sims, bot. mag. t. 792. Flowers red.

Galega-leaved Swainsonia. Fl. June, Aug. Clt. 1800. Sh. 1 to 3 feet.

2 S. ALBIFLÒRA; stem shrubby, erect; leaves with 5-11 pairs of oval obtuse leaflets; racemes longer than the leaves. ♄. G.

Native of New Holland. S. galegifòlia, var. albiflòra, Lindl. bot. reg. 994. Flowers white.

White-flowered Swainsonia. Fl. July, Aug. Clt. 1826. Sh. 1 to 3 feet.

3 S. CORONILLÆFÒLIA (Salisb. par. no. 28.) suffruticose, erect; leaves with 9-11 pairs of obovate, emarginate leaflets; pedicel of legume a little shorter than the permanent filaments. ♄. G. Native of New South Wales. Sims, bot. mag. 1725. Leaves smaller than those of the other species. Flowers of a violaceous purple colour.

Coronilla-leaved Swainsonia. Fl. June, Aug. Clt. 1802. Shrub 1 to 3 feet.

4 S. LESSERTIÆFÒLIA (D. C. in ann. sc. nat. 4. p. 99.) stems rather herbaceous, erect; leaves with 6-7 pairs of elliptic-oblong, rather obtuse leaflets; pedicel of legume very short. ♄. G. Native of New Holland, on the southern coast. S. astragalifòlia, Hortul. Peduncles 2 or 3 times longer than the leaves. Stipulas ovate, obtuse. Younger leaves clothed with hoary pubescence, adult ones almost glabrous. Flowers red, smaller than those of the other species.

Lessertia-leaved Swainsonia. Fl. July, Aug. Clt. 1824. Sh. 1 to 2 feet.

Cult. All the species are elegant, delicate shrubs, which deserve to be cultivated in every greenhouse. They grow freely in a mixture of loam, peat, and sand, and young cuttings root readily if planted in a pot of sand, with a bell-glass placed over them, or they may be raised from seeds, which are often produced in gardens.

CXXVII. LESSE'RTIA (in honour of Benjamin Delessert, of Paris, a great promoter of botany, author of Icones, in 2 vols. folio, Paris, 1823). D. C. astrag. p. 37. prod. 2. p. 271. R. Br. in hort. kew. ed. 2. vol. 4. p. 327.—Sulitra, Medic and Mœnch.

LIN. SYST. *Diadélphia, Decándria.* Calyx half 5-cleft. Vexillum flat. Keel obtuse. Stamens diadelphous. Stigma capitate. Style bearded transversely in front at the apex, but beardless behind. Legume scarious, indehiscent, compressed, or inflated, the uppermost side the shortest.—Herbs, rarely subshrubs, natives of the Cape of Good Hope, with impari-pinnate leaves, and axillary peduncles bearing racemes of purplish nodding flowers.

1 L. A'NNUA (D. C. l. c. prod. 2. p. 271.) leaves with 8-10 pairs of leaflets, which are glabrous above, the lower ones oblong and emarginate and the upper ones linear; racemes longer than the leaves; calyxes bibracteate, beset with black hairs. ⊙. G. Hook, exot. fl. t. 84. Colùtea herbàcea, Lin. spec. 1045. Colùtea ánnua, Murr. comm. goet. 5. p. 40. t. 7. f. 12 and 13.—Comm. hort. amst. 2. t. 44. Flowers red.

Annual Lessertia. Fl. June, July. Clt. 1731. Pl. 1 foot.

2 L. DIFFU'SA (R. Br. in hort. kew. ed. 2. vol. 4. p. 327.) stems diffuse, herbaceous; leaves with 8-10 pairs of elliptic-linear, rather emarginate leaflets, which are rather hairy on both surfaces; racemes pedunculate, longer than the leaves; calyxes bractless, beset with black hairs. ⊙. G. Galèga dùbia, Jacq. icon. rar. 3. p. 576. Flowers purple.

Diffuse Lessertia. Fl. July, Aug. Clt. 1792. Pl. prostrate.

3 L. PERE'NNANS (D. C. astrag. p. 37.) stem herbaceous, erect; leaflets oval, silky beneath, pubescent above; calyxes bractless; racemes longer than the leaves, loose, elongated, pedunculate; flowers numerous, drooping. ♃. G. Colùtea perénnans, Jacq. hort. vind. 3. t. 3. Murr. comm. goet. nov. 5. p. 38. t. 7. Colùtea fistulòsa, Hortul. Legume stipitate, compressed. Corolla with a pale base and red or purple apex.

Perennial Lessertia. Fl. Aug. Clt. 1776. Pl. 1 foot.

4 L. PU'LCHRA (Sims, bot. mag, 2064.) stem erect, suffrutescent; leaves with 7 pairs of ovate, acute, smoothish leaflets; racemes pedunculate, somewhat capitate, longer than the leaves; flowers secund. ♄. G. Flowers red or purplish. Legume unknown.

Fair Lessertia. Fl. May, July. Clt. 1817. Shrub 1½ foot.

5 L. MACROSTA'CHYA (D. C. in ann. sc. nat. 4. p. 100.) stem erectish, suffruticose at the base; leaves with 4-6 pairs of elliptic-oblong, obtuse leaflets, which are rather pubescent on both surfaces, the terminal leaflet is longest; racemes pedunculate, loose-flowered, 2 or 3 times longer than the leaves. ♄. G. Burch. cat. geogr. afr. aust. 2356. Flowers red or purple. Young legumes compressed, pendulous, few-seeded.

Long-spiked Lessertia. Shrub 1 to 2 feet.

6 L. BRACHYSTA'CHYA (D. C. legum. mem. vi. prod. 2. p. 272.) stem erect, suffruticose at the base; leaves with 6-8 pairs of linear-oblong, obtuse leaflets, which are rather pubescent beneath, the terminal leaflet longer than the others; racemes much shorter than the leaves; legumes oblong, straight, pendulous, 10-seeded. ♄. G. Burch. cat. geogr. afr. austr. no. 3353. Flowers red or purplish. Legumes secund, membranous, pubescent, about an inch long, each standing on a short stipe.

Short-spiked Lessertia. Fl. June, Aug. Clt. 1826. Sh. 1 ft.

7 L. FALCIFÒRMIS (D. C. legum. mem. vi. t. 46.) stem erect; leaves with 8 pairs of elliptic-oblong, obtuse leaflets, which are pubescent beneath; racemes 3-4-flowered, one half shorter than the leaves; legume oblong, falcately curved, 10-seeded. ♄. ? G. Flowers purple or red. Legumes like those of the preceding species, but falcate, therefore the species is intermediate between *L. brachystàchya* and *L. annulàris.*

Falciform-podded Lessertia. Fl. June, Aug. Clt. 1826. Shrub 1 foot.

8 L. FRUTICÒSA (Lindl. bot. reg. 970.) stem erect, suffruticose; leaves with 5-6 pairs of linear obtuse leaflets; stem, petioles, and peduncles, as well as the branches, pilose; racemes erect, loose-flowered, a little longer than the leaves; legumes oblong, sessile, 4-seeded. ♄. G. Flowers purple.

Shrubby Lessertia. Fl. Jul. Aug. Clt. 1826. Sh. 1 to 3 ft.

† *Species not sufficiently known.*

9 L. ANNULA'RIS (Burch. cat. no. 1597. voy. 1. p. 304.) stem erect, a span high; legume flat, contracted into the form of a ring. ⊙. ? G. Flowers red or purple.

Ring-podded Lessertia. Fl. June, Aug. Clt. 1816. Pl. ½ ft.

10 L. RÍGIDA (D. C. prod. 2. p. 272.) stem shrubby, erect; leaves with 5-6 pairs of lanceolate, acute, glabrous leaflets; racemes very long. ♄. G. Colùtea rígida, Thunb. fl. cap. edit. Schult. p. 603. Legume ovate, compressed, tumid, glabrous. Flowers yellowish. Compare it with *L. macrostàchya.*

Stiff Lessertia. Shrub 1½ foot.

11 L. PUBE'SCENS (D. C. prod. 2. p. 272.) stem herbaceous, erect, pubescent; leaves with many pairs of lanceolate, villous leaflets; racemes oblong; calyxes hairy. ⊙. ? G. Colùtea pubéscens, Thunb. l. c. Legume oblong, glabrous, hardly an inch long. Corolla rufescent.

Pubescent Lessertia. Pl. 1 foot.

12 L. PROSTRA'TA (D. C. prod. 2. p. 272.) stem herbaceous, diffuse, pubescent; leaves with many pairs of lanceolate, acute, villous leaflets; peduncles usually 2-flowered. ⊙. ? G. Colùtea prostràta, Thunb. l. c. Legume ovate, pubescent, hardly stipitate.

Prostrate Lessertia. Pl. prostrate.

13 L. EXCÌSA (D. C. prod. l. c.) stem herbaceous, decumbent, pubescent; leaves with many pairs of obovate, cut leaflets; racemes usually terminal. ⊙. ? G. Colùtea excìsa,

Thunb. l. c. Corolla blood-coloured. Legume ovate-acinaciform, slightly pubescent.

Cut-leafletted Lessertia. Pl. decumbent.

14 L. OBTUSA'TA (D. C. l. c.) stem frutescent, erect; leaves with many pairs of linear, obtuse, hairy leaflets; racemes nearly terminal. ♄. G. Calyxes clothed with cinereous pubescence. Legume glabrous. Colùtea obtusàta, Thunb. l. c.

Obtuse-leafletted Lessertia. Shrub 1 to 2 feet.

15 L. LINEA'RIS (D. C. l. c.) stem herbaceous, erect, glabrous; leaves with many pairs of linear, acute leaflets; racemes elongated. ⊙.? G. Colùtea lineàris, Thunb. l. c. Legume ovate, glabrous, not half an inch long.

Linear-leafletted Lessertia. Pl. 1 ft.

16 L. VESICA'RIA (D. C. l. c.) stem herbaceous, decumbent, villous: leaves with many pairs of ovate, mucronate leaflets; legumes globose, bladdery, dehiscent at the apex. ⊙.? G. Colùtea versicària, Thunb. l. c.

Bladdery-podded Lessertia. Pl. decumbent.

17 L. TOMENTÒSA (D. C. l. c.) stem herbaceous, very short, and tomentose; leaves with 6-7 pairs of ovate, hoary leaflets; racemes ovate; calyxes hairy. ⊙.? G. Colùtea tomentòsa, Thunb. l. c. Legume ovate, inflated, hairy.

Tomentose Lessertia. Pl. ½ foot.

18 L. PROCU'MBENS (D. C. l. c.) stem suffrutescent, procumbent; leaves with 12-14 pairs of ovate-linear, tomentose leaflets; peduncles very long, 3-4-flowered. ♃. G. Flowers purple. Legume compressed, falcate. Colùtea procùmbens, Thunb. l. c.

Procumbent Lessertia. Fl. June, July. Clt. 1753. Pl. proc.

Cult. This is a genus of delicate little shrubs and herbs. Their culture and propagation is the same as for *Swainsònia.* The seeds of the annual kinds should be sown in pots early in the spring, and placed in the greenhouse, where the plants will soon rise, and when they have grown 2 inches high, they should be planted separately in small pots, and shifted into larger ones as they grow.

CXXVIII. SUTHERLA'NDIA (in honour of James Sutherland, one of the first superintendants of the Royal Botanical Garden at Edinburgh, and author of a catalogue of the plants grown in that garden in his time). R. Br. hort. kew. ed. 2. vol. 4. p. 327. D. C. prod. 2. p. 273.

LIN. SYST. *Diadélphia, Decándria.* Calyx 5-toothed, nearly equal. Vexillum with replicate sides, short. Keel oblong. Wings very short. Stamens diadelphous. Stigma terminal. Style bearded lengthwise behind and transversely at the apex. Legume inflated, scarious.—Cape shrubs, with impari-pinnate leaves and axillary racemes of large scarlet flowers.

1 S. FRUTE'SCENS (R. Br. l. c.) leaflets elliptic-oblong, and are as well as the calyxes and branches canescent from adpressed pubescence; peduncles few-flowered. ♄. F. Colùtea frutéscens, Lin. spec. 1045. Curt. bot. mag. 181. Burm. cap. prod. 22. Mill. fig. t. 99. A hoary shrub, with large elegant shewy scarlet flowers.

Frutescent Sutherlandia. Fl. June, Aug. Clt. 1683. Sh. 2 to 4 feet.

2 S. MICROPHY'LLA (Burch. cat. pl. afr. austr. no. 1510. ined. D. C. prod. 2. p. 273.) leaflets oblong-linear, and are, as well as the branches and calyxes, pubescent; peduncles 2-3-flowered. ♄. G. Flowers purple or scarlet.

Small-leaved Sutherlandia. Shrub 2 to 3 feet.

Cult. The species of *Sutherlándia* are very shewy when in flower, being profusely clothed with large scarlet pea blossoms. A mixture of loam and peat is the best soil for them, and they may be propagated by young cuttings in sand under a bell-glass, but the easiest and best method is by seeds, which ripen plentifully in the gardens. The *S. frutéscens* will stand the winter if planted in a sheltered situation, protected by a mat in severe weather.

SUBTRIBE V. ASTRAGA'LEÆ (plants agreeing with *Astrágalus*, in the legumes being transversely 2-celled, in consequence of the upper suture being bent in so much). Adans. fam. l. c. D. C. prod. 2. p. 273. Legume (f. 39. *c.* f. 40. *c.*) longitudinally 2-celled or half 2-celled, in consequence of the upper suture being bent in so much. Stamens diadelphous, with 9 joined and one free. Stems herbaceous or suffrutescent. Leaves pinnate; primordial ones alternate.

CXXIX. PHA'CA (from φαγω, *phago*, to eat, or φακη, *phace*, a lentil; a name adopted from Dioscorides for this genus). Lin. gen. no. 891. D. C. astrag. no. 111. R. Br. in hort. kew. ed. 2. vol. 4. p. 358. D. C. prod. 2. p. 273.

LIN. SYST. *Diadélphia, Decándria.* Calyx 5-toothed (f. 39. *a.*), 2 superior teeth more remote than the others. Carina obtuse (f. 39. *b.*). Stamens diadelphous. Style beardless. Stigma capitate. Legume rather turgid (f. 39. *c.*), 1-celled, having the superior suture tumid.—Herbs, with impari-pinnate leaves, axillary pedunculate racemes of flowers. The mature legume usually resupinate.

* *Flowers white or cream-coloured.*

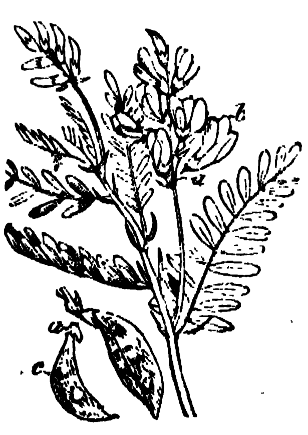
1 P. BÆ'TICA (Lin. spec. 1064.) stem erect, pilose; stipulas lanceolate; leaves with 7-10 pairs of ovate mucronate leaflets, which are villous beneath; keel longer than the vexillum; legume oblong, boat-formed, compressed. ♃. H. Native of Spain, Portugal, and Mauritania. D. C. astr. no. 1. Astrágalus Lusitánicus, Lam. dict. 1. p. 312.—Moris. oxon. sect. 2. t. 8. f. 1. Flowers white, about the size and shape of those of *Sutherlándia.* The seeds are roasted and ground, and used as a substitute for coffee in Hungary.

Bætic Bastard-Vetch. Fl. Sept. Clt. 1640. Pl. 1 to 2 feet.

2 P. FRI'GIDA (Lin. fl. suec. 2. p. 657.) stem erect, glabrous, almost undivided; stipulas ovate-oblong, large, leafy; leaves with 4-6 pairs of ovate-oblong, rather ciliated leaflets; legumes stipitate, oblong, inflated, rather hairy. ♃. H. Native of Siberia, Altai, Lapland, Norway, Sweden, Austria, Switzerland, and Savoy, on the frigid parts of mountains. P. alpìna, Lin. spec. 1064. Oed. fl. dan. t. 856. Jacq. aust. 166. P. ochreàta, Crantz. austr. 419. t. 2. f. 2. Flowers cream-coloured.

Frigid Bastard-Vetch. Fl. July. Clt. 1795. Pl. 1 foot.

FIG. 39.



3 P. ALPI'NA (Jacq. icon. rar. 1. t. 151.) stem erect, branched, pubescent; stipulas linear-lanceolate; leaves with 9-12 pairs of oblong, obtuse, pubescent leaflets; legumes compressed, half ovate, acute, smoothish. ♃. H. Native of the Alps of Europe, the Pyrenees, and of Siberia. D. C. astr. no. 3.—Gmel. sib. 4. t. 14. Astrágalus penduliflòrus, Lam. fl. fr. Flowers yellow.

Var. β, *Dahùrica* (Fisch. in litt. 1825.) plant more firm and more erect, and the legume is harder. ♃. H. Native of Dahuria. P. membranàcea, Fisch. in litt. 1822.

Alpine Bastard-Vetch. Fl. July. Clt. 1759. Pl. 1 foot.

4 P. TRIFLÒRA (D. C. astr. no. 7. t. 1.) stem almost erect, pubescent; stipulas acuminated, rather concrete at the base; leaves with 5-6 pairs of ovate, obtuse, pubescent leaflets; peduncles rather shorter than the leaves, few-flowered; legumes

semi-elliptic-oblong, turgid, depressed, pubescent. ⊙. H. Native of Peru. Flowers 3-6 in a raceme, yellowish. P. Candolleàna, H. B. et Kunth, nov. gen. amer. 6. p. 495. t. 586.

Three-flowered Bastard-Vetch. Pl. ½ to 1 foot.

5 P. villòsa (Nutt. gen. amer. 2. p. 97.) plant almost stemless, hairy; leaflets oblong-oval, glabrous above; peduncles shorter than the leaves, or equal in length to them; spike few-flowered, somewhat capitate; legume clothed with canescent villi, terete, and cymbiform. ♃. H. Native of Carolina and Georgia, in sandy pine-woods, and on hills about the Missouri, as well as of China. Astrágalus villòsus, Michx. fl. bor. amer. 2. p. 67. Flowers cream-coloured.

Villous Bastard-Vetch. Pl. ½ foot.

6 P. cæspitòsa (Nutt. gen. amer. 2. p. 98.) stemless, tufted, and clothed with canescent villi; leaves with 3-5 leaflets, which are disposed in a digitate manner, and are acute at both ends; flowers aggregate, without a scape; stipulas membranous, without any regular or decided form; legume pubescent, sub-cylindrical. ♃. H. Native of North America, on hills at the confluence of the rivers Sawanee and Missouri. Astrágalus triphýllus, Pursh. fl. amer. sept. 2. p. 740. but not of Pall. Flowers cream-coloured. Leaflets lanceolate.

Tufted Bastard-Vetch. Pl. ¼ to ½ foot.

7 P. arena'ria (Pall. it. 4. t. 19. f. 3-4. ed. gall. append. no. 388. t. 91. f. 3-4.) stems spreading, ascending, glabrous; stipulas membranous, concrete; leaves with 5-6 pairs of linear-lanceolate acute leaflets, having the terminal one sessile; peduncles about the length of the leaves; legumes inflated, glabrous. Native of Siberia, about the Uda Selenga and the Baikal. Flowers cream-coloured. Pallas's plate exhibits 2 plants under this name, the one with ovate, and the other with globose legumes; the first belongs to *Phàca*, but the second is referrible to *Sphærosphýsa*.

Sand Bastard-Vetch. Fl. July, Aug. Clt. 1796. Pl. ascending.

* * *Flowers purplish, sometimes painted with white and violet.*

8 P. móllis (H. B. et Kunth, nov. gen. amer. 6. p. 496. t. 585.) stems short, diffuse, clothed with soft tomentum; leaves with 7-8 pairs of oblong, obtuse, silky, tomentose leaflets; racemes on long peduncles, of a cylindrical-oblong form, dense, and many-flowered; calyxes soft and silky. ♃. G. Native of Mexico, in valleys near Casave. Flowers purplish. The legume being unknown the genus is doubtful.

Soft Bastard-Vetch. Pl. diffusely procumbent.

9 P. densifòlia (Smith in Rees' cyclop. 27. no. 9.) stems decumbent, branched, and smooth; stipulas ovate, concave; leaves with 16-20 pairs of obovate emarginate leaflets, which are villous beneath; peduncles length of leaves; racemes dense, oblong; legumes ovate, turgid, almost smooth. ♃. H. Native of California. Flowers drooping, reddish.

Dense-leaved Bastard-Vetch. Pl. decumbent.

10 P. gla'bra (Clar. bull. philom. no. 61. D. C. astr. no. 4.) stem branched, prostrate, glabrous; stipulas broad, ovate; leaves with 6-7 pairs of oval-oblong, acute, glabrous leaflets; peduncles longer than the leaves; wings of flowers entire; legume stipitate, turgid, glabrous. ♃. H. Native of Provence, on the Lower Alps. Corolla white, tipped, and margined with violet.

Glabrous Bastard-Vetch. Fl. July. Clt. 1818. Pl. prostrate.

11 P. Gera'rdi (Vill. dauph. 3. p. 474.) stem diffuse, branched, prostrate; leaves and stipulas clothed with velvety pubescence, and ciliated; peduncles rather longer than the leaves; wings of flower oblong, and rounded at the apex; legumes ovate, rather velvety. ♃. H. Native of Dauphiny. Flowers white, having the carina tipped with purple.

Gerard's Bastard-Vetch. Fl. July. Pl. prostrate.

12 P. austra'lis (Lin. mant. 103. and 448.) stem branched, tufted, ascending, glabrous; stipulas ovate; leaves with 6-8 pairs of linear-lanceolate, glabrous leaflets, having the terminal one sessile; peduncles longer than the leaves; wings bifid at the apex, longer than the keel; legumes stipitate, ovoid, at length glabrous. ♃. H. Native of the alps of Europe and the Pyrenees. Jacq. misc. 2. t. 3. D. C. astr. no. 8. Lodd. bot. cab. 490. P. Hallèri, Vill. dauph. 4. p. 473. Colùtea austràlis, Lam. dict. 1. p. 354. Corolla pale, having the keel tipped with purple.

Var. β, Altaica (Fisch. in litt.) stem almost erect. ♃. H. Native of the Altaian mountains. Perhaps a proper species.

Southern Bastard-Vetch. Fl. May, July. Clt. 1779. Pl. asc.

13 P. astragalìna (D. C. astr. no. 9.) stems short, procumbent, smoothish; stipulas ovate, acute; leaves with 9-10 pairs of ovate leaflets, which are beset with adpressed pubescence on both surfaces; peduncles about the length of the leaves; wings entire, shorter than the keel; legumes stipitate, pendulous, when young beset with black hairs. ♃. H. Native of the alps of Switzerland, Savoy, Austria, Pyrenees, and on the Altaian mountains in Siberia. In July, 1831, this plant was found in plenty by Dr. Graham and others in Scotland on the Clova mountains, north of Forfar in Angushire. Astrágalus alpìnus, var. Lin. spec. 1070. Oed. fl. dan. 1. t. 51.—Lodd. bot. cab. 429. Flowers white, tipped with lilac. Root creeping.

Astragalus-like Bastard-Vetch. Fl. May, July. Scotland. Pl. procumbent.

14 P. Lappo'nica (D. C. prod. 2. p. 274.) stems elongated, ascending, glabrous; stipulas ovate, acute; leaves with 9 pairs of oval leaflets, which are glabrous above, and clothed with adpressed pubescence beneath; peduncles longer than the leaves; wings entire, longer than the keel; legumes stipitate, pendulous, half-bilocular, when young beset with black hairs. ♃. H. Native of the alps of Lapland and Sweden, and of Dahuria near Ochotsk. Astrágalus alpìnus, var. Lin. l. c. P. Lappónica, Wahlenb. Flowers purplish. This I fear is not distinct from the last.

Lapland Bastard-Vetch. Fl. June, Jul. Clt. 1816. Pl. 1 ft.

15 P. oroboìdes (D. C. prod. 2. p. 274.) stem elongated, ascending, glabrous; stipulas ovate, acute; leaves with 5-7 pairs of oval-oblong leaflets, which are glabrous above and hardly pubescent beneath; peduncles longer than the leaves; racemes elongated; wings entire, longer than the keel; legumes sessile, semi-bilocular, pendulous, when young beset with black hairs. ♃. H. Native of the alps of Norway and Lapland. Astrágalus oroboìdes, Horn. in fl. dan. 8. t. 1396. Astrag. leontìnus, Wahl. fl. lap. p. 191. t. 12. f. 4. but not of Jacq. Flowers purplish.

Orobus-like Bastard-Vetch. Fl. Ju. Jul. Clt. 1820. Pl. asc.

16 P. brachy'tropis (Stev. mem. soc. hist. nat. mosc. 4. p. 53.) stems ascending, smoothish; stipulas broad, short, and bluntish; leaves with 6 pairs of oblong-elliptic leaflets, which are smoothish above and rather pubescent beneath; peduncles longer than the leaves; racemes short; wings entire, longer than the keel; legumes on short pedicels, when young hairy. ♃. H. Native of Eastern Caucasus, Bieb. suppl. 485. Flowers purplish.

Short-keeled Bastard-Vetch. Pl. ascending.

† *A species not sufficiently known.*

17 P. trifolia'ta (Lin. mant. 270.) stem branched, filiform; stipulas lanceolate; leaves trifoliate; leaflets oval, obtuse; legumes semi-orbicular. ⊙. H. Native of China. Smith, in Rees' cycl. Perhaps a species of *Glýcine* or *Flemíngia*, according to Smith. Perhaps a species of *Crotalària*, according to the specimen in Delessert's herbàrium at Paris.

Trifoliate-leaved Bastard Vetch. Pl. procumbent.

Cult. Most of the species grow well in the open borders in common garden soil; the dwarfer kinds are well adapted for ornamenting rock-work, but the rarer and more tender species should be grown in pots in a mixture of sand, peat, and loam. They are all increased by dividing the plants at the root, or by seeds, which generally ripen in this country, which last is by far the best method. The seeds of the annual kinds only require to be sown in the open border in spring.

CXXX. OXY'TROPIS (from *οξυς*, *oxys*, sharp, and *τροπις*, *tropis*, a keel; in reference to the keel of the flower ending in an exserted mucrone on the back at the apex). D. C. astr. no. 4. ed. maj. p. 19. and 53. prod. 2. p. 275.—Astrágalus species of Lin. and others.

LIN. SYST. *Diadélphia, Decándria.* Calyx 5-toothed (f. 40. *a.*). Keel of corolla ending in an exserted mucrone on the back at the apex (f. 40. *b.*). Stamens diadelphous. Legume (f. 40. *c.*), bilocular, or half bilocular in consequence of the upper suture being bent in so much.—Herbs with impari-pinnate leaves, axillary or radical peduncles, bearing spikes of flowers. There are a number of species with inflated legumes, which would constitute a good section of the genus, but from the fruit of most of the species being but slightly known or altogether unknown, it is at present impossible to separate them, and consequently they are here arranged according to habit.

§ 1. *Acaúlis* (from *acaulis*, stemless; in reference to the species contained in this division being without stems). *D. C. prod. 2. p. 275. Plants without stems or with very short ones. Stipulas adnate to the petiole. Leaves with many opposite pairs of leaflets, not verticillate.*

* *Flowers purplish or white.*

1 O. MONTA'NA (D. C. astr. no. 1.) plant almost stemless, villous, the hairs on the petioles and scape spreading; leaflets elliptic-lanceolate; scapes a little longer than the leaves; racemes short; bracteas one half shorter than the calyxes; legumes erect, terete-oblong, villous, acuminated by the style, half bilocular. ♃. H. Native of Europe, on the mountains. Astrágalus montànus, Lin. spec. 1070. Jacq. austr. t. 167. Curt. bot. mag. 483. Scop. carn. t. 45. Phàca montàna, Crantz. austr. 422. Flowers of a bluish-purple colour, almost like those of *Phàca astragalìna.* Calyx purplish.

Mountain Oxytropis. Fl. July, Aug, Clt. 1581. Pl. ½ ft.

2 O. BOREA'LIS (D. C. prod. 2. p. 275.) plant almost stemless, the hairs on the scapes and stipulas spreading and stiff, on the petioles there are but few; leaflets elliptic-lanceolate, glabrous beneath and pilose above; scapes length of leaves; flowers capitate; bracteas length of calyx, which is beset with black stiff hairs. ♃. H. Native of Tschuktschor Land, in the Bay of St. Lawrence, and Kotzebue's Sound. Stipulas pale.

Northern Mountain Milk-vetch. Pl. ½ foot.

3 O. CYANÆ'A (Bieb. fl. taur. suppl. 502.) plant almost stemless, hoary, and pilose; the hairs on the petioles and scapes are adpressed; leaflets elliptic-lanceolate; scapes longer than the leaves; racemes short; bracteas one-half shorter than the calyxes; legumes oblong-ovate, villous, at length spreading. ♃. H. Native of Iberia. Astrágalus montànus, Bieb. fl. taur. 2. p. 197. exclusive of the synonymes. O. montàna, Stev. mem. soc. mosc. 4. p. 54. Flowers spreading, blue, larger than those of *O. montàna*, and the keel ending in a longer mucrone.

Var. β, Albàna (Stev. l. c.) scapes declinate; legumes ovate, pubescent. ♃. H. Native of the alps about Chinalug.

Azure-flowered Mountain Milk-vetch. Fl. July, Aug. Clt. 1818. Pl. ½ foot.

4 O. ARGYRÆ'A (D. C. prod. 2. p. 276.) plant almost stemless; stipulas white, membranous, hairy; leaflets elliptic-oblong, clothed with adpressed, silky, silvery down on both surfaces; petioles, scapes, and calyxes beset with spreading villi; scapes twice the length of the leaves; flowers erect, disposed in capitate spikes; bracteas linear, length of calyx. ♃. H. Native of the Altaian mountains. Flowers deep-purple. Legumes unknown.

Silvery Mountain Milk-Vetch. Pl. 1 foot.

5 O. URALE'NSIS (D. C. prod. 2. p. 276.) plant stemless, clothed with silky hairs in every part; leaflets ovate, acute; scapes solitary or twin, longer than the leaves; calyx clothed with silky down, as well as the leaflets; heads of flowers round and dense; bracteas oblong, one to each flower; legumes oblong, tumid, pointed, shaggy, erect, bilocular. ♃. H. Native of Siberia, on the Ural Mountains, Alps of Austria, Pyrenees, &c. In Scotland on mountains in sandy soil; plentiful near Burnt Island in Fifeshire. Astrágalus Uralénsis, Lin. spec. 1071. Smith, engl. bot. t. 466. Jacq. misc. 1. p. 150. Light. fl. scot. 401. t. 17. Pall. astrag. t. 42. f. A. Phàca Uralénsis, Wahl. carp. 737. Flowers of a rich bluish-purple colour, rarely white. This is an elegant plant. The Siberian plant is more villous than silky; it may perhaps be a distinct species. The plant is also a native of Arctic America.

Ural Mountain Milk-Vetch. Fl. July, Scotland. Pl. ½ foot.

6 O. CŒRU'LEA (D. C. astr. no. 2.) plant stemless and silky; leaflets lanceolate; scapes nearly twice the length of the leaves; flowers spicate, lower ones drooping a little; legumes ovate, ventricose, almost 1-celled, acuminated, glabrous. ♃. H. Native of Siberia, on high mountains about Lake Baikal. Astrágalus cœrùleus, Pall. itin. 3. p. 293. Astr. Baicalénsis, Pall. astrag. p. 64. t. 52.—Gmel. sib. 4. t. 26. f. 2. Flowers blue. Mucrone of keel equal in length to the wings.

Blue-flowered Mountain Milk-Vetch. Pl. ½ foot.

7 O. A'RCTICA (R. Br. chl. melv. p. 20.) plant almost stemless, silky; leaflets opposite and alternate, ovate-oblong; heads subumbellate, few-flowered; legumes erect, oblong, and are, as well as the calyxes, clothed with black pubescence. ♃. H. Native of Melville Island in the Arctic sea, &c. This species approaches *O. Uralénsis*, but the leaflets are smaller, acute or obtuse, and much more numerous, and the flowers are disposed in umbels, not in spikes.

Arctic Mountain Milk-Vetch. Pl. ¼ foot.

8 O. LEUCA'NTHA (Pers. ench. 2. p. 331.) plant stemless and glabrous; leaflets lanceolate; scapes hardly longer than the leaves, rather pilose; spikes almost globose; bracteas shorter than the calyx; the 2 upper teeth of the calyx shorter, and more distant than the rest. ♃. H. Native of Eastern Siberia, among rocks. Flowers white, but according to Pallas's figure they are reddish. Legume unknown.

White-flowered Mountain Milk-Vetch. Pl. ½ foot.

9 O. ARGENTA'TA (Pers. ench. 2. p. 3[illegible]1.) plant almost stemless; leaflets lanceolate, silvery white on both surfaces; scapes hoary-pubescent, hardly longer than the leaves. ♃. H. Native of Siberia, in the Kirghisean Steppe. Astrágalus argentàtus, Pall. astr. p. 60. t. 48. Flowers white, but with a tinge of blue. Legume unknown.

Silvered Mountain Milk-Vetch. Pl. ½ foot.

10 O. AMBI'GUA (D. C. astr. no. 4.) plant stemless and hairy or smoothish; leaflets ovate, with rather villous margins; scapes longer than the leaves; spikes of flowers oblong; bracteas lanceolate, and are, as well as the calyxes, hairy; legumes erect, ovate, acuminated, somewhat bilocular. ♃. H. Native throughout Siberia. Astrágalus ambíguus, Pall. astr. p. 54. t. 43.—Gmel. sib. 4. t. 30. Flowers purplish-blue.

Ambiguous Mountain Milk-Vetch. Fl. May, July. Clt. 1817. Pl. ½ foot.

stemless, dwarf, clothed with silky white hairs; leaves in pairs, or 3 or 4 in a whorl, linear, acute; scapes decumbent, longer than the leaves; spike capitate; bracteas white and membranous, rather longer than the calyx, which is villous. ♃. H. Native of Siberia, at the river Ina. Flowers blue, one-half smaller than those of *O. Inària*. The legume, according to Fischer, is ovate, inflated, mucronate, and pubescent.

Dwarf Mountain Milk-Vetch. Pl. decumbent.

36 O. LANA'TA (D. C. astr. no. 26.) plant with a short suffruticose stem; leaflets oblong, clothed with silky down. 4 in a whorl; stipulas joined together; scape shorter than the leaves; flowers capitate; legumes ovate, turgid, villous, and woolly, hardly bilocular. ♄. F. Native of Siberia, on hills. Phàca lanàta, Pall. itin. ed. gall. in 8vo. append. no. 386. t. 87. f. 2. Phàca Sibírica, Lin. fil. suppl. 326. Astrágalus dasyphýllus, Pall. astr. p. 91. t. 75. Flowers purple.

Woolly Mountain Milk-Vetch. Pl. ½ foot.

37 O. VERTICILLA'RIS (D. C. astr. no. 25.) plant stemless; leaflets linear, acute, acuminated, clothed with silky villi, disposed 4 or 6 in a whorl on the petiole; scape hairy, longer than the leaves; spikes ovate; legumes erect, ovate, acuminated, hardly half-bilocular. ♃. H. Native of Siberia. Astrágalus verticillàris, Lin. mant. 275.—Amm. ruth. t. 19. f. 1. Flowers flesh-coloured.

Whorled-leafletted Mountain Milk-Vetch. Fl. July. Clt. 1819. Pl. ½ foot.

38 O. PROSTRA'TA (D. C. astr. no. 22.) plant stemless; leaflets linear, inflexed, rather villous, disposed 3 or 4 in a whorl on the petiole; stipulas very villous; scapes decumbent, rather longer than the leaves; flowers capitate; bracteas shorter than the calyx, which is hairy. ♃. H. Native of Siberia, in sandy, gravelly, salt fields about Lake Tarei. Phàca prostràta, Lin. fil. suppl. 336. Pall. itin. ed. gall. 8vo. append. no. 303. t. 87. f. 1. Astrágalus Dahùricus, Pall. astr. p. 88. t. 72. Legume unknown. Flowers purple or flesh-coloured.

Prostrate Mountain Milk-Vetch. Pl. prostrate.

39 O. MYRIOPHY'LLA (D. C. astr. no. 24.) plant stemless; leaflets subulate, pilose, disposed 4 or 6 in a whorl on the petiole; scapes erect, longer than the leaves; flowers disposed in a spike, lower ones rather remote; bracteas about equal in length to the calyx, which is cylindrical and villous; legumes erect, cylindrical, acuminated, tomentose, half bilocular. ♃. H. Native of Siberia, on mountains in sandy places. Phàca myriophýlla, Pall. voy. append. no. 384. t. 86. f. 2. Astrágalus myriophýllus, Pall. astr. p. 87. t. 71. Astr. verticillàris, Lin. mant. 275. Willd. spec. 3. p. 1299. There are varieties of this plant with dark-purple, blue, flesh-coloured, and white flowers, and sometimes variegated with these colours.

Myriad-leaved Mountain Milk-Vetch. Fl. July, Aug. Clt. 1818. Pl. ½ foot.

40 O. OXYPHY'LLA (D. C. astr. no. 21.) plant stemless: leaflets linear-lanceolate, clothed with silky pubescence, disposed 4 or 5 in a whorl, on the petiole; scape hairy, about equal in length to the leaves or longer than them; spikes ovate-oblong; legumes ovate, inflated, acuminated, pubescent, 1-celled. ♃. H. Native of Siberia and Dahuria, on hills. Phàca oxyphýlla, Pall. itin. ed. gall. append. no. 380. t. 87. f. 3. Astrágalus oxyphýllus, Pall. astr. p. 90. t. 74. There are varieties of this species with purple and pale flowers.

Sharp-leafletted Mountain Milk-Vetch. Fl. July, Aug. Clt. 1816. Pl. ½ foot.

41 O. MURICA'TA (D. C. astr. no. 23.) plant stemless; leaflets linear, glabrous, disposed 4-8 in a kind of whorl on the petiole, young ones muricated beneath as well as the petioles and legumes; scapes glabrous, about equal in length to the leaves; bracteas rather longer than the calyx; spikes of flowers ovate; legumes lanceolate, arched, acuminated. ♃. H. Native of Siberia, on mountains at the river Yenesee, and at lake Baikal. Phàca muricàta, Lin. suppl. Pall. itin. ed. gall. append. no. 385. t. 89. f. 1. Astrágalus muricàtus, Pall. astr. p. 89. t. 73. Flowers yellow, ex Lin.

Muricated Mountain Milk-Vetch. Pl. ¼ to ½ foot.

§ 3. *Tragacanthoìdeæ* (from τραγος, *tragos*, a goat, ἀκανθα, *akantha*, a thorn, and ιδεα, *idea*, similar; in reference to the plants contained in this section resembling the *Goat's-thorn*, in being spiny). *D. C. prod. 2. p. 280. Stems elongated, shrubby. Stipulas adnate. Petioles permanent, at length becoming spines.*

42 O. TRAGACANTHOÌDES (Fisch. in litt. D. C. prod. 2. p. 280.) stem erect, branched; petioles becoming hardened into strong spines; leaves with 5 or 6 pairs of elliptic-oblong leaflets, which are clothed with adpressed silky down on both surfaces; peduncles few-flowered, length of leaves; calyx clothed with soft hairs, at length becoming inflated. ♄. F. Native of the Altaian mountains, at the river Baschka-us, where it was detected by Mardofkin, in July 1822. This is a very elegant plant, having larger flowers than any other species, they are purple. The keel is furnished with a long beak. The legumes, according to Fischer, are bladdery, almost globose, acuminated, and hairy.

Tragacanth-like Mountain Milk-Vetch. Shrub 1 foot.

§ 4. *Caulescéntes* (a diminutive of *caulis*, a stem; the plants contained in this section are furnished with stems). *D. C. prod. 2. p. 280. Stems elongated. Stipulas not adnate to the petiole. Leaflets rising in pairs from the petiole, not in whorls.*

* *Flowers cream-coloured.*

43 O. PILÒSA (D. C. astr. no. 27.) stems erect, beset with soft hairs as well as the rest of the plant; leaflets lanceolate, acute; peduncles axillary, longer than the leaves; spikes ovate-oblong; legumes erect, terete, hooked at the apex, villous. ♃. H. Native of Europe, Tauria, and of Siberia, on mountains near the river Oby. Sims, bot. mag. 2483. Astrágalus pilòsus, Lin. spec. 1065. Jacq. austr. t. 51. Pall. astr. t. 80. Lodd. bot. cab. 544.—Gmel. sib. 4. t. 16. Flowers pale-yellow.

Pilose Mountain Milk-Vetch. Fl. June, Aug. Cl. 1732. Pl. 1 foot.

44 O. PALLA'SII (Pers. ench. 2. p. 334. Bieb. fl. taur. suppl. 502.) plant caulescent, prostrate, pubescent or villous; leaflets oblong-elliptic, acutish; peduncles rather longer than the leaves; spikes capitate; legumes erect, oblong-terete, mucronate, hairy. ⊙. H. Native of Tauria, among stones near Sudak. Astrágalus lanàtus, Pall. astr. p. 108. t. 81. Bieb. fl. taur. 2. p. 188. Flowers very pale cream-coloured, much more so than the last species.

Pallas's Mountain Milk-Vetch. Fl. July, Aug, Clt. 1818. Pl. prostrate.

* * *Flowers purple or white.*

45 O. TE'RES (D. C. astr. no. 28.) plant caulescent, erect, almost glabrous; leaflets linear-oblong, acute, rather pubescent; peduncles twice the length of the leaves; flowers few, about 7 or 8, disposed in a loose spike; legumes erect, cylindrical, mucronate, glabrous. Native of Siberia, at the river Oby, at the place where the Irtish falls into it. Corolla purplish-blue.

Terete-podded Mountain Milk-Vetch. Pl. 1 foot.

46 O. FLORIBU'NDUS (D. C. astr. no. 30.) plant caulescent, erect, rather pilose; leaflets linear, acute at both ends, puberulous; stipulas lanceolate; peduncles axillary, at first shorter than the leaves, but at length longer; flowers spicate; le-

gumes oblong-subulate, 1-celled, pubescent. ♂. H. Native of Siberia, in sandy places along the banks of the river Irtish. Astrágalus floribúndus, Pall. astr. p. 47. t. 37. Flowers numerous, elegant, of a purplish rose-colour.

Bundle-flowered Mountain Milk-Vetch. Pl. ½ to 1 foot.

47 O. GLA'BRA (D. C. astr. no. 31. t. 8.) plant caulescent, prostrate, glabrous; leaflets lanceolate-elliptic, acuminated; peduncles much longer than the leaves; flowers in spikes, remote; legumes pendulous, pubescent. ♃. H. Native of Siberia, Altai, and Dahuria. Very like the following. The hairs on the legume are blackish, but the other parts of the plant are clothed with adpressed pubescence or smooth.

Glabrous Mountain Milk-Vetch. Fl. June, Aug. Clt. 1823. Pl. prostrate.

48 O. DEFLE'XA (D. C. astr. no. 32.) plant rather pilose; stems ascending; leaflets ovate-lanceolate, pubescent; peduncles much longer than the leaves; flowers disposed in spikes; legumes pendulous, hairy, 1-celled, gaping at the apex. ♃. H. Native of Siberia, about the Baikal on the mountains in cold springs, and North America on the banks of the Saskatchawan. Astrágalus defléxus, Pall. act. petr. 1776. t. 15. Lher. stirp. t. 80. A. hìans, Jacq. icon. rar. t. 153. Astr. parviflòrus, Lam. Astr. retrofléxus, Pall. astr. t. 27. Tìum hìans, Mœnch. meth. 162. Flowers purple.

Deflexed-podded Mountain Milk-Vetch. Fl. June, Jul. Clt. 1800. Pl. 1 foot.

49 O. FISCHE'RI (D. C. prod. 2. p. 281.) plant caulescent, assurgent, or procumbent, pubescent; stipulas distinct; leaflets oblong-linear, rather obtuse; peduncles longer than the leaves; flowers spicate, rather distant; wings obtuse, somewhat emarginate; mucrone of keel elongated, about equal in length to the wings. ♃. H. Native of Siberia, on the Altaian mountains. Flowers small, bluish-purple. O. versícolor, Fisch. in litt. but very distinct from *Astrágalus versícolor*.

Var. β, *macrántha* (D. C. l. c.) flowers larger and rose-coloured; leaves and calyxes much more villous. ♃. H. Native of Siberia. Perhaps a proper species.

Fischer's Mountain Milk-Vetch. Fl. July, Aug. Pl. proc.

50 O. VAGINA'TA (Fisch. in litt. D. C. prod. 2. p. 281.) plant caulescent and ascending, sparingly pubescent; stipulas concrete; leaflets elliptic; peduncles a little longer than the leaves; spikes of flowers somewhat capitate; wings retuse; beak of keel equal in length to the wings. ♃. H. Native of Siberia, on the Altaian mountains at the metal mines. Flowers large, blue. It differs from *O. Fischèri macrántha* in the stipulas being joined into one. Legumes unknown.

Sheathed-stipuled Mountain Milk-Vetch. Pl. ascending.

51 O. TENE'LLA (Fisch. in litt. D. C. prod. 2. p. 281.) stems short, diffuse, or procumbent, pubescent; stipulas concrete; leaflets elliptic or oblong-linear, acutish, clothed on both surfaces with adpressed silky down; peduncles longer than the leaves; flowers disposed in a spike, rather distant; wings entire; mucrone of keel about equal in length to the wings; legumes nearly terete, acute, straight, 1-celled. ♃. H. Native of Scythia. Flowers small, bluish-purple.

Tender Mountain Milk-vetch. Pl. diffuse.

52 O. DICHO'PTERA (D. C. astr. no. 33. exclusive of the synonymes) plant caulescent, ascending, pubescent; stipulas joined; leaflets oblong, acute; peduncles equal in length to the leaves; flowers capitate; wings emarginate; mucrone of keel small. ♃. H. Native of Siberia. Flowers blue.

Fork-winged Mountain Milk-Vetch. Fl. July. Clt. 1815. Pl. ascending.

Cult. All the species of this genus are very elegant when in bloom, and being for the most part dwarf evergreen plants, are very proper for ornamenting rock-work, or the front of flower-borders. For this purpose the seeds of the species, whether perennial or annual, should be sown where the plants are to remain, especially those which are intended for rock-work, as it has been observed that no species of this genus thrives after being transplanted. The rarer kinds may be kept in pots, well drained with sherds, in a mixture of peat, sand, and a little loam, and treated as other alpine plants.

CXXXI. ASTRA'GALUS (from αστραγαλος, *astragalos*, vertebra or talus; the seeds in the legumes in some species being squeezed into a squarish form in the legume, or perhaps αστηρ, *aster*, a star, and γαλα, *gala*, milk. It is also the name of a shrub of Greek writers). D. C. astrag. no. 5. ed. maj. p. 22. and p. 79. prod. 2. p. 281.—Astrágalus species of Linneus and others.

LIN. SYST. *Diadélphia, Decándria.* Calyx 5-toothed. Keel of flower obtuse. Stamens diadelphous. Legume bilocular or half bilocular, from the upper suture being bent in so much.—Herbs or subshrubs. The species of this genus are very distinct, but are very difficult to define. The following sections and divisions have been adopted with a view to define them more completely, viz.

I. PURPURASCE'NTES. Stipulas free from the petiole. Flowers purplish. This section contains the following divisions: *Hypoglottídei, Dissitiflòri, Onobrychoìdei, Sesamèi, Vesicàrii,* and *Annulàres,* see species 1 to 94.

II. OCHROLEU'CI. Stipulas free from the petiole. Flowers cream-coloured. To this section belongs the following divisions: *Buceràtes, Synochreàti, Ciceroìdei, Galegifórmes, Alopecuroìdei, Christiàni,* see species 95 to 154.

III. TRAGACANTHA'CEI. Stipulas adnate to the petiole. Petioles permanent, usually becoming hardened into spines. To this section belong two divisions, viz. *Tragacánthæ* and *Chronopòdii,* see species 155 to 196.

IV. PODOCHREA'TI. Stipulas adnate to the petioles. Petioles never becoming indurated. To this section the following divisions belong, viz. *Anthylloìdei, Caprìni, Incàni,* and *Radiciflòri,* see species 197 to 257.

SERIES I. PURPURASCE'NTES (so called from the flowers being purple or purplish). D. C. prod. 2. p. 281. Stipulas free from the petiole. Flowers purplish.

§ 1. *Hypoglottidei* (ὑπο, *hypo*, under, and γλωττα, *glotta*, a tongue; in reference to the shape of the pods). *D. C. prod. 2. p. 281. Flowers purplish or white. Stipulas free from the petiole, but joined together, therefore they appear as if they were bifid at the apex and opposite the leaves.*

1 A. HYPOGLÓTTIS (Lin. mant. 274.) stems prostrate, rather hairy; stipulas ovate, concrete; leaves with numerous, little, ovate, obtuse, dark-green leaflets, sometimes rather emarginate; heads of flowers roundish; peduncles longer than the leaves, ascending; bracteas one half shorter than the tube of the calyx; the hairs on the calyxes as well as those on the peduncles are black and white mixed; legumes ovate, deeply channelled along the back, compressed, hairy, hooked at the point, bilocular; cells 1-seeded. ♃. H. Native of Europe, on hills and mountains, also of Barbary, Tauria, Siberia, North America; and in Britain, on open mountainous heaths, in a chalky or sandy soil, also on the sea-coast; upon Newmarket and Royston heaths, on Swaffham heath, Norfolk; Gogmagog hills. Plentiful near Doncaster, on several parts of the sea-coast of Scotland, particularly beyond Newhaven, Edinburgh. D. C. astr. no. 18. t. 14. Smith, engl. bot. 274. A. arenàrius, Huds. 323. Oed. fl. dan. 614. Pall. astr. t. 34. A. Dánicus, Retz. obs. fasc. 3. p. 41. Hoffm. A. gláux, Vill. Oxýtropis montána, Spreng. fl. hal. 207. with a figure, ex. Wallr. sched. 329. A. epiglóttis, Dicks. hort. sic. fasc. 1-13.

—Raii, syn. 326. t. 12. f. 3. Flowers variegated with purplish, blue, and white. Root creeping, woody, though slender.

* *Tongue-under-tongue* or Purple Milk-Vetch Fl. June, July. Britain. Pl. prostrate.

2 A. DASYGLÓTTIS (Fisch. in litt. D. C. prod. 2. p. 282.) plant diffuse, nearly glabrous; stipulas concrete, opposite the leaves; leaflets elliptic-oblong, somewhat emarginate; spikes of flowers capitate; peduncles a little longer than the leaves; bracteas about equal in length to the tube of the calyx; calyx beset with white hairs; legumes erect, ovate-triquetrous, hairy, disposed in heads; cells 1-seeded. ♃. H. Native of Siberia, on the Altaian mountains. Root creeping. Flowers purple, blue, and white mixed. Very nearly allied to *A. hypoglóttis*.

Thick-tongued or Thick-podded Milk-Vetch. Fl. June, July. Clt. 1818. Pl. diffuse.

3 A. PURPU'REUS (Lam. dict. 1. p. 314.) plant diffuse, procumbent, rather villous; stipulas concrete, opposite the leaves; leaflets obovate, bidentate at the apex; spikes of flowers capitate; peduncles longer than the leaves; legumes erect, ovate-triquetrous, hairy, disposed in heads; cells 3-seeded. ♃. H. Native of Provence, on the mountains, Piedmont, and the Appennines. D. C. astr. no. 17. t. 12. Flowers purplish blue.

Purple-flowered Milk-Vetch. Fl. June, July. Clt. 1820. Pl. prostrate.

4 A. TENUIFÒLIUS (Desf. atl. 2. p. 186. D. C. astr. no. 10. but not of Lin.) plant decumbent, hoary, and villous; stipulas concrete, opposite the leaves; leaflets elliptic-linear, about 15 or 17 pairs; peduncles shorter than the leaves; spikes capitate; vexillum elongated. ♃. H. Native of Barbary, near Cafza, in sand. Flowers rose-coloured. Legumes unknown.

Fine-leaved Milk-Vetch. Pl. decumbent.

5 A. LOTOÌDES (Lam. dict. 1. p. 316.) plant prostrate, glabrous; stipulas not known; leaves with about 4 or 5 pairs of obovate, nearly obcordate leaflets; flowers 4 or 5 in an umbel; peduncles length of leaves; legumes prismatic, triquetrous, erect, subulate at the apex. ⊙. H. Native of China. A. Sínicus, Lin. mant. 103. Sims, bot. mag. 1350. Flowers rose-coloured. Lamarck's name has been adopted in preference to that of Linnæus in consequence of its being more expressive of the habit of the plant, and to prevent its being confounded with *A. Chinénsis*. The specimen in the Linnæan herbarium under the name of *A. Sinicus* is certainly a species of *Coronilla* very near *C. vària*.

Lotus-like Milk-Vetch. Fl. June, July. Clt. 1763. Pl. pr.

6 A. VICIÆFÓRMIS (D. C. astr. no. 19.) plant trailing and clothed with adpressed pubescence; stipulas half-concrete; leaves with from 10-15 pairs of obovate or obcordate leaflets; spikes 5-7-flowered; peduncles angular, a little longer than the leaves; legumes oblong, acute, erect, villous. ♃. H. Native of Cappadocia. A. humifùsus, Willd. spec. 3. p. 1286. Flowers bluish-purple.

Vicia-formed Milk-Vetch. Pl. trailing.

7 A. ONOBRYCHIOÌDES (Bieb. casp. 185. fl. taur. 2. p. 184.) plant rather diffuse, suffruticose at the base, clothed with adpressed pubescence; stipulas concrete, opposite the leaves; leaves with 8-10 pairs of elliptic leaflets; spikes of flowers capitate, on long peduncles; vexillum linear, longer than the wings; legumes ovate-oblong, erect, villous, terminating in a hooked point. ♃. H. Native of Iberia, Persia, and Caucasus. A. canéscens, D. C. astr. no. 39. t. 16. A. cephalòtes, Pall. astr. no. 32. t. 24. Flowers beautiful purple.

Saintfoin-like Milk-Vetch. Fl. July. Clt. 1819. Pl. diff.

8 A. BÍCOLOR (Lam. dict. 1. p. 317.) plant almost stemless, suffrutescent, hoary; stipulas concrete, opposite the leaves; leaves with from 6-9 pairs of oblong-linear leaflets; spikes of flowers capitate; peduncles twice the length of the leaves; calyxes villous, 5-cleft; legumes villous. ♃. H. Native of Armenia, D. C. astrag. no. 41. Flowers white and purple in the same head, according to Tournefort, cor. 28.

Two-coloured-flowered Milk-Vetch. Pl. ½ foot.

9 A. NA'NUS (D. C. astr. no. 40. t. 17.) plant almost stemless, frutescent, canescent; stipulas concrete, opposite the leaves; leaves with 6-7 pairs of ovate leaflets; spikes of flowers capitate, on short peduncles; legumes ovate-oblong, pubescent. ♃. H. Native of Syria. Flowers purple.

Dwarf Milk-Vetch. Pl. ¼ to ½ foot.

10 A. PSORALEOÌDES (Lam. dict. 1. p. 317.) plant with short stems, ascending, suffrutescent and canescent; stipulas concrete, opposite the leaves; leaves with 6-9 pairs of linear-oblong leaflets, flowers capitate at first, but at length spicate, longer than the leaves; legumes oblong, very hairy. ♄. F. Native of the Levant. D. C. astr. no. 42. t. 18. f. 2. Flowers blue or purplish blue.

Psoralea-like Milk-Vetch. Pl. ½ foot.

11 A. ALLYSSOÌDES (Lam. dict. 1. p. 317.) plant with short, ascending, suffrutescent stems, hoary; stipulas concrete, opposite the leaves; leaves with from 5-10 pairs of linear-oblong leaflets; spikes of flowers somewhat cylindrical, on peduncles, which are twice the length of the leaves; legumes ovate, acute, pubescent, 4-seeded. ♃. F. Native of the Levant. D. C. astr. no. 43. t. 18. f. 1. Flowers small, of a dirty-white colour.

Madwort-like Milk-Vetch. Pl. ¼ foot.

12 A. LASIOGLÓTTIS (Stev. in Bieb. suppl. 486.) plant ascending, hoary from adpressed hairs; stipulas concrete, opposite the leaves; spikes of flowers capitate, on long peduncles; vexillum elongated, emarginate; legumes rather ovate-globose, acute, woolly. ♃. F. Native of Caucasus, in stony, exposed places. Flowers purple. Allied to *A. onobrychioìdes*.

Woolly-tongued Milk-Vetch. Pl. ascending.

13 A. LEONTÌNUS (Jacq. icon. rar. 1. t. 153.) plant diffuse, suffruticose at the base, clothed with hairs, which are fixed by their centre; stipulas concrete, but usually free at length; leaves with 6-12 pairs of ovate leaflets; flowers disposed in heads; peduncles trigonal, longer than the leaves; legumes ovate, villous. ♃. H. Native of Austria and Switzerland, on mountains. D. C. astr. no. 20. Lodd. bot. cab. 432. Flowers blue. Vexillum a little longer than the wings.

Lion's-tail Milk-Vetch. Fl. May, June. Clt. 1816. Pl. diff.

14 A. UNIFU'LTUS (Lher. stirp. 158.) plant decumbent, suffrutescent, hoary from villi; stipulas concrete, opposite the leaves; leaves with from 11-14 pairs of oblong, obtuse leaflets; racemes pedunculate, length of leaves; legumes erect, compressed, villous. ♃. F. Native of Peru and Chili. D. C. astr. no. 9. t. 10. Calyxes rather bladdery, clothed with adpressed, black down. Flowers purplish.

Single-propped Milk-Vetch. Pl. decumbent.

15 A. PROCU'MBENS (Hook, in Beech. voy. p. 18.) plant clothed with hirsute tomentum in every part; stems prostrate, branched; stipulas concrete; leaves with 11-14 pairs of elliptic, retuse leaflets; peduncles racemose, longer than the leaves; wings of flowers not half so long as the keel; legumes, in an immature state, linear, hairy, and reflexed. ♃. F. Native of Chili, about Conception. Flowers pale-purple.

Procumbent Milk-Vetch. Pl. procumbent.

16 A. BIDENTA'TUS (H. B. et Kunth, nov. gen. amer. 6. p. 493. t. 584.) plant ascending and somewhat pubescent; stipulas joined together to the middle; leaves with from 9-11 pairs of linear-oblong leaflets, which are emarginately bidentate at the apex; racemes roundish, pedunculate, longer than the leaves. ♃. S. Native of South America. Very like *A. unifúltus*. Flowers pale-purple.

Bidentate-leafletted Milk-Vetch. Pl. ascending.

17 A. Garbancíllo (Cav. icon. 1. t. 85.) plant erect, suffruticose, and rather villous; stipulas concrete, opposite the leaves; leaflets 10-12 pairs, oblong, obtuse; racemes pedunculate, longer than the leaves; legumes inflated, pilose. ♄. S. Native of Peru, in the valley of Canta. Flowers pale violet. The plant is said to be noxious to cattle. *Garbancillo* is the vernacular name of the plant in Peru. Calyx covered with black hairs.

Garbancillo Milk-Vetch. Shrub 1½ foot.

18 A. Donia'nus (D. C. prod. 2. p. 283.) plant prostrate, beset with a few scattered adpressed hairs; leaves with 8-10 pairs of oval, alternate, mucronulate leaflets, which are pubescent beneath, but when young silky; stipulas connate; peduncles axillary, few-flowered, twice the length of the leaves; legumes subulate, silky. ♃. H. Native of Nipaul, in Gosaingsthan. Flowers purple, having a broad vexillum. Root long, thick, and woody, dividing into many arms at the base. A. macrorhìzus, D. Don, prod. fl. nep. 245.

Don's Milk-Vetch. Fl. Ju. Jul. Clt. 1818. Pl. pr.

19 A. arena'rius (Lin. spec. 1069.) plant diffuse, tomentose from white adpressed down; stipulas concrete, opposite the leaves; leaflets linear-obtuse; peduncles few-flowered, rather shorter than the leaves; legumes stipitate, rather tumid, tomentose, thrice the length of the breadth. ♃. H. Native of Denmark and Sweden, in sandy places. Retz. obs. 2. no. 73. p. 3. t. 3. D. C. astr. no. 1. Corolla blue. The stems are erect, according to Retzius, but according to Willdenow and Linnæus they are prostrate. Root creeping.

Sand Milk-Vetch. Fl. June, July. Clt. 1800. Pl. ½ foot.

20 A. Bayonne'nsis (Lois. fl. gall. 247.) plant diffusely-procumbent, somewhat tomentose from white, adpressed down; stipulas concrete, opposite the leaves; peduncles 4-6-flowered, about equal in length to the leaves; legumes almost sessile, rather tumid, tomentose, twice the length of the breadth. ♃. H. Native of the west of France, in sand by the sea-coast, at Bayonne. D. C. fl. fr. suppl. 573. A. Austrìacus, Thore, but not of Lin. Flowers bluish-purple.

Bayonne Milk-Vetch. Fl. July, Aug. Clt. 1816. Pl. pr.

21 A. verrucòsus (Moris, elench. sard. p. 12.) plant pilose and decumbent; stipulas concrete, opposite the leaves, lanceolate-subulate; leaves with 10-12 pairs of ovate-oblong leaflets; racemes longer than the leaves, many-flowered; legumes arched, oblong, acuminated, rather mucronulate, pilose. ⊙. H. Native of Sardinia. Flowers purple.

Warted-podded Milk-Vetch. Pl. decumbent.

22 A. macrópterus (D. C. prod. 2. p. 283.) plant erect and smoothish; young stipulas concrete and opposite the leaves, but at length becoming free; leaflets linear-lanceolate, acute; peduncles 2 or 3 times the length of the leaves; flowers nodding, disposed in interrupted spikes; wings much longer than the keel, and about equal in length to the vexillum; legumes oval-linear, straight, glabrous, apiculated by the style, hardly double the length of the calyx. ♃. H. Native of Dahuria and Siberia. Astrágalus and Oxýtropis macróptera, Fisch. in litt. but there is no mucrone on the keel to be seen. Flowers purple.

Long-winged Milk-Vetch. Pl. 1 foot.

23 A. vagina'tus (Pall. astr. no. 49. t. 36.) plant erect, pubescent; stipulas concrete, opposite the leaves; leaflets linear-lanceolate, acute; peduncles longer than the leaves; flowers drooping, disposed in dense spikes; legumes linear, straight. ♃. H. Native of Siberia, at the Uba, Jenesee, and Baikal. Flowers of a whitish-purple colour, or white and purple mixed. This species is very nearly allied to *A. versicolor*, and probably only the same. The plant is also a native of North America.

Sheathed-stipuled Milk-Vetch. Pl. 1 foot.

24 A. versícolor (Pall. astr. no. 48. t. 35.) plant erect and glabrous; stipulas concrete, opposite the leaves; leaflets linear, acute; peduncles bearing a crowded spike of flowers each, which is longer than the leaves; flowers drooping; legumes triquetrous, erect, glabrous. ♃. H. Native of eastern Siberia, on rocks. Flowers pale-blue at first, but at length changing to a deeper blue. It is probably not distinct from *A. vaginàtus*.

Party-coloured-flowered Milk-Vetch. Pl. ½ to 1 foot.

25 A. Tau'ricus (Pall. astr. no. 51. t. 38. exclusive of the synonymes) plant spreading and tufted, clothed with adpressed silky down; leaflets linear, acute; stipulas membranous, concrete, opposite the leaves; peduncles spicate, thrice the length of the leaves; legumes ovate, acute, 2-4-seeded. ♃. H. Native of Tauria, in gravelly or chalky places. Flowers purple, varying to white, ex Bieb. taur. 2. p. 192. Oxýtropis Taùricus, Pers. ench. exclusive of the synonymes. A. cretàceus, Pall. ined. taur.

Taurian Milk-Vetch. Fl. Ju. Jul. Clt. 1826. Pl. ¼ to ½ ft.

§ 2. *Dissítiflori* (from *dissitus*, distant, and *flos*, a flower; in reference to the flowers being distant in the racemes). *D. C. prod. 2. p. 284. Stipulas distinct, not adhering to the petiole. Flowers purplish or white, distant in the racemes. Legumes straight.*

26 A. Austri'acus (Lin. spec. 1070.) plant diffusely procumbent; leaflets glabrous, linear, truncately-emarginate; racemes pedunculate, longer than the leaves; wings of corolla bifid; legumes somewhat triquetrous, pendulous. ♃. H. Native of Spain, Dauphiny, Austria, Italy, Tauria, in dry exposed places, and of Russia, on the banks of the Volga. Jacq. austr. 195. Vind. 263. D. C. astr. no. 1. A. dichópterus, Pall. astr. t. 39. Allied to *Oxýtropis dichóptera*. Flowers with a blue vexillum, but the rest purple.

Austrian Milk-Vetch. Fl. May, June. Clt. 1640. Pl. diff.

27 A. olo'pterus (D. C. prod. 2. p. 284.) plant diffuse; leaves with 6-7 pairs of linear, glabrous, entire, acutish leaflets; racemes pedunculate, twice or thrice the length of the leaves; wings of corolla obtuse. ♃. H. Native of the Altaian mountains, and in the Kirghisean steppe. A. Austrìacus, Fish. in litt. The plant is very like the *A. Austrìacus*, but differs in the wings of the corolla being entire; also like *A. melilotoìdes*, but differs from it in the leaves having many pairs of leaflets. The flowers are pale, according to the dried specimen.

Entire-winged Milk-Vetch. Fl. Ju. Jul. Clt. 1817. Pl. diff.

28 A. melilotoìdes (Pall. itin. ed. gall. t. 33. f. 1. and 2. astr. t. 41.) plant erect, glabrous; leaflets 5, oblong, emarginate; racemes pedunculate, thrice the length of the leaves: wings of corolla entire; legumes erect, ovate, didymous, 2-seeded, wrinkled. ♃. H. Native of Siberia, Altaia, Dahuria, and China. D. C. astr. no. 37. Flowers purple.

Melilot-like Milk-Vetch. Pl. 2 to 3 feet.

29 A. sulca'tus (Lin. spec. 1065.) plant erect, glabrous; stem furrowed; leaflets linear-lanceolate; racemes pedunculate, longer than the leaves; wings of corolla entire; legumes erect, rather triquetrous, half bilocular. ♃. H. Native of Siberia, in grassy places, and the Tartarian desert. Jacq. hort. vind. t. 40. D. C. astr. no. 35. Tium lineàre, Mœnch. A. leptostàchys, Pall. astr. t. 40. but not of Willd. Flowers pale-violet but with a white keel, tipped with brown.

Furrowed-stemmed Milk-Vetch. Fl. July. Clt. 1783. Pl. 2 to 3 feet.

30 A. Cra'cca (D. C. astr. no. 2. t. 9.) plant diffuse; leaflets oval-oblong, emarginate, pubescent; racemes pedunculate, about equal in length to the leaves; wings of corolla entire; legumes pendulous, stipitate, ovate-oblong, compressed, half-bilocular. ♃. G. Native of Peru.

Cracca-like Milk-Vetch. Pl. diffuse.

31 A. PROSTRA'TUS (Hook, in Beech. voy. p. 18.) plant diffuse; leaflets pubescent, obtuse; stipulas concrete, but free from the petiole; racemes pedunculate, much longer than the leaves; flowers loose, almost sessile; calyxes clothed with black pubescence. ♃. G. Native of Chili, about Conception. Flowers purple.

Prostrate Milk-Vetch. Pl. prostrate.

32 A. GRA'CILIS (Nutt. gen. amer. 2. p. 100.) plant erect, slender, pubescent; leaflets oblong-linear, remote; racemes pedunculate, longer than the leaves; legumes very short, drooping, elliptic-ovate, rather triquetrous, pubescent, 1-celled, usually containing 4 seeds. ♃. H. Native of North America, on the plains on the banks of the Missouri. A. tenéllus, Pursh. fl. amer. sept. 2. p. 473. E'rvum multiflòrum, ibid. p. 739. Dàlea parviflòra, ibid. p. 474. according to Nuttall. Psoràlea parviflòra, Poir. suppl. 4. p. 590. Flowers pale purple.

Slender Milk-Vetch. Fl. June, July. Clt. 1821. Pl. 2 ft.

33 A. FLEXUÒSUS (Doug. mss.) plant erect, flexuous, downy in a young state; stipulas distinct; leaflets distant, linear, obtuse, beset with close-pressed hairs beneath; flowers distant, racemose; calyx smoothish; bracteas not much longer than the pedicels. ♃. H. Native of North America, near the Columbia river. Flowers purple. Plant with the habit of *Vícia crácca.*

Var. β, álba (Dougl. mss.) flowers white.

Flexuous-stemmed Milk-Vetch. Pl. 1 foot.

34 A. INFLE'XUS (Dougl. mss.) plant white and woolly; stems flexuous; stipulas distinct; leaves with numerous pairs of oblong-lanceolate leaflets; racemes pedunculate, longer than the leaves; flowers remote; bracteas subulate, longer than the tube of the calyx; legumes curved upwards, very woolly. ♃. H. Native of North America, on the banks of the Columbia river. Flowers large, purple.

Inflexed-podded Milk-Vetch. Pl. 1 foot.

35 A. COLLI'NUS (Dougl. mss.) plant puberulous, erect; stipulas joined? leaves with numerous pairs of obovate-lanceolate emarginate leaflets; racemes on long peduncles; flowers distant; bracteas subulate, twice the length of the pedicels; legumes straight, between terete and compressed. ♃. H. Native of North America, near the Columbia river. Flowers purple.

Hill Milk-Vetch. Pl. 1 to 2 feet.

36 A. SUCCULE'NTUS (Rich. in Frankl. trav. p. 226.) plant prostrate, pubescent; leaflets 21-25, oblong-obovate, slightly emarginate; stipulas distinct; racemes shorter than the leaves; flowers remote; bracteas ovate, acute, longer than the pedicel; calyx beset with black hairs. ♃. H. Native of North America, in the vicinity of the Saskatchawan river, and in the Arctic region. Lindl. bot. reg. 1324. Flowers large, purplish, with an oblong vexillum.

Succulent Milk-Vetch. Fl. June. Clt. 1826. Pl. prostrate.

37 A. SUBULA'TUS (Bieb. fl. taur. no. 1480. but not of Desf.) plant diffuse and hoary from white pili; leaflets linear; racemes pedunculate, loose, longer than the leaves; the lower flowers remote; legumes subulate, triquetrous, rather arched, erectish, 5 times the length of the calyx. ♃. H. Native of Tauria and Siberia, in fields. A. subulifórmis, D. C. astr. no. 33.

Var. a, màjor (D. C. prod. 2. p. 284.) flowers approximate, purple. Pall. astr. t. 20.

Var. β, maciléntus (D. C. l. c.) flowers fewer, remote, and purple. Pall. astr. t. 20.

Var. γ, Tartáricus (D. C. l. c.) flowers fewer, and cream-coloured. Native of Caucasus, on the banks of the Volga and the Don. Perhaps a distinct species.

Subulate-podded Milk-Vetch. Fl. Ju. Jul. Clt. 1820. Pl. dif.

38 A. CORNICULA'TUS (Bieb. pl. ross. cent. 1. t. 45. ex suppl. fl. taur. 492.) plant procumbent, suffruticose, hoary, and pilose; leaflets linear; peduncles longer than the leaves, few-flowered; flowers umbellate; legumes subulate, triquetrous, rather arched, and much spreading. ♃. ♄. H. Native of Bessarabia, about Odessa, and of the south of Podolia. Flowers purple.

Horned-podded Milk-Vetch. Pl. procumbent.

39 A. CERATOI'DES (Bieb. suppl. 492.) plant depressed, clothed with silky villi; leaflets oblong-elliptic; peduncles longer than the leaves; racemes somewhat capitate; legumes subulate, triquetrous, erect, 4-times longer than the calyx, clothed with adpressed bristles. ♃. H. Native of Siberia, on the Altaian mountains. A. subulàtus Altàicus, Pall. astr. no. 27. t. 20. A. Flowers purple.

Horn-like-podded Milk-Vetch. Pl. depressed.

40 A. MACRÓLOBUS (Bieb. suppl. 493.) plant depressed, clothed with white adpressed hairs; leaflets oblong-elliptic; peduncles rather longer than the leaves; racemes somewhat capitate; legumes subulate, triquetrous, erect, beset with adpressed bristles, thrice the length of the calyx. ♃. H. Native of Siberia, on the Altaian mountains, and on the banks of the Yenesee, in the Kirghisean-steppe. Flowers white.

Long-podded Milk-Vetch. Pl. depressed.

41 A. VIRGA'TUS (Pall. astr. t. 18. exclusive of the synonymes,) plant erect, suffruticose, rather canescent; leaves with about 6 pairs of linear-lanceolate acute leaflets; racemes spicate, much elongated; the lower flowers very remote; legumes oblong, triquetrous, twice the length of the calyx. ♄. ♃. H. Native of Hungary, Tauria, Tartary, at the Volga, and at the Caspian sea, in sandy places. A. vàrius, Gmel. jun. trav. 2. p. 116. t. 17. D. C. astr. no. 34. A. virgàtus, Bieb. fl. taur. and suppl. no. 465. Flowers purple.

Var. β, Uralénsis (D. C. prod. 2. p. 285.) stems shorter than the peduncles; racemes few-flowered. ♄. ♃. H. Native of the Ural mountains. A. subulàtus, Uralénsis, Pall. astr. t. 20. C. ex Bieb. suppl. 493. Perhaps a proper species.

Twiggy Milk-Vetch. Fl. May, Aug. Clt. 1806. Pl. 1 to 3 feet.

42 A. HYRCA'NUS (Pall. astr. no. 29. t. 22.) plant erect, suffruticose, pubescent; leaves with 3 pairs of linear acute leaflets; racemes usually 5-flowered, hardly longer than the leaves; legumes oblong, mucronate, villous, twice the length of the calyx. ♃. ♄. H. Native on the shores of the Caspian sea, at Derbent. Flowers purple. Perhaps only a variety of *A. virgàtus* according to Bieberstein.

Hyrcanian Milk-Vetch. Pl. 1 to 2 feet.

43 A. BRACHY'LOBUS (D. C. prod. 2. p. 285.) plant erectish; shrubby at the base, clothed with adpressed silky white down; leaves with 2-3 pairs of linear acute leaflets; racemes pedunculate, much longer than the leaves, 6-8-flowered; legumes oblong, pubescent, mucronate by the style, hardly longer than the calyx. ♄. H. Native of Siberia, at Lake Inderskoi. Flowers purple? Allied to *A. virgàtus* according to Fischer. Leaflets 12-15 lines long.

Short-podded Milk-Vetch. Pl. 1 foot.

44 A. A'NNUUS (D. C. astr. no. 25.) plant rather diffuse, and rather glabrous; leaflets linear; racemes longer than the leaves; flowers spreading; vexillum twice the length of the wings. ⊙. H. Native country as well as the legumes unknown. Perhaps belonging to a different section of the genus.

Annual Milk-Vetch. Pl. diffuse.

45 A. BIFLÒRUS (Viv. fl. lyb. 44. t. 20. f. 1.) plant erect, clothed with canescent hairs; stipulas very short; leaves with 5-6 pairs of elliptic leaflets; peduncles longer than the leaves, usually bearing only 2 flowers; calyx covered with stiff black hairs. ⊙. H. Native of Cyrenaica. Flowers blue. The legume being unknown, the place which the plant should occupy in the genus is doubtful.

Two-flowered Milk-Vetch. Pl. ½ to 1 foot.

§ 3. *Onobrychoìdei* (from *onobrỳchis*, saintfoin, and *idea*, like. The plants contained in the division agree with *Saintfoin* in habit). *D. C. prod.* 2. *p.* 285. *Stipulas distinct, and free from the petioles. Flowers purplish, disposed in dense spikes or heads. Vexillum of flowers linear and elongated. Legumes straight, rarely falcate. Roots perennial.*

* *Legumes curved.*

46 A. LEPTOPHY′LLUS (Desf. atl. 2. p. 188. t. 207.) plant procumbent, suffrutescent, and rather pubescent; leaflets obcordate; racemes longer than the leaves; legumes pendulous, falcate, compressed, when young pubescent. ♃. H. Native of Barbary, on the mountains. A. Tunetànus, Willd. spec. 3. p. 1277. Flowers white.

Slender-leaved Milk-Vetch. Fl. June, July. Clt. 1811. Pl. procumbent.

47 A. ORNITHOPODIOI′DES (Lam. dict. 1. p. 312.) plant suffruticose, tufted and diffuse, hoary and villous; leaflets ovate; racemes longer than the leaves; legumes pendulous, falcate, compressed. ♃. H. Native of Armenia. Flowers yellowish. D. C. astr. no. 4.

Ornithopus-like Milk-Vetch. Pl. diffuse.

48 A. DAHU′RICUS (D. C. prod. 2. p. 285.) plant herbaceous, erect, pilose; stipulas lanceolate-subulate; leaflets oblong, mucronate, 7-9 pairs; racemes longer than the leaves; legumes erect, incurved, linear, compressed, rather pilose. ♃. H. Native on the banks of rivers from Dahuria to China. Galèga Dahùrica, Pall. itin. 3. append. no. 107. t. W. f. 1. ed. gall. append. no. 369. t. 81. f. 3. Flowers purple. The teeth of the calyx are subulate, as in *Galèga*, but the stamens are diadelphous, and the legumes are bilocular.

Dahurian Milk-Vetch. Fl. July. Clt. 1822. Pl. 1 to 2 feet.

49 A. LENTIGINÒSUS (Dougl. mss.) plant smooth, prostrate; stipulas membranous, distinct; leaflets obovate-roundish; racemes about the length of the leaves; legumes smooth, inflated, curved at the end, and ending in a long beak. ♃. H. Native of North West America, on the Blue mountains. Flowers apparently purple.

Freckled Milk-Vetch. Pl. ¾ foot.

50 A. STEVENIA′NUS (D. C. prod. 2. p. 285.) plant erect, glabrous, slender, few-leaved; leaflets linear, distant, 4 or 5 pairs; spikes pedunculate, few-flowered, longer than the leaves; flowers rather distant; legumes linear, elongated, falcate, slender, acute, and glabrous. ♃. H. Native of Iberia, Caucasus, and Asia Minor. A. grácilis, Stev. ined. but not of Nutt. Flowers purple, almost like those of *A. onobrỳchis*, but the habit of the plant is that of *A. vàrius.*

Steven's Milk-Vetch. Pl. 1 foot.

* * *Legumes straight.*

51 A. MACROSTA′CHYS (D. C. astr. no. 38. t. 15.) plant shrubby, erect, pubescent; leaves with about 12 or 14 pairs of linear leaflets; spikes pedunculate, elongated, many-flowered, much longer than the leaves; vexillum longer than the wings; legumes ovate, compressed, hairy. ♃. H. Native of Armenia. A. hedysaroìdes, Willd. spec. 3. p. 1264. Pers. ench. 2. p. 337. no. 46. and Oxỳtropis hedysaroìdes, Pers. ench. 2. p. 334. no. 44. Calyx tubular, pilose. Flowers purple.

Long-spiked Milk-Vetch. Pl. ½ foot.

52 A. LINEARIFÒLIUS (Pers. ench. 2. p. 336.) plant erect, pubescent; leaflets linear, acute, about 10 or 12 pairs; racemes much longer than the leaves; vexillum broad, twice the length of the wings. ♃. H. Native of Siberia. Sweet, fl. gard. t. 73. A. Onobrỳchis angustifòlius, D. C. astr. no. 24. A. tenuifòlius, Lin. spec. 1065. Flowers purple.

Linear-leafletted Milk-Vetch. Fl. July, Aug. Clt. 1780. Pl. 1 foot.

53 A. PECTINA′TUS (Dougl. mss.) plant erect, pubescent; leaflets filiform; racemes dense-flowered, pedunculate, longer than the leaves; bracteas a little longer than the pedicels. ♃. H. Native of North America, in the pastures of the Saskatchawan, &c. Phàca pectinàta, Hook. fl. bor. amer. 141. t. 54. Flowers large, purple.

Pectinated-leaved Milk-Vetch. Pl. 1 foot.

54 A. ONOBRY′CHIS (Lin. spec. 1070,) plant diffuse or erect, pubescent; leaves with 7-16 pairs of oblong leaflets; spikes of flowers oblong-ovate, pedunculate, longer than the leaves; vexillum linear, twice the length of the wings; legumes ovate, triquetrous, rather villous, erect, twice the length of the calyx, ending in a straight point; cells 4-seeded. ♃. H. Native of Europe and Siberia. D. C. astr. no. 24. Bieb. fl. taur. no. 1482. Flowers purple. An elegant plant. Of all the varieties there are white flowers.

Var. α, *alpìnus* (D. C. prod. 2. p. 286.) plant dwarf; leaflets linear; spikes ovate. ♃. H. Native of Austria. Jacq. fl. austr. t. 38. Plant procumbent.

Var. β, *Moldávicus* (D. C. l. c.) plant dwarf; leaflets ovate-oblong, glabrous; spikes of flowers ovate. ♃. H. Native of Moldavia. Plant procumbent.

Var. γ, *microphỳllus* (Bess. in litt. D. C. l. c.) plant dwarf; leaflets linear; spikes of flowers ovate-oblong. ♃. H. Native of Podolia. Plant procumbent.

Var. δ, *màjor* (D. C. l. c.) plant erect; leaflets ovate or oblong; spikes of flowers oblong. ♃. H. Native of Siberia. A. onobrỳchis stipuláceus et máximus, D. C. astr. no. 24.—Gmel. sib. 4. t. 21.

Saintfoin-like Milk-Vetch. Fl. June, July. Clt. 1640. Pl. 1½ foot, or procumbent.

55 A. ADU′NCUS (Bieb. fl. taur. 2. p. 195. plant. ross. cent. 2. t. 80.) plant diffuse and hoary; leaves with 5-10 pairs of elliptic small leaflets; spikes short, pedunculate, longer than the leaves; vexillum much longer than the wings; legumes ovate-oblong, rather villous, ending in a long oblique acumen. ♃. H. Native of Caucasus, among broken rocks. Flowers purple. Very like the preceding species.

Hooked-podded Milk-Vetch. Fl. June, July. Clt. 1819. Pl. diffuse.

56 A. FLA′CCIDUS (Bieb. fl. taur. 2. p. 196.) plant procumbent and villous; leaves with 8 or 10 pairs of elliptic, somewhat emarginate leaflets; spikes few-flowered, pedunculate, about equal in length to the leaves; vexillum much longer than the wings; legumes triquetrous, prismatic, erect, acute, hairy. ♃. H. Native of Iberia, very common. A. hỳbridus, Gmel. trav. 1. t. 18. ? A. viminеus var. Pall. astr. no. 28. Flowers purple. Legume bent downwards at the apex.

Flaccid Milk-Vetch. Pl. procumbent.

57 A. VIMI′NEUS (Pall. astr. no. 28. t. 21.) plant erect, suffruticose; leaves with 4-6 pairs of lanceolate acute leaflets; spikes somewhat capitate, pedunculate, longer than the leaves; vexillum much longer than the wings; legumes spreading; oblong-lanceolate, villous, apiculated by the style. ♄. H. Native of Siberia, Iberia, and about Odessa. A. cornùtus, Pall. itin. 2. app. p. 499. no. 122. A. Odessànus, Bess. enum. no. 944. ex cont. 2. no. 1575. Stems glabrous. Leaves beset with adpressed pubescence. Calyx clothed with black hairs. Corolla purple? Legume clothed with white hairs.

Twiggy Milk-Vetch. Fl. June, Aug. Clt. 1816. Pl. 1 foot.

58 A. FRUTICÒSUS (Pall. astr. no. 26. t. 19. but not of Forsk.) plant shrubby, erect; leaves with 8-10 pairs of linear-lanceolate acute leaflets; spikes capitate, few-flowered, pedunculate, longer than the leaves; vexillum much longer than the wings;

legumes erect, oblong-lanceolate, villous, apiculated by the style. ♄. F. Native of Eastern Siberia, and beyond the Baikal. D. C. astr. no. 27.—Gmel. sib. 4. t. 24. f. A. Flowers white, tipped with purple. Very like the preceding species.

Shrubby Milk-Vetch. Fl. June, July. Clt. 1804. Sh. 1 ft.

59 A. ARBU´SCULA (Pall. astr. no. 24. t. 17.) plant erect, shrubby; leaves with 3 pairs of linear acute leaflets; spikes of flowers capitate, pedunculate, twice the length of the leaves; vexillum much longer than the wings; legumes spreading, elongated, linear, channelled on the back, clothed with adpressed pubescence. ♄. F. Native of Siberia, in the Kirghiscan steppe. Flowers purple. Habit of the two preceding species.

Little-tree Milk-Vetch. Shrub.

60 A. SUFFRUTICÒSUS (D. C. astr. no. 5. exclusive of the synonymes,) plant diffuse, suffruticose, villous; leaflets ovate-oblong, 7-10-pairs; spikes capitate, few-flowered, pedunculate, about equal in length to the leaves; vexillum a little longer than the wings; calyx rather inflated and villous. ♄. F. Native of Siberia, beyond the Baikal. Flowers purple. Perhaps this species belongs to a different section.

Suffruticose Milk-Vetch. Shrub.

61 A. ABORIGINO´RUM (Richards. in Frankl. journ. append. p. 746.) plant suffruticose, erect; leaves with 5 pairs of lanceolate-linear hoary-pubescent leaflets; racemes axillary, loose, exceeding the leaves. ♄. H. Native of Arctic America. Flowers white or bluish; the keel decidedly blue. The roots are long and yellow like liquorice. The Crees and Stone Indians gather them in the spring as an article of food.

Aborigin's Milk-Vetch. Shrub 1 foot.

62 A. ADSU´RGENS (Pall. astr. no. 44. t. 31.) plant ascending, smoothish; leaves with 11-12 pairs of lanceolate acute leaflets; stipulas acuminated, length of leaves; spikes of flowers oblong, pedunculate, longer than the leaves; vexillum longer than the wings; legumes oblong, terete, and somewhat tetragonal, sulcate on the back, apiculated by the style, erect, clothed with adpressed pubescence. ♃. H. Native of Siberia beyond the Baikal. Flowers bluish purple.

Var. β, prostràtus (Fisch. hort. gor.) stems prostrate. ♃. H. Native of Siberia about Irkutsk.

Assurgent Milk-Vetch. Fl. June, July. Clt. 1818. Pl. asc.

63 A. LAXMA´NNI (Jacq. hort. vind. 3. p. 37.) plant erect or diffuse, smoothish; leaves with 11-13 pairs of oblong-lanceolate leaflets; spikes of flowers pedunculate, oblong, longer than the leaves; vexillum much longer than the wings; legumes oblong, trigonal, mucronate, having a furrow on the back. ♃. H. Native of Siberia and North America, on the plains of the Missouri river. Flowers pale-purple or pale-blue. A. Laxmánni of Pall. astr. t. 30. differs in its more rigid habit. The American plant appears to be upright. Jacquin's one is procumbent.

Laxmann's Milk-Vetch. Fl. July, Aug. Clt. 1804. Pl. 1½ foot or procumbent.

64 A. AGRE´STIS (Dougl. mss.) stem erect, smooth; leaflets ovate-lanceolate, obtuse, beset with adpressed hairs; peduncles elongated, longer than the leaves; spikes of flowers capitate; calyx villous; bracteas lanceolate, not half so long as the calyx. ♃. H. Native of North America, near the Columbia river in fields. Flowers purple.

Field Milk-Vetch. Pl. 1 foot.

65 A. DORYCNIOI´DES (Dougl. mss.) plant erect, densely clothed with hoary silky villi; leaflets obovate-linear, obtuse; calyx smooth; racemes longer than the leaves. ♃. H. Native of North America, near the Columbia river. Flowers purple. An elegant plant.

Dorycnium-like Milk-Vetch. Pl. 1 foot.

66 A. MICROCA´RPUS (D. C. astr. no. 29.) plant erect, glabrous; leaves with 10-12 pairs of elliptic leaflets; spikes of flowers capitate, pedunculate, equal in length to the leaves; vexillum oblong, a little longer than the wings; legumes ovate, compressed, pubescent, rather acute. ♃. H. Native of Siberia, in plains near the river Oby. Flowers purple.

Small-fruited Milk-Vetch. Pl. 1 foot.

67 A. BARBA´TUS (Lam. dict. 1. p. 314.) plant erect, clothed with canescent hairs; leaves with 6-8 pairs of linear-lanceolate leaflets; spikes of flowers ovate, on short peduncles; teeth of calyx subulately-filiform, longer than the corolla, clothed with stiff villi; vexillum linear, much longer than the wings. ♃. H. Native of Armenia. D. C. astr. no. 12. A. híspidus, Labill. syr. dec. 1. t. 8. Flowers purple.

Bearded Milk-Vetch. Pl. ½ foot.

68 A. LABRADO´RICUS (D. C. prod. 2. p. 287.) plant procumbent, clothed with minute pubescence; leaflets ovate; spikes of flowers pedunculate; legumes secund, straight, acuminated at both ends, pendulous. ♃. H. Native of the north of Canada and of Labrador. A. secúndus, Michx. fl. bor. amer. 2. p. 67. but not of D. C. Flowers of a deep purple-colour. Perhaps belonging to a different section.

Labrador Milk-Vetch. Pl. procumbent.

69 A. MISSOURIE´NSIS (Nutt. gen. amer. 2. p. 99.) plant almost stemless, rather diffuse, clothed with canescent villi; stipulas ovate; leaves with 5-10 pairs of small obovate-elliptic leaflets; spikes of flowers capitate, standing on peduncles, which are a little longer than the leaves; calyx covered with black hairs; legumes oblong, acuminated, transversely-dilated, nearly glabrous, half-bilocular. ♃. H. Native of Upper Louisiana, on hills about the Missouri. Oxýtropis argentàtus, Pursh, fl. sept. amer. 2. p. 473. exclusive of the synonymes. Flowers purple, but there is a variety with white flowers also. Perhaps belonging to a different section.

Missouri Milk-Vetch. Pl. ½ foot.

70 A. CARYOCA´RPUS (Ker. bot. reg. t. 176.) plant having numerous, prostrate, assurgent stems, rising from the same root, clothed in every part with hoary-silky down; stipulas ovate, acute; leaves with 9-12 pairs of elliptic leaflets; peduncles shorter than the leaves; racemes loose-flowered; legumes nut-formed, inflated, fleshy, mucronate, glabrous, many-seeded. ♃. H. Native of Louisiana. A. crassicárpus, Fras. cat. 1813. A. carnòsus, Nutt. gen. amer. 2. p. 100. but not of Pursh. Flowers of a pale-violet colour. Perhaps belonging to a different division of the genus.

Nut-fruited Milk-Vetch. Fl. June, July. Pl. prostrate.

§ 4. *Sesàmei* (*Semsen* is the Arabic name of some species). *D. C. prod. 2. p. 287. Stipulas distinct, not adhering to the petiole. Flowers purplish, disposed in dense spikes or heads. Legumes straight. Roots annual.*

71 A. PENTAGLÓTTIS (Lin. mant. 274.) plant diffusely-procumbent, rather villous; stipulas ovate; leaves with 4-9 pairs of obovate retusely-emarginate leaflets; peduncles rather longer than the leaves; legumes half-ovate, somewhat triquetrous, echinated with tubercles, which are usually piliferous, disposed in heads; cells 1-celled. ⊙. H. Native of Spain and Barbary, on hills. D. C. astr. no. 16. Cav. icon. t. 188. A. cristàtus, Gouan. ill. 59. A. echinàtus, Lam. A. procúmbens, Mill. A. dasyglóttis, Pall. Flowers blue and white.

Five-tongued or Five-podded Milk-Vetch. Fl. Ju. Jul. Pl. pr.

72 A. GLA´UX (Lin. spec. 1097.) plant procumbent, clothed with canescent villi; stipulas ovate-lanceolate; leaves with 8-13 pairs of small, oblong, acutish leaflets; peduncles longer than the leaves; vexillum linear; legumes erect, ovate, triquetrous, mucronate, villous, disposed in heads; cells 1-seeded. ⊙. H. Native of Spain and the south of France, in arid places. D. C. astr. no. 22.—Clus. hist. 2. p. 242. with a figure. Allied to the smaller

variety of *A. hypoglóttis*, but differs in the stipulas being free, not connate. Flowers purplish.

Miltwort Milk-Vetch. Fl. June, July. Clt. 1596. Pl. procumbent.

73 A. OXYGLÓTTIS (Stev. in Bieb. fl. taur. 2. p. 192.) plant diffuse, puberulous; stipulas subulate; leaves having 5-9 pairs of oblong emarginate leaflets; peduncles length of leaves, or rather shorter; legumes sulcate, acute, rather hoary, disposed in stellate heads; cells 6-seeded. ⊙. H. Native of Tauria, on hills about Sudak. A. sesàmeus, Pall. astr. no. 104. exclusive of the synonymes. Flowers unknown, but probably blue.

Sharp-tongued or Sharp-podded Milk-Vetch. Fl. June, July. Clt. 1817. Pl. diffuse.

74 A. PSILOGLÓTTIS (Stev. in litt. D. C. prod. 2. p. 288.) plant diffuse or rather procumbent; stipulas linear-subulate; leaflets cuneated, emarginate, 6 or 8 pairs, smoothish; peduncles one-half shorter than the leaves, and are, as well as the stems, hoary; legumes spreading, crowded, furrowed, acute, glabrous; cells 3-4-seeded. ⊙. H. Native about Astracan. Flowers probably purplish. Perhaps this and the preceding species are referrible to division six, *Annulàres*.

Smooth-tongued or Smooth-podded Milk-Vetch. Pl. spread.

75 A. CRUCIA'TUS (Link, enum. 2. p. 256.) plant procumbent, hoary, and villous; stipulas lanceolate; leaves with 6-8 pairs of oblong-linear acutish leaflets; peduncles a little shorter than the leaves; legumes between terete and compressed, dilated at the base, clothed with adpressed villi, and disposed in stellate heads; cells 5-7-seeded. ⊙. H. Native of Egypt and Siberia. A. stélla, Bieb. fl. taur. 2. p. 191. ex Fisch. in litt. Flowers violaceous?

Cross-podded Milk-Vetch. Fl. June, July. Clt. 1820. Pl. procumbent.

76 A. STE'LLA (Gouan. ill. 50.) plant diffusely procumbent, clothed with hoary villi; stipulas lanceolate; leaves with 8-10 pairs of elliptic-oblong leaflets; peduncles length of leaves or shorter; legumes almost terete, furrowed on the back, mucronate, hairy, at first in a head, but at length becoming stellately disposed; cells 5-10-seeded. ⊙. H. Native of the south of France and of the north of Africa, in arid places. D. C. astr. no. 7.—Lob. icon. 2. t. 83. Flowers bluish-purple. There is a variety of this plant with acute leaflets.

Star-podded Milk-Vetch. Fl. Jul. Aug. Clt. 1658. Pl. pr.

77 A. TRIBULOÌDES (Delill. ill. fl. ægyp. p. 22.) plant diffusely procumbent, or almost stemless, clothed with hoary villi; stipulas lanceolate; leaves with 7-9 pairs of elliptic-oblong leaflets; heads of flowers axillary, sessile; legumes nearly terete, hairy, furrowed on the back, disposed in stellate heads; cells 5-7-seeded. ⊙. H. Native of Egypt, in deserts. Perhaps distinct from *A. tribuloìdes* of Roth. in Horn. hort. hafn. 2. p. 703. Flowers purplish.

Caltrop-like Milk-Vetch. Fl. June, Jul. Clt. 1817. Pl. pr.

78 A. SESA'MEUS (Lin. spec. 1068.) plant diffuse, villous, and rather canescent; stipulas lanceolate; leaves with 9-10 pairs of elliptic, emarginate leaflets; heads of flowers axillary, sessile; legumes erect, nearly terete, acuminated, villous, furrowed on the back, disposed in heads; cells 7-8-seeded. ⊙. H. Native of the south of Europe and the north of Africa. D. C. astr. no. 8. A. stellàtus, Riv. tetr. irr. t. 106.—Garid. aix. t. 12. Flowers bluish purple.

Sesame-like Milk-Vetch. Fl. June, Jul. Clt. 1816. Pl. diff.

§ 5. *Vesicàrii* (from *vesica*, the bladder; in reference to the calyxes in all the species contained in this division being inflated). *D. C. prod. 2. p. 288. Stipulas distinct, not adhering to the petiole. Flowers purplish or white. Calyxes bladdery.*

79 A. LINEA'TUS (Lam. dict. 1. p. 314.) plant diffusely prostrate, clothed with villous pubescence; leaves with 8-10 pairs of elliptic-oblong leaflets; peduncles longer than the leaves; calyxes bladdery, rather villous, lined, and contracted at the mouth, inclosing the legume, which is pilose. ⊙. H. Native of the Levant. Vahl. symb. 1. p. 59. D. C. astr. no. 14. t. 11. f. 1. Flowers purplish.

Lined-calyxed Milk-Vetch. Pl. prostrate.

80 A. MEGALA'NTHUS (D. C. astr. no. 58. t. 20.) plant diffuse, rather hoary from adpressed down; leaflets oblong-elliptic; peduncles shorter than the leaves; calyxes inflated, clothed with black adpressed down; legumes very hairy, length of calyx. ♃. H. Native of Siberia, about Zmeof. Cajànus megalánthus, Spreng. Flowers large, pale. Stipulas sometimes joined together at the very base. Said to be nearly allied to *A. unifúltus*.

Large-flowered Milk-Vetch. Pl. diffuse.

81 A. VESICA'RIUS (Lin. spec. 1071.) plant diffusely procumbent, hoary from adpressed silky down; leaves with 5-7 pairs of elliptic leaflets; peduncles longer than the leaves; calyx bladdery, clothed with black adpressed down, and long white spreading hairs; legumes hairy, a little longer than the calyx. ♃. H. Native of the south of France, Hungary, and Tauria, in rugged exposed places. Vill. dauph. t. 42. f. 1. D. C. astr. no. 15. All. pedem. no. 1269. t. 80. f. 1. A. álbidus, Waldst. et. kit. pl. hung. 1. t. 40. A. glaúcus, Bieb. fl. taur. 2. p. 186. A. dealbàtus, Pall. astr. t. 23. f. 1. Flowers having the vexillum purple, the wings yellow, and the keel white, tipped with yellow, rarely with all the petals cream-coloured.

Bladdery-calyxed Milk-Vetch. Fl. July, Aug. Clt. 1737. Pl. diffuse.

82 A. ALBICAU'LIS (D. C. astr. no. 59. t. 21.) plant tufted and erectish, suffruticose at the base, canescent from adpressed down; leaves with 3-4 pairs of ovate leaflets; peduncles a little longer than the leaves; calyxes bladdery, clothed with adpressed black down; legumes hairy, ovate, compressed. ♃. H. Native of Russia, between the Volga and the Don, at Sarepta, also of Caucasus and Tauria. A. dealbàtus, Pall. astr. no. 30. t. 23. f. 2 and 3. Willd. spec. 3. p. 1263. Bieb. fl. taur. no. 1463. Oxýtropis dealbàtus, Pers. Flowers white or pale yellow.

White-stemmed Milk-Vetch. Pl. ½ foot.

83 A. ARGE'NTEUS (Bertol. ined. ex Vis. pl. dalm. in bot. zeit. p. 18.) plant silky; stems diffusely procumbent, herbaceous, permanent at the base; peduncles terminal, very long, and loosely racemose; leaves with 5-7 pairs of linear leaflets; stipulas distinct; wings entire, shorter than the vexillum; legume straight, terete, acuminated. ♃. H. Native of Dalmatia. Nearly allied to *A. vesicàrius* but differs in the legumes being terete and silky.

Silvery Milk-Vetch. Pl. procumbent.

§ 6. *Annulàres* (from *annulàris*, of a ring; in reference to the shape of the legumes which are twisted into the form of a ring). *D. C. prod. 2. p. 289. Stipulas distinct, not adhering to the petiole. Flowers purplish or white. Legumes arched. Roots annual.*

84 A. NUTTALLIA'NUS (D. C. prod. 2. p. 289.) plant decumbent; leaflets elliptic, emarginate; peduncles 2-flowered, longer than the petioles; legumes falcate, having 2 keels, glabrous; seeds truncate. ⊙.? ♂.? ♃.? H. Native of North America, in plains at Rod river. A. micránthus, Nutt. in journ. sc. nat. philad. 1821. p. 122. but not of Desv. Stem a span long. Flowers blue.

Nuttall's Milk-Vetch. Fl. June, July. Clt. 1822. Pl. dec.

85 A. CYMBÆCA'RPOS (Brot. fl. lus. 2. p. 167. phyt. p. 143. t. 59.) plant herbaceous, procumbent, rather pilose; leaflets obcordate, cuneated; peduncles length of leaves; legumes gla-

brous, warted, beaked, arched, and most tumid at the base. ⊙. H. Native of Portugal, in barren sandy places. Corolla sometimes white and sometimes purple.

Boat-fruited Milk-Vetch. Fl. June, Jul. Clt. 1800. Pl. pr.

86 A. STRIATE'LLUS (Bieb. fl. taur. 2. p. 189.) plant diffuse, glabrous; leaflets cuneiform, somewhat emarginate; peduncles 3-flowered, shorter than the leaves; legumes ovate-oblong, tumid, glabrous, deflexed, a little arched. ⊙. H. Native of Tauria, about Sudak. Bieb. pl. ross. cent. 1. t. 20. ex suppl. no. 1472. Corolla blue or white. Vexillum hardly longer than the wings, and obtuse keel.

Striped Milk-Vetch. Pl. diffuse.

87 A. ANNULA'RIS (Forsk. ægypt. 139.) plant diffuse, clothed with cinereous villi; leaflets few, obovate; peduncles few-flowered, length of leaves; young legumes straight, subulate, pubescent, adult ones glabrous, spotted, resupinate and arched. ⊙. H. Native of Egypt. D. C. astr. append. no. 6. t. 7. A. maculàtus, Lam. dict. 1. p. 316. A. subulàtus, Desf. fl. atl. 2. p. 186. but not of Pall. Flowers small, rose-coloured.

Annular-podded Milk-Vetch. Fl. June, July. Clt. 1800. Pl. diffuse.

88 A. TRIMÓRPHUS (Viv. fl. lyb. p. 44. t. 10. f. 2.) plant erect, and clothed with canescent hairs; lower leaves with 1-3 leaflets, upper ones impari-pinnate, with a few pairs of elliptic-oblong, acute leaflets; peduncles 2-3-flowered, a little longer than the leaves; legumes cylindrical, incurved, clothed with adpressed villi. ⊙. H. Native on the shores of Lybia, in the Great Syrtis. Flowers purple.

Three-formed Milk-Vetch. Fl. Ju. Jul. Clt. 1827. Pl. $\frac{1}{2}$ ft.

89 A. HISPÍDULUS (D. C. astr. no. 30. t. 13.) plant tufted and rather diffuse, pilose; leaflets elliptic-oblong; peduncles few-flowered, length of leaves; legumes slender, erect, hispid, when young they are straight, but when mature they are arched. ⊙. H. Native of Egypt, in the desert. Flowers pale, with the vexillum elongated.

Hispid-podded Milk-Vetch. Pl. $\frac{1}{4}$ foot.

90 A. SCORPIOIDES (Pourr. in Willd. spec. 3 p. 1280.) plant erectly-spreading, pubescent; leaflets oblong, obtuse, emarginate; stipulas lanceolate; flowers axillary, 1-2, almost sessile; legumes hooked, subulate, pubescent. ⊙. H. Native of Spain, about Madrid. A. subbiflòrus, Lag. Flowers blue. This plant, when growing in a dry place, hardly exceeds an inch in height, but when growing in moist rich places it rises to a foot. Perhaps not distinct from *A. canaliculàtus*, of Willd. enum. suppl. 52.

Scorpion-like-podded Milk-Vetch. Fl. June, July. Clt. 1816. Pl. 1 inch to 1 foot.

91 A. MAREO'TICUS (Delil. fl. ægyp. 113. t. 39. f. 3.) plant diffusely-prostrate, rather hispid; leaflets obovate, emarginate; peduncles 3-4-flowered, shorter than the leaves; legumes hooked and arched, almost cylindrical, glabrous, furrowed on the back, almost bilocular. ⊙. H. Native about Alexandria, and in the Mareotic marsh. Flowers lilac.

Mareotic Milk-Vetch. Fl. June, July. Clt. 1817. Pl. pr.

92 A. CORRUGA'TUS (Bert. amœn. 38. rar. dec. 3. p. 33.) plant erectly-spreading, rather pubescent; leaflets oblong-cuneated, emarginately bidentate at the apex; peduncles usually 1-flowered, about equal in length to the leaves; legumes arched, furrowed on the back, quite smooth, transversely and reticulately wrinkled. ⊙. H. Native of Egypt. A. cruéntus, Balb. cat. taur. append. 1. p. 8. A. crenàtus, Schultes, obs. 186. Flowers blue or purplish.

Wrinkled-podded Milk-Vetch. Pl. $\frac{1}{2}$ foot.

93 A. RETICULA'TUS (Bieb. suppl. fl. taur. 491.) plant diffuse and glabrous; leaflets oblong-cuneated and emarginate; peduncles usually 5-flowered, shorter than the leaves; legumes hooked, subulate, furrowed on the back, quite smooth, transversely and reticulately veined. ⊙. H. Native of Middle Iberia, at Sarepta. Flowers blue. A very small plant.

Reticulated-podded Milk-Vetch. Fl. June, July. Clt. 1828. Pl. $\frac{1}{8}$ foot.

94 A. CANALICULA'TUS (Willd. enum. suppl. 52.) stems erect; leaflets oblong, retuse; stipulas ovate; flowers axillary, solitary, nearly sessile; legumes hooked, profoundly channelled on the back. ⊙. H. Native of Europe. Flowers white.

Channelled Milk-Vetch. Fl. June, July. Clt. 1816. Pl. 1 to 2 feet.

SERIES II. OCHROLEU'CI (from ωχρος, *ochros*, yellow, and λευκος, *leucos*, white; the colour of the flowers is between white and yellow, that is cream coloured). D. C. prod. 2. p. 290. Stipulas free from the petiole. Flowers cream-coloured.

§ 7. *Buccràtes* (from βους, *bous*, an ox, and κερας, *keras*, a horn; in reference to the form of the pods). *D. C. prod.* 2, *p.* 290. *Stipulas neither adhering to the petioles nor together. Flowers cream-coloured. Legumes usually arched. Roots annual.*

95 A. CONTORTUPLICA'TUS (Lin. spec. 1068.) plant procumbent, villously-pubescent; leaflets obovate, emarginate; racemes pedunculate, 4-times shorter than the leaves; legumes contortuplicate, channelled on the back, villous. ⊙. H. Native of Siberia, Tauria, and Hungary, in grassy places. Pall. astr. t. 79.—Gmel. sib. 4. t. 28. D. C. astr. no. 29.—Buxb. cent. 3. p. 22. t. 39. Flowers pale yellow. This plant varies wonderfully in size, according to the soil in which it grows.

Contortuplicate-podded Milk-Vetch. Fl. July, Aug. Clt. 1783. Pl. procumbent.

96 A. TRIME'STRIS (Lin. spec. 1073. but not of Bieb.) plant diffuse, villously-pubescent; leaflets elliptic, emarginate; peduncles 2-5-flowered, a little shorter than the leaves; legumes hooked, subulate, rather pubescent, broadly furrowed on the back, and 2-keeled. ⊙. H. Native of Egypt and the island of Scio. Jacq. hort. vind. 174. D. C. astr. no. 50. A. membranàceus, Mœnch. A. hamòsus β, Pall. Flowers pale yellow.

Three-Monthly Milk-Vetch. Fl. Ju. July. Clt. 1777. Pl. $\frac{1}{2}$ ft.

97 A. HAMÒSUS (Lin. spec. 1067.) plant diffuse, pubescent; leaflets cuneated, emarginate, glabrous above; peduncles usually 6-flowered, shorter than the leaves; legumes hooked, furrowed on the back, almost terete, subulate at the apex, when young pubescent, but when adult smooth. ⊙. H. Native of dry exposed places, from Spain to Tauria, and of Mauritania. Gært. fruct. t. 154. D. C. astr. no. 51.—Moris. oxon. sect. 2. t. 9. f. 10. A. Austrìacus, Delarb. A. bùceras, Willd. enum. suppl. p. 51. according to Link. and Fischer. The plant is either prostrate or diffuse, and the peduncles bear from 2-8 flowers; they are pale-yellow. It goes commonly under the name of caterpillars in the gardens, in reference to the shape of the pods.

Var. β, *macrocárpus* (D. C. prod. 2. p. 290.) plant decumbent or erect; peduncles equal in length to the leaves. Led. hort. dorp. p. 23. Legumes 3-times larger than those of the species.

Hooked-podded Milk-Vetch. Fl. June, Aug. Clt. 1640. Pl. diffuse.

98 A. ÆGI'CERAS (Willd. enum. suppl. 52.) plant diffuse and pubescent; leaflets elliptic, emarginate; stipulas lanceolate, acuminated; racemes 8-10-flowered, pedunculate, twice or thrice shorter than the leaves; legumes hooked, compressed at the apex, somewhat pubescent, channelled on the back. ⊙. H. Native country unknown. Flowers pale yellow. Sometimes the plant is erect.

Goat's-horn-podded Milk-Vetch. Fl. June, Jul. Clt. 1818. Pl. 1 foot or diffuse.

99 A. BRACHY'CERAS (Ledeb. cat. hort. dorp. 1822. p. 3.) plant procumbent; leaflets elliptic, mucronate; stipulas ovate; racemes pedunculate, shorter than the leaves; legumes nearly erect, incurved, subulate. ⊙. H. Native of the North of Persia, and probably of the south of Tauria. A. triméstris, Bieb. fl. taur. 2. p. 190. Legumes much shorter than those of *A. hamòsus*, and the plant is also much smaller. Flowers pale yellow.

Short-horned or podded Milk-Vetch. Fl. June, July. Clt. 1828. Pl. procumbent.

100 A. GENICULA'TUS (Desf. atl. 2. p. 186. t. 205.) plant diffuse, hoary from villi; stipulas lanceolate; leaves with 5-8 pairs of oblong-elliptic leaflets; peduncles shorter than the leaves, when bearing the fruit they are deflexed; legumes depressed, trigonal, mucronate, a little arched, channelled on the back, hairy. ⊙. H. Native of Barbary, near Mascar on hills. D. C. astr. no. 52. Flowers pale yellow.

Jointed Milk-Vetch. Pl. diffuse.

101 A. TUBERCULÒSUS (D. C. astr. no. 60. t. 22.) plant erect, hispid at the apex; stipulas lanceolate; leaflets obovate, emarginate, about 11-12 pairs; racemes pedunculate, longer than the leaves; legumes depressed, ending each in a long mucrone, arcuately hooked upwards, tubercular, and puberulous. ⊙.? H. Native of Syria and Cappadocia. The fruit of the Cappadocian plant is much larger than those of the Syrian one. Flowers pale yellow.

Tubercular-fruited Milk-Vetch. Pl. 1 foot.

102 A. EPIGLÓTTIS (Lin. mant. 274.) plant procumbent, clothed with hoary villi; stipulas lanceolate, and are, as well as the calyxes, clothed with black villi; leaves with 6-7 pairs of oblong-linear leaflets; spikes of flowers capitate, on very short peduncles; legumes depressed, somewhat cordate, acuminated, with somewhat replicate margins, spreading, and pubescent. ⊙. H. Native of Spain, Barbary, the Levant, and south of France. D. C. astr. no. 56.—Herm. lugd. bot. p. 77. Riv. tetr. 109. f. 1. Flowers pale yellow.

Var. β, aspérulus (D. C. prod. 2. p. 291.) stems rather rigid, and rough. ⊙. H. Native of Spain, on hills about St. Philip. A. aspérula, Dufour, ann. gen. sc. 7. p. 295.

Sword-tongued or Sword-podded Milk-Vetch. Fl. June, July. Clt. 1737. Pl. procumbent.

103 A. TRIANGULA'RIS (D. C. prod. 2. p. 291.) stem erect, smoothish, trigonal; stipulas membranous, acuminated, villous; leaves with 8-10 pairs of elliptic-oblong, obtuse, emarginate leaflets; spikes of flowers pedunculate, longer than the leaves; legumes pendulous, triquetrous, few-seeded, straight, incompletely 2-celled. ⊙. H. Native country unknown. Phàca triangulàris, Zea in Horn. hort. hafn. suppl. 63. Flowers pale yellow.

Triangular-stemmed Milk-Vetch. Fl. July, Aug. Clt. 1818. Pl. ¾ foot.

104 A. BŒ'TICUS (Lin. spec. 1068.) plant procumbent, pubescent; stipulas membranous, ovate, acuminated; leaves with 10-15 pairs of obovate retuse leaflets; spikes of flowers on very short peduncles; legumes erect, triquetrously-prismatic, glabrous, straight, but hooked at the apex. ⊙. H. Native of Spain, Barbary, Sicily, and the Levant. A. uncinàtus, Mœnch. A. triangulàris, Munt. phyt. t. 110.—Riv. tetr. irr. t. 105.—Bocc. sic. t. 4. Flowers pale yellow. The plant under this name in the gardens is erect; it is therefore perhaps the preceding species. In Hungary the seeds are roasted, ground, and used as a substitute for coffee.

Bœtian Milk-Vetch. Fl. June, Aug. Clt. 1759. Pl. proc.

§ 8. *Synochreàti* (from συν, *syn*, together, and ωχρος, *ochros*, yellow; the stipulas are joined together, and the flowers are yellow). *D. C. prod. 2. p. 291. Stipulas free from the petiole, but joined together. Flowers cream-coloured. Root perennial.*

105 A. EMARGINA'TUS (D. C. astr. no. 47.) plant almost stemless and ascending, clothed with somewhat tomentose villi; stipulas membranous, concrete; leaves with 20-25 pairs of ovate emarginate leaflets; spikes of flowers ovate, dense, on radical peduncles or scapes, which are much longer than the leaves; legumes roundish, hairy. ♃. H. Native of the Levant. Flowers pale yellow.

Var. α, densifòlius (Lam. dict. 1. p. 317.) leaflets small, much crowded. Rauw. hodœp. 123. t. 29.

Var. β, Billardièrii (D. C. l. c.) leaflets larger, and rather distant. A. emarginàtus, Labill. syr. dec. 1. p. 19. t. 9.

Emarginate-leafletted Milk-Vetch. Fl. June, July. Clt. 1825. Pl. ¼ foot.

106 A. CAPITA'TUS (Lin. spec. 1064.) plant caulescent, erect; leaflets emarginate; spikes capitate, on elongated peduncles. ♃. H. Native of the Levant. Flowers purple.

Capitate-flowered Milk-Vetch. Fl. July, Aug. Clt. 1759. Pl. 1 foot.

107 A. FRA'GRANS (Willd. spec. 3. p. 1294.) plant procumbent, and almost stemless, glabrous; stipulas concrete, marcescent; leaves with 8-10 pairs of elliptic acute leaflets, which are pubescent beneath; peduncles about equal in length to the leaves; spikes of flowers ovate; bracteas ovate, membranous; legumes glabrous. ♃. H. Native of Cappadocia. A. glàber, D. C. astr. no. 44. but not of Michx. A. orientalis minimus foliis viciæ et floribus ex viridi-flavescentibus odoratissimis, Tourn. cor. 29. Flowers greenish yellow.

Fragrant Milk-Vetch. Pl. procumbent, an inch long.

108 A. MICROPHY'LLUS (Lin. spec. 1067.? Willd. spec. 3. p. 1277.) plant diffuse, smoothish; lower stipulas free, upper ones concrete; leaves with 15-18 pairs of puberulous leaflets, the lower ones oblong and emarginate, the upper ones linear and retuse; peduncles longer than the leaves; legumes erect, crowded in spikes, inflated, ovate, hairy. ♃. H. Native of Siberia in pastures; also of Thuringia and Hercynia, if the synonyme of Willd. be rightly attached. The fruit is that of *A. cìcer*, but the leaves and stipulas are different. Flowers pale yellow. The specimen in the Linnæan herbarium is pubescent, with 6-7 pairs of roundish emarginate leaflets.

Small-leaved Milk-Vetch. Fl. June, July. Clt. 1773. Pl. 1 foot long, diffuse.

109 A. SEMIBILOCULA'RIS (D. C. astr. no. 64. t. 23.) plant erect, rather ascending, smoothish; lower stipulas concrete, upper ones distinct; leaves with 9-11 pairs of elliptic-oblong acute leaflets; peduncles longer than the leaves; legumes erect, disposed in heads, oblong-triquetrous, half-bilocular. ♃. H. Native of Siberia, about Zmeof. Flowers pale yellow.

Half-bilocular-podded Milk-Vetch. Fl. July, Aug. Clt. 1804. Pl. 1 foot.

110 A. RESUPINA'TUS (Bieb. fl. taur. suppl. p. 493.) plant with short diffuse stems, and clothed with adpressed pubescence in every part; stipulas concrete; leaves with 5-10 pairs of elliptic acutish leaflets; peduncles about equal in length to the leaves; legumes oblong, nearly terete, arched, resupinate, and rather pilose. ♃. H. Native of middle Iberia. A. physòdes var. perpusílla, Bieb. fl. taur. 2. p. 198. Flowers pale yellow.

Resupinate-podded Milk-Vetch. Pl. ¼ foot.

111 A. RE'PTANS (Willd. hort. berl. 2. t. 88.) plant procumbent, creeping, glabrous; some of the stipulas concrete, and others free; leaves with 12-13 pairs of linear, lanceolate, obtuse, mucronate leaflets; racemes pedunculate, hardly shorter than the leaves; legumes lanceolate, pubescent, half-bilocular. ♃. G. Native of Mexico. Flowers white. Allied to *A. odoràtus*, according to Link. There is a specimen in the Lambertian herbarium, which agrees with this in every particular, but the leaves

are hairy on the under surface, and the peduncles are equal in length to the leaves.

Creeping Milk-Vetch. Fl. Ju. Jul. Clt. 1818. Pl. ½ creeping.

112 A. ODORA'TUS (Lam. dict. 1. p. 311.) plant erect, and rather ascending, pubescent; stipulas concrete; leaves with 11-14 pairs of oblong acute leaflets; peduncles length of leaves; bracteas smaller than the calyx; legumes oblong, terete, glabrous, spreadingly reflexed. ♃. H. Native of the Levant. D. C. astr. no. 67. t. 24. Habit of *A. uliginòsus*, but differs in the stipulas being concrete. Flowers pale yellow, sweet-scented.

Sweet-scented-flowered Milk-Vetch. Fl. June, July. Clt. 1820. Pl. ½ foot.

113 A. STIPULA'TUS (D. Don, prod. fl. nep. p. 246. and in bot. mag. 2380.) plant erect, glabrous; stipulas concrete, foliaceous, large; leaves with 8-16 pairs of oval-oblong, or obovate mucronulate leaflets; peduncles about the length of the leaves; flowers disposed in loose spikes, at first erect, but at length drooping; legumes compressed, stipitate, glabrous, drooping. ♃. H. Native of Upper Nipaul at Corasan. Corolla greenish-white, tinged with red. A. lanceolàtus, Hamilt. in herb. Lamb. Coronílla stipulàta, ibid. Habit of *A. glycyphýllus*. Stipulas 2 inches long, and half an inch broad.

Large-stipuled Milk-Vetch. Fl. June, July. Clt. 1822. Pl. 2 to 3 feet.

114 A. MUCRONA'TUS (D. C. astr. no. 68. t. 25.) plant erect, rather pubescent; stipulas concrete, lanceolate; leaves with 7-17 pairs of oblong-elliptic mucronate leaflets; peduncles length of leaves; legumes compressed, arched, channelled on the back, when young pubescent. ♃. H. Native of the Levant. A. orientàlis altíssimus, &c. Tourn. cor. p. 29. Flowers yellow.

Mucronate-leafletted Milk-Vetch. Fl. June, Aug. Pl. 2 to 3 ft.

115 A. FRAXINIFÒLIUS (D. C. astr. no. 71.) plant erect, smoothish; stipulas concrete, marcescent; leaves with 6-7 pairs of ovate acuminated leaflets, which are pubescent beneath; peduncles shorter than the leaves; legumes pendulous, subulate, triquetrous, sessile, a little arched and glabrous. ♃. H. Native of the Levant. Tourn. cor. 29. Flowers yellow. Like *A. stipulàtus* and *A. glycyphýllus*.

Ash-leaved Milk-Vetch. Pl. 2 to 3 feet.

§ 9. *Ciceroìdei* (from *cicer*, the chick-pea, and *idea*, similar; plant similar to the chick-pea in habit). *D. C. prod. 2. p. 292. Stipulas neither adhering to the petioles nor to each other, Flowers cream-coloured, disposed in pedunculate spikes. Roots perennial. Legumes sessile.*

116 A. GLYCYPHY'LLUS (Lin. spec. 1067.) plant prostrate, glabrous; stipulas ovate-lanceolate, entire; leaves with 4-5-7 pairs of oval, bluntish, smooth leaflets; peduncles shorter than the leaves; spikes of flowers ovate-oblong; legumes almost terete, obscurely triangular, with a slight longitudinal furrow, curved upwards, pointed, smooth, and even. ♃. H. Native of Europe and Siberia. In Britain in woods, thickets, borders of fields, or on the sides of hills, on a chalky or gravelly soil. Smith, engl. bot. t. 203.—Riv. tetr. irr. t. 103. Flowers sulphur-coloured. The leaves have at first a sweetish taste, soon changing on the palate to a nauseous bitter. Cattle are not fond of them, nor is this plant applied to any agricultural use.

Sweet-leaved or Liquorice-Vetch. Fl. June, July. Britain. Pl. prostrate, 2 to 3 feet long.

117 A. GLYCYPHYLLOI'DES (D. C. prod. 2. p. 292.) plant procumbent, pubescent; stipulas oblong, leafy, rather stipitate; leaves with 7 pairs of oval leaflets; peduncles shorter than the leaves; spikes of flowers ovate; flowers secund; calyx acutely 5-toothed; legumes spreading, disposed in something like a spike, subulate, triquetrous, straight, glabrous. ♃. H. Native of Iberia. Flowers pale yellow.

Glycyphyllus-like Milk-Vetch. Fl. June, July. Clt. 1818. Pl. prostrate.

118 A. SECU'NDUS (D. C. astr. no. 55.) plant procumbent, glabrous; stipulas ovate-oblong, with pubescent margins, and are, as well as the bracteas, leafy; leaves with 4-5-pairs of ovate leaflets; peduncles longer than the leaves; flowers secund, spreading; calyx truncate; legumes stipitate, compressed, oblong, glabrous. ♃. H. Native of the south of Siberia. Flowers pale yellow. Allied to *A. glycyphýllus*.

Secund-flowered Milk-Vetch. Pl. prostrate.

119 A. SERI'CEUS (D. C. astr. no. 45.) plant almost stemless and suffrutescent, clothed with silky pubescence; stipulas lanceolate; leaves with 11-13 pairs of oblong-elliptic leaflets; peduncles a little longer than the leaves; spikes capitate; legumes ovate, silky, acute from the style. ♃. H. Native of the Levant. A. orientàlis mínimus flore glomerato vìrescente. Tourn. cor. 29. Flowers greenish yellow.

Silky Milk-Vetch. Pl. ¼ to ½ foot.

120 A. STRIGULÒSUS (H. B. et Kunth, nov. gen. amer. 6. p. 494.) stems herbaceous, procumbent, clothed with strigose pubescence, as well as the under side of the leaves, but they are glabrous above; leaves with 9-10 pairs of oblong obtuse leaflets; stipulas ovate-oblong, acuminated; racemes cylindrically oblong, on long peduncles; calyx beset with black strigæ. ♃. H. Native of Mexico, in temperate parts. Flowers pale-yellow. Perhaps belonging to a different division.

Strigose Milk-Vetch. Pl. procumbent.

121 A. KAHI'RICUS (D. C. prod. 4. p. 292.) plant diffuse, tomentose; stipulas broad, short, acute: leaves having 5-7 pairs of orbicular leaflets; peduncles length of leaves; flowers disposed in spicate racemes, erect; calyx when in fruit inflated; legumes stipitate, ovate, smooth. ♃. F. Native of Egypt, between Cairo and Soueys. A. longiflòrus, Delil. fl. ægyp. 112. t. 39. f. 2. but not of Pall. Flowers pale yellow.

Cairo Milk-Vetch. Pl. diffuse.

122 A. PEREGRI'NUS (Vahl. symb. 1. p. 57.) plant diffuse, clothed with hairy tomentum; stipulas lanceolate: leaves having 11-13 pairs of obovate emarginate leaflets; peduncles length of leaves or shorter than them; flowers disposed in spikes, lower ones remote; legumes somewhat triquetrous, a little arched, hairy. ♃. H. Native of Egypt. D. C. astr. no. 72. t. 27. Flowers pale-yellow. There is a variety of this plant with fewer flowers, which are sessile in the axils of the leaves.

Foreign Milk-Vetch. Pl. diffuse.

123 A. DEPRE'SSUS (Lin. spec. 1073.) plant almost stemless or diffuse, clothed with canescent pubescence; stipulas ovate, membranous; leaflets 9-11 pairs, obovate; peduncles shorter than the leaves; legumes terete, depressed, straight, drooping, glabrous. ♃. H. Native of the south of Europe, in rugged exposed places, and on mountains. All. ped. no. 1277. t. 19. f. 3. D. C. astr. no. 48. Lodd. bot. cab. 680. Flowers cream-coloured. A. helmintocárpus, Vill. mosp. 42. t. 25. f. 2. dauph. 3. p. 456. t. 42. f. 2. but Villars describes his plant as having no peduncle, the leaflet hoary, cut at the apex, and the legume oblong-elliptic and thickening.

Depressed Milk-Vetch. Fl. June, July. Clt. 1772. Pl. depressed.

124 A. LEUCOPHÆ'US (Smith, in Lin. trans. 1. p. 252.) plant prostrate, clothed with canescent villi; stipulas ovate, trapezoid, membranous; leaves with 12-14 pairs of obcordate leaflets; peduncles shorter than the leaves; legume terete, depressed, acute, deflexed, glabrous. ♃. H. Native country unknown. Very like the preceding species, but the flowers are nearly white at first, but at length changing to a dirty purplish colour.

Dusky-flowered Milk-Vetch. Fl. May, Aug. Clt. 1777. Pl. prostrate.

125 A. GLA'BER (Michx. fl. bor. amer. 2. p. 66. but not of D. C.) plant low and smoothish; leaves with 10-11 pairs of elliptic-oblong, obtuse or emarginate leaflets; peduncles longer than the leaves; flowers disposed in racemose spikes; legumes distant, spreading, depressed, incurved. ♃. H. Native of Georgia and South Carolina, in sandy woods. Flowers white.

Smooth Milk-Vetch. Pl. ½ to 1 foot.

126 A. CI'CER (Lin. spec. 1067.) plant diffusely procumbent, rather pubescent; stipulas lanceolate; leaves with 10-13 pairs of elliptic-oblong mucronate leaflets; peduncles longer than the leaves; flowers disposed in spike-like heads; legumes inflated, hairy, mucronate. ♃. H. Native of Europe, in mountain meadows and hedges. D. C. astr. no. 67. var. *α.* Jacq. austr. 3. t. 251.—All. pedem. no. 1266. t. 41. f. 2.—Riv. tetr. irr. t. 108.—Moris. oxon. sect. 2. t. 9. f. 9. Corolla pale-yellow.

Chick-pea Milk-Vetch. Fl. July, Aug. Clt. 1570. Pl. proc.

127 A. ULIGINÒSUS (Lin. spec. 1066.) plant erect, somewhat diffuse, and rather pubescent; stipulas membranous, lanceolate, acuminated; leaves with 10-11 pairs of elliptic oblong leaflets; peduncles about equal in length to the leaves; flowers disposed in spikes; bracteas about equal in length to the calyx; legumes rather reflexed, terete, glabrous, with a longitudinal furrow on the back. ♃. H. Native of Siberia, in rather humid meadows. Pall. astr. t. 26. D. C. astr. no. 66.—Gmel. sib. 4. t. 17, 18. Flowers pale yellow, the top of the keel violet-coloured.

Bog Milk-Vetch. Fl. July, Aug. Clt. 1772. Pl. diffuse.

128 A. MICRA'NTHUS (Desv. journ. bot. 1814. 1. p. 78. but not of Nutt.) plant diffuse, rather pubescent; stipulas ovate, acute; leaves having 11-12 pairs of elliptic, obtuse leaflets; peduncles twice the length of the leaves; flowers disposed in spikes; bracteas shorter than the calyx; legumes deflexed, somewhat trigonal, smoothish. ♃. H. Native country unknown. Flowers pale yellow.

Small-flowered Milk-Vetch. Fl. June, July. Clt. 1800. Pl. diffuse.

129 A. CANADE'NSIS (Lin. spec. 1066.) plant erectish, rather pubescent; stipulas lanceolate, acuminated; leaves having 10-12 pairs of elliptic-oblong, bluntish leaflets; peduncles about equal in length to the leaves; flowers disposed in spikes; bracteas shorter than the calyx; legumes erect, oblong, terete, glabrous. ♃. H. Native of North America, from Canada to Carolina. D. C. astr. no. 65. Dodart. icon. t. 65.—Dill. elth. 46. t. 39. f. 45. Corolla yellow. Root creeping.

Canada Milk-Vetch. Fl. July. Clt. 1732. Pl. 2 to 3 feet.

130 A. CAROLINIA'NUS (Lin. spec. 1066.) plant erect, glabrous; stipulas ovate, acuminated; leaves with 20 pairs of oblong leaflets, which are pubescent beneath; peduncles longer than the leaves; flowers disposed in spikes; bracteas length of pedicels; legumes erect, ovate, tumid, beaked. ♃. H. Native of Virginia and Carolina, on mountains.—Dill. elth. t. 39. f. 45. Flowers pale yellow.

Carolinian Milk-Vetch. Fl. Jul. Aug. Clt. 1732. Pl. 2 to 3 ft.

131 A. FALCA'TUS (Lam. dict. 1. p. 310. but not of Desf.) erect, rather pubescent; stipulas lanceolate, acuminated; leaves having 16-20 pairs of elliptic-oblong, acute leaflets; peduncles rather longer than the leaves; legumes pendulous, rather trigonal, acute, falcate, glabrous, disposed in racemes. ♃. H. Native of Siberia, in wet, grassy places. Pall. astr. t. 31. D. C. astr. no. 70. t. 26. A. viréscens, Ait. hort. kew. 3. p. 73. A. Iseténsis, Hortul. Flowers greenish yellow.

Falcate-podded Milk-Vetch. Fl. Ju. Jul. Clt.? Pl. 1 to 2 ft.

132 A. FALCIFÓRMIS (Desf. amend. atl. D. C. astr. no. 69.) plant erect, glabrous; stipulas lanceolate, acuminated; leaves with 10-15 pairs of elliptic, obtuse, leaflets; peduncles rather shorter than the leaves; legumes compressed, drooping, falcate, rather stipitate. ♃. H. Native of Algiers, at the foot of Mount Atlas. A. falcàtus, Desf. fl. atl. 2. p. 188. t. 206. Flowers pale yellow or greenish yellow.

Falciform-podded Milk-Vetch. Fl. June, July. Clt. 1816. Pl. 2 feet.

133 A. A'SPER (Jacq. icon. rar. 1. t. 152.) plant erect, straight, rough from hairs, which are fixed by their centre; stipulas linear-lanceolate; leaves with 12-15 pairs of lanceolate leaflets; peduncles much longer than the leaves; flowers spicate, erect; legumes oblong, triquetrous, acuminated, clothed with adpressed pubescence. ♃. H. Native of Siberia, Tauria, Caucasus, Hungary, &c. D. C. astr. no. 63. A. chloránthus, Pall. astr. no. 34. t. 25. Flowers greenish yellow, tipped with orange.

Rough Milk-Vetch. Fl. Jul. Aug. Cl. 1796. Pl. 3 to 4 ft.

134 A. CHLOROSTA'CHYS (Lindl. mss.) this plant comes very near *A. stipulàtus* and *A. galegifórmis*, both in habit and character. It is cultivated in the English gardens, but we have not been able to procure a specimen, and therefore the description remains a desideratum. ♃. H. Native of Nipaul. Flowers greenish-yellow. A. malachophýllus, Hort.

Green-spiked Milk-Vetch. Fl. Sept. Oct. Clt. 1824. Pl. 3 to 5 feet.

135 A. PALLE'SCENS (Bieb. fl. taur. suppl. p. 489.) plant ascending, canescent; stipulas lanceolate; leaves with 5-6 pairs of linear-elliptic leaflets; peduncles much longer than the leaves; flowers disposed in spicate racemes, rather distant; legumes erect, oblong, and somewhat triquetrous, clothed with adpressed pubescence, acuminately mucronate. ♃. H. Native of Siberia, between the Don and the Volga. Flowers cream-coloured. This plant would have been brought into the division *Dissitiflòræ*, if it had not been for the colour of the flowers.

Pale-flowered Milk-Vetch. Fl. Ju. Jul. Clt. 1818. Pl. asc.

§ 10. *Galegifórmes* (from *Galèga*, goats'-rue, and *fórma*, form; plants with the habit of Goats'-rue, *Galèga*). *D. C. prod. 2. p. 294. Stipulas neither adhering to the petiole nor to each other. Flowers cream-coloured or white. Legumes stipitate.*

136 A. CHINE'NSIS (Lin. fil. dec. 1. t. 3.) plant erect, glabrous; leaves with 12-13 pairs of elliptic-oblong leaflets; peduncles longer than the leaves; flowers pendulous, racemose; legumes ovate, inflated, hardly mucronate. ♃. H. Native of China. Flowers pale yellow, but finally become white.

China Milk-Vetch. Fl. Jul. Aug. Clt. 1795. Pl. 2 to 4 ft.

137 A. GALEGIFÓRMIS (Lin. spec. 1066.) plant erect, glabrous; leaves with 12-13 pairs of elliptic-oblong leaflets; peduncles longer than the leaves; flowers pendulous, racemose; legumes triquetrous, mucronate at both ends. ♃. H. Native of Siberia, and Iberia. Pall. astr. no. 38. t. 29. D. C. astr. no. 61. Flowers pale yellow.

Goats'-rue-formed Milk-Vetch. Fl. June, July. Clt. 1729. Pl. 3 to 5 feet.

138 A. DRUMMO'NDI (Dougl. in Hook, fl. bor. amer. p. 153. t. 57.) plant glabrous; stems flexuous; leaves with 10-12 pairs of ovate-lanceolate, obtuse, mucronate leaflets; bracteas subulate, about the length of the pedicels, or perhaps longer; peduncles a little longer than the leaves, pubescent as well as the petioles, and under side of the leaves as well as the calyxes. ♃. H. Native of North America. Flowers yellow. Like *A. galegifórmis*.

Drummond's Milk-Vetch. Pl. 2 feet.

139 A. SUCCU'MBENS (Dougl. mss.) plant strong and very villous; stems flexuous; leaflets obovate, obtuse; stipulas broad, triangular; bracteas subulate, about the length of the tube of the calyx; racemes about the length of leaves. ♃. H. Native of North America, on the barren grounds of the Columbia. Flowers apparently yellow. Legumes flat, smooth.

Crouching Milk-Vetch. Pl. 1 foot.

140 A. racemosus (Pursh, fl. sept. amer. p. 740.) plant erect, rather pubescent; leaves with 10 pairs of lanceolate leaflets; peduncles longer than the leaves; racemes dense-flowered; legumes pendulous, inflated, triquetrous. ♃. H. Native of Upper Louisiana. A. galegoides, Nutt. gen. amer. 2. p. 100. Flowers white. Plant disagreeably scented.

Racemose-flowered Milk-Vetch. Pl. 2 to 3 feet.

141 A. ptero'stylis (D. C. prod. 2. p. 294.) plant almost erect, glabrous; leaves with 6-7 pairs of elliptic, emarginate leaflets; peduncles longer than the leaves: flowers erect, racemose; legumes pendulous, ovate, depressed, reticulately veined. ♃.? S. Native of New Holland, on the eastern coast, and the island of Timor. The cauline stipulas are distinct, and deeply bi or tridentate. The style is compressed, ensiform, and bearded at the apex on the upper side. Legume on a short stipe, with the cells 2-seeded. Perhaps this plant will constitute a new genus.

Winged-styled Milk-Vetch. Pl. 1 foot.

§ 11. *Alopecuroìdei* (from αλωπηξ, *alopex*, a fox, ουρα, *oura*, a tail; and ειδος, *eidos*, form; in reference to the shape of the spikes of flowers, which has been likened to a fox's tail). *D. C. prod. 2. p. 294. Stipulas not adhering to the petioles. Stems erect, straight. Flowers yellow, disposed in thick dense spikes, which are either sessile, or on very short peduncles, in the axils of the leaves.*

142 A. alope'cias (Pall. astr. p. 12. t. 9.) plant erect; leaflets elliptic, villous; stipulas lanceolate; spikes sessile, cylindrical, almost the length of the leaves; tube of calyx woolly, somewhat globose, with the segments subulate, and rather longer than the corolla. ♃. H. Native of Siberia, at Lake Alagul, in the Songarian desert. Flowers pale yellow.

Fox-tail-spiked Milk-Vetch. Fl. Jul. Aug. Clt. 1800. Pl. 3 ft.

143 A. ma'ximus (Willd. spec. 3. p. 1258.) plant erect; leaflets lanceolate, pubescent; stipulas oblong-lanceolate; spike sessile, cylindrical, nearly terminal; teeth of calyx capillary, woolly, shorter than the corolla. ♃. H. Native of America. Flowers yellow. Very like the next species.

Largest Milk-Vetch. Fl. June, July. Clt. ? Pl. 2 to 3 ft.

144 A. alopecuroi'des (Lin. spec. 1064. Mill. fig. t. 28.) plant erect; leaflets ovate-lanceolate, pubescent; stipulas ovate-lanceolate, acuminated; spikes of flowers ovate-oblong, stalked; calycine segments setaceous, shorter than the tube, but about equal in length to the corolla. ♃. H. Native of Siberia. A. alopecuroìdes and A. alopecùrus, D. C. astr. no. 66. and 67. A. alopecùrus, Pall. astr. t. 8. Flowers yellow.

Fox-tail-like-spiked Milk-Vetch. Fl. June, July. Clt. 1737. Pl. 2 to 3 feet.

145 A. Narbone'nsis (Gouan. ill. 49. Pall. astr. t. 10.) plant erect, villous; stipulas lanceolate; leaflets oblong-linear; spikes of flowers somewhat globose; calycine teeth setaceous, shorter than the corolla, but about the same length as the tube. ♃. H. Native about Narbonne and Madrid. Flowers yellow.

Narbonne Milk-Vetch. Fl. Ju. Jul. Clt. 1789. Pl. 2 to 3 ft.

146 A. Pónticus (Pall. astr. p. 14. t. 11.) plant erect; stem rather villous; leaflets oblong, smoothish; stipulas lanceolate: spikes of flowers sessile, almost globose, when in fruit ovate; segments of the calyx linear, much shorter than the tube and the corolla. ♃. H. Native of Tauria and Bessarabia. Flowers yellow. In the specimen sent under this name to De Candolle, by Steven from Tauria, the leaflets are not emarginate, nor the teeth of the calyx ovate, as described by Willdenow.

Pontic Milk-Vetch. Fl. July, Aug. Clt. 1820. Pl. 2 feet.

147 A. vulpìnus (Willd. spec. 3. p. 1259.) plant erect; stem glabrous; leaflets obovate, obtuse, or emarginate, rather velvety; spikes of flowers nearly globose, on very short peduncles; teeth of calyx setaceous, length of tube, but a little shorter than the corolla. ♃. H. Native about Astracan, and in the sand of the Caspian desert, as well as of the desert of Kuma. A. alopecuroìdes, Pall. astr. p. 9. t. 7. Flowers pale yellow.

Fox Milk-Vetch. Fl. June, July. Clt. 1816. Pl. 2 to 3 ft.

148 A. macroce'phalus (Willd. spec. 3. p. 1260.) plant erect; stem glabrous; leaflets oblong-elliptic, glabrous; stipulas large, acuminated; spikes of flowers globose, pedunculate; teeth of calyx subulate, length of tube, but shorter than the corolla. ♃. H. Native of Iberia, on hills, and of Galatia, in fields. Bieb. fl. taur. 2. p. 183. A. orientàlis, Pers.? Flowers yellow.

Large-headed Milk-Vetch. Pl. 3 to 4 feet.

149 A. obtusifòlius (D. C. prod. 2. p. 295.) plant erect; stem and leaves clothed with velvety villi; leaflets broadly obovate, very obtuse; stipulas narrow-lanceolate; spikes globose, containing about 8 or 10 flowers, pedunculate; calycine teeth subulate, length of tube, but shorter than the corolla. ♃. H. Native of the Levant, between Mossul and Bagdad. Leaflets 11-15, never more, by which it is easily distinguished from all the other species of this division.

Obtuse-leaved Milk-Vetch. Pl. 2 to 3 feet.

§ 12. *Christiàni* (so called from the similarity of the species to *A. Christiànus* of Lin., which is called by Dioscorides *Christiàna-radix* or *Christian-root*; in reference to the country in which it grows wild). *D. C. prod. 2. p. 295. Stipulas adnate to the petiole, but not joined together. Flowers cream-coloured, disposed in glomerate, almost sessile racemes in the axils of the leaves.*

150 A. macroca'rpus (D. C. astr. no. 73. t. 28. but not of Pall.) plant erect, hairy; stipulas lanceolate; leaves with 11-14 pairs of ovate-oblong leaflets; flowers glomerate, almost sessile, axillary; legumes inflated; ovate-globose, mucronate, glabrous, large. ♃. H. Native of the Levant. Flowers pale yellow.

Long-fruited Milk-Vetch. Pl. 2 to 3 feet.

151 A. Sieversia'nus (Pall. astr. no. 18. t. 12.) plant erect, rather hairy; stipulas ovate-lanceolate, acuminated; leaves having 10-12 pairs of ovate-oblong leaflets; flowers glomerate, almost sessile, axillary; legumes inflated, ovate-globose, mucronulate, callous, tomentose. ♃. H. Native of the south of Siberia, at the river Ultchaar. Flowers pale yellow.

Sievers's Milk-Vetch. Pl. 2 to 3 feet.

152 A. Christia'nus (Lin. spec. 1064.) plant erect, hairy; stipulas membranous, lanceolate, acuminated; leaves with 12-24 pairs of elliptic-orbicular leaflets; flowers glomerate, sessile in the axils of all the leaves; legumes ovate, wrinkled, glabrous. ♃. H. Native of Judea, and between Aleppo and Mossul, and of Armenia. Tour. voy. 2. p. 254. with a figure. A. flòridus, Scop. ins. 2. p. 108. Flowers yellow.

Christian Milk-Vetch. Fl. Jul. Clt. 1737. Pl. 2 to 3 ft.

153 A. tomentòsus (Lam. dict. 1. p. 312.) plant erect, clothed in every part with soft tomentum; stipulas lanceolate; leaves with 20-25 pairs of ovate-orbicular, somewhat emarginate leaflets; flowers glomerate, almost sessile in the axils of the leaves; legumes oblong, terete, acuminated, callous, hairy. ♃. H. Native of Egypt. D. C. astr. no. 80. t. 29. A. fruticòsus, Forsk. ægyp. 139. Flowers yellow.

Tomentose Milk-Vetch. Fl. July. Clt. 1800. Pl. 1½ foot.

154 A. Siebe'ri (D. C. prod. 2. p. 295.) stem erect, clothed with hoary, silky, adpressed hairs; stipulas membranous, acuminated; leaves having 20-25 pairs of elliptic, obtuse leaflets, when young clothed with canescent villi; flowers axillary, almost sessile; legumes triquetrous, acuminated, pubescent. ♄.? ♃.? F. Native of Egypt. A. trigònus, Sieb. pl. exsic. but not of D. C. Flowers pale-yellow. Allied to the preceding

species, and like it having the petioles permanent, and therefore falls into section *Tragacanthæ*.

SERIES III. TRAGACANTHA'CEI (from τραγος, *tragos*, a goat, and ακανθα, *akantha*, a spine; in reference to the similarity of the species to *A. tragacántha*, which is vulgarly called goat's-thorn). D. C. prod. 2. p. 295. Stipulas adnate to the petioles. The petioles are permanent, and at length become hardened spines.

§ 13. *Tragacánthæ* (see series for derivation). *D. C. l. c. Petioles permanent, becoming as hard as spines. Stipulas adnate to the petioles.*

* *Flowers sessile in the axils of the leaves.*

155 A. TRIGO'NUS (D. C. astr. no. 81.) flowers axillary, sessile, solitary, concealed under the stipulas; legumes trigonal, acuminated, hoary from pubescence; leaflets with 6-7 pairs of leaves, which are clothed with hoary wool. ♄. F. Native of Egypt. Flowers yellowish.

Trigonal-fruited Goat's-Thorn. Shrub ½ to 1 foot.

156 A. CRYPTOCA'RPUS (D. C. astr. no. 82.) flowers solitary, axillary, latent; legumes ovate, hairy, 2-seeded; leaves having 4-6 pairs of linear leaflets, which are as well as the stipulas quite glabrous. ♄. F. Native of Armenia. Trag. orientàlis humíllima fòliis viciæ, &c. Tourn. cor. 29. Flowers pale yellow?

Hidden-fruited Goat's-Thorn. Shrub ½ foot.

157 A. BA'RBA JÒVIS (D. C. astr. no. 83.) flowers solitary, latent; calyxes 5-parted, very villous; legumes ovate, glabrous, almost 1-celled, 1-2-seeded; leaves having 3-5 pairs of oblong, acute, hoary-tomentose leaflets. ♄. F. Native of Armenia. Trag. orientàlis humíllima argéntea, &c. Tour. cor. 29. Tragacántha argéntea, Mill. Corolla purplish?

Jupiter's-beard Goat's-Thorn. Shrub ¼ to ½ foot.

158 A. MICROCE'PHALUS (Willd. spec. 3. p. 1332.) flowers axillary, sessile, somewhat capitate; calyxes woolly, 5-cleft; leaves having 4 pairs of lanceolate, hoary, mucronate leaflets. ♄. F. Native of Armenia.

Small-headed Goat's-Thorn. Shrub ½ foot.

159 A. ERIOCAU'LOS (D. C. astr. no. 84.) flowers axillary, solitary, latent; calyxes usually hardly 5-cleft; leaves with 4-5 pairs of oblong acute leaflets, which are woolly, as well as the stems. ♄. F. Native of Armenia. Trag. orientàlis foliis incanis caule et ramulis tomentosis, Tourn. cor. 29. Corolla cream-coloured? Legume unknown.

Woolly-stemmed Goat's-Thorn. Shrub ½ foot.

160 A. CAUCA'SICUS (Pall. astr. p. 2. t. 2.) flowers 2-3-together, axillary, sessile; calyxes 5-cleft, clothed with woolly villi; legumes 1-celled, 4-seeded; leaves having 5-7 pairs of oblong-linear leaflets, which are clothed with hoary tomentum. ♄. H. Native of Caucasus, on barren rocks. Flowers white (Bieb.), cream-coloured (Pall.). Stipulas when young clothed with white tomentum, but at length becoming glabrous. Bieb. fl. taur. 2. p. 205. Willd. spec. 3. p. 1331. exclusive of the synonyme of Tournefort.

Caucasian Goat's-Thorn. Fl. June, July. Clt. 1824. Sh. ½ ft.

161 A. GU'MMIFER (Labill. journ. phys. 1790. p. 46. with a figure,) flowers 3-5-together, axillary, sessile; calyxes 5-cleft, and are, as well as the legumes, woolly; leaves having 4-6 pairs of oblong-linear glabrous leaflets. ♄. F. Native of Mount Lebanon. Flowers yellow, rising from the axils of all the leaves, as well as in the preceding species, and therefore they appear in something like a spike. Gum tragacanth flows from this plant, but more sparingly than from *A. vèrus*. D. C. astr. no. 85. exclusive of the synonyme of Tournefort.

Gum-bearing Goat's-Thorn. Fl. June, July. Sh. ½ to 1 ft.

162 A. VE'RUS (Oliv. voy. 3. t. 44.) flowers 2-5-together, axillary, sessile; calyxes tomentose, obtusely 5-toothed; leaves having 8-9 pairs of linear hispid leaflets. ♄. F. Native of the Levant. A. gúmmifer var. β, hispídulus, D. C. astr. no. 85. Young stipulas clothed with silky villi, adult ones glabrous. According to Olivier, a traveller in the Levant, the greater part of the gum-tragacanth which is imported into Europe is obtained from this plant. Tragacanth exudes from it naturally from July to September, either from wounds made in the shrub by animals, or from fissures occasioned by the force of the juice during the great heats of summer. According as the juice is more or less abundant, tragacanth exudes in twisted filaments, which sometimes assume the form of a small worm, elongated, rounded, and compressed, rolled up upon itself or twisted. The finest and purest tragacanth assumes this form. It is almost transparent whitish, or of a yellowish white. It also exudes in large tears, which preserve more or less of a vermicular form. This is more of a reddish colour, and more contaminated with impurities. The quantity of tragacanth furnished by Persia is very considerable. Much is consumed in that country in the manufacture of silk, and the preparation of comfits. It is exported to India, Bagdad, and Bussorah. Russia also gets some by way of Bakou. Tragacanth, though generally called a gum, differs very much from gum Arabic in its properties. It is opaque, white, difficultly pulverizable, unless when thoroughly dried, and the mortar heated, or in frost, and it cannot be said to be properly soluble in water, for it absorbs a large quantity of that fluid, and increases in bulk. It is totally insoluble in alcohol. Its mucilage differs from that of gum-Arabic in being precipitated by the superacetate of lead and oxymuriate of tin, and not by silicized potass, or the oxymuriate of iron. In pharmacy tragacanth is employed for forming powders into troches, and rendering them tough cohesive substances, by beating them with mucilage of tragacanth, and then drying the mass. For electuaries it is improper, as it renders them slimy on keeping. It is also an improper adjunct to active powders, as it swells up on attempting to mix them with water. It is a demulcent, and may answer the purposes of gum-arabic, being better adapted for allaying tickling cough, and sheathing the fauces in catarrhal affection, owing to its great viscidity.

True Tragacanth or Goat's-Thorn. Shrub ½ to 3 feet.

163 A. SETI'FERUS (D. C. prod. 2. p. 296.) flowers and leaflets unknown, but the last fall very soon off the plant; there are fascicles of silky bristles, rising from the axils of the spines. ♄. F. Native of the Levant. This species is hardly known, but from the habit it is allied to the preceding plant, but it differs from it in having axillary fascicles of bristles.

Bristle-bearing Goat's-Thorn. Shrub ½ foot.

164 A. ERIA'NTHUS (Willd. spec. 3. p. 1332.) flowers axillary, sessile, aggregate; calyxes globose, woolly; leaves with 5 pairs of oblong, acute, glabrous leaflets. ♄. F. Native of Armenia. Petioles yellowish.

Woolly-flowered Goat's-Thorn. Shrub ½ foot.

165 A. BREVIFLÒRUS (D. C. astr. no. 89. t. 31.) flowers axillary, sessile, somewhat capitate; calyx 5-cleft, rather longer than the corolla, having woolly, plumose, filiform lobes; leaves with 6-7 pairs of lanceolate villous leaflets. ♄. F. Native of Armenia. Lodd. bot. cab. 1388. Trag. orientàlis foliis angustissimis, flore purpurascente, Tourn. cor. 29. A. eriocéphalus, Willd. spec. 3. p. 1333. Flowers purple.

Var. β, *glàber* (D. C. l. c.) leaflets longer and glabrous. ♄. F. Native of Persia. Perhaps a distinct species.

Short-flowered Goat's-Thorn. Fl. May, Jul. Clt. 1826. Sh. ½ ft.

166 A. AU'REUS (Willd. act. berl. 1794. p. 29. t. 1. f. 3.) flowers axillary, sessile, disposed in globose heads; calyx 5-

parted, with plumose segments, shorter than the corolla; leaves with 5-6 pairs of oblong-linear smoothish leaflets. ♄. F. Native of Armenia. D. C. astr. no. 90. t. 32. f. 1. Trag. orientàlis humilis floribus luteis dense congestis, &c. Tour. cor. 29. Flowers yellow.

Golden-flowered Goat's-Thorn. Shrub ½ foot.

167 A. plumòsus (Willd. spec. 3. p. 1333.) flowers axillary, sessile, aggregate; calyx cleft into 5 parts beyond the middle; lobes filiform, bearded, plumose, shorter than the corolla; leaflets elliptic-lanceolate, ending each in a spine-like mucrone, and clothed beneath with adpressed silky villi. ♄. F. Native of Galatia (Willd.). Troade (Oliv.). Flowers purple. Very like the two preceding species, but differs from them in the form of the leaflets.

Feathery-calyxed Goat's-Thorn. Shrub ½ foot.

168 A. compa'ctus (Willd. in act. berl. 1794. p. 29. t. 1. f. 1.) flowers axillary, sessile, 4-5, aggregate; calyx 5-parted; the lobes filiform, and bearded with wool, shorter than the corolla; leaves with 4-5 pairs of oblong, mucronate, hoary-villous leaflets. ♄. F. Native of Armenia and Caucasus. D. C. astr. no. 86. t. 32. f. 2. Bieb. fl. taur. suppl. p. 500. A. pycnophýllus, Stev. in soc. mosq. 4. p. 57. Flowers white.

Compact Goat's-Thorn. Shrub ½ foot.

169 A. arnaca'ntha (Bieb. fl. taur. 2. p. 205.) flowers axillary, 2-3-together; calyx 5-parted, with setaceous woolly segments, which are shorter than the corolla; leaflets lanceolate, ending each in a spiny mucrone, and clothed with hoary hairs. ♄. F. Native of Tauria and Caucasus, on barren hills. A. Potèrium, Pall. astr. p. 1. t. 1. but not of Vahl. A. compáctus var. β, D. C. Willd. Flowers flesh-coloured. The legume is 1-celled according to Pallas.

Lamb's-Thorn. Shrub ½ foot.

170 A. oleæfòlius (D. C. astr. no. 87.) flowers axillary, sessile, disposed in globose whorls around the branches; calyx 5-cleft, woolly, villous; leaves with 6-10 pairs of oblong, glaucescent, smoothish leaflets. ♄. F. Native of the Levant. Trag. orientalis foliis oleæ, &c. Tourn. cor. 29. A. pugnifórmis, Willd. spec. 3. p. 1334. but not of Lher. Flowers yellowish.

Olive-leaved Goat's-Thorn. Shrub ½ foot.

171 A. longifòlius (Lam. dict. 1. p. 322.) flowers axillary, sessile, disposed in somewhat globose whorls; calyx 5-parted, woolly, a little shorter than the corolla; leaves with 9-12 pairs of oblong glabrous leaflets, each ending in a spine-like mucrone. ♄. F. Native of Armenia. D. C. astr. no. 88. t. 30. A. pugnifórmis, Lher. stirp. 170. Trag. orientàlis, Pocock, trav. 3. t. 88.

Long-leaved Goat's-Thorn. Shrub ½ to 1 foot.

172 A. denuda'tus (Stev. mem. mosq. 4. p. 57.) flowers axillary, sessile, glomerate; calyx 5-parted, with setaceous woolly lobes; leaves with 7 pairs of lanceolate, mucronate, green, pubescent leaflets. ♄. F. Native of Eastern Caucasus, on the higher mountains. Bieb. fl. taur. suppl. p. 501. Corolla small, with the vexillum striated. Young leaves rather tomentose in winter, but becoming smooth in summer.

Naked-leaved Goat's-Thorn. Shrub ½ foot.

173 A. pseu'do-Tragaca'ntha (Pall. astr. p. 3. t. 3.) flowers axillary, sessile, 7-8-together; calyxes woolly, with setaceous lobes, which are longer than the tube; leaves with 8-9 pairs of oblong, acutish, awnless leaflets, clothed with hoary pili. ♄. F. Native of Eastern Caucasus, in subalpine places among rocks. Flowers yellowish. This plant is very like *A. aristàtus*, but differs in the flowers being sessile.

False-Goat's-Thorn. Shrub ½ foot.

174 A. Cre'ticus (Lam. dict. 1. p. 321.) flowers axillary, sessile, aggregate; calyxes 5-parted, with setaceous plumose lobes, which are a little longer than the corolla; leaves with 5-8 pairs of oblong, acute, tomentose leaflets. ♄. F. Native of Candia, on Mount Ida. D. C. astr. no. 91. t. 33. Trag. Crética incàna, &c. Tourn. cor. 29. Flowers purple, striped. Gum tragacanth also flows from this shrub, but very sparingly.

Cretan Goat's-Thorn. Shrub ½ to 1 foot.

175 A. Sí'culus (Biv. giorn. palerm. no. 4. Rafin. car. p. 72.) flowers axillary, sessile, aggregate; calyx 5-parted, very villous, shorter than the corolla; leaves with 4-8 pairs of oblong acute leaflets, which when young are villous, but afterwards become glabrous. ♄. F. Native of Sicily, on high mountains, especially on Mount Etna. Flowers white, or tinged with purple (Rafinisque). A. tragacántha, Bern. Ucr. hort. panorm. p. 316.

Sicilian Goat's-Thorn. Shrub ½ foot.

176 A. echi'nus (D. C. astr. no. 92. t. 34.) flowers axillary, sessile, twin; calyx woolly and villous, 5-toothed, shorter than the corolla; leaves with 4-5 pairs of oblong-lanceolate, acutish, hoary leaflets. ♄. F. Native of the Levant on rocks, and of Eastern Caucasus. A. Cáspicus, Bieb. fl. taur. 2. p. 204. suppl. 500. A. Creténsis, Pall. astr. p. 6. exclusive of the synonymes. Flowers white, with the vexillum striped with purple.

Hedgehog Goat's-Thorn. Shrub ½ foot.

* * *Flowers axillary, pedunculate.*

177 A. echioi'des (Lher. stirp. 170.) peduncles 2-flowered, shorter than the leaves; calyxes hardly pubescent, 5-toothed; leaves with 4-5 pairs of linear-lanceolate hoary leaflets. ♄. F. Native of Candia. A. echioìdes, Willd. spec. 3. p. 1326. A. Créticus, Willd. acad. berol. 1794. p. 23. t. 2. f. 2. exclusive of the synonymes. Flowers white, but the vexillum is marked with red lines.

Bugloss-like Goat's-Thorn. Shrub ½ foot.

178 A. Oly'mpicus (Pall. astr. p. 4. t. 4.) peduncles very short; calyx ovate, tubular, silky, 5-toothed; leaves with 6 pairs of oblong, bluntish, hoary leaflets; legumes cylindrical, mucronate, twice the length of the calyx. ♄. F. Native of Armenia, on Mount Olympus. A. leucophýllus, Willd. spec. 3. p. 1331. Flowers white, almost sessile. Legumes distinctly pedunculate.

Olympic Goat's-Thorn. Shrub ½ to 1 foot.

179 A. Pote'rium (Vahl. symb. 1. p. 63.) peduncles very short, usually 2-flowered; calyx cylindrical, 5-toothed; leaves with 4-5 pairs of oblong acute leaflets, which are glabrous above and villous beneath; legumes tomentose, ovate, 1-seeded, length of calyx. ♄. H. Native of Granada, in dry places. Potèrium, Cluss. hist. 1. p. 108. with a figure. Moris. oxon. sect. 2. t. 13. f. 2. A. Granaténsis, Lam. dict. 1. p. 321. A. tragacántha β, Lin. spec. 1073. Flowers white. The odd leaflet usually permanent. Perhaps A. Potèrium of Willd., a native of the Levant, is distinct from the plant of Vahl.

Poterium-like Goat's-Thorn. Fl. June, July. Clt. 1640. Shrub ½ foot.

180 A. Massilie'nsis (Lam. dict. 1. p. 320. D. C. astr. no. 96.) peduncles usually 4-flowered, about equal in length to the leaves; calyxes cylindrical, with 5 short blunt teeth; leaves with 9-11 pairs of elliptic hoary leaflets. ♄. H. Native about Marseilles and Narbonne, in sandy places, as well as of Corsica and Mauritania. A. tragacántha var. α, Lin. spec. 1073. A. tragacántha, Pall. astr. t. 4. f. 1, 2. Duh. arb. 2. t. 100. Woodv. med. bot. 267. t. 98. Wats. dent. brit. 84.—Lob. icon. 2. t. 27.—Garid. aix. 469. t. 104, &c. Flowers white. This plant is usually grown for tragacanth, from which the gum is obtained, but it certainly produces nothing like gum tragacanth.

Marseilles Goat's-Thorn. Fl. May, July. Clt. 1640. Shrub ½ to 1 foot.

181 A. arista'tus (Lher. stirp. 170.) peduncles very short, usually 6-flowered; calycine teeth long and setaceous; leaves with 6-9 pairs of oblong-linear, mucronate, pilose leaflets; legumes

hardly half-bilocular. ♄. H. Native of the alps of Europe and the Pyrenees. A. sempervirens, Lam. dict. 1. p. 320. Phàca tragacántha, All. pedem. 1257.—Garid. aix. t. 104. Flowers white or pale red. Peduncles usually 4-flowered.

Awned-calyxed Goat's-Thorn. May, Jul. Clt. 1791. Sh. ½ ft.

182 A. GENARGE'NTEUS (Moris. elench. sard. p. 11.) peduncles usually 5-flowered, shorter than the leaves; teeth of calyx narrow, acute, very short; leaves with many pairs of elliptic, canescent leaflets. ♄. H. Native of Sardinia, on the heights of Genargentum. Flowers cream-coloured, with the keel tipped with dark purple. Like *A. Massiliénsis* and *A aristàtus.*

Genargentum Goat's-Thorn. Shrub ½ foot.

183 A. BRACTEOLA'TUS (D. C. astr. no. 102.) peduncles rather longer than the leaves, bearing ovate spikes of flowers; calyx clothed with adpressed pubescence, cylindrical, with lanceolate-subulate teeth; leaves with 7-8 pairs of oblong leaflets, which when young are clothed with silky pubescence, but at length becoming glabrous. H. ♄. Native of Galatia, on hills. A. púngens, Willd. spec. 3. p. 1325. Trag. orientàlis humíllima se spargens, floribus spicatis, Tourn. cor. 29. Bracteas linear-subulate. Flowers white in the dried specimens.

Bracteolate Goat's-Thorn. Shrub ½ to 1 foot.

184 A. ANGUSTIFÒLIUS (Lam. dict. 1. p. 321.) peduncles 6-flowered, somewhat corymbose, about equal in length to the leaves; calyx cylindrical, rather villous, acutely 5-toothed; leaves with 7-9 pairs of lanceolate leaflets, glabrous in the adult state. ♄. F. Native of Armenia, Willd. act. berol. 1794. p. 25. D. C. astr. no. 98.—Tourn. cor. 29. Flowers yellow.

Narrow-leaved Goat's-Thorn. Shrub ½ foot.

185 A. RETU'SUS (Willd. act. berol. 1794. p. 24. t. 2. f. 3. exclusive of the synonyme) peduncles 4-flowered, shorter than the leaves; calyxes clothed with adpressed, silky villi, cylindrical, 5-toothed; the teeth lanceolate; leaflets obovate, and somewhat retuse. ♄. F. Native of the Levant. Flowers reddish in a dried state. Like *A. Massiliénsis.*

Retuse-leafletted Goat's-Thorn. Shrub ½ foot.

186 A. DAMASCE'NUS (D. C. prod. 2. p. 198.) peduncles 4-6-flowered, somewhat spicate, rather longer than the leaves; calyxes cylindrical, clothed with adpressed silky villi, 5-toothed, the teeth lanceolate; bracteas ovate, membranous, shorter than the tube of the calyx; leaves with 15-16 pairs of elliptic, somewhat mucronate leaflets, which are villous on both surfaces. ♄. F. Native about Damascus. Flowers white in the dried specimens. A. retùsus, D. C. astr. no. 99. t. 35. but not of Willd.

Damascus Goat's-Thorn. Shrub ½ foot.

187 A. LAGOPOÌDES (Lam. dict. 1. p. 312. var. β, D. C. astr. no. 103.) spikes of flowers ovate, pedunculate, longer than the leaves; calyxes very hairy, 5-cleft, the lobes setaceous; bracteas ovate, acuminated, deciduous, membranous, longer than the tube of the calyx; leaves with 7-8 pairs of oblong leaflets, ending each in a spine-like mucrone, and clothed with adpressed villi. ♄. F. Native of Armenia. A. lagopodioìdes, Vahl. symb. 1. p. 64. Willd. in act. berol. 1794. p. 28. t. 1. f. 4. Flowers purple, spreading.

Var. β, Pérsicus (D. C. prod, 2. p. 299.) calyxes rather bladdery; spikes of flowers on long peduncles; flowers imbricated; leaflets broader. ♄. F. Native of Persia, between Kermancha and Amadan. Perhaps a proper species.

Hare's-foot-like Goat's-Thorn. Shrub ¼ foot.

188 A. LAGU'RUS (Willd. act. berol. 1794. p. 28. t. 1. f. 2.) spikes of flowers ovate, pedunculate, longer than the leaves; calyxes very villous, at length a little inflated, 5-cleft; the segments subulate, about equal in length to the corolla; bracteas membranous, ovate, acuminated, length of flowers; leaves with 4-5 pairs of oblong-leaflets, each ending in a spine-like mucrone, and clothed with adpressed villi. ♄. F. Native of Armenia. D. C. astr. no. 104. t. 36. A. lagopoìdes α, Lam. Flowers imbricated, yellow.

Hare's-tail-spiked Goat's-Thorn. Shrub ½ foot.

189 A. VAGINA'TUS (D. C. astr. no. 105. t. 37.) spikes of flowers ovate, dense, pedunculate, longer than the leaves; calyxes at length inflated, villous, acutely 5-toothed; bracteas equal in length to the calyx; stipulas acuminated, very long, sheathing; leaves with 7-10 pairs of oblong leaflets, each ending in a spiny mucrone, and clothed with pubescence beneath. ♄. F. Native of the Levant. Flowers cream-coloured. Petioles almost unarmed.

Sheathing-stipuled Goat's-Thorn. Shrub ½ foot.

190 A. CEPHALA'NTHUS (D. C. astr. no. 106. t. 38.) flowers disposed in round pedunculate heads, 3-times longer than the leaves; calyxes clothed with silky hairs, 5-toothed; bracteas small; leaves with 7-9 pairs of oblong-linear leaflets, which are clothed with hoary, adpressed, silky villi. ♄. F. Native of Persia. Petioles almost unarmed.

Headed-flowered Goat's-Thorn. Shrub ½ foot.

191 A. TRICHÒLOBUS (D. C. prod. 2. p. 299.) spikes of flowers ovate-roundish, pedunculate, twice or thrice longer than the leaves; calyxes a little inflated, hairy; the segments subulate, longer than the tube of the corolla; bracteas ovate, acuminated, deciduous, length of corolla; leaves with 5-6 pairs of linear leaflets, each ending in a spine-like point, and clothed with adpressed hoary villi. ♄. F. Native of the Levant. Flowers pale in the dried specimens, adult ones without the bracteas.

Hair-lobed-calyxed Goat's-Thorn. Shrub ½ foot.

192 A. TU'MIDUS (Willd. act. berol. 1794. p. 26.) flowers usually solitary, on short peduncles; calyxes villous, inflated, contracted at the mouth, 5-toothed; leaves with 4-6 pairs of oblong leaflets, which are clothed with adpressed pubescence. ♄. H. Native of Spain, in the province of Aragon, Egypt, and the Levant, in sandy places. Russ. alepp. t. 5. A. Rauwólfii, Vahl. Colùtea spinòsa, Forsk. descr. Spines long. Axillary leaves small, with a few pairs of leaflets, which are about equal in length to the pedicels. Flowers pale yellow.

Var. β, armàtus (D. C. prod. 2. p. 299.) leaves with 8 pairs of linear, acute leaflets. ♄. F. Native of Mauritania. Anthýllis tragacanthoìdes, Desf. fl. atl. 2. p. 150. t. 194. but not of Labill. Ast. armàtus, Willd. spec. 3. p. 1330.

Tumid-calyxed Goat's-Thorn. Fl. May, July. Clt. 1816. Shrub ½ to 1 foot.

193 A. TORTUÒSUS (D. C. prod. 2. p. 299.) peduncles a little longer than the leaves; flowers 3-8, distant, disposed in a kind of raceme; bracteas membranous, length of pedicels; calyxes villous, 5-toothed, cylindrical, at length a little inflated; leaves with 10 pairs of obovate, hairy, small leaflets. ♄. F. Native of the Levant, between Bagdad and Kermancha. This plant is very like *A. anthylloìdes*, but differs in the petioles being spiny. Flowers probably purple.

Twisted Goat's-Thorn. Shrub ½ to 1 foot.

194 A. COLUTEOÌDES (Willd. act. berol. 1794. p. 27.) peduncles a little longer than the leaves, each bearing 4-5 distant flowers in a kind of spike; bracteas setaceous, very short; calyxes villous, inflated, 5-toothed; leaves with 15-20 pairs of obovate, small, hoary, hairy leaflets. ♄. F. Native on Mount Lebanon. Rauw. trav. 281. with a figure. Anthýllis tragacanthoìdes, Labill. dec. syr. 2. p. 16. t. 9. Flowers purple.

Bladder-senna-like Goat's-Thorn. Shrub ½ foot.

§ 14. *Chronopòdii* (from χρονος, *chronos*, time, and πους ποδος, *pous podos*, a foot; in reference to the permanent nature of the footstalks of the leaves). *D. C. prod. 2. p. 299. Petioles permanent, but never hardening into spines. The odd leaflets remaining a long time on the end of the petiole, after the lateral* *leaflets have fallen. Stipulas not adnate to the petioles. Stamens distinct or diadelphous, with a short sheath. Perhaps a proper genus.*

195 A. AMA'RUS (Pall. astr. p. 8. t. 6.) plant erect, glabrous; stipulas spreading, lunate, leafy; leaves with 2-5 pairs of ovate, remote leaflets; spikes pedunculate, elongated, thinly flowered; calyx almost cylindrical; stamens distinct. ♄. F. Native of the Caspian desert, on the gypsaceous hills called Arsagar. This plant agrees with *A. colutcoides* in the inflorescence, but differs in the calyx not being inflated, and from all the species in the stamens being distinct, but of this rare plant the fruit has not been seen.

Bitter Milk-Vetch. Shrub 1 foot?

196 A. GIBBÒSUS (D. C. prod. 2. p. 300.) plant erect, canescent from adpressed villi; stipulas wanting; leaves with 8-10 pairs of remote, ovate leaflets; spikes elongated, pedunculate, thinly-flowered; calyx gibbous at the base; stamens diadelphous, joined at the base but a very little way. ♄. F. Native between Mossul and Bagdad. Very like *A. amàrus*, but very distinct, and with it will form perhaps a connecting genus to *Astrágalus.*

Gibbous-calyxed Milk-Vetch. Shrub.

SERIES IV. PODOCHREA'TI (πους ποδος, *pous podos*, a foot, and ωχρος, *ochros*, yellow; in reference to the footstalks of leaves or petioles never hardening into spines, as those of the last series, but remaining weak and pliable, and in the flowers being usually yellow). D. C. prod. 2. p. 300. Stipulas adnate to the petioles. Petioles permanent, but never hardening into spines.

§ 15. *Anthylloìdei* (from *Anthýllis*, and *idea*, similar; plant resembling *Anthýllis* in habit). *D. C. prod.* 2. p. 300. *Stipulas adnate to the petioles. Petioles unarmed. Calyxes bladdery, inclosing the legume.*

* *Corollas yellowish, rarely purple.*

197 A. CALYCÌNUS (Bieb. fl. taur. 2. p. 199. pl. cent. ross. 1. t. 9. ex suppl. p. 496.) plant stemless, rather glaucous and canescent from adpressed pili, which are fixed by their centre; leaves with from 5-13 pairs of obovate leaflets, the lower ones remote; scapes longer than the leaves; spikes of flowers oval-oblong; calyxes inflated; legumes somewhat triquetrous, acute, many-seeded. ♃. H. Native of Caucasus and at the river Kuma. Flowers cream-coloured. Calyx sometimes beset with hairs, like those on the leaves.

Large-*calyxed* Milk-Vetch. Pl. ¼ to ½ foot.

198 A. HALICA'CABUS (Lam. dict. 1. p. 320.) plant stemless, glabrous; leaves with 21-31 lanceolate-linear leaflets; scapes longer than the leaves; flowers spicate, remote; calyxes globose, bladdery; legumes hardly half-bilocular, 2-seeded. ♃. H. Native of Armenia. Phàca vesicària, Schreb. dec. p. 5. t. 3. Flowers yellowish. Calyxes veiny, contracted at the mouth.

Kettle-calyxed Milk-Vetch. Fl. Ju. Clt. 1806. Pl. ¼ to ½ ft.

199 A. PHYSALOÌDES (D. C. prod. 2. p. 300.) plant stemless, rather hairy; leaflets 5-7, ovate, obtuse, smoothish; scapes longer than the leaves; flowers rather remote, disposed in spikes; calyxes hairy, globose, bladdery. ♃. H. Native of the Levant. Flowers yellowish. The leaves are like those of *A. calycìnum*, and the flowers are like those of *A. halicácabus.*

Winter-cherry-like-calyxed Milk-Vetch. Pl. ½ foot.

200 A. ANTHYLLOÌDES (Lam. dict. 1. p. 320. D. C. astr. no. 124. t. 42. but not of Pall.) plant almost stemless, clothed with hoary villi; leaflets 27-35, ovate; peduncles twice the length of the leaves; flowers distant on the spikes; calyxes hairy, bladdery; legumes hardly half-bilocular, 2-seeded. ♃. H. Native of Armenia. Phàca incàna, Vahl. symb. 1. p. 57. Flowers yellow. This plant is very like *A. coluteoìdes*, but differs in the petioles being unarmed.

Anthyllis-like Milk-Vetch. Pl. ¼ to ½ foot.

201 A. NUBI'GENUS (D. Don, prod. fl. nep. 245.) plant stemless; leaves with many pairs of oval, mucronulate, densely pilose leaflets; flowers solitary, almost sessile; calyxes inflated, saccate at the base; legumes nearly terete, straight, very villous. ♃. F. Native of Nipaul, in Gosaingsthan. Root long, woody. Flowers large, yellow, with the vexillum pilose on the back.

Cloud-born Milk-Vetch. Fl. May. Pl. ¼ foot.

202 A. VULNERA'RIÆ (D. C. prod. 2. p. 300.) plant almost stemless, twisted, low, hairy; leaflets 7-11-13, obovate, the terminal one sessile; peduncles hardly longer than the leaves; flowers few, capitate; calyxes hairy, reticulated, becoming at length bladdery; corolla clothed with adpressed silky villi. ♃. H. Native of Asia Minor. Phàca halicácaba, Willd. spec. 3. p. 1254. Flowers yellowish.

Wound-wort-like Milk-Vetch. Pl. ½ foot.

203 A. LUPULI'NUS (Pall. itin. ed. gall. append. no. 877. astr. p. 17. t. 15.) plant stemless and canescent from adpressed villi, which is fixed by the centre; leaflets 9, elliptic-oblong; scapes hardly longer than the leaves; spikes dense, ovate; calyx hairy, at length bladdery; corollas glabrous; legumes half-bilocular, 2-seeded. ♃. H. Native of Siberia, in sandy islands in the rivers Selenga and Ouda, and at Lake Baikal. Flowers cream-coloured.

Hop Milk-Vetch. Pl. ¼ to ½ foot.

204 A. LAGUROÌDES (Pall. itin. ed. gall. 8vo. append. no. 376. t. 91. f. 2.) plant stemless, and clothed with adpressed villi; leaflets 5-7, elliptic-oblong; scapes about equal in length to the leaves; spikes ovate, dense; calyxes hispid, at length bladdery; legumes bilocular, 2-seeded. ♃. H. Native of Siberia, in plains about the river Selenga. A. lagùrus, Pall. astr. p. 18. t. 16. but not of Willd. A. laguroìdes, D. C. Willd. This species is very like *A. lupulìnus*, but differs in the flowers being purple.

Hare's-tail-like Milk-Vetch. Pl. ¼ to ½ foot.

205 A. INFLA'TUS (D. C. astr. no. 13.) plant caulescent, nearly erect, glabrous; stipulas lanceolate, adnate to the petiole? leaflets 9, linear-lanceolate; spikes globose; peduncles longer than the leaves; calyxes inflated, tomentose; legumes ovate. ♃. H. Native of Siberia, in the Kirghisean steppe. A. anthylloides, Pall. astr. no. 19. t. 13. A. anthylloìdes, Pall. astr. no. 19. t. 13. but not of Lam. A. fragifórmis, Willd. spec. 3. p. 1261. Flowers cream-coloured.

Inflated-calyxed Milk-Vetch. Pl. ½ foot.

206 A. FOLLICULA'RIS (Pall. astr. p. 19. t. 14.) plant stemless, canescent from adpressed hairs, which are fixed by their centre; leaflets 13-21, lanceolate; scapes straight, longer than the leaves; spikes cylindrical; calyxes clothed with blackish adpressed down, at length becoming bladdery. ♃. H. Native of the Kirghisean steppe, at the Uba, and near Salair. A. strícta, Sievers ex Fisch. in litt. Oxýtropis folliculàris, Pers. ench. but the carina is obtuse.

Follicular-fruited Milk-Vetch. Pl. ¼ to ½ foot.

207 A. MÓLLIS (Bieb. fl. taur. suppl. p. 495.) plant almost stemless and rather villous; leaflets 25-29, elliptic, obtuse, young ones hairy; scapes shorter than the leaves; flowers spicate; calyxes hairy, at length becoming bladdery, the teeth subulate; legumes very hairy, covered by the calyx. ♃. H. Native of Iberia, on hills about Tiflis. A. eriocárpus, Bieb. fl. taur. 2. p. 196. but not of D. C. Flowers yellowish.

Soft Milk-Vetch. Pl. ½ foot.

208 A. HE'LMII (Fisch. in litt. D. C. prod. 2. p. 301.) plant almost stemless, canescent from adpressed bristles; leaflets 13-17, elliptic, rather mucronulate; scapes length of leaves; flowers 6-8, disposed in a kind of capitate spike; calyxes membranous, at length pubescent; legumes hairy, longer than the

calyx. ♃. H. Native of the Ural mountains, at the metal mines of Woskres-Senskoi. Flowers yellow. Perhaps this plant belongs to a different section.

Helm's Milk-Vetch. Pl. ½ foot.

* * *Corollas white. Calyxes hardly bladdery. Perhaps this will constitute a proper section.*

209 A. GALACTÌTES (Pall. astr. p. 85. t. 65.) plant stemless, rather canescent from adpressed bristles; leaflets 11-15, oblong; flowers radical, aggregate, almost sessile; legumes minute, 2-seeded, inclosed in the calyx, which is pubescent, membranous, and rather inflated. ♃. H. Native of Siberia, beyond the Baikal, and of Dahuria, in naked gravelly places. Corolla white, but becoming of a pale yellow colour on drying, and almost as long as the leaves.

Milky-Vetch. Pl. ¼ foot.

210 A. AMMÓDYTES (Pall. itin. ed. gall. append. no. 372. t. 83. f. 2. astr. p. 7. t. 5.) plant prostrate, clothed with hoary down; stipulas ovate, obtuse; leaves with 2-5 pairs of ovate-leaflets; flowers axillary, rather radiant, twin, on short peduncles; calyxes cylindrical, hairy. ♄. F. Native of Eastern Siberia, on sandy hills. D. C. astr. no. 91. Legume ovoid, mucronate, half-bilocular. Flowers white. Plant small. Petioles permanent and unarmed, as in division *Chronopòdii.*

Sand-viper Milk-Vetch. Fl. May, July. Clt. 1820. Sh. pr.

§ 16. *Caprìni* (from *caprinus*, of a goat; in reference to the leaves of *A. caprinus*, the ciliæ of which have been compared to a goat's beard). *D. C. prod. 2. p. 301. Stipulas adhering to the petioles at the base. Petioles unarmed. Flowers yellow. Calyxes not bladdery.*

211 A. OVA'TUS (D. C. astr. no. 107.) plant somewhat caulescent, procumbent, villous; leaflets 20-23, ovate; peduncles longer than the leaves; spikes of flowers ovate-oblong; bracteas and calyxes villous; legumes glabrous. ♃. H. Native of Armenia. Flowers cream-coloured according to the dried specimens, ex. Tourn. cor. 28. Perhaps belonging to a different section.

Ovate-spiked Milk-Vetch. Pl. procumbent.

212 A. DASYA'NTHUS (Pall. astr. p. 79. t. 65. itin. ed. gall. append. no. 375. t. 85.) plant caulescent, erect, clothed with soft hairs; leaflets 21-23, elliptic, obtuse, rather mucronate; peduncles hardly shorter than the leaves; spikes of flowers ovate-roundish; calyxes villous, 5-cleft; legumes ovate-lanceolate, hairy. ♃. H. Native of Siberia and Caucasus, the Ukraine, and Hungary, in sandy and calcareous fields. A. eriocéphalus, Waldst. et Kit. pl. rar. hung. 1. t. 46. Flowers yellow, with the vexillum pubescent.

Thick-flowered Milk-Vetch. Pl. 1 foot.

213 A. MULTÍJUGIS (D. C. prod. 2. p. 301.) plant short, caulescent and pubescent; leaflets 41-61, elliptic, obtuse at both ends; racemes pedunculate, rather loose, elongated, hardly shorter than the leaves; calyxes cylindrical, 5-toothed; corollas glabrous; legumes mucronate, velvety, twice the length of the calyx. ♃. F. Native of the Levant, between Bagdad and Kermancha. Flowers 8-10, distant, yellow.

Many-paired-leaved Milk-Vetch. Pl. ½ foot.

214 A. CAPRÌNUS (Lin. spec. 1071.) plant almost stemless, erect, pubescent; leaflets 23-29, ovate-oblong, ciliated; peduncles one-half shorter than the leaves; flowers racemose, spreading; segments of the calyx subulate; corollas glabrous; legumes ovate, inflated, stipitate, sparingly pilose. ♃. H. Native of Barbary and the Levant. D. C. astr. no. 109.—Mòris. oxon. 2. p. 24. f. 3. Flowers yellow.

Var. β, glàber (D. C. prod. 2. p. 302.) leaflets as well as ovaries nearly smooth. ♃. H. Native of Mauritania. Perhaps a proper species.

Goat's Milk-Vetch. Fl. June, July. Clt. 1683. Pl. ½ ft.

215 A. LONGIFLÒRUS (Pall. astr. p. 73. exclusive of the synonyme of Buxb. and Lin.) plant almost stemless, rather hairy; leaflets 11-13, obovate, retuse, or emarginate; racemes loose, shorter than the leaves; teeth of calyx lanceolate-subulate; corolla very long, glabrous; legumes ovate, turgid, mucronate, smooth, when young filled with pulp. ♃. H. Native of the desert of Tartary and of the Volga, as well as at Lake Inderskoi. Flowers yellow. The plant from the Volga differs from the rest in the legumes being almost sessile.

Var. a, brevìscapus (D. C. prod. 2. p. 303.) peduncles much shorter than the leaves; bracteas hardly exceeding the pedicels. Pall. astr. t. 60.—Gmel. sib. 4. t. 27.

Var. β, procèrior (D. C. prod. 2. p. 302.) peduncles exceeding the leaves; bracteas thrice the length of the pedicels. Pall. astr. t. 60. β.

Long-flowered Milk-Vetch. Fl. June, July. Clt. 1806. Pl. ¼ to ½ foot.

216 A. U'TRIGER (Pall. astr. p. 75.) plant stemless, rather hairy; leaflets 25-35; racemes loose, much shorter than the leaves; teeth of calyx lanceolate-subulate; corollas glabrous; legumes stipitate, ovate, mucronate. hard, turgid, clothed with woolly pubescence, adult ones glabrous and 1-celled. ♃. H. Native of Russia, on rocks. Flowers yellow.

Var. a, ovàtus (Pall. astr. t. 61.) leaflets ovate; legumes large. ♃. H. Native of Tauria, Tartary, and Iberia.

Var. β, Uralénsis (Pall. astr. t. 62. f. 2. β) leaflets oblong-linear. ♃. H. Native of the Ural mountains, at the river Don.

Bladder-bearing Milk-Vetch. Fl. Ju. Jul. Clt. 1818. Pl. ¼ ft.

217 A. LIGNÒSUS (D. C. astr. no. 114. t. 39.) plant somewhat caulescent, woody, grey; leaflets 49-51, oblong-linear; peduncles few-flowered, much shorter than the leaves; teeth of calyx lanceolate, subulate; corollas glabrous; legumes sessile, compressed, villous. ♄. ? ♃. ? H. Native of Siberia, in sandy fields impregnated with salt, at the river Irtish. Flowers yellow.

Woody-stemmed Milk-Vetch. Pl. ¼ to ½ foot.

218 A. PUBIFLÒRUS (D. C. astr. no. 111.) plant almost stemless, hairy; leaflets 21-27, ovate, acute; flowers almost sessile, aggregate; teeth of calyx linear-subulate; wings of corolla pubescent; ovary sessile, woolly. ♃. H. Native of Siberia. Flowers yellow.

Downy-flowered Milk-Vetch. Pl. ½ foot.

219 A. FABA'CEUS (Bieb. suppl. p. 496.) plant stemless; leaflets 35-45, oblong or ovate, pilose; scapes few-flowered, much shorter than the leaves: teeth of calyx lanceolate; corollas glabrous; legumes compressed, sessile, ovate, mucronate, and quite smooth, even when young. ♃. H. Native of Iberia, on hills, and of other provinces in the east. A. tùmidus, Bieb. fl. taur. 2. p. 198. but not of Willd. Flowers yellow, drooping. Allied to *A. longiflòrus* and *A. ùtriger.*

Bean-like Milk-Vetch. Pl. ¼ to ½ foot.

220 A. LANI'GERUS (Desf. atl. 2. p. 181. t. 202.) plant stemless and clothed with soft hairs; leaflets 17-31, elliptic or oblong; flowers almost sessile, aggregate; teeth of calyx lanceolate; corollas glabrous; legumes compressed, ovate, mucronate, sessile, when young very hairy, but when in an adult state sparingly pilose. ♃. H. Native of Mauritania, Egypt, Phrygia, and Iberia, in barren sandy places and on hills. Flowers yellow, sometimes pedunculate.

Var. β, subglabràtus (D. C. prod. 2. p. 302.) leaflets almost glabrous; calyxes and petioles hairy at the base. ♃. H. Native of the Levant.—Buxb. cent. 3. p. 38. f. 2. and hence the *A. tragacanthoìdes* of Willd. spec. 3. p. 1323. Flowers radical.

Wool-bearing Milk-Vetch. Fl. May, Jul. Clt. 1791. Pl. ¼ ft.

221 A. EXSCA'PUS (Lin. mant. 275.) plant stemless, clothed with soft hairs; leaflets 21-27, ovate; flowers almost sessile,

aggregate; teeth of calyx long and subulate; corolla glabrous; legumes ovate, acuminately-mucronate, hairy, sessile, and rather compressed. ♃. H. Native of Vallais, Thuringia, Austria, Hungary, and the Ukraine. Jacq. icon. rar. t. 561. Pall. astr. 64. Astragaloìdes syphilítica, Mœnch. Flowers yellow. The plant is used to cure syphilis in Hungary.

Scapeless Milk-Vetch. Fl. May, July. Clt. 1787. Pl. ¼ ft.

222 A. Schanginia'nus (Pall. astr. p. 67. t. 73.) plant somewhat caulescent and loosely lanuginose; leaflets 25-31, ovate-oblong, peduncles very short, somewhat racemose; teeth of calyx long, subulate; corollas glabrous; legumes triquetrous, acuminated, pubescent, callous. ♃. H. Native of Siberia, at the Catunja and in the desert of the Don. Leaves about a foot long. Flowers yellow.

Schang's Milk-Vetch. Pl. 1 foot.

223 A. declina'tus (Willd. spec. 3. p. 1294.) stems short, procumbent; leaflets 29-31, oblong, obtuse, and pilose; racemes few-flowered, crowded, pedunculate, one half shorter than the leaves; legumes oblong, acute, pilose. ♃. H. Native of Armenia. A. orientàlis acaúlis fere flore luteo. Tourn. cor. 29. ex Willd. Very like *A. exscàpus*. Flowers yellow.

Declinate-stemmed Milk-Vetch. Pl. procumbent.

224 A. nummula'rius (Lam. dict. 1. p. 317. exclusive of the synonymes) stemless, hairy; leaflets 21-23, ovate, mucronate, or emarginate; flowers almost sessile, aggregate; teeth of calyx lanceolate-subulate; corolla glabrous; legumes compressed, ovate, mucronate, hairy. ♃. H. Native of Candia, Syria, and Eastern Caucasus. D. C. astr. 117. t. 11. f. 2. Flowers yellow. In the same plant the leaflets are emarginate and acute.

Money-wort Milk-Vetch. Pl. ¼ to ½ foot.

225 A. diffu'sus (Willd. spec. 3. p. 1321.) plant almost stemless, beset with cinereous hairs; leaflets 19-23, elliptic-lanceolate; flowers almost sessile, aggregate; bracteas and calycine teeth setaceous, longer than the tube, and very pilose; legumes ovate, rather triquetrous, acuminated, hairy. ♃. H. Native of Tauria, in fields adjacent to the Caucasus, and in the Caspian and Tartarian deserts. Bieb. fl. taur. 2. p. 202. A. dolichophýllus, Pall. astr. p. 84. t. 68. Flowers pale cream-coloured. This plant is allied to *A. testiculàtus*.

Diffuse Milk-Vetch. Fl. May, Jul. Clt. 1820. Pl. ¼ foot.

226 A. hu'milis (Bieb. fl. taur. 2. p. 203. suppl. 498.) plant almost stemless, depressed, clothed with cinereous villi; leaflets obovate; flowers almost sessile, aggregate; calycine teeth much shorter than the tube; legumes ovate, acuminated, hairy. ⊙. H. Native of Iberia. Corolla yellowish. Allied to *A. testiculàtus*.

Humble Milk-Vetch. Pl. depressed.

227 A. du'bius (D. C. astr. no. 115.) plant almost stemless, beset with cinereous villi; leaflets 19-21, linear-oblong; flowers almost sessile, aggregate; calycine teeth about equal in length to the tube; legumes compressed, acuminated, villous, half-bilocular. ♃. H. Native of Tartary. Flowers very pale cream-coloured. Perhaps sufficiently distinct from the following species.

Doubtful Milk-Vetch. Pl. ¼ to ½ foot.

228 A. Buchtorme'nsis (Pall. astr. p. 76. t. 62. f. A.) plant stemless, clothed with hoary pubescence; leaflets 39-43, oblong; peduncles few-flowered, very short, declinate when in flower; calyx 5-toothed; legumes oblong-cylindrical, acuminated, callous, half-bilocular. ♃. H. Native of Siberia at the rivers Uba, Catunja, and Bucktorm. Flowers yellow. Legume, according to Fischer ½ an inch long and hairy.

Bucktorm Milk-Vetch. Fl. May, Jul. Clt. 1818. Pl. ¼ to ½ ft.

229 A. brachysta'chys (D. C. prod. 2. p. 303.) plant hairy-pubescent, with very short stems; leaflets 15-23, exactly and broadly ovate; peduncles shorter than the leaves; flowers disposed in short spikes; calyx cylindrical, with lanceolate-subulate teeth; corollas glabrous; ovary sparingly-villous. ♃.? ♄.? F. Native of the Levant, between Aleppo and Mossul. Flowers yellow. Legumes unknown.

Short-spiked Milk-Vetch. Pl. ¼ to ½ foot.

230 A. globòsus (Vahl. symb. 1. p. 60.) plant stemless, clothed with hoary-silvery down; leaflets 12-16 pairs, elliptic-oblong, callous at the apex; scapes twice the length of the leaves; spikes of flowers dense, ovate-globose; bracteas linear, about equal in length to the calyx. ♃. F. Native of Armenia. D. C. astr. 120. Flowers yellow.

Globose-spiked Milk-Vetch. Pl. ¼ to ½ foot.

231 A. cylindra'ceus (D. C. astr. 119.) plant stemless and clothed with hoary-silky down; leaves with 14 pairs of elliptic-oblong leaflets; peduncles longer than the leaves; spikes cylindrical; bracteas setaceous, longer than the calyx. ♃. F. Native of Armenia. Allied to the preceding species. Perhaps both are wrongly placed in the present section. Flowers pale-yellow.

Cylindrical-spiked Milk-Vetch. Pl. ¼ to ½ foot.

232 A. lana'tus (Labill. dec. syr. 1. p. 21. t. 10. but not of Pall.) plant stemless, clothed with hoary villi; leaflets 11-23, ovate; peduncles rather shorter than the leaves; spikes of flowers ovate, dense; legumes ovate-cordate, triquetrous, compressed, acute, villous. ♃. F. Native of Mount Lebanon. A. Libanòtis, Willd. spec. 3. p. 1308. A. hirsutíssimus, D. C. astr. no. 46. t. 19. Flowers yellow. Perhaps this plant belongs to another section.

Woolly Milk-Vetch. Pl. ¼ to ½ foot.

§ 17. *Incàni* (from *incanus*, hoary; aspect of plants). *D. C. prod. 2. p.* 304. *Stipulas adnate to the petioles, which are unarmed. Calyxes as well as legumes not bladdery. Flowers usually purple, rarely of a dirty yellow colour. Vexillum much elongated. Leaves hoary from adpressed down. Legumes perfectly bilocular.*

233 A. Monspessula'nus (Lin. spec. 1072.) plant almost stemless, clothed with hoary pubescence or almost glabrous; leaflets 21-41, ovate or lanceolate, outer ones rather the smallest; scapes exceeding the leaves; teeth of calyx long, and subulate; legumes terete, subulate, a little arched, adult ones glabrous. ♃. H. Native of the south of Europe and Mauritania, in fields. Cam. epit. 929. with a figure. Curt. bot. mag. 219. Flowers either purple, pale, or white. Stems almost wanting when growing in a dry situation, but in rich earth or in a moist place they are elongated. Leaves hoary when the plant grows in dry exposed situations, but in a moist situation they are almost glabrous.

Var. β, *polýgala* (D. C. prod. 2. p. 304.) spikes of flowers shorter; legumes almost glabrous, even when young; leaflets ovate-roundish, almost glabrous. ♃. H. Native of the south of Caucasus. A. polýgala, Pall. astr. p. 110. t. 83.

Montpelier Milk-Vetch. Fl. June, Aug. Clt. 1710. Pl. ¼ to ½ foot, or prostrate.

234 A. sanguinole'ntus (Bieb. casp. 190. fl. taur. 2. p. 200.) plant stemless; leaflets elliptic, obtuse, hoary beneath; scapes declinate, longer than the leaves; legumes oblong, compressed, rather arched, glabrous, spotted with blood-colour. ♃. H. Native of Eastern Caucasus, on dry exposed hills. A. incànus var. Pall. astr. 84. f. 2. A. clavàtus β, brevibracteàtus, D. C. astr. no. 127. Flowers yellowish green. Perhaps this species is referrible to section *Caprìni*.

Bloody-spotted-legumed Milk-Vetch. Pl. ¼ to ½ foot.

235 A. inca'nus (Lin. spec. 1072.) plant stemless, hoary; leaflets 13-17, ovate; scapes hardly exceeding the leaves; spikes capitate; calycine teeth subulate, short; legumes nearly cylindrical, hoary from short down, incurved at the apex, and ending in a subulate mucrone, hardly 3 times the length of the calyx;

cells 5-6-seeded. ♃. H. Native of the south of France, in dry fields and among stones. Magn. bot. monsp. p. 32. with a figure. A. incànus, Pall. astr. t. 84. Flowers purplish.

Var. β, Barrelièri (Dufour, ann. gen. sc. 7. p. 297.) legumes hoary, at length very hard, oblong, not ovate, a little incurved, subulate; cells usually 5-seeded. ♃. H. Native of Spain, in the province of Valentia, on arid hills at St. Philip.

Hoary Milk-Vetch. Fl. June, July. Clt. 1795. Pl. ¼ to ½ ft.

236 A. INCU'RVUS (Desf. atl. 2. p. 182. t. 203.) plant stemless, hoary; leaflets 17-27, elliptic; scapes longer than the leaves; spikes of flowers capitate; teeth of calyx subulate; legumes oblong, cylindrical, tapering to the base, incurved at the apex, glabrous, hardly 3-times the length of the calyx; cells 3-5-seeded. ♃. H. Native of Algiers, in sandy places. D. C. astr. 128. Flowers pale-purple.

Incurved-podded Milk-Vetch. Pl. ½ foot.

237 A. CLAVA'TUS (D. C. astr. no. 127. t. 44.) plant almost stemless, hoary; leaflets 11-21, roundish-ovate; scapes longer than the leaves; flowers disposed in spikes, spreading; legumes erect, glabrous, somewhat clavate, incurved at the top; cells 4-5-seeded. ♃. H. Native of Armenia. Flowers greenish yellow in a dried state. Perhaps the same as *A. cinèreus* of Willd. spec. 3. p. 1315.

Clavate-legumed Milk-Vetch. Pl. ¼ to ½ foot.

238 A. NUMMULARIOI'DES (Desf. emend. D. C. astr. no. 131.) plant stemless and hoary; leaflets 17-23, obovate; scapes longer than the leaves; flowers few, disposed in short spikes; calyxes beset with black villi, 5-toothed; legumes elliptic, ventricose, silky, hardly longer than the calyx; cells 3-seeded. ♃. H. Native of sandy places near Sbiba, in Tunis. A. nummulàrius, Desf. atl. 2. p. 182. t. 204. exclusive of the synonymes. A. rotundifòlius, Willd. spec. 3. p. 1317. Flowers rose-coloured.

Money-wort-like Milk-Vetch. Pl. ¼ to ½ foot.

239 A. MACRORHI'ZUS (Cav. icon. 2. p. 28. t. 133.) plant stemless, hoary; leaflets 15-21, ovate, mucronulate; scapes exceeding the leaves; spikes ovate, many-flowered; flowers distinct, pedicellate; calyxes clothed with black villi, 5-toothed; legumes erect, obovate, pubescent, a little longer than the calyx, ending in a hooked acumen; cells 3-4-seeded. ♃. H. Native of Spain, in fields about Madrid. Flowers red. A. montànus, Brot. ex Steud.

Long-rooted Milk-Vetch. Pl. ¼ to ½ foot.

240 A. BRACHYCA'RPUS (Bieb. fl. taur. 2. p. 201. cent. 2. p. 58.) plant stemless, pubescent; leaflets 15-27, oblong-elliptic; scapes longer than the leaves; spikes many-flowered, at length elongated; calyxes clothed with black and white hairs mixed; legumes erect, obovate, length of calyx, when young clothed with adpressed pubescence; cells 2-3-seeded. ♃. H. Native of Caucasus. Sims, bot. mag. 2335.—Buxb. cent. 3. t. 38. f. 1.? Flowers of a dirty purple colour.

Sharp-fruited Milk-Vetch. Fl. Ju. July. Clt. 1820. Pl. ½ ft.

241 A. GLAREÒSUS (Dougl. mss.) stems short, procumbent; plant clothed with hoary silky villi; stipulas free, permanent; leaflets numerous, obovate; peduncles or scapes bearing from 3-10 flowers at the apex; bracteas lanceolate, subulate, twice the length of the pedicels. ♃. H. Native of North America, from the confluence of Lewis and Clarke's river with the Columbia to the Rocky mountains. Flowers large, purple. Habit of a species of *Oxýtropis*. This species belongs more properly to section *Onobrychoìdei* than to the present section.

Gravel Milk-Vetch. Pl. ¼ to ½ foot.

242 A. PU'RSHII (Dougl. mss.) plant tufted, woody at the base, densely clothed with hoary-silky villi; stipulas distinct, permanent; leaflets numerous, elliptic; bracteas subulate, twice the length of the pedicels; peduncles or scapes shorter than the leaves, bearing a few flowers at the apex. ♃. H. Native of North-west America, on the low hills of the Spokan River. Flowers yellow. Habit of a species of *Oxýtropis*. This plant belongs more properly to section *Ciceroìdei*.

Pursh's Milk-Vetch. Pl. ¼ to ½ foot.

243 A. MOLLI'SSIMUS (Torrey, in ann. lyc. 2. p. 173.) plant almost stemless, erect, clothed in every part with silky down; stipulas free; leaves with 11-14 pairs of ovate-oblong mucronulate leaflets; peduncles longer than the leaves; flowers spicate, erect; legumes oblong, arched, glabrous. ♃. H. Native of North America, on the Platte. Flowers probably cream-coloured.

Very-soft Milk-Vetch. Pl. ¼ to ½ foot.

244 A. PE'NDULUS (D. C. astr. no. 129.) plant stemless, hoary; leaflets 17-21, roundish; scapes longer than the leaves; flowers spreading, but at length pendulous, disposed in spikes. ♃. F. Native of the Levant. A. orientàlis folio subrotundo, flore purpureo magno, Tourn. cor. 28.

Pendulous-flowered Milk-Vetch. Pl. ¼ to ⅓ foot.

245 A. ELONGA'TUS (Willd. spec. 3. p. 1314.) plant stemless, hoary; leaflets 9-11, elliptic; scapes longer than the leaves; spikes of flowers elongated; flowers erect, but at length spreading; legumes pendulous, ovate, pubescent, mucronate by the style; cells 2-3-seeded. ♃. H. Native of Galatia. A. Pistàcia, Rost. ined. Flowers purplish. Legumes the size and form of those of the *Pistachia-nut*. Very like *A. brachycárpus*, but differs in the fruit being pendulous.

Elongated-spiked Milk-Vetch. Pl. ½ foot.

246 A. ANGULÒSUS (D. C. astr. no. 122. t. 45.) plant stemless, hoary; leaflets 9-13, elliptic, mucronulate; scapes longer than the leaves; spikes of flowers at length elongated; legumes ovate, somewhat trigonal, rather pendulous, pubescent, mucronate by the style, about 3-times the length of the calyx; cells 3-4-seeded. ♃. H. Native of the Levant. Flowers unknown.

Angular-podded Milk-Vetch. Pl. ¼ to ½ foot.

§ 18. *Radiciflòri* (from *radix*, a root, and *flos*, a flower; in reference to the flowers and scapes rising from the roots, and not from the stems). *D. C. prod. 2. p. 305. Stipulas adhering to the petioles, which are unarmed. Calyxes not bladdery, nor ruptured above after flowering. Flowers purplish or white, with the vexillum not much elongated. Leaves not hoary. Legumes usually bladdery.*

247 A. PHYSÒDES (Lin. spec. 1073.) plant almost stemless and glabrous, but beset with a few hairs, which are fixed by their centre; leaflets 21-31; peduncles scape-like, about equal in length to the leaves or rather longer; legumes inflated, membranous, nearly globose, glabrous. ♃. H. Native of Siberia, in places impregnated with salt. D. C. astr. 127. Pall. astr. 71. but not of Pall. itin. Flowers purplish. Vexillum oblong. Root creeping.

Var. α, Wolgénsis (Pall. astr. t. 58. D. C. astr. t. 48.) leaflets linear, acute; scape declinate, length of leaves. ♃. H. Native of Sandy Islands, at the mouth of the Volga.

Var. β, Taúricus (Pall. astr. t. 58. B. f. 1.) leaflets oblong; scapes exceeding the leaves; stems more conspicuous. ♃. H. Native of Tauria.

Var. γ, Altàicus (Pall. astr. t. 58. B. f. 2.) leaflets elliptic; scapes length of leaves. ♃. H. Native of Altai.

Inflated-podded Milk-Vetch. Fl. Ju. Jul. Clt. 1759. Pl. ½ ft.

248 A. PALLA'SII (Fisch. in litt. D. C. prod. 2. p. 305.) plant almost stemless, tufted, branched, clothed with hairy pubescence; leaflets 11-13, oblong-linear; scapes length of leaves; legumes inflated, membranous, almost globose, villous. ♃. H. Native of the Caspian desert, at Lake Inderskoi. A. physòdes affìnis, Pall. astr. p. 73. t. 59. A. physòdes var. δ, D. C. astr. no. 127. Pers. ench. 2. p. 344. Flowers purplish.

Pallas's Milk-Vetch. Fl. June, July. Clt. 1818. Pl. ½ foot.

249 A. TESTICULA'TUS (Pall. astr. p. 82. t. 67.) plant stemless, clothed with cinereous villi: leaflets lanceolate or oblong; flowers radical, almost sessile, aggregate; legumes inflated, ovate, tomentose. ♃. H. Native in deserts and in sands at the Caspian sea, and of Tauria. Flowers flesh-coloured, but in a dried state they appear milk-coloured or yellowish. Calyxes cylindrical. Bieb. fl. taur. 2. p. 202. A. cinèreus radiciflòrus, D. C. astr. t. 40.

Testiculate-podded Milk-Vetch. Fl. June, July. Clt. 1818. Pl. ¼ to ½ foot.

250 A. RUPIFRA'GUS (Pall. astr. p. 86. t. 70.) plant stemless, clothed with cinereous villi; leaflets oblong, obtuse: scapes shorter than the leaves, or about equal in length to them; legumes oblong, acute, 2-celled. ♃. H. Native of the south of Tauria, on rocks. Flowers purplish. Calyxes rather turgid.

Var. α, exscàpus (Pall. astr. t. 70.) scapes very short or hardly any; leaflets oblong-linear.

Var. β, caulèscens (Pall. astr. t. 70. B.) scapes length of leaves; leaflets oblong, fewer; calyxes rather bladdery. ♃. H. Native of the Ural mountains. Perhaps a proper species.

Broken-rock Milk-Vetch. Pl. ¼ to ½ foot.

251 A. REDU'NCUS (Pall. astr. p. 109. t. 82.) plant almost stemless, hairy, and rather canescent; leaflets 25-35, elliptic-oblong, glabrous above; scapes a little higher than the leaves; flowers disposed in elongated spikes; legumes erect, hairy, incurved, cylindrical, hooked downwards, channelled above, 5-times the length of the calyx. ♃. H. Native of Tauria, in sandy places at the Volga, and about Sarepta. A. cinèreus lòngipes, D. C. astr. 41. Flowers purple or white.

Var. β, brèvipes (D. C. astr. t. 41.) scapes shorter than the leaves; leaflets elliptic-ovate, fewer. ♃. H. Growing along with the species.

Hooked-podded Milk-Vetch. Pl. ¼ to ½ foot.

252 A. HIRSU'TUS (Vahl. symb. 1. p. 59. D. C. astr. no. 125. t. 43.) plant stemless, clothed with hoary villi; leaflets 7-9, elliptic; scapes rather longer than the leaves; flowers capitate; calyx villous, 5-cleft, at length cleft above; legumes nearly globose, apiculated, hairy, 2-celled. ♃. H. Native of Armenia on hills. Colour of flowers unknown.

Hairy Milk-Vetch. Pl. ¼ to ½ foot.

253 A. ERIOCA'RPUS (D. C. astr. no. 135. t. 47. but not of Bieb.) plant stemless, villously-hairy; leaflets 21-27, elliptic, obtuse; scapes exceeding the leaves; spikes of flowers ovate; calyx villous, 5-toothed; ovary very hairy. ♃. H. Native country unknown. Flowers purple.

Woolly-fruited Milk-Vetch. Pl. ¼ to ½ foot.

254 A. PYGMÆ'US (Pall. astr. 66. t. 54.) plant almost stemless, branched, prostrate; leaflets 7-9, lanceolate, small, pubescent; peduncles 1-flowered, very short; legumes oblong, inflated, pubescent. ♃.? ♄.? H. Native of Eastern Siberia, in the Arctic region. Flowers unknown. Perhaps only a variety of *A. pumìlio*.

Pygmy Milk-Vetch. Pl. prostrate.

255 A. PUMI'LIO (Pall. astr. p. 67. t. 55.) plant almost stemless, with many little shoots rising from the neck; leaflets 9, lanceolate-linear, hoary, and rather pilose beneath; flowers twin, almost sessile. ♃. H. Native of the Curil islands. Flowers large, pale violet. Calyx 5-cleft, clothed with white or brown hairs. Legumes unknown.

Dwarf Milk-Vetch. Pl. ½ foot.

256 A. GEMINIFLÒRUS (Humb. et Bonpl. pl. equin. 1. p. 126. t. 37.) plant almost stemless, branched, prostrate; leaflets 19-21, approximate, complicate, oblong, silky, small; flowers twin, almost sessile; legumes ovate, acuminated, silky, 2-seeded. ♃. F. Native of South America, in the kingdom of Quito, in high cold places; frequent on mount Antisana. Flowers violaceous.

Twin-flowered Milk-Vetch. Pl. ½ foot, prostrate.

257 A. UNIFLÒRUS (D. C. astr. no. 141. t. 50.) plant almost stemless, branched, prostrate, glabrous; leaflets 13-17, linear, obtuse; stipulas joined; flowers almost sessile, solitary. ♄.? ♃. G. Native of Peru, at Huasa-Huasi. Flowers purplish.

One-flowered Milk-Vetch. Pl. prostrate.

† *Species not sufficiently known.*

258 A. UNCA'TUS (Lin. spec. 1072.) plant stemless and scapeless; leaves with 8-9 pairs of obcordate leaflets, each terminating in a bristle; legumes subulate, hooked, longer than the leaves. ⊙. F. Native about Aleppo. Oxýtropis uncàtus, Pers. ench. 2. p. 33.? Said to be allied to *A. trimèstris.* Flowers almost white.

Hooked-podded Milk-Vetch. Pl. ¼ foot.

259 A. AR'CTICUS (Willd. enum. suppl. 51.) plant stemless; leaflets ovate-lanceolate, pilose, silky beneath; scapes ascending, longer than the leaves; legumes lanceolate, a little inflated. ♃. H. Native country unknown. Corolla shewy violet.

Arctic Milk-Vetch. Pl. ¼ to ½ foot.

260 A.? OBCORDA'TUS (Ell. sketch. 2. p. 227.) plant glabrous, decumbent; leaves with 7-9 pairs of small obcordate leaflets; peduncles elongated; lobes of calyx subulate. ♃. H. Native of the south of Georgia, near St. Mary. Flowers white. Legumes unknown.

Obcordate-leafletted Milk-Vetch. Pl. prostrate.

261 A. PSEU'DO-CI'CER (Opiz, in flora, 1821. p. 758.) plant caulescent, prostrate; leaflets glabrous, lanceolate, acute; stipulas lanceolate; racemes pedunculate, shorter than the leaves.—Native of Bohemia. Melilòtus dentàta, Waldst. et Kit. hung. ex Opiz.

False-chick-pea Milk-Vetch. Pl. prostrate.

262 A. RADI'CANS (Horn. hort. hafn. 2. p. 708.) stolons rooting: leaflets ovate-lanceolate; scapes nearly erect, length of leaves; flowers in ovate heads; legumes oblong, flat, glabrous. ♃. H. Native country unknown.

Rooting Milk-Vetch. Pl. creeping.

263 A. SYRI'ACUS (Lin. spec. 1069.) plant pubescent, caulescent and procumbent; leaflets few pairs, linear-lanceolate; heads of flowers pedunculate, longer than the leaves; flowers reflexed; legumes ovate-oblong, tomentose, ending in a long beak. ♃. H. Native of Syria. The plant in the Linnæan herbarium under this name certainly belongs to section *Onobrychoìdei.*

Syrian Milk-Vetch. Pl. procumbent.

264 A. PASTELLIA'NUS (Pollin, pl. veron. 1816.) plant caulescent, diffuse, and silky; leaves with 6 pairs of linear bluntish leaflets; spikes capitate, on long peduncles; legumes ovate, silky, exceeding the calyx. ♃. H. Native of fields about Verona, among stones on mount Pastello.

Pastello Milk-Vetch. Pl. diffuse.

265 A. LUNA'TUS (Pall. astr. p. 44.) plant caulescent, glabrous; leaves with usually 15 pairs of linear-lanceolate leaflets; peduncles very long, sulcated, 10-flowered; legumes triquetrous, rather lunate, erect, glabrous. ♃. H. Native of Persia. Buxb. cent. 3. t. 36. f. 2.? Oxýtropis lunàta, Pers. ench. p. 333 According to Fischer this is a true species of *Astrágalus*, intermediate between *A. falcàtus* and *A. hamòsus.*

Lunate-podded Milk-Vetch. Pl. 1 foot.

Cult. All the species of this genus are worthy of cultivation in every collection. The shrubby kinds, or those belonging to section *Tragacánthæ*, grow well in any light dry soil, and are increased by cuttings or seeds. The herbaceous perennial kinds thrive well in any kind of earth, though they prefer a dry light soil, and they are easily increased by dividing the plants or by seeds; the last mode is preferable, as the greater part of the species are very liable to die if even transplanted or divided at the root. The dwarfer kinds are well adapted for ornamenting rock-work, or to be grown in pots as alpines in a mixture of loam, peat, and sand. Those marked frame require the protection of a frame or greenhouse in winter. The seeds of the annual species only require to be sown in the open border early in spring. Those species belonging to divisions *Alopecuroídei*, *Tragacánthæ*, *Incàni*, *Dissitiflòri*, and *Onobrychoìdei* are the most worthy of cultivation.

CXXXII. GÜLDENSTÆ'DTIA (in honour of A. Güldenstaedt, a Russian naturalist). Fisch. in litt. but not of Neck. D. C. prod. 2. p. 307.

Lin. syst. *Diadélphia, Decándria.* Calyx bibracteate at the base, campanulate, 5-cleft, upper segments broadest. Petals 5, disposed in a papilionaceous corolla, with the vexillum entire, about the length of the wings. Keel minute. Stamens diadelphous. Legume somewhat cylindrical, 1-celled, many-seeded, filled with medulla, which vanishes at maturity, with the valves always separating in a spiral manner. Seeds reniform, small, scrobiculate.—Stemless herbs, with impari-pinnate or simple leaves, that is, having the terminal leaflet only remaining, which is jointed at the top of the petiole. Scapes ascending. Flowers umbellate, red, or violaceous. Perhaps Astrágalus Sínicus of Lin. belongs to this genus.

1 G. MONOPHY'LLA (Fisch. in litt. D. C. prod. 2. p. 307.) leaves simple, kidney-shaped, clothed with silky-pubescence; umbels 2-5-flowered. ♃. H. Native of the Altaian mountains. Leaves glaucous, sometimes trifoliate. Flower purplish.

One-leaved Güldenstædtia. Pl. ¼ to ½ foot.

2 G. PAUCIFLÒRA (Fisch. mss. D. C. prod. 2. p. 307.) leaves impari-pinnate, silky; umbels 2-3-flowered. ♃. H. Native of the Altaian mountains, in humid meadows. Astrágalus pauciflòrus, Pall. astr. no. 88. t. 66. B. Willd. spec. 3. p. 1319. Astrag. biflòrus, Pall. itin. 3. p. 205.—Gmel. sib. 4. p. 54. no. 70. t. 26. f. 1. Flowers purple.

Var. β, subglabràta (D. C. prod. 2. p. 307.) leaves almost glabrous at length. ♃. H. Native of Dahuria. Astrágalus brevicarinàtus, D. C. astr. p. 128. t. 49. Flowers flesh-coloured. Legumes villous.

Few-flowered Güldenstædtia. Fl. June, July. Clt. 1827. Pl. ¼ to ½ foot.

3 G. LATIFÒLIA (Fisch. in litt.) plant hoary: leaflets 1-7, ovate, terminal one largest; legumes terete, subulate, a little incurved, clothed with adpressed pubescence. ♃. H. Native of Persia and Armenia. Astrágalus latifòlius, Lam. dict. 1. p. 319. D. C. astr. no 133. t. 46. Flowers purple.

Broad-leaved Güldenstædtia. Pl. ¼ to ½ foot.

Cult. See *Oxýtropis* for culture and propagation, p. 253.

CXXXIII. BISE'RRULA (from *bis*, twice, and *serrula*, a little saw; in allusion to the legumes, which are toothed on both sides, giving them the appearance of a little saw). Lin. gen. no. 893. Lam. ill. t. 622. D. C. astr. no. vi. prod. 2. p. 307.

Lin. syst. *Diadélphia, Decándria.* Calyx 5-cleft. Keel obtuse. Stamens diadelphous. Legume flat, 2-celled, having the valves carinately compressed, and sinuately-toothed on the back.—A diffuse pubescent herb, with impari-pinnate leaves, having many pairs of obcordate leaflets. Peduncles shorter than the leaves. Spikes ovate. Flowers small, blue, or purple.

1 B. PELE'CINUS (Lin. spec. 1073. Gisek. icon. fasc. 1. t. 17.) ⊙. H. Native of the south of Europe, and the north of Africa, in waste places and corn-fields. Lam. ill. f. 22. Pelécinus vulgàris, Tourn. inst. 417. t. 234.

Corn-weed Biserrula. Fl. July, Aug. Clt. 1640. Pl. ½ to 1 ft.

Cult. The seeds of this plant only require to be sown in the open border in spring.

Tribe III.

HEDYSA'REÆ (plants agreeing with *Hedýsarum* in some important characters). D. C. legum. mem. vii. prod. 2. p. 307. Embryo with the radicle bent back upon the edge of the cotyledons (f. 21. *e. f.*). Corolla papilionaceous (f. 42. *b.*). Stamens rarely free, but usually monadelphous (f. 43. *c.*) or diadelphous, 9 joined together, and one free (f. 44. *d.*), or 5 in each bundle. Legumes dividing transversely into 1-seeded cells or joints (f. 41. *e.*). Cotyledons flat, changing into leaves at the time of germination. This tribe is very natural, and easily distinguished from the rest by the legumes being divided transversely into joints, unless in the following genera, *Onobrýchis*, *Eleiòtis*, and *Lespedèza*, which have only 1-celled, 1-seeded legumes, and in a few others, which have the legumes divided into transverse cells from membranous or spongy dissepiments, but not separating into joints.

Subtribe I. Coronílleæ (plants agreeing with *Coronilla* in some characters). D. C. prod. 2. p. 308. Flowers disposed in umbels (f. 41. *b.* f. 42. *b.*). Legumes terete (f. 41. *e.*) or compressed. Stamens diadelphous, 9 joined and 1 free.

CXXXIV. SCORPIU'RUS (from σκορπιος, *scorpios*, a scorpion, and ουρα, *oura*, a tail; in reference to the twisted form of the legumes). Lin. gen. 876. Gært. fruct. 2. t. 155. D. C. prod. 2. p. 308.—Scorpioìdes, Tourn. inst. 226.—Scórpius, Lois. fl. gall. Mœnch.

Lin. syst. *Diadélphia, Decándria.* Calyx 5-cleft, with equal acute lobes. Corolla with a 2-edged keel. Stamens diadelphous, the 5 longest dilated a little under the anthers. Ovary sulcated. Style filiform, acute. Legume revolute, rather spiral, constantly of 3-6 1-seeded joints, which are furrowed lengthwise, with the nerves usually prickly or muricated. Embryo replicate. Cotyledons linear.—Annual herbs, with membranous linear-lanceolate stipulas, simple entire leaves, which taper into the petiole, axillary 1-4-flowered peduncles, which are longer than the leaves, and yellow, rarely purple flowers.

1 S. LÆVIGA'TA (Smith, fl. græc. t. 718. ex prod. 2. p. 81.) legumes glabrous, with ribs unarmed. ⊙. H. Native of the islands in the Archipelago of Europe. S. bupleuri-folio siliquis lævibus, Tourn. inst. 402. Flowers yellow. Perhaps only a variety of *S. muricàta*.

Smooth-podded Caterpillar. Fl. June, July. Clt. 1818. Pl. prostrate.

2 S. MURICA'TA (Lin. spec. 1050.) legumes glabrous, with the inner ribs unarmed, and the outer ones muricated with minute bluntish tubercles. ⊙. H. Native of the region of the Mediterranean, in fields.—Moris. oxon. sect. 2. t. 11. f. 4. S. echinàta *α*, Lam. dict. 726. Peduncles 2-flowered. Flowers yellow.

Muricated-podded Caterpillar. Fl. June, July. Clt. 1640. Pl. trailing.

3 S. SULCA'TA (Lin. spec. 1050.) legumes glabrous; inner ribs smooth, 4 outer ones bearing stiff distant prickles, which are hooked at their apex. ⊙. H. Native of the region of the Mediterranean, in fields. Gært. fruct. 2. t. 155. Desf. atl. 2. t. 4. S. echinàta *β*, Lam. dict. 1. p. 726. Peduncles usually 3-flowered. Flowers yellow.

Furrowed-podded Caterpillar. Fl. June, July. Clt. 1596. Pl. prostrate.

4 S. SUBVILLÒSA (Lin. spec. 1050.) legumes glabrous, the inner ribs naked, but 6 or 8 of the outer ones bear stiff, crowded prickles, which are a little hooked at the apex. ⊙. H. Native along with the preceding species. S. echinàta *γ*, Lam. dict. 1. p. 726.—Moris. hist. sect. 2. t. 11. f. 2. Legumes thicker, and more revolute than those of *S. sulcàta*. Flowers yellow. Plant rather villous. Peduncles usually 4-flowered.

Sub-villous Caterpillar. Fl. Ju. July. Clt. 1731. Pl. proc.

5 S. acutifòlia (Viv. fl. lyb. p. 43. t. 19. f. 4.) legumes clothed with short hairs, having the inner ribs naked, and 6 or 8 of the outer ones bearing crowded, stiff, very short prickles. ⊙. H. Native of Cyreniaca, in sandy places, and of Corsica, about Bonifacio. Flowers yellow.

Acute-leaved Caterpillar. Fl. Ju. July. Clt. 1825. Pl. proc.

6 S. vermicula'ta (Lin. spec. 1050.) legumes glabrous, with the inner ribs almost obsolete, but the 10 outer ones bear crowded stipitate tubercles, which are obtusely dilated at the apex. ⊙. H. Native of the region of the Mediterranean, in corn-fields. Moris. hist. sect. 2. t. 11. f. 3. Gærtn. fruct. 2. p. 155. Flowers yellow, but with the vexillum streaked with red, solitary on the peduncles. Legumes thick.

Vermicular-podded Caterpillar. Fl. June, July. Clt. 1621. Pl. prostrate.

7 S. purpu'rea (Desf. atl. 2. p. 174.) stem and leaves hairy; peduncles 1-flowered; legumes covered all over with very short tubercles. ⊙. H. Native of Algiers. Flowers purple. Plant with the habit of the preceding species.

Purple-flowered Caterpillar. Fl. June, July. Pl. trailing.

Cult. These plants are preserved in gardens more for the oddness of the shape of their pods than for their beauty, and being all hardy annuals the seeds of them only require to be sown in the open border in spring, where they are intended to remain, and thinned afterwards if they rise too thick.

CXXXV. CORONI'LLA (from *corona*, a crown; in reference to the disposition of the flowers in heads or umbels at the tops of the peduncles). Neck. elem. no. 1319. Lam. ill. t. 630. D. C. prod. 2. p. 309.—Coronílla species of Lin. and others.

Lin. syst. *Diadèlphia, Decándria.* Calyx campanulate, short, 5-toothed (f. 41. *a.*), the 2 superior teeth approximate, and joined together higher up than the rest. Claws of petals usually longer than the calyx. Carina acute. Stamens diadelphous. Legume nearly terete, slender, at length separating into oblong 1-seeded joints (f. 41. *e.*). Seeds ovate or cylindrical (f. 41. *f.*)—Shrubs or herbs, with impari-pinnate leaves, and axillary peduncles, bearing at their tops umbels of pedicellate flowers.

Sect. I. E'merus (from ἥμερος, *emeros*, pure, agreeable; the shrub is very pretty). Tourn. inst. t. 418. Desv. journ. bot. 3. p. 121. t. 4. f. 9. D. C. prod. 2. p. 309. Legume nearly terete, separating into joints slowly and obscurely, but decidedly. Claws of petals 3 times the length of the calyx. Flowers yellow.

1 C. E'merus (Lin. spec. 1046.) shrubby, glabrous; stipulas small; leaflets 5-7, obovate; peduncles 3-5-flowered. ♄. H. Native of middle and south Europe, and of Tauria, in hedges, and among bushes. Sims, bot. mag. 445. E'merus màjor, Mill. fig. t. 132. f. 1. and minor, f. 2. C. pauciflòra, Lam. fl. fr. Flowers yellow.

Agreeable Coronilla or Scorpion-Senna. Fl. April, June. Clt. 1596. Shrub 3 to 4 feet.

Sect. II. Coroni'lla (see genus for derivation). Tourn. inst. t. 419. Desv. journ. bot. 3. p. 119. t. 4. f. 3. Legume rather compressed, evidently separating into joints (f. 41. *e.*). Claws of petals hardly longer than the calyx.

* *Flowers yellow.*

2 C. ju'ncea (Lin. spec. 1047.) shrubby, glabrous; stipulas small; leaflets 3-7, linear-lanceolate, obtuse, rather fleshy, lower ones remote from the stem; umbels 5-7-flowered. ♄. H. Native of the south of France. Ker. bot. reg. 820. Lodd. bot. cab. 235.—Barrel. icon. t. 133.—J. Bauh. hist. 1. p. 2. t. 383. f. 2. Branches rush-like, terete, almost naked, slender. Flowers bright yellow.

Rushy-branched Coronilla. Fl. June, July. Clt. 1656. Shrub 2 to 3 feet.

3 C. stipula'ris (Lam. dict. 2. p. 120.) shrubby, glabrous; stipulas roundish, large, deciduous; leaflets 7-9, obovate, mucronulate, glaucous, lower ones remote from the stem; umbels 6-8-flowered. ♄. F. Native of the south of Italy, in Goat's Island, in Sicily near Palermo, and probably of Spain. C. orbiculàris, Mœnch. C. Valentìna, Lin. spec. 1047. exclusive of the synonyme of Clusius, and therefore the name. Curt. bot. mag. 185. C. Hispánica, Mill. dict. no. 4.? Flowers deep yellow, very fragrant at night.

Large-stipuled Coronilla. Fl. Mar. Nov. Clt. 1596. Sh. 3 ft.

4 C. pentaphy'lla (Desf. atl. 2. p. 171.) shrubby, glabrous; stipulas ovate, mucronate, deciduous; leaflets 5-7, cuneiform, mucronate, usually emarginate; umbels 10-20-flowered. ♄. F. Native of Algiers on hills. Mill. fig. t. 289. f. 2.?

Five-leafletted Coronilla. Fl. June, July. Clt. 1700. Shrub 2 to 4 feet.

5 C. arge'ntea (Lin. spec. 1048.) shrubby; leaflets 11, silky, terminal one largest. ♄. F. Native of Candia. Mill. fig. t. 289. f. 1.? ex Ait. hort. kew. 4. p. 332. This is a very doubtful plant. Flowers beautiful yellow, sweet-scented.

Silvery Coronilla. Fl. May, June. Clt. 1664. Sh. 2 feet.

6 C. glau'ca (Lin. spec. 1047.) shrubby, glabrous; stipulas small, lanceolate; leaflets 5-7, obovate, very obtuse, glaucous, lower ones remote from the stem; umbels 7-8-flowered. ♄. F. Native of France about Narbonne, and of Sicily, and probably of Spain. Curt. bot. mag. t. 13. Mill. fig. 289. f. 1. Flowers beautiful yellow, fragrant in the day time, but scentless at night.

Glaucous Coronilla. Fl. May, Sept. Clt. 1722. Sh. 2 to 4 ft.

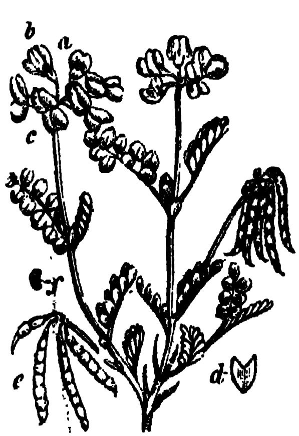
7 C. mi'nima (Lin. spec. 1048.) suffruticose, procumbent, glabrous; stipulas concrete, small, opposite the leaves, bidentate at the apex, the upper ones largest, membranous, and deciduous; leaflets 7-13, ovate-roundish, obtuse or retuse, lower ones remote from the stem; umbels 7-8-flowered; legume 4-winged, toothed. ♃. H. Native of the southern parts of Europe, on the lower mountains in sandy places. Jacq. fl. austr. t. 271. D. C. fl. fr. 4. p. 608. Sims, bot. mag. 2178.—J. Bauh. hist. 2. p. 351. f. 2. Flowers yellow, sweet-scented. Plant erect or prostrate, evergreen. (f. 41.)

Least Coronilla. Fl. June, July. Clt. 1658. Pl. prostrate or ½ foot.

8 C. vagina'lis (Lam. dict. 2. p. 121.) plant suffruticose, prostrate; stipulas concrete, large; leaflets roundish; legumes 4-winged, toothed. ♃. H. Native of the southern parts of Europe, on the lower mountains. Flower yellow. This species is usually confused with *C. mínima.*

Sheathing-stipuled Coronilla. Pl. prostrate.

FIG. 41.



9 C. corona'ta (Lin. spec. 1048.) plant suffruticose, erect, or ascending, glabrous; stipulas concrete, small, opposite the leaves, bidentate at the apex; leaflets 5-11, obovate, rather mucronate, glaucous, lower ones approximating the stem; umbels many-flowered; legumes compressed, tetragonal, erect. ♃. H. Native of the southern parts of Europe, in arid places. Jacq. austr. 1. t. 95. D. C. fl. franc. 4. p. 608. but not of Bieb. nor Sims. C. Clùsii, Dufour, ann. sc. phys. 7. p. 307. C. Valentìna, Lam. fl. fr. 2. p. 663. but not of Lam.—Clus. hist. 1. p. 98. f. 2. (fig. 41.)

Crown-flowered Coronilla. Fl. July, Aug. Clt. 1776. Pl. 1 to 2 feet.

10 C. monta'na (Scop. carn. ed. 2. p. 912. t. 44.) plant herbaceous, erect, glabrous; stipulas concrete, opposite the leaves, oblong, emarginate, deciduous; leaflets 7, ovate, mucronate, rather glaucous, lower ones approximating the stem; umbels 15-20-flowered. ♃. H. Native of Germany, Carniola, and Switzerland, on the mountains. C. coronàta, Bieb. fl. taur. 1434. Sims, bot. mag. 907.—Riv. tetr. t. 207. (f. 41.)

Mountain Coronilla. Fl. Ju. July. Clt. 1776. Pl. 1 to 1½ ft.

11 C. Ibe'rica (Bieb. fl. taur. 2. p. 173.) plant herbaceous, prostrate, glabrous; stipulas distinct, membranous, orbicular, denticulated; leaflets 9-11, obcordate, ciliated; umbels 7-8-flowered; legumes tetragonal, incurved. ♃. H. Native of Iberia and Cappadocia. Willd. spec. 3. p. 1152. Sweet, fl. gard. 25. Lodd. bot. cab. 789. C. orientàlis, Mill. Flowers large, yellow. Root creeping.

Iberian Coronilla. Fl. July, Aug. Clt. 1822. Pl. ascending.

12 C. squama'ta (Cav. icon. t. 155.) plant herbaceous, erect; stipulas lanceolate-ovate, membranous, somewhat ciliated; leaflets 9-11, obovate, pubescent, lower ones remote from the stem; umbels 7-8-flowered; legumes scurfy from scales. ♃. H. Native of Spain, near the town of Lamota del Cuervo. Flowers yellow.

Scaly-podded Coronilla. Fl. June, July. Clt. 1820. Pl. ½ foot.

13 C. parviflòra (Willd. spec. 3. p. 1155.) plant herbaceous, much branched, rather scabrous from reflexed stiff hairs; leaflets 9, cuneate, emarginate, glabrous; stipulas ovate, very minute; umbels 5-flowered; peduncles longer than the leaves; legumes terete, arched. ♃. H. Native of Candia and Tauria, on exposed hills. C. Crética herbàcea, &c. Tourn. cor. 44. C. Valentìna, Pall. ined. Bieb. fl. taur. 2. p. 173. Very like C. *Crética*, but differs in the flowers being yellow.

Small-flowered Coronilla. Pl. ¼ foot.

* * *Flowers purple, pink, or white.*

14 C. vimina'lis (Salisb. par. t. 13. Ait. hort. kew. ed. 2. vol. 4. p. 331.) suffruticose; stipulas ovate, membranous, soon falling off; leaflets 13-21, obovate, retuse, mucronate, glaucous, lower ones approximating the stem; umbels 6-10-flowered. ♃. H. Native of Mogodor. Branches hardly angular. Flowers large, pale, having the vexillum lined with red lengthwise, changing from pale to deeper purple.

Twiggy Coronilla. Fl. May, Nov. Clt. 1798. Sh. 2 to 4 ft.

15 C. Cre'tica (Lin. spec. 1048.) plant herbaceous, ascending, glabrous; stipulas small, acute; leaflets 11-13, cuneated, retuse, the lower ones remote from the stem; umbels 3-6-flowered. ⊙. H. Native of Candia, Tauria, and Italy, on hills. Flowers white, having the vexillum streaked with red, and the keel dark purple. Jacq. hort. vind. t. 25. C. parviflòra, Mœnch. Astrolòbium Créticum, Desv.

Cretan Coronilla. Fl. June, July. Clt. 1731. Pl. ascending.

16 C. va'ria (Lin. spec. 1048.) plant herbaceous, diffuse, flexuous, glabrous; stipulas distinct, lanceolate; leaflets 9-13, oblong, elliptic, mucronate, lower ones approximating the stem; umbels 16-20-flowered; legumes angular, very long, straight. ♃. H. Native of Europe and Tauria, in fields and meadows. Curt. bot. mag. 258. Mill. fig. t. 106.—Clus. hist. 2. p. 237. f. 2. Astrágalus glaucoìdes, Gmel. itin. 1. t. 21. ex Bieb. Flowers pink, rarely white, at length drooping. Root creeping. This plant was formerly proposed to be cultivated as a proper food for cattle; and it was found that it grew very readily, and might be very beneficial to the farmer. In a good soil the stems will grow even 5 feet long, and be tender their whole length, so that a small spot of ground will supply a considerable quantity of fodder, especially in dry seasons. Horses and cows seem to eat it greedily. However, Mr. Curtis remarks that its bitterness will be an objection to its being cultivated for cattle.

Various-flowered Coronilla. Fl. June, Nov. Clt. 1640. Pl. diffuse.

17 C. globòsa (Lam. dict. 2. p. 122.) herbaceous, glabrous; stipulas small, acute; leaflets oblong-elliptic, 11-13, obtuse, lower ones distant from the stem; umbels globose, 20-30-flowered; legumes pendulous. ♃. H. Native of Candia in fields. C. Crética herbacea flore magno candido, Tourn. cor. 44. Flowers pink or white. Perhaps only a variety of *C. vària*.

Globose-flowered Coronilla. Fl. July, Nov. Clt. 1800. Pl. diffuse.

† *Doubtful species.*

18 C.? sca'ndens (Lin. spec. 1048.) stem scandent, flaccid; leaflets 5, ovate; peduncles axillary, twin, 1-flowered, prickly; legumes terete, articulated, glabrous.—Native of South America. —Plum. ed. Burm. t. 107. f. 3. Perhaps a species of *Poirètia*. Flowers large, pale yellow.

Climbing Coronilla. Pl. cl.

19 C. multiflòra (D. C. prod. 2. p. 310.) plant suffruticose, glabrous; stipulas small, lanceolate; leaflets 7-9, oblong-cuneate, obtuse, lower ones approximating the stem; umbels 15-20-flowered. ♄. F. Native of Spain. Branches terete, spreading, flexuous. Flowers pale, perhaps yellow, perhaps white.

Many-flowered Coronilla. Shrub 1 to 2 feet.

20 C. hirsu'ta (D. C. prod. 2. p. 310.) stem herbaceous, erect, clothed with white hairs, as well as the peduncles and leaves; leaves with 6-8 pairs of oval obcordate leaflets; stipulas leafy, roundish-cordate; peduncles longer than the leaves; umbels globose, 8-12-flowered; calyx beset with black hairs. ♃. G. Native of the Cape of Good Hope. Coronilla argéntea, Burm. cap. 22. Thunb. fl. cap. 592.? Legume unknown.

Hairy Coronilla. Pl. 1 foot.

Cult. All the species of *Coronilla*, both shrubby and herbaceous, are worthy of cultivation in every collection, for the beauty of their flowers, as well as for the neatness of their herbage. The hardy shrubby kind, *C. E'merus*, is very proper for the front of shrubberies. It thrives in any kind of soil, and flowers the greater part of the year. Ripened cuttings of it root freely if planted in autumn in the open ground. The frame and greenhouse shrubby kinds are beautiful plants of easy culture; they grow best in a mixture of loam and peat, and cuttings of them strike readily in sand under a hand-glass; they may be turned out into the open border in spring, where they will make shewy bushes and flower all the summer, and if the winters are not very severe they will live with very little protection. The hardy perennial herbaceous kinds are most handsome when cultivated in pots, and placed among other alpine plants. *C. vària globòsa* and *Ibérica* are very hardy, but become troublesome if planted in the open ground, as their roots run so much as to injure every other plant near them, and they are afterwards difficult to eradicate. *C. coronàta minima* and *montàna* are well adapted for rock-work, but do not long exist in such a situation, as they are apt to be killed in severe winters. The annual species, *C. Crética*, requires the treatment of other hardy annuals.

CXXXVI. ASTROLO'BIUM (from αστρον, *astron*, a star, and λοβος, *lobos*, a pod; in reference to the disposition of the pods like the rays of a star). Desv. journ. bot. 3. p. 121. t. 4. f. 10. D. C. prod. 2. p. 311.—Orníthopus species of Lin. and others.

Lin. syst. *Diadélphia, Decándria.* Calyx bractless, tubular, nearly equally 5-toothed. Keel of corolla small, compressed. Stamens diadelphous. Legume nearly terete, constantly composed of numerous 1-seeded, indehiscent, cylindrical joints, which are truncate at both ends.—Smooth European herbs, with impari-pinnate leaves. Stipulas wanting or very small, when present they are joined in one, opposite the leaves, and therefore bidentate at the apex. Flowers yellow, capitate, destitute of the bractea to the head of the flowers.

1 A. **ebracteàtum** (D. C. prod. 2. p. 311.) peduncles about equal in length to the leaves, bractless at the apex; leaves all pinnate; leaflets elliptic-oblong, many-pairs, equal in size and shape, lower ones distant from the stem; legumes terete, arched. ⊙. H. Native of Portugal, Spain, south of France, and Italy, in gravelly places. Oríthopus lævigàtus, Smith in Rees' cycl. no. 3. Ornith. exstipulàtus, Thore, chl. land. 311. O. ebracteàtus, Brot. fl. lus. 2. p. 159. Scorpiùrus pinnàtus, Mill. dict. no. 5.? O. nudiflòrus, Lag. varied. esp. 2. p. 40. O. dùrus, D. C. fl. fr. no. 4039. but not of Cav. O. pygmæ'us, Viv.—Dalech. hist. 1. p. 487. f. 1. Flowers small, yellow.

Bractless Star-Vetch. Fl. June, July. Clt. 1700. Pl. pros.

2 A. **du'rum** (D. C. prod. 2. p. 311.) peduncles a little longer than the leaves, almost bractless at the apex; stipulas concrete, sheathing; lower leaves simple, the rest pinnate, with few pairs of obcordate leaflets, the lower ones approximating the stem; legumes arched, rather tetragonal. ⊙. H. Native of Spain, about Valentia and Madrid in bushy places, and of Portugal in vineyards. Orníthopus dùrus, Cav. icon. 1. p. 31. t. 41. O. heterophy'llus, Brot. phyt. t. 67. fl. lus. 2. p. 160. Flowers yellow.

Hard-podded Star-Vetch. Fl. Ju. July. Clt. 1816. Pl. ¼ to ½ foot.

3 A. **repa'ndum** (D. C. prod. 2. p. 311.) peduncles a little shorter than the leaves, bractless at the apex; stipulas concrete, sheathing; lower leaves simple, ovate, and emarginate, upper ones pinnate; leaflets oblong, lower ones roundish, approximating the stem; legumes rather nodose, a little incurved. ⊙. H. Native of Barbary in fields towards Lacalle. Orníthopus repándus, Lam. ill. t. 631. f. 4. Poir. dict. 4. p. 620. O. lotoìdes, Viv. Flowers yellow.

Repand-podded Star-Vetch. Fl. June, July. Clt. 1805. Pl. prostrate.

4 A. **scorpioìdes** (D. C. prod. 2. p. 311.) peduncles longer than the leaves, bractless; stipulas concrete, sheathing; leaves trifoliate; lower leaflets small, roundish, approximating the stem, terminal one large, oval; legume a little incurved, rather nodose. ⊙. H. Native of the south of Europe, in corn-fields. Orníthopus scorpioìdes, Lin. spec. 1049. Cav. icon. t. 37. Orníthopus trifoliàtus, Lam. fl. fr. 2. p. 659. Ornithopòdium scorpioìdes, All. Ornithopòdium triphy'llum, Mœnch. Flowers yellow.

Scorpion-like-podded Star-Vetch. Fl. June, July. Clt. 1506. Pl. ½ foot.

Cult. The seeds of these plants only require to be sown in the open border in spring.

CXXXVII. ORNI'THOPUS (from ορνις ορνιθος, *ornis ornithos*, a bird, aud πους, *pous*, a foot; the legumes are like the claws of a bird, and are disposed somewhat in the same manner).

Desv. journ. bot. 3. p. 121. t. 5. f. 14. D. C. prod. 2. p. 311.—Ornithopus species Lin. and others. Lam. ill. t. 631.—Ornithopòdium, Tourn. inst. t. 224. Mœnch. meth.

Lin. syst. *Diadélphia, Decándria.* Calyx tubular, almost equally 5-toothed, bracteate. Keel of corolla small, compressed. Stamens diadelphous. Legume compressed, with many 1-seeded indehiscent joints, which are truncate at both ends, but having parallel margins.—European, villous, annual herbs, with impari-pinnate leaves, small stipulas which are adnate to the petioles, axillary peduncles, bearing a few-flowered umbel at the top of each. Flowers small, white or rose-coloured. All the species have a pinnate bractea under each head of flowers.

1 O. **compre'ssus** (Lin. spec. 1049.) peduncles shorter than the leaves; leaves villous, upper ones having the lower pair of leaflets approximating the stem; legumes compressed, pubescent, wrinkled, incurved at the apex; the joints oval. ⊙. H. Native of the south of Europe and the north of Africa, in sandy places. Berg. phyt. t. 191. Ornithopòdium compréssum, All. ped. no. 1245. Flowers small, yellow.

Compressed-podded Bird's-foot. Fl. June, July. Clt. 1781. Pl. prostrate.

2 O. **perpusíllus** (Lin. spec. 1049.) peduncles longer than the leaves; leaves rather villous, upper ones having the lower pair of leaflets approximating the stem; legumes rather compressed, glabrous, curved upwards, the joints elliptic, moderately compressed. ⊙. H. Native of every part of Europe and the North of Africa, on heaths and gravelly pastures; plentiful in Britain. Smith, engl. bot. 369. Oed. fl. dan. 307. Curt. lond. 6. t. 53. Flowers small, usually 2-3 or 5 in a head, having the vexillum and wings white, and beautifully veined with crimson, and the keel green.

Var. β, *nodòsus* (Mill. dict. no. 2.) root bearing ovoid tubercles; legumes pubescent. ⊙. H. Native of Europe, in several parts of Britain and of France, very common about Paris. The tubercles, which are said to be on the roots of this variety, are to be found on the roots of almost all leguminous plants, which arise from morbid excrescences.

Common or *Very small* Bird's-foot. Fl. May, July. Britain. Pl. prostrate.

3 O. **satìvus** (Brot. fl. lus. 2. p. 160.) peduncles longer than the leaves; leaflets pubescent; oval in the lower leaves, and lanceolate in the superior ones, the lower pairs approximating the stem; legumes hardly arched, with roundish compressed knots. ⊙. H. Native of Portugal and other parts of the south of Europe, in rather wet sandy places and meadows. O. ròseus, Dufour. in litt. O. perpusíllus β, intermèdius, Roth. fl. germ. 2. p. 215. Ornithopòdium màjus, C. Bauh. pin. 350. Ger. emac. 1241. f. 3.—Moris. hist. sect. 2. t. 10. f. 13. Flowers white and red, mixed.

Cultivated Bird's-foot. Fl. May, July. Clt. 1818. Pl. pr.

Cult. The seeds of these plants only require to be sown in the open ground, in spring. None of the species are worth cultivating, except in botanical gardens.

CXXXVIII. HIPPOCRE'PIS (from ιππος, *hippos*, a horse, and κρηπις, *krepis*, a shoe; in reference to the shape of the recesses of the pods, which are curved in such a manner as to give them a likeness to a horse's shoe).

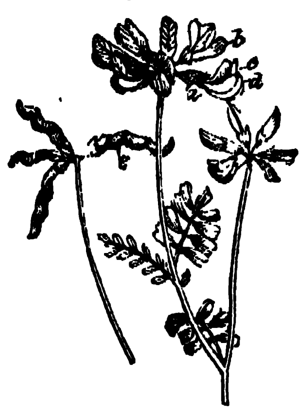
Lin. gen. 885. Lam. ill. t. 630. D.C. prod. 2. p. 312. Férrum-equìnum, Tourn. inst. t. 225.

Lin. syst. *Diadélphia, Decándria.* Calyx 5-cleft (f. 42. *a.*) with the lobes equal and acute. Carina of corolla 2-edged (f. 42. *b.*). Stamens diadelphous. Style filiform, acute. Legume having numerous, 1-seeded joints, curved (f. 42. *e.*), hence the upper side of the legume appears as if it were cut, from having numerous rounded recesses. Seeds cylindrical or compressed, oblong, curved, fixed to the middle part of the joint, and therefore the umbilicus is in the middle of the curve.—Herbs or subshrubs, with impari-pinnate leaves and yellow flowers, which are sometimes solitary and axillary, sometimes sessile, but usually disposed in umbels on the tops of the axillary peduncles.

§ 1. *Roots perennial. Legumes sinuated, with the joints curved, forming a broad open recess between each pair.*

1 H. **Balea'rica** (Jacq. misc. 2. p. 305. icon. rar. 1. p. 149.) shrubby, erect; peduncles longer than the leaves, bearing an

FIG. 42.



umbel of flowers at the apex; legumes glabrous, a little arched. ♄. F. Native of the Island of Minorca. Lam. ill. 620. f. 2. Curt. bot. mag. t. 427. Leaves and calyxes either glabrous or pilose.

Minorca Horse-shoe-Vetch. Fl. May, Ju. Clt. 1776. Sh. 1 to 2 ft.

2 H. comòsa (Lin. spec. 1050.) stem herbaceous, prostrate; peduncles longer than the leaves, bearing an umbel of flowers at the apex; legumes arched, sinuated on both margins, rough from minute prominent tubercles. ♃. H. Native of Europe, in Germany, Italy, France, Austria, Britain, in calcareous soils; plentiful in Kent, Cambridgeshire, and Berkshire, and in most chalk countries, as well as of the north of Africa. Smith, engl. bot. t. 31. Jacq. austr. 5. t. 431. Riv. tetr. 97. H. perénnis, Lam. fl. fr. 2. p. 657. Leaflets 7-11, obovate, obtuse, very minutely mucronate. Legumes with their joints neither dilated nor bordered. (fig. 42.)

Tufted Horse-shoe-Vetch. Fl. April, Aug. Brit. Pl. pr.

3 H. Helve'tica (G. Don, in Loud. hort. brit. p. 308.) stems herbaceous, procumbent; peduncles longer than the leaves, bearing an umbel of flowers at the apex; legumes compressed, curved, smooth; leaflets 9-11, obovate, obtuse, mucronate. ♃. H. Native of Switzerland. H. comòsa, Schleich. Legume broad, arched. An elegant plant, much larger in every part than the last species.

Swiss Horse-shoe-Vetch. Fl. May, Aug. Clt. 1819. Pl. pr.

4 H. glau'ca (Ten. fl. neap. 2. p. 165. t. 69.) stems herbaceous, ascending; leaves glaucous; peduncles longer than the leaves, bearing an umbel of flowers at the apex; legumes arched, rather scabrous, constantly of 5 joints. ♃. H. Native of Naples, on the rocks of Magella. Calyx pubescent. Allied to *H. comòsa*.

Glaucous Horse-shoe-Vetch. Fl. May, Jul. Clt. 1819. Pl. asc.

§ 2. *Roots annual. Legumes with roundish recesses.*

5 H. sca'bra (D. C. prod. 2. p. 312.) peduncles twice the length of the leaves, bearing an umbel of flowers at the apex; legumes arched, scabrous at the seeds, the rest clothed with a kind of lepidoted pubescence. ⊙. H. Native of Spain, in the kingdom of Murcia, near the city. Style long, compressed, permanent at the top of the legumes.

Scabrous-podded Horse-shoe-Vetch. Pl. prostrate.

6 H. bicontórta (Lois. not. in ann. soc. Lin. par. vol. 4. 1827.) stem branched, spreading; leaflets linear; peduncles length of leaves, usually bearing 3 flowers at the apex; legumes scabrous, twisted into a double circle. ⊙. H. Native of Montpelier.

Twice-twisted-podded Horse-shoe-Vetch. Pl. spreading.

7 H. multisiliquòsa (Lin. spec. 1050.) peduncles a little shorter than the leaves, 2-4-flowered; legumes quite smooth, circularly incurved. ⊙. H. Native of Spain, Italy, south of France, and Barbary, in exposed stony or sandy places. Mill. fig. 278. f. 2. Férrum equìnum polyceràtum, Col. ecphr. p. 300. with a figure. F. multiflòrum, Mœnch. meth. 119. Plant smooth.

Many-podded Horse-shoe-Vetch. Fl. Ju. Aug. Clt. 1683. Pl. pr.

8 H. monoca'rpa (Bieb. fl. taur. suppl. p. 480.) flowers axillary, almost sessile, solitary; legumes quite glabrous. ⊙. H. Native of Eastern Caucasus, on hills about Schamachi. H. unisiliquòsa, Bieb. fl. taur. 2. p. 174. exclusive of the synonymes.

One-fruited Horse-shoe-Vetch. Fl. June, Aug. Clt. 1824. Pl. prostrate.

9 H. unisiliquòsa (Lin. spec. 1050.) flowers axillary, sessile, solitary; legumes a little incurved, hairy in the middle part of the joints. ⊙. H. Native of the south of Europe, Barbary, and the Levant, in exposed stony places. Lam. ill. t. 630. f. 3. Mill. fig. 278. f. 1. Férrum equìnum vulgàre, Col. ecphr. p. 300. with a figure. F. uniflòrum, Mœnch. meth. 119.

One-podded Horse-shoe-Vetch. Fl. June, July. Clt. 1570. Pl. prostrate.

10 H. cilia'ta (D. C. prod. 2. p. 313.) peduncles rather shorter than the leaves; legumes arched, hispid at the seeds, and ciliated on one side. ⊙. H. Native of Spain and Italy.

Var. α; peduncles 4-6-flowered. ⊙. H. Native of Spain, near Aranjuez. H. ciliàta, Willd. berl. mag. nat. ges. 1808. p. 173.

Var. β; peduncles 3-flowered. ⊙. H. Native of Spain, in the provinces of Granada and Murcia. H. ánnua, Lag. nov. spec. 23. p. 299.

Var. γ; peduncles 2-flowered. ⊙. H. Native of Italy, about Naples, as well as of Sicily and Tauria. H. dicárpa, Bieb. suppl. 480.

Ciliated-podded Horse-shoe-Vetch. Fl. June, July. Clt. 1818. Pl. prostrate.

11 H. biflòra (Spreng. pug. 2. p. 73.) peduncles very short, 2-flowered; legumes minutely ciliated on both margins. ⊙. H. Native country unknown. Flowers twin, axillary, almost sessile, but the peduncles becomes elongated after flowering. Ciliæ of legume very short.

Two-flowered Horse-shoe-Vetch. Fl. June, July. Clt. 1816. Pl. prostrate.

Cult. All the species of this genus are worthy of cultivation in every garden, on account of their neatness and beauty. The *H. Baleàrica* is the only species which requires protection in a greenhouse in winter. It thrives in a mixture of loam and peat, and cuttings of it strike root readily under a hand-glass. The perennial herbaceous kinds are well fitted for ornamenting rock-work or banks: they are propagated by dividing at the root or by seeds. The annual species are also well fitted for rock-work, where their seeds should be sown early in spring.

CXXXIX. SECURI'GERA (from *securis*, a hatchet, and *gero*, to bear; in reference to the form of the pods). D. C. fl. fr. 4. p. 609. prod. 2. p. 313. Securidàca, Tourn. inst. t. 224. Lam. ill. t. 629. but not of Lin.—Bonavèria, Scop. Neck. elem. no. 1320. Desv. journ. vol. 3. p. 60. t. 4. f. 7.—Securílla, Pers. ench. 2. p. 314.

Lin. syst. *Diadélphia, Decándria.* Calyx short, bilabiate, lower lip 3-parted, upper one bidentate. Claws of petals rather longer than the calyx. Keel acute. Stamens diadelphous. Legume compressed, flat, with rather prominent sutures, the seeds separated by spongy substance, not articulated, linear, ending in a long beak at the apex. Seeds 8-10, compressed. Herb, with the habit of *Coronilla.*

1 S. coronílla (D. C. l. c.). ⊙. H. Native of the south of Europe, from Spain to Tauria. Coronílla securidàca, Lin. spec. 1048. Securidàca lùtea, Mill. dict. no. 1. fig. 232. Securidàca, legítima, Gærtn. fruct. 2. t. 153. Flowers yellow, 3 or 4 in an umbel.

Coronilla-like Hatchet-Vetch. Fl. July, Aug. Cl. 1562. Pl. prostrate.

Cult. The seeds of this plant only require to be sown in the open ground in any kind of soil.

Subtribe II. Euhedisa'reæ (plants agreeing with *Hedýsarum* in important characters). D. C. prod. 2. p. 313. Flowers disposed in racemes (f. 43. *g.* f. 44. *c.*). Legumes compressed (f. 43. *i.* f. 44. *g.*).

CXL. DI'PHACA (from δις, *dis*, twice, and φακη, *phake*, a lentil or pea; in reference to the pods being composed of 2 1-seeded joints). Lour. coch. p. 454. D. C. prod. 2. p. 313.

Lin. syst. *Diadélphia, Decándria.* Calyx 5-cleft, permanent, propped by 2 lanceolate bracteas, the lowest lobe longest. Corolla papilionaceous. Keel of 2 distinct petals. Stamens joined into 2 5-anthered bundles. Carpels 2, 1-styled. Legume compressed, straight, articulated; joints striated, 1-seeded. This genus is allied to *Dalbérgia* and *Æschinómene*, in the stamens being equally diadelphous, but the fruit is articulated as in *Hedýsarum*, and the plant is therefore placed in the same tribe.

1 D. Cochinchine'nsis (Lour. l. c.). ♄. G. Native of Cochin-china, China, and the Moluccas, where it is cultivated in gardens. Dalbérgia díphaca, Pers. ench. 2. p. 276.—Rumph. amb. 3. p. 200. t. 128. according to Loureiro. Leaves impari-pinnate. Peduncles 2, axillary, 1-flowered. Flowers white.

Cochin-china Diphaca. Shrub 8 feet.

Cult. To be treated as other greenhouse plants.

CXLI. PICTE'TIA (in honour of Charles Pictet, a celebrated French physician, author of Traite des Assolemens, 1 vol. 8vo. Geneva, 1788.). D. C. in ann. sc. nat. 4. jan. 1825. p. 93. legum. mem. vii. prod. 2. p. 314.

Lin. syst. *Diadélphia, Decándria.* Calyx furnished at the base with 2 caducous bracteoles, campanulate, 5-cleft, 2 superior lobes obtuse and shorter than the others, 3 inferior ones acuminated and somewhat spinose. Vexillum of corolla roundish, complicated. Keel obtuse, a little shorter than the wings. Stamens diadelphous. Style filiform, glabrous. Legume stipitate, compressed, few-seeded, sometimes continuous, having the seeds separated by a kind of spongy substance, sometimes articulated, the joints 1-seeded, but some of them are abortive, never striated nor warted. Seeds compressed, flat, ovate, rather truncate at the base. Cotyledons flat, green. Radicle lying above the commissure formed by the cotyledons.—Quite glabrous American shrubs, having the cauline stipulas usually spinescent, rarely unarmed. Leaves impari-pinnate, the leaflets exstipellate, having the middle nerve of each drawn out in a spine-like mucrone. Flowers axillary, disposed in loose racemes or solitary, yellow, the pedicels jointed at the apex, and bibracteolate; bracteoles caducous.

1 P. squama'ta (D.C. l. c. t. 47. f. 3.) leaves with 7-10 pairs of orbicular leaflets, each leaflet ending in a long spine-like mucrone, having the lateral veins hardly evident; stipulas spinose, erect; scales at the base of the branchlets, imbricated, and rather spinose; racemes loose, 3-7-flowered. ♄. S. Native of the island of St. Thomas, by the sea-side. Robínia squamàta, Vahl. symb. 3. p. 88. t. 69. Robínia squamòsa, Poir. dict. 6. p. 224. Caragàna spinòsa, Rich. herb. Pedicels distant, elongated, nearly opposite. Flowers yellow. Legumes unknown.

Scaly-branched Pictetia. Fl. June, Jul. Clt. 1824. Sh. 6 ft.

2 P. arista'ta (D. C. legum. mem. vii. t. 47. f. 5.) leaves with 7-10 pairs of obovate-orbicular, usually alternate leaflets, each leaflet ending in a long straight spine-like mucrone, having the lateral nerves prominent; stipulas spinose, spreading; racemes loose, 3-7-flowered. ♄. S. Native of St. Domingo, Santa Cruz, and Krabben Island. Æschinómene aristàta, Jacq. hort. schœnbr. t. 237. Poirètia aristàta, Desv. journ. bot. 3. p. 122. Flowers yellow. Legume of 3-4 joints. Very like the preceding species.

Awned-leafletted Pictetia. Fl. June, July. Clt. 1816. Sh. 5 to 10 feet.

3 P. obcorda'ta (D. C. l. c. t. 47. f. 1. prod. 2. p. 314.) leaves with 10-12 pairs of nearly opposite obcordate leaflets, each leaflet ending in a short, recurved, spine-like mucrone; stipulas ovate-lanceolate, unarmed. ♄. S. Native of St. Domingo. Racemes few-flowered. Legumes oblong, compressed, and perhaps 1-celled and 1-seeded from abortion, each standing on a longish stipe. Flowers unknown, but most probably yellow.

Obcordate-leafletted Pictetia. Shrub 3 to 6 feet.

4 P. Jussiæ'i (D. C. l. c.) leaves with 3-4 pairs of alternate or opposite, oblong leaflets, each leaflet ending in a straight spine-like mucrone, the odd one longest; stipulas spinose, erect, small. ♄. S. Native country unknown. Robínia aculeàta, Juss. herb. where a specimen of it is preserved without either flower or fruit.

Jussieu's Pictetia. Shrub 3 to 6 feet.

5 P. Desvau'xii (D. C. l. c. t. 47. f. 4.) leaves with 1-2 pairs of approximate oblong leaflets, which taper to both ends, and terminate in a straight spine-like mucrone; stipulas spinose, straight; pedicels axillary, 1-flowered; legume linear-oblong, obtuse, continuous. ♄. S. Native of St. Domingo. Robínia spinifòlia, Desv. journ. bot. 1814. 1. p. 78. Flowers small, yellow. Legume an inch long and about 3 lines broad, 5-6-seeded.

Desvaux's Pictetia. Shrub 3 to 6 feet.

6 P. terna'ta (D. C. l. c. t. 47. f. 2.) leaflets 3, approximate, cuneate-oblong, terminating in a short, straight, spine-like mucrone; stipulas spinose, straight; pedicels axillary, 1-flowered; legume torulose, linear-oblong, acute. ♄. S. Native of St. Domingo. Æschinómene ternàta, Spreng. syst. in herb. Balb. Flowers yellow.

Ternate-leaved Pictetia. Shrub 3 to 4 feet.

Cult. A mixture of loam, peat, and sand will suit the species of this genus, and young cuttings will root in sand under a hand-glass, in heat.

CXLII. ORMOCA'RPUM (from ορμος, *ormos*, a necklace, and καρπος, *carpos*, a fruit; in allusion to the shape of the pods, which are jointed, and may be likened to a necklace). Beauv. fl. d'ow. 1. p. 95. Desv. journ. bot. 3. p. 122. t. 5. f. 16. D. C. prod. 2. p. 314.

Lin. syst. *Diadélphia, Decándria.* Calyx furnished with 2 permanent bracteoles at the base, 5-cleft, somewhat bilabiate, with all the lobes acute. Corolla papilionaceous, with a broad entire vexillum, and an obtuse 2-edged keel. Stamens diadelphous. Legume stipitate, many-jointed, with the joints attenuated at both ends, usually striated and warted lengthwise, 1-seeded, distinctly separating.—Smooth shrubs, with simple leaves, having the petiole jointed at the apex, or impari-pinnate, or abruptly-pinnate leaves. Racemes short, axillary.

* *Leaves simple, with the petiole jointed at the apex.*

1 O. verrucòsum (Beauv. l. c. t. 58.) leaves simple, ovate-lanceolate, acuminated; joints of legume striated and warted. ♄. S. Native of western Africa, in the kingdom of Waree. Mullèra verrucòsa, Pers. ench. 2. p. 311. Leaves 3 inches long, but hardly an inch and a half broad. Flowers red.

Warted-podded Ormocarpum. Shrub 3 to 6 feet.

2 O.? sulca'tum (Beauv. l. c. in a note) leaves simple, small; joints of legume furrowed, but not warted. ♄. S. Native of St. Domingo. Perhaps *Pictètia Desvaúxii.* Flowers red.

Furrowed-podded Ormocarpum. Shrub 3 to 4 feet.

* * *Leaves impari-pinnate.*

3 O. sennoïdes (D. C. prod. 2. p. 315.) leaves impari-pinnate, with 6-7 pairs of obovate, retuse mucronulate leaflets; joints of legume striated and beset with prickly tubercles. ♄. S.

Native of the East Indies. Hedýsarum sennoìdes, Willd. spec. 3. p. 1207. O. cassioìdes, Desv. l. c. Flowers red?
Senna-like Ormocarpum. Fl. July, Aug. Clt. 1816. Sh. 3 to 6 feet.

4 O. CORONILLOÌDES; shrubby, erect, branched; leaves impari-pinnate; leaflets oblong, emarginate, glaucous; flowers lateral, pedunculate; legumes with 6-7 furrowed, glabrous joints, which taper at both ends. ♄. S. Native of the island of St. Thomas, in Guinea, on a little island in Man-of-War Bay.
Coronilla-like Ormocarpum. Shrub 6 feet.

* * * *Leaves abruptly pinnate.*

5 O. E'LEGANS; shrubby, smooth except the young leaves, which are silky; leaves abruptly pinnate, with 8-10 pairs of ovate-lanceolate, mucronate leaflets; racemes axillary, not so long as the leaves; calyx smooth, slightly 5-lobed; vexillum large. ♄. S. Native of Mexico. Legumes stipitate, 3-jointed; joints tapering to both ends. Calyx permanent. Flowers purple.
Elegant Ormocarpum. Shrub 3 to 6 feet.

6 O. COCCI'NEA; shrub rather villous, with 10-16 pairs of obovate-lanceolate, obtuse, mucronate leaflets; racemes shorter than the leaves; calyx campanulate, almost truncate. ♄. S. Native of Mexico. Flowers apparently scarlet.
Scarlet-flowered Ormocarpum. Shrub 3 to 4 feet.
Cult. See *Pictètia*, p. 278. for culture and propagation.

CXLIII. AMI'CIA (in honour of Joseph Baptiot Amici, a celebrated French physician). H. B. et Kunth, nov. gen. amer. 6. p. 511. t. 600. D. C. prod. 2. p. 315.—Zygómeris, Moc. et Sesse, fl. mex. icon. ined.

LIN. SYST. *Monadélphia, Decándria.* Calyx campanulate, 5-cleft, 2 upper lobes roundish, large, 2 lateral ones minute, the lowest one oblong, keeled, and concave. Corolla with an orbicular vexillum, and with the wings applied to the keel. Stamens 10, monadelphous, with the tube or sheath cleft in front. Legume linear, compressed, many-jointed, with the joints truncate at both ends.—Climbing shrubs. Branches and petioles pubescent. Leaves abruptly pinnate, with 2 pairs of leaflets, full of pellucid dots. Peduncles axillary, 5-6-flowered. Bracteas 2, orbicular, opposite, at the origin of the pedicels. Flowers yellow. This genus is nearly allied to *Poirètia*, but is easily distinguished by the form of the calyx.

1 A. GLANDULÒSA (H. B. et Kunth, l. c.) leaflets obovate, somewhat emarginate; vexillum obcordate; legume with 5 joints. ♄. ◡. S. Native of New Granada, near Loxa.
Glandular Amicia. Shrub cl.

2 A. ZYGÓMERIS (D. C. prod. 2. p. 315.) leaflets cuneate-obcordate, mucronate; vexillum broadly obovate, mucronate; legumes having 2 joints. ♄. ◡. S. Native of Mexico. Zygómeris flàva, Moc. et Sesse, fl. mex. icon. ined. According to the figure there are 2 of the stamens longer than the rest.
Two-jointed-podded Amicia. Clt. 1826. Shrub cl.
Cult. See *Pictètia*, p. 278. for culture and propagation.

CXLIV. POIRE'TIA (in honour of J. L. M. Poiret, a French botanist and traveller in Barbary, editor of the supplement to Lamarck's Dictionnaire de Botanique, 4 vols. 4to). Vent. choix. t. 42. but not of Gmel. nor Smith, nor Cav. D. C. prod. 2. p. 315.—Turpínia, Pers. ench. 2. p. 314. but not of Bonpl. nor Rafin.

LIN. SYST. *Monadélphia, Decándria.* Calyx campanulate, bilabiate, upper lip somewhat bidentate, lower one tridentate. Corolla with a semi-orbicular, emarginate vexillum, thrown back from the keel, with reflexed sides; wings spreading. Stamens 8-10, monadelphous, with the tube or sheath cleft in front. Stigma capitate. Legume with 3-4, compressed, 1-seeded, straight, truncate joints, separating at maturity.—Climbing shrubs, having the habit of *Glýcine*, with abruptly pinnate leaves, bearing 2 pairs of leaflets. Stipulas distinct from the petiole. Racemes short, axillary. Flowers covered with glandular dots.

1 P. SCA'NDENS (Vent. l. c.) stems climbing, glabrous; leaves with 2 pairs of obovate retuse leaflets, full of pellucid dots; racemes few-flowered, shorter than the petioles. ♄. ◡. S. Native of St. Domingo, and near Caraccas, among bushes. H. B. et Kunth, nov. gen. amer. 6. p. 510. Glýcine, Lam. ill. t. 609. f. 2. Turpínia punctàta, Pers. l. c. P. punctàta, Desv. journ. bot. 3. p. 122. t. 5. f. 17. Glýcine punctàta, Willd. spec. 3. p. 1066.
Climbing Poiretia. Clt. 1823. Shrub cl.

2 P. PSORALEOÌDES (D. C. prod. 2. p. 315.) stem erect, angular; leaves with 4 obovate leaflets, full of pellucid dots; flowers almost terminal, glomerate. ♄. S. Native of Monte Video, at the bottom of mountains. Psoràlea tetraphýlla, Poir. suppl. 4. p. 589. The leaves are sometimes composed of 3 or 5 leaflets from some cause or other.
Psoralea-like Poiretia. Shrub 2 to 3 feet.
Cult. See *Pictètia*, p. 278. for culture and propagation.

CXLV. PLANA'RIUM (from *planarius*, plain; in reference to the broad flat legumes). Desv. obs. legum. in Schlecht. Linnæa. 2. p. 511.

LIN. SYST. *Diadélphia, Decándria.* Calyx campanulate. Stamens diadelphous. Legume on a short stipe, compressed, 8-jointed, having a prominent longitudinal nerve in the middle of the valves.—A climbing shrub, with impari-pinnate leaves.

1 P. LATISI'LIQUUM (Desv. l. c.). ♄. ◡. S. Native of Peru. Poirètia latisiliquòsa, Desv. journ. bot. and D. C. prod. 2. p. 316? Hedýsarum latisiliquòsum, Juss. herb. Poir. dict. 6. p. 432. Stems pubescent. Leaves with 5 oval, acute leaflets. Racemes axillary, few-flowered, longer than the petioles.
Broad-podded Planarium. Shrub cl.
Cult. See *Pictètia*, p. 278. for culture and propagation.

CXLVI. MYRIADE'NUS (from μυριος, *myrios*, innumerable, and αδην, *aden*, a gland; in reference to the leaves being beset with numerous glands). Desv. journ. bot. 3. p. 121. t. 4. f. 11. D. C. prod. 2. p. 316. but not of Cass.

LIN. SYST. *Diadélphia, Decándria?* Calyx tubular, 5-toothed, and appearing as if hidden within 2 opposite bracteas. Corolla and stamens unknown. Legume constantly composed of numerous, terete, somewhat obconical, 1-seeded, indehiscent joints.—An erect smooth herb, having 4 dotted, obovate, emarginate leaflets at the top of each petiole, with very short, axillary, solitary, 1-flowered pedicels, and yellow flowers. This genus is not sufficiently known, but it appears to be nearest allied to *Poirètia*, in the leaves being of 4 glandular leaflets.

1 M. TETRAPHY'LLUS (D. C. prod. 2. p. 316.). ⊙. S. Native of Jamaica.—Sloan. jam. 1. p. 186. t. 116. f. 3. Ornithopus tetraphýllus, Lin. amœn. 5. p. 402. Lunan. hort. jam. 1. p. 94. Leaflets cuneated, obtuse, or emarginate, glabrous, dotted beneath, all rising from the apex of the petiole.
Four-leafletted Myriadenus. Fl. Ju. Jul. Clt. 1818. Pl. 1 ft.
Cult. The seeds of this plant require to be sown in pots and placed on a hot-bed in spring, and when the plants are strong enough they may be removed to the stove or greenhouse, or they may remain in the frame, where they will ripen seeds.

CXLVII. ZO'RNIA (in honour of John Zorn, once an apothecary at Kempten in Bavaria, author of Icones plantarum medicinalium, 8vo. Nuremberg, 1779 and 1784). Gmel. syst. 1076. Michx. fl. bor. amer. 2. p. 76. Desv. journ. bot. 3. p. 124. t. 5. f. 25. D.C. prod. 2. p. 316.—Anónyma, Walt. car. 181.

LIN. SYST. *Monadélphia, Decándria.* Calyx campanulate, bilabiate, upper lip emarginate, lower one 3-cleft. Corolla inserted in the bottom of the tube of the calyx. Vexillum having revolute sides. Keel bifidly lunulate. Stamens monadelphous. Anthers alternately globose and ovate. Legume compressed, 3-5-jointed; joints nearly orbicular, usually hispid.—Glabrous herbs, full of pellucid dots. Stipulas sagittate, lower ones lanceolate, upper ones the largest, and forming girding bracteas. Leaflets 2 or 4, rising from the top of the petiole. Flowers yellow, surrounded by the large stipulas.

* *Leaves having 2 leaflets rising from the top of each petiole.*

1 Z. ANGUSTIFÒLIA (Smith, in Rees' cycl. no. 1.) stems diffuse; leaflets oblong-lanceolate; bracteas ovate-sagittate, 5-nerved, ciliated, shorter than the legumes, full of glandular dots; prickles of legume covered with retrograde stiff hairs. ⊙. S. Native of the Mauritius and the East Indies, in sandy places.—Rheed. mal. 9. t. 82. Z. diphýlla *α*, Pers. 2. p. 318. Hedýsarum diphýllum, var. *α*, Lin. syst. 560. exclusive of the synonyme of Sloane. In some specimens of this plant the legumes are prickly their whole length, in others only at their apex.

Narrow-leafletted Zornia. Fl. July, Aug. Clt. 1733. Pl. ½ to 1 foot.

2 Z. GLOCHIDA'TA (Reichb. in Sieb. pl. exsic. seneg. no. 40.) stems erect, branched; leaflets linear; bracteas ovate-sagittate, 5-nerved, dotless, and ciliated with long hairs, a little shorter than the legumes; legume with 3-4 joints, beset with glochidate prickles, which are covered with retrograde stiff hairs. ⊙. S. Native of Senegal.

Glochidated-podded Zornia. Fl. July, Aug. Clt. 1823. Pl. ¼ to ½ foot.

3 Z. BIARTICULA'TA; stem branched; leaflets lanceolate, acute; spikes few-flowered; stipulas ovate, membranous, acute, 4-5-nerved, ciliated; legumes 2-jointed, echinated; prickles hooked at apex. ⊙. S. Native of the Gold Coast, in sandy places.

Two-jointed-podded Zornia. Pl. ½ foot.

4 Z. GRA'CILIS (D. C. prod. 2. p. 316.) stems erect; leaflets oblong-lanceolate; bracteas linear-sagittate, acuminated at both ends, 5-nerved, a little ciliated, full of glandular dots; prickles of legume beset with stiff retrograde bristles. ⊙. S. Native of Guiana.

Slender Zornia. Pl. ¼ to ½ foot.

5 Z. RETICULA'TA (Smith, in Rees' cycl. no. 2.) stems erect; leaflets lanceolate, glabrous, lower ones elliptic; bracteas ovate, acute, ciliated, glandless, 5-nerved, reticulated, length of legumes; legumes pubescent, as well as furnished with a few downy prickles. ⊙. S. Native of Jamaica, Cayenne, Porto Rico, and Santa Cruz. Hedýsarum diphýllum *β*, Lin. Swartz. and Willd. Z. diphýllum *β*, ciliàtum, Pers.

Var. β, pubérula (D. C. prod. 2. p. 316.) branches pubescent at the apex; bracteas ovate-lanceolate, acuminated, longer than the legumes. ⊙. S. Native of Cayenne. Perhaps a proper species. Perhaps only a variety of *Z. pubéscens.*

Reticulated-bractead Zornia. Fl. Jul. Aug. Clt. 1800. Pl. 1 ft.

6 Z. THYMIFÒLIA (H. B. et Kunth, nov. gen. amer. 6. p. 514.) stems diffuse, and are as well as the petioles pubescent; leaflets oblong, glabrous above, but puberulous beneath, having the margins dotted as well as the calyxes; bracteas ovate, 5-nerved, puberulous and glandular beneath; legumes rather pilose, the joints reticulated with veins. ♄.? ♃.? S. Native of Mexico, near Santa Rosa.

Var. β, clandestìna; plant larger and more branched; leaves dotless; bracteas a little dotted, glabrous, ciliated. ⊙. S. Native of Mexico, near Jalapa. Z. thymifòlia, Schlecht. et Cham. in Linnæa. 5. p. 582. Perhaps a proper species.

Thyme-leaved Zornia. Pl. ¼ to ½ foot.

7 Z. LÆ'VIS (Schlecht. et Cham. in Linnæa. 5. p. 582.) plant smooth; bracteas somewhat 7-nerved, sparingly dotted, ciliated; legumes smooth, but rather puberulous between the joints; leaflets variable, ovate, or ovate-lanceolate, acute. ⊙. S. Native of Mexico, near Jalapa.

Smooth Zornia. Pl. ½ foot.

8 Z. PUBE'SCENS (H. B. et Kunth, nov. gen. amer. 6. p. 515.) stem erect, dichotomously branched, glabrous; branches and petioles clothed with villous pubescence; leaflets oblong-lanceolate, pubescent on both surfaces, and are glandless as well as the calyxes; bracteas ovate, acute, ciliated, dotted; legumes hispid and muricated, having 5-6 joints. ⊙. S. Native of South America, on the banks of the river Magdalena, near Honda.

Pubescent Zornia. Pl. 1 to 2 feet.

9 Z. LATIFÒLIA (D. C. prod. 2. p. 317.) plant ascending, clothed in every part with villi; bracteas ovate, acute, many-nerved. ⊙. H. Native of Brazil. Leaflets ovate, 12-18 lines long and 8-9 broad, longer than the petioles. Flowers large. Legume unknown.

Broad-leafletted Zornia. Pl. ½ to ¾ foot.

10 Z. MARANHAME'NSIS; stems erect, branched, pubescent at the apex; leaflets lanceolate, acute; stipulas subulate; bracteas lanceolate, 3-nerved, acute, villous; legume with 3-4 hispid joints. ⊙. S. Native of Maranham.

Maranham Zornia. Pl. ½ foot.

11 Z. ZEYLONE'NSIS (Pers. ench. 2. p. 318.) leaflets ovate; bracteas ovate, ciliated; legumes prickly; stem erect. ⊙. S. Native of Ceylon.—Burm. zeyl. t. 50. f. 1. Pluk. alm. t. 102. f. 1. Hedýsarum conjugàtum, Willd. spec. 3. p. 1178. H. diphýllum, var. Lin. Z. conjugàta, Smith, in Rees' cycl. no. 3.

Ceylon Zornia. Fl. July, Aug. Clt. 1825. Pl. ½ foot.

12 Z. DICTYOCA'RPA (D. C. prod. 2. p. 317.) leaflets lanceolate; bracteas ovate-sagittate, acuminated, shorter than the legumes, a little ciliated and rather glandular, hardly 5-nerved; joints of legume unarmed, glabrous, reticulated. ⊙. H. Native of New Holland. Sieb. pl. exsic. nov. holl. no. 610.

Net-fruited Zornia. Fl. July, Aug. Clt. 1820. Pl. ½ foot.

* * *Leaves bearing 4 leaflets at the apex of each petiole.*

13 Z. TETRAPHY'LLA (Michx. fl. bor. amer. 2. p. 76. t. 41.) leaflets 4, digitate, oblong, acuminated; bracteas glabrous, length of legumes, 5-nerved; prickles of legume rather scabrous. ♃. F. Native of Carolina, in sandy fields. Anónymos bracteàta, Walt. car. 181. Z. bracteàta, Gmel. syst. 1096. Hedýsarum tetraphýllum, Lam. dict. 2. p. 405. but not of Thunb.

Four-leafletted Zornia. Fl. June, July. Clt. 1824. Pl. 1 ft.
